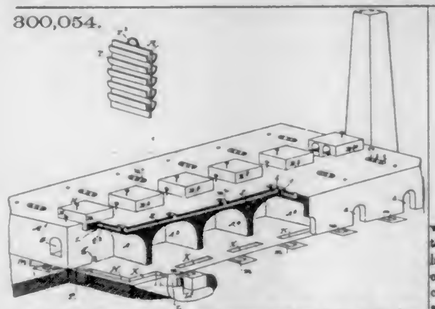
Claim.—1. The transverse bearing-plate C on the wheeled frame, and the auger E, having screw-shank F, in combination with the anchored rotating nut D, threaded on the screw-shank, the washer G, feathered on the screw-shank above the nut, and a means for alternately rotating said nut and washer to raise or depress the auger, respectively, substantially as herein described.

2. The wheeled frame A, having transverse plate C, with flanged socket *c*, and the auger E, having screw-shank F, in combination with the nut D on said screw-shank, and having socket-arms *d* and flanged neck *a*, fitting socket *c*, the washer G, feathered on said screw-shank

300,053.

and having socket-arms *g*, and the pole or lever H, adapted to fit its end into the socket-arms of the nut D or washer G, substantially as and for the purpose herein described.



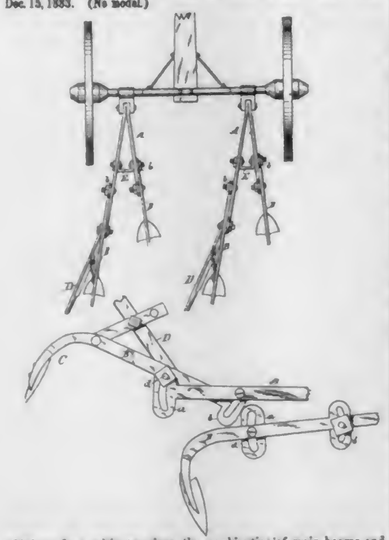
3. The transverse bearing-plate C on the wheeled frame, and the auger E, having grooved screw-shank F, in combination with the rotating horizontally-anchored nut D, having socket-arms *d*, the pin I, for preventing its revolution, the feathered washer G on the screw-shank, and having socket-arms *g*, the sliding pin J, adapted to fit the feather-groove of the screw-shank to prevent it from turning, and the removable pole or lever H, substantially as and for the purpose herein described.

300,054. BRICK-KILN. WM. H. DE VALIN, San Rafael, Cal. Filed Aug. 17, 1883. (No model.)

Claim.—1. In a burning-kiln, the chambers A A′, &c., each pair being connected with a separate furnace, a common chimney-flue, G, outlets *g*, for the chambers, and valves or dampers A, and connections beneath the chamber with means for controlling them, as set forth.

2. In a burning-kiln, the combination, with a series of burning-chambers, of a principal outlet flue or conduit, S, flues *t f* at each chamber, and a removable cap or cover, as V, provided with division-plates for separating or connecting said flues and conduit, as desired, substantially as set forth.

300,054.



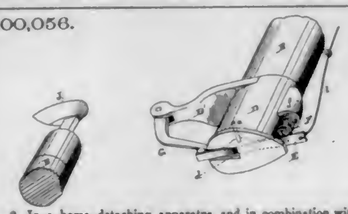
3. The combination, with the burning-chambers A A', of the flues K, damper-pits *m*, connecting-passages L L', and removable dampers R, provided with means for holding a coating of clay on each side, substantially as set forth.

4. In a kiln for burning brick and other material, a burning-chamber, as A, having flue *g*, leading to the chimney, and a furnace, as B, on top, and communicating with the interior of the chamber through a flue, as I, substantially as set forth.

5. The combination, with the conduit S and flues *t t'*, of cover V, provided with center plate, *v'*, and a division-plate, *z*, on one side and two division-plates, *w w*, on the other, substantially as set forth.

6. The combination of the flues for connecting the chambers at the bottoms of the damper or stopper R, provided with the curved wings *r r* on the sides, to hold a coating of clay, as set forth.

300,055. CULTIVATOR. JAMES C. DOANE, Western, Nebr. Filed Dec. 15, 1883. (No model.)



Claim.—In a cultivator-drag, the combination of main beams and extensions, each provided with slotted cross-heads and secured together, as described, whereby the adjustment and relief of the plows is secured, as specified.

300,056. HORSE-DETACHER. OCTAVE DUPAS, San Rafael, Cal., assignor of one-half to ISAAC SHAVER, same place. Filed Mar. 7, 1884. (No model.)

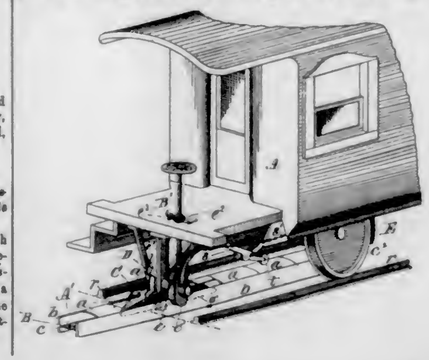
Claim.—1. In a horse-detaching apparatus, and in combination with the whiffletree of a vehicle, a pivoted trace-hook on one end of the whiffletree, and a latch and latch-tripping mechanism for engaging and releasing the trace-hook, whereby the trace may be held or pulled off, and a trace lug or hook on the other end of the whiffletree adapted, when the tree is turned at an angle by the release of the opposite trace, to free itself from the loop of its trace, substantially as herein described.

300,056.

2. In a horse-detaching apparatus, and in combination with the whiffletree B, the cap D on its end, having a slot, *d*, and forwardly-extending arm D', the curved trace-hook G, pivoted in the end of the arm, latch E, pivoted within the end of the cap, and adapted to engage the end of hook G, the spring F, for holding the latch to its engagement, and the cord I, for tripping the latch, all arranged and operating substantially as and for the purpose herein described.

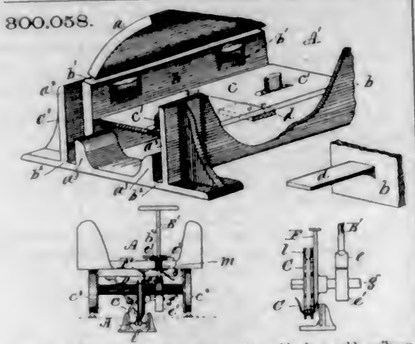
3. In a horse-detaching apparatus, and in combination with the pivoted trace-hook G, and latching and tripping mechanism on one end of the whiffletree, as described, the trace lug or hook J on the other end of the whiffletree, said lug having a head with a curved face and beveled long front, and a curved and beveled short back, substantially as and for the purpose herein described.

300,057. THILL-COUPLING. ROBERT R. EARNEST, Mechanicsburg, Ohio, assignor of one-half to THOMAS M. BATES, same place. Filed Mar. 6, 1884. (No model.)



Claim.—1. The herein-described thill-coupling, consisting of clip A, thill-iron B, bolt C, having pointed latch *b* pivoted to its body *a*, and rubber washer D, encircling bolt C and interposed between latch *b* and the side of the thill-clip, substantially as shown.

2. In combination with a thill-clip and a shaft-iron, a connecting pin or bolt passing through said parts, and provided with a pivoted latch at one end, and a rubber washer encircling the pin between the latch and the clip, and provided with a metal facing to receive the wear of the latch, as described and shown.



300,058. CABLE RAILWAY. AUSTIN C. EVANS, Springfield, Ohio. Filed Jan. 5, 1884. (No model.)

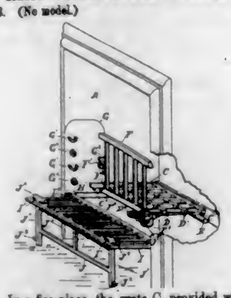
Brief.—The hinged covering-plates of the tube are raised by arms upon the device which carries the propelling-cable, said cable being engaged by a sprocket-wheel which is controlled by a brake mechanism upon the axle of said wheel. The tube is open at the bottom, except at turnouts, curves, and the approaches thereto, where a floor is provided, which is supported upon arms extending out from one side of the tube, part way across the same, and upon which floor are arranged guides for the cable.

Claim.—1. In a tube for cable railways, a series of covering-plates hinged or otherwise flexibly connected therewith on one side, in combination with a cable operated in said tube and a car having a carrier adapted to carry said cable, as described, and to elevate said covering-plates automatically as said car is drawn along the track of the railway.

300,058.

2. A cable way or tube for a running cable, in a cable railway, open throughout its length at the bottom, and having at the curves, turnouts, and approaches to the former floor-plates supported upon arms extending from the side plates about half the depth of the same, said floor-plates being for the purpose of supporting and guiding the cable at these points, as set forth.

3. In a cable railway, the combination, with the running cable, of a tube having side plates provided with lateral arms extending inward therefrom, and floor-plates resting upon said arms, whereby said cable is supported and guided, substantially as set forth.



4. In a cable way or tube having an open bottom, the combination, with the sections forming the same, of the chairs extending across the line of the tube under the latter, having the standards and the abutments inside of the same, forming grooves between the two, adapted to support the side plates of said tube in a perpendicular position, as set forth.

5. In a cable way or tube for a single-track railway, the combination, with the floor-plates and the cable, of the vertical studs of double convex form in their cross-section, arranged upon said floor-plates to keep the two lines of said cable separate and to guide the latter toward the bearing-pulleys.

6. In a cable-railway car, a bracket and braces suspended therefrom, a shaft extending horizontally through the same rotating in bearings therein, a sprocket-wheel mounted upon said shaft on one side of said bracket, and a wheel upon the same shaft on the opposite side, said wheel being operated upon by a shoe pivotally attached to the screw-threaded shaft of the brake, whereby the connection and disconnection of the car with the cable is made by clamping said shoe upon said wheel, which stops the revolution of said shaft with the sprocket-wheel, and allows the links or balls on the cable to engage the teeth of the latter and propel the car along the track.

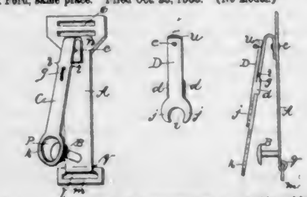
7. In a cable railway, a car provided with a bracket suspended from its platform, a carrier on the lower end of said bracket extending into the cable-tube, through which the cable runs, a brace on either side of said bracket, a horizontal shaft pivoted in bearings in the bracket and braces, having on one side of the former a sprocket-wheel, the teeth of which are engaged by the cable, and on the other side a wheel operated upon by a brake from the platform of the car to stop the rotation of the sprocket-wheel, whereby the latter becomes fixedly connected with said cable and the car is propelled, as set forth.

300,059. GRATE. CHARLES H. FISHER, Wheeling, W. Va. Filed Nov. 30, 1883. (No model.)

Claim.—1. In a fire-place, the grate C, provided with the lugs C' and lever D, said grate pivotally mounted on the rod E, in combination with the grate F, supporting the grate C, and having lugs F', and the side plates having the side lugs, G', substantially as specified.

2. In a fire-place, the grate C, provided with lugs C' and side lugs, C', and rod E, in combination with the grate F, supporting the grate C, and having the lugs F', and the side plates having the side lugs, G', substantially as specified.

3. In a fire-place, the grate C, provided with lugs C', lever D, having opening D', and the shaking-lever L, secured in said opening, in combination with the grate F, supporting the grate C, and pivotally mounted in the side of the fire-place, the grates C F having lateral play, whereby they may be shaken by the lever L, substantially as specified.



4. In a fire-place, the grate C, pivotally mounted on the rod E, and provided with lugs C' and lever D, the tilting-rod M, secured to the forward end of the lever D, in combination with the grate F, supporting the grate C, and pivotally mounted in the sides of the fire-place, substantially as specified.

5. In a fire-place, the grates F C, pivotally mounted, and having lateral movement, and provided with lever D, in combination with the shaking-rod L and tilting-rod M, substantially as specified.

6. In a fire-place, the supplementary grate I, having the supporting-frame J, movably secured thereto, said grate being provided with end lugs, I', the support being provided with end lugs, J', in combination with the side of the fire-place, provided with grooved lugs, whereby the lugs I' and J' may be secured and the grate caused to assume various positions, substantially as described and specified.

7. In a fire-place, the pivoted grates C and F, in combination with the grate I and lugs G', whereby one end of the grate I may rest on said lugs, and the rear end of said grate rest on the top of grate F, and the grate I elevated immediately over the fire, substantially as described, and for the purposes set forth.

300,060. CLASP. ISAAC V. FORD, Troy, N. Y., assignor to Catharine E. Ford, same place. Filed Oct. 23, 1883. (No model.)

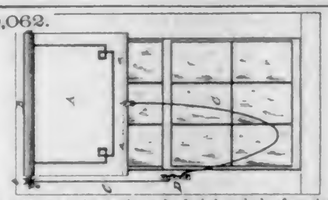
Claim.—1. In a clasp, the combination of a rigid studded plate, A, and a perforated spring, C, attached to said plate, and provided with a forked slide, D, substantially as described, and for the purposes set forth.

2. In a clasp, the combination of plate A, stud B, rivet *c*, spring C, having ring *k* and depression *g*, and slide D, having projection *e*, guides *d d*, and forks *j j*, substantially as and for the purposes set forth.

3. A clasp-spring, C, provided with ring *k*, and stops *t t*, in combination with a slide, D, provided with forks *j j* and guides *d d*, and studded plate A, substantially as described, and for the purposes mentioned.

300,061. OYSTER-REFRIGERATOR. SPENCER LEE FRASER and WILLIAM A. BRIGHAM, Toledo, Ohio. Filed Oct. 12, 1883. (No model.)

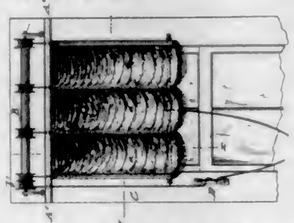
Claim.—1. A refrigerator-box and a food-receptacle contained therein, in combination with a cover for said box provided with an opening adapted to encircle the top of said receptacle, whereby access may be had to the receptacle without exposing the contents of the box, substantially as set forth.



2. The refrigerator-box *a*, the perforated shelf *d*, and the receptacle B, in combination with the box-cover F, provided with a central opening, E, adapted to encircle the top of the receptacle B, and the cover G of said receptacle, substantially as set forth.

300,062. WINDOW-SHADE ATTACHMENT. CHARLES GEERTS, Brooklyn, N. Y. Filed Apr. 26, 1884. (No model.)

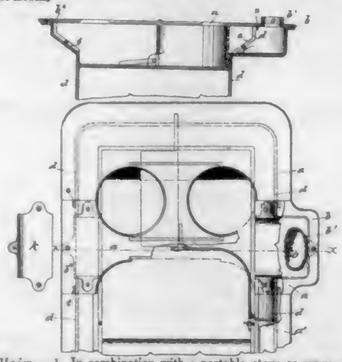
Claim.—1. The combination of the shade A, shade-roller B, having a pulley, *b*, shade-cord C, attached to the pulley and to the bottom strip, *a*, of the shade, and a perforated friction device, D, through the holes of which the shade-cord is passed, substantially as set forth.



2. A friction device for the cords of window-shades, composed of a block of suitable shape, having diametrical perforations extending alternately in different directions through the block, substantially as set forth.

300,062.

3. A friction device for the cords of window-shades, formed of a cylindrical or spherical block, having diametrical openings arranged alternately at right angles to each other, and end openings for attaching it to the window-casing, substantially as set forth.



300,063. LAMBREQUIN-SHADE. CHARLES GEERTS, Brooklyn, N. Y. Filed Apr. 26, 1884. (No model.)

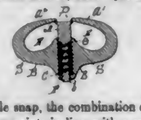
Claim.—1. The combination of a fixed top strip, a lambrequin-shade composed of longitudinal sections attached to said strip, suspension-cords that are passed through openings of the meeting edges of the shade-sections, alternately, from one side to the other of said edges, and a winding-up roller above the top strip, substantially as set forth.

2. The combination of a fixed top strip, a lambrequin-shade attached to said strip, a shade-roller above said strip, suspension-cords passing through guide-openings of the top strip and through openings of the meeting edges of the shade-sections, alternately, from one side to the other of said edges, and inclosing-hems running along the meeting edges of the shade-sections, substantially as set forth.

300,064. PORTABLE RANGE. CHARLES P. GEISSENHAINER, Pittsburg, Pa., assignor to Frank. S. Bissell, same place. Filed Nov. 17, 1883. (No model.)

Claim.—1. In combination with a portable stove or range, a removable and reversible pipe-connection, whereby the stove or range may be altered to a right or left hand one, substantially as described.

2. In combination with a portable stove or range, a combined removable and reversible top plate and pipe-collar, whereby the stove or range may be altered to a right or left hand one, substantially as set forth.



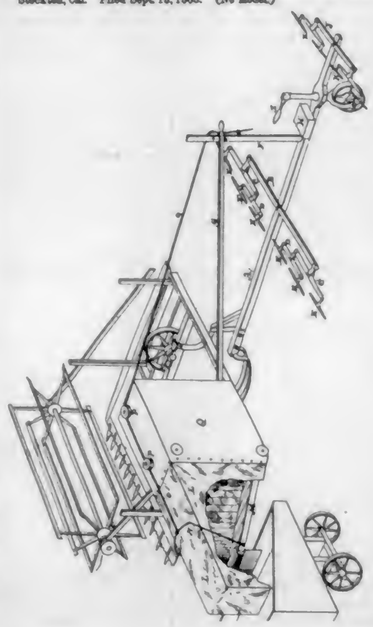
3. In a convertible right and left hand stove or portable range having recessed side plates, a flue-box attachable to and detachable from the recessed side plates, and reversible from one side to the other, in combination with a reversible top plate having a pipe-collar attached thereto, and a removable stopper-plate, substantially as set forth.

4. In a convertible right and left hand stove or portable range having recessed side plates, a flue-box attachable to and detachable from the side plates, and reversible from one side to the other, in combination with a reversible top plate having a pipe-collar attached thereto, and a removable stopper-plate for covering the recess not covered by the flue-box, substantially as set forth.

5. In a convertible right and left hand stove or portable range having recessed side plates, a flue-box attachable to and detachable from the side plates, and reversible from one side to the other, in combination with a reversible top plate having a pipe-collar attached thereto, and a reversible deflecting-plate, substantially as set forth.

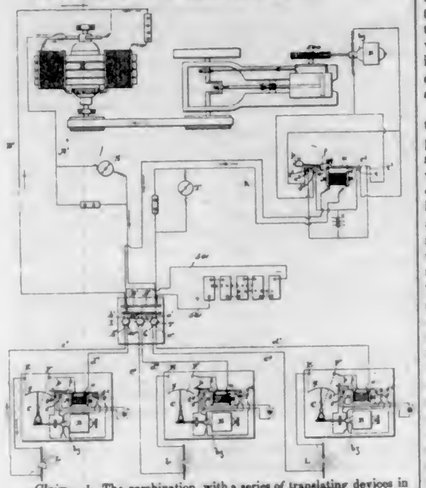
6. In a convertible right and left hand stove or portable range having recessed side plates, the flue-box *f*, in combination with the top plate, *a*, having pipe-collar *b'*, the stopper-plate *k*, and the deflecting-plate *l*, substantially as set forth.

300,065. DOUBLE SNAP-HOOK FOR HARNESS. JOHN GIBBONS, West Troy, N. Y., assignor to the Union Hardware Manufacturing Company, same place. Filed Nov. 13, 1883. (No model.)



Claim.—In a double snap, the combination of two reversing-hooks having their approaching points in line, with a space between them, an intermediate body part to which the hooks attach, a chamber within the body part, and a bolt-latch within said chamber, and constructed with an encircling-spring adapted to force said bolt-latch to close the opening between the hook-prongs, substantially as herein shown and described.

300,066. RAILWAY-SPIKE. WILLIAM GOLDIE, West Bay City, assignor of one-half to David H. Jerome, Saginaw, Mich. Filed Dec. 31, 1883. (No model.)



Claim.—In a railway-spike having a main portion, *a*, and compressing-inclines, a supplemental portion of reduced rectangular cross-section, and a point formed by beveling toward a common center the sides of the reduced portion, substantially as described.

300,067. HEADER AND THRASHER. CHRISTOPHER GRATTAN, Stockton, Cal. Filed Sept. 18, 1883. (No model.)

Claim.—In a combined header and thrasher having a straw-carrier and cleaning-shoe which discharge at one side, a supplemental carrying-belt and an inclosing hood or cover, with a downwardly-discharging spout, in combination with a suspending-bail, N, operating-rope O, pulleys P P, and a bar, F, secured to the pole A, substantially as herein described.

300,068. APPARATUS FOR DISTRIBUTING ELECTRICITY. ALPHONSE ISIDORE GRAVIER, Paris, France. Filed Feb. 9, 1882. (No model.) Patented in France June 3, 1880, No. 137,033; in Germany July 29, 1880, No. 15,525, and May 13, 1881, No. 16,682; in Belgium June 13, 1881, No. 54,896; in England June 22, 1881, No. 2,739; in Italy Dec. 19, 1881, No. 13,693; in Austria-Hungary May 20, 1882; in Norway July 18, 1882; in Sweden Oct. 9, 1883, and in Denmark Feb. 27, 1883.

Claim.—1. The combination, with a series of translating devices in branches of a common circuit, of self-adjusting rheostats operated electrically, included in the same branches with the translating devices, for increasing or decreasing automatically the resistance of said branches as the current through the translating devices rises or falls, substantially as described.

2. The combination, with translating devices in branches of a common circuit, of self-adjusting rheostats adjustable also by hand to vary the normal resistance thereof, said rheostats being placed in the same branches with the translating devices, so that when set they maintain the current through the translating devices at a given strength, and when desired may be adjusted by hand to vary the said current, substantially as described.

3. The combination, with translating devices in branches of a common circuit, a generator for supplying electricity to said circuit, and adjustable rheostats in the said branches, of an automatic electric governor for controlling the electro-motive force of said generator, substantially as described.

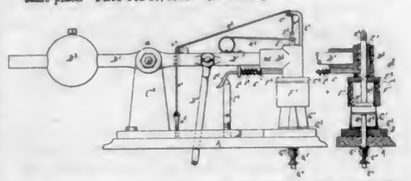
4. In a system of distributing electricity, the combination, with the main circuit and the derived or looped branches containing the translating devices, of switches for connecting and disconnecting simultaneously both wires of the loop branches, the connection of the wires of the main circuit being broken at each switch when the corresponding branch is cut out, substantially as described.

5. The combination, with translating devices in branches connected with the main circuit at common points or centers, and main conductors extending from said centers to the generating-station at a distance, of a governing branch returning from said centers to the generating-station, substantially as described.

6. The combination, with translating devices in branches connected with the main conductors at common points or centers, of secondary batteries included in a loop or branch, also connected with the main conductors at said centers, substantially as described.

7. The combination, with the translating devices in branches, and the generator for supplying electricity to the circuit, of the secondary battery in a loop or branch, and an electric governor for controlling the electro-motive force of the generator, also placed in a loop or branch, substantially as described.

8. The combination, with translating devices, a generator, and the conductor forming a circuit, of the secondary battery in a branch or loop, and self-adjusting rheostats in the same branches, which include the translating devices, substantially as described.



9. The combination, with translating devices, a generator, and conductors forming a circuit, of the secondary battery in a loop or branch, the self-adjusting rheostats for controlling the resistance of the branches, including the translating devices, and the electric governor for controlling automatically the electro-motive force of the generator, substantially as described.

10. The combination, with translating devices in branches of a common circuit, the conductors constituting said circuit, a generator, and a governing branch, of a galvanometer or similar instrument in the main circuit, and an additional one in the governing branch, whereby the attendant at the generating-station may ascertain when the translating devices are all out of action, substantially as described.

11. A system of electric lamps, generator, and conductors comprising a generator and main conductors of low resistance, a number of translating devices, each having a resistance as many times as great as that of a lamp using the entire current as the number of translating devices is greater than one, and being included in a separate branch having a resistance equal to that of the circuit supplying a single lamp increased in the same proportion, the common resistances of the generator and main conductors first being deducted, substantially as described.

12. A system of distributing electricity, comprising, in combination, main conductors extending to a distance, a generator having its poles connected with said conductors, a series of branches derived from said conductors at common points or centers, a switch-board through whose contacts the said branches are connected with the main conductors, translating devices and self-adjusting rheostats in the said branches, a loop permanently connected with the main conductors at the said centers, a secondary battery in the loop, a governing branch derived from the main conductors at the aforesaid centers, means for controlling the electro-motive force of the generator, an electric governor operating said means and placed in said governing branch, a galvanometer in one of the main conductors, and a second galvanometer in the governing branch, said self-adjusting rheostats being provided with devices to be set by hand for varying the normal resistance or resistance which each rheostat has when the normal difference in potential between the aforesaid centers is maintained, and said self-adjusting rheostats being also provided with or comprising a rheostat proper having a resistance-wire, a series of contacts, and a switch-lever, and an electric governor having a relay and an electric motor, the latter connected with the switch-lever and the aforesaid electric governor for controlling the electro-motive force of the generator, in like manner comprising a relay and a motor, and the said switch-board having independent prisms, with a duplicate set of contacts for making or breaking the connection of both conductors of the derived translating branches, and the resistance of the translating devices and of the derived translating branches being adapted to the construction of the generator, all substantially as described.

300,069. MACHINE FOR CUTTING CIGAR-WRAPPERS. HENRY GRUNHAGEN, St. Paul, Minn., assignor of one-third to William Pfaender, Jr., same place. Filed Oct. 15, 1883. (No model.)

Claim.—1. In a cigar-wrapper-cutting machine, the combination of a fixed cutting-knife, a piston in the knife having a downward intermittent movement therein, and adapted to be held stationary after each downward movement, and a shell or block having an up and down reciprocating movement for pressing the successive wrappers upon the knife, substantially as and for the purpose herein specified.

2. The combination of a stationary cutting-knife, a reciprocating shell or block which presses the wrappers upon the knife, a spring-depressed piston within the said shell or block, means for raising the said piston in the shell or block, and means for locking and then releasing the piston in its raised position, substantially as and for the purpose herein specified.

3. The combination of the stationary knife G', reciprocating piston G^3 in the said knife, reciprocating shell or block F', reciprocating piston H' therein, means for retaining the piston G^3 after each intermittent downward movement, means for raising the piston H' in the shell or block, and means for locking and again releasing the same in its raised position, substantially as and for the purpose herein specified.

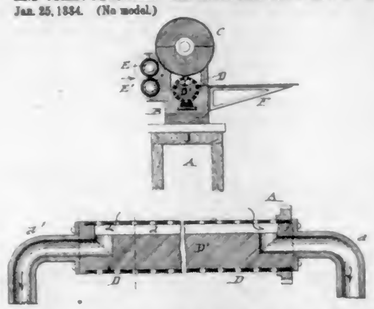
4. The combination of the lever D', shell or block F', attached to and operating with said lever, piston H', piston-rod H^3, spring H^3, cord C^3, rod L', pin L', and knife G', substantially as set forth.

5. The combination of the pivoted lever D', means for depressing one end thereof bearing the head D^3, counter-weight D^2 upon its other

end, shell or block F', carried by the said lever-head, and stationary knife G', substantially as and for the purpose herein specified.

6. The combination of the lever D', piston H', piston-rod H², spring H³, stationary pulley c^3, cord c^2, pulley c', carried by the said lever, and fixed pin c^4, substantially as and for the purpose herein specified.

300,070. ALBUM-CLASP. THEODORE M. HAHN, New York, N. Y. Filed Apr. 12, 1884. (No model.)



Claim.—1. The combination of a hinged main piece, A, an extension-shank, B, guided by said main piece, and fulcrumed and spring-actuated levers C C, engaging a recess of the extension-shank, substantially as set forth.

2. The combination of the hinged main piece A, an extension-shank, B, guided thereby, having a ball-shaped terminal, B', fulcrumed and spring-actuated levers C C, and retaining-studs a' a', substantially as set forth.

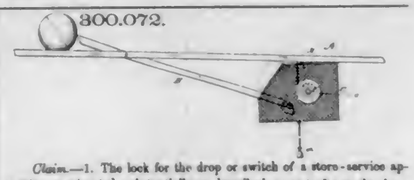
3. The combination of a hinged main piece, A, an extension-shank, B, guided in a socket of the main piece, fulcrumed levers C C, engaging a recess of the shank, a V-shaped spring, e, engaging the inner ends of the levers, the spring being retained in a recess of the main piece by a fixed pin, e', substantially as set forth.

4. The combination of a hinged main piece, A, provided with guide-recesses f f, for the lower handles, an extension-shank, B, guided in a socket of said main piece, and fulcrumed and spring-actuated levers C C, engaging a recess of said shank, substantially as set forth.

300,071. MACHINE FOR SCRAPING THE QUILLS OF OSTRICH AND OTHER FEATHERS. JOHN HAWLOWETZ, New York, N. Y. Filed Jan. 25, 1884. (No model.)

Claim.—1. The method herein described of scraping the quills of ostrich and other feathers, which consists in subjecting the quills to the abrading action of a rapidly-revolving scraping-roller and simultaneously removing the vanes out of the path of said roller by atmospheric suction, substantially as set forth.

2. The combination of a revolving abrading-roller, a perforated revolving shell below the same, and means for sucking in the air through the perforations of the shell, substantially as set forth.



3. In a machine for scraping the quills of feathers, the combination of a revolving abrading-roller, a revolving perforated shell below the same, a fixed core inside of the shell, said core being provided with a longitudinal channel and pipes connecting the ends of the channel with a suction-fan, substantially as described.

4. The combination of an abrading-roller, a perforated revolving shell below the same, a fixed interior core provided with an air-channel at the upper part, suction-pipes connected to the ends of the air-channel, revolving feed-rollers at one side of the abrading-roller, and a delivery-table at the other side thereof, substantially as and for the purpose set forth.

300,072. STORE-SERVICE APPARATUS. HARRIS H. HAYDEN, New York, N. Y. Filed Feb. 23, 1884. (No model.)

300,072.

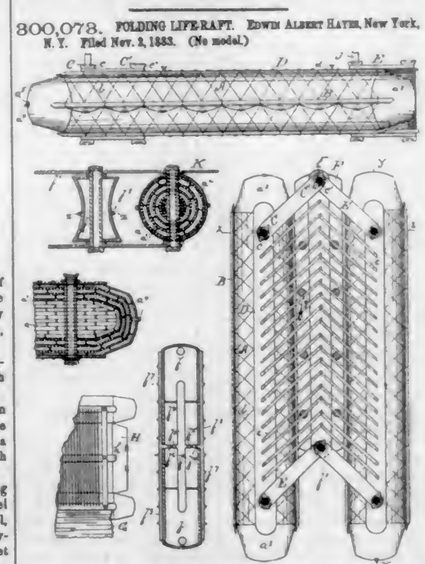
Claim.—1. The lock for the drop or switch of a store-service apparatus, constructed, substantially as described, so as to fasten the drop automatically when the basket or other receptacle is withdrawn, and to release the same when the basket is returned, substantially as specified.

2. The combination of a track, drop-switch, vertically-movable basket, and detent, constructed and arranged to lock the switch as the basket descends, and to unlock the switch as the basket approaches the track, substantially as set forth.

3. The combination, with the drop-switch of a store-service apparatus, of a detent provided with an arm extending beneath the switch, and with an arm arranged to make contact with the basket, for the purpose specified.

4. The combination of the switch B, detent provided with arms b d and fingers s i, and drop-basket C, substantially as described.

5. The combination, with the track and end drop-basket, of a detent arranged and constructed to limit the movement of the carriers after the basket has been drawn down, and to be moved to release the carriers as the basket approaches the track, substantially as specified.



6. The combination, with the track and drop-basket, of a detent pivoted to the track and provided with a cross-bar, m, and pendent arms p, substantially as specified.

7. The combination, in a store-service apparatus, of a track, a basket, cords connected to the track, and a spring drum or drums upon the basket, around which said cords are wound, substantially as set forth.

8. In a store-service apparatus, a drop box or basket provided with one or more cord-winding devices for receiving the cords connected to the track by which the basket is suspended, substantially as set forth.

9. The combination of the flexible cords or suspensions connected at the upper ends to the track, a basket, and winding attachments on the basket to which the cords are attached, substantially as specified.

300,073. FOLDING LIFE-RAFT. EDWIN ALBERT HAYES, New York, N. Y. Filed Nov. 2, 1883. (No model.)

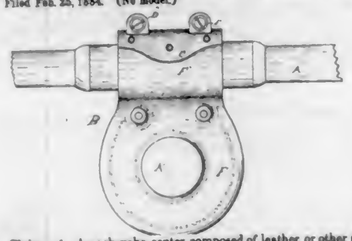
Claim.—1. In a life-raft, the buoys A, constructed of a core consisting of a series of longitudinal air-chambers, a, and surrounded by alternate layers of annular and longitudinal air-compartments, in combination with a filling of granular cork or equivalent placed in the interstices between the same, and with an exterior covering, a^2, for the whole, consisting of canvas or other water-tight material, substantially as described.

2. In a life-raft, the buoy A, consisting of a body constructed of a number of air-chambers, a, and an exterior covering, a^2, for the same, of canvas or like water-proof material, and provided with an air-cock, a^4,

for the purpose of inflating the float, in combination with removable metal guarding-shields a^3, placed at the extreme points of the buoy, substantially as and for the purpose set forth.

3. In a folding life-raft, the combination, with the buoys A and distensible cross-ties E, jointed at their longitudinal centers, and the top bracing-board f', of the secondary distensible cross-ties e, also jointed at their longitudinal centers, and adapted to be attached to the buoys A and to the top bracing-board f', substantially as described.

4. In a buoy or other vessel adapted to float upon water, the combination, with an oil-tank, f^3, and with perforated longitudinal pipes f^5, placed at the sides or other exterior surfaces of the buoy, of tubes f^4 or other conduits adapted to connect the same with the tank, substantially as described, whereby the oil in the tank f^3 may be gradually distributed by means of and through the perforations in the longitudinal pipes, as and for the purpose set forth.



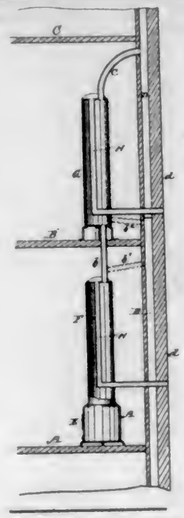
5. In a buoy or other vessel adapted to float upon water, the combination, with an oil-tank, f^3, and with perforated longitudinal pipes f^5, placed at the sides or other exterior surfaces of the buoy, of tubes f^4 or other conduits adapted to connect the same with the tank, substantially as described, and provided with cocks f^6, whereby the oil may be confined in the tank or gradually distributed through the perforated longitudinal pipes at will, as and for the purpose set forth.

6. In a buoy or other vessel adapted to float upon water, the combination, with an oil-tank, f^3, and with perforated longitudinal pipes f^5, placed at the sides or other exterior surfaces of the buoy, of tubes f^4 or other conduits adapted to connect the same with the tank, and provided with two sets of cocks, f^6 and f^7—one, f^6, adapted to supply the pipes f^5 with oil from the tank at pleasure, and the other, f^7, adapted to supply the pipes f^5 with air, water, &c., for cleansing purposes—substantially as described.

7. In a folding life-raft, the combination, with the exterior buoys, A, the distensible cross-ties E, jointed at their longitudinal centers, and the bracing-boards f', of the central float, F, provided with a water-tight chamber, f, and also provided with man-holes f^8, and adapted to contain water and provisions, substantially as specified.

8. In a folding life-raft, the combination, with the exterior floats A, of a central buoy, F, consisting of a water-tight chamber, f, adapted to contain water and provisions, and also provided with an oil-tank, f^3, and of the distensible cross-ties E, jointed at their longitudinal centers, or equivalent devices, for connecting the three floats together, substantially as described

300,074. NECK-YOKE CENTER. PHILIPP J. HEILMAN, Emporia, Kans. Filed Feb. 25, 1884. (No model.)



Claim.—1. A neck-yoke center composed of leather or other suitable flexible material, having its upper or band portion which encircles the yoke divided, substantially as shown and described, in combination with a clamp attached thereto, by which it may be adjustably connected with said yoke.

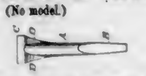
2. In a flexible neck-yoke center, a detachable device in combination therewith, by means of which the upper portion of the center is secured to the yoke-bar and its tension thereabout regulated as required, said device consisting of the plates C C, securely fastened to said center, and provided with the ears D D D' D', with the adjusting screw-bolts E E passing through said ears, for the purpose set forth.

300,075. HEATING AND VENTILATING DEVICE FOR BUILDINGS. AMANDA M. HICKS, Clinton, and ALONZO DISHMAN, Paducah, Ky. Filed July 16, 1883. (No model.)

Claim.—The combination of the stove E, with its drum F on the lower floor, A, of a building, one or more upper drums, G, on the floor or floors above, pipes or ducts connecting the upper portion of each under drum with the lower portion of the drum on the next floor above it, the escape-pipe e for the gaseous products of combustion, the chimney D of the building, and the independent air-supply pipes H, arranged one above the other within the drums and through the chimney to the external atmosphere, and open at their upper or inner ends to the rooms containing the drums, essentially as shown and described, and for the purposes set forth.

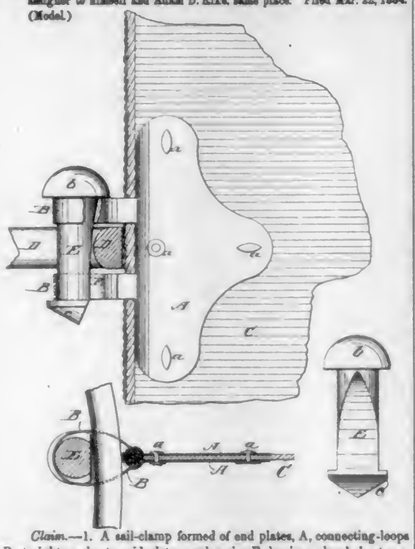
300,075.

300,076. MINING-MACHINE. JOHN R. HOWELLS, Plymouth, and GEORGE SHELLEY, Wilkes-Barre, Pa. Filed Sept. 25, 1883. (No model.)



Claim.—1. In a mining-drill, the box F, supported on a suitable standard and formed in two parts, having screw-threads on the inside, the feed-screw H, shouldered at one end, having its bearing in the box F, and engaging with the screw-thread in the same, and the sleeve I, surrounding the feed-screw H, and having gearing on its periphery, in combination with the shaft L, shouldered at each end, having the worm-gear L^2 and pinion L' mounted on said shaft, and the shaft M, shouldered at each end, and having the gear-wheel M' mounted on the same and meshing with pinion L', all arranged and operating to the end that the drill may be run at a high or low rate of speed, as desired.

2. In a mining-drill, the box F, supported on a suitable standard, and formed in two parts hinged together, having screw-threads on the inside, the feed-screw H, shouldered at one end, having its bearing in the box F, and provided with the keys i i and grooves k, and the sleeve I, surrounding the feed-screw H, and having the lugs l^2, forming key-seats, and the gearing o on its periphery, in combination with the shaft L, shouldered at each end, having the worm-gear L^2 and pinion L' mounted on said shaft, and the shaft M, shouldered at each end, and having the gear-wheel M' mounted on the same and meshing with the pinion L', all arranged and operating substantially as and for the purpose shown and described.

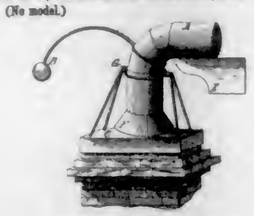


3. In a mining-drill, the standard D, pivoted in the stock A and secured to the adjustable plate E, the box F, supported by the standard D and formed in two parts, having screw-threads on the inside, the feed-screw H, shouldered at one end, having its bearing in the box F, and the sleeve I, surrounding the feed-screw H, and having gearing on its periphery, in combination with the shaft L, shouldered at each end, and having the worm-gear L^2 and pinion L' mounted on said shaft, and the shaft M, shouldered at each end, and having the gear-wheel M' mounted on the same and meshing with the pinion L', substantially as and for the purpose shown and described.

300,077. HEADED SLUG-NAIL. JOHN HYSLOP, Jr., Abington, Mass. Filed Jan. 9, 1884. (No model.)

Claim.—The headed slug-nail consisting of the body A, formed with a rectangular head, C, and tapered webs D, connecting the end parts of the head with the body, and a rectangular wedge-shaped point, B, substantially as set forth.

300,078. SAIL-CLAMP. GEORGE WILLIAM INDER, Thomasville, Ga., assignor to himself and Adam D. Rike, same place. Filed Mar. 22, 1884. (Model.)



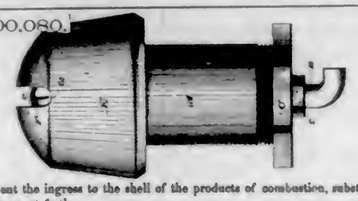
Claim.—1. A sail-clamp formed of end plates, A, connecting-loops B at right angles to said plates, and a pin, E, having a head, *b*, at one end and a conical head, *c*, projecting beyond the side of the bolt at the other end, whereby when the bolt is inserted in the loops the conical head will prevent its vertical displacement, as specified.

2. The combination of the sail C and mast-hoop D with a sail-clamp formed of end plates, A, and connecting-loops B, and a pin, E, having a conical head, *c*, and cut away on one side, as described.

3. As an improved article of manufacture, a sail-clamp composed of end plates, A, and loops B, and a pin, E, having a head, *b*, and a conical head, *c*, and cut away upon one side, as described.

300,079. CHIMNEY-COWL. J. WORTH JACKMAN, HERBERT B. NEIGHBOR, JOHN R. STEER, and SAMUEL F. HAMLITNER, Lafayette, Iowa. Filed Mar. 7, 1884. (No model.)

Claim.—1. In a chimney-cowl, the elbow stayed near the curvature therein by an encircling bearing, and provided with an annular flange at or near the bottom, resting upon anti-friction rollers pivoted in the base, substantially as shown and described.



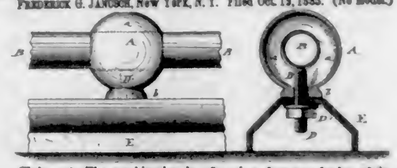
2. In a chimney-cowl, the combination of elbow A, counter-balance B, upper bearing, G, flange *b*, and rollers *a a*, all constructed, arranged, and operating substantially as and for the purpose set forth.

3. In a chimney-cowl, the combination of elbow A, counter-balance B, upper bearing, G, flange *b*, rollers *a a*, casing *c*, ring D, hood F, and vane E, all substantially as shown and described.

300,080. DEVICE FOR PROMOTING COMBUSTION. WALTER MARSH JACKSON, Providence, R. I., assignor to the American Combustion Company, same place. Filed Mar. 12, 1884. (No model.)

Claim.—1. The combination, with an air-heating tube provided at one end with a shell having an elongated air-discharge opening, of a steam-pipe provided with a discharge-nozzle located within said shell, said nozzle having an elongated opening formed therein, the opening in the steam-nozzle being located in close proximity to the air-discharge opening, the parts being constructed and arranged to inject into the fire-box a thin jet of steam enveloped by a thin stratum of heated air and

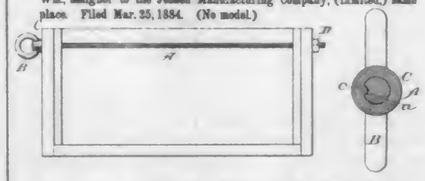
300,080.



prevent the ingress to the shell of the products of combustion, substantially as set forth.

2. The combination, with an air-heating tube provided at one end with a shell forming an enlarged air-chamber, said shell having an elongated air-discharge opening, of a steam-pipe provided with a nozzle located within the shell, said nozzle being provided with an elongated opening located in close proximity to the similar shaped opening in the shell, substantially as set forth.

3. The combination, with the tube provided at or near its opposite ends with the centrally-perforated supports formed integral therewith, and the pipe passing through the tubes and supports, of the enlarged shell secured to the outer end of said tube, and the nozzle secured to said pipe and resting within the shell, all of the above parts combined as described.



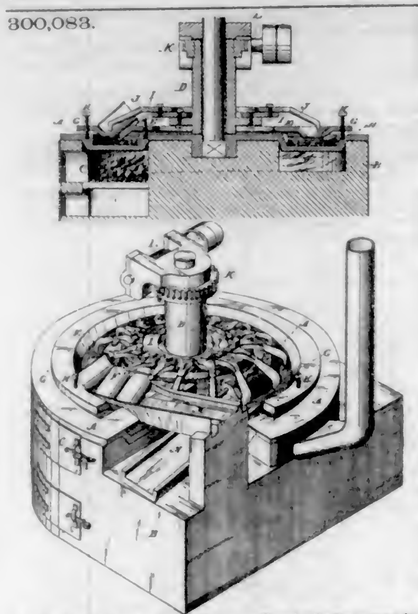
300,081. STUD FOR FIRE-PLACE FRAMES AND FENDER-BARS. FREDERICK G. JANUSCH, New York, N. Y. Filed Oct. 19, 1883. (No model.)

Claim.—1. The combination, in a fire-place frame or fender, of the base of the same, a stud having a hollow body and shank, said shank being cast integral with the body and provided with an interior screw-thread, a threaded bolt passing through the shank, a screw-nut for fastening the bolt, and a fender-bar passing through openings of the hollow stud and locked by the threaded bolt, substantially as set forth.

2. A stud for fender bars and frames, composed of a hollow body having openings for the fender-bar, a shank cast integral with the body and having an interior screw-thread, a threaded bolt screwing in said shank, and a screw-nut applied to the outer end of the screw-bolt, substantially as set forth.

300,082. END-GATE ROD FOR VEHICLES. JENS JENSEN, Racine, Wis., assignor to the Jensen Manufacturing Company, (Limited,) same place. Filed Mar. 25, 1884. (No model.)

Claim.—An end-gate rod for vehicles, consisting of the rod A, provided at one end with the groove *a*, and the ring B, having collar C, with projection *c*, corresponding to said groove, substantially as set forth.



300,083. SOLDERING-MACHINE. MATHIAS JENSEN, Astoria, Oreg., assignor of two-thirds to John FOX and Alsey L. FOX, both of same place. Filed Mar. 22, 1884. (No model.)

Claim.—1. An apparatus for soldering cans or cylinders, consisting of a circular trough for containing solder, with a fire-place and flue beneath, and an angular support upon which the cans roll, with their angles dipping in the solder, in combination with a central disk with arms projecting outward, to roll the cans around, substantially as herein described.

2. In a soldering apparatus, a circular solder-trough with fire-place beneath, and arms driven by a central flange, by which the cans are rolled around the circle, in combination with exterior and interior rings having angular faces upon which the cans roll and by which the angle to be soldered is caused to dip into the solder, substantially as herein described.

3. In a soldering apparatus, the circular solder-trough, fire-place, and can-propelling arms, in combination with exterior and interior rings

300,083.

with inclined faces upon which the cans roll, and adjusting-screws by which the rings may be raised or lowered, substantially as herein described.

4. In a soldering apparatus, a circular solder trough or pan, fire-place, and can supporting and adjusting rings, in combination with removable central disks having arms projecting from the periphery to drive the cans, whereby different-sized cans may be soldered, substantially as herein described.

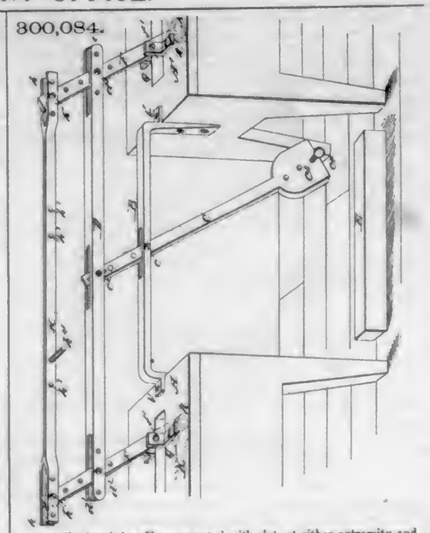
5. In a soldering apparatus, a circular solder trough or pan, fire-place, and can supporting and adjusting rings, in combination with a central disk with projecting arms, and a worm-gear, pulley, or other driving mechanism by which it is rotated, substantially as herein described.

6. In a soldering apparatus, a circular solder trough or pan, fire-place, and can-supporting rings, and a central rotating disk with arms projecting so as to drive the cans, in combination with an inclined chute to deliver the cans into the channel, said chute having its lower end inclined or canted, so as to deliver the cans at the proper angle, substantially as herein described.

7. In a soldering apparatus, a circular solder trough or pan with fire-place, can-supporting rings, and central rotating disk with arms projecting so as to move the cans around, and inclined chute by which the cans are delivered into the trough, in combination with a second inclined chute leading downward from the delivery-point of the apparatus, substantially as herein described.

8. In a soldering apparatus, a circular trough or pan for containing solder, and means for supporting the cans at the proper angle and rolling them around the circle, in combination with a fire-place beneath the pan having a circular flue extending around beneath the pan to the chimney, and tapering or decreasing in size from the fire-place to the chimney, substantially as herein described.

300,084. HAND AND FOOT POWER. OWEN E. JONES, Wymore, Nebr. Filed Nov. 2, 1883. (No model.)



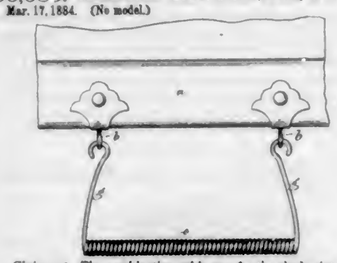
Claim.—1. The pendulous operating-lever C, constructed, substantially as described, with a weight and adjustable foot-rest at its lower extremity, and slot and adjustable-pivot apertures at the upper end, and adapted for connections with the bars B and D, as set forth.

2. The cross-bar B, constructed, as described, with a central slot and pivot to receive and support the pendulous lever C, as set forth.

3. The connecting-bar D, constructed with a central slot and pivot for connection with the upper end of the lever C, and slots and perforations for adjustable pivots at either end, and adapted for connections with the levers F F, substantially as set forth.

4. The oscillating levers F F, constructed with perforations for adjustable pivots, and adapted for connections with the bars D and H and with the machine to be operated, substantially as set forth.

300,084.



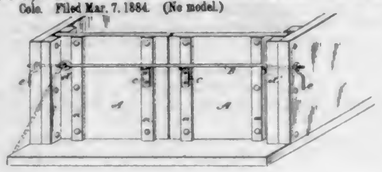
5. The hand-bar H, constructed with slots at either extremity and apertures for adjustable pivots, and adapted for connections with the levers F F, substantially as set forth.

6. The combination of the pendulous lever C, the cross-bar B, connecting-bar D, connecting-bar H, and levers F F, substantially as set forth.

7. The combination, with the lever C, cross-bar B, connecting-bar D, levers F F, and connecting-bar H, of the connecting-bar K and bell-crank lever L, substantially as set forth.

300,085. SHADE-PULL. HUBERT L. JUDD, Brooklyn, N. Y. Filed Mar. 17, 1884. (No model.)

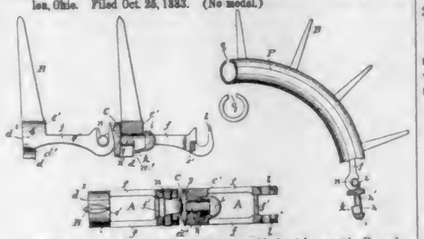
Claim.—1. The combination, with eyes for the shade-slat, of a pull having the body *e* and end portions, *g*, with hooks at the upper ends of the end portions for engaging with the eyes, substantially as set forth.



2. A shade-pull having a body, *e*, and end portions, *g*, terminating as hooks, the pull being elastic, so that the hooks can be sprung into or removed from the suspending-eyes.

3. The shade-pull having end pieces and a body formed of a wire helix, substantially as set forth.

4. The pull having a continuation of the wire helix formed into suspending end pieces, substantially as set forth.

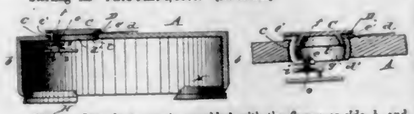


5. A pull having ornamental end pieces, *g*, and a body formed of a wire helix, *e*, substantially as set forth.

300,086. WAGON END-GATE. DAVID B. KRAGY, Idaho Springs, Colo. Filed Mar. 7, 1884. (No model.)

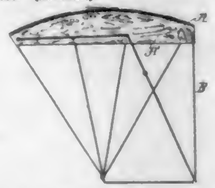
Claim.—The combination, with a wagon-box, of the hinged end-gate provided with brackets *c c*, rod B, linked permanently at one end to an eyebolt, *d*, passing through the box, and there provided with a hand-nut, *e*, and said rod formed at the other end with a hook, and an eyebolt passing through the side of the box, to engage said hook, and a hand-nut, *e*, for tightening the rod, substantially as set forth.

300,087. HARVESTER CHAIN RAKE. HENRY KETTERING, Massillon, Ohio. Filed Oct. 25, 1883. (No model.)



Claim.—1. A chain having a link provided with a tooth, B, and a coupling for the links having a round shank whereby the links may turn, as set forth.

2. A chain having a link provided with a tooth, B, and a coupling for the links having a round shank, and a stop device to limit the turn of the link on the shank, as set forth.



3. A chain having its links provided with a tooth, B, and a coupling for the links having a round shank, in combination with a slotted tube or equivalent guide in which the chain travels, as set forth.

300,088. DUST-PROOF CAP FOR WATCHES. CASPER ENTLER, Sterling Ill. Filed June 4, 1883. (No model.)

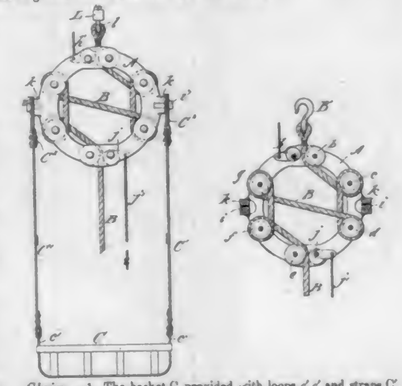
Claim.—The dust-cap A, provided with the flange or side *b*, and hole *c*, the latter having concave walls, in combination with the open ring D, provided with the indicator *d* and lug *e*, and having its exterior fitted to conform to the sides of the hole *c*, and its interior walls slightly concave, and the lid C, having its periphery slightly convex to fit in and be held by the interior walls of the ring D, and slightly enlarged vertically on a portion of its outer edge, to fill the interval in the open ring D, whereby the ring D is sprung into the hole *c* and held therein by its own elasticity, and the lid C clamped within such ring D, and such hole effectually closed, substantially as shown and for the purpose described.

300,089. VEHICLE-TOP. FRANK A. KOEHEK, Milwaukee, Wis. Filed Apr. 30, 1883. (No model.)

Claim.—1. An improved carriage-top made of scale-board having side pieces and independent top piece, whose side edges overlap the inner upper side edges of the side pieces and are secured thereto, substantially as set forth.

2. In an improved carriage-top, the side pieces, A' A', made of scale board, and curved in cross-section, and having vertical rear ends integral therewith, in combination with the top piece, A, formed of a single piece of scale-board bent into shape, and whose side edges overlap and rest upon the inner upper side edges of the side pieces, substantially as set forth.

3. In a carriage-top, a rolling curtain formed of a backing of cloth having transverse slats secured thereto, each slat being beveled in the same direction along both its upper and lower edge, substantially as set forth.



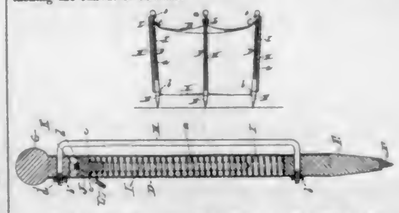
4. An improved carriage-top made of scale-board, and consisting of the side pieces, A' A', secured directly to the bows, and the top piece, A, resting upon and secured solely to the inner upper side edges of the side pieces, substantially as shown.

5. In an improved carriage-top, the rigid top piece, A, of scale-board, supported solely on the underlying inner upper side edges of the side pieces, A' A', substantially as shown.

6. In a carriage-top, the rigid side pieces, A' A', made of scale-board, curved in cross-section, and having vertical rear ends integral therewith, substantially as shown.

300,090. FIRE-ESCAPE. JOHN LARSON and AUGUST W. HAGSTROM, Stockholm, Wis. Filed Mar. 8, 1884. (No model.)

Brief.—A fire-escape consisting of two rings joined together by screw-tapped spacing-blocks, to which are secured apertured plates, to which the basket-straps are fastened. The escape-rope is rove between the rings over the friction-rolls therein journaled.



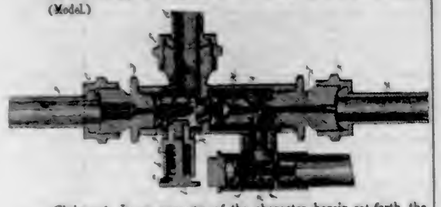
Claim.—1. The basket C, provided with loops *c' c'* and straps C', secured at their lower ends to said loops and at their upper ends to the apertured plates C², whereby the basket may be readily secured to the opposite sides of the pulley-plates of the fire-escape, as shown and described.

2. The rings A A, joined together and spaced by the blocks *k*, which are screw-tapped, substantially as and for the purposes set forth.

3. The combination, with the rings A A, having the pulleys *b*, *c*, *d*, *e*, *f*, and *g*, and the cam-levers *h j*, journaled between them, of the chair C, attached to the rings A, and the rope B, passing around the pulleys *c d* and *f g*, and between the pulleys *b e* and cam-levers *h j*, the said cam-levers being provided with operating ropes or cords, substantially as and for the purposes set forth.

300,091. FIRE-ESCAPE. WILLIAM LAWRENCE, Worcester, Mass. Filed May 9, 1883. (No model.)

Brief.—Hollow posts having suitable handles secured thereto, a spiral spring within them, and a clevis bolted to their upper ends for attaching the canvas or blanket.



Claim.—1. The combination, with canvas B, of the hollow posts D, provided with handles H, and having spiral springs I within said posts, or upon the outside thereof, and clevises L, or other suitable devices, as a means of attaching to the upper ends of said springs I said canvas B, all constructed and arranged substantially as shown and described.

2. The hollow post D, provided with a suitable handle, in combination with a spiral spring, I, and clevis L at the upper end of said spring, for attaching a canvas to said spring, substantially as shown and described.

3. The post D, provided with longitudinal slots *a*, and handle H, in combination with spiral spring I, bolt K, and clevis L, arranged and operated substantially as shown and described.

300,092. INJECTOR. JOHN LOFTUS, Albany, N. Y., assignor of two-thirds to George W. Richardson, Boston, Mass. Filed Sept. 11, 1883. (Model.)

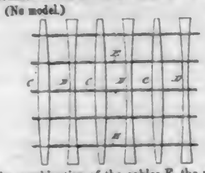
Claim.—1. In an apparatus of the character herein set forth, the suction-pipe having the conical mouth or inlet and the cylindrical stem, the latter being provided with a movable valve, substantially as shown and described.

2. The steam-inlet pipe having the cylindrical stem, the movable nozzle applied thereon, means, substantially as explained, for raising and lowering said nozzle from the exterior of the apparatus, and the suction-pipe provided with a gravitating-valve, these several parts being arranged and combined substantially as shown and described.

3. In an injector, the hollow plug tapped through the wall or jacket, the nozzle, the disk carrying the crank-pin and mounted upon a shaft projecting through said plug, and a spring for maintaining the disk in contact with the inner end of the plug, combined and arranged substantially as shown and described.

4. In combination with the shaft projecting through the hollow plug upon the side of the injector, provided with a sprig and carrying a disk and crank-pin for operating the regulating-nozzle, the indicator-pin projecting from said shaft, substantially as and for the purposes set forth.

5. In an injector, the loose check-valve mounted upon the lower end of the suction-tube, and arranged to automatically close the space between the lower mouth of the said tube and the upper mouth of the combining-cone, the parts being combined and arranged substantially as shown and described.



6. In an injector, the combining-cone having a check-valve resting upon its upper mouth and overflow-outlets near its base, the same being combined with the suction-tube, delivery-tube, and overflow-tube, substantially as and for the purposes explained.

7. In an injector, the suction-tube arranged to be adjusted automatically by back-pressure upon its under surface, the same being combined with a check-valve and the combining-cone, substantially as and for the purposes set forth.

8. In combination with the overflow-tube of an injector, an automatically-operating valve having the upper and lower seats, as explained, and adapted to operate, substantially as and for the purposes set forth.

9. The herein-described injector, having the regulating-nozzle, means for operating the same, a check-valve applied upon the suction-tube, the combining-cone, delivery-tube, and overflow-tube provided with an automatically-operating valve, the whole arranged and combined substantially as shown and described.

300,093. PICKET FENCE. ALPHEUS G. LYNE, Washington, D. C. Filed Sept. 20, 1883. (No model.)

Claim.—1. The combination of the cables E, the pickets C, having opposite convex longitudinal edges, and the pickets D, having opposite concave longitudinal edges, the pickets C and D being arranged in alternate order, substantially as shown and described.

2. The combination of a number of holding-cables and a number of differently-shaped pickets, each picket having two opposite sides or edges made approximately carved, and the several forms of pickets being arranged with a curved side of one parallel with or equidistant from the adjacent carved side of another, substantially as described and shown.

300,094. FENCE-MAKING MACHINE. ALPHEUS G. LYNE, Washington, D. C. Filed Dec. 18, 1883. (No model.)

Claim.—1. A wire-twister consisting of a smooth cylindrical body, on which it is adapted to rotate, having a longitudinal perforation near its periphery for holding one wire at a given distance from its center, and a longitudinal groove in its periphery opposite to the perforation for receiving and holding a removable wire at an equal distance from its center, substantially as shown and described.

2. A wire-twister consisting of a cylindrical body having a longitudinal perforation for holding one wire at a given distance from its center, and a longitudinal groove for receiving and holding a removable wire at an equal distance from its center, in combination with a bearing having an opening or slot with which the said groove may register, to receive the removable wire, substantially as shown and described.

3. A wire-twister consisting of a cylindrical body having a longitudinal perforation and groove therein, and means for holding a spool of wire on one end thereof, to allow the wire to be passed through said perforation, in combination with means for passing a removable wire in and out of engagement with said groove, substantially as shown and described.

4. The combination of a suitable supporting-frame, a number of twisters having cylindrical bodies, on which they may rotate, each provided with means for holding one wire and preventing it from being moved radially from the twister, and means for holding the other wire and permitting it to be moved radially from the twister, means for gearing the several twisters together, a movable carrier for passing the removable wires in and out of engagement with the twisters, and tensioning devices for the wires, substantially as shown and described.

5. The combination of a number of twisters, each having a cylindrical body provided with means for holding one wire and preventing it from being moved radially from the twister, and means for holding another wire and permitting it to be moved radially from the twister, a supporting-frame having a slot or opening leading to each twister, means for gearing the several twisters together and for rotating or oscillating the same, a rocking frame for passing the removable wires in and out of engagement with the twisters, and tensioning devices for the wires, substantially as shown and described.

6. The combination of a number of twisters, each having means for holding one wire and preventing it from being moved radially from the twister, and means for holding another wire and permitting it to be moved radially from the twister, a supporting-frame, substantially as described, a rocking frame for passing the removable wires in and out of engagement with the twisters, and means for connecting the twisters and rocking frame together, whereby they may be operated in turn, substantially as specified.

7. The combination of a number of twisters, each having means for holding one wire and preventing it from being moved radially from the twister, and means for holding another wire and permitting it to be moved radially from the twister, a supporting-frame, a rocking frame for passing the removable wires in and out of engagement with the twisters, the mutilated gear A' and means for gearing it with the twisters, the gear H', adapted to lock the gear A', the shaft M', and mutilated gear P', the shaft Q', carrying the eccentrics S' T' and bevel-pinion R', and means for connecting the eccentrics with the rocking frame, substantially as shown and described.

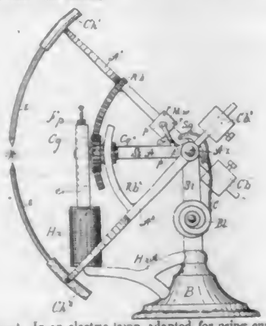
8. The combination of the rocking frame, a transverse shaft connected to the said frame, and a transverse slide connected to the said shaft, substantially as and for the purpose set forth.

9. The combination of the twisters having passages for two series of wires, a series of spools carried by the twisters, the wires of which spools are passed through the twisters, a series of spools supported above the machine, and a rocking frame adapted to place the wires of said latter

series of spools in and out of engagement with the twisters, and having tensioning devices for said wires, substantially as specified.

10. The rocking frame or lever for placing the removable wires in and out of engagement with the twisters, in combination with the slide for pressing the pickets back into position for being secured in the wires, and means for connecting the slide with the said rocking frame, and the web-spooling mechanism having a lever for rotating the same, and means for connecting said lever with the rocking frame, substantially as and for the purpose specified.

11. The combination, with the rocking frame or lever, of the slide for pressing the pickets back into position for being secured in the wires, and means for connecting the slide with the said rocking frame, and the web-spooling mechanism having a weighted lever, ratchet-wheel, and pawls, and means for connecting said weighted lever with the rocking frame, substantially as shown and described, whereby the two said functions of adjusting the pickets and winding the web may be performed by operating the said rocking frame or lever, as set forth.



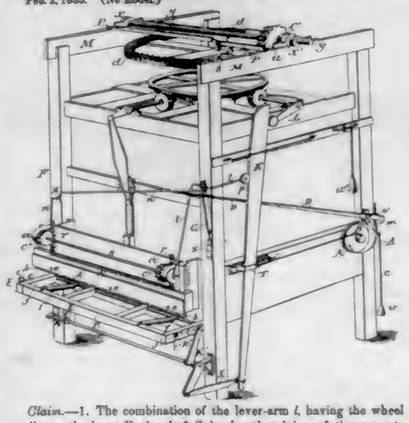
12. The combination, with the rocking frame or lever, of the web-spooling shaft having a ratchet-wheel thereon and a retaining-pawl for the same, the weighted lever having a pawl for rotating said shaft, and the connection Z', connecting the weighted lever to the said rocking frame or lever below the pivot of the latter, substantially as and for the purpose set forth.

13. The fence-spooling shaft having a picket-holding device provided with a removable or adjustable socketed piece for receiving one end of a picket, substantially as shown and described.

14. The fence-spooling shaft having a stationary collar provided with a socket for one end of a picket, and a removable collar having a socket for the opposite end of the picket, and means for preventing the latter collar from rotating on the shaft, substantially as shown and described.

15. The combination, with the rocking frame having a segmental rack, of the picket-feeding device consisting of the oscillatory shaft having curved arms for holding a picket and a pinion adapted to be operated by the rack, and the slide having bent fingers adapted to receive and hold the picket, substantially as shown and described.

300,095. ELECTRIC LAMP. MIRABEAU N. LYNN, Indianapolis, Ind., assignor to the Ohio Power and Light Company, Dayton, Ohio. Filed Aug. 23, 1883. (No model.)



Claim.—1. In an electric lamp adapted for using curved carbons, a base supporting an axis, upon which are mounted a pair of arms carrying carbon-holders, the arms rotating in opposite directions, and actuated by suitable mechanism through differential gear-wheels mounted on a sleeve carrying a face-plate, whose movement is adapted to be reversed by a brake actuated by a current of electricity passing through a helix provided with a core connected with the brake mechanism, all combined substantially as described.

2. In an electric lamp, the base B, having vertical and horizontal arms, the helix Hx, with its core Hx c, axis Ax, arms A' A², provided with counter-balances Cb' Cb², movable weight Mw, rack-bars Rb' Rb², and carbon-holders Ch' Ch², the differential gears Cg' Cg², face-plate Fp, tension-spring cs', and the brake mechanism connected with the core and operating upon the face-plate Fp, all combined substantially as described.

3. In an electric lamp, a feeding mechanism operated by a mechanical force which exerts a constant and uniform strain at any point of their movement upon a pair of arms mounted on a common axis, adapted to rotate in opposite directions upon such axis, and carrying the carbons, the arms provided with suitable stationary weights, and the upper arm with a movable weight, so that a balance is preserved at all times while the lamp is burning, the mechanical force drawing the arms together, in combination with suitable mechanism actuated by an electric current for separating the arms and reversing the feeding mechanism at the proper point to focus the light at one point, substantially as described.

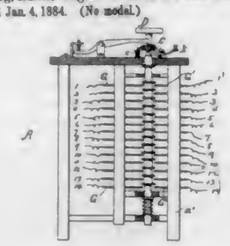
300,096. BRICK-MACHINE. HENRY MARTIN, Lancaster, Pa. Filed Feb. 2, 1883. (No model.)

Claim.—1. The combination of the lever-arm *l*, having the wheel or pulley *p*, the lever E, the shaft S, having the pinions c^2, the supports *a a*, the gate A', having the racks *r r*, and the lever *l'*, having the weight *w'*, constructed and operated substantially as set forth.

2. The combination of the lever D, the friction-wheel B, and the friction-band A, the end *m* of which has a screw-thread cut in it, and is thereby attached to the end of the lever D by the nut V, in the manner and for the purpose specified.

3. The combination of the lever D with the arm G, having the bracket *f*, the rods *n n' n²*, the cranks H H', and the plate *g*, hinged to the plate *g'*, substantially as set forth.

300,097. TOY. JAMES E. A. MCALLISTER, Albany, N. Y. Filed Feb. 13, 1884. (Model.)



Claim.—1. The ball D, formed of two hollow semi-spherical sections hinged to each other, provided opposite the hinge with an opening, and pressed against each other by a spring or elastic band surrounding the ball, substantially as herein shown and described.

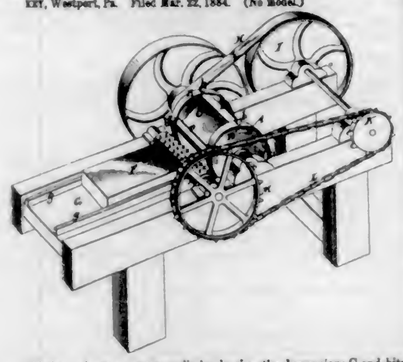
2. The combination, with the ball D, formed of two semi-spherical hollow sections hinged to each other and pressed together by a spring or elastic band, and having an opening opposite the hinge, of an elastic string secured to the ball at the joint or hinge, substantially as herein shown and described.

3. The combination, with the hollow semi-spherical sections D', each having a groove, F, and cut away to form an opening, E, of the spring or elastic band G in the grooves, and a hinge uniting the two sections, substantially as herein shown and described.

4. The combination, with a hollow ball formed of two hinged and spring-pressed sections, provided with an elastic cord at its hinge or joint, of the board A, provided with apertures B, and the pins C, provided with heads C', substantially as herein shown and described.

300,098. MULTIPLE-CIRCUIT CLOSER. WILLIAM F. C. M. MCCARTY, St. Petersburg, Russia, assignor to James F. Pierce, Trustee, New York, N. Y. Filed Jan. 4, 1884. (No model.)

Claim.—1. In an apparatus for the simultaneous transmission of given electrical impulses to different termini, the combination of a series of independent electrical circuits, each of which is connected with an independent service of current, and is provided with adjacent terminals arranged in predetermined order, a suitable casing, housing, or framing for containing the above-mentioned terminals of all the circuits, a traveling rod provided with a series of contact-bars arranged in predetermined order correspondent to that of the terminals aforesaid, and normally out of contact with said terminals, but adapted to make contact between them, means for actuating the traveling rod so as to bring its contact-bars into contact with said terminals, and means for returning said traveling rod and bars out of the above-mentioned contact, substantially as and for the purposes set forth.



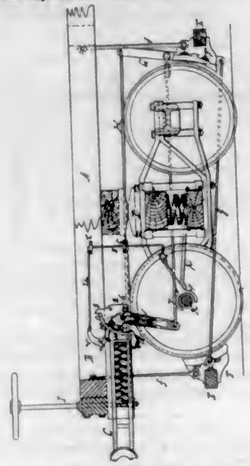
2. In an apparatus for the simultaneous transmission of given electrical impulses to different termini, the combination of a series of independent electrical circuits, each of which is provided with adjacent terminals arranged in predetermined order, a suitable casing, housing, or framing for containing the above-mentioned terminals of all the circuits, a traveling rod or series of traveling rods, each provided with a series of contact-bars corresponding in order and number to the aforesaid terminals, and an impulse-bar common to the traveling rods aforesaid, the arrangement being such that a movement of the impulse-bar occasions a movement of the traveling rods and the contact of the contact-bars with the terminals with which they are respectively adapted to operate, substantially as set forth.

3. In an apparatus for the simultaneous transmission of given electrical impulses to different termini, the combination of a series of independent electrical circuits, each of which is provided with adjacent terminals arranged in predetermined order, a suitable casing, housing, or framing for containing the above-mentioned terminals of all the circuits, traveling rods, each provided with a series of contact-bars arranged in predetermined order correspondent with that of the terminals aforesaid, means for returning said traveling rods to their normal position after enforced movement therefrom, and an impulse-bar common to the traveling rods aforesaid, substantially as and for the purposes set forth.

4. In an apparatus for the simultaneous transmission of given electrical impulses to different termini, the combination of a series of independent electrical circuits, each of which is provided with adjacent terminals, a suitable casing, framing, or housing for containing the above-mentioned terminals of all the circuits, a series of spring-controlled traveling rods, each provided with a series of contact-bars corresponding in number and order with the terminals aforesaid, an impulse-bar, and switch-keys adapted to be interposed between the traveling rods and the impulse-bar or to be removed from interposition, substantially as and for the purpose specified.

5. In an apparatus for the simultaneous transmission of given electrical impulses to different termini, the following instrumentalities in combination: a series of independent electrical circuits, each of which is provided with adjacent terminals, traveling rods provided with a series of contact-bars corresponding in number and position to said terminals and adapted to make contact between the same, but normally out of contact with said terminals, an impulse-bar common to all of the traveling rods, and adapted to act upon all of them in such manner as to cause their contact with the terminals aforesaid, means for actuating said impulse-bar, and a suitable casing, framing, or housing for containing the said assembled instrumentalities, substantially as and for the purpose specified.

300,099. WOOD-SPLITTING MACHINE. WILLIAM TIPTON MCCLOSKEY, Westport, Pa. Filed Mar. 22, 1884. (No model.)



Claim.—A rotary cutter-cylinder having the depressions C and bits D, in combination with a spiked feed-roll, a table having guides for the block of wood which is to be cut up, and an operative mechanism, substantially as described, whereby the block of wood may be fed, cut up, and the pieces of kindling discharged, as set forth.

300,100. SUSPENDING DEVICE. GEORGE W. MCGILL, Riverdale, N.Y. Filed Dec. 19, 1883. (No model.)

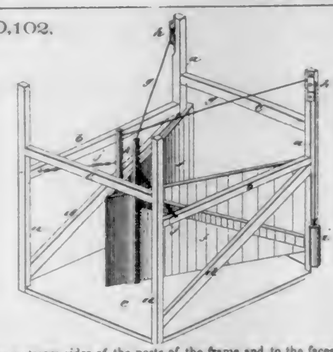
Claim.—As an improved article of manufacture, the improved ring-staple for binding and suspending papers, &c., consisting of a broad-headed sheet-metal staple and a loop or ring hinged together, substantially as shown, to enable the loop or ring to be opened or folded, substantially as set forth.

300,101. LOCKING MECHANISM FOR CAR-BRAKES. SAMUEL WORTHINGTON MCMUNN, CHARLES JOHN SCHILLER, and EDWARD BAKER LEIGH, St. Louis, Mo., assignors to the American Brake Company, same place. Filed Sept. 14, 1883. (No model.)

Claim.—1. The combination, with automatic car-brake mechanism, of an automatic locking device consisting of a gravitating pawl pivoted to a fixed part of the car-frame, and adapted to engage and lock the brake-actuating mechanism when the brakes have been applied, substantially as and for the purposes specified.

2. The combination, with a movable draw-bar, of a lever for actuating the brakes, said lever provided with a ratchet, and an automatic pawl pivoted to a fixed part of the car-frame, and adapted to engage with the ratchet of the brake-lever, substantially as and for the purposes specified.

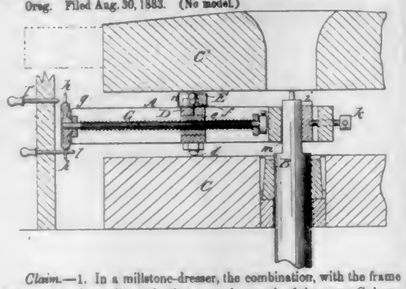
3. The combination, with automatic brake mechanism, of a movable draw-bar, an automatic pawl for locking the brake mechanism when the brakes are applied, and means for connecting the free end of the pawl directly to the draw-bar, substantially as and for the purpose specified.



4. The combination, with brake mechanism for applying the brakes, of a ratchet-faced lever pivoted in rear of the draw-bar and actuated thereby, a gravitating dog or pawl arranged to engage with the ratchet-faced lever, a movable draw-bar, and a pawl-trip actuated by the draw-bar, substantially as and for the purposes specified.

300,102. FLOOD-GATE. JAMES MONROE METCALF, Enfield, Ill. Filed Jan. 23, 1884. (No model.)

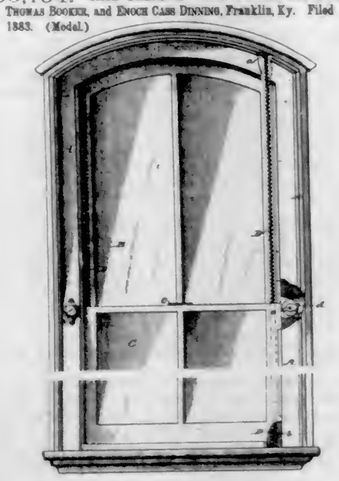
Claim.—1. The combination, in a flood-gate, of the supporting-frame consisting of posts *a*, connecting-timbers *b c*, and braces *d*, gates *f*, weights and cords *i g*, and check cords or chains *j*, substantially as described.



2. In combination with the rectangular frame-work, the gates *f*, having vertical cleats *l*, and the end hinges, *k*, said hinges being secured

300,102.

to the upstream sides of the posts of the frame and to the faces of the cleats next to the sides of the frame-work, as described.

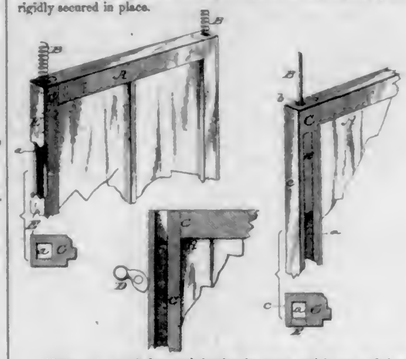


300,103. MILLSTONE-DRESSING MACHINE. JOHN MILLER, Milton, Oreg. Filed Aug. 30, 1883. (No model.)

Claim.—1. In a millstone-dresser, the combination, with the frame A, having the inwardly-projecting central ways, *b*, of the screw G, bearing in the frame A, and provided with a lever-wheel, *g*, the carriage D, having slots in its ends to receive the ways *b*, and the tools E, with cups *n*, secured by their nuts upon their upper ends, and the stops *l l'*, substantially as and for the purpose set forth.

2. In a millstone-dressing apparatus, the frame for holding the upper stone, consisting of a series of connected ring-sections, I I, forming an annular clamp, pins *r r*, for supporting the stone, and adjustable legs *s s*, for raising and lowering it, essentially as described.

300,104. SASH-BALANCE. JOHN BARTLETT MONTAGUE, JAMES THOMAS BOOKER, and ENOCH CASS DINNING, Franklin, Ky. Filed July 13, 1883. (Model.)



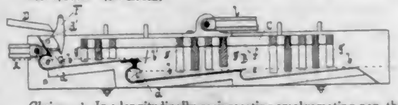
Claim.—1. A window-sash having its upper and lower ends bored vertically and the intermediate portion cut away, substantially as shown and described, to receive suspending-springs.

2. A window-sash provided with longitudinal grooves or recesses in its sides, and with covering-strips applied to said grooves and rigidly secured in place, their outer faces being made flush with the faces of the sash, as and for the purpose explained.

3. In combination with a sash having grooves or recesses *a* in its stiles and a broad bearing-face, *c*, at its ends, suspending-springs B, seated in the recesses *a*, and a frictional locking device bearing against face *c*, as and for the purpose set forth.

300,105. WINDOW. JOHN BARTLETT MONTAGUE, JAMES THOMAS BOOKER, and ENOCH CASS DINNING, Franklin, Ky. Filed Jan. 29, 1884. (No model.)

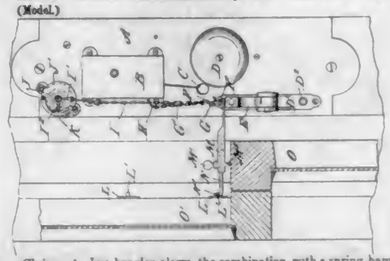
Brief.—Consisting of both ends of the side rails bored vertically, the rails having longitudinal recesses in their sides and covered by strips rigidly secured in place.



Claim.—1. A window-sash having its upper and lower ends bored vertically and the intermediate portion cut away, substantially as shown and described, to receive suspending-springs.

2. A window-sash provided with longitudinal grooves or recesses in its sides, and with covering-strips applied to said grooves and rigidly secured in place, their outer faces being made flush with the faces of the sash, as and for the purpose explained.

3. In combination with a sash having grooves or recesses *a* in its stiles and a broad bearing-face, *c*, at its ends, suspending-springs B, seated in the recesses *a*, and a frictional locking device bearing against face *c*, as and for the purpose set forth.



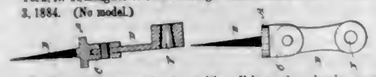
300,106. AMALGAMATOR. HENRY MOON, Thomasville, N. C. Filed Feb. 9, 1884. (No model.)

Claim.—1. In a longitudinally-reciprocating amalgamating-pan, the bottom thereof provided with two wave-plates, *c c'*, having the horizontal extensions *d*, and located at different heights within the pan, substantially as specified.

2. In combination with the longitudinally-reciprocating amalgamating-pan B, and the chute D, the vibratory funnel F, and the link G, which connects it to the said pan, substantially as and for the purpose specified.

300,107. COMBINED FIRING AND BELL-RINGING BURGLAR-ALARM. CHARLES L. MORRISON, Brooklyn, N. Y. Filed Nov. 24, 1883. (Model.)

Claim.—1. In a burglar-alarm, the combination, with a spring-hammer, a bell, a clock-work mechanism for operating the bell, and a hook, F, for holding the hammer cocked, of the chain G', secured to the clock-work mechanism, and adapted to connect the said clock-work mechanism with the hook F, the chain I, adapted to be secured to the hook F, and fastened to an arm, I', of a shaft, J, provided with an arm, I^3, a spring acting on the shaft J, and the pivoted lever K, provided with a notch for receiving the end of the arm I^3, substantially as herein shown and described.

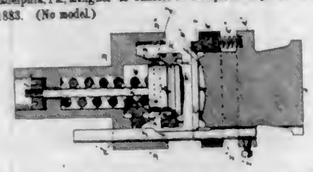


2. In a burglar-alarm, the combination, with a spring-hammer, a bell, and a clock-work mechanism for operating the bell, of a pivoted hook for holding the hammer cocked, a lever resting on the upper surface of the top rail of the bottom sash, and having one end held on the upper sash and the other end under the hook, for holding the spring-hammer cocked, substantially as herein shown and described.

3. In a burglar-alarm, the combination, with a spring-hammer, a bell, and a clock-work mechanism for operating the bell, of the hook F, for holding the spring-hammer cocked, the lever M, provided with the extension-rod N and with the spurs or lugs M^2 on the under side, and the ring l, provided with a cross-piece, L', which ring is fastened on the window, substantially as herein shown and described.

4. In a burglar-alarm, the combination, with the plate D', of the hammer E, pivoted between the jaws of the plate D', and provided at its free end with an aperture or recess, *a*, and the hook F, pivoted to the upper end of the plate D', and provided with an eye, F', substantially as herein shown and described.

5. In a burglar-alarm, the combination, with a casing, J', containing a spiral spring, of the spindle J, held in the casing J', and connected with the spring, the pointed arm I^3 on the spindle J, the arm I', the pivoted lever K, provided with a notch for receiving the end of the arm I^3, and of an alarm device connected with the arm I' of the spindle J, substantially as herein shown and described, whereby the alarm device can be released, by withdrawing the curved arm K, to release the arm I^3 of the spindle J, to permit the spring in the casing to act on the spindle and throw the same, thus causing the arm I' to pull on the chain and start or release the alarm.



300,108. SHADE-ROLLER HANGER. WILLIAM J. MULLEN, New York, N. Y., assignor to Frank George Gallon, Hoboken, N. J. Filed Apr. 3, 1884. (No model.)

Claim.—1. The combination, with a disk or plate having a screw on its upper surface and lugs or jaws on the under surface, of a hanger for receiving the pins of a curtain-roller pivoted between the said jaws or lugs, substantially as herein shown and described.

2. The combination, with the plate or disk A, having a screw, B, on its upper surface and lugs C on its lower surface, of the hanger D, pivoted between the lugs, which hanger is provided with a socket at its free end, substantially as herein shown and described.

300,109. DIE FOR FORMING WATCH-CASES. THEODORE MUELLER, Philadelphia, Pa., assignor to Charles N. Thorpe, same place. Filed Apr. 26, 1883. (No model.)

Claim.—1. The combination of a female die, a male die, and an expanding or ring die, carried by said male die, with means to expand said ring-die and displace it from said male die, substantially as and for the purpose specified.

2. The combination of a female die, a male die, and an expanding ring-die, carried by said male die, with a crushing-die and means to expand said ring-die, substantially as and for the purpose specified.

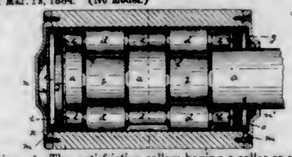
3. The combination of a female die, a male die, and an expanding ring-die, carried by said male die, with a crushing-die, means to expand said ring-die, and means to control the relative time of action of the various dies, substantially as and for the purpose specified.

4. The combination of a female die, a male die, and an expanding ring-die, carried by said male die, with a crushing-die, means to expand said ring-die, and means to support and return said ring-die to the male die after being displaced therefrom, substantially as and for the purpose specified.

5. The combination of a female die, a male die, and an expanding ring-die, carried by said male die, with a crushing-die, means to expand said ring-die, means to control the relative time of action of the various dies, and means to support and return said ring-die to the male die after being displaced therefrom, substantially as and for the purpose specified.

6. The combination of dies A, E, K, and D' *d* and connecting mechanism, substantially as and for the purpose specified.

7. The combination of dies A, E, K, and D' *d*, ring C, and connecting mechanism, substantially as and for the purpose specified.



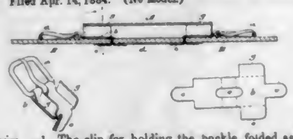
8. The combination of dies A, E, K, and D' *d*, body D, rod F, nut *f*, spring G, and locking mechanism to cause said die E to move with or be free of body D, substantially as and for the purpose specified.

9. The expanding ring-die K, composed of segments K', held together by springs, the inner and lower edges of said die being beveled, substantially as and for the purpose specified.

10. The expanding ring-die K, composed of segments K^1, held together by springs, the upper and lower inner edges of said die being beveled in opposite directions, substantially as and for the purpose specified.

11. The expanding ring-die K, composed of segments K', held together by springs, the upper and lower inner edges of said die being beveled in opposite directions, the point of juncture of said beveled edges being provided with fins *d*, substantially as and for the purpose specified.

300,110. ANTI-FRICTION ROLLER. CHARLES NAU, Allegheny, Pa. Filed Mar. 19, 1884. (No model.)



Claim.—1. The anti-friction rollers having a collar or collars and a recessed portion or portions, so as to form two separate bearing-surfaces of different diameters, in combination with a shaft or journal having similar collar or collars and recess or recesses, the edges or ends of which collars are beveled at different angles, so that they shall not come in contact with each other at their beveled edges, excepting on a line at the apex of the angle, substantially as and for the purpose specified.

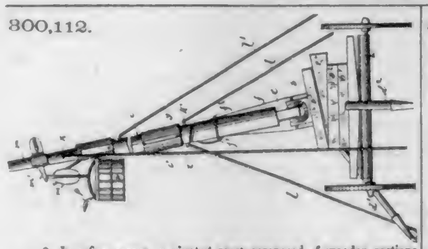
2. The anti-friction rollers having beveled edges arranged around a shaft or journal in a journal-box, and securing collars or rings the edges of which are beveled, so that the rollers shall not come in contact therewith at the beveled edges, excepting on a line at the apex of the angles formed by the bevel of the collars and ring, substantially as and for the purpose specified.

3. Anti-friction rollers interposed between a journal and box, in combination with a spring or springs arranged between the ends of the rollers and the ends of the box, substantially as and for the purpose specified.

300,111. STRAP AND BUCKLE LOOP. FRED A. NEIDER, Augusta, Ky. Filed Apr. 14, 1884. (No model.)

Claim.—1. The clip for holding the buckle, folded as described, and provided with clinching-points and upright side flanges, *g*, substantially as and for the purposes set forth.

2. The combination, with a buckle-loop, A, and buckle *a*, of the attaching-clip *b*, provided with points *c* and flanges *g*, all substantially as set forth.



300,112. FIRE-ESCAPE. ROBT. E. NELSON, Sr., Cumberland County, Va. Filed Mar. 31, 1884. (No model.)

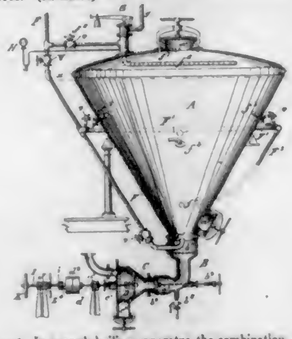
Brief.—The telescopic mast is pivoted at its base to a platform which is made in sections hinged together and adapted to be tilted. The joints of the sections of the mast are provided with iron sleeves, which are slipped over them when raised. Levers for tilting the sections of the platform, hinged braces, and a hoisting apparatus are provided.

Claim.—1. In a fire-escape, the combination, with the truck, of the sectional platform comprising three sections, the lower one of which is secured to the bolsters, the intermediate one hinged to this one at one edge, and a top section hinged to the opposite edge of the hinged intermediate section, and adapted to be tilted to incline the mast secured to the top section both toward the building and away from the building, substantially as specified.

2. In a fire-escape, a hinged sectional mast pivoted at its base to the platform, and provided with iron sleeves for slipping over the ends of the aligned jointed sections and holding the sections extended, substantially as specified.

300,112.

3. In a fire-escape, a pivoted mast composed of wooden sections made hollow except at their ends, and hinged together and adapted to be folded and extended by shifting the iron sleeves with which said sections are provided, substantially as specified.



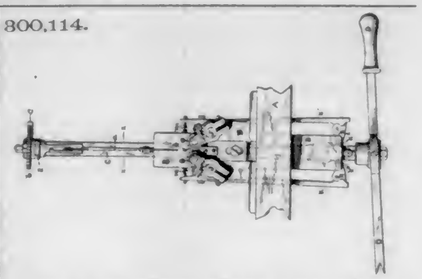
4. In a fire-escape, the combination, with the truck provided with a hinged sectional tilting platform, of the mast-stand upon the upper section of said hinged platform, and the pivoted sectional mast provided with guy-ropes, and an escape basket and tackle secured to the mast, for raising and lowering the basket, substantially as specified.

5. In a fire-escape, the combination of the truck, the tilting platform having the tapering mast-stand, and the pivoted sectional mast, the lower section of which is provided with a ring for connecting said section to the tapering mast-stand, substantially as specified.

6. In a fire-escape, a sectional mast composed of hollow wooden sections having solid ends, said ends being kerfed vertically, and connected by pivoted flat plates of metal held in their extended position by iron sleeves slipped over the joints and secured in place by pins, substantially as specified.

7. In a fire-escape, the combination, with the truck, of a sectional platform comprising three sections, the lower one of which is secured to the bolster, the intermediate one hinged to this one at one edge, and provided with a transverse recess having guards in its lower face, and a top section hinged at its opposite edge to the intermediate section, and having at its opposite edge a transverse recess in its under face, and guards for holding a tilting lever in the recess, and a sectional mast secured to the top section, and provided with ropes and tackle for steadying it and operating the escape-basket, substantially as specified.

300,113. MASH-BOILER. AXEL W. NIBELIUS, Brooklyn, N. Y. Filed Jan. 6, 1883. (No model.)



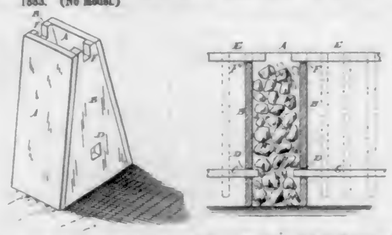
Claim.—1. In a mash-boiling apparatus, the combination, with the boiler A, of the steam-supply pipe F, stop-cocks *v*, the vertical jet bottom pipe, f', discharging a central jet, and perforated top pipe, f'', and one or more branch pipes, F'', and sub-branches F^2, provided with jet-pipes f^3 f^3 f^4 f^5, which enter the boiler at various elevations, and are bent to discharge the steam in the same circular direction, substantially as and for the purpose hereinbefore set forth.

2. The combination of a mash-boiler, provided with a grinding-mill, with a stone receptacle or trap, c^2, at the lowest point of said mill, and a discharge-pipe, *c*, at the upper part thereof, substantially as specified.

3. The elbow-pipe B, provided with the screen b' and bottom discharge-pipe, b^4, in combination with the inverted-cone boiler A and valve b^2 b^3, substantially as and for the purpose set forth.

300,114. MACHINE FOR FORMING THE TEETH UPON FILE-BLANKS. WILLIAM T. NICHOLSON, Providence, R. I. Filed May 28, 1883. (No model.)

300,114.



Claim.—1. The combination, substantially as before set forth, of a holder for a file-blank, a revolving tooth-generator, as described, means, substantially as specified, for causing the longitudinal sections of the surface of the blank to be traversed by the generator, a pattern-block conforming to the shape of the blank, and means, as described, for causing the generator to be governed in its path of revolution by the pattern-block, and to exert suitable pressure upon the surface of the blank to mold up teeth thereon.

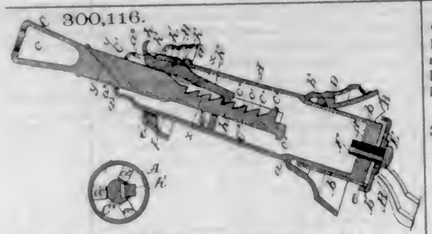
2. The combination, substantially as before set forth, of a pair of generators so mounted that the axes upon which they revolve may be made to approach toward or recede from each other, and arranged to operate upon opposite sections of a file-blank inserted between them, a pattern-block corresponding with the shape of the file-blank which is to have teeth formed thereon, levers or equivalent means for causing the generators to approach toward or recede from each other, tripping foot-pieces attached to such levers, and means, as described, for causing the surface of the blank to be traversed by the generators, whereby pressure can be exerted upon the opposite sides of the blank by the generators while the blank is passing between them in one direction, and such pressure be relieved when the direction of the movement is reversed.

3. The combination, substantially as before set forth, of a file-holder adapted to clamp a file-blank by its tang, a pair of tooth-generating tools adapted to operate under pressure upon opposite longitudinal sections of the blank to be furnished with teeth, and arranged relatively to the blank, as described, and suitable means, as described, for causing the blank to be moved in a right line in the direction of its length between the faces of the generators, as specified.

300,115. FENCE-POST. ELY N. OBERT, Cuba, N. Y. Filed Dec. 8, 1883. (No model.)

Claim.—The combination, with the rails, of the hollow fence-post open at top and bottom, having its sides inclined inwardly toward the top, and provided with apertures in its ends, which receive the ends of the rails, said post and rails being anchored or held in place by stones placed in the post, as shown and described, for the purpose set forth.

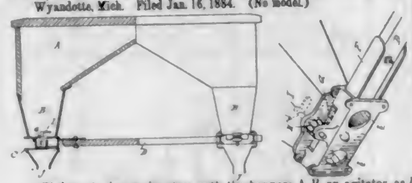
300,116. STOOL OR SEAT STANDARD. HENRY OCORR, Milwaukee, Wis. Filed Jan. 23, 1884. (No model.)



Claim.—1. The combination, in a standard for furniture, of the hollow body and its supporting-legs with a sliding stem having ratchet-teeth, as described, a pawl-block, H, and webbed ring I, as set forth.

2. In a standard for furniture, the combination of a tapering body and its support with a sliding stem having ratchet-teeth, as described, a pawl-block, H, and a securing-ring having webs *i*, as and for the purpose set forth.

3. The combination, with body A, having slot a^3, its support, and stem C, having groove and ratchet-teeth formed therein, of a pawl-block, H, substantially as described, and a ring for locking the block.

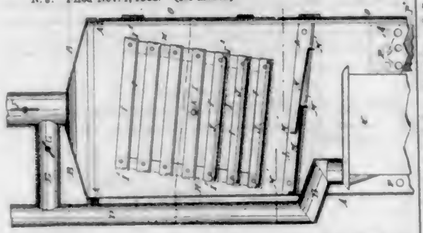


4. The combination of the hollow body A and a suitable support therefor, having slot a^3, stem C, provided with groove and ratchet-teeth formed therein, pawl-block H, with pawl A, and securing-ring I, having interior webs or flanges, *i*, substantially as set forth.

300,116.

5. In a standard for furniture, the combination, with the hollow body A and a suitable support therefor, having slot a^3, of the vertically-movable stem C, with solid vertical portion C' and lower portion, C^3, the latter having an exterior groove, *c'*, with straight walls, and ratchet-teeth c^2 formed therein, and a securing-ring and pawl-block suspended loosely against the stem.

300,117. ATTACHMENT FOR CORN-PLANTERS. GEO. S. PAINE, Wyandotte, Mich. Filed Jan. 16, 1884. (No model.)

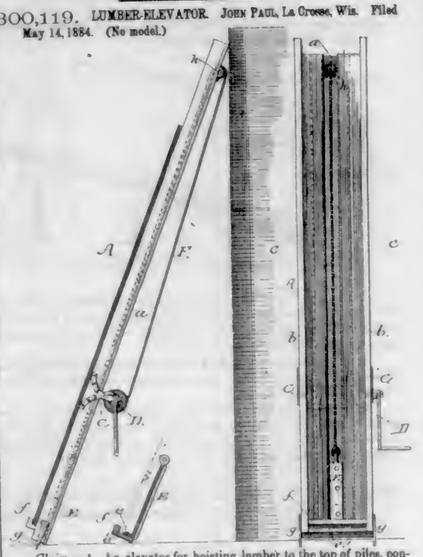


Claim.—1. In combination with the hoppers A B, an agitator, as A I, journaled to said hopper, and carrying a pinion, H, operated by the motion of the grain-slide through the medium of a rack attached thereto, and working through a slot in the casting supporting said slide, substantially as specified.

2. The combination, with the hopper A B, and hollow casting C, and the shaft A, journaled in said casting, and carrying agitator-arm I and pinion H, of the reciprocating bar D, carrying rack G, meshing with said pinion, substantially as and for the purpose specified.

3. In a corn-planter attachment, the combination of the hopper A B, hollow casting C, bar D, carrying slides F and rack G, and reciprocating in said hollow casting, pinion H, agitator I, and spouts J, substantially as described.

300,118. PORTABLE FRUIT-DRIER. JOSEPH N. PARKER, Vineland, N. J. Filed Nov. 1, 1883. (No model.)



Claim.—1. In a drier, a series of horizontal tray-supporting bars on opposite sides of the drier, pivoted at their ends to vertical bars, one of said supporting-bars in each series being pivoted to the sides of the drier, whereby the said supporting-bars may be adjusted to different angles and inclined in opposite directions, substantially as set forth.

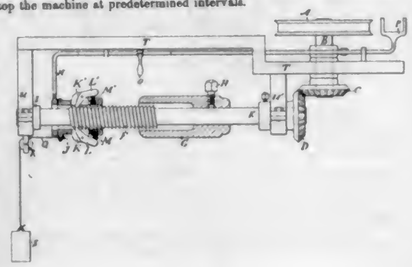
2. In a drier, the combination, with a series of horizontal tray-supporting bars on opposite sides of the drier, pivoted at their ends to two vertical bars, and the central bar of each series pivoted centrally to the side of the drier, of a series of trays resting at their ends on said supporting-bars, whereby the front and rear longitudinal edges of the upper and lower trays respectively may be adjusted to fit against opposite sides of the drier to direct the volume of heat through the trays from either side, as may be desired, substantially as set forth.

3. In a drier, the combination, with a series of horizontal tray-supporting bars on opposite sides of the drier, pivoted at their ends to two vertical bars, the central supporting-bar of each series being pivoted to the side of the drier, of the series of trays resting on said bars, and a damper constructed to shut off the volume of heat from the under side of the lower tray and direct it in front or in rear of the trays, according to the direction in which they are inclined, substantially as set forth.

4. The combination of the two series of tray-supporting bars, pivoted at their ends to the vertical bars, and the central supporting-bars, pivoted centrally to the sides of the drier, with the two independently-adjustable damper-plates below the drier, for shutting off the volume of heat or admitting it alternately to the opposite sides of the trays, according to the direction in which they are inclined, substantially as set forth.

300,119. LUMBER-ELEVATOR. JOHN PAUL, La Crosse, Wis. Filed May 14, 1884. (No model.)

Claim.—1. An elevator for hoisting lumber to the top of piles, consisting of an inclined frame with guide for the lumber, a sliding carriage, operated by a rope or chain, and a toe-piece secured to the carriage, substantially as herein set forth.

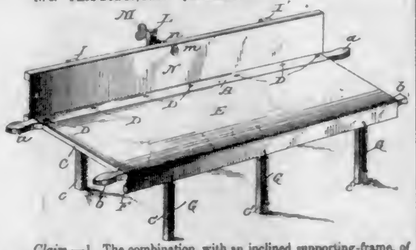


2. In an elevator for the purpose described, the frame A, provided with the side pieces, *b*, and intermediate strips, *c*, and a sheave, A, mounted on the top of the frame, in combination with a sliding carriage constructed substantially as herein set forth, and the mechanism, as described, for operating said carriage so as to elevate lumber beyond the top of the frame, substantially as and for the purpose set forth.

3. In an elevator for hoisting lumber to the top of piles, a carriage constructed substantially as shown, and adapted to slide in guides formed by the frame A, and the mechanism described for operating the carriage, substantially as and for the purpose set forth.

4. An elevator for hoisting lumber to the top of piles, consisting of an inclined frame, a sheave mounted in said frame, a sliding carriage constructed as shown and described, and operated by a rope or chain secured to a drum mounted on a shaft which is journaled in brackets secured to the frame, and a crank mechanism, substantially as and for the purpose set forth.

300,120. AUTOMATIC STOP-MOTION. ROBERT R. PEARE, Hartford, Conn. Filed Sept. 24, 1883. (No model.)

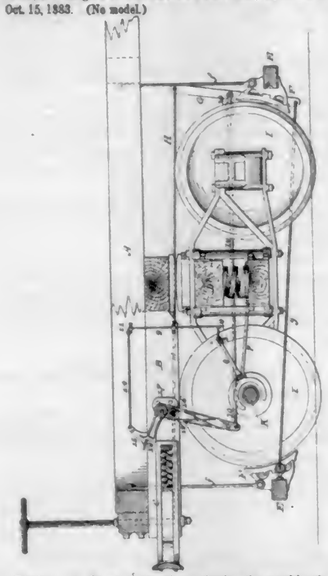


Brief.—The wire which passes into a machine for coiling the wire and interweaving the coils to make a fabric passes around the pulley of the belt-shifting device, and thus operates this device to shift the belt and stop the machine at predetermined intervals.

Claim.—1. The combination of the pulley A, the shaft E, having the screw-thread F, the thimble J, having the pawls L L′ and the springs M M′, and the angle-rod having the handle O and the shifting-fork P.

2. The combination of the pulley A, the shaft E, having the screw-thread F, the thimble J, having the pawls L L′ and the springs M M′, the adjustable stop G, the weight S, and the angle-rod N.

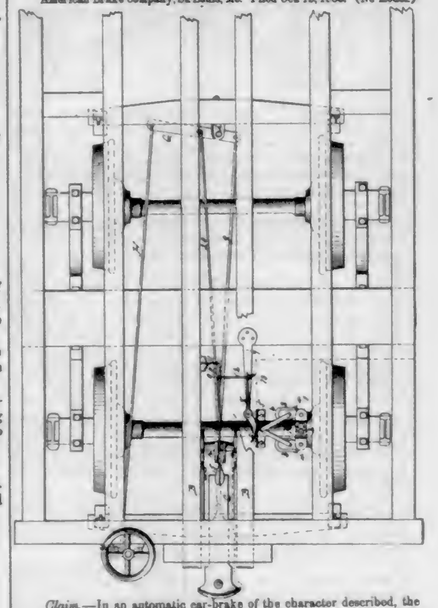
300,121. PORTABLE FRUIT-DRIER. RILEY F. PEPPER, Germanton, N. C. Filed Dec. 10, 1883. (No model.)



Claim.—1. The combination, with an inclined supporting-frame, of the screen E, secured to said frame at one side by means of the pegs D, and to the other by means of the elastic straps G, removably secured to the pegs H, as and for the purpose set forth.

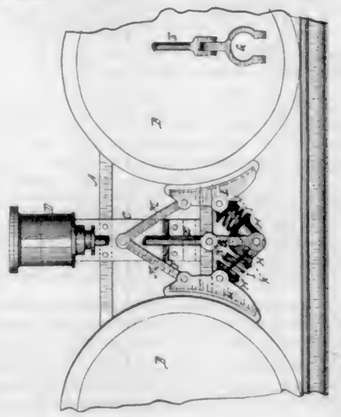
2. In a fruit-drier, the inclined porous screen E, in combination with the supporting-rails A B, and elastic connections for keeping the screen taut across the rails, as set forth.

3. In a fruit-drier, the combination, with the supporting-frame provided with the inclined screen E and arm L, of the reflector N, having set-screw M, whereby said reflector may be adjusted with reference to said screen, substantially as and for the purpose set forth.



300,122. AUTOMATIC CAR-BRAKE. GEORGE HAMILTON POOR, St. Louis, Mo., assignor to the American Brake Company, same place. Filed Oct. 15, 1883. (No model.)

Claim.—1. In an automatic car-brake, the combination, with the movable draw-bar, of a straight lever fulcrumed near its upper end in rear of the draw-bar, and having its long arm connected with the brake mechanism, and a latch pivoted at one end to the short arm of the lever, and having its free end connected, through suitable intermediate devices, with an automatic regulator secured to the wheel-axle, substantially as and for the purpose specified.

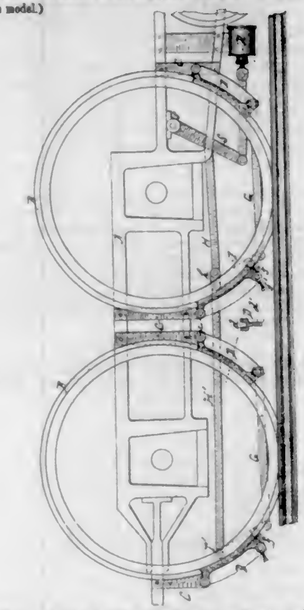


2. In an automatic car-brake, the combination of a movable draw-bar, an operating-lever pivoted in rear thereof and having its long arm connected directly to the brace, a latch pivoted on the short arm of the operating-lever, and connected with an automatic regulator adapted to actuate the latch and cause it to engage with the draw-bar, substantially as and for the purpose specified.

300,123. AUTOMATIC CAR-BRAKE. GEORGE HAMILTON POOR, Portland, Me., and CHARLES JOHN SCHILLER, St. Louis, Mo., assignors to the American Brake Company, St. Louis, Mo. Filed Oct. 15, 1883. (No model.)

Claim.—In an automatic car-brake of the character described, the combination, with the movable draw-bar and the brake mechanism, of an L-shaped operating-lever fulcrumed in rear of the draw-bar, with its short arm extending upward and toward the draw-bar and its long arm terminating forward of the wheel-axles, and a short latch pivoted at one end to the upper end of said short arm, and having its free end connected, through suitable intermediate devices, with an automatic regulator secured to the wheel-axle, substantially as and for the purpose specified.

300,124. LOCOMOTIVE-BRAKE. GEORGE H. POOR, St. Louis, Mo., assignor to the American Brake Company, same place. Filed Nov. 12, 1883. (No model.)



Claim.—1. In a locomotive power-brake wherein the shoes are arranged between the drive-wheels, and the power is applied by means of a piston-rod in connection with toggle or eccentric-faced levers, the combination, with the shoes and power-levers, of an auxiliary elastic medium interposed between the same, substantially as and for the purposes specified.

2. In a locomotive power-brake, the combination, with two drive-wheels and a piston-rod, of two brake-shoes arranged between the drivers, toggle or eccentric-faced levers for applying power to the brake-shoes, and an auxiliary elastic medium interposed between the toggle-levers and brake-shoes, substantially as and for the purposes specified.

3. In a locomotive power-brake, the combination, with two drive-wheels and a piston-rod, of two brake-shoes arranged between the drive-wheels, toggle-levers for applying power to the drive-wheels, elastic medium interposed between the toggle-levers and shoes, and a yoke or link interposed between the power and toggle-levers, substantially as and for the purposes specified.

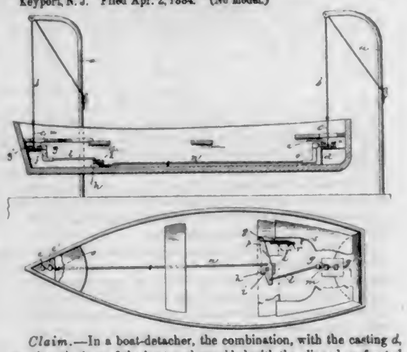
4. In a locomotive-brake, the combination of two brake-shoes arranged between the drive-wheels, a piston-rod for applying power thereto, a yoke pivoted on the piston-rod, spring-cups pivoted on the yoke and on the brake-shoes, and spiral springs arranged between the spring-cups, to form yielding toggle-arms between the yoke and the brake-shoes, substantially as and for the purposes specified.

300,125. LOCOMOTIVE-BRAKE. GEORGE H. POOR, St. Louis, Mo., assignor to the American Brake Company, same place. Filed Dec. 19, 1883. (No model.)

Claim.—1. In a locomotive-brake, the combination, with the locomotive-frame, of a face-plate secured thereto and provided with a boss or projection for suspending the brake-shoe, and a brake-shoe pivoted directly on the boss or projection of the face-plate, substantially as and for the purposes specified.

2. In a locomotive or like brake, the combination, with the brake-beam, of a beam-lever coupled to the brake-beam by a yoke provided with a screw for adjusting the distance between the brake-beam and brake-lever, substantially as and for the purposes set forth.

3. The brake-shoe having the deep longitudinal groove in the face which bears on the tread of the wheel, and the longitudinal web upon its back corresponding with the groove of the bearing-surface, substantially as and for the purposes specified.



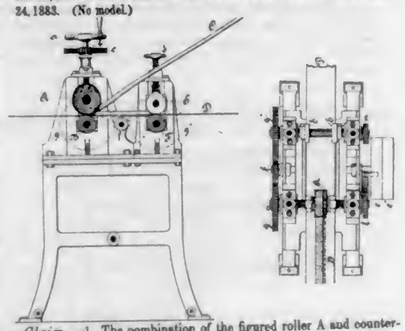
4. In a locomotive-brake, the combination, with the brake-shoe of opposite sides, of a transverse brake-beam having two beam-levers, one arranged near each end of the brake-beam and connected thereto by an adjustable yoke, and two pull-rods, one connected to each of said beam-levers, substantially as and for the purposes specified.

5. In a locomotive or like brake, the combination of two transverse brake-beams, two beam-levers connected to one of said brake-beams near its extremities, two pull-rods—one for each beam-lever—and two tie-rods which connect the two beam-levers with the opposite brake-beam, substantially as and for the purposes specified.

6. The twin cylinder provided with its two pistons, in combination with the two cross or floating levers pivotally secured to the cylinder, substantially as and for the purposes specified.

7. The twin cylinder provided with its two pistons, in combination with two cross or floating levers, each of said levers fulcrumed on the cylinder by means of an intermediate link pivoted on the cylinder, substantially as and for the purposes specified.

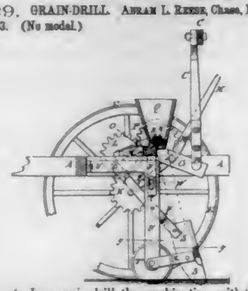
300,126. BOAT-DETACHING APPARATUS. ANDREW DECKER POST, Keyport, N. J. Filed Apr. 2, 1884. (No model.)



Claim.—In a boat-detacher, the combination, with the casting *d*, secured to the bow of the boat, and provided with the aligned perforated lugs *e e′*, and the casting *f*, secured in the stern of the boat, and provided with the perforated aligned lugs *g g′*, of the base-plate *h*, having stud *i*, secured in the bottom of the boat, the pivoted lever *k*, connected by rod *q* to the hand-lever *r*, the bolt-rod *l*, bent upwardly at its rear end, and provided with the shouldered bolt *m m′*, and the bolt-rod *n*, bent upward at its forward end, and provided with the shouldered bolt *m o*, substantially as specified.

300,127. SLIDING-JAW WRENCH. WILLIAM H. RATCLIFF, Middleborough, assignor of one-half to George S. Gates, Athol, Mass. Filed Jan. 24, 1884. (No model.)

Claim.—The combination, with the adjustable jaw D and its frame E, provided with a longitudinal opening, and spring H, of the sliding pivot L, swinging arms K, and friction-roll N, adapted for operation substantially as described, as and for the purposes set forth.

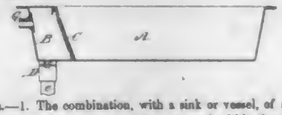


300,128. MACHINE FOR MAKING ORNAMENTS FOR GILT CORNICES, &c. JOSEF REDELIGH, Cologne-on-the-Rhine, Germany. Filed Sept. 24, 1883. (No model.)

Claim.—1. The combination of the figured roller A and counter-roller B with the traveling bed D and rollers E F, said bed passing below the rollers A E and above the rollers B F, and with the conduit C, which is placed to discharge the plastic matter upon the bed D, between the two sets of rollers A B and E F, substantially as herein shown and described.

2. The combination of the figured roller A, having cutting-edges o and grooves *p*, with the traveling bed D, substantially as described.

300,129. GRAIN-DRILL. ABRAM L. REESE, Chase, Kans. Filed Sept. 27, 1883. (No model.)

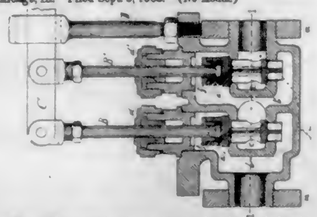


Claim.—1. In a grain-drill, the combination, with the drive-wheels E, the adjustable crank-axles F, and the feed-shafts N, of the gear-wheels K L P, the swinging bars M, pivoted to the shafts N and carrying the gear-wheels L, and the springs O, attached to the outside rails of frame A, and bearing against the bars M, substantially as herein shown and described, whereby the said gear-wheels will be kept in gear, however the drive-wheels may be adjusted, as set forth.

2. In a grain-drill, the combination, with the crank-axles F, journaled in the side bars, A, and in the short bars G, secured thereto and carrying the wheels E, of the rigid levers H, secured to said axle between the bars A G and provided with suitable locking devices, substantially as herein shown and described, whereby the axles can be readily turned to raise and lower the frame of the machine, as set forth.

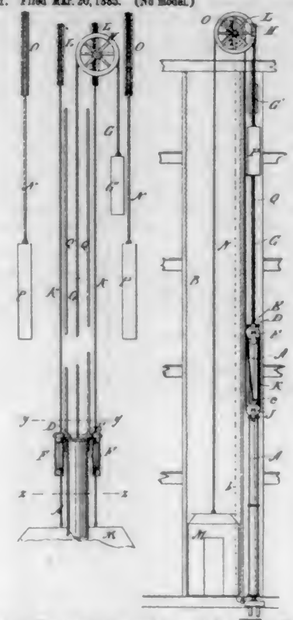
3. In a grain-drill, the rectangular standards U, secured to the front bars of frame A at their forward extremities, and at their bends to vertical slotted arms V, which are in turn secured to the under sides of the rear bars of frame A, the circular colters pivoted at the lower ends of standards U, in combination with shoe S, connected to the lower ends of standards U by the bars X, and to their upper angular portion by the bars Y, substantially as specified.

300,130. SINK. CHARLES T. REGAN, Brooklyn, N. Y. Filed Dec. 3, 1883. (No model.)



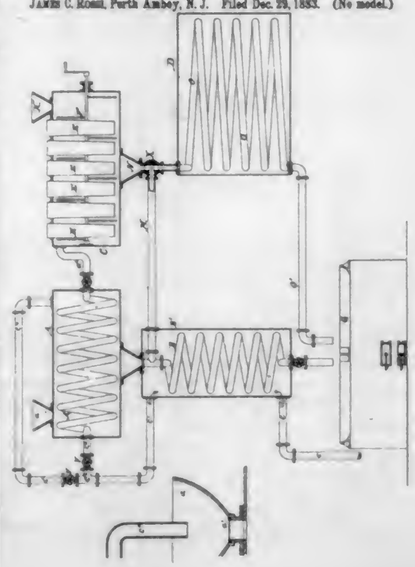
Claim.—1. The combination, with a sink or vessel, of a compartment for the reception of sewer-gas, arranged within the sink, and a pipe or passage for conducting away the gas which may arise within the chamber or compartment, substantially as shown and described.

2. The combination, in a sink or other like vessel, of a cap or cover, *a*, at one end, and a slide or door for separating the sink into an open and a closed compartment, the closed compartment being provided with exit-pipes for the discharge of water and gas, respectively, as specified.



3. The combination, in a sink having outlet G, of a ledge or cover, *a*, and a slide, having serrations or perforations, as described, whereby a closed chamber or compartment for the reception of sewer-gas is produced, and the matter which passes from the open to the closed compartment is strained, as described.

300,131. DEVICE FOR OPERATING VALVES. JOSEPH REICHMANN, Chicago, Ill. Filed Sept. 5, 1883. (No model.)



Claim.—The combination, with the double-headed valves *c c'*, and their rods B B', of the lever C, fulcrumed in the upper ends of said rods, whereby in opening one valve the fulcrum of said lever is transferred to the other valve, substantially as and for the purpose set forth.

300,132. HYDRAULIC ELEVATOR. OLIVER P. RICE, New York, N. Y. Filed Mar. 20, 1883. (No model.)

Claim.—The combination, with the well B and cage M, of the vertical cylinder A, open at top, valved at bottom, and carrying stationary side pulleys, J J, the piston-head O, and plate D, connected by rods *d*, the cross-bar E, guided by bars Q, attached to plate D and carrying pulleys F F, the end-weighted ropes G N N, and superposed pulleys H O, whereby the elevator-cage and piston-head may always move in the same direction, as described.

300,133. PROCESS OF AND APPARATUS FOR PRODUCING COLD. JAMES C. ROSSI, Perth Amboy, N. J. Filed Dec. 29, 1883. (No model.)

Claim.—1. The process of reducing temperature or producing cold which consists in applying to a liquid a chemical that will produce cold while going into solution therein, using the cold solution thus formed to cool a fresh body of liquid, then dissolving a cooling agent in and thus further reducing the temperature of the second body of liquid, substantially as and for the purposes set forth.

2. The process of reducing temperature or producing cold consisting of a series of two or more successive steps, each of which consists of applying to a liquid a chemical that will reduce the temperature of the liquid, and then using this cooled liquid to cool another liquid, substantially as and for the purposes set forth.

3. The process of producing cold which consists in using four or more vessels properly connected, so that by the solution of a chemical in a liquid in the first vessel a mass of pure liquid contained in the second vessel may be cooled, which liquid is subsequently further cooled by the use of a chemical therein, and then at the proper time using either or both of these masses of liquid in the third vessel for cooling pure water contained in the fourth vessel, which pure water subsequently has its temperature reduced by the solution of a chemical therein, substantially as described.

4. The continuous process of reducing temperature for manufacturing ice or for refrigeration which consists of providing a continuous supply of liquid, cooling it continuously by conduction from a second mass of liquid, also continuously supplied and continuously cooled chemically, then further reducing the temperature of the first mass of liquid by introducing into it a chemical, and continuously discharging both masses of liquid, after they are cooled chemically, at the same rate at which they are supplied, substantially as and for the purposes set forth.

5. The continuous process of reducing temperature for manufacturing ice or for refrigeration which consists of providing a continuous supply of liquid, cooling it continuously by conduction from a second mass of liquid, also continuously supplied and continuously cooled chemically, then further reducing the temperature of the first mass of liquid by introducing into it a chemical, and continuously discharging both masses of liquid, after they are cooled chemically, at the same rate at which they are supplied, then employing the discharged impure cold liquid to cool the supplied liquid, or for any other purpose, substantially as and for the purpose set forth.

6. The process of producing cold which consists in using four or more vessels properly connected, so that by the solution of a chemical in a liquid in the first vessel a mass of pure liquid contained in the second vessel may be cooled, which liquid is subsequently further cooled by the use of a chemical therein, and then at the proper times using either or both of these masses of liquid in the third vessel for cooling pure water contained in the fourth vessel, which pure water subsequently has its temperature reduced by the solution of a chemical therein, and then using at the proper time the cold impure liquids from the vessels 3 and 4 for cooling masses of water in other like or unlike vessels, or for any purpose for producing cold, substantially as described.

7. The process of producing cold which consists in dissolving in a liquid contained in a vessel a chemical which will produce cold while going into solution, and which cold solution serves to cool a fresh body of liquid contained in another vessel, the temperature of which is to be further reduced by dissolving therein a cooling agent, and then subsequently at the proper time using the cold impure liquids from either or both vessels for cooling other masses of water, or for any purpose where it may be desired to produce cold, substantially as described.

8. The continuous process of producing cold which consists in continuously passing water into a containing vessel around a contained vessel, which may be formed of a coil of pipes, and into which water or other liquid in said containing-vessel a cooling agent is thrown in a proper proportion continuously, for the purpose of cooling the water or other liquid, allowing the impure water to escape as rapidly as pure water is added, and simultaneously therewith passing pure water through the contained vessel, which may be a coil of pipes, cooling the same by conduction therein, then passing said cooled pure water into another vessel, where its temperature is again reduced by the addition of a chemical thereto, which is continuously thrown therein, and allowing this very cold impure water to escape as rapidly as pure cooled water is added, substantially as described.

9. The process of producing cold which consists in continuously passing water into a containing vessel around a contained vessel, which may be formed of a coil of pipes, and into which water or other liquid in said containing vessel is thrown, in a proper proportion continuously, a cooling agent for the purpose of cooling the water or other liquid, allowing the impure water to escape as rapidly as pure water is added, and using the same for cooling fresh masses of water or other substance, and simultaneously therewith passing pure water through the contained vessel, which may be a coil of pipes, cooling the same by conduction therein, then passing said cooled pure water into another vessel, where its temperature is again reduced by the addition of a chemical thereto, which is continuously thrown therein, and allowing this very cold impure water to escape as rapidly as pure cold water is added, and using this very cold impure water to cool fresh bodies of water or other substances or things which it is desired to cool, substantially as described.

10. The process of producing ice which consists in making one set of ice blocks rapidly with an extremely cold solution, and another set of ice blocks slowly with the comparatively warmer discharged solution, substantially as described.

11. A double vessel, as described, each compartment of which is properly arranged to carry out the process of cooling liquids therein by the absorption of the cooling agent, so that the cold liquid in one compartment may cool by conduction the liquid in the other compartments before the said liquid itself has absorbed the said cooling agent, combined with stirrers in one or both of the vessels, and suitable cocks, substantially as described.

12. A double vessel, as described, each compartment of which is properly arranged to carry out the process of cooling liquids therein by the absorption of a cooling agent, so that the cold liquid in one compartment may cool by conduction the liquid in the other compartments before the said liquid itself has absorbed the said cooling agent, combined with stirrers in one or both vessels and suitable cocks, and with boxes or vessels for containing liquid which is to be congealed by cold liquid surrounding the said boxes, substantially as described.

13. An apparatus for producing ice or cold liquids, which consists of two vessels, within one of which a liquid is cooled by absorbing the cooling agent, and which cold impure liquid by conduction cools the liquid in the surrounding or contained vessel, in combination with a pipe, conduit, or conveyer for the pure cold liquid, and a third vessel, within which the said cooled pure liquid is placed where it is to absorb in solution the cooling agent, so as to be still further cooled for the purpose of making ice or for any other desired object, substantially as described.

14. An apparatus for producing ice or cold liquids, which consists of two vessels, within one of which a liquid is cooled by absorbing the cooling agent, and which cold impure liquid by conduction cools the liquid in the surrounding or contained vessel, in combination with a pipe, conduit, or conveyer for the pure cold liquid, and a third vessel, within which the said cooled pure liquid is placed where it is to absorb in solution the cooling agent, so as to be still further cooled for the purpose of making ice, or for any other desired object, and stirrers and pipes provided with valves to conduct the impure liquids, when they have served their purpose, through coils or the like, substantially as described.

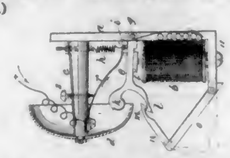
15. An apparatus for producing ice or cold liquids, which consists of two vessels, one within the other, within both of which a liquid may be placed, and pipes leading to two or more smaller vessels, substantially as and for the purposes set forth.

16. An apparatus for making ice or cold liquids, which consists of a contained and containing vessel, in both of which a liquid is placed, and in one of which is placed a chemical, the dissolving of which in the liquid results in the lowering of the temperature, thus cooling by conduction the liquid in the adjacent vessel, which is subsequently to have its temperature further reduced by the addition of a cooling agent, combined with pipes which conduct the liquid to the contained and containing vessels of another substantially like apparatus capable of substantially the same use, but in which the liquid in one of the vessels is cooled by conduction from the cold water drawn from one or both of the vessels of the first apparatus, substantially as described.

17. An apparatus for continuously producing ice, which consists of a contained and a containing vessel, into both of which a stream of liquid is continuously passed, and into one of which the cooling agent is continuously fed, combined with the coil of a tank for cooling by conduction pure water by the impure water drawn continuously from a vessel into which the cooling agent is supplied, in combination with another vessel into which cooled water, cooled by conduction in the containing or contained vessel, passes, and in which vessel the ice-boxes are placed, and to the cooled pure water surrounding which ice-boxes and within the vessel the cooling agent is continuously added, in combination with a pipe leading from said vessel and continuously carrying off the cold impure water, substantially as described.

18. An apparatus for continuously producing ice, which consists of a contained and a containing vessel, into both of which a stream of liquid is continuously passed, and into one of which the cooling agent is continuously fed, combined with the coil of a tank for cooling by conduction pure water by the impure water drawn continuously from a vessel into which the cooling agent is supplied, in combination with another vessel into which cooled water, cooled by conduction in the containing or contained vessel, passes, and in which vessel the ice-boxes are placed, and to the cooled pure water surrounding which ice-boxes and within the vessel the cooling agent is continuously added, in combination with a pipe leading from said vessel and continuously carrying off the cold impure water, and an evaporator and coils of pipe through which the stream of cold impure liquid surrounding the freezing-boxes may be directed when desired.

19. An apparatus for continuously producing ice, which consists of a contained and a containing vessel, into both of which a stream of liquid is continuously passed, and into one of which the cooling agent is continuously fed, combined with the coil of a tank for cooling by conduction pure water by the impure water drawn continuously from a vessel into which the cooling agent is supplied, in combination with another vessel into which cooled water, cooled by conduction in the containing or con-



tained vessel, passes, and in which vessel the ice-boxes are placed, and to the cooled pure water surrounding which ice-boxes and within the vessel the cooling agent is continuously added, in combination with a pipe leading from said vessel and continuously carrying off the cold impure water, and stirrers either to one or both of the vessels into which the cooling agent is thrown.

20. The process of cooling rooms, refrigerators, cellars, and the like, which consists in continuously supplying liquid and the cooling agents to a vessel, then circulating the cold liquid through coils or the like, and before it reaches the evaporator or evaporators, cooling by conduction with this liquid the water which is subsequently to have its temperature further reduced by the addition in the vessel first mentioned of the cooling agent thereto, substantially as described.

21. The apparatus for cooling rooms, cellars, or the like, which consists of a vessel into which cooled water and the cooling agent are continuously added, coils of pipe through which this cold liquid is circulated, a tank containing pure water, the contents of which are cooled by conduction, and which tank or vessel receives the liquid which is subsequently to be combined with the cooling agent, and which liquid is cooled in said tank, and a pipe or conduit connecting said tank with the vessel when the cooled pure water and the cooling agent to be dissolved therein are brought together, substantially as described.

22. The process of cooling water or other material, which consists in first dissolving in a liquid a chemical which produces cold, and cooling by conduction another mass of liquid, which is subsequently to have its temperature further reduced by the dissolving therein of some chemical which produces cold, and subsequently using the first and second body of cold impure liquid, or either of them, for cooling by conduction other substances which it is desired to cool, substantially as described.

300,134. ELECTRIC BELL AND ANNUNCIATOR. DAVID ROUSSEAU, New York, N. Y. Filed June 23, 1881. Renewed Apr. 5, 1884. (No model.)

Claim.—1. In an electric bell and annunciator, the combination, with an electric magnet, a bell or sounder, and an annunciator drop or tag, of an armature bar or lever, *a*, formed with the hammer-knob *k* and pawl-hook *l* on the same extremity, substantially as and for the purpose shown and described.

2. In a combined electric bell and annunciator, the armature-bar *a* projecting across the edge of the bell with a hammer-knob, *k*, arranged on one side of the edge to sound the bell, and a catch-hook, *l*, arranged on the other side to engage or release the annunciator-drop, substantially as herein shown and described.

3. In a combined electric bell and annunciator, the combination, with a suitable base, of a bell or sounder arranged at one end of the base, an electric magnet arranged at the opposite end of the base, and an armature tag or drop pivoted at one side of the bell with an armature bar or lever, *a*, projecting between the magnet and bell, with its free extremity formed with a hammer-knob to sound the bell, and a pawl-hook to engage or disengage the drop, substantially as herein shown and described.

4. An electric bell constructed with the L-shaped base *a*, with the magnet fixed to the bend or foot of the L, with its axis parallel with the body of the L, and the armature and bell supported on the body of the L beyond the magnet, substantially as herein shown and described.

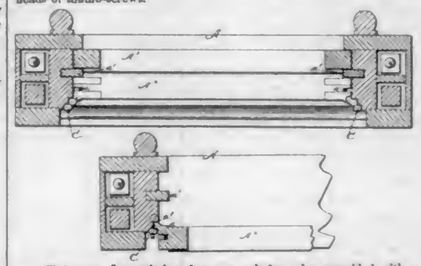
5. An electric bell constructed with the L-shaped iron base *a*, having a horseshoe-magnet fixed to the bend or foot of the L, with its cores in metallic contact therewith and projecting therefrom parallel with the body of the L, with the armature and bell supported on the body of the base beyond the magnet, substantially as herein shown and described.

6. In an electric bell, the L-shaped base *a*, in combination with an annunciator-tag pivoted on the end of the foot or bend of the L, a magnet arranged in the angle or corner of the L, and an armature and bell supported on the body of the L beyond the magnet, substantially as herein shown and described.

300,135. LOCKED FASTENING FOR WATCH-CHAINS. HENRY T. SALISBURY, Pawtucket, R. I. Filed Mar. 3, 1884. (No model.)

Claim.—1. In a fastening for watch-chains, the combination, with a hasp and a lock-spring provided with a sliding finger-piece, of a pair of notched rotating disks arranged to hold the spring in locked position, excepting when turned to assume a certain relative position, substantially as described.

2. The combination, with the spring C, provided with the projection *c'*, of the disks D E, provided, respectively, with the notches *d e*, and also with the projections *d' e'*, substantially as set forth.

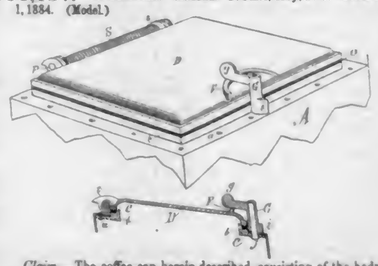


3. The spindle *b*, carrying the disk E, provided with the notch *e* and the stud *e'*, in combination with the disk D, having the spring d^3, notch *d*, and pin *d'*, and the casing inclosing said parts, substantially as specified.

4. The casing A, having the characters upon its front, in combination with the spindle *b*, carrying the face-plate B and handle *b'*, the said face-plate having characters upon its front, substantially as described.

5. The casing A, provided with the hasp *a*, the spring C, secured within the casing, and provided with the aperture, the projection *c'*, and push-pin *c*, in combination with the spindle *b*, having the handle *b'*, the face-plate B, and the disk E, secured to said spindle, the disk D, and the notches, studs, and apertures, all constructed and arranged substantially as set forth.

300,136. WINDOW. NILS F. SANDELIN, Chicago, Ill. Filed Feb. 12, 1884. (No model.)

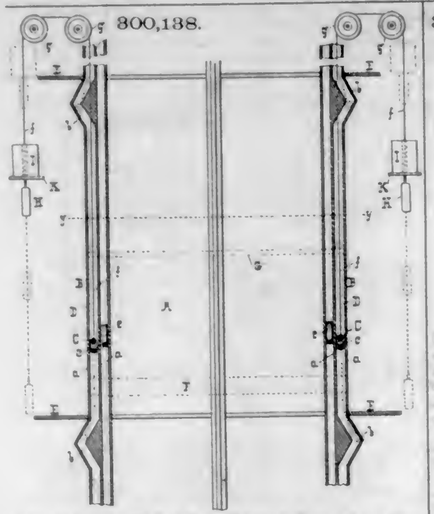


Brief.—A sash provided with flanges upon its inner edges, which run in notches in the frame, and are secured therein by the overlapping heads of thumb-screws.

Claim.—1. In a window-frame, a sash formed or provided with a flange upon its inner vertical sides, which overlaps the adjoining edges of the frame, in combination with a series of screws secured in the frame beside the flange, and having heads overlapping and confining the same, substantially as and for the purpose set forth.

2. The combination, with a window-frame, A, provided with the headed screws C C and notch *c'*, of a sash having side flanges, *c c*, running in said notches, and hung at or near its vertical center by cords *a a*, whereby it may be more readily cleaned, substantially as shown and described.

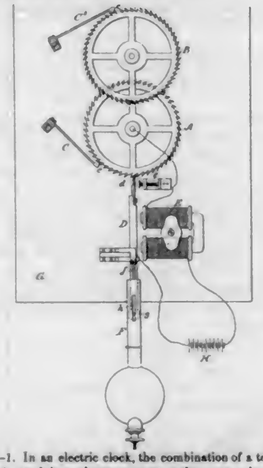
300,137. COFFEE-CAN. MATTHEW D. SAXE, Troy, N. Y. Filed Feb. 1, 1884. (Model.)



Claim.—The coffee-can herein described, consisting of the body A, having the rim *b* and cushion C, the hinged cover having the arm F, and the pivoted lock G, provided with an arm, *g*, and stop *i* to engage the arm F, to secure the cover and body together, as shown and described.

300,138. HATCHWAY-GUARD. JOHN SCHERER, Baltimore, Md. Filed Apr. 1, 1884. (No model.)

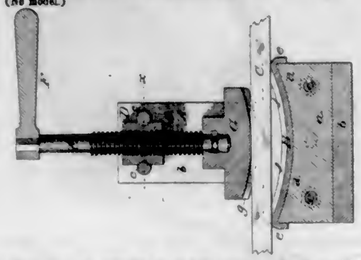
Claim.—1. In an elevator, the casing of the shaft, having vertical channels extending from one floor to another, with offsets therein formed of angular grooves reversed in position, substantially as described, guard-bars with their ends adapted to slide in the said channels and to the offsets from either end thereof, weighted cords which pass over sheaves and are attached to the said guard-bars, and the platform, which is constructed



300,138.

to come in contact with the said guard-bars and elevate or depress them from the channels to the said offsets, all combined substantially as specified.

2. In combination with the guard-bars C and their supports *c*, the cord *f*, sheaves *g*, weights H and I, and shelf K, substantially as and for the purpose specified.



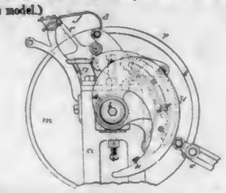
300,139. ELECTRIC CLOCK. SOLOMON SCHEINALL, St. Petersburg, Russia. Filed Nov. 8, 1883. (No model.) Patented in Belgium Oct. 19, 1883, No. 62,932; in France Oct. 22, 1883, No. 158,175; in Germany Oct. 24, 1883, No. 27,382; in England Oct. 30, 1883, No. 5,153; in Portugal Nov. 21, 1883, No. 875; in Italy Dec. 31, 1883, XXXII, 26; in India Jan. 7, 1884, No. 213, and in Spain Jan. 19, 1884, No. 5,135.

Claim.—1. In an electric clock, the combination of a toothed actuating-wheel, A, pendulum, electro-magnet, and armature-lever having a spring, *d*, closing the circuit through the said wheel and the clock-work, with a spring, C, acting on said wheel A to push it forward and break its contact with the spring *d*, substantially as set forth.

2. The combination of the actuating-wheel A of an electric clock, a pendulum, an electro-magnet, armature-lever D, having a spring, *d*, making contact with said wheel, with two electric batteries adapted to be put in circuit through the coils of said electro-magnet to operate the clock, and a commutator operated by said wheel to throw one or other of the batteries into circuit alternately, all substantially as described.

300,140. MACHINE FOR BENDING METALLIC HOOPS. MICHAEL SCHLIRM and PHILIPP ACKERMANN, Milwaukee, Wis. Filed Aug. 24, 1883. (No model.)

Claim.—1. In a machine for forming blanks for flared metal hoops, the combination of a frame, a die curved on the arc of a circle corresponding to the required flare of the hoop, perpendicular bearing-faces at each side of the die, a bunter having a curved face parallel with that of the die, and flanges perpendicular to the curved face, and means, substantially such as shown and described, for causing the approach of one of said parts (the die and bunter) toward the other.



2. In combination with frame A, having faces *f f*, die B, bunter G, having flanges *g*, and screw E, swiveled in the bunter and passing through a nut in frame A, all substantially as shown.

3. The herein-described press, consisting of side plate *a*, provided with ledge *d*, side plate *b*, nut D, seated in recesses in the side plates, tie-bolts *c*, screw E, bunter G, and die B, said parts being combined and arranged to operate substantially as explained.

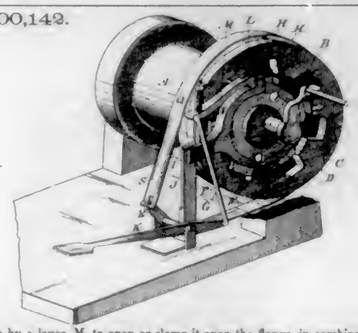
4. In a press substantially such as described, the combination of side plates, *a b*, die B, and bunter G, the bolts *c*, and set-screw *h*, as and for the purpose set forth.

5. In a machine for flaring metal hoop-blanks, the combination of a die or support, means, substantially as shown, for holding strips of band-iron on edge upon said die or support, and a curved bunter movable to and from said support, arranged to bear against the opposite edges of the strips, and to bend said strips in the direction of their width.

300,141. PRINTING-MACHINE. HENRY SCHOTT, Richmond, Va., assignor of one-half to William L. Royall, New York, N. Y. Filed Dec. 6, 1881. (No model.)

Claim.—1. The combination of the sectional adjustably-extensible cam, the feed-guides operated thereby, and the fly-cam, the end segment of the sectional-adjustable cam being secured to the fly-cam, substantially as and for the purpose set forth.

2. The combination of the feed-guides, adjustable mechanism, substantially such as described, for operating said guides, the fly-cam, and means, substantially such as described, whereby the fly-cam and said adjustable mechanism may be simultaneously adjusted according to the size of the sheet being printed.

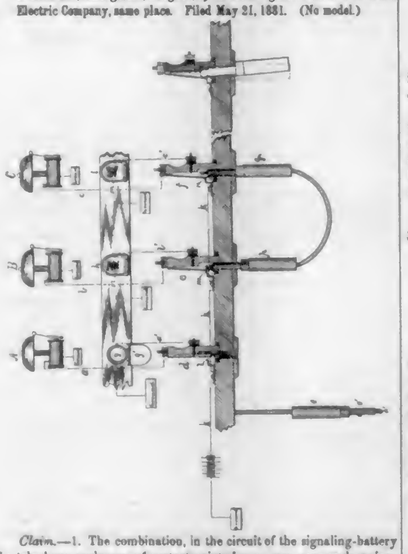


300,142. HOISTING-GEAR. IVES SCOVILLE and AVERY SCOVILLE, Oakland, Cal. Filed Apr. 19, 1884. (No model.)

Claim.—1. In a differential winding-gear, the drum A, having the recessed internally-toothed end, an interior spur-gear, D, of smaller diameter and one less tooth, with a concentric hub, C, having an eccentric revolving loosely within it and keyed to the shaft, as shown, in combination with a strap, G, fitting the projecting hub or flange of the gear D, and a mechanism, as described, by which the strap may be clamped upon or loosened from the flange, substantially as herein described.

2. In combination with a winding-drum and differential driving-gear, as shown, a strap, G, open at one side, and having the arm I supported so as to be free to follow the movements of the eccentric without rotating with it, a lever, M, connected with the lugs H H' of the open sides of the strap to open or close it upon the flange of the driving-gear, substantially as herein described.

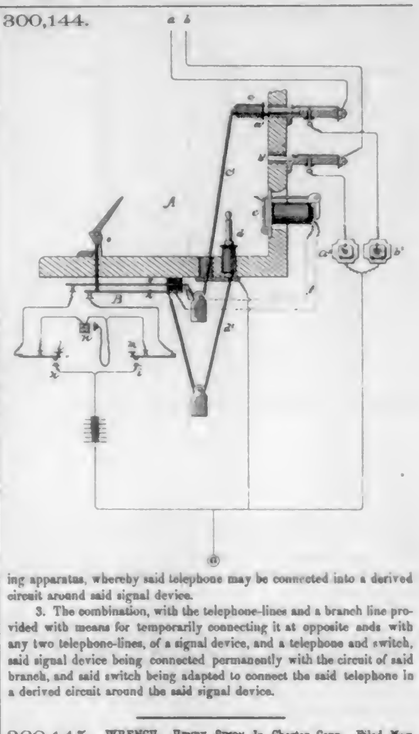
3. In a differential driving-gear, the strap G, surrounding the flange of the spur-gear D, open at one side, and having lugs which are acted



300,142.

upon by a lever, M, to open or clamp it upon the flange, in combination with a foot-lever, K, and spring Q, connected with the lever M, substantially as herein described.

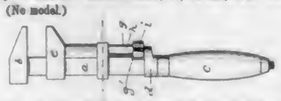
4. In a differential gear, the strap O, surrounding the flange of the gear D, with its guiding-arm I and operating-lever M, in combination with the foot-lever K, lever R, and band-brake S, substantially as herein described.



300,143. SPRING-JACK FOR TELEPHONE SYSTEMS. CHARLES E. SCRIBNER, Chicago, Ill., assignor, by mesne assignments, to the Western Electric Company, same place. Filed May 21, 1881. (No model.)

Claim.—1. The combination, in the circuit of the signaling-battery of a telephone-exchange, of contact-points *l* *m* *n*—one near each spring-jack—and plugs which, while inserted in the spring-jacks, are adapted to force the line-strips or contact-springs respectively into contact with said contact-points, as and for the purpose specified.

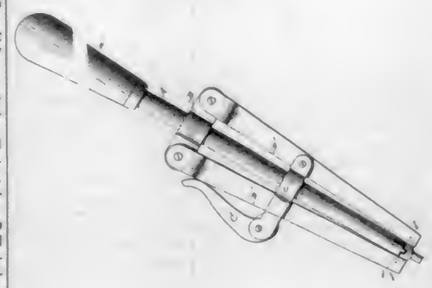
2. The combination of spring-jack *d* with contact-point *l* and plug *o*, said plug being smaller at *o'* than at *o''*, whereby the signaling-battery may be thrown to line *a*, as and for the purpose specified.



300,144.

ing apparatus, whereby said telephone may be connected into a derived circuit around said signal device.

3. The combination, with the telephone-lines and a branch line provided with means for temporarily connecting it at opposite ends with any two telephone-lines, of a signal device, and a telephone and switch, said signal device being connected permanently with the circuit of said branch, and said switch being adapted to connect the said telephone in a derived circuit around the said signal device.

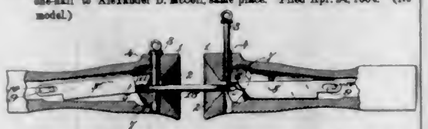


300,145. WRENCH. HENRY SIMON, Jr., Chester, Conn. Filed May 29, 1883. (No model.)

Claim.—1. In a wrench, in combination, the wrench-bar, the sliding head bearing the channeled screw-threaded socket, and the screw-rod *g*, flattened on opposite sides, and bearing integral with it the rosette by means of which the rod is turned, the said rod bearing directly against the step, all substantially as described.

2. In combination, the wrench-bar *a*, the sliding jaw *e*, having the threaded socket *f*, channeled on opposite sides, the screw-rod *g*, flattened on opposite sides, and bearing fast to it the rosette *i* at the end near the stop *d*, and the spring-bolt *m*, all substantially as described.

300,146. SCREW DRIVER AND HOLDER. JOHN SINNOTT, Chicago, Ill., assignor of two-thirds to John P. Barrett, same place. Filed Oct. 17, 1883. (No model.)



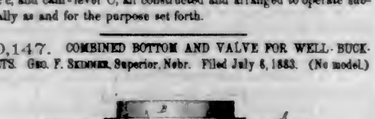
Claim.—The combination, with the shank A, having a square end and tongue *a'*, of the sliding collar B, arms B', having socketed jaws, links *c c*, and cam-lever C, all constructed and arranged to operate substantially as and for the purpose set forth.

300,147. COMBINED BOTTOM AND VALVE FOR WELL-BUCKETS. GEO. F. SKINNER, Superior, Nebr. Filed July 6, 1883. (No model.)

Claim.—The combination, in a well-bucket, of a bottom having a central perforation, a valve-disk above the bottom to close the opening, and a ⊔-shaped yoke secured thereto, and having vertical portions depending through said opening near the sides thereof, and bent horizontally at their lower ends, substantially as set forth.

300,148. CAR-COUPLING. JOHN SKINNER, Flint, Mich., assignor of one-half to Alexander D. McColl, same place. Filed Apr. 24, 1884. (No model.)

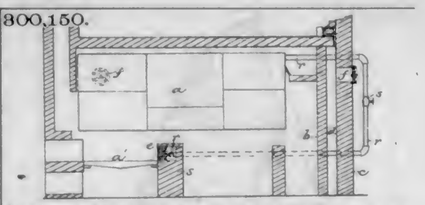
Claim.—1. The combination, with the draw-head, of the bar having a cross-head which overlies the end of the link, the bar having connection to the draw-head at its rear end, and a shoulder supporting the link beneath, the weight of the projecting end of the link being substantially counterbalanced by the weight of the bar and cross-head, substantially as described.



2. In a car-coupling, the combination, with the recessed draw-head, of a bar lying therein, and provided with a cross-head, the ends of which engage with and ride up and down upon the forwardly-inclined walls of a chamber located behind the coupling-pin, substantially as described.

3. In a car-coupling, the combination, with a recessed draw-head, of a bar lying therein, a cross-head upon the end of said bar, having its lower edge inwardly beveled, and a chamber or recess within the draw-head, having forwardly-inclined walls which engage with the said cross-head, substantially as described.

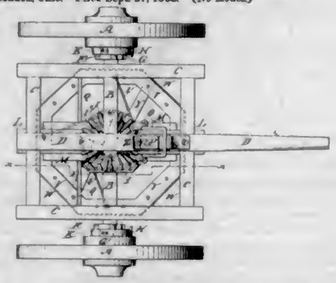
4. In a car-coupling, the combination, with the draw-head having the recess 6 and inclined walls 7, of the bar 8, having slot 9, and beveled cross-head 11, having the groove 13, substantially as described.



5. In a car-coupling, the combination, with the draw-head 1, having opening 2 and shoulder 16, of the bar 8 and cross-head 11, the latter having beveled edge 12, and groove 13, and the pin 3, and link 15, substantially as described.

300,149. VIOLIN TAIL-PIECE. JOHN J. SMITH, Kaufman, Tex. Filed July 23, 1883. (No model.)

Claim.—An apron or tail-piece for violins, recessed on the under side, and provided with a movable plate pivoted at one side, in combination with a slide and actuating-screw, the plate being provided near its forward edge with apertures, the front walls of which are recessed for the strings, substantially as and for the purposes specified.



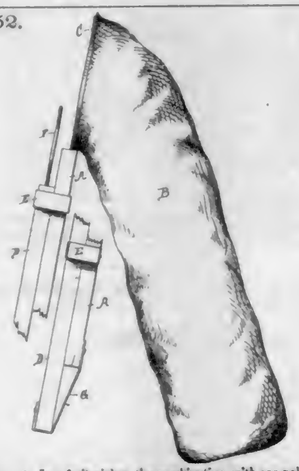
300,150. FEEDING AIR TO FURNACES. SIDNEY SMITH, Cambridge, Mass. Filed Nov. 6, 1883. (No model.)

Claim.—1. The combination, with a boiler, of inner and outer inclosing-walls separated by an air-space, and having registers for the admission of air, perforated distributing-plates arranged in the air-space, and the mixer or mixers having connection with said air-space, substantially as shown and set forth.

2. The combination of a boiler having inner and outer inclosing-walls separated by an air-space, and with a mixer or mixers having connection with said air-space registers for the admission of air, and perforated distributing-plates arranged within the air-space, with a steam-pipe extending from the steam-space of the boiler to the space behind the mixers, and having a perforated portion in close proximity to said mixers adapted to mingle superheated steam with the heated air supplied to said mixers from the air-space, substantially as set forth.

300,151. ROTARY SULKY-HARROW. WILLIAM HENRY SOUTHWARD, Mendon, Ohio. Filed Sept. 27, 1883. (No model.)

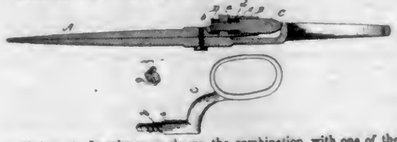
Claim.—1. In a rotary sulky-harrow, the combination, with the sulky A B C, the bent bar L, and the harrow frame or rim V, of the gear-wheels I J, the center wheel, R S T, and the hinged rods U, substantially as herein shown and described.



2. In a rotary sulky-harrow, the combination, with the bent bar L, the tongue D, and the gear-wheel J, of the link M, the bail O, and the saddle-block P, substantially as herein shown and described, whereby the gear-wheels can be readily thrown into and out of gear, as set forth.

3. In a rotary harrow, the combination of the plate T, hub R, hinged rods U, and toothed rim V, adapted to receive the halved and apertured bars Y, so as to hold the teeth out of contact with the ground, substantially as shown and described.

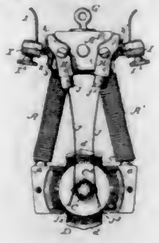
300,152. FRUIT-PICKER. JOHN S. SPRAKER, Kokomo, Ind. Filed Apr. 5, 1884. (No model.)



300,152.

Claim.—1. In a fruit-picker, the combination, with one pole or handle and a hoop and bag secured thereon, of another handle having a curved wire secured to one end, and secured to the first handle by loops, substantially as and for the purpose specified.

2. The combination, with a handle, a hoop and bag secured thereon, as described, another handle, a wire thereon, and loops connecting the two handles, of a stop attached to the two handles to limit their relative longitudinal motion, substantially as shown and described.



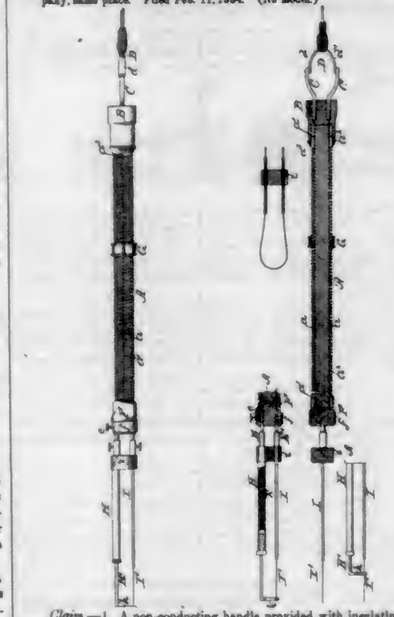
300,153. REVERSIBLE SHEARS. JOHN LITTLEBERRY STARKS, Sharon Grove, Ky. Filed Mar. 13, 1884. (No model.)

Claim.—1. In scissors or shears, the combination, with one of the blades, provided at its lower end with a tubular extension having slots formed upon the opposite sides of the same at their upper ends, of a detachable handle having a coiled spring mounted thereon near the upper end thereof, and a cap adapted to fit the end of the said handle upon the outer side of the tubular extension, substantially as set forth.

2. In scissors or shears, the combination, with one of the blades, provided at its lower end with a tubular extension having slots at its upper end, and a recess formed adjacent thereto upon the blade, said extension being also provided with a seat upon its inner side near the upper end of the same, of a detachable handle, the end of which is squared, said handle being also provided with a coil-spring bearing against a seat upon said handle at one end and against the seat of the tubular extension at the other end, and a cap provided with an outwardly-projecting lug, and adapted to be rigidly mounted on the squared end of the handle, substantially as set forth.

300,154. ELECTRIC MOTOR AND DYNAMO-ELECTRIC MACHINE. ELI T. STARR, Philadelphia, Pa., assignor to the S. S. White Dental Manufacturing Company, same place. Filed Dec. 4, 1883. (No model.)

Claim.—1. The improved armature having pole-pieces made up of thin plates or strips connected together and to the armature shaft or bar, substantially as described.



2. The combination of the motor-frame, the tubular armature, the flexible driving-shaft fitted in said armature and connected therewith so as to be driven thereby, and the sheath or cover for said shaft connected with an extension of the motor-frame, substantially as described.

3. A commutator-brush loosely jointed or swiveled to accommodate itself to the commutator-shaft, substantially as described.

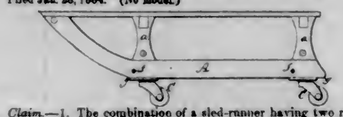
4. A brush-arm jointed so as to be adjustable in its pressure upon the commutator, and provided with a loosely-jointed or swivel commutator-brush, substantially as described.

5. The combination of the brush-arm, the adjusting device thereof, and the loosely-jointed or swivel commutator-brush, consisting of a flat plate or strip, substantially as described.

300,155. ELECTRICAL CAUTERIZING APPARATUS. ELI T. STARR, Philadelphia, Pa., assignor to the S. S. White Dental Manufacturing Company, same place. Filed Feb. 11, 1884. (No model.)

Claim.—1. A non-conducting handle provided with insulating-ferrules at its ends, and with opposite longitudinal grooves, in combination with circuit-wires fitted in said grooves, and one of said wires being formed into a loop and wound spirally around the handle to constitute a resistance device, substantially as described.

2. A non-conducting handle provided with insulating-ferrules at its ends, and with opposite longitudinal grooves, in combination with circuit-wires fitted in said grooves, and one of said wires being formed into a loop and wound spirally around the handle to constitute a resistance device, and with a tool or device carried by the front end of the handle to be affected by the current flowing over said circuit-wires, substantially as described.

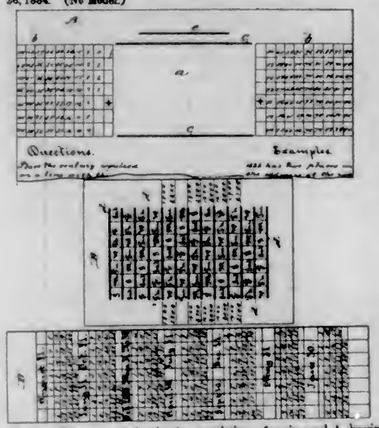


3. The combination of a handle carrying conducting-connections, with a single incandescing cauterizing-needle connected with said conducting-connections and rendered incandescent by the current passing therethrough, substantially as described.

4. The combination of a handle carrying conducting-connections, with a cauterizing-needle in circuit with said connections, and a plunger making contact therewith and movable endwise, so as to allow said needle to be protruded in front of said plunger, substantially as described.

5. The combination of a handle carrying conducting-connections, with a cauterizing-needle in circuit with said connections, and a spring-plunger making contact therewith, and movable endwise relatively to said needle, substantially as described.

6. A cauterizing-needle consisting of two members, one only of which is brought to incandescence in operation, and is of materially higher resistance than the non-incandescent member thereof, substantially as described.



300,156. SLED-RUNNER. NATHANIEL W. STARR, Tarrytown, N. Y. Filed Jan. 28, 1884. (No model.)

Claim.—1. The combination of a sled-runner having two running-surfaces, *c c*, with a groove between them, and a detachable broad runner, B, adapted to fit in the groove and cover the said running-surfaces *c c*, substantially as and for the purpose herein specified.

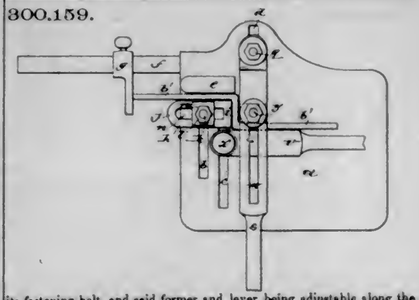
2. The combination of a sled-runner provided with longitudinal groove *b* therein, and casters C C, provided with tongues or flanges fitting the grooves in the sled-runner, substantially as and for the purpose herein specified.

300,157. CALENDAR. HENRY S. STEVENS, Keene, N. H. Filed Apr. 26, 1884. (No model.)

Claim.—The perpetual calendar consisting of main card A, having slits *c e*, adjustable week-day card B, having slits *d*, and the adjustable month-card D, the cards having upon them the names and numbers, as specified, for use in the manner set forth.

300,158. MANUFACTURE OF MATERIAL TO IMITATE IVORY FROM PYROXYLINE COMPOUNDS. JOHN R. STEVENS, Newark, N. J., assignor to the Celluloid Manufacturing Company, New York, N. Y. Filed Apr. 5, 1884. (No specimens.)

Claim.—1. In the art of making pyroxyline material in imitation of ivory by cutting strips of material of varied color, welding them together to form a block, and reducing the block to sheets, the method of treating the strips to insure a perfect result, which consists in applying thereto a solvent to compensate for such evaporation of their moisture as may occur prior to their subjection to the action of the press.



2. The method hereinbefore described of producing sheets in imitation of ivory from pyroxyline material, which consists in, first, cutting strips composed of one or more thin pieces of material of varied color; second, treating the strips with a solvent and compacting them on edge into a cake; third, welding them together to form a block by heat and pressure; and, fourth, reducing the block to sheets.

3. The within-described process of producing sheets in imitation of ivory from pyroxyline material, which consists in treating strips of varied colors with a solvent, placing them on edge in face-to-face contact and applying pressure to insure the cementing of the strips into a solid mass, and finally subjecting them to the action of the press, whereby they are solidified into a block, from which sheets may be cut.

4. The method hereinbefore described of producing sheets in imitation of ivory from pyroxyline material, which consists in cutting strips of material of varied colors, cementing them together without the aid of heat, then solidifying them in a press, and finally reducing the block thus formed to sheets.

300,159. BENDING-MACHINE. WILLIAM WATSON STOKES, Alma, Ill. Filed Jan. 28, 1884. (No model.)

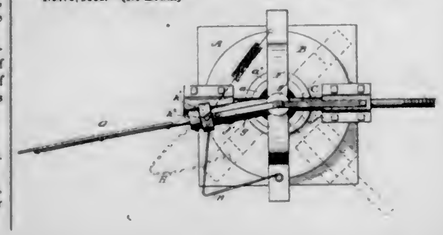
Claim.—1. The combination of the anvil *e*, former A, and lever *s*, with a bed-plate, *a*, having slots *b c*, said former A having a slot, *n*, for its fastening-bolt, and said former and lever being adjustable along the slots of the bed-plate, and former A being adapted to be set obliquely to the anvil-block, substantially as described.

2. The combination of the anvil-block *e*, adjustable former A, and lever *s*, with bed-plate *a*, having slots *b* and *c*, and the lever *v*, said lever *v* being pivoted to and adjustable along lever *s*, substantially as described.

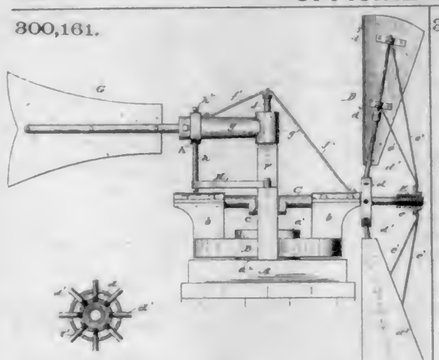
3. The combination of the anvil-block *e*, adjustable former A, lever *s*, former *u*, and lever *v*, with the bed-plate *a*, having slots *b c d*, said lever *v* and former *u* being adjustably connected to said lever *s*, and said lever *s* being removable to and connectable in slot *c*, substantially as described.

4. The combination of the bed-plate *a*, anvil-block *e*, adjustable former A, levers *s* and *v*, and the gage-bar *f* and adjustable stop-gage *g*, substantially as described.

300,160. EMBROIDERY. EDMUND STURZENEGGER, New York, N. Y. Filed Aug. 7, 1883. (No specimens.)



Claim.—1. An article of embroidery provided with undivided tufts composed of the embroidery-threads, the fibers of the tufts being fastened alternately on opposite sides of the center line of the tufts, substantially as described.



2. The process of making plush embroidery, which consists in forming a single or multiple series of parallel face-stitches on each of the adjacent faces of the design, extending from the edge or margin past the center line thereof, the series of the respective faces interlapping at the center, and then cutting the threads at the margin, substantially as described.

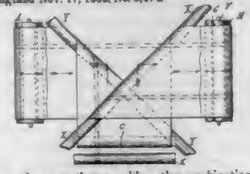
3. The process of forming plush embroidery, which consists in running a face-stitch from the margin of the design transversely across the latter past the center line thereof, then running a short back-stitch near the center line at an angle to the face-stitch, then running a face-stitch parallel with the first face-stitch, then running a short back-stitch at the margin at an angle to the face-stitch, and continuing until one half of the design is covered, then running similar parallel face-stitches across the other half of the design and past the center line thereof with connecting back-stitches, the respective series of face-stitches interlapping at the center, and then cutting the threads of the face-stitches at the margin, substantially as described.

300,161. WINDMILL. GEORGE M. TAYLOR, Chicago, Kans. Filed Nov. 9, 1883. (No model.)

300,161.

Claim.—1. The combination, with the turn-table, arch, crank-shaft, wind-wheel, and vane, of a spring-governor normally holding the vane a little out of line from the crank-shaft and yieldingly connecting said vane and wind-wheel through the arch, turn-table, and crank-shaft, whereby the wind-wheel may automatically adjust itself toward said vane according to the varying force of the wind, substantially as set forth.

2. The combination, with the turn-table B, arch F, crank-shaft C, wind-wheel D, and vane G, of the angular spring-governor H, normally holding the vane a little out of line from the crank-shaft and yieldingly connecting said wind-wheel and vane, substantially as set forth.



3. The combination, with the arch F and vane G, of the collar A', mounted on the stock of the vane, the rod A, fastened to said collar, and the angular spring-governor H, fastened to said rod and the arch F, substantially as described.

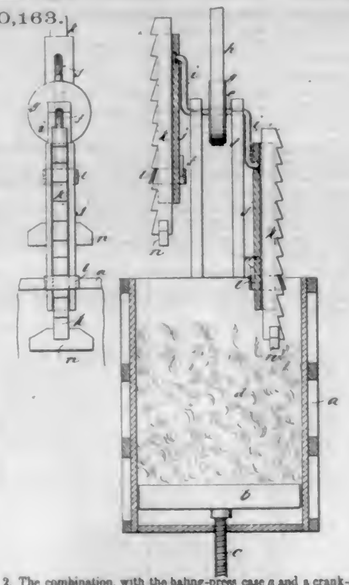
4. The combination, with the shaft C, having a threaded extension, and the wind-wheel D, mounted on the said shaft, of the internally-threaded sleeve E, adapted to said threaded extension, the hub or sleeve *e*, swiveled on the threaded sleeve E, and braces connected with the hub or sleeve *e* and the arms of the wind-wheel, substantially as described.

5. The combination, with the turn-table B and the arch F, having the post *f*, of the vane G, pivoted to said post, and the brace or stay rods *f' f²*, also having a loose or pivotal connection with said post, substantially as described.

6. The combination, with the flanged hub *d*, of the arms *d'*, passing freely through the outer flange and screwed into an inner flange, substantially as described.

300,162. PRINTING-MACHINE. WILLIAM WILBERFORCE TAYLOR, Ripon, County of York, England. Filed Aug. 6, 1883. (No model.) Patented in England Nov. 17, 1882, No. 5,474.

Claim.—1. In a printing-machine, the combination of bars and rollers for turning and guiding the paper, and the ordinary carrying-tapes, or equivalent, with a web or tapes to support the said ordinary tapes, substantially as set forth.



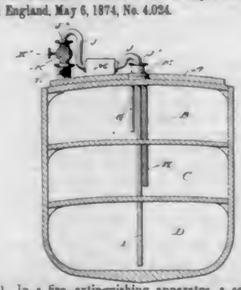
2. In a printing-machine, the combination of bars having inclined turning-surfaces at right angles to each other, and guiding-rollers and carrying-tapes, or equivalent, for the paper, with a carrying web or tapes to support the said ordinary tapes, substantially as set forth.

3. The combination of bars X Y, having inclined turning-surfaces at right angles to each other, with rollers A B C D E, tapes passing around said rollers, to carry the paper, and a carrying web or tapes to support the said ordinary tapes, and also passing around said rollers, substantially in the manner set forth.

300,163. TRAMPING ATTACHMENT FOR BALING-PRESSES. GIDEON PHILIP THOMPSON, Crowley's Station, Tex. Filed Apr. 11, 1884. (No model.)

Claim.—1. The combination, with a baling-press case, *a*, of a pair of tramping-legs suspended from a crank-shaft located over the case, substantially as described.

300,163.

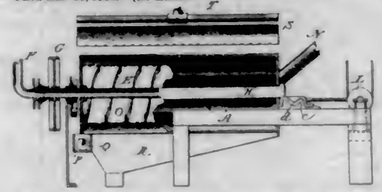


2. The combination, with the baling-press case *a* and a crank-shaft, *e*, located over the same, of extensible tramping-legs suspended from said crank-shaft and adapted for tramping the cotton or other material in the case to be baled, substantially as described.

3. The combination of extensible tramping-legs consisting of grooved section *j* and notched section *k*, fitted one within the other and secured by a band, *l*, and key *m*, with the crank-shaft *e* and the press-case *a*, said section *j* being suspended from the crank, and the section *k* having the tramping-foot *n*, substantially as described.

4. The combination, with a press having a follower, *b*, in the bottom, and being arranged to open at the top, of a pair of trampers suspended from a crank-shaft located over the top of the case, said trampers being adapted to be contracted as the case fills, substantially as described.

300,164. APPARATUS FOR EXTINGUISHING FIRES ON SHIPS. WILLIAM H. THOMPSON, New York, N. Y. Filed May 3, 1883. (No model.) Patented in England, May 6, 1874, No. 4,024.

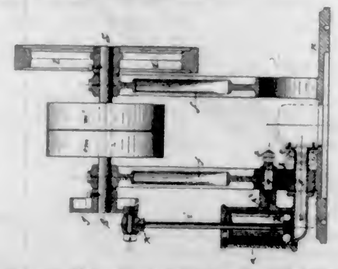


Claim.—1. In a fire-extinguishing apparatus, a series of vertical pipes of different lengths, terminating in separate compartments, the upper ends whereof are flush and arranged in the arc of a circle, in combination with a main supply-pipe having one end of a branch pipe swiveled thereto, the loose end of said branch pipe being adapted to engage any one of the vertical pipes, substantially as described, and for the purposes set forth.

2. In a fire-extinguishing apparatus, a series of vertical pipes of different lengths, the upper ends whereof are flush and secured in the openings of a quadrantal plate, the lower ends whereof terminate in separate compartments, in combination with a main supply-pipe having one end of a branch pipe swiveled thereto, and a cock, K', the loose end of said branch pipe being adapted to engage any one of the openings in the quadrantal plate, substantially as described, and for the purposes set forth.

3. In a fire-extinguishing apparatus, a series of vertical pipes of different lengths, terminating in separate lower compartments, the upper ends whereof are flush, in combination with a main supply-pipe having a swivel feed-pipe connected therewith, said feed-pipe being provided with a gas-generator, substantially as described, and for the purposes set forth.

300,165. STARCH-SEPARATOR. CHARLES W. TREMAIN, Chicago, Ill. Filed Mar. 15, 1884. (No model.)



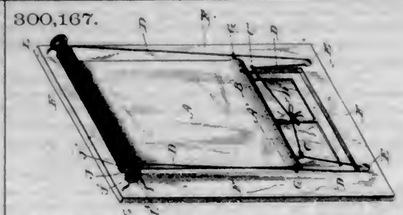
Claim.—1. In the machine described, a screen and screen-frame, in combination with suitable belt-connections for imparting a rotary motion thereto, a rod connected to said frame and mounted in V-shaped journals, and suitable belt-connections for imparting a reciprocating and trip motion to said frame and screen, as described.

2. In the machine described, the combination, with a screen, a screen-frame, and a conveyer situated therein, of suitable belt-connections for imparting a rotary motion thereto, a rod connected to said frame and mounted in V-shaped journals, and suitable belt-connections for imparting a reciprocating and trip motion to the parts, as described.

3. In the machine described, the combination, with a screen and screen-frame mounted on a perforated shaft, of a water-supply pipe connected to said shaft, suitable belt-connections for imparting a rotary motion thereto, a rod connected to said frame and mounted in V-shaped journals, and suitable belt-connections for imparting a reciprocating and trip motion to the parts, as described.

300,166. OSCILLATING STEAM-ENGINE. MAX ULRICH, Holyoke, Mass. Filed Feb. 15, 1884. (No model.)

Claim.—1. The combination, with a laterally-oscillating steam-cylinder, *a*, having a bottom steam-channel, *u*, and a pivot, *q*, above the same, of an arched supporting-block, *b*, having steam supply and exhaust pipes *s* and *e*, and a bearing, *p*, for the pivot of the cylinder above the pipes *s* and *e*, substantially as set forth.



2. The combination of an arched supporting-block, *o*, having steam supply and exhaust pipes at the lower part and a bearing, *p*, at the top part, with a laterally-oscillating steam-cylinder, *a*, having a bottom steam-channel, *u*, and a pivot, *q*, above the same, said pivot being supported in the bearing *p*, and acted upon by a spiral spring, *r*, substantially as set forth.

3. The combination of an arched supporting-block, *b*, having steam admission and exhaust pipes *s* and *e* at the bottom part of the same and a bearing, *p*, at the top part, a laterally-oscillating steam-cylinder having a bottom steam-channel, *u*, and a spring-actuated pivot, *q*, the faces of the socket of the pivot and its bearings and the faces of the steam-channel *u* and the steam admission and exhaust pipes being arranged vertically in line with each other, substantially as and for the purpose set forth.

300,167. WINDOW-CURTAIN FIXTURE. CHRISTOPHER T. UNANGST, Swartswood, N. J. Filed Mar. 25, 1884. (No model.)

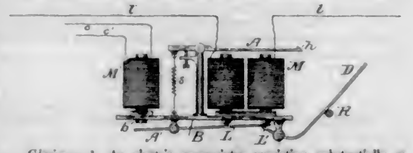
Claim.—1. A curtain-roller provided with an end gudgeon, and a drum revolubly secured to the end of said roller and around the gudgeon, in combination with a spring having one end fixed to the drum and the other end united to the gudgeon, substantially as described, and for the purposes set forth.

300,167.

2. A curtain-roller provided with an end gudgeon, and a flanged drum revolubly secured to the end of said roller and around the gudgeon, in combination with a spring having its respective ends united to the drum and gudgeon aforesaid, in the manner and for the purposes set forth.

3. A curtain-roller provided with an end gudgeon fixed thereto, and a flanged drum having a rim and recess for the reception of the end of the roller, in combination with a spring having its respective ends fixed to the gudgeon and drum, substantially as described and set forth.

4. A curtain-roller provided with an end gudgeon, a drum revolubly secured to the end of said roller and around the gudgeon, and a spring having one end fixed to the drum and the other secured to the gudgeon, the end of said gudgeon extending through and beyond the outer wall of the drum, in combination with a bracket adapted to receive and form a journal-bearing for the gudgeon projection, substantially as described, and for the purposes set forth.



5. A curtain provided on its lower end with a slat having end eye-screws and a roller on its upper end, said roller being provided with a gudgeon, drum, and spring, as specified, and brackets fixed to the frame, said frame having studs fixed below the bottom of the curtain, in combination with cords having one end fixed to the drum and the other end secured to the lower part of the curtain, said cords passing through the screw-eyes and around the frame-studs aforesaid substantially as described, and for the purposes set forth.

6. A curtain provided with a roller, said roller having a gudgeon and spring, as specified, and brackets fixed to the frame, said frame having studs fixed below the bottom of the curtain, in combination with cords having one end fixed to the drum and the other end secured to the lower end of the curtain, said cords passing around the studs aforesaid, in the manner and for the purposes specified.

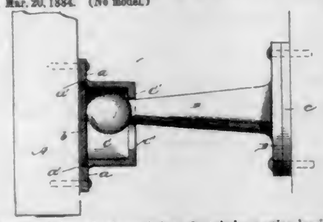
7. A curtain provided on its lower end with a slat having end eye-screws, said slat being provided with hooks on its under side, said curtain having a roller on its upper end, provided with a gudgeon, drum, and spring, as set forth, gudgeon-brackets fixed to the upper part of the frame and studs secured to the bottom of the frame, in combination with cords having one end fixed to the drum and the other end secured to the lower part of the curtain, said cords being engaged by the screw-eyes, studs, and hooks, in the manner and for the purposes specified.

8. The bracket herein shown, consisting of a wire bent so that its points lie substantially parallel, said points being sharp, the lower portion of the wire being inclined upward at about an angle of forty-five degrees, and then curved forward, said forward or upward curve having a downward bend or loop for the reception of the roller-gudgeon, as specified.

300,168. ELECTRIC ANNUNCIATOR AND CIRCUIT. THEODORE N. VAIL, Boston, Mass. Filed Jan. 30, 1884. (No model.)

Claim.—1. An electric annunciator consisting, substantially as hereinbefore described, of an electro-magnet for a signaling-circuit, an armature therefor, and a drop-signal with lever-extension controlled by said armature, the electro-magnet being adapted, when energized, to attract the armature and release the drop signal, with an auxiliary electro-magnet adapted for inclusion in an independent circuit, an armature and lever therefor, said lever bearing upon and controlling the lever-extension of the drop-signal, whereby the said drop-signal may be replaced by the attractive power of the auxiliary magnet exerted through its armature and lever.

2. In a telephone-exchange system, the combination of two or more main lines, a switch-board, connecting devices for connecting any two lines together on said switch-board, an annunciator for each line, a local normally-open battery-circuit, and an auxiliary electro-magnet therein adapted on the closing of its circuit to attract its armature, and thereby



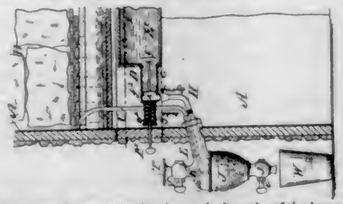
reset said annunciator, said battery-circuit being connected with said switch-board, substantially as described, whereby the act of connecting any two lines together by means of said connecting devices simultaneously closes said circuit, as set forth.

3. The combination of the main lines, annunciators, switch-board, connecting devices—such as switch-plugs—and resetting electro-magnet in a normally-open circuit connected with said switch-board, whereby the insertion of the switch-plug in its socket to make a connection between two lines momentarily closes said circuit long enough to energize said magnet and reset the annunciator, substantially as described.

4. In a telephone switch-board, the combination of plug-sockets and connecting-plugs adapted to be inserted in the said sockets, with a local circuit normally open at each plug-socket, and including a battery and electro-magnet, the said electro-magnet being attached to a line-annunciator and adapted to reset the same, whereby the act of inserting the plug in its socket automatically effects the closing of the local circuit, for the purposes described.

5. In a telephone-exchange system, the central-office apparatus herein set forth, comprising an annunciator for signaling, switching devices for connecting a line with any other line, resetting devices consisting of an electro-magnet, armature, and armature-lever, the said electro-magnet being in a normally-open local circuit, means for automatically closing the said local circuit by the act of switching one line to another, and means for manually closing the said local circuit, for the purposes described.

300,169. DOOR-CHECK. OTIS PALMER VANDEBURGH, Toledo, Ohio. Filed Mar. 20, 1884. (No model.)



Claim.—1. A door-check consisting of a tubular portion having at its lower end an outwardly-projecting flange for its attachment, and at its upper end an inwardly-projecting flange, and a plate provided with a stem or post having a headed portion, and an elastic cushion located between said plate and the base-board, substantially as shown and described.

2. In a door-check, a stem or post having a headed portion and a plate for its attachment, an elastic cushion interposed between said plate and the base-board, and means carried by the door for receiving said headed portion of the stem, substantially as set forth.

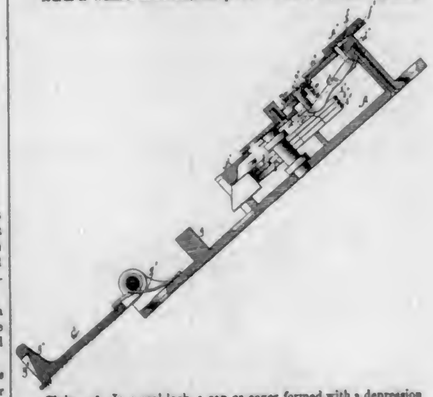
3. In a door-check, a tubular portion provided with a flange for its attachment, an elastic cushion secured to the door within said tubular portion, an inwardly-projecting annular flange at the upper edge of said tubular portion, a stem adapted to be secured to the base-board and provided with a headed end, and an elastic cushion interposed between said stem and the base-board, substantially as set forth.

4. A door-check comprising a tubular portion having at its lower end a flange with means for its attachment, an elastic cushion clamped to the door by the lower edges of said tubular portion, which is also provided at its upper end with an inwardly-extending annular flange, a stem having a ball-head, and a suitable attaching-plate formed integral therewith, and an elastic cushion interposed between said plate and the base-board, substantially as set forth.

300,170. SODA-FOUNTAIN. ABRAM H. VAN RIPER, Orange, N. J., and FREDERICK E. KIP, New York, N. Y. Filed Sept. 20, 1883. (No model.)

Claim.—1. The combination, in a soda-fountain, of the box or case A, the drawer D, and the syrup-chambers arranged side by side in the drawer, whereby facility is afforded for withdrawing all of said chambers simultaneously through the front wall of the box or case, substantially as herein described.

2. The combination, with the syrup can or chamber E, having the necks or extensions $e e^2$, one forming a measuring-chamber, of the valves $f f'$, valve-rod F, common to both valves, and springs g, acting on the valve-rod with a tendency to close one valve and open the other, arranged and operating as shown and described, for the purpose specified.



3. In a soda-water fountain, a receiving, mixing, and discharging apparatus, consisting of a bowl or receptacle, J, and a cap or cover, K, having a shank, L, provided with two conduits—one for soda-water and the other for syrup—substantially as herein described.

4. The combination, with the syrup-chambers and the receiving and discharging apparatus, of the pipes H, having their upper ends flaring or funnel-shaped and arranged under their respective chambers, and their lower ends concentrated and communicating with the syrup-conduit, substantially as herein described.

5. The combination, with the soda-water pipe and coil C and the receiving and discharging apparatus, of the conduit L, branches $m m^2$, valves m^3 m^{3a}, conduits p p^2, stirrers or beaters S, and vertical pipe l, substantially as and for the purpose herein described.

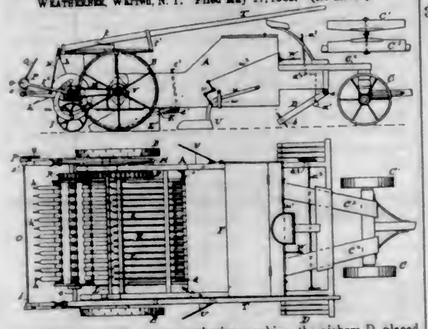
6. The combination, with the receiving and discharging apparatus, of the auxiliary syrup-receiver, consisting of the urn or chamber T, provided with the valve or cock V, and having an opening communicating with the syrup-conduit N, substantially as and for the purpose herein described.

300,171. SEAL-LOCK. ROWT. O. WALKER, Chicago, Ill., assignor of one-fourth to William M. Dobbin, same place. Filed Feb. 4, 1884. (Model.)

Claim.—1. In a seal-lock, a cap or cover formed with a depression or groove for receiving the seal, a sliding spring-actuated guard for protecting and holding the seal in position, and a lever carrying a seal-punch at one end and a pin for locking the guard at the other, in combination with a lock-bolt having an incline upon its rear end, adapted to engage and actuate the seal-punch, substantially as and for the purpose set forth.

2. In a seal-lock, a plate provided with a depression for receiving the seal, and a spring-actuated lever provided with a punch working in a hole in said depression, in combination with a sliding spring-actuated plate or guard for holding the seal, and a pin for locking this plate in position, having a slotted connection with the punching-lever, whereby the pin is not moved to release the guard till after the seal has been punctured, substantially as and for the purpose set forth.

3. The cap or cover A', seal-receptacle c, lever C, and punch d, in combination with the plate A^2, having arms a^2, projections or lugs a', acted upon by springs a^4, and the inclined groove f and depression f', and the latch-pin d^2, connected to said lever by a slotted connection, substantially as and for the purpose set forth.



4. In a seal-lock, the bolt B, made in three parts and having the beveled or inclined rear end, in combination with the seal-punch d, lever C, slotted pin d^2, and seal-guard A^2, all constructed and arranged to operate substantially as and for the purpose set forth.

300,172. TICKET-HOLDER. CHARLES W. WALTERS, Oglethorpe, Ga. Filed Mar. 31, 1884. (No model.)

Claim.—The combination, with a casing, A, having an opening in its upper side, and a slot, E, in one of its ends, of a plate located in said casing, a flat spring interposed between said plate and the bottom of the casing, and a catch and pin secured to the back of said casing, substantially as set forth.

300,173. MACHINE FOR GATHERING STONES. BRAYTON A. WHITBECK, Watton, N. Y. Filed May 17, 1883. (No model.)

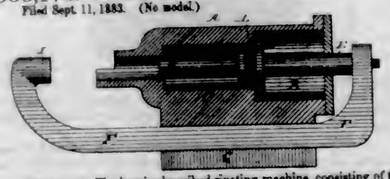
Claim.—1. In a stone-gathering machine, the pickers D, placed forward of the stone-propelling apparatus, for loosening the stones, and having independent hinge-connection at their forward ends with the frame, in combination with the revolving propeller arranged in rear thereof, substantially as set forth.

2. In a stone-gathering machine, a revolving propelling device having spring teeth or beaters attached to horizontal bars, each tooth being attached at its inner end to a bar and being passed around said bar, substantially as and for the purposes described.

3. A revolving stone-propelling device having heads G, and provided with removable bars holding spring-teeth adapted for striking and propelling the stones, substantially as shown and described.

4. The revolving stone-propelling device having the heads G, provided with seats f, removable bars g, with grooves i, and the teeth A, severally passing around said bars, being secured thereto, as shown, in combination with suitable operating mechanism, substantially as set forth.

5. In combination with a revolving device on a shaft, the arms H, having a pivotal connection with the machine-carriage, and provided with openings J, and adjustable journal-boxes p within said openings, having lateral arms p', entering sockets in arms H, substantially as and for the purposes set forth.

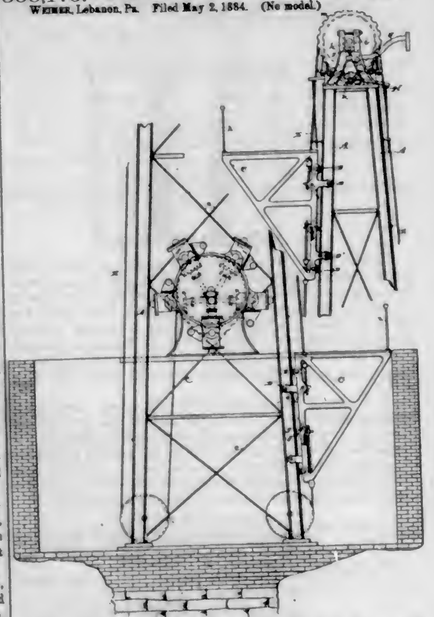


6. In combination with the arms H, carrying the shaft of a revolving propelling device, a transverse shaft, L, having arms M, attached thereto, and the rods N, with end slots, r, connecting said arms H and M, substantially as and for the purpose set forth.

7. In a stone-gathering machine, the combination, with the revolving propeller, of the inclined sectional drag-apron, each section being loosely coupled to the lower part of the machine and forward of the propelling device, substantially as and for the purpose set forth.

8. In a stone-gathering machine, in combination with a revolving propelling device and a receptacle for stones, the inclined drag-apron arranged in front of the propeller and formed of teeth, each being severally coupled at its forward end to the machine, and means for raising the apron, substantially as set forth.

9. In a stone-gathering machine, the guides E', suspended to the frame-work of the machine to swing endwise, and provided with fixed guards d^3, in combination with a stone-propelling device, substantially as set forth.



300,174. RIVETING-MACHINE. WILLIAM R. WEBSTER, Athens, Pa. Filed Sept. 11, 1883. (No model.)

Claim.—1. The herein-described riveting-machine, consisting of the cylinders B and C, having a common axis, and each furnished with a piston, the smaller piston acting as a hammer for forming the head of the rivet, and the larger one acting upon an arm, F, one end of which is fastened to the piston-rod E, and the other end of which is in front of the hammer end of the smaller piston H, and holds the rivet in place while being struck by piston H, substantially as set forth.

2. The combination, in a riveting-machine, of the cylinders B and C, piston-rod and piston-head H, piston-head D, piston-rod E, arm F, attached to piston-rod E and furnished with a head, I, and guide G, for guiding said arm F, all arranged and operating substantially as set forth.

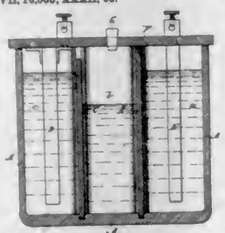
300,175. HOISTING-TOWER FOR BLAST-FURNACES. PETER L. WEIMER, Lebanon, Pa. Filed May 2, 1884. (No model.)

Claim.—1. The combination, with a car or carriage, of a non-adjustable pulley, automatically-adjustable pulleys situated on opposite sides of the non-adjustable pulley, and ropes connected to the car or carriage and passing over the pulleys, substantially as set forth.

2. The combination, with a car or carriage and a counter-balance, of a non-adjustable pulley, automatically-adjustable pulleys situated on opposite sides of the non-adjustable pulley, ropes connecting the carriage and a counter-balance and passing over the pulleys, and tail-ropes connecting the carriage and counter-balance and connected to a drum, substantially as set forth.

3. The combination, with a carriage and counter-balance and two or more ropes connecting the carriage and counter-balance and passing over pulleys, of a tail-rope connecting the carriage and counter-balance and secured to a winding-drum, substantially as set forth.

4. The combination, with a carriage, a counter-balance, and a rope connecting the carriage and counter-balance and passing over a pulley, of a tail-rope and a safety tail-rope, both of which are connected to the carriage and counter-balance and to a driving-drum, substantially as set forth.

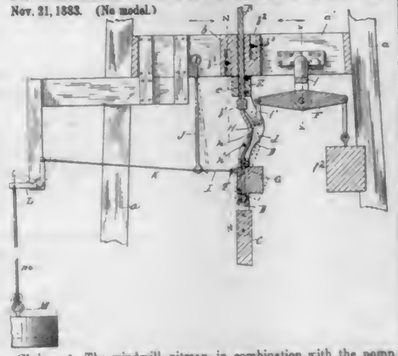


5. The combination, with a tower having tracks or guides formed on opposite sides thereof, of carriages moving on said guides or tracks, a rope connecting said carriages and passing over a pulley located at the top of the tower, a tail-rope connecting the carriages and passing under pulleys located at or near the base of the tower, and a drum around which the tail-rope winds.

6. The combination, with a tower and the carriages secured to the said tower, as described, of a rope connecting the carriages and passing over a pulley located at the top of the tower, and a tail-rope connecting the carriages and winding around a driving-drum, substantially as set forth.

7. The combination, with a tower, a non-adjustable pulley located on the top of the tower, and adjustable pulleys located on opposite sides of the non-adjustable pulley, of carriages moving in contact with the opposite sides of the tower, three ropes connecting the carriages and passing over their respective pulleys, and a tail-rope connecting the carriages and winding around a driving-drum, substantially as set forth.

8. The combination, with the tower, the pulleys located thereon, and the levers and weights for holding two of the pulleys elevated in a yielding manner, of the carriages, ropes connecting the carriages and passing over the pulleys, a tail-rope connecting the carriages, and a winding-drum to which the tail-rope is connected, substantially as set forth.



300,176. GALVANIC ELEMENT. WILHELM WENSEL, Vienna, Austria-Hungary. Filed Nov. 23, 1883. (No model.) Patented in France Nov. 5, 1883, No. 158,380; in Belgium Nov. 5, 1883, No. 63,104, and in Italy Dec. 31, 1883, XVII, 16,065, XXXII, 68.

Claim.—1. A galvanic element the negative electrode of which (of zinc) is contained in a dialyzing-cell and immersed in an alkaline solution or its specified equivalent, in combination with a positive electrode (of platinum or carbon) immersed in a strong acid (nitric acid of from 30° to 40° Baumé) and contained in a second porous cell, and a conducting-liquid (sulphuric acid of from 50° to 70° Baumé) to electrically connect the electrodes through the medium of the constant osmotic exchange between the sulphuric and the nitric acid, substantially as described.

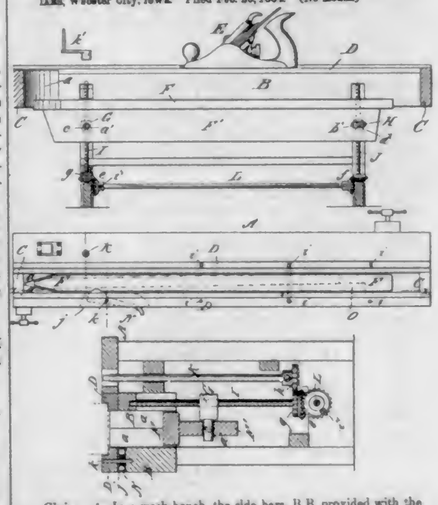
2. A galvanic element composed of a non-porous vessel divided into three cells by means of porous partitions, suitable electrodes and exciting agents therefor, and an intermediate conducting-liquid, the porous partition separating the intermediate conducting-liquid from the exciting agents being constructed to permit an overflow of the conducting-liquid into the cell containing the positive electrode and its exciting agent, substantially as described, and for the purpose specified.

300,177. AUTOMATIC STARTING AND STOPPING MECHANISM FOR WINDMILL-PUMPS. JOHN M. WHITNEY, Mount Pulaski, Ill. Filed Nov. 21, 1883. (No model.)

Claim.—1. The windmill-pitman, in combination with the pump suction-rod, connected loosely to permit movement of the pitman on the rod, and swinging bolt arranged to stand in line with the pitman and suction-rod when in a vertical position, and to swing backward out of such line when released from strain, substantially as and for the purposes set forth.

2. The windmill-pitman, in combination with the block *b*, adjustable vertically, and the pump suction-rod, substantially as and for the purposes set forth.

3. The pump suction-rod, in combination with the block G, pivoted thereto at its lower front corner, the bolt H, attached to the block, the windmill-pitman, and a suitable device for holding the pump suction-rod up when released from the action of the pitman, substantially as and for the purposes set forth.



4. The pump suction-rod provided with plates D at its upper end the block E at the upper end of the plates, the swinging block G, arranged between the plates and pivoted thereto at its lower front corner, the bolt H, mounted on the pivoted block, the pitman B, the stop-block *b*, and the counterbalancing-weight connected to the suction-rod, substantially as and for the purposes set forth.

5. The pump suction-rod, in combination with the block G, pivoted thereto at its lower front corner, the bolt H, arranged to stand in line with the pitman and suction-rod when in a vertical position, the float M, and the bell-crank lever L, connected to both float and pivoted block, substantially as and for the purposes set forth.

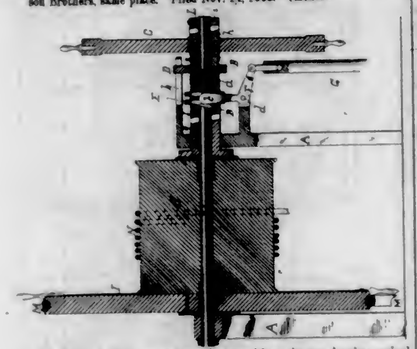
6. The pump suction-rod, in combination with the block G, pivoted thereto at its lower front corner, the bolt H, mounted thereon, the windmill-pitman, the connecting rods or wires I and K, the support J, the bell-crank lever L, and the float M, substantially as and for the purposes set forth.

7. The pump suction-rod, in combination with the mill-pitman, the swinging bolt hinged to the suction-rod below its connection with the pitman, the bell-crank lever connected to the float, and a connecting device between the bell-crank lever and the swinging bolt arranged horizontally and broken and supported at a point shortly distant from its connection to the swinging bolt, substantially as and for the purposes set forth.

300,178. CARPENTER'S WORK-BENCH. CLARENCE ADELBERT WILLIAMS, Webster City, Iowa. Filed Feb. 26, 1884. (No model.)

Claim.—1. In a work-bench, the side bars, B B, provided with the inclines *a a*, that form a V-shaped rest for holding the board or piece of lumber, substantially as described.

2. A work-bench consisting, essentially, of the rabbeted side bars, B B, provided with apertures *i* on their upper edges, to receive suitable clamps or yokes, pivoted cam-lever N in a slot in the outer side bar, and a vertically-adjustable support, F, working between said side bars, substantially as set forth.



300,179. MANUFACTURE OF ELECTRIC CONDUCTORS. JOHN J. WILLIAMSON, Boston, Mass. Filed July 23, 1883. (No specimens.)

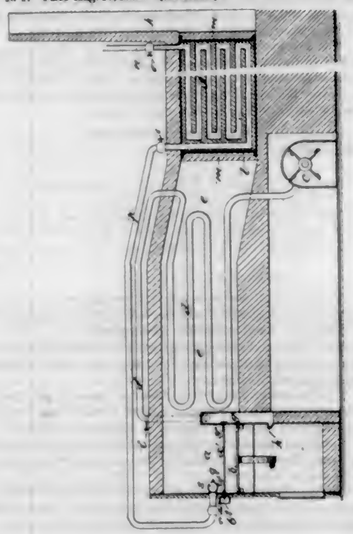
Claim.—1. A compound ingot having a core of malleable metal of high electric conductivity and comparatively low fusing temperature, completely inclosed on its sides and ends by a malleable tenacious metal of lower electric conductivity and comparatively high fusing-point, substantially as and for the purposes described.

2. In the preparation of compound ingots of malleable-cast-metal exterior and copper center for the manufacture of electric conductors, the improved method of preparing the interior of the steel envelope for the reception of the copper core, consisting of the removal of sand scale and the application of a carbonaceous wash, or of the equivalent of such manipulations, substantially as described.

300,180. STEAM STEERING MECHANISM. WILLIAM C. WILLIAMSON and HALVOR O. FLADVAD, Philadelphia, Pa., assignors to Williamson Brothers, same place. Filed Nov. 14, 1883. (Model.)

Claim.—1. In a steam steering-machine, sleeves having spiral, curved, screw, or inclined end faces moved by the steering-wheel and connections, and appliances for controlling the motion of the steering-engine and governing the rudder, substantially for the purpose set forth.

2. In a steam steering-machine, sleeves having spiral, curved, screw, or inclined end faces and connected with the engine, and appliances connected with the engine for controlling the action of the same and governing the rudder, substantially for the purpose set forth.



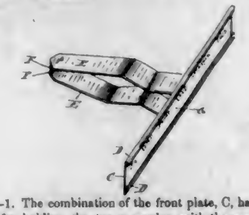
3. The combination, in a steam steering-machine, of a hand-wheel provided with cam-faces adapted to contact, as described, with collars having cam-faces and operated by the tiller-drum, and connections for starting, stopping, and reversing the engine, substantially as set forth.

4. In a steam steering-machine, the combination of a hollow shaft, B, having spiral, curved, screw, or inclined ends, with a drum-shaft, H, having like ends or collars, for starting, stopping, or reversing the engine.

5. In a steam steering-machine, the combination of a hollow shaft, B, having spiral, curved, screw, or inclined ends, a drum-shaft, H, having ends or collars, collar E, link F, and rod G, for starting, stopping, or reversing the driving-engine.

6. In a steam steering-machine, the combination of a hollow shaft having spiral, curved, screw, or inclined ends, a drum-shaft, H, having like ends or collars, a hand-wheel, I, drum Q, link F, and rod G, for starting, stopping, or reversing the driving-engine.

300,181. METALLURGIC FURNACE. THOMAS J. WILSON, Auburn, N. Y. Filed Aug. 17, 1883. (No model.)

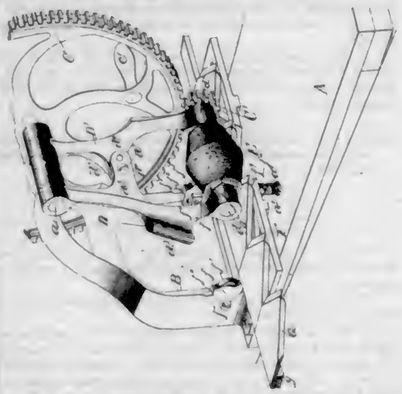


Claim.—1. A furnace for heating blanks, consisting of the fire-chamber *a*, provided with a suitable grate and a horizontal flue, in combination with a fan or blower beneath said flue, and a pipe connected to said fan or blower, said pipe passing through the flue in serpentine form to the outside of the flue, and there provided with a regulating-valve, *i*, and into the flue again, where it communicates with the furnace-chamber below the grate, substantially as set forth.

2. A furnace for heating blanks, consisting of the furnace-chamber, the grate, the hollow bridge-wall provided with openings *h* below the grate, and a horizontal flue in rear of said bridge-wall, in combination with the fan or blower beneath said flue, and a pipe passing from said fan or blower through the flue in serpentine form to the outside thereof, where it is provided with a regulating-valve, *i*, thence into the hollow bridge-wall, whereby the air, properly heated and regulated, may pass through the fuel to aid combustion, substantially as set forth.

3. The steam superheating or decomposing chamber formed of fire-clay or other analogous material *j*, consisting of a series of horizontal flues and surrounded by a metal case or box, said box being coated inside and out with fire-clay or other analogous material, whereby oxidizing is prevented, substantially as set forth.

300,182. TAG-HOLDER. BENJAMIN H. WINCHELL, Chicago, Ill. Filed Mar. 19, 1884. (No model.)



Claim.—1. The combination of the front plate, C, having its edges turned over, for holding the tag or marker, with the spring-plates for securing the whole to the roll of goods, substantially as and for the purposes set forth.

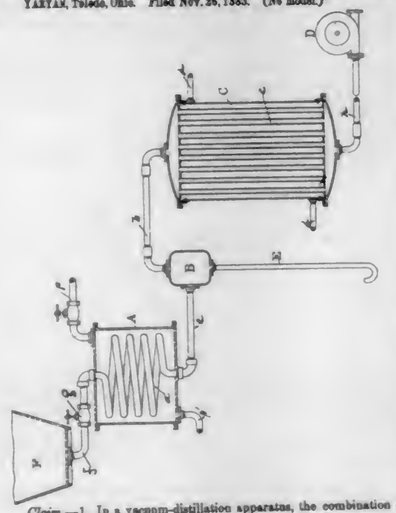
2. The combination, in a tag-holder, of the front plate, C, and the spring-plates E, bent to clasp the center-board at two or more points, substantially as specified and shown.

3. The combination of the front plate, C, spring-plates E, and points F, substantially as specified and shown.

300,183. MACHINE FOR GRINDING HARVESTER-KNIVES. JOHN J. WOOD, Sr., Berlin, Wis., and FRED CHRISTEN, Iowa Falls, Iowa. Filed Apr. 11, 1884. (No model.)

Claim.—1. In a grinding-machine for harvester-knives, in combination with the table F, having hinge *f*, and stand B, the adjustable hinging-plate f', having shoulder f^2, and vertical slot f^3, the screw-bolt f^4, and fastening-nut f^5, substantially as shown and described, and for the purpose set forth.

2. In a grinding-machine for harvester-knives, the combination, with the bed and knife-table, of the curved stand B, having overhanging bearing-studs *a*, the driving-wheel *c*, vibrating arms D D', and grinding-wheel, substantially as described.



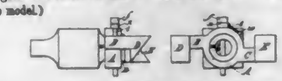
3. In a grinding-machine for harvester-knives, in combination with the stand B and the grinding-wheel E, the vibrating arms D D', each

having the respective extensions d^1 d^2 overlapping each other, the studs d^2 d^3 and respective perforations, and the binding-screw d^7, substantially as shown and described, and for the purpose set forth.

300,184. MANUFACTURE OF SHEET-IRON. W. DEWEES WOOD, Pittsburg, Pa. Filed Jan. 18, 1884. (No specimens.)

Claim.—As a mixture or wash for use in the manufacture of planished sheet-iron, the mixture of red oxide, carbon, water, and acidulating material, substantially as set forth.

300,185. APPARATUS FOR VACUUM DISTILLATION. HOMER T. YARYAN, Toledo, Ohio. Filed Nov. 26, 1883. (No model.)



Claim.—1. In a vacuum-distillation apparatus, the combination of the coil *a*, surrounded by steam or other heating medium, separating-chamber B, vacuum-pump D, and pipe-connections, substantially as and for the purpose set forth.

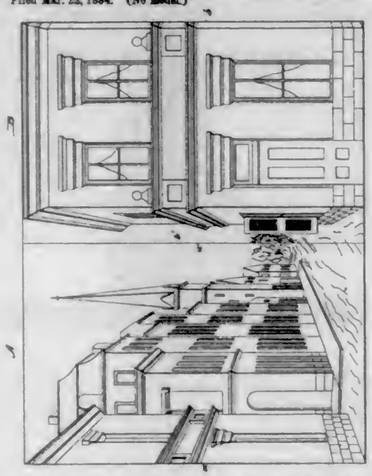
2. The combination of the coil *a*, surrounded by steam or other heating medium, the separating-chamber B, tail-pipe E, vapor-pipe *b*, condenser C, and exhaust-pump D, substantially as and for the purpose set forth.

3. The combination of the coil *a*, surrounded by steam or other heating medium, the separating-chamber B, tail-pipe E, vapor-pipe *b*, regulating-valve *g*, and exhaust-pump D, substantially as and for the purpose set forth.

300,186. CAR-COUPLING. WILLIAM ZAHRINGER, New Orleans, La., assignor of one-half to CHAS. W. DOYLE, same place. Filed July 16, 1883. (No model.)

Claim.—1. An open, round-faced, and ball-shaped bumper and draw-bar, *a*, adapted to receive a collar, A, substantially as and for the purpose set forth.

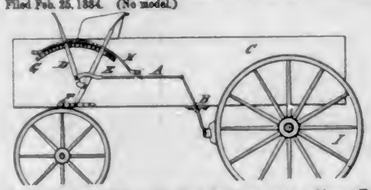
2. A slotted, armed, and hooked collar, A, to be secured to the draw-bar *a*, substantially as described.



3. The combination of the open round-faced ball-shaped bumper and draw-bar *a* with the slotted, armed, and hooked collar A, secured to said bumper and draw-bar by means of a pin, *f*, and spring *s*, permitting the hooks of said collar, when coupled, to adjust themselves upon both sides of said bumper and draw-bar to the various angles formed in running around curves, thereby equalizing the draft upon hooks D E and their mates, substantially as described.

4. The combination of the draw-bar *a* and collar A with the pin *f*, collar *x*, spring *s*, and stud *w*, arranged substantially as and for the purpose set forth.

5. The combination of the draw-bar *a*, collar A, pin *f*, collar *x*, spring *s*, and stud *w* with a rod, R, chain J, and lever L, arranged substantially as and for the purpose set forth.



6. The combination of rod R, chain J, and lever L with a pawl, P, stud *v*, and cord (or chain) F, arranged substantially as and for the purpose set forth.

300,187. STAGE-SCENERY. MATHIAS ARMBRUSTER, Columbus, Ohio. Filed Mar. 22, 1884. (No model.)

Claim.—Stage-scenery with the design upon each piece so painted and arranged that either of the vertical edges of said piece will match either of the vertical edges of other pieces of scenery, so as to produce a complete design, substantially as described, and for the purpose set forth.

300,188. WAGON-BRAKE. BENJAMIN F. BALL, Cincinnati, Ohio. Filed Feb. 25, 1884. (No model.)

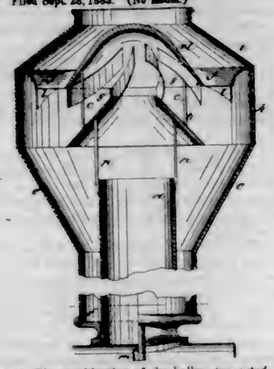
Claim.—1. The combination, with the brake-rod A, of levers E D, connected therewith, and adapted to be moved together as one lever to operate the brake, the lever D having also a motion independently of the lever E when the latter is locked, substantially as described.

2. In a wagon-brake, the combination, with the forked brake-rod A and the rack G, of the lever D, connected directly to the forked brake-rod and to the lever E, the lever E working loosely in the fork of the rod, whereby the lever D may be moved independently of the lever E when the latter is locked, substantially as described.

300,189.

Withdrawn.

300,190. FIRE-EXTINGUISHING COMPOUND. N. GRAY BARTLEY, Chicago, Ill. Filed Dec. 19, 1883. (No specimens.)



Claim.—1. A fire-extinguishing grenade hermetically sealed and containing free carbonic-acid gas and a salt of carbonic acid in solution therein, substantially as set forth.

2. A fire-extinguishing grenade hermetically sealed and containing a salt of carbonic acid in a solution adapted to remain liquid at a temperature about or below zero Fahrenheit, substantially as set forth.

3. A fire-extinguishing grenade hermetically sealed and containing the alkaline chlorides and an alkaline carbonate in solution therein, substantially as set forth..

4. A fire-extinguishing grenade hermetically sealed containing free carbonic-acid gas, together with the alkaline chlorides, and an alkaline carbonate in solution therein, substantially as described.

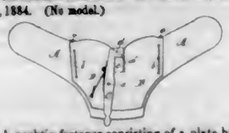
300,191. SPARK-ARRESTER. WILLIAM CONSTANTINE BEAL, Fernandina, Fla. Filed Sept. 28, 1883. (No model.)

Claim.—1. The combination of the hollow truncated cone *b* and hollow cone *d* with the smoke-pipe *a* and the smoke-stack *e h*, the base of the cone *b* being larger and the top smaller than the smoke-pipe, and said cones being arranged one above the other and over the top of the smoke-pipe, substantially as described.

2. The combination of the hollow truncated cone *b*, hollow cone *d*, and the curved flanges *g* in said cone *d*, with the smoke-pipe *a* and the smoke-stack *e h*, said cones being arranged over the smoke-pipe, substantially as described.

3. In a spark-arrester, the combination, with the part A, of the part *i*, flange *j*, and cone *d*, as shown and described.

4. The inwardly and downwardly projecting guard *j*, in combination with the cone *d*, curved chutes *g*, and the smoke-stack, substantially as described.



5. The inwardly and downwardly projecting guard *j* and curved chutes *l*, in combination with the smoke-stack, substantially as described.

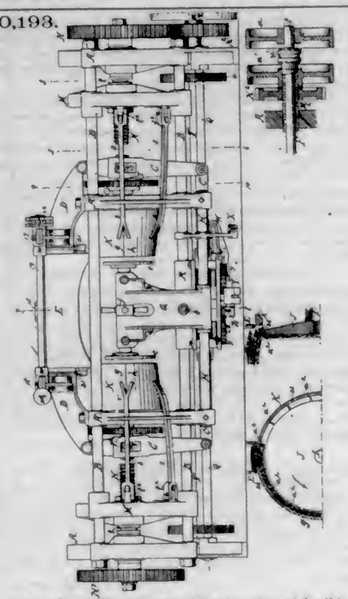
6. The inwardly and downwardly projecting guard *j* and curved chutes *l*, in combination with cone *d*, chutes *g*, and the smoke-stack, substantially as described.

7. The inwardly and downwardly projecting guard *j* and curved chutes *l*, in combination with cone *d*, chutes *g*, cone *b*, and the smoke-stack, substantially as described.

8. The inwardly and downwardly projecting guard *j* and curved chutes *l*, in combination with the cone *d*, chutes *g*, cone *b*, smoke-pipe *a*, and the smoke-stack, substantially as described.

300,192. NECKTIE-FASTENER. WESEL BEALE, Shawneetown, Mo. Filed Feb. 21, 1884. (No model.)

Claim.—1. A necktie-fastener consisting of a plate having slot *c*, in combination with a hooked lever, C, and a spring, D, as and for the purpose described.



2. The combination of the plate B, having slot *c*, with inturned lip *d'*, the lever C, and spring D, as and for the purpose described.

3. The plate B, having collar-button, slot *c*, and bearings *d d' d²* for the fulcrum-pin, in combination with the lever C, having headed fulcrum-pin *e*, and the spring D, substantially as and for the purpose described.

300,193. BARREL-MAKING MACHINE. MARIA E. BEARLEY, Philadelphia, Pa., and EMIL M. HOHENTOHLER, New York, N. Y.; said Hohentohler assignor to said Bearley. Filed May 7, 1883. (No model.)

Brief.—The heads are received upon rotating disks, being carried thereto by holders upon a rocking frame longitudinally movable therein. The staves are placed in a movable hopper above the disks, the lowest stave resting upon the edges of the disks between pairs of fins. As the disks are intermittently rotated by suitable mechanism, the staves are carried around within projecting flanges on cones behind the disks. Over these cones hoops are driven by pivoted driving-arms on heads advanced by screws. When the barrel is finished, it is dropped by the retraction of the disks and the lower halves of the cones.

Claim.—1. The combination, in a barrel-forming machine, of a stave-feeding device, opposite disks constructed to receive and support upon their peripheries the ends of the staves, mechanism for rotating said

disks, and the flanges 26, surrounding but independent of the disks, and notched for the passage of the staves, said flanges projecting over the ends of the staves, whereby they serve to retain said staves in place on the peripheries of the disks as the latter are rotated, all substantially as set forth.

2. The combination, in a barrel-forming machine, of a stave-feeding device, opposite disks constructed to receive and support upon their peripheries the ends of the staves, mechanism for rotating the disks, the flanges 26, surrounding but independent of the disks and notched for the passage of the staves from the feeder, said flanges projecting over the ends of the staves, so as to retain the same upon the peripheries of the disks, the opposite hoop-holders and fingers for forcing the hoops from said holders and onto the barrel while the ends of the staves are within the flanges 26, as set forth.

3. The combination, in a barrel-forming machine, of the stave-feeding device, the opposite disks, J J', constructed to receive and support upon their peripheries the ends of the staves, and having on said peripheries projecting pins a^2, forming stave-sockets, mechanism for rotating said disks, and the retaining-flanges 26, surrounding but independent of the disks and notched for the passage of the staves, said flanges projecting over the ends of the staves and serving to retain them upon the peripheries of the disks as the latter are rotated, as set forth.

4. The combination, in a barrel-making machine, of a stave-feeding device, opposite disks constructed for the reception and support of the ends of the staves, and having their faces provided with means for retaining the heads of the barrel, mechanism for rotating said disks, the flanges 26, extending completely around the disks, and notched for the passage of the staves, and projecting over the ends of the same, so as to serve as a retainer, opposite hoop-holders, and the hoop-driving fingers, as set forth.

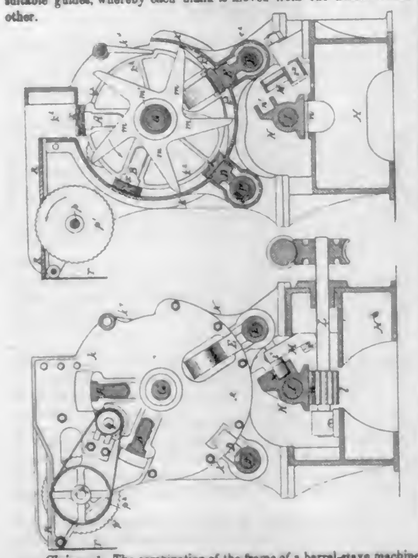
5. The combination of the disks J J' and means for rotating the same, the cones K, having notched flanges 26 upon the ends of the cones, and constructed to overlap the ends of the staves, a stave-holding box, E, located above the notched portions of the flanges, and means, substantially as described, whereby said box can be raised and lowered, as set forth.

6. The combination of the stave-feeder, the opposite disks J J', the flanges 26, projecting over the disks so as to retain staves carried thereby, each flange comprising a lower longitudinally-movable half and an upper fixed half notched for the passage of the staves, and mechanism, substantially as described, for rotating the disks and for retracting the same and the lower halves of the flanges, as set forth.

7. The combination of the opposite disks J J', situated within the cones K K, with the swinging frame G and disks *c c*, and with mechanism for advancing and retracting said disks, as set forth.

8. The combination, in a barrel-forming machine, of the disks J J', constructed to receive the staves, the shafts or sleeves I, carrying said disks, gearing connecting said shafts or sleeves, the ratchet-wheel *m* on

one of the shafts or sleeves, the rocking frame L, operated continuously, and having a pawl engaging with the ratchet-wheel, the ratchet-locking wheel n', and the locking-lever n^2, constructed as described, whereby it trips the pawl and throws the same out of gear on dropping into position to lock the wheel n', as set forth.



9. The combination of the disks J J' and their shafts I, the pivoted arms C, connected thereto, the longitudinally-movable screw-sleeves s' s', means for connecting one sleeve to one arm and the other to the opposite arm, devices for rotating the sleeves, wheels gearing into said sleeves, and mechanism for locking and releasing said wheels, as set forth.

10. The combination of the disks J J', the shafts I, the arms C, connected thereto, the longitudinally-movable screw-sleeves s' s', connected one to one arm and the other to the opposite arm, devices for rotating said sleeves, wheels v, gearing into the sleeves, ratchets v^2 on said wheels, pawl-levers z, adapted to the ratchets, and a wedge-block, w, adapted to act upon said levers, as set forth.

11. The combination of the disks J J', the shafts I, the arms C, connected thereto, the longitudinally-movable screw-sleeves s' s', connected one to one arm and the other to the opposite arm, devices for rotating said sleeves, the wheels v, gearing into the sleeves, the ratchets v^2 on said wheels, the pawls z, adapted to the ratchets, the wedge-block w, acting on the pawls, the balance-lever W, controlling said wedge-block, and having a movable weight, x, the operating-treadle X, constructed to tilt said lever, the weighted lever Y, adapted to reverse the same, the block U, adapted to fit between the sleeves s' s', and having a pin for acting on the lever Y, and the restoring-lever Z, constructed to depress the block U, as set forth.

300,194. BARREL-STAVE-SHAPING MACHINE. MARIA E. BEASLEY, Philadelphia, Pa., and EMIL M. HUGENTOBLER, New York, N. Y.; said Hugentobler assignor to said Beasley. Filed May 14, 1883. (No model.)

Brief.—A reciprocating carriage having work-holders arranged on radial arms is passed through an inclosing-case which supports the several cutters, and contains an intermittently-rotating feeding device and suitable guides, whereby each blank is moved from one holder to the other.

Claim.—1. The combination of the frame of a barrel-stave machine and cutters mounted in fixed bearings with an intermittently-reciprocating carriage having a series of holders for the stave-blanks, to be subjected to the action of said cutters successively for the dressing of the staves during the movement of the carriage, and automatic feed mechanism, substantially as described, for intermittently transferring the blanks from one holder to another at right angles to the movement of the carriage.

2. The combination of the frame of a barrel-stave machine, cutters, and a reciprocating carriage having holders for traversing the blanks longitudinally under said cutters, with chamfering and crozing cutters, and automatic feed mechanism, substantially as described, for intermittently transferring the blanks from one holder to another and subjecting them to the action of the chamfering and crozing cutters in the transfer.

3. The combination of the frame of a barrel-stave machine and a reciprocating carriage carrying a series of blank-holders, with intermittently-operated feeding-arms, for transferring the blanks from one holder to another at right angles to the movement of the carriage, and a series of cutters, beneath which the blanks are successively traversed as follows: a planer, chamfering and crozing cutters, concave and convex cutters, and edge-dressing cutters, all substantially as set forth.

4. In a barrel-stave machine, the combination of a holder constructed to hold the blank in a curved form, a holder for holding the blank straight, and cutters for dressing the blank, with feed mechanism for transferring the blank from the straight to the curved holder, and bending devices, substantially as described, for imparting the required curve to the blank in the transfer.

5. The combination of a fixed casing or box having guide-flanges for supporting the staves, and an intermittently-traversing carriage having holders for the staves, with a series of rotary cutters and intermittent feeding-arms for transferring the staves at right angles to the movement of the carriage from one holder to the next on the said flanges, substantially as described.

6. The combination of the frame of a barrel-machine and the casing K, having supply and discharge openings for the blanks and guide-flanges, with an intermittently-reciprocating carriage having holders for the blanks, and intermittently-rotated feed-wheels for transferring the blanks on said flanges from one holder to another at right angles to the direction of motion of the carriage and while the latter is at rest.

7. The combination of a casing, K, having cams k^2 thereon, and ribbed flanges k^3 over the said cams, with a holder, E, and feeding-wheels for moving the stave-blank between the ribs and flanges onto the holder, substantially as described.

8. The combination of the frame of a barrel-stave machine and a series of cutters on a fixed portion of the frame with a reciprocating carriage having holders for the blanks, a casing for receiving and guiding the blanks, and an intermittent-feed mechanism for transferring the blanks from one holder to the next within the casing, substantially as set forth.

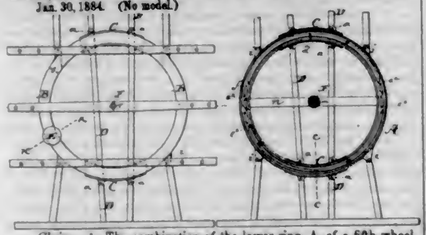
9. The combination of a traversing carriage provided with a series of holders, and having a central rod, G, and the casing K, having bearings, with a series of cutters and a sleeve, w', mounted to turn in said bearings, and carrying feed-wheels w, for transferring the blanks from one holder to another, the said rod passing through said sleeve, substantially as set forth.

10. The combination of a carriage having a series of holders for the stave-blanks, and intermittent-feed mechanism for transferring the blanks from one holder to another, with a rack connected to said carriage to impart motion thereto, but having a limited motion independent thereof, and devices, substantially as described, connecting the said rack with the feed mechanism.

11. The combination of a fixed frame carrying cutters, and an intermittently-reciprocating carriage having holders for the stave-blanks, with an intermittent-feed mechanism for transferring the blanks from one holder to another, and devices, substantially as described, connecting the carriage with feed-operating mechanism, whereby the blanks are transferred while the carriage is at rest.

12. The combination of a traversing carriage having holders for the stave-blanks, and feed devices for transferring the blanks, with an operating-rack, N, connected to the carriage, but having a limited motion independently thereof, and provided with a cam-groove, n', and a lever controlled by said cam, and connected to said feeding devices, substantially as set forth.

13. The combination of a carriage having a series of holders for the stave-blanks, and having feed-wheels for transferring the blanks from one holder to another, with pawl-and-ratchet operating devices, a driving-pinion, L, and a sleeve, N, provided with a rack and cam-groove, and mounted to have a limited motion on said carriage, and a lever, M, connected to the pawl and controlled by said cam-groove, substantially as set forth.



300,195. LAST-BLOCK FASTENER. GEORGE E. BELCHER, Stoughton, Mass. Filed Feb. 27, 1884. (No model.)

Claim.—1. The combination of the last having the diagonally-arranged fastener consisting of bolt a, socket a, and spring c, with the block having the diagonally-arranged orifice d, provided with the tube d', adapted to receive said bolt, and extending to the outer surface of the block.

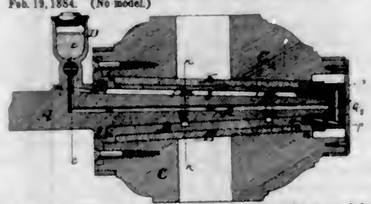
2. The last formed without a shoulder at the lower or forward end of the surface on which the block rests, and having the diagonal or backwardly-inclined pin or dowel i, combined with the block having a diagonal hole to receive said pin at one side of the center thereof, whereby the last-hook is enabled to be inserted diagonally from the side of the last, as set forth.

300,196. FIFTH-WHEEL. HANS H. E. BERY, Brooklyn, N. Y. Filed Jan. 30, 1884. (No model.)

Claim.—1. The combination of the lower ring, A, of a fifth-wheel with the supporting-trough C, having lugs a, and with the fastening-screw d, substantially as and for the purpose described.

2. In the fifth-wheel, the bottom plate, A, having interior channel and inner broken wall, e, within said channel, combined with the upper ring, B, substantially as and for the purpose described.

3. The fifth-wheel ring A, made with oil-channel and provided with discharge opening or openings f, substantially as described.



4. The combination of the lower fifth-wheel ring, A, having channel or channels, with the upper fifth-wheel ring, B, covering the said channels, and with the pins g, that extend downward from said upper ring into said channel, substantially as described.

5. The combination of the trough C with the lower ring, A, of the fifth-wheel, and with the upper ring, B, of said fifth-wheel, both said rings being contained within said trough, substantially as described.

6. The combination of the lower ring, A, of the fifth-wheel, with the projecting lugs i, and with the sustaining-troughs C C, substantially as described.

7. The king-bolt F, made with central enlargement, j, in combination with the tubes m and o, which embrace it, and with the rings A and B of the fifth-wheel, substantially as herein shown and described.

300,197. WAGON-AXLE. HANS H. E. BERY, Brooklyn, N. Y. Filed Feb. 19, 1884. (No model.)

Claim.—1. The axle A, having channels a b d and passage b, leading to channel b, substantially as and for the purpose herein shown and described.

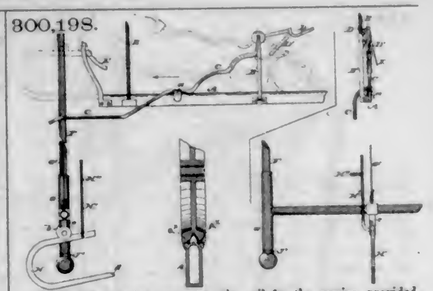
2. The combination of the axle with the axle-box B, having channels e and g, and with the pins f, substantially as herein shown and described.

3. The combination of the axle A with the cap F, having passages p s r, and with the axle-box B, substantially as herein shown and described.

4. The combination of the axle A, having channels a b d, with the axle-box B, having channels e and g, and with the pins f, substantially as herein shown and described.

300,198. STORE-SERVICE APPARATUS. ISIDORE BRICK, Philadelphia, Pa. Filed Mar. 24, 1884. (No model.)

Claim.—1. In store-service apparatus, a cage consisting of a U-shaped frame pivoted to a rising and falling support and set sidewise, substantially as and for the purpose set forth.



2. In store-service apparatus, a cage of U shape formed with a stop, b, and a rising and falling support therefor, formed with a lug, c, substantially as and for the purpose set forth.

3. A U-shape cage pivoted to a rising and falling support formed with a shoulder, d, in combination with a hollow rail, substantially as and for the purpose set forth.

4. In store-service apparatus, a cage formed with a guard, H''', at the side thereof, substantially as and for the purpose set forth.

5. In store-service apparatus, a cage formed with a flaring guide, H'''', substantially as and for the purpose set forth.

300,198.

6. In store-service apparatus, the rail for the carrier, provided with a pivoted stop-arm which extends diagonally and is of curved form, substantially as and for the purpose set forth.

7. In store-service apparatus, the stop-arm of the carrier, formed with a fork, a, substantially as and for the purpose set forth.

8. In store-service apparatus, the stop-arm of the carrier, provided with a stop-piece in advance of said arm, substantially as and for the purpose set forth.

9. In store-service apparatus, the rail and the carrier, in combination with guards of forked form, substantially as and for the purpose set forth.

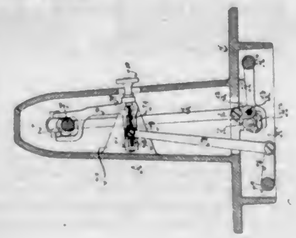
10. In store-service apparatus, a rail-supporting standard formed with a vertical slot, in combination with a bracket with which the rail is connected, formed with arms which enter the slot of the standard and are tightened by nuts, substantially as and for the purpose set forth.

11. In store-service apparatus, a cage attached to a rising and falling support and the guide or frame for said support, having buffers J' at the bottom thereof, substantially as and for the purpose set forth.

12. In store-service apparatus, an automatically-operating switch consisting of a rail having a vertical pivot and a weighted heel, the contiguous faces of the switch and its bearing being inclined, the pivot also being inclined, substantially as and for the purpose set forth.

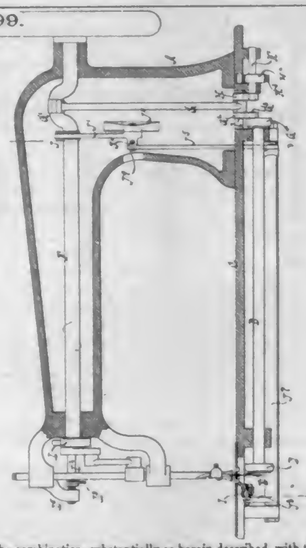
13. In store-service apparatus, a switch provided with a vertically-operating sliding latch or bolt which is raised from the switch-rail by a projection in the carrier, substantially as and for the purpose set forth.

14. The sliding latch or bolt N of the switch-rail, having a nose, N', in combination with the rail having a bar or abutment, P, for said nose, substantially as and for the purpose set forth.



15. In store-service apparatus, a switch and a sliding bolt locking the same, in combination with the carrier formed with an inclined way adapted to raise said bolt, substantially as and for the purpose set forth.

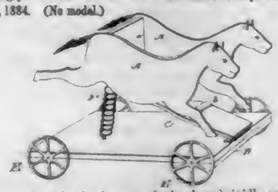
16. In store-service apparatus, a switch-rail provided with a guard, T, and a bridge supporting the same, substantially as and for the purpose set forth.



300,199. SEWING-MACHINE. ADAM BOECHER, New York, N. Y. Filed July 26, 1883. (Model.)

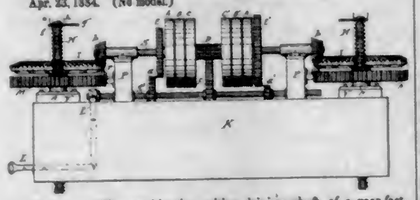
Brief.—A guide-arm is pivoted to the lower end of the main pitman. The guide-arm is fixed to a cam-shaft, the cam acting on the arm of a rock-shaft connected by an arm with the feed-dog and another rock-shaft. Mechanism for adjusting the feed is located between this latter rock-shaft and the main shaft.

Claim.—1. The combination, substantially as hereinbefore described, with the needle-bar-operating shaft and hook-shaft, of the crank G^4 on the hook-shaft, the cam-shaft H' of the feed mechanism, the guide-arm H, for the pitman fixed to the cam-shaft, the rock-shaft H^4, provided with the arm H^2, acted on by the cam on shaft H', the arm H^3 of the rock-shaft, the feed-dog I, the pitman having the upper end connected to the needle-bar-operating shaft and the lower end connected to its said guide-arm, and the link connecting the lower end of the pitman to the crank of the hook-shaft.



300,199.

2. The combination, substantially as herein described, with the needle-bar-operating shaft and hook-shaft, of the crank G^4 on the hook-shaft, the cam-shaft H', the guide-arm H, for the pitman fixed to the cam-shaft, the pitman having the upper end connected to the needle-bar-operating shaft and the lower end connected to its said guide-arm, the link connecting the lower end of the pitman to the crank of the hook-shaft, the rock-shafts H^3 J^3, the one connected to the needle-bar-operating shaft and the other to the cam-shaft, and the feed-dog I, connected to both rock-shafts.



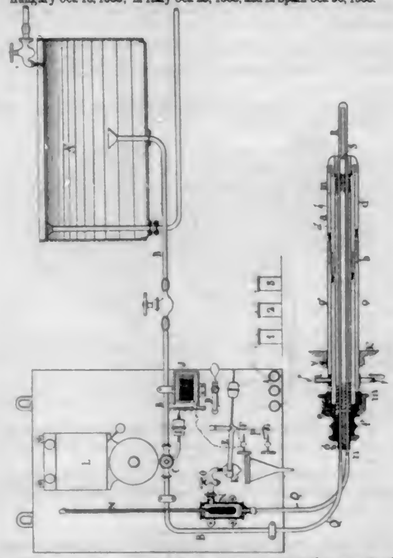
300,200. HOBBY-HORSE. MARTIN BOHLIG, Dubuque, Iowa. Filed Mar. 20, 1884. (No model.)

Claim.—1. In a hobby-horse, a sloping board rigidly secured at its rear elevated end to a seat and hinged at its lower front end to a supporting-base, substantially as described.

2. In a hobby-horse, a sloping board rigidly secured at its rear elevated end to a seat and hinged at its lower front end to a base supported upon wheels, with a spring interposed between the rear end of said board and the base, whereby the seat is adapted to a rocking as well as to an up-and-down movement, substantially as described.

300,201. POWER-PRESS. RUFUS E. BOSCHERT, Syracuse, N. Y. Filed Apr. 23, 1884. (No model.)

Claim.—1. The combination, with a driving-shaft, of a gear fastened on said shaft, and a pinion and pulley fastened to each other and mounted loose on the shaft, and a counter-shaft having fastened to it a gear engaging the loose pinion of the driving-shaft, and a gear adapted to be thrown in and out of engagement with the fast gear of the driving-shaft, substantially as set forth.



2. The combination, with a driving-shaft, of gears of different diameters fastened on said shaft, a pulley and pinion fastened to each other and mounted loose on the driving-shaft, and a counter-shaft having fastened to it a gear in constant engagement with the loose pinion of the driving-shaft, and gears adapted to be thrown in and out of engagement with the fast gears of the driving-shaft, substantially as set forth.

3. The combination, with a driving-shaft, of gears of different diameters fastened to said shaft, a driving-pulley and an axially-elongated gear fastened to each other and loose on the driving-shaft, a counter-shaft adapted to be shifted longitudinally, and having fastened to it a gear in constant engagement with the loose elongated gear of the driving-shaft, and two gears adapted to be carried in and out of engagement alternately with the two fast gears of the driving-shaft by the shifting of the counter-shaft, substantially as described and shown.

4. In combination with the two driving-belts *d* and *e*, running in opposite directions, the shaft S, having mounted thereon the loose elongated pinion D, pulleys C C', fixed to said pinion, loose pulleys B B', fast pulleys A A', and fast gears E E', the counter-shaft S', having the fast gear F in constant engagement with the pinion D, and fast gears *a a'*, adapted to be thrown in and out of engagement alternately with the two gears E and E', substantially as set forth and shown.

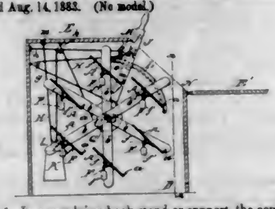
5. In combination with the power-screws H H and nuts N N, the spur-wheels M M, integral with said nuts, the intermediate pinion, *c*, bevel-gear I, the shaft S, provided with bevel-pinions *b*, elongated loose pinion D, pulleys C C', fixed to the loose pinion D, loose pulleys B B', fast pulleys A A', and fast differential gears E E', belts *d* and *e*, running in opposite directions, counter-shaft S, adapted to slide longitudinally, gears F, *a*, and *a'*, fixed to the counter-shaft, and the shifting-lever L, connected with the counter-shaft, all combined to operate substantially as specified and shown.

300,202. PYROMETER. ALFRED BOULIER, Paris, France. Filed Jan. 21, 1884. (No model.) Patented in France Mar. 3, 1883, No. 154,067; in Belgium Mar. 29, 1883, No. 60,911; in Germany Mar. 31, 1883, No. 25,230; in England Apr. 4, 1883, No. 1,698, and Oct. 5, 1883, No. 4,751; in Austria-Hungary Oct. 13, 1883; in Italy Oct. 23, 1883, and in Spain Oct. 30, 1883.

Claim.—1. In a pyrometer operating by means of a current of fluid exposed for a short time to the action of the heat to be measured, and in which the initial temperature of the said fluid is maintained constant, the combination, with the conveying-pipes and capsule, of a thermometer graduated to express the degree of said heat, the bulb of said thermometer being immersed in said fluid, substantially as described.

2. The combination, with the capsule and the inlet and outlet pipes leading to and from the same, of the jacket closely surrounding the said pipes and protecting them from the heat to which the capsule is exposed, substantially as described.

3. The combination, with the capsule and the inlet and outlet pipes, of the water-jacket surrounding said pipes, substantially as described.



4. The combination, with the capsule, the inlet and outlet pipes leading to and from the same, and the protecting-jacket, of adjusting means for withdrawing the capsule more or less into said jacket, substantially as described.

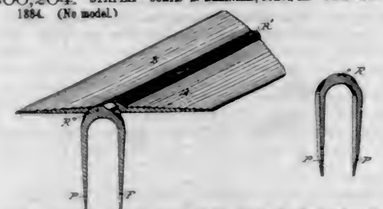
5. The electric balance comprising a device to receive the impact of a stream of liquid and a counter-weight adjusted to balance the force exerted by said impact, in combination with contacts connected with said balance for closing an electric circuit, substantially as described, said balance remaining in equilibrium under a normal flow of the liquid, but turning to operate said contacts and change the circuit-connections when a change takes place in said flow, as set forth.

6. The combination, with a pyrometer wherein a flow of liquid is maintained, of an automatic alarm comprising a balance arranged to be acted upon by the flowing liquid, a signal or alarm, and devices connecting the alarm with said balance, so as to be operated thereby, for indicating a diminution in the flow, substantially as described.

7. The combination, with a pyrometer wherein a flow of liquid is maintained, of an automatic stop-cock comprising a cock or valve, a balance arranged to be acted upon by the flowing liquid, and devices connecting the cock or valve with said balance, so as to be operated thereby, for cutting off the flow upon the diminution of the same, substantially as described.

300,203. REVOLVING BOOK-STAND. DAVID D. BOWMAN, Eureka, Cal. Filed Aug. 14, 1883. (No model.)

Claim.—1. In a revolving book stand or support, the combination, with a series of revolving spiders and means for revolving them, of a series of shelves journaled between the arms of the spiders, and adjustable weights attached to the back of the shelves, substantially as and for the purpose set forth.



2. In a revolving book stand or support, the combination, with the revolving spiders B and shelves A, journaled between their arms, of the bracket *f*, provided with the serrated face *e*, having thumb-screw *i*, and the serrated and apertured face *e'*, having weight *f'* attached, substantially as herein shown and described.

3. In a revolving book-support, the shaft C, provided with the spiders B B, in combination with the pivoted and weighted shelves A, lever J, weight K, cord H, and suitable pulleys arranged for turning the shaft C, substantially as described.

4. In a revolving book stand or support, the combination, with the case E, the shaft C, journaled therein, and provided with the spiders B and the pivoted and weighted shelves A, of the pulleys G *g h k'*, the weight K, the cord H, the lever J, and means for locking said lever in position, substantially as herein shown and described.

5. In a revolving book stand or support, the combination, with the case E, having the hinged lid or shelf E', and a series of revolving shelves journaled in said case, of the operating-lever J, made in two parts, hinged together within the case, substantially as and for the purpose set forth.

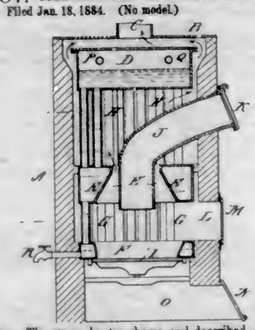
300,204. STAPLE. CURTIS B. BRAINARD, Joliet, Ill. Filed Feb. 15, 1884. (No model.)

Claim.—The staple described, having its head re-enforced and strengthened by means of the integral additional metal R, formed of a portion of the rib R' of the strip S by means of shearing the staple from the diagonal end of said strip, and having its points beveled in opposite directions, as and for the purpose set forth.

300,205. MANUFACTURE OF BOOTS OR SHOES. AARON A. BROWN, Cincinnati, Ohio. Filed June 21, 1883. (No model.)

Claim.—1. In a boot or shoe, the combination of the upper cut away at the toe and heel, and the insole, with tip and molded heel pieces placed over the upper and sewed to the same along their edges and secured to the sole, substantially as described.

300,205.

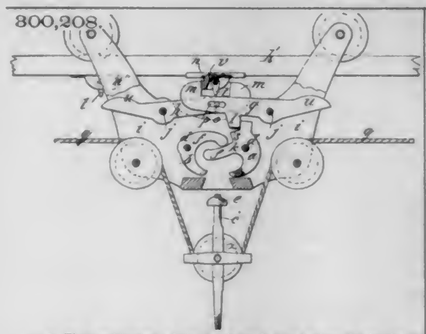


2. The herein-described process of manufacturing shoes, which consists in preparing the upper with toe and heel portions thereof cut away, and in lasting said vamp or upper to the inner sole in the usual manner, except at the toe and heel, and in then placing on the toe and heel suitable molded pliable pieces, which cover both the upper and the sole, and in afterward placing on and sewing or pegging the outer sole to the insole, and to the upper and heel and toe pieces, and in sewing the toe and heel pieces along their upper edges to the vamp or upper, substantially as described.

300,206. METHOD OF SEWING BUTTONS TO SHOES. AARON A. BROWN, Cincinnati, Ohio. Filed July 18, 1883. (No model.)

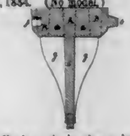
Claim.—The herein-described process of sewing buttons to shoes, which consists in first drawing up a loop of the thread through the shank and placing the button through the loop, so that said button lies on the shoe-flap in an opposite direction to that in which it was placed when the loop was passed through the shank, and in drawing said loop tightly around the shank; and, secondly, in drawing up the thread through the shank the second time, and in reversing the position of the button by passing it back through the second loop and drawing said loop tightly around the shank, substantially as herein set forth.

300,207. STEAM-HEATER. WILLIAM C. BRONSON, Saratoga Springs, N. Y. Filed Jan. 18, 1884. (No model.)



Claim.—The steam-heater shown and described, consisting of the masonry A, centrally-apertured cover B C, water-chamber D below the cover, having all of its outer surface exposed to the heat, as shown, intermediate water-chamber E, provided with a central downward and outward flaring opening, and the water-bosh F, surrounding grate I, in combination with the bent fuel-tube J, fitted in the side of the masonry and reaching through the flaring aperture of chamber E, the water-chambers and bosh being connected by the vertical pipes G H, whereby the heat from the grate in passing upward to the central aperture in the cover, through the central aperture in chamber E, will pass between the vertical pipes and under and around all sides of the chamber D, substantially as set forth.

300,208. HAY-CARRIER. ABNER J. BURRANK, Harvard, Ill. Filed Apr. 5, 1884. (No model.)



Claim.—1. In a hay-carrier having hooks *a b* to hold the shaft of the fork-sheave, and levers *g h* to lock and trip the hooks and the carrier, the hook *a*, having the locking-notch *k* and shoulder *s* located on its top, and the levers *g h* located above the hooks and connected together over the fork-shaft, with the locking-stud *l* of lever *g* about midway between the pivot *j* and the hook *m* of said lever, substantially as described.

300,208.

2. The combination of the catch-studs *n* and pivoted trip-dogs *l* with the carrier *i*, provided with the pivoted levers *g h*, connected at O, and having the hooks *m* on their adjacent ends, and their outer ends, *u*, adjusted to engage said trip-dogs, the said lever *g* being further provided with a stud, *l*, for holding in open or closed position the pivoted hooks *a b*, substantially as set forth.

300,209. GRATE-BAR FOR FURNACES. JAMES CAIRNS, Philadelphia, Pa. Filed Feb. 6, 1884. (No model.)

Claim.—1. The middle bar, A, having a longitudinal bottom bar, *b*, connected therewith by means of vertical ties *c* in the same vertical plane, substantially as described.

2. The side bars, B B, having side lugs, *e*, and elongated openings *f*, substantially as and for the purpose set forth.

300,210. UNDERGROUND CONDUIT FOR ELECTRIC CONDUCTORS. AUGUSTUS CAMPBELL, Metuchen, N. J. Filed Mar. 13, 1884. (No model.)

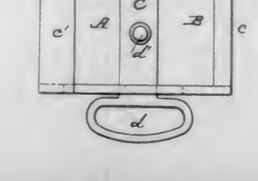
Claim.—1. In combination with the sections A, having internal ridges, A^3, the semi-cylindrical pieces D, adapted to support the electrical conductors *m* and leave a clear space below for the passage of water, as herein specified.

2. In combination with the sections A, having internal ridges, A^3, the pieces D, having longitudinal grooves *d*, adapted to support and insulate the electrical conductors *m*, as and for the purposes set forth.

3. In combination with the sections A, having internal ridges, A^3, the perforated pieces D, having longitudinal grooves *d*, adapted to support and insulate the conductors *m*, and to allow the passage of water, &c., to the space below, as herein specified.

4. The combination of the sections A, having internal ridges, A^3, with the pieces D, arranged to overlap the joints of the sections to strengthen the same, as set forth.

300,211. NUT-LOCK. ELI F. CAMPBELL, LEROY C. NOBLE, and MILTON G. HOWK, Houston, Tex. Filed Mar. 17, 1884. (No model.)



Claim.—1. An elongated spring-washer plate having bolt-openings *a* and lips or spurs A^3, projecting above the face of said plate in proximity to the bolt-openings, and adapted to engage with the under side of the nuts, substantially as described.

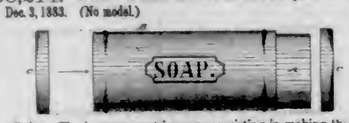
2. A torsional spring-washer consisting of a flat elongated metal plate slightly twisted in opposite directions from its center toward its ends, and provided with bolt-openings at the ends of said plate, substantially as described.

300,212. TAG OR TICKET FASTENER. SOLOMON C. CAMPBELL, Brooklyn, N. Y. Filed Apr. 16, 1884. (No model.)

Claim.—The combination of a tag or ticket with a metallic thread or wire having a hook for engaging with the tag at one end and the other end formed into a spiral, oblong in shape, whereby the tag may be secured to the goods by a simple inward and outward movement, as shown and described.

300,213. SOAP STAND AND SUPPORT. WILLIAM H. CARSLAKE, Philadelphia, Pa. Filed Sept. 21, 1883. (No model.)

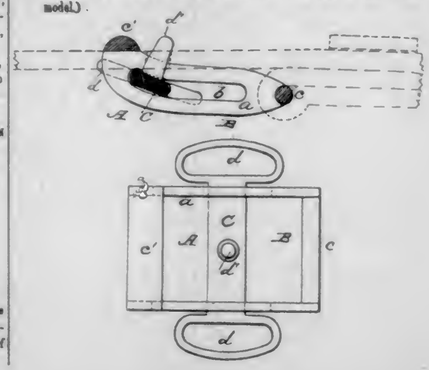
Claim.—1. A wire stand or support formed of a frame, ledges, a pivoted leg, and locking-arm, said frame having a space to receive said arm when the stand is folded, substantially as and for the purpose set forth.



2. A wire frame having central vertical pieces with a space between them, in combination with ledges and braces attached to said central and side pieces of the frame, substantially as and for the purpose set forth.

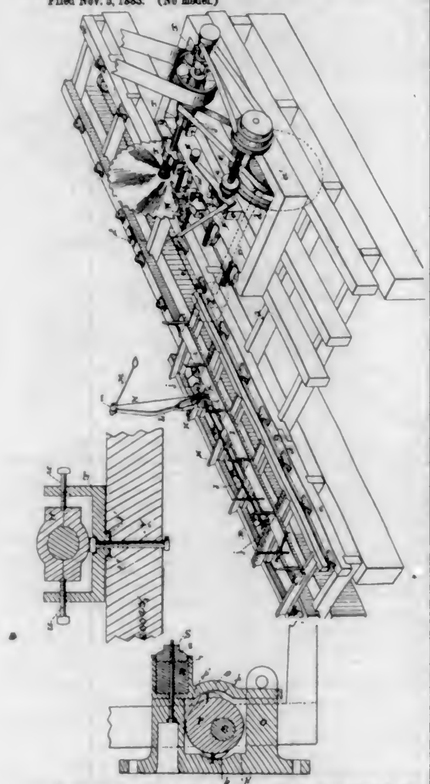
3. A wire frame provided with a supporting-leg which is bifurcated and has its lower ends bent forward, substantially as and for the purpose set forth.

4. A wire frame having its side and bottom cross-pieces extended and twisted together, forming legs B, substantially as and for the purpose set forth.



5. A wire frame provided with a card-rack, substantially as and for the purpose set forth.

300,214. SOAP. WILLIAM H. CARSLAKE, Philadelphia, Pa. Filed Dec. 3, 1883. (No model.)



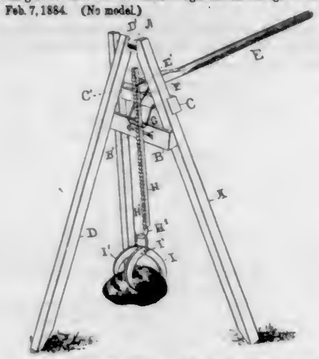
Claim.—The improvement in soap, consisting in making the same of cylindrical form and placing it in a box of similar form, having both of its ends open and provided with closing-caps, substantially as and for the purpose set forth.

300,215. TRACE-BUCKLE. MOSES C. CHASE, Camp Point, Ill., assignor of one-fourth to John H. Stickman, same place. Filed Apr. 16, 1884. (No model.)

Claim.—In a trace-buckle, the combination, with the frame portion B, consisting of the side bars, *a a*, provided with the curved slots *b b*, and the end bars, *c c'*, of the bar C, provided at each end with the oblong loops *d d* and the tongue *d'*, said loops being shorter in length than said slots, whereby the same may be passed through the latter in connecting the portions B and C to one another, as shown, described, and for the purpose specified.

300,216. SAW-MILL. PETER MCG. CRESHOLM, San Francisco, Cal. Filed Nov. 5, 1883. (No model.)

Claim.—1. In a saw-mill, the beam-setting ratchet-wheel K, having teeth *k* on one edge, reversed as described, in combination with the lever L, having the series of independent pawls engaging with the ratchet *l*, to turn it forward, and the gravitating reversed pawl *k'*, engaging with teeth *k*, to reverse said ratchet-wheel, the oscillating bearing *m* in the top of the lever, the lever-handle M, pivoted to move vertically in said bearing, the rod N, connected with the bearing, the crank *n*, connected with the rod, and the cross-rod *n'*, connected with the crank and passing under the series of pawls *l* and over the rear end of pawl *k'*, whereby when said pawls *l* are down in engagement the pawl *k'* is thrown out, and vice versa, substantially as herein described.



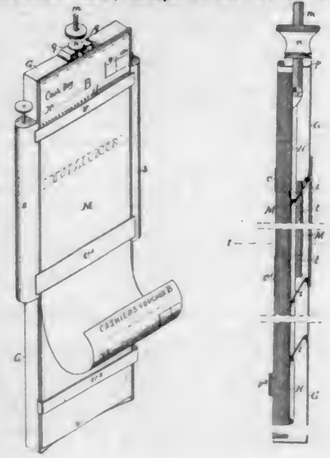
2. In a saw-mill, the shaft C, eccentric P loose thereon and having the convex lugs or projections *q*, and the lever F on the eccentric, in combination with the boxing consisting of the casing O and cap *o*, each having the concave or recessed surfaces *p* and straight surfaces *p'*, and a means for connecting the cap to the casing to allow it to yield when the eccentric is turned, and yet press upon said eccentric, substantially as and for the purpose herein described.

3. In a saw-mill, the shaft C, eccentric P loose thereon and having the convex lugs or projections *q*, and the lever F on the eccentric, in combination with the boxing consisting of the casing O and cap *o*, each having the concaved or recessed surfaces *p* and straight surfaces *p'*, said cap having a hinge or pivot connection to the casing at one end, the chamber *r* at the other, the rubber cushion R therein, the cup *s* on top of said cushion, and the bolt S, binding the cushion to the casing O, substantially as and for the purpose herein described.

4. In a saw-mill, the adjustable boxes for the saw-shaft, consisting of the outer casings, T, having bottom bearings adapted to turn in beams of the frame, the sleeves U, through which the saw-shaft passes, and the set-screws *u*, passing through the outer casing and impinging against the sleeves, substantially as herein described.

5. In a saw-mill, the adjustable boxes for the saw-shaft, consisting of the outer casings, T, mounted to turn in the beams of the frame, the sleeves U and set-screws *u*, and the bolts *v*, supporting the sleeves, substantially as herein described.

300,217. STONE-HOISTER. WM. H. H. CLOPPERT, Trotwood, Ohio, assignor of two-thirds to Moses Wogaman and George W. Gaines. Filed Feb. 7, 1884. (No model.)



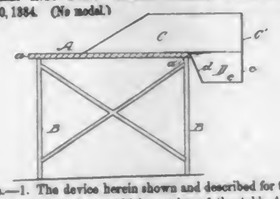
Claim.—1. The combination of the bar having a series of ratchet-teeth on one side, the frame provided with anti-friction rollers and a suitable pawl-bail, and the lever provided with an elevating-bail, substantially as and for the purposes set forth.

2. The combination, with the ratchet-bar and the framing provided with a pawl-bail and anti-friction rolls arranged to receive the bearing of said ratchet-bar, of the lever provided with a hoisting-bail, said lever having its end slotted or bifurcated and embracing and guiding the ratchet-bar, substantially as and for the purposes specified.

3. In a stone-hoister, a grapple, substantially as herein described, having arms I I' I', the points of arms I' being arranged on opposite sides of the point of arm I, as and for the purposes specified.

4. The combination of the main frame having a head-rod and upper and lower cross-bars provided with anti-friction rollers arranged to receive the bearing of the ratchet-bar, the pawl-bail suspended from the lower cross-bar, the lever pivoted on the upper cross-bar and provided with a hoisting-bail, the ratchet-bar, and the strut or brace having its upper edge slotted and engaging the head-rod of the main frame, substantially as and for the purposes set forth.

300,218. SALESMAN'S CHECK-BOOK CASE. CLARENCE CLOTHIER and DARWIN E. CROZET, Philadelphia, Pa. Filed Oct. 9, 1883. (No model.)



Claim.—1. The combination of a case, G, for receiving a salesman's check-book, with rollers *l* and an endless band of transfer-paper passing round the said rollers, substantially as specified.

2. The combination of the case G, the plate H, connected thereto by hinged strips *i*, the screw-rod *m*, connected to the end of the plate, and the nut *n*, all substantially as specified.

3. The combination of the case, its check-book, and rollers with the inking-band M, composed of transfer-paper with a backing of fabric, as set forth.

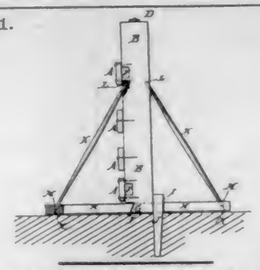
4. The combination of the case G, having the inking-band M and cross-bar *o'*, with the book having forms on opposite sides, so arranged as to permit the doubling of the leaf over the bar *o'*, as set forth.

300,219. PORTABLE TABLE FOR TRANSFERRING FLOUR FROM BARRELS INTO BAGS. WILLIAM COCHRANE, Brooklyn, N. Y. Filed Apr. 30, 1884. (No model.)

Claim.—1. The device herein shown and described for transferring flour from barrels into bags, which consists of the table A, supported upon legs B, side and end fenders, C C', and spout or hopper D, arranged substantially as and for the purposes set forth.

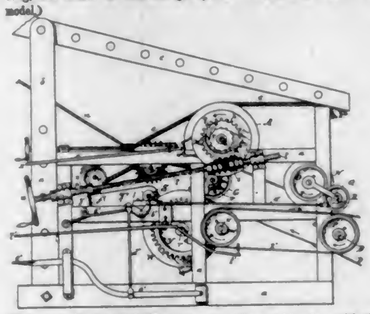
2. The side fenders, C C, provided with the downward extensions *c c*, in combination with the table A, plate *d*, and end fender, C', formed with the downward extension *c*, substantially as described.

300,220. SHIRT. JACOB COHEN, New York, N. Y. Filed July 12, 1883. (No model.)



Claim.—1. The combination of the body of the shirt-front having a narrow opening of parallel sides formed in its longitudinal center, an under fly attached to one of the sides of said opening and having its longitudinal center in alignment with that of the front, and an outer fly having one edge attached to the opposite side of said opening and the other doubled over and stitched to the side of the front to which the fly is attached, substantially as shown and described, whereby the longitudinal centers of said flies may be easily made to correspond to each other, as specified.

2. The method of making open fronts for shirts, which consists in cutting out a narrow strip with parallel sides from the shirt-front, attaching an under fly to one of the sides of the opening thus formed, and attaching to the opposite side of said opening one of the edges of an outer fly, and then doubling the material of the said outer fly upon itself and stitching its other edge to the body of that side of the front to which it has been attached, substantially as hereinbefore specified.



300,221. PORTABLE FENCE. WILLIAM COKAYNE, Geetingsville, Ind. Filed Oct. 15, 1883. (Model.)

Claim.—A portable fence having its panels each composed of an upright, C, a post, B, detachably secured to a sill, and provided with gains F in one edge, boards A, the upper and lower ones of which are provided with tenons E at one end, and braces K, the ends of the boards A opposite the tenons being secured to the post B over the gains F, forming, with the gains, mortises in the post for the reception of the tenons E of the adjacent panel, as set forth.

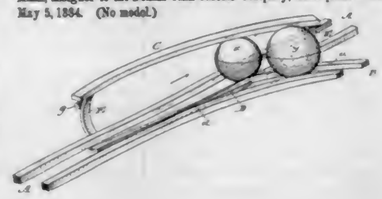
300,221.

300,222. WELL-DRILLING MACHINE. JOHN CONNER, Jr., Carrollsburg, and HENRY A. OTTO, Allegheny, Pa. Filed Feb. 19, 1884. (No model.)

Claim.—1. In a well-drilling apparatus, the combination, with the frame thereof, of a derrick, *c*, pivoted above its bottom, rope or ropes *n*, attached thereto and to a winding-shaft, *l*, on said frame *a*, gear-wheel *i* on said shaft, a worm, *k*, meshing therewith, and a hand wheel or crank, *m*, substantially as described.

2. In a well-drilling apparatus, a drum having the drilling-rope hitched thereto and unwinding by the gravitation of the drilling-tool, and provided with a gear-wheel, in combination with a hand-operated worm, normally locking said drum by engaging with the gear-wheel, but constructed and adapted to be ungeared and geared therewith at pleasure, substantially as described.

3. In a well-drilling apparatus, a winding-drum, A, for the drilling-rope, having a gear-wheel, o, attached thereto, in combination with the pulley E on the main shaft B, belt F, shaft I, having fast and loose pulleys G H, and pinion *v*, and a shifter, L, for said belt, substantially as described.



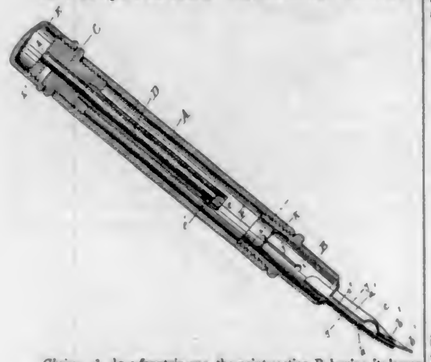
4. In a well-drilling apparatus, the combination of drum A, having ratchet-wheel *r* fixed thereto, loose gear-wheel *p*, having pawl *q*, and longitudinally-movable worm *s*, substantially as described.

5. In a well-drilling apparatus, a crank-pin, *s'*, rotating in one direction, in combination with a vibrating lever, T, controlling the drilling-rope at one end, and at the other straddling the said crank-pin *s*, substantially as described.

6. In a well-drilling apparatus, the pivoted lever T, having sheave *g'*, adapted to operate the drilling-rope, and fork *h'*, in combination with the crank-pin *s'* on shaft *r'*, and suitable means of rotating said shaft *r'*, substantially as described.

7. In a well-drilling apparatus, the pivoted lever T, having sheave *g'*, adapted to operate the drilling-rope, and fork *h'*, in combination with the shaft *r'*, having crank-pin *s'*, and gear-wheel V, pinion *p'*, shaft *n'*, fast and loose pulley thereon, a belt, *k'*, and driving-pulley P, substantially as described.

300,223. SWITCH FOR CASH-RAILWAYS. JOHN C. CORAN, Lowell, Mass., assignor to the Dennis Cash Carrier Company, same place. Filed May 5, 1884. (No model.)

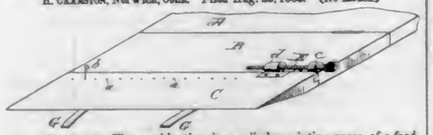


Claim.—1. The combination of the main track, the side or branch track, and the elevated guide-rail bridging the main track, substantially as and for the purposes hereinbefore set forth.

2. The combination of the main track, the side or branch track, and the elevated guide-rail bridging the main track, and adjustable to varying heights above the same, substantially as and for the purposes hereinbefore set forth.

3. The combination of the main track, the side or branch track, the elevated guide-rail bridging the main track, and the guide-frog, substantially as and for the purposes hereinbefore set forth.

300,224. FOUNTAIN-PEN. CHARLES H. COURT, Jersey City, N. J., and ALBERT J. KLETZKER, New York, N. Y.; said Court assignor of one-half of his right to said Kletzker. Filed Mar. 31, 1882. (No model.)



Claim.—1. In a fountain-pen, the point-section B, having its lower end pen-shaped, and provided with the cavity *c* on its under side, substantially as and for the purpose set forth.

2. In a fountain-pen, the combination, with the point-section B, constructed substantially as herein shown and described, of the agitator *i j*, arranged in said section, and having both lateral and longitudinal movement, substantially as and for the purpose set forth.

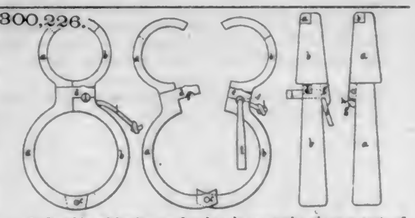
3. In a fountain-pen, the combination, with the point-section B, of the plate *k*, provided with the aperture *i'*, and held in said section by its elasticity, and the rod *j*, provided with the balls *i* at its ends, substantially as and for the purpose set forth.

4. The combination, with the upper support, *a*, of the lower pen-shaped support, *a'*, provided with a split, *b'*, substantially as shown and described.

300,225. REGISTERING DEVICE FOR PRINTING-PRESSES. JOHN H. CRANSTON, Norwich, Conn. Filed Aug. 23, 1883. (No model.)

Claim.—1. The combination, in a cylinder printing-press, of a feed-board, A, having a hinged leaf, B, an adjustable support, having a series of holes, *a a*, for the reception of a vertical guide-pin, *b*, and a screw, E, for adjusting the guide-support, substantially as described.

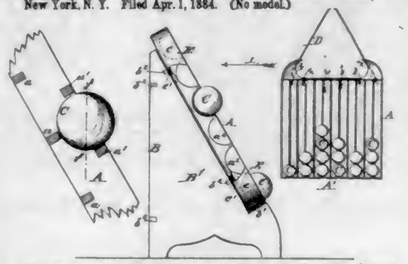
2. The combination, in a cylinder printing-press, of the feed-board A, hinged leaf B, sliding guide-piece C, provided with holes *a a* and pin *b*, and the adjusting-screw E, substantially as described.



3. The combination, in a cylinder printing-press, of the leaf B, sliding guide-piece C, rod F, having bearings *e f*, and the adjustable tongues G G, having boxes *h*, substantially as described.

300,226. SAIL HANK AND HOOK. DAVID CROWELL, Jr., Yarmouth Port, assignor to Albert F. Edson, Barnstable, and Frederick C. Swift, Yarmouth, Mass., Trustees. Filed Apr. 26, 1883. (No model.)

Claim.—1. The combination, with two pivoted or hinged parts, of a thong operating to fasten the said parts together by entering and filling a hole, one portion of which hole is formed upon one of said parts and one portion upon the other part, all substantially as described.

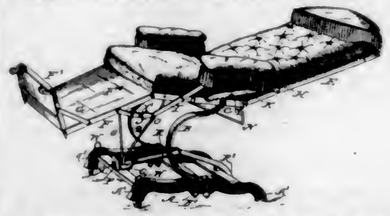


2. In combination with two pivoted or hinged parts, a thong made larger at one end than the other, the small end fitting a hole in one of the parts, and the large end a hole formed partly upon each of said parts, all substantially as described.

300,226.

3. In a hinged hank, a cord, *r*, loosely connecting the two parts of said hank after it has been placed upon the stay, substantially as described.

300,227. BALL-RACK FOR POOL-TABLES. STEPHEN DE GAETANO, New York, N. Y. Filed Apr. 1, 1884. (No model.)

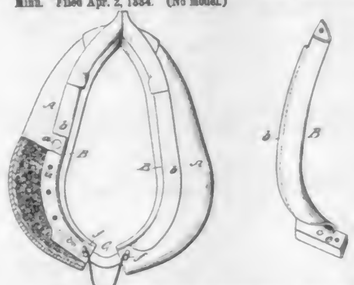


Claim.—1. A pool-rack, A, having in one side thereof end openings for each shelf, and at the ends of the said open side oppositely-placed converging guides E, for discharging the balls directly from the rack within the width of the triangle, substantially as hereinbefore set forth.

2. The combination, with a portable pool-rack, A, of a bracket, B, having shoulders *b'* and inclined front edges, *b*, for supporting the said rack, substantially as specified.

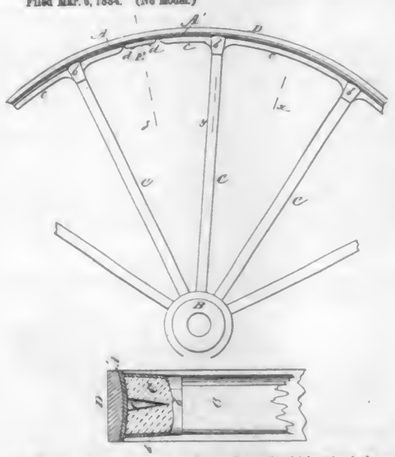
3. A pool-rack consisting of the ball-retaining side A', the ball releasing or discharging side A^2, having openings a^2 cut therein at the end of each shelf, the shelves formed of rails *a a'*, as specified, and the guides E, having guide-edges *e* and curved delivery edges *e'*, all substantially as and for the purpose set forth.

300,228. CONVERTIBLE CHAIR. HENRY HANNON DE PEW, Maquoketa, Iowa. Filed Aug. 22, 1883. (No model.)



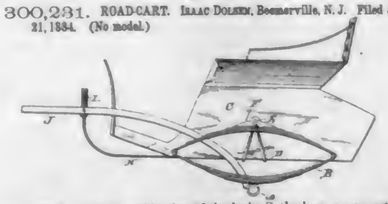
Claim.—1. The combination of the base A, springs B, having a semicircular curve, B'', with their upper ends having a slight reverse curve upward, and terminating in an eye, C', cross-bar C'', journaled therein, chair A'', consisting of the back E, side D, the frame of which is provided with studs M and foot-rest F, pivoted together, as described, arm-rest H, upright bar I, and hinged bar J, ratchet-bars K, having teeth L', adapted to engage with the studs M, and connected by a curved rod, N, supporting-bars O O, having a cross-head, P, adapted to engage with the slotted plate Q, slotted plate Q, and hinged lever R, supported in suitable bearings upon the rear cross-piece of the frame A, all constructed and arranged to operate substantially in the manner and for the purpose shown and set forth.

2. The combination of the base A, springs B, having a semicircular curve, B'', with their upper ends having a slight reverse curve upward and terminating in an eye, C', in which is journaled a cross-bar, C'', chair A'', consisting of the back E, seat D, and foot-rest F, pivoted together, as described, arm-rest H, upright bar I, and hinged bar J, ratchet-bars K, having teeth L', adapted to engage with studs M, and connected by a curved rod, N, pivoted legs S S, adapted to serve as an additional support when the chair is extended to form a surgeon's operating chair



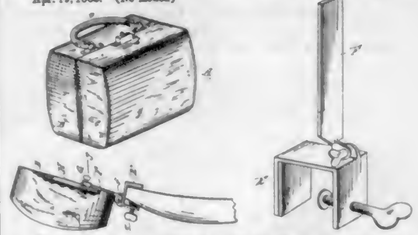
or table, supporting-bars O O, having cross-head P, adapted to engage with the slotted plate Q, and hinged lever R, supported in suitable bearings upon the rear cross-piece of the frame A, all constructed and arranged to operate as and for the purpose shown and described.

300,229. HORSE-COLLAR. HERMAN THEODORE DETERT, Faribault, Minn. Filed Apr. 2, 1884. (No model.)



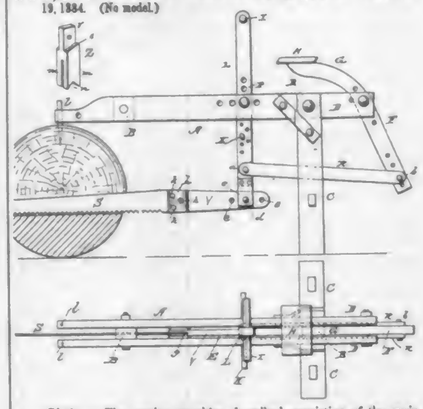
Claim.—As an improved article of manufacture, a horse-collar provided with the metallic attachments B, formed with the hame-flanges *b* and sleeves *c*, as shown, the section C, curved and perforated, and pins *f* for connecting and adjusting said section C, substantially as set forth.

300,230. VEHICLE-WHEEL. JACOB DIETERER, Brushland, N. Y. Filed Mar. 6, 1884. (No model.)



Claim.—In a combined wooden and metal vehicle-wheel, the combination of the externally-concave cast metal rim or felly sections A A', the spoke-sockets *b* on the interior thereof, the wooden spokes C, the wedges *c*, the internally-convex tire D, shrunk on and within the concave exteriors of the rim-sections, and the re-enforcing plates E, arranged on the inner surfaces of the end portions of the rim-sections and united with said sections and with the tire of the wheel, essentially as herein described.

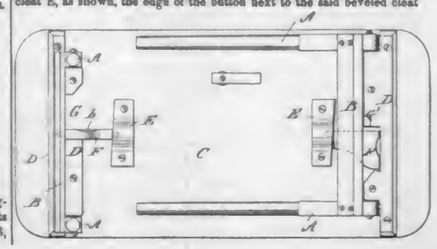
300,231. ROAD-CART. ISAAC DOLSEN, Beemerville, N. J. Filed Jan. 21, 1884. (No model.)



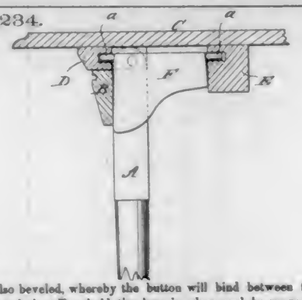
Claim.—The combination of the body C, the loop or supporting-bar D, which is applied to the under side of the body, and which has its end turned upward and then horizontally outward, with the springs B, which are supported upon the axle, the saddles F, which are secured upon the tops of the springs, and through which the bearings E of the supporting-arm pass, and the springs H, substantially as shown and described.

300,232. HEAD-REST. HENRY K. DOREN, Grand Rapids, Mich. Filed Apr. 19, 1883. (No model.)

Claim.—In a head-rest, the cushioned portions B C, hinged to each other, the inner side of one of the hinged portions being provided with clamps G, having set-screws *g*, and a wall, D, with cut-away portion H, in combination with the rods F and clamps E, the parts being organized substantially as and for the purpose set forth.



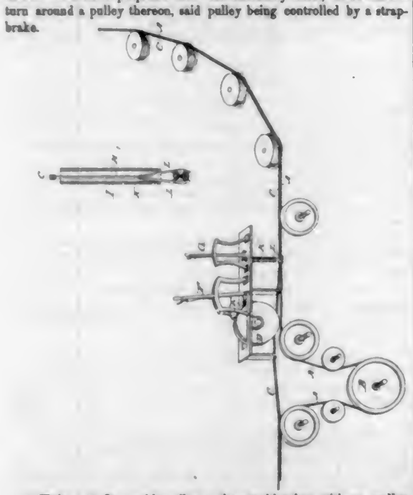
300,233. DRAG-SAW. JOHN T. H. DRAKE, Emporia, Mo. Filed Feb. 19, 1884. (No model.)



Claim.—The sawing-machine described, consisting of the main frame A, the curved adjustable seat-beam G, pivoted in the rear thereof, as shown, the adjustable operating-lever L, standards C C, the adjustable kerfed head saw-bar V, concave-convex clamping-plates A, the saw, and its securing-bolts, the forked guide Z, and bar R, connecting the saw and main operating-lever, with the seat-beam, substantially as specified.

300,234. FOLDING TABLE. WILLIAM E. ELDRED, Brooklyn, N. Y. Filed Oct. 31, 1883. (No model.)

Claim.—In a folding table, the combination, with the top C, transverse bar D, recessed at G to form a shoulder, G', legs A, pivoted to said bar, cross-piece B, connecting the legs, and a beveled transverse cleat, E, on the under side of the top, and parallel with cross-piece D, of the button F, pivoted to the cross-piece D near the shoulder G' and to the cleat E, as shown, the edge of the button next to the said beveled cleat



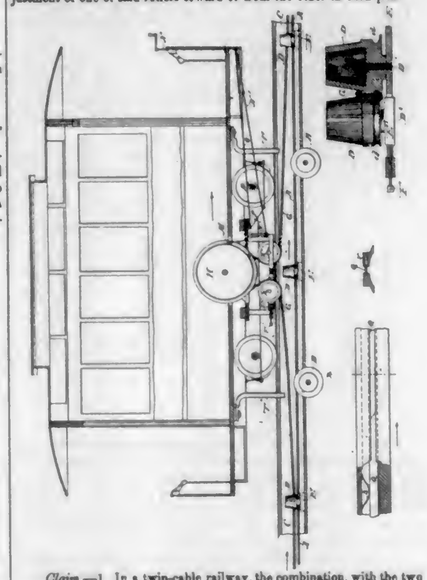
300,234.

being also beveled, whereby the button will bind between the cross-piece B and cleat E to hold the legs in place and be prevented from swinging too far back by the said shoulder, substantially as set forth.

300,235. CABLE RAILWAY. CHARLES B. FAIRCHILD, New York, N. Y. Filed Nov. 21, 1883. (No model.)

Brief.—A secondary cable independent of the main cable-propelling mechanism travels with said main driven cable through frictional contact therewith, and also through a grip-connection between the two cables. The car is propelled from the secondary cable, which takes a turn around a pulley thereon, said pulley being controlled by a strap-brake.

Claim.—1. In a cable railway, the combination, with an endless main driving rope or cable geared to the prime motor, of a second superimposed endless rope or cable moving continuously with the main cable independently of any connection with the prime motor, substantially in the manner and for the purpose herein set forth.

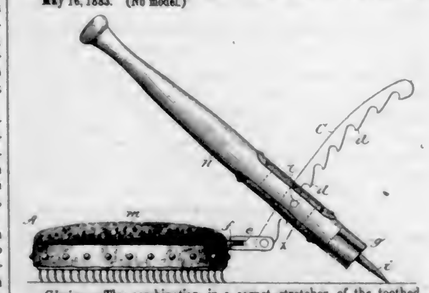


2. In a cable railway, the combination, with an endless main driving rope or cable geared to the prime motor, a second superimposed endless rope or cable moving continuously with the main cable independently of any connection with the prime motor, and a car running upon the railway, of a mechanical device mounted upon the car to engage the secondary rope or cable and couple the car thereto or release it therefrom, substantially in the manner and for the purpose herein set forth.

3. In a cable railway, the combination, with an endless main driving rope or cable geared to the prime motor, a second superimposed endless rope or cable moving continuously with the main cable independently of any connection with the prime motor, and a car running upon the railway, of a loose pulley mounted upon the car, and over which the secondary cable is led, and a brake-lever adapted to lock said pulley, substantially in the manner and for the purpose herein set forth.

4. The combination, in a cable railway, with a car running upon the railway, and with an endless main driving rope or cable geared to the prime motor, and a second superimposed endless rope or cable moving continuously with the main cable independently of any connection with the prime motor, of a grip or clamping device mounted upon the car, to be operated therefrom, to embrace the two cables, and which is adapted when open to allow them to pass freely through it, and when closed to clamp and bind them firmly together, substantially in the manner and for the purpose herein set forth

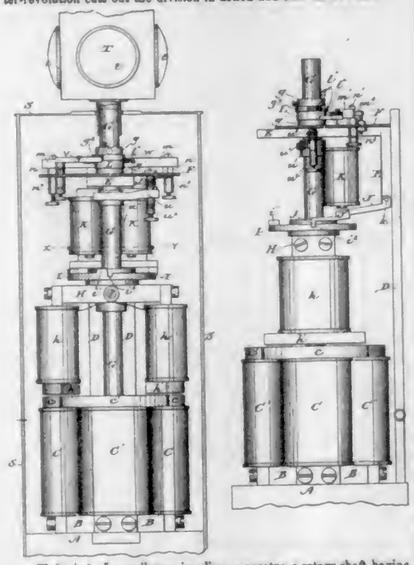
300,236. CABLE RAILWAY. CHARLES B. FAIRCHILD, New York, N. Y. Filed Jan. 9, 1884. (No model.)



Brief.—A main driving-cable actuates a secondary cable which directly propels the car through pairs of conical rollers driven by the first-named cable, the secondary cable being supported and driven by the rollers in the groove formed by their conical shape. The secondary cable passes over a drum on the car, which is controlled by a brake to cause the car to move with the cable or let the cable run. The tension of this cable is regulated through adjustable guide-pulleys below the drum. The bite of the conical pulleys upon the driving-cable is regulated by the adjustment of one of said rollers toward or from the other in each pair.

Claim.—1. In a twin-cable railway, the combination, with the two superimposed cables, of a series of vertical conical rollers arranged in pairs, each pair being made to embrace the main cable between them with close frictional contact, so as to be rotated thereby, and to receive and engage the secondary cable between their inclined rotating surfaces, substantially in the manner and for the purpose herein set forth.

2. In a twin-cable railway, the combination, with its secondary cable superimposed and driven by the main cable and led over a drum fitted upon a car moving over the railway, of guide-pulleys fitted beneath the drum on either side of its axis and adapted to engage said cable, substantially in the manner and for the purpose herein set forth.



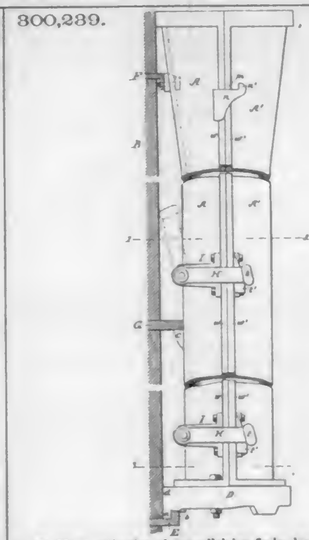
300,237. CARPET-STRETCHER. SAML. PILDES, La Porte, Ind. Filed May 16, 1883. (No model.)

Claim.—The combination, in a carpet-stretcher, of the toothed card or fillet *b b*, the block A, the looped wire or draw-bar, and the handle H, having pointed end and hook to engage draw-bar, as specified.

300,238. ELECTRIC RAILWAY-SIGNAL. LOUIS FINGER, Melrose Mass., assignor, by mesne assignments, to the Hanlon Electric Signal Company, Portland, Me. Filed Sept. 27, 1883. (No model.)

Brief.—An electric-signal motor the field-magnets of which are connected up in two divisions alternately excited through the agency of a commutator attached to the signal-shaft, which at the end of each quarter-revolution cuts out the division in action and cuts in the other.

Claim.—1. In a railway-signaling apparatus, a rotary shaft having a visual signal combined with an electric circuit having a battery and a circuit-closer, an electro-magnetic motor having independent divisions or sections, and switching devices, substantially as described, whereby the successive closures of the circuit are caused to energize the sections of the motor alternately, and thereby cause the shaft to alternately display a danger and a safety signal, as set forth.



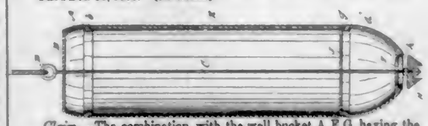
2. In a railway-signaling apparatus, a rotary shaft having a signal combined with an electric circuit having a battery and a circuit-closer, an electro-magnetic motor having independent divisions or sections, switching devices, substantially as described, whereby said divisions are alternately energized by the successive closures of the circuit, and said shaft is given a partial rotation at each closure of the circuit-looking devices, adapted to normally hold the shaft in different positions, and automatic means for unlocking the shaft when the circuit is closed, as set forth.

3. In a railway-signaling apparatus, a rotary shaft having a signal combined with an electric circuit having a battery and a circuit-closer, an electro-magnetic motor, and switching devices, substantially as described, whereby the shaft is given a partial rotation at each closure of the circuit, a signal-bell located in an electric circuit, and means whereby said circuit is broken when the shaft is in either of its positions of rest, and closed, so as to ring the bell when the shaft is in motion, as set forth.

4. In a railway-signal, a rotary shaft having a suitable visual signal, combined with an electro-magnetic motor composed of two independent sections or fixed magnets, and a rotary armature affixed to said shaft, an electric circuit including a battery and a circuit-closer, a switch operated by said shaft, whereby the circuit is closed first through the one of said fixed electro-magnets and then through the other, a locking device which normally locks said shaft in either of two positions, and an electro-magnet included in a branch of the said electric circuit, and adapted to unlock the shaft whenever the circuit is closed through either of said fixed electro-magnets, and thereby permit the partial rotation of said shaft, as set forth.

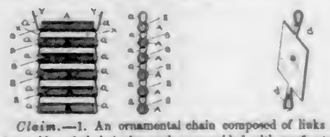
300,239. PIPE MOLD AND FLASK. HIRAM H. FISHER, Allentown, Pa. Filed Mar. 15, 1884. (No model.)

Claim.—1. The combination of the part A of a pipe-molding flask and the retaining-arms H, pivoted thereto, each arm having an inclined shoulder or shoulders, *i*, with the part A′ of the flask and its inclined or rounded ribs *i′*, all substantially as set forth.



2. The combination of two adjoining flasks, brackets I, secured to the flanges of the parts A of the two flasks, and arms H, pivoted to the said brackets, and having inclined shoulders *i* and inclined or rounded ribs *i′*, secured to the flanges of the removable portions A′ of the two flasks, all substantially as set forth.

3. The combination of a two-part flask, one part, A, of which is attached to a wall, substantially as described, and has a lug, *c*, with a plate, G, built into the said wall and projecting over the lug, all substantially as specified.

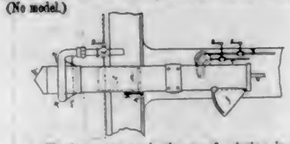


4. The combination of the part A of the flask, attached to the wall and having lugs *n*, with the part A′ of the flask, having shoulders *m m*, adapted to rest on the lugs, substantially as specified.

300,240. WELL-BUCKET. ROBERT H. FOAT, Weatherford, Tex. Filed Dec. 31, 1883. (No model.)

Claim.—The combination, with the well-bucket A E G, having the rabbeted opening F in its bottom, and provided with the apertured cross-bars B J, of the valve-rod C, passing through the apertures in said cross-bars and the opening in the bottom of the bucket, and the valve H, secured to the lower end of said rod, substantially as herein shown and described.

300,241. ORNAMENTAL CHAIN. FRANK FOUNTAIN, Attleborough, Mass. Filed Mar. 17, 1883. (No model.)



Claim.—1. An ornamental chain composed of links having the ends or sides of their body portions provided with perforated tangs *a*, which are hooked together to connect the links, substantially as set forth.

2. An ornamental chain composed of folded sheet-metal links having the ends or sides of their body portions provided with integral perforated tangs *a*, which tangs are hooked together to connect the links, substantially as set forth.

3. An ornamental chain composed of folded sheet-metal links having perforated tangs *a* upon the ends or sides of their body portions, and such body portions provided with studs or projections *a′*, which enter the perforations in said tangs and prevent the link-body from being opened, substantially as set forth.

300,242. ART OF AND MACHINERY FOR LITHOGRAPHIC PRINTING. WILLIAM H. FORBES, Boston, Mass., and JOHN W. OSBORNE, Washington, D. C.; said Osborne assignor to said Forbes. Filed Apr. 20 1881. (No model.)

Claim.—1. The improvement in the art of printing in the lithographic manner which consists in first projecting upon the printing-surface a delicate spray of atomized water, then inking the surface so treated, and finally printing from the same on paper or other flexible material, substantially as and for the purpose described.

2. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in producing a cloud of atomized water, and in conveying the same to the surface to be damped, substantially as and for the purpose described.

3. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in producing a cloud of atomized water, and in conveying the same to the surface to be damped by an independent current of air generated by extraneous means, substantially as and for the purpose described.

4. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in producing a cloud of atomized water and selectively conveying the lighter particles in said cloud to the surface to be damped, substantially as and for the purpose described.

5. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in producing a cloud of atomized water and selectively conveying the lighter particles in said cloud to the surface to be damped by means of a current of air, substantially as and for the purpose described.

6. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in producing a cloud of atomized water and selectively conveying the lighter particles in said cloud to the surface to be damped by an independent current of air generated by extraneous means, substantially as and for the purpose described.

7. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in projecting a spray of atomized water in a direction other than that of the surface to be damped, and then diverting the direction of said spray, or a portion of it, toward that surface and carrying it to the same, substantially as and for the purpose described.

8. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in projecting a spray of atomized water in a direction other than toward the surface to be damped, and then diverting the direction of said spray, or a portion of it, toward that surface, and carrying it to the same by means of a current of air, substantially as and for the purpose described.

9. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in projecting a spray of atomized water in any desired direction other than that of the surface to be damped, and then diverting the direction of said spray, or a portion of it, toward that surface, and carrying it to the same by means of an independent current of air generated by extraneous means, substantially as and for the purpose described.

10. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in conveying over such a surface a cloud of atomized water in excess, and then removing the unused excess or superfluity, substantially as and for the purpose described.

11. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in conveying over such a surface a cloud of atomized water in excess, and then removing the unused excess or superfluity by means of a current of air, substantially as and for the purpose described.

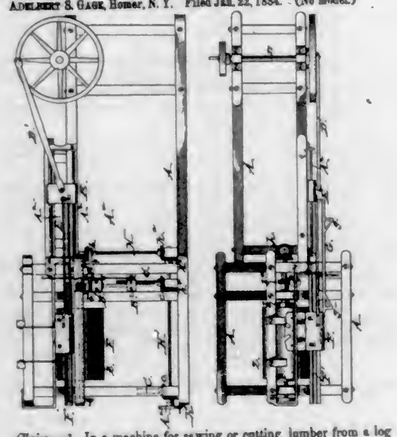
12. The improvement in the art of damping surfaces prepared for printing in the lithographic manner which consists in conveying to and depositing upon such a surface a quantity of water in an atomized condition, and then spreading or equalizing said deposit by means of a roller or rollers, substantially as and for the purpose described.

13. An atomizer, in combination with printing-surface of a lithographic press, substantially as and for the purpose described.

14. An atomizer surrounded by a tube or trunk opening over and in combination with a printing-surface adjusted for printing in a lithographic press, substantially as and for the purpose described.

15. The trunks *a* and *b*, containing an atomizer, and provided with the valve *f* for controlling the ingress of air, in combination with a printing-surface adjusted for printing in a lithographic press, substantially as and for the purpose described.

16. The trunks *a* and *b*, provided with a tube, *f″*, for the admission of an independent current of air, in combination with a printing-surface adjusted for printing in a lithographic press, substantially as and for the purpose described.



17. In combination with the printing bed or surface of a lithographic press, the trunk containing an atomizer, and a valve, *g*, located between the atomizer and bed, to regulate the quantity of atomized fluid delivered to the printing-surface.

18. In combination with the trunk *b*, the tubes *k k*, provided with slit openings and connected with an exhaust fan or pump, substantially as and for the purpose described.

19. The trunk *b*, provided with the channels *n n*, and the raised edge *i*, surrounding the discharge-opening over the surface to be damped, substantially as and for the purpose described.

20. The trunk *a*, containing an atomizer, and provided with an adjustable opening or connection for the ingress of a current of air, a valve, *g*, for controlling the quantity of atomized fluid discharged, joined to the trunk *b*, provided with an opening for the descent of the cloud of atomized particles, said opening having raised channels to catch drops, and the exhaust-tubes *k k*, to remove excess, in combination with a printing-surface adjusted for printing in the lithographic press, substantially as and for the purpose described.

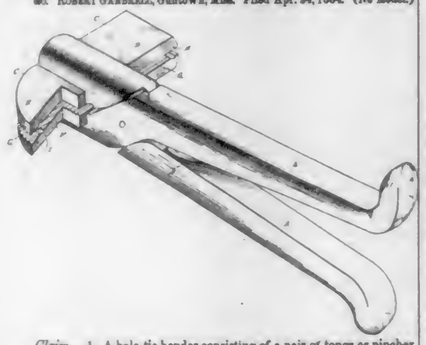
300,243. VENEER-CUTTING MACHINE. CHARLES W. GAGE and ADELBERT S. GAGE, Homer, N. Y. Filed Jan. 22, 1884. (No model.)

Claim.—1. In a machine for sawing or cutting lumber from a log in convolute layers, mechanism, substantially as described, for simultaneously rotating and gradually elevating the log, said mechanism consisting of a screw or screws for elevating and a worm or analogous means for rotating said parts engaging with the log-support and operated through proper mechanical connections by the reciprocation of the saw-slide, as set forth.

2. In a machine for sawing veneers, the combination of the reciprocating rod G, having the inclines *g g*, feed-lever G′, dog *g′*, ratchet for it to work upon, and mechanical connections to log-support for rotating the log, substantially as set forth.

3. In a machine for sawing veneers, the combination of the reciprocating feed-rod G, having the inclines *g g* at both ends, pivoted feed-lever G′, and connections to the log-supports for rotating the same, with gear and shaft connections to the screws C C′, whereby the log is both rotated and elevated at the same time by the reciprocation of the rod G, substantially as set forth.

4. In a machine for sawing veneers from a log in convolute layers, wherein the log is fed by being elevated and rotated simultaneously, the combination of the reciprocating feed-rod G, having the inclines *g g*, and the feed-lever G′, secured to a part of the machine which is elevated and lowered with the log, so that the throw of the lever may be varied as the radius of the log is changed, and the said log caused to be fed with equal rapidity at all times.



5. The combination of the feed-lever G′, feed-dog *g′*, attached thereto, and ratchet on which it operates, and means for operating said lever, of the regulator J, having the slot *j*, set-block *j″*, and screw *j³*, for arbitrarily regulating the throw of the lever, as set forth.

6. In a machine for sawing lumber from a log in convolute layers, the combination, with the saw or cutter and supporting-frame, the hooks *k k*, placed above the logs, for receiving the edge of the lumber as it leaves the log, substantially as set forth.

7. A saw-slide provided with the adjustable plate I, resting on a

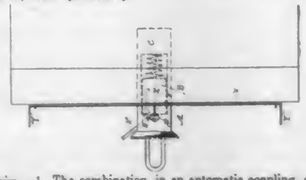
plane surface on the top thereof, said plate having the slots *i' i'*, adapted to receive the pinching-screws *i' i'*, and the slide being provided with the set-screws I', passing through the rear wall thereof, behind the adjustable plate, and serving to set said plate.

300,244. COMBINED BALE-BAND BENDER, NAIL-EXTRACTOR, &c. ROBERT GANDRELL, Guntown, Miss. Filed Apr. 24, 1884. (No model.)

Claim.—1. A bale-tie bender consisting of a pair of tongs or pincher handles provided with a flat extended head adapted to grasp ties and to be manipulated to bend the same, as and for the purpose specified.

2. In combination with the tie-bender, the curved back extension constructed to form a bale-hook, as specified.

3. In combination with the bale-tie bender, the rear extension of the head, having a triangular recess adapted to operate as a bale-hook, as specified.



4. In combination with the bale-tie bender, the rear extension forming a bale-hook, and provided with transverse slots, adapting the device to be used in drawing nails, as specified.

5. The combination, with the bale-tie bender, of the transverse grooves, adapting it to be used as a hand-vise, as specified.

6. The combination, with the tie-bender, of the extended head and the serrations on the inner side of the parts of the said head, adapting the device to be used as a pinchers, as specified.

7. The combination-tool consisting of a bale-tie bender, a bale-hook, a nail-extractor, a hand-vise, and a pinchers, all arranged in the manner and operating as and for the purpose specified.

300,245. CAR-COUPLING. THOMAS GERITT, Kenosha, Wis. Filed Apr. 30, 1884. (No model.)

Claim.—1. The combination, in an automatic coupling, of the pin with a cam for locking the pin in a raised position, substantially as shown.

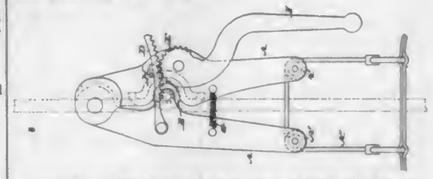
2. The combination of the draw-head, the spring-actuated block, the coupling-pin, the cam for locking the pin in a raised position, and the block or frame upon the top of the draw-head, substantially as set forth.

300,246. APPARATUS FOR ADMINISTERING MEDICATED BATHS. MAX GOLDBERG, Milwaukee, Wis. Filed Oct. 4, 1883. (No model.)

Claim.—In a mask-shield for vapor or medicated baths, the combination of spring *b*, having a loop, *b'*, with the endless elastic band *d* and notch *d'* on said shield, substantially as shown and described, and for the purpose set forth.

300,247. GRAIN-CONVEYER FOR HARVESTERS. JAMES F. GORDON, Rochester, N. Y. Filed Sept. 21, 1883. (No model.)

Claim.—1. In an endless conveyer-chain for harvesters, the combination of links provided with journals extending laterally beyond the edge of the chain, angular teeth pivoted upon said journals, and separate links provided with laterally-extending stop-fingers arranged to act beneath the point of the teeth.



2. In an endless conveyer-chain, two adjacent links, one provided with a journal extending laterally beyond its edge, and the other provided with a stop-finger extending laterally beyond its edge, in combination with an angular rising and falling tooth mounted upon the journal and arranged to act at its point against the stop-finger, as described, whereby the chain is permitted to operate in a frame of limited vertical height.

3. A conveyer-chain having links provided with journals extending laterally beyond their edges, in combination with angular teeth mounted upon said journals, and having hubs located wholly on the side adjacent to the chain, and a stationary plate covering the chain and hub, substantially as described.

4. In combination with the endless chain having the laterally-projecting journals, and laterally-projecting stop-fingers on separate links, the angular teeth provided with the widened foot or base portion, a rail or track to support said chain or teeth, and a stationary plate to cover the chain and feet, substantially as described.

300,248. FIRE-ESCAPE. HENRY GREENE, Philadelphia, Pa. Filed Apr. 1, 1884. (No model.)

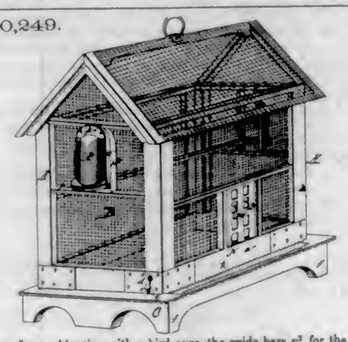
Brief.—The pivoted jaws are provided one with a thimble, the other with a roller, between which the rope passes. They are held together both by the weight on the body-strap and its connection with the lower ends of the jaws, and by a rack-bar pivoted on one jaw and a toothed segment upon a hand-lever, which engages with said rack-bar and is pivoted upon the other jaw.

Claim.—1. The pivoted jaws A, with a thimble and roller, between which the rope is passed, and rollers A' at the lower ends, in combination with the strap A'', connected with the waist-belt, extending continuously from said belt around said rollers A'. substantially as and for the purpose set forth.

2. Jaws with a thimble and roller, in combination with a controlling device for the rope, consisting of a rack-bar and a toothed segment, the latter having an operating-lever, substantially as and for the purpose set forth.

3. In a fire-escape, clamping-jaws, in combination with a rack-bar, a toothed segment, and a guard for said bar, substantially as and for the purpose set forth.

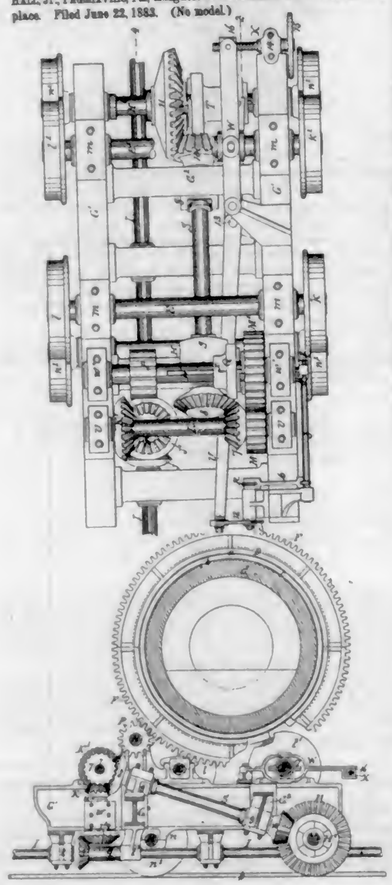
4. Jaws with a thimble and the opposite roller, the end rollers, the connection with the waist-belt, the closing-spring, the rack-bar, the toothed segment, and the operating-lever, combined and operating substantially as and for the purpose set forth.



300,249. BIRD-CAGE. JAS. W. GREGORY, Ames, Iowa. Filed Apr. 26, 1883. (Model.)

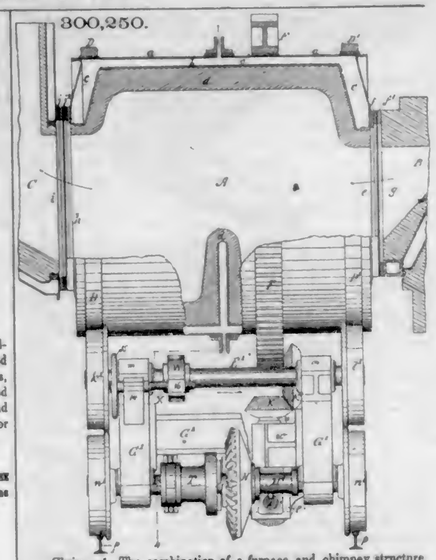
Claim.—1. The combination, with the front lower edge of the cage, of a series of teeth or serrations adapted to perforate the floor-covering material, substantially as described.

2. The combination, with the door having a trough secured thereto, and suitable opening or openings formed therein for access to said trough, of the slides arranged to open and close said opening or openings, substantially as described.



3. The combination, with the door and the slides secured thereto, of the spring having one end fixed to a permanent support and the other end secured to the slides, said spring being arranged to close the door and draw the slides, substantially as described.

300,249.

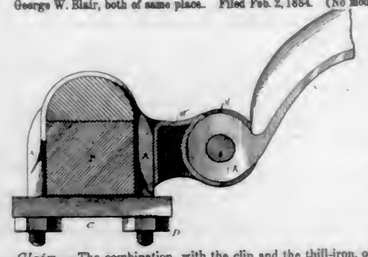


4. In combination with a bird-cage, the guide-bars p^3, for the feed-cup slide, secured to the wall of the cage, and having an opening formed between them in said wall, of a slide arranged to play between said bars, and a shelf projecting from the slide for the support of the feed-cup, and a recessed cleat, p^4, for engaging with the upper end of the feed-cup, and a spring attached to the cleat and shelf, substantially as shown, and for the purpose set forth.

300,250. ROTARY PUDDLING-FURNACE. JOHN GRIFFEN and JESSE HALL, Jr., Phœnixville, Pa., assignors to the Phœnix Iron Company, same place. Filed June 23, 1883. (No model.)

300,250.

Claim.—1. The combination of a furnace and chimney structure, a track between the two, and a truck adapted to carry a rotary puddler with a grooved shaft, I, driven by a fixed motor apart from the truck, and with mechanism through the medium of which the said shaft is caused to traverse the truck, all substantially as set forth.



2. The combination of a furnace and chimney structure, a track between the two, a truck having wheels adapted to the rails of the track, and wheels for supporting a rotary puddler, with a grooved shaft, I, deriving its motion from a fixed motor, and with mechanism whereby the said shaft is caused to rotate the supporting-wheels of the puddler, substantially as specified.

3. The combination of the truck, its shafts E E', having wheels, and the rotary puddler supported by the said wheels, with mechanism for imparting an endwise motion to one of the shafts, substantially as described.

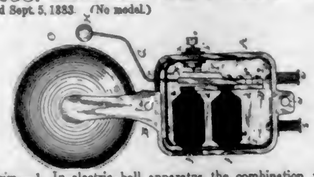
4. The combination of the shaft I, the shaft L on the truck, wheels whereby the two shafts are geared together, the axle H', a wheel, 11, on the shaft, gearing whereby the shaft L is caused to drive the said wheel 11, and clutching mechanism whereby the latter wheel may be thrown in or out of gear with its shaft, all substantially as set forth.

5. The combination of the grooved shaft I, the truck, the puddler A, supported by wheels on the truck, and having a toothed rim, F, the shaft N, having its bearings on the truck, and carrying a pinion, P, having teeth adapted to those of the rim, a cog-wheel, M', on the shaft N, gearing by which the said wheel is driven from the shaft I, and clutching mechanism by which the said wheel M' may be thrown in and out of gear with its shaft, substantially as specified.

300,251. ANTI-RATTLER FOR THILL-COUPLINGS. JAMES MILO HAAS, Wabash, Ind., assignor of two-thirds to Louis H. Fougures and George W. Elair, both of same place. Filed Feb. 2, 1884. (No model.)

Claim.—The combination, with the clip and the thill-iron, of the spring having a broad bearing setting against the inside of the clip, a curved top extending well over the eye of the thill-iron, and extending backward at a sharp angle and curved to form a bearing for the thill, substantially as specified.

300,252. WHIFFLETREE-HOOK. MILES E. HAMILTON, Auburn, N. Y. Filed Mar. 26, 1884. (No model.)



Claim.—1. The combination, in a whiffletree-hook, of a rigid hook provided at the outwardly-facing edges of its inner and outer ends with two upwardly-projecting lugs, with a hook curved in the opposite direction and turning inside the rigid hook, with its inner end formed into a collar, and provided with notches upon the outwardly-facing edges of its inner and outer ends, adapted to fit upon the lugs of the rigid hook, as and for the purpose shown and set forth.

2. The combination, in a whiffletree-hook, of a rigid hook having a notched hook-shaped inwardly-projecting lip upon its inner-end, with a turning collar having a hook curved in the opposite direction, and having a flange turning in the hook-shaped lip, and provided with a notch a short distance above the hook, as and for the purpose shown and set forth.

3. The combination of the rigid sleeve provided with the hook having the upwardly-projecting lugs upon the outwardly-facing edges of its inner and outer ends, and having the notched hook-shaped inwardly-projecting lip, with the collar turning upon the reduced inner end of the sleeve, provided with the hook turned in the opposite direction to the rigid hook, and having notches in the outwardly-facing edges of its inner and outer ends, and provided with the flange upon its outer end turning in the hook-shaped lip, and having a notch above the hook, as and for the purpose shown and set forth.

300,253. ELECTRIC BELL. EDGAR W. HAZAZER, New York, N. Y. Filed Sept. 5, 1883. (No model.)

Claim.—1. In electric-bell apparatus, the combination, with the works, of a case inclosing and carrying the same, and having an open back and closed face, substantially as set forth.

2. The metallic box cast in one piece, with open back and closed face for carrying and inclosing the works of an electric bell, substantially as set forth.

3. The combination of the iron inclosing-box and the magnet-cores attached directly thereto, said box alone forming the yoke or back piece of the magnet, substantially as set forth.

4. The combination, with the magnet-cores and the vibrating armature, of the non-magnetic bar supported by such cores, substantially as set forth.

5. The combination of the magnet-cores and the non-magnetic bar placed upon them, said cores not projecting entirely through said bar, substantially as set forth.

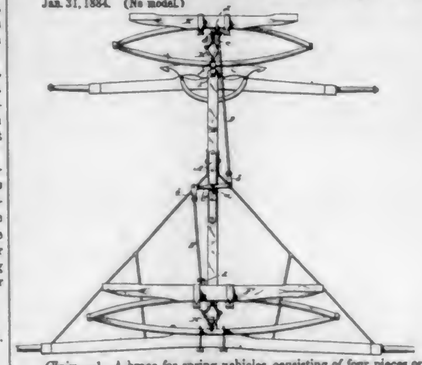
6. The combination, with the electro-magnet and the non-magnetic bar placed before it, of the vibrating armature carried by said bar, substantially as set forth.

7. The combination, with the electro-magnet and the non-magnetic bar placed before it, of the flat spring attached to said bar and carrying the vibrating armature, substantially as set forth.

8. The combination of the metallic inclosing-box, the magnet-cores, the non-magnetic bar placed upon said cores, and the vibrating armature attached to said bar, substantially as set forth.

9. The combination of the cores, the non-magnetic bar attached thereto, the vibrating armature carried by said bar, and the contact-spring attached to said armature, substantially as set forth.

10. The combination, with an adjustable contact-screw passing through the side of a box, of a split bushing surrounding said screw, and having an enlarged head outside of the box, and a clamping-nut upon said split bushing within the box, substantially as set forth.

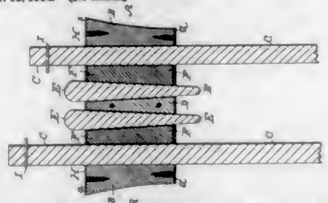


11. In electric-bell mechanism, the combination, with a contact-screw adjustable through the side of the inclosing-box, to and from a contact-spring carried by the vibrating armature, of a split bushing surrounding said screw, and having an enlarged head and a clamping-nut upon said split bushing, substantially as set forth.

12. The combination, with an adjustable contact-screw passing through the side of an iron inclosing-box, of a split bushing surrounding said screw, and having an enlarged head, a clamping-nut on the other end of said split bushing, and insulating material surrounding said bushing and clamped between the enlarged end and the clamping-nut, substantially as set forth.

13. In electric-bell mechanism, the combination of the iron inclosing-box and the magnet-cores attached directly thereto, both the box and cores forming parts of the circuit through the mechanism, substantially as set forth.

14. In electric-bell mechanism, the circuit including the magnet-coils, the fixed contact-point, the vibrating armature, the non-magnetic bar, to which said armature is attached, the magnet-cores, and the inclosing-box, substantially as set forth.

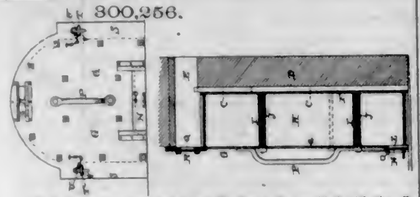


300,254. VEHICLE-SPRING ATTACHMENT. PETER HERBERT, Burr Oak, Kans., assignor of one-half to Jones F. Williamson, same place. Filed Jan. 31, 1884. (No model.)

Claim.—1. A brace for spring-vehicles, consisting of four pieces or leaves pivotally joined at their extremities, the two upper pieces or leaves being curved or on the arc of a circle, so that their upper ends will come together and limit their movement to hold the brace extended, substantially as and for the purpose set forth.

2. A brace for spring-vehicles, consisting of four pieces or leaves pivotally joined at their extremities, the two upper pieces or leaves being curved or on the arc of a circle, in combination with a suitable axle arranged transversely to the reach and pivoted thereto, and provided at its ends with clips, to which stay-rods are connected, substantially as and for the purpose specified.

300,255. DOUBLE GAGE. JOHN HELLRIEGEL, Marine, Ill. Filed Apr. 13, 1884. (No model.)

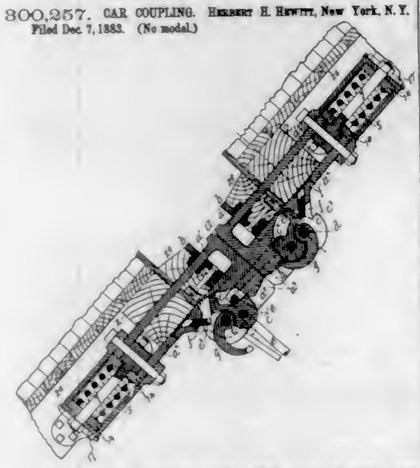


Claim.—1. The combination, with the mortised block B, the abutment D, fixed thereto, the bars C, and the wedges E, of the shoes F, fitted between the wedges and bars, the wedges and shoes filling the space between the bars and abutment, and means for holding the loose parts in the mortised block, substantially as shown and described.

2. The combination, with the mortised block B, the bars C, the wedges E, the abutment D, and the shoes F, of the binding G in a single piece, covering one face and two edges of the block, having holes fitted to receive the bars and wedges, and portions of its edges retaining the shoes and abutment, as and for the purpose specified.

300,256. DOOR FOR COKE-OVENS. JOHN HERRON and ROBERT T. WRAY, Dunbar, Pa. Filed Dec. 28, 1883. (Model.)

Claim.—1. The combination of the frame A and the brick-work D, built therein, with a double door, which is placed inside of the door-frame, and which is provided with means for regulating the passage of air up through the door, and a peep-hole, substantially as shown.



300,256.

2. The combination of the metallic frame A, provided with the rib C, the brick-work D, and a double door which is placed inside of the frame, and up through which the air is made to pass, substantially as described.

3. A door for coke-ovens, consisting of the inner and outer plates, F G, the side strips, H, and bolts J, the inner plate, F, being of a less height than the outer one, in combination with the brick-work D and passage E, substantially as set forth.

300,257. CAR COUPLING. HERBERT H. HEWITT, New York, N. Y. Filed Dec. 7, 1883. (No model.)

Claim.—1. The combination, with a buffer having an integral stem constructed to pass through the buffer-block and the end sill of a car, and an integral stem located under the buffer-block and end sill, of a buffer-head and draw-spring attachment located between the center timbers behind the end sill, and connected to the free ends of the two stems of the buffer, substantially as set forth.

2. An integral buffer and coupler consisting of a buffer-head, a downwardly-projecting hook located under the same, and two parallel stems, one adapted to pass through and the other under the buffer-block and end sill of a car, substantially as set forth.

3. In a car-coupler, a detachable piece or plate pivoted to the draw-bar, and a pendent link permanently attached to said pivoted piece or plate and actuated by means, substantially as described, whereby the link and pivoted piece are swung up, so that the free end of the link engages a downwardly-projecting hook on or enters the mouth of an ordinary coupler of an adjacent car, as set forth.

4. The combination, with the downwardly-projecting hook of a car-coupling, of a closing device, constructed and operated to automatically close the opening of the hook when the coupling-link of an adjacent coupler passes over the hook and by the upward movement of the link, substantially as set forth.

5. In a car-coupler, a downwardly-projecting hook, in combination with a pivoted notched piece, which, when in open position, allows the free end of a coupling-link to pass into the notch over the hook, and when turned on its axis into its closed position the side of the notch retains the link on the hook, substantially as set forth.

6. The combination, with a downwardly-projecting hook and a pivoted notched closing-piece, of a sliding bolt or catch constructed and operated to hold the pivoted closing-piece in its closed position, substantially as set forth.

7. In a coupling, a hook, and a pivoted piece provided with a notch, the upper side of which is in front of the hook when in its open position, in combination with the coupling-link of an adjacent car, which when thrown up over the hook strikes said upper side of the notch of the pivoted piece and forces it partly round on its center, so that the under side of the notch closes the opening to said hook, and a bolt or catch constructed and operated to hold the plate in its closed position, substantially as set forth.

8. In a coupling, a pivoted notched piece, a bolt or catch adapted to hold the plate in its closed position, and a lifter and cam device pivoted on the same axis as the plate, constructed and operated, when moved in one direction, to turn the pivoted notched piece into its closed position, and when moved in the opposite direction to raise the bolt or catch to free the notched piece, substantially as set forth.

9. In a coupler, a pivoted notched piece, a link permanently attached thereto and hanging loose, and a lifter pivoted on the same axis as the notched piece to raise said link into position to couple with an adjacent car, in combination substantially as set forth.

10. In a coupler, a pivoted notched piece, a link permanently attached thereto and hanging loose, and a lifter pivoted on the same axis as the notched piece, in combination with a downwardly-projecting hook of the coupler of an adjacent car, substantially as and for the purpose set forth.

11. In a coupler, a pivoted notched piece, a link permanently attached thereto and hanging loose, and a lifter pivoted on the same axis as the notched piece, in combination with the coupler on an adjacent car, composed of a hook, a pivoted notched piece adapted to close the opening to the same when the link passes over it, and a bolt or catch adapted to hold said plate in its closed position, substantially as set forth.

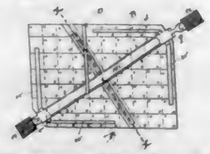
12. The integral buffer and coupler a a' a^2 a^3, in combination with the connecting-bolt a^3, the yoke a^5, and the draft and compression spring device 7, 5, 14, 13, and 17, substantially as set forth.

13. The link e, notched piece c, lifter g, and handles h^3, in combination, substantially as set forth.

14. In combination, the pivoted notched piece c, lifter g, located between the lugs a^4 of a car-coupling, the pin d, fitted to turn freely in the lugs a^4 a^4, and notched piece c, and secured to the lifter g, and the rods h', attached to the ends of the pin d by means of universal couplings, substantially as and for the purpose set forth.

15. The combination of the link e, pivoted piece c of a car-coupling, and downwardly-projecting hook a^2 of a car-coupling on an adjacent car, substantially as and for the purpose set forth.

16. The link e and lifter g of a car-coupling, in combination with the hook a^2, and pivoted notched piece c of the coupler of an adjacent car, substantially as set forth.



17. The combination of the link e, pivoted piece c, and lifter g, substantially as and for the purpose set forth.

18. The combination of the hook a^2, notched pivoted piece c, and sliding bolt f, substantially as and for the purpose set forth.

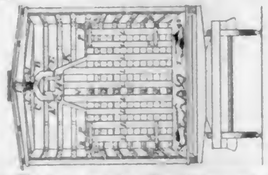
19. The combination, with the notched piece c, the hook a^2, and sliding bolt f, of the cam-shaped lifter g, substantially as and for the purpose set forth.

20. The combination of the link e, pivoted piece c, and pin d, by means of which the piece c is held between the lugs a^4 of the coupling, substantially as and for the purpose set forth.

300,258. ELEVATOR. MARTIN W. HOBEN, Cohoes, N. Y. Filed Mar. 27, 1884. (No model.)

Claim.—1. The combination of the safety-racks b, with the suitably-guided and sliding spring catch-bolts A, spiral springs l, surrounding said bolts, and the bell-cranks l, operated by the cross-bolt or stud g of the sliding rope stirrup, link, or coupling f, substantially as described.

2. An elevator-cage consisting of a suitable and suitably-guided rectangular frame, A, carrying a diagonally-placed platform, B, resting on the lower cross-piece, m, of the frame A, the outer corners of the platform B being rigidly supported from below by iron braces w, secured thereto and proceeding from near the lower extremities of the projecting uprights k, substantially as described.



3. An elevator-cage consisting of a suitable and suitably-guided rectangular frame, A, carrying a diagonally-placed platform, B, resting on the lower cross-piece, m, of the frame A, the outer corners of the platform being rigidly supported from below by iron braces w, secured thereto and proceeding from near the lower extremities of the projecting uprights k, the platform B being further supported from below and stiffened by a truss formed of a transverse beam, x, let into the lower cross-piece, m, and of two braces, y, proceeding from near the lower edge of the lower cross-piece, m, and terminating near the ends of the transverse beam x, substantially as described.

4. An elevator-cage consisting of a suitable and suitably-guided rectangular frame, A, carrying a diagonally-placed platform, B, formed of two layers of planking crossing each other at or nearly at right angles, and well bolted together with two bolts to each crossing, substantially as specified, said platform resting on the lower cross-piece, *m*, of the frame A, its outer corners being rigidly supported from below by iron braces *w*, secured thereto and proceeding from near the lower extremities of the projecting uprights *k*, as described.

5. An elevator-cage consisting of a suitable and suitably-guided rectangular frame, A, carrying a diagonally-placed platform, B, so arranged within said rectangular frame that the projecting corners of the platform will be thrown upon opposite sides of a line crossing the lower bar, *m*, of the rectangular frame centrally of its length, and at right angles thereto, substantially as described.

6. An elevator-cage consisting of a suitable and suitably-guided rectangular frame, A, carrying a diagonally-placed platform, B, in which the guide-jaws *q* and *r* project unequally from the uprights *k*, in a manner substantially as described.

300,259. STOCK-CAR STALL. WILLIAM HOLDEN, Los Angeles, Cal., assignor of one-half to Thomas Wright, same place. Filed Jan. 26, 1884. (No model.)

Claim.—1. The improvement in cattle-stalls consisting of thin flexible partitions suspended from a horizontal longitudinally-slotted tube by means of a ball inclosed within the tube, and connected with the partition by means of a cross-head, to which the partition is hinged, and to which the ball is attached by means of a short cylindrical connection passing through the slot in the tube, all being constructed and combined substantially as described, and the partitions being connected to each other and to the floor and walls of the building, substantially as set forth.

2. In cattle-stalls, a depending partition hinged to a horizontal cross-head, such cross-head having a ball attached to the center of its upper side by a cylindrical connection, and being sustained by a horizontal slotted tube, in which the ball is held, substantially as and for the purpose set forth.

3. In cattle-stalls, the improved device for mounting the partitions, consisting, substantially as shown, of a horizontal tubular support, slotted upon its under side, and retaining within its cavity balls, from which the partitions are suspended, whereby the partitions are allowed to be rotated and shifted in position throughout the length of the tube.

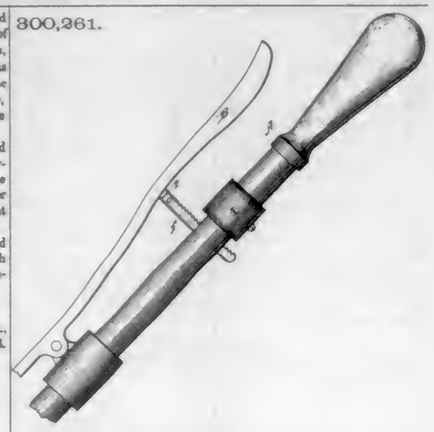
4. In cattle-stalls in which the partitions are supported by globular mountings, substantially as described, a longitudinally-slotted tube for supporting such mountings, having flanges extending along the top of the tube, substantially as shown, and for the purpose set forth.

300,260. FOUNTAIN-PEN. JOHN HOLLAND, Cincinnati, Ohio. Filed Apr. 4, 1883. (No model.)

Claim.—The combination, substantially as specified, of the holder A, point-section B, plug C, tube D, cap E, and pen F with rod G, secured to the cap E, and having valve *g* and vents *h i*, for the purpose set forth.

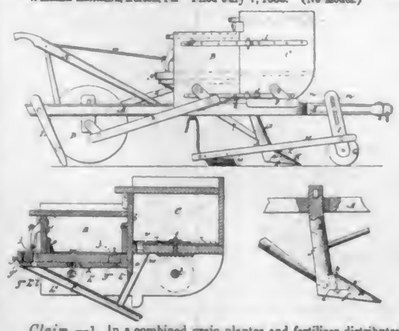
300,261. BRAKE-LOCK FOR BICYCLES. GEO. S. HULL and CHAS. S. HULL, Chambersburg, Pa. Filed Mar. 31, 1884. (No model.)

Claim.—1. The combination, with the brake-handle of a bicycle, of a locking attachment, substantially as specified.



2. The combination, with the brake-handle and the main handle, of the toothed locking-bar and the lock having a passage in which said locking-bar works, substantially as specified.

3. The combination, with the toothed locking-bar, of the lock having a passage for said bar, a locking-bolt, and spring operating the same, spring-slide to engage said bolt, and a tumbler, substantially as specified.



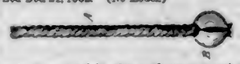
4. The combination, with the locking-bar, of the spring-bolt, its thumb-catch, and the angular holding-slot of the lock, substantially as specified.

5. The combination, with the main handle and the brake-handle, of the lock and the lock-bar, having its fastenings guarded by one of the handles when drawn up in juxtaposition thereto in the locked position, substantially as specified.

300,261.

300,262. COMBINED PLANTER AND FERTILIZER-DISTRIBUTER. WILLIAM IRONSIDE, Kelton, Pa. Filed July 7, 1883. (No model.)

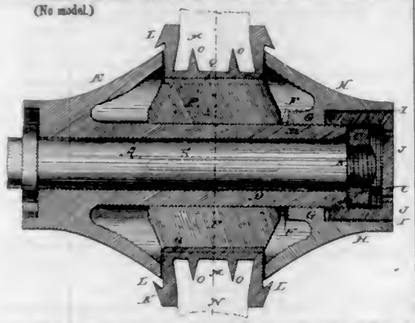
Claim.—1. In a combined grain-planter and fertilizer-distributer, the grain-box B, furnished and fitted with the partition-back *b*, the uplifting-front *b'*, and the clamping-hasps *d*; also said box conjoined with the manure-hopper C, and both boxes mounted upon the platform *a* of the drill-frame A, substantially as and for the purposes herein specified.



2. In the grain-hopper B of the combined grain-planter and fertilizer-distributer herein described, the combination, with the table-bed *g*, provided with the concentric shoulder *g'* and groove *g''*, the drop-hole *l*, the plate-cap *m*, and the spout *p*, with the box-front *b'*, having the brush *o* and the presser *q* thereto attached, and with the counter-shaft *i*, of the set of interchangeable turn-plates *h*, furnished each with the circle of differential vent-holes, *j*, the center pivot, *h'*, and the spur-cogs *h''*, all substantially as and for the purposes herein specified.

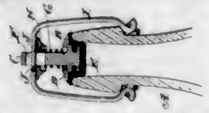
3. In the adjustable manure-hopper C of the combined grain-planter and fertilizer-distributer herein described, the combination, with the partition-front *b*, and its metal-covered floor furnished with the vent-hole *v*, the branch spout *c*, and the lever-regulated vent-stop *w*, and with the vertical spindle *s* and its bevel-geared counter-shaft *t*, of the cruciform and oatsweeping hopper-boy *r*, substantially as and for the purposes herein specified.

4. In a combined grain-planter and fertilizer-distributer, as herein described, the counter-shafts *i* and *t*, each reciprocally imparting motion through its respective and intermediate gearing, the former to the interchangeable turn-plates *h* in the box B, and the latter to the hopper-boy *r* in the box C, and having their bearings on the same level, their cranks of the same length, and their wrist-pins ready to couple and act in combination with the connecting-rods *x*, the independently-coupling parallel bars *y*, and the counter-cranks of the shaft of the driving-roller D, substantially as and for the purposes herein specified.



5. In a combined grain-planter and fertilizer-distributer, as herein described, the combination, with the plow-beam of the drill-frame A, of the rigidly-wedged colter-staff F, provided with the rear vertical groove, *f*, and a hollow arched foot, the last having a scarf-jointing edge, *s*, to which is adjusted and firmly bolted the correspondingly rear scarf-edged drill-colter, E, substantially as and for the purposes herein specified.

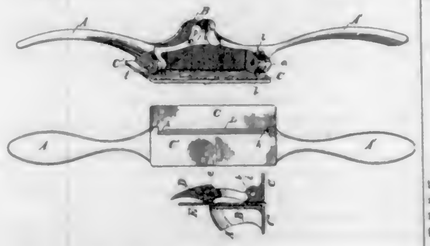
300,263. SASH-CORD FASTENER. HENRY F. JENES, Pawtucket, R. I. Filed Dec. 21, 1882. (No model.)



Claim.—As a new article of manufacture, a sash-cord grip consisting of a metallic ball having a rounded axial perforation of size and shape corresponding to that of the sash-cord, and a lateral slot or opening of less breadth internally than the diameter of the cord, and admitting said cord by a sidewise movement to the enlarged axial perforation, said ball being compressible by closing said slot, so that the walls of the axial perforation will grasp the cylindrical cord without flattening it, substantially as set forth.

300,264. VEHICLE-HUB. JOSIAH JONSON, Toledo, Ohio, assignor of one-half to Thomas Matthew O. Neill, same place. Filed Jan. 26, 1884. (No model.)

Claim.—The combination of a box fitting upon the axle-spindle and having an outwardly-projecting funnel-shaped flange upon its inner end and longitudinal flanges upon the outer side of the box, an elastic ring fitting upon the box and having longitudinal grooves upon its inner and outer sides, a socketed spoke-receiving ring fitting upon the elastic ring having longitudinal flanges upon its inner sides and provided with inwardly-pointing flanges upon the outer edges of its faces, and a sleeve having an inwardly-projecting funnel-shaped flange and fitting upon the outer end of the box, clamping the socketed ring between its flange and the flange upon the box, as and for the purpose shown and set forth.

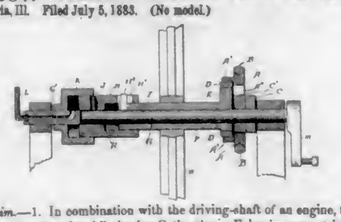


300,265. BOTTLE-STOPPER. JAMES E. KEENAN, Scranton, Pa. Filed Apr. 9, 1884. (No model.)

Claim.—1. In a bottle-stopper, the combination, with the plate B and its slotted stem, of the collar H, the spring, and the swinging bail, substantially as described.

2. The combination, with a bottle, of the stopper having the outwardly-extending slotted stem, the spring, the collar, and the bail pivotally supported on the neck of the bottle, and passing through the slot in the stem, substantially as described.

300,266. CABINET-SHAVE. JOHN A. KEHER, Cincinnati, Ohio, assignor to Samuel C. Tatum & Co., same place. Filed Feb. 23, 1884. (No model.)

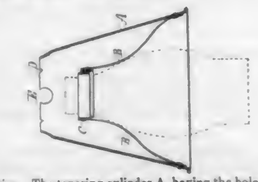


Claim.—1. A shave composed of the stock B and bit-face C', in combination with the bit-face C, swiveled by a pintle placed parallel with the axis of rotation of the bit-face, and a fastening device, D, suitably supported, and adapted to grip the bit at or near the top and force one of the bit-faces against the lower edge of the bit, whereby the bit will be held to its place by said fastening D and bit-face, independently of other fastenings, substantially as described.

2. The combination, with the stock B and stationary bit-face C', of the bit-face C, provided with lugs *h* to bear against the bit and with yoke *d*, and swiveled by a pintle parallel with its axis of rotation, and a fastening device, D, connected with the yoke *d* and adapted to bear against the upper part of the bit, the bit being held to its place by said fastening D and the face C, independently of other fastenings, substantially as described.

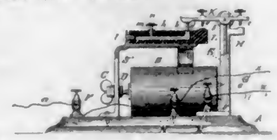
3. The combination of the stock B and stationary bit-face C', provided with ears *a*, the bit-face C, provided with ears *b* and yoke *d*, and swiveled to ears *a* by pintles *i*, and the cam-lever D, fulcramed on yoke *d*, for instantaneously fastening and releasing the bit, substantially as described.

300,267. COMBINED CUT-OFF AND GOVERNOR. JOHN KELLY, Peoria, Ill. Filed July 5, 1883. (No model.)



Claim.—1. In combination with the driving-shaft of an engine, the eccentric A, having slot A'', the dog C, the sleeve F, having eccentric E, fast thereon, the box D, movable between the bars A', fast on eccentric A, and means whereby the backward turning of said sleeve upon said shaft shall be elastically resisted by said shaft, substantially as and for the purpose specified.

2. The driving-pulley W, shaft G, having tubular end G', cylinder K, having slots J' and H', and the pins J H² therein, in combination with the sleeve F, drive-pulley W thereon, eccentric E, fast at one end of said sleeve, box D, eccentric A, having bars A' and slot A'', and the dog C.



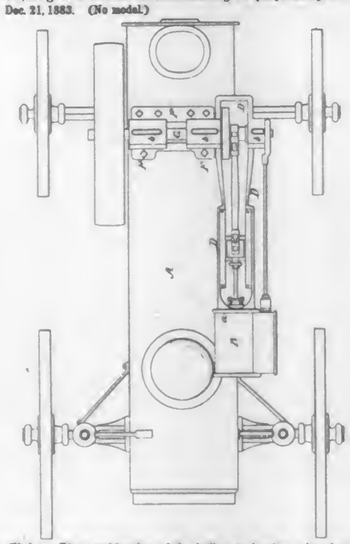
3. The eccentric A, having slot A'', dog or block C, movable in said slot and fast on the shaft G, and the parallel bars A' on said eccentric, in combination with the box D, movable between said bars, and the eccentric E, secured to the end of the sleeve F, whereby the rotation of said sleeve shall shift the eccentric A.

300,268. LAMP-STOVE. CHARLES P. KIMMERER, Grand Island, Nebr. Filed Dec. 26, 1883. (No model.)

Claim.—The tapering cylinder A, having the holes E E and notches D D, the springs B B, the spring-clasps C C, and the frame F, all constructed substantially in the manner and for the purposes herein set forth.

300,269. TELEGRAPHIC RELAY. JAMES S. LAMAR, Augusta, Ga. Filed Feb. 19, 1884. (No model.)

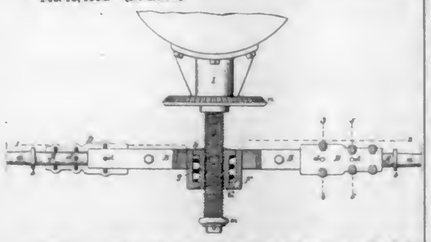
Claim.—1. In a telegraphic relay, the combination, with its electro-magnet, of a vibratory steel magnet operated by its own attraction alone toward the core of the electro-magnet to break circuit, and by means of the magnetic repulsion between said steel magnet and the electro-magnet to make circuit, substantially as specified.



2. In a telegraphic receiving-instrument without retractile spring, a permanent magnet as the armature of an electro-magnet normally held thereto by its own magnetism alone, in combination with an arm rigidly attached to said armature to control the local circuit by its own weight when the magnetism induced in said electro-magnet by said armature is neutralized by the line-current, substantially as specified.

3. In a telegraphic receiving-instrument, the combination, with an electro-magnet, of a vibratory steel magnet having a metallic projection or arm rigidly connected at an angle with said steel magnet, and having a point of platinum or other metal adjusted to make and break electrical connections when operated by the successive repulsions and attractions between said steel magnet and the electro-magnet, substantially as specified.

4. In a telegraphic receiving-instrument, the combination of an electro-magnet, of an oscillating steel magnet, H, arm K, extension *d* and mercury-cup A, substantially as and for the purpose specified.



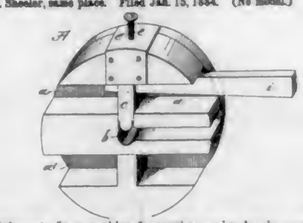
5. In a telegraphic receiving-instrument, the combination of an electro-magnet, an oscillating magnet, H, arm K, extension *d*, mercury-cup A, and governing-screw *l*, substantially as shown and described.

300,270. PORTABLE ENGINE. HENRY B. LANKLERR, Greencastle, Pa., assignor to the Crowell Manufacturing Company, same place. Filed Dec. 21, 1883. (No model.)

Claim.—The combination of the boiler A, having a bracket, *d*, the engine-frame D, secured to the boiler at the front end, and having at the rear end of the cylinder B a confining-bolt, *f*, and one or more rollers, *m*, interposed between the bracket *d* and the engine cylinder or frame, as set forth.

300,271. TRACTION-ENGINE. HENRY B. LANKLERR, Greencastle, Pa., assignor to the Crowell Manufacturing Company, same place. Filed Feb. 18, 1884. (No model.)

Claim.—1. The combination of the central bar or bars, B, of the axle with the short shafts A, abutting against the ends of said bar or bars B, and having journals *a*, and with opposite clamping-bars D, having in their inner faces recesses for the reception of the bars and shafts, as set forth.

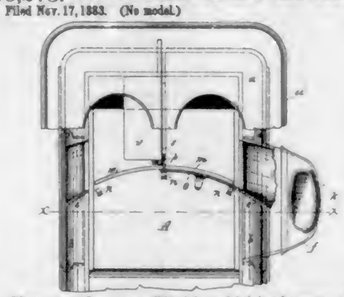


2. The combination of the axle, the boiler, the spindle J, carried by the boiler, and the box F, pivoted to the axle, and having a spindle supporting spring, *g*, as set forth.

3. The combination of the boiler and the spindle J, carried thereby, the pivoted box F, having a spindle supporting spring, and the axle, composed of two bars, B, united at the ends and bowed in the center for the reception of the box F, as set forth.

4. The combination of the boiler and the screw-spindle J, carried thereby, with the axle, its pivoted box F, and the spring-supported nut G, adapted to the screw-spindle J, as specified.

5. The combination of the axle, the boiler, the screw-spindle J, free to turn in bearings on the boiler, the nut G, adapted to the screw-spindle, the box F, pivoted to the axle and carrying a spring, *g*, for supporting the nut, and gearing, substantially as described, whereby said screw-spindle may be turned, as set forth.



300,272. CHUCK. CHAR. LEWIS, Amsterdam, N. Y., assignor to Davis W. Sheeler, same place. Filed Jan. 15, 1884. (No model.)

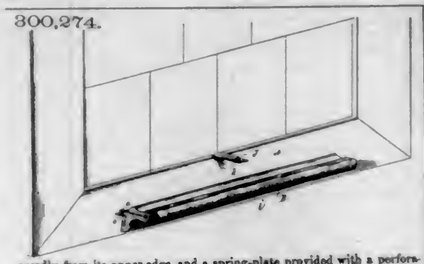
Claim.—1. In a machine for turning spring-heads, a rotary chuck provided with grooves *a b*, recess *d*, sliding plug *c*, and key *i*, substantially as described.

2. The combination, with the chuck A, provided with a transverse groove, *a*, radial groove *b*, having a circular enlargement at the end coinciding with the center of the chuck, and the recess *d*, of the sliding plug *c*, having slot *h*, the rod *e*, spring *d'*, and key or wedge *i*, substantially as described.

300,273. PORTABLE RANGE. WILLIAM P. LEWIS, Pittsburg, Pa. Filed Nov. 17, 1883. (No model.)

Claim.—1. In a convertible right and left hand stove or portable range having recessed side plates, the combination of a combined flue-box and pipe-collar and a stopper-plate, the said parts being attachable to and detachable from the side plates and interchangeable, substantially as set forth.

2. In a convertible right and left hand stove or portable range having recessed side plates, the combination of a combined flue-box and pipe-collar, a stopper-plate, said parts being attachable to and detachable from the side plates and interchangeable, and an adjustable deflecting-plate, substantially as set forth.



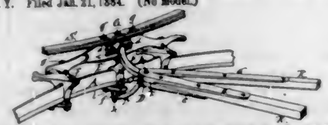
3. In a convertible right and left hand stove or portable range having recessed side plates, the combination of the flue-box and pipe-collar *f*, the stopper-plate *l*, and the deflecting-plate *o*, moving in guides formed on the oven-top and the under side of the top plate, substantially as set forth.

300,274. HILL AND POSTER HOLDER. WILLIAM HENRY LEBETT, Monticello, Ind. Filed Mar. 10, 1884. (No model.)

Claim.—1. The combination, with a suitable base-strip, of a spring-pressed clamping-plate provided with means of attachment, substantially as shown, and triangular in cross-section, one of the points of which forms the fulcrum upon which it works, substantially as set forth.

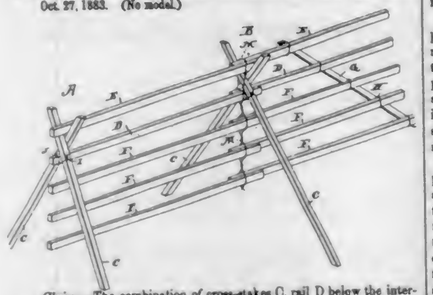
2. The combination, with a suitable base-strip, of a spring-pressed clamping-plate triangular in cross-section, having a pin projecting upwardly from its upper edge, and a spring-plate provided with a perforation secured to the base-strip, substantially as set forth.

300,274.



3. The combination, with a suitable base-strip, of a spring-pressed clamping-plate, triangular in cross-section, provided with a pin upon its upper edge adapted to engage a perforation in a spring-plate secured to the base-strip, pins projecting outwardly from the lower end of the base-strip to engage perforations or recesses formed upon the under side of the clamping-plate, substantially as set forth.

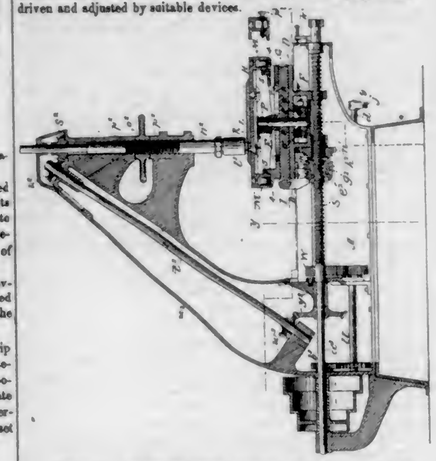
4. The combination, with a suitable base, of a clamping-strip having depending loops formed with eyes secured at its ends, wires secured to the opposite ends of the base-strip at one end and to the ends of the clamping-strip at their other ends, substantially as set forth.



5. The combination, with a suitable base-strip, of a clamping-strip having depending loops formed with eyes secured at its ends, wires secured to the opposite ends of the base-strip at one end and to the opposite ends of the clamping-strip at their other ends, said clamping-plate being provided with a pin upon its upper edge adapted to engage a perforation in a spring-plate secured to the base-strip, substantially as set forth.

300,275. DROP-PERCH COUPLING. THOMAS D. LYNE, Syracuse, N. Y. Filed Jan. 21, 1884. (No model.)

Claim.—In combination with the convergent reaches R R, axle A, and head-block B, the bottom brace, D, composed of the divergent shanks *s s* and the neck *n*, formed integral therewith and terminating with the eye *f*, and the top brace, C, composed of the divergent shanks *a a*, the re-enforce *r* at the junction of said shanks, lying contiguous to the lower brace, and forming an abutment for the ends of the two reaches, and the neck *b*, formed integral with the shanks *a a*, and terminating with the T-head *c*, all constructed and combined substantially in the manner specified and shown.



300,276. FENCE. HENRY F. MAGER, Symmes' Corner, Ohio. Filed Oct. 27, 1883. (No model.)

Claim.—The combination of cross-stakes C, rail D below the intersection of the stakes, wire I J K L, applied as described to the stakes and to the rail D, rails E, lying in the top crotch of the stakes, and wires M, engaging the rails E, passing the rails D, and suspending the rails F, as and for the purpose set forth.

300,277. STONE-DRESSING MACHINE. JAMES W. MALOY, Somerville, Mass. Filed Jan. 5, 1884. (No model.)

Brief.—A carriage is reciprocated by a screw-shaft. Upon this is pivoted a rotary support which is rotated by a worm gearing with wheels feathered to the screw-shaft. Upon this support is the work-supporting carriage proper, which is reciprocated by a pinion on a shaft concentric with the rotary support, which shaft is also driven from the gearing feathered to the screw-shaft. Each of the three carriages may be connected at will with the screw-shaft, and each is provided with a stop device to hold it when disconnected. The rotary overhanging cutter is driven and adjusted by suitable devices.

Claim.—1. In a stone-dressing machine, the combination, with a work-supporting carriage, of traveling supports for the carriage, a main driving-shaft, and mechanism, substantially as described, connecting the supports and the carriage with the shaft, the arrangement being such that the work-supporting carriage may be caused to travel in any substantially horizontal direction, as set forth.

2. In a stone-dressing machine, the combination, with a work-supporting carriage, of a rotary and a reciprocating support for the carriage, and mechanism, substantially as described, for connecting said supports and propelling the same from a single shaft, as set forth.

3. In a stone-dressing machine, the combination of a primary carriage traveling on fixed tracks, a support rotating on a pivot or center carried by said primary carriage, and a secondary work-supporting carriage traveling on said rotary support, and mechanism, substantially as described, for propelling said supports and carriage from a single shaft.

4. In a stone-dressing machine, the combination of the primary carriage adapted to travel on fixed tracks B, having rollers bearing on said tracks, and provided with lateral extensions or supports L L, the rotary support adapted to rotate on a pivot supported by the primary carriage and to bear upon the support L, and the secondary work-supporting carriage adapted to move endwise on tracks on the rotary support, and mechanism for propelling the same from a single source of power, as set forth.

5. In a stone-dressing machine, the combination of the fixed supporting frame or base having a propelling screw-shaft, mechanism for rotating said shaft in either direction, a primary carriage adapted to travel on said fixed support, a rotary support adapted to rotate on the primary carriage, a secondary carriage adapted to travel on the rotary support, and intermediate mechanism, substantially as described, connecting said primary carriage, rotary support, and secondary carriage to the shaft, whereby they may be independently connected with and disconnected from said screw-shaft, as set forth.

6. In a stone-dressing machine, the combination of the fixed supporting frame or base having a screw-shaft, mechanism for rotating said shaft in either direction, a primary carriage adapted to travel on said fixed support, a rotary support adapted to rotate on the primary carriage, a secondary carriage adapted to travel on the rotary support, intermediate mechanism, substantially as described, connecting said primary carriage, rotary support, and secondary carriage to the shaft, whereby they may be independently connected with and disconnected from the screw-shaft, and locking devices whereby said connecting and disconnecting devices are locked in either of the conditions in which they may be placed, and thus prevented from accidental movement, as set forth.

7. In a stone-dressing machine, the combination of the fixed supporting frame or base having a screw-shaft, mechanism for rotating said shaft in either direction, a primary carriage adapted to travel on said fixed support, a rotary support adapted to rotate on the primary carriage, a secondary carriage adapted to travel on the rotary support, mechanism, substantially as described, connecting said primary carriage, rotary support, and secondary carriage to the shaft, whereby they may be

independently connected with and disconnected from the screw-shaft, and locking devices whereby the primary and secondary carriages may be prevented from independent motion when disconnected from the screw-shaft, as set forth.

8. In a stone-dressing machine, the combination of the fixed supporting frame or base having flanges or tracks, a screw-shaft, operating mechanism for said shaft, the primary carriage adapted to travel on the tracks and having a movable half-nut adapted to engage with the screw-shaft, a locking device adapted to prevent the movement of the carriage on its tracks, and mechanism connected therewith whereby the half-nut may be disengaged from or engaged with the screw-shaft, and the locking device simultaneously made operative or inoperative, as set forth.

9. In a stone-dressing machine, the combination of the fixed supporting frame or base having a screw-shaft, operating mechanism for said shaft, the primary carriage adapted to travel on said base, and provided with mechanism, substantially as described, connected therewith, whereby it may be engaged with or disengaged from the screw-shaft, the rotary support journaled on an arbor or pivot supported by the primary carriage, and supported by said carriage, the worm 1, engaged with the worm-wheel 2, forming a part of the rotary support, and intermediate mechanism, substantially as described, connecting said parts, whereby said worm may be connected with and disconnected from the screw-shaft, as set forth.

10. In a stone-dressing machine, the combination of the fixed supporting frame or base having a screw-shaft, operating mechanism for said shaft, the primary carriage adapted to travel on said base, and provided with mechanism, substantially as described, whereby it may be engaged with or disengaged from the screw-shaft, the arbor E, journaled in the primary carriage and provided with the worm-wheel N and pinion P, mechanism, substantially as described, whereby said worm-wheel and arbor may be rotated by the screw-shaft, the rotary support journaled on the arbor, mechanism, substantially as described, whereby said support may be rotated in either direction by the screw-shaft, and the secondary carriage D, adapted to travel on and rotate with the rotary support, and provided with a rack, R, meshing with the pinion P on the arbor E, as set forth.

11. In a stone-dressing machine, the combination of the fixed base or support having the screw-shaft, operating mechanism for said shaft, the primary carriage adapted to travel on said base, and the secondary carriage supported by the primary carriage and adapted to move independently thereof, as described, and mechanism connecting the same whereby either carriage may be put in operative connection with the screw-shaft, the other being at the same time disconnected from the said shaft and made inoperative, as set forth.

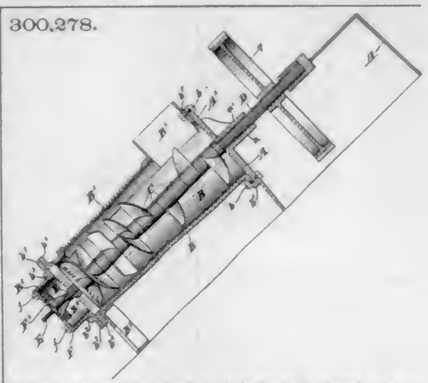
12. The combination of the screw-shaft S, primary carriage D, nut T, engaging with the shaft, lever q, connected to the nut and engaging with rack s, and shaft v, carrying pinion u, also engaging with the rack, as set forth.

13. The combination of the screw-shaft S, primary carriage D, half-nut T, engaging with the shaft, lever q, connected with the nut and engaging rack s, shaft v, carrying pinion u, also engaging with the rack s, and cam i' on shaft v, operating clamp f'', as set forth.

14. The combination of the screw-shaft S, primary carriage D, sliding half-nut T, engaging with the shaft, lever q, connected with the nut and engaging rack s, shaft v, carrying pinion u, also engaging rack s, arbor E, having worm-wheel N and pinion P, attached thereto, swinging frame j'', connected with the half-nut by link l', the worm O, journaled in the frame j'', and engaging with a gear-wheel on the screw-shaft, and the secondary carriage having a rack engaging with the pinion on the arbor E, as set forth.

15. The combination, with a reciprocating carriage for carrying a stone to be dressed, of the arbor E, having the flanged worm-wheel N, the brake o', embracing the flange of the worm-wheel, the swinging frame j'', having the worm O, and the dog d', having an arm engaging with the frame j'', and adapted to compress the brake, as set forth.

16. In a stone-dressing machine, the combination, with a horizontally-adjustable rotary carrige, of an overhanging rotary cutter adapted to form a molded edge upon a slab of stone placed upon the rotating carriage, and connections, substantially as described, whereby both are driven from the same shaft, as set forth.



17. The combination of the cutter-spindle, the sleeve carrying said spindle having an arm, j^4, and the turret g^4, journaled on said arm and adapted to hold a series of cutters and present either of them to the spindle, as set forth.

18. The combination, with a work-supporting carriage having slots, of a clamp composed of a slotted plate having bolts for engagement with the slots in the carriage, a jaw connected with the clamp, and a stop adapted to bear against the edge of a slab on the carriage, as set forth.

300,278. TILE-MACHINE. MICHAEL NOLAN, Nashville, Ind. Filed Sept. 27, 1883. (No model.)

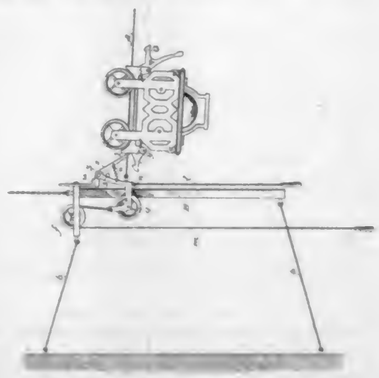
Claim.—1. In a tile-mill, a frame-work for supporting the shafting and driving-gear of the mill, on the front end of which is formed integrally therewith a disk or head to which the tub is adapted to be secured, substantially as set forth.

300,278.

2. The combination, in a tile-mill, of the frame-work A, having a disk or head, A', cast integrally therewith, said head being provided with a pillow, a, of the journal-bearing formed in piece therewith, and the cap a' to said journal-bearing, the flanges through which it is bolted to the pillow being shorter than the cap proper to allow said cap to extend through the head flush with its inner face, substantially as set forth.

3. In a tile-mill, the die-support E, the arms whereof are provided on their front edges with fingers e, one side of each of which is tapered from the rear to the point in the opposite direction from that in which each of those immediately next it is tapered, whereby the sides of the column of clay as it passes said arms in its regular course to the die is serrated, substantially as described, and for the purposes specified.

4. In a tile-machine, the combination of the frame A, the tub B, the screw C, with means for operating the same, the die-support E, and the dies F and F', said several parts being arranged and operated substantially as set forth.



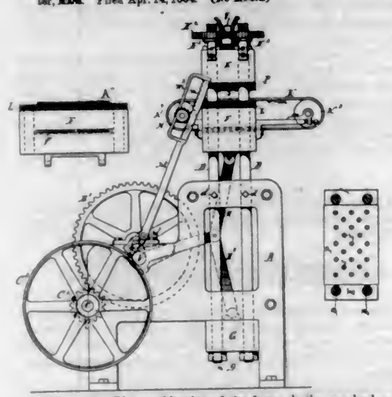
5. The combination, in a tile-mill, with the spindle E', of the conical centering device G, whereby the outer die, F, is adjusted to an equal distance from all sides from the inner die, substantially as set forth.

6. The combination, in a tile-mill, of the frame-work A, having a flange or head, A', cast in piece therewith, the tub B, adapted to be bolted to said flange or head, the auger C, mounted in suitable bearings in the frame-work, with means of operating the same, the die-support E, located in the mouth of the tub, and the dies F and F', substantially as shown and specified.

7. The combination of the frame A, provided with the disk A', and the tub B, secured by short bolts b to said disk, said disk also forming one head of said tub, substantially as set forth.

8. In a tile-mill, an auger, C, the forward wings whereof are serrated on their front edges, substantially as described, and for the purposes specified.

300,279. CASH AND PARCEL CARRIER. BYRON A. OSGOOD, Wakefield, Mass. Filed May 3, 1884. (No model.)



Claim.—1. In a cash and parcel system, a suspended bar, B, a wireway provided with a wheel and yoke at the salesman's station, said wheel bearing on the bar B, guys for holding the said bar, and means, substantially as described, for raising and lowering the end of the wire, all combined substantially as described.

2. In a cash and parcel system, a wireway, one end thereof being vertically movable by means substantially as described, a lever moving with the wire and adapted to strike against a stationary stud in its upward movement, and to give an impetus to the car automatically, substantially as described.

3. In combination with the end of a wireway vertically movable by means substantially as described, and with a stop, a lever, s, provided with a spring, and forked to straddle the wire, and adapted to the catch of the car, whereby the lever acts as a catch and to push the car, substantially as described.

300,280. MACHINE FOR COMPRESSING HEELS OF BOOTS OR SHOES. JAMES H. PARKER, Milford, assignor to John L. Parker, Worcester, Mass. Filed Apr. 14, 1884. (No model.)

Claim.—1. The combination of the frame A, the standard-rods D, supported therein, the head-block E, the foot-block G, the follower F, the knuckle-joint arms H H', the connection I, crank-shaft B, and operating-shaft C, with gears B' C², and pulleys C', said parts being arranged and operating in the manner set forth.

2. The combination, with the follower and press-head, of an endless traveling feed-belt passing through the follower, and having an automatic intermittent motion imparted thereto by mechanism substantially as described, for the purposes set forth.

3. In a machine for pressing or embossing articles of leather, the combination of a head-block supporting an impressing plate or die, a reciprocating pressing-follower carrying an intermittently-acting feed-apron, and a ratchet device and connecting-rod for automatically operating said feed-apron, alternating with the action of said pressing-follower, substantially as set forth.

4. The combination of the follower F, the endless apron K, the supporting-rolls K' K², mounted in bearings attached to said follower, the ratchet mechanism N, mounted on the roll'-shaft, the actuating-rod M, and crank M', substantially as set forth.

5. The combination, with the reciprocating follower F, endless traveling feed-belt K, and head-block E, of the removable impression-plate P, for the purpose set forth.

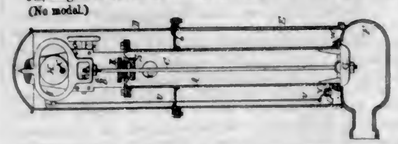
6. The combination, with the reciprocating follower F and head-block E, of an impressing-plate provided with a series of discharging-studs, substantially as and for the purpose set forth.

7. The combination, with the impressing-plate, of the studs S and springs s', confined in recesses formed in said plate, and adapted for action substantially as described.

8. The combination, with the follower F, feed-bed apron K, head-block E, and die or plate P, of the felt or yielding cushion L, substantially as and for the purpose set forth.

9. The combination of the stationary foot-block G, the rods D, the reciprocating follower carrying the feed-belt K, the operating-arms H H', and the adjustable head-block E with geared nuts E' and operating-gear E², substantially as set forth.

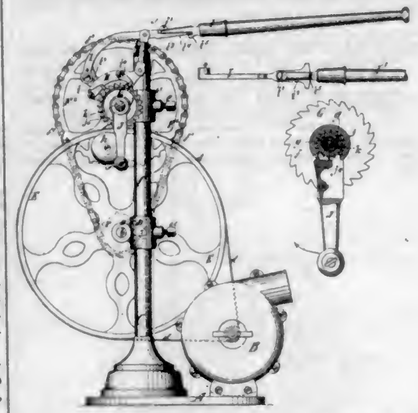
10. The combination, as described, with the feed-belt, operating-roll K², and crank-shaft B, of the ratchet N², pawl n, flanged gear N', rack m, guide m', connecting-rod M, and adjustable crank M', for the purposes set forth.



11. The combination, with the head-block E, the adjusting-gear E², and the impressing-plate P, of the bolt t and hand-nut V, said bolt and nut being adapted for securing said plate and clamping said gear, as hereinbefore described.

12. The follower-block provided with a central opening or slot, as f, in combination with the endless feed-apron and knuckle-joint-operating arm, as set forth.

300,281. EXPLOSIVE COMPOUND. WILLIAM R. QUINAN, San Francisco, Cal. Filed Apr. 27, 1883. (No specimens.)



Claim.—A low-explosive powder composed of a small proportion of nitro-glycerine, carbonaceous material, either pulverized or in the form of non-porous small masses or grains, and an explosive salt in the form of non-porous nntriturated small masses, grains, or crystals, the unpulverized ingredients remaining as separate grains in the mixture, substantially as described.

300,282. HYDRANT AND PLUG. JOHN W. RAMSEY, Beaver Falls, Pa., assignor of one-half to John Corbus, same place. Filed Feb. 14, 1884. (No model.)

Claim.—In a fire-plug or hydrant, the valve G, the valve-rod C, the yoke I, attached to the valve-rod, the shaft K, carrying the cam H and the gear I_1, and the shaft N, carrying the hand-wheel O and the worm P, the latter meshing with the gear I_1, and the whole arranged to act in combination, for the purpose substantially herein specified.

300,283. DRIVING MECHANISM FOR FAN-BLOWERS. JOHN R. ROWLANDS, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Henry F. Read, same place. Filed Mar. 10, 1884. (No model.)

Claim.—1. The combination, with a fan-blower and a driving pulley or wheel from which the fan is operated, of a standard or column, and a bearing for the shaft of said pulley or wheel, capable of vertical adjustment thereon, substantially as herein described.

2. The combination, with the blower B and the wheel or pulley E, of the standard or column C, the sleeve or collar D, adjustably secured to said standard or column, and provided with the bearing or socket D', and the shaft or pin b, supporting said wheel or pulley and supported in said bearing or socket D', substantially as herein described.

3. The combination, with a standard or column, of an upper shaft and means for rotating it, a lower shaft and a driving wheel or pulley thereon, wheels or pulleys, and a chain or belt for transmitting rotary motion from said upper shaft to the wheel or pulley on said lower shaft, and bearings for said upper and lower shafts, capable of vertical adjustment on said standard or column, substantially as herein described.

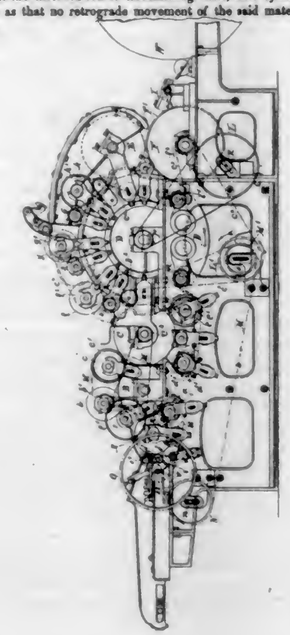
4. The combination of the standard or column C, the sleeves or collars D F thereon, comprising the cross bearings or sockets D' F', means for adjustably securing said sleeves or collars on said standard or column, the shaft b in said bearing D', the shaft f in said bearing F', means for rotating said shaft f, the wheel E on the shaft b, and the wheels F² e, and a chain or belt for transmitting motion from the shaft f to the wheel E, all substantially as herein described.

5. The combination, with a shaft, *f*, and ratchet-wheel G thereon, of a bearing, F', provided with a tabular extension, *f'*, a rocking frame, H, fulcrumed upon said tabular extension *f'*, and carrying a pawl or pawls engaging with said wheel G, and a hand-lever for rocking said frame, substantially as herein described.

6. The combination, with the shaft *f* and ratchet-wheel G, of the rocking frame H, fulcrumed about said shaft, devices for rocking said frame, and two pawls, i i^2, pivoted on said frame, and capable of acting on said wheel when the frame is moved in one direction only, said pawls being so arranged relatively to each other that one or other will always be engaged with said wheel by a movement of said frame in the proper direction equal to half a tooth of the wheel, substantially as herein described.

7. The combination, with a shaft, *f*, and ratchets G *g* fast thereon, of a rocking frame and a pawl or pawls for turning said shaft through the ratchet G, and a gravity-crank loosely surrounding the ratchet *g*, and carrying a pawl capable of being engaged therewith when desired, substantially as herein described.

8. The combination, with a shaft, *f*, and ratchets G *g* fast thereon, of a rocking frame and a pawl or pawls for turning said shaft through said ratchet G, and a gravity-crank, J, loosely fitting said ratchet *g*, and provided with a gravity-pawl, *j*", capable of engaging automatically when said crank is moved, substantially as herein described.



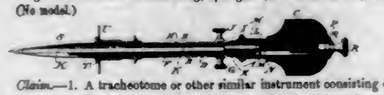
9. The combination, with a shaft and ratchet-wheel, *f* G, and a rocking frame, H, carrying a pawl or pawls for engaging with said wheel, of an operating-lever fulcrumed at one end, and a link connecting said lever with said rocking frame, substantially as herein described.

10. The combination of the shaft and wheel *f* G, the rocking frame H and its pawl or pawls, the arm i^2, the lever composed of the parts I I', pivoted together and fulcrumed to said arm i^2, and the link i^3, connecting the lever portion I with said frame H, all substantially as herein described.

11. The combination, with a shaft, *f*, and a ratchet-wheel, G, fast thereon, of a rocking frame and a pawl or pawls for engaging with said wheel G, a second ratchet-wheel concentric with the wheel G, and a gravity-crank supported concentrically to said shaft, and carrying a pawl capable of being engaged with said second ratchet-wheel when desired, substantially as herein described.

300,284. WOOL-CARDING ENGINE. CLEMENS RÖDNER, Forst, Prussia, Germany. Filed Aug. 16, 1882. (No model.) Patented in Germany Feb. 26, 1881, No. 15,717; in England July 22, 1882, No. 3,501; in Belgium July 22, 1882, No. 58,545; in France Aug. 1, 1882, No. 150,403, and in Austria-Hungary July 13, 1883, No. 25,453 and No. 29,832.

Brief.—The material is transferred from one cylinder to another without the intervention of transmitting-rolls, said cylinders being so driven as that no retrograde movement of the said material may take place.



Claim.—1. The combination of two or more co-operating carding-engines, each composed of a carding-cylinder and suitable urchins, the cylinders of each engine operating to take the material directly from the preceding engine without the intervention of transferring-rolls, and card or comb the material and form the same into a fleece, and mechanism for operating said parts, as described.

2. The combination of two or more carding-engines, each composed of a carding-cylinder and suitable urchins, the workers of each engine or set of carding devices rotating at a successively-decreasing speed, and the cylinders thereof operating to take the material directly from the preceding engine without the intervention of transferring-rolls, and to card or comb the material and form the same into a fleece, and mechanism for imparting the described speed to said workers, as described.

3. The combination of two or more co-operating carding-engines, each composed of a carding-cylinder and suitable urchins, the workers of each engine or set of carding devices rotating at a successively-decreasing speed, and the cylinders of the several engines at a successively-increasing speed, the cylinders of one of said engines operating to take the material from the engine next preceding it without the intervention of transferring-rolls, and card or comb the said material into a fleece, and mechanism to impart the described speed to said workers and cylinders, as described.

4. The combination of two or more co-operating card-engines, each composed of a carding-cylinder and urchins, and adapted to card or comb the material and form the same into a fleece, as described, a feed-apron, feed-rolls, a licker-in, a fancy-roller, a knife or stripping-comb, a receiving-cylinder, and mechanism for imparting to the workers and carding-cylinders the described speed, all operated from the driving-shaft of one of the carding-cylinders, as described, for the purpose specified.

300,285. TRACHEOTOME. DEODS LINCOLN RUSSELL, Prairie City, assignor of one-half to J. La F. King, Springfield, Ill. Filed Mar. 8, 1884. (No model.)

Claim.—1. A tracheotome or other similar instrument consisting of an outer tube, a dilating detachable cone, and a stilette or lancet formed with salient angles and re-entering facets, whereby it is adapted to form a radiating incision, which can be readily dilated, expanded, substantially as specified.

2. A tracheotome or other similar instrument consisting of a main tube, a detachable dilating-cone, a lancet or stilette, and means for dilating said cone, whereby the incision made by the lancet or other puncturing instrument may be readily expanded, substantially as specified.

3. A tracheotome or other similar instrument consisting of a main tube, a detachable dilating-cone and stilette, and a longitudinal dilating-tube surrounding the stilette, and provided with a thumb-button extending through a slot at one side of the main tube, whereby it may be projected to partially dilate the cone and expand the incision made by the instrument, substantially as and for the purposes specified.

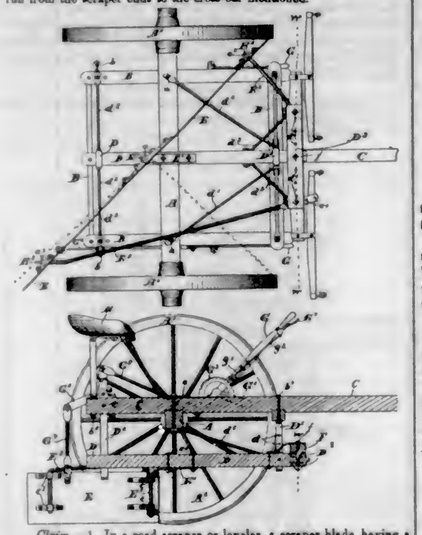
4. The combination, with the main tube of the instrument, the stilette, dilating-tube and dilating-cone, of the semi-tubular shouldered section adapted to project the cannula into the detachable cone and leave it there, substantially as specified.

5. The combination, in a tracheotome, of the main tube, the dilating-cone, the stilette having a rectangular guide, and left-hand screw near its rear end, the handle or head and screw-plug, and the milled head attached to the stilette, whereby the thrust of the same may be regulated, substantially as specified.

6. The combination, with the detachable cone, of the cannula adapted to be carried by the semi-tubular shouldered section and introduced into the incision in the trachea with said cone, so as to keep the same distended while in position, substantially as specified.

7. The combination, in a tracheotome, of the cannula adapted to be inserted in a distended incision in the trachea by the dilating-cone, the exhaust-tube whereby said cannula may be deposited in the incision, and the tape-clamp adapted to be secured to said tube, substantially as and for the purpose specified.

8. The combination, in a tracheotome, of the main tube, the dilating or sound tube, the stilette and the dilating-cone having lateral arms, and tape-loops, whereby said cone may be held in place in the incision in the trachea, substantially as specified.



300,286. BRACELET. HENRY T. SALISBURY, Pawtucket, R. I. Filed Apr. 27, 1883. (No model.)

Claim.—In a winged bracelet, the combination, with the central box, B, and the wings A A, hinged near the ends of the box, of the plates *c c*, provided with the arms *d d*, constructed to close the ends of the box B, and the springs *e e*, secured in opposite ends of the box, and constructed to close the wings, as described.

300,287. ROAD SCRAPER AND LEVELER. THEODORE K. SAWYERS, Moorsville, Ind., assignor of one-half to Charles Cook, same place. Filed Aug. 25, 1883. (No model.)

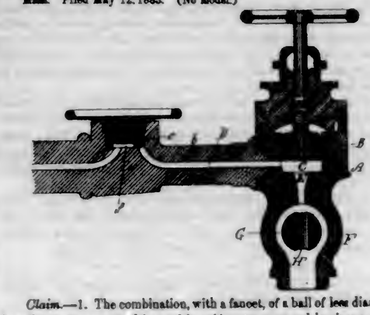
Brief.—The scraper-beam is carried in the slots of two clevis-like hangers from the main frame, preventing lateral play, while perforations in the forward hanger permit vertical adjustment of the securing-bolt. The double-tree is laterally adjustable through a series of holes on a cross-bar secured transversely to the scraper-beam. A right-angle piece bolted to such beam projects down to form the pivot of a central hinge in the scraper. One hinge-piece is secured by bolts and slots to permit a play, enabling the alteration of the scraper to V shape. Brace-rods run from the scraper ends to the cross-bar mentioned.

Claim.—1. In a road scraper or leveler, a scraper-blade having a joint in the center, by means of which it may be changed from a straight blade to a V-shaped blade, substantially as set forth.

2. In a road scraper or leveler, a scraper-blade having a hinge in the center thereof, the hinge parts being bolted to the back side of said scraper, and provided with longitudinal slots, by means of which they are permitted to slide upon the bolts after the nuts are loosened, and thus form an open joint, and permit said scraper-blade to be swung back into a V-shaped blade, substantially as set forth.

3. The combination, in a road scraper and leveler, of the frame, the timber D, the clevis-like devices D' and D^2, whereby said timber is prevented from lateral motion, but is rendered vertically adjustable, and the scraper E, secured to said timber, substantially as set forth.

4. The combination, in a road scraper or leveler, of the timber D, to which the scraper-blade is secured, and the clevis-like device D^2, in which the rear end of said timber is mounted, whereby it is rigidly secured from any lateral movement, and at the same time rendered susceptible of easy vertical adjustment, substantially as set forth.



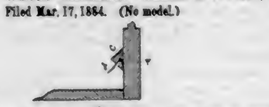
5. The combination, in a road scraper and leveler, of the frame, the timber D, the scraper attached to said timber by iron E', and the clevis-like device D', in which the front end of said timber is mounted, provided with a series of holes, *d*, by means of which the front end of said timber is secured at any desired elevation, substantially as set forth.

6. The combination, in a road scraper and leveler, of the frame-work, the vertically-adjustable timber D, the scraper-blade secured thereto, the cross-timber D^2, and the double-trees mounted thereon, said cross-timber being provided with a row of holes, d^4, by means of which said double-trees may be adjusted from side to side as the varying draft may require, substantially as set forth.

7. The combination, in a road scraper and leveler, of the timber D, the cross-timber D^2, provided with holes d^4, the clevis-like devices D' and D^2, for mounting said timber D, and the scraper-blade E, secured at its center to the under side of said timber, substantially as described, and for the purposes specified.

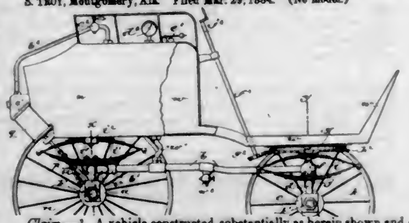
8. The combination, in a road scraper and leveler, of the scraper-blade E, composed of two parts hinged together, the hinge-pintle E' being formed in the shape of an angle-iron, and its longitudinal portion being securely bolted to the timber D, said timber, the cross-timber D^2, the stay-rods E^2 and E^3, by means of which the ends of the scraper are connected to the ends of said cross-timber, and the double-trees mounted thereon, substantially as described, and for the purposes specified.

300,288. APPARATUS FOR DISPENSING AERATED WATERS. JOSEPH HEWES SHEPHERD, Newton, assignor to Alvin D. Puffer, Medford, Mass. Filed May 12, 1883. (No model.)



Claim.—1. The combination, with a faucet, of a ball of less diameter than the water-way, and located in said water-way and having passage through it, substantially as set forth.

2. The combination, with a faucet, of an intercepting device arranged permanently in the middle of the water-way thereof, said device being of less diameter than the interior of said faucet, and provided with means for turning it so as to allow the water to run freely or to interrupt the flow of water, as may be preferred.



3. In combination, the chamber *c*, having a peripheral opening, *h*, and valve *e*, having pocket *f* and segmental opening *g*, the mouths of the interrupted channel D terminating in the valve-seat and governed by the valve.

300,289. CARPET-FASTENER. WILLIAM M. SHOFSELL, Auburn Springs, Mo. Filed Mar. 17, 1884. (No model.)

Claim.—The V-shaped strip C, having a cavity in its under side, and the headed and pointed nails projecting through and at right angles to one side of the strip, in combination with the floor and base-board of a room, substantially as and for the purpose set forth.

300,290. VEHICLE PROPELLED BY COMPRESSED AIR. DANIEL S. TROY, Montgomery, Ala. Filed Mar. 29, 1884. (No model.)

Claim.—1. A vehicle constructed, substantially as herein shown and described, with its axle or axles and reach made hollow and communicating to serve as a reservoir for compressed air to be utilized in driving the vehicle, substantially as herein specified.

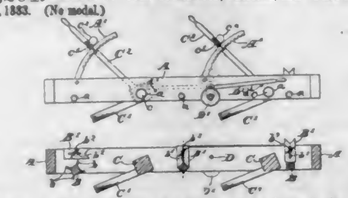
2. A vehicle constructed with its axle or axles and reach and its body portion in whole or in part made hollow and communicating to serve as a reservoir for compressed air to be utilized in driving the vehicle, substantially as shown and described.

3. A vehicle constructed with its axle or axles and reach made hollow and communicating with each other to form a reservoir for compressed air, in combination with a compressed-air engine secured thereto and constructed to revolve one of said axles, substantially as set forth.

4. A vehicle constructed with its body, axle or axles, and reach made hollow and communicating to form a reservoir for compressed air,

in combination with a compressed-air engine secured to the body and constructed to revolve one of the axles, substantially as set forth.

5. The combination of the hollow reach *b* with the hollow axles *a c* and cross-tubes *d u*, connecting the hollow axles with the reach and connected to the axles by the chambers *a' c'*, whereby a continuous reservoir is formed, substantially as set forth.



6. The combination of the hollow body *w* with the hollow reach *d* and hollow axles *c a*, with the flexible pipe *w'* connecting the hollow body with the hollow reach, whereby a continuous hollow space is formed within the body, reach, and axles, to serve as a reservoir, substantially as set forth.

7. The combination of the continuous hollow communicating body, axles, and reach, the rear axle being hollow, cranked, as at *o r o*, with an air-engine, *q*, communicating with the body *w*, the pitman-rods *p*, connected to the pistons of the engine and to the cranks *o o*, and the stem *t*, connected to the air-valves of the engine and to the eccentrics *s* on the middle tube, *r*, substantially as set forth.

8. The combination, with the hollow axle *a*, perforated, as shown, near its ends, with the hollow reach, connecting cross-pipe *u*, connected to and communicating with the axle by the chambers *a'*, fitting around the ends of the axle over the perforations, and held in place by the screw-collars *l*, and packing *m* between said collars and chambers, substantially as set forth.

9. The connection between the hollow front axle, cross-pipe *d*, and the hollow communicating reach, which consists in the hollow perforated tube *e* on the cross-pipe *d*, and bulb *f*, surrounding said perforated tube and connected to and communicating with the reach *b*.

300,291. HARROW. JOHN UNDERWOOD, Sheridan, Ind. Filed Dec. 21, 1883. (No model.)

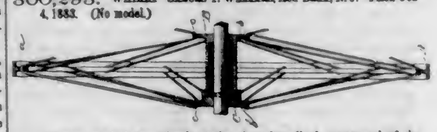
Claim.—1. The combination, in a harrow, of the frame A, the revoluble pulverizing-bars B, journaled in said frame, the detent B', secured to the frame just above the end of the pulverizing-bar, and adapted to fit down onto said bar, with means for securing it in this position, and the beam C, bearing teeth C', substantially as described, and for the purposes specified.

2. The combination, in a harrow, of the frame A, the beams C, journaled in bearings in said frame, square pulverizing-bars B, interposed between said beams, said beams bearing shares or teeth C', which are set at an angle with the beam, and levers C^2, rigidly secured to the end of said beam as a means for operating the same, with means for securing the same in position, substantially as set forth.

3. The combination, in a harrow, of the frame A, square revoluble pulverizing-bars B, journaled therein, the detents B', secured to the frame and adapted to be fitted against said bars, with means for securing them in position, the beams C, bearing shares or teeth C', said shares or teeth being set at an angle with the beam, and levers C^2, secured to the ends of said beams as a means for regulating the depth to which the teeth shall enter the soil, all arranged and operating substantially as described, and for the purposes specified.

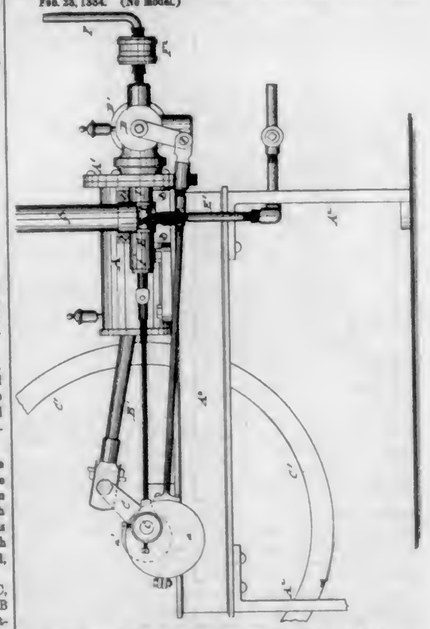
4. The combination, in a harrow, of the frame A, the beams C, bearing shares or teeth C', and the square revoluble pulverizing-bars B interposed between said beams C, said bars being provided with outwardly-projecting pins *b*, substantially as described, and for the purposes specified.

300,292. CAR-COUPLING. JOHN WARD, Condersport, Pa., assignor of one-half to Frederick Davenport. Filed Mar. 21, 1884. (No model.)



Claim.—1. In a car-coupling, the combination, with a draw-head, of a plate pivoted to the upper side thereof, said plate being provided near its rear end with a raised portion, and a coupling-pin seated in a perforation of said plate, substantially as set forth.

2. In a car-coupling, the combination, with a draw-head, of a plate provided at its rear end with a raised portion, a hinged support secured to the under side of the plate, and a coupling seated in an opening in the front end of the same, substantially as set forth.

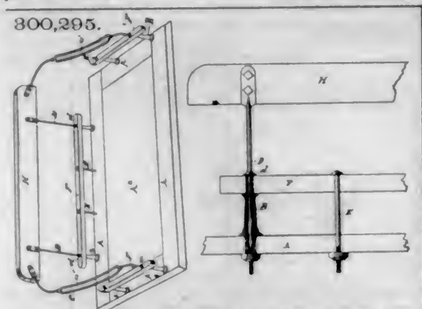


3. In a car-coupling, the combination, with a draw-head, of a shaft having bearing in the front end of the same, a spring secured to the end of said shaft at one end, its other end being secured to a post or trunnion projecting outwardly from the draw, a bail or loop secured to the shaft at one end, its other end bearing against the under side of the spring, and a plate secured to said shaft, substantially as set forth.

300,293. WHEEL. SAMUEL T. WILLIAMS, Red Bank, N. J. Filed Oct. 4, 1883. (No model.)

Claim.—A hub for wheels of the class described, composed of the main portion B, having the flange *b* on one end thereof, and rigid or immovable thereon, and radial teeth on the other end, and cap C, having the flange *b'* and teeth *d* thereon to engage the teeth on the end of the said portion B, all constructed and arranged substantially as set forth, whereby the spokes may be distended and held in their distended condition, as specified.

300,294. GAS-ENGINE. JOSEPH S. WOOD, Brooklyn, N. Y. Filed Feb. 28, 1884. (No model.)

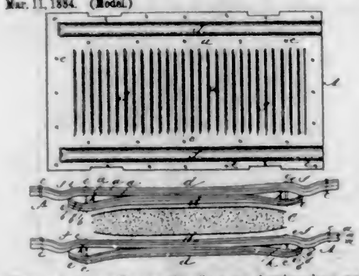


Claim.—1. In a gas-engine, the combination of a cylinder, a reciprocating piston, a crank-shaft, an igniter arranged at one side of the cylinder, means for reciprocating the igniter-valve, a gas-and-air-supply valve communicating with the cylinder, a valve-gear for oscillating the piston-valve, said valve communicating with the gas-supply pipe, air-pipe, and the cylinder, substantially as set forth.

2. In a gas-engine, the combination of a cylinder, A, having an inlet-port, *a*, a gas-and-air-supply valve, D, having gas and air channels *d d' d²*, a valve-gear for oscillating said valve, a valve-casing, D', having ports *s d' d²*, and a gas-supply pipe, F, having a check-valve, F', the oscillating gas-and-air valve serving also to exhaust the products of combustion, substantially as set forth.

3. In a gas-engine, the combination, with the cylinder, of an auxiliary supply-valve composed of a supply-tube having a perforated bottom, a vertically-adjustable spindle, and a weighted valve, substantially as set forth.

300,295. SHIFTING-RAIL FOR BUGGY-SEATS. RICHARD G. WOOD, Cincinnati, Ohio, assignor, by mesne assignments, of one-half to the Queen City Forging Company, same place. Filed Apr. 27, 1883. (No model.)



300,295.

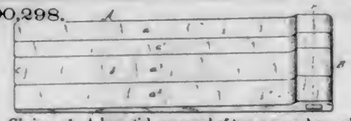
Claim.—1. In a buggy-seat, the combination of the seat-frame, rails F, and pieces B with the arm-rests C and back-supports D, the said parts C and D having screw-threaded shanks passing through the rails F, pillars B, and the seat with nuts to hold the parts together, substantially as specified.

2. The combination, with the seat-frame, the hollow standards, and the rails F, of the shifting-rails removably secured to said rails F by bolts passing through the shifting-rails, rails F, hollow standards, and seat-frame, substantially as described.

300,296. OIL-PRESS PLATE. CLARK WOODMAN, Omaha, Nebr. Filed Mar. 11, 1884. (Model.)

Claim.—1. A metallic plate for oil-presses, forming also a mat on its opposite faces, constructed with reverse transversely-concave faces, protruding or bulging sides, and gutters on its upper surface, substantially as specified.

2. A metallic plate for oil-presses, forming also a mat on its opposite faces, constructed of a double series of metal sheets or layers secured together, with the upper series of greater width than the lower series, and both series constructed to present reverse transversely-concave faces having protruding or bulging sides and gutters on the upper face of the combined plate, essentially as described.

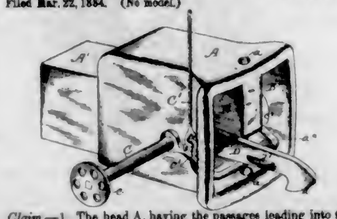


3. A combined metallic plate and mat for oil-presses, consisting of an upper series of metal sheets or layers, *a a*, and a lower series of like sheets or layers, *b b*, of lesser width than the upper series, all riveted together and constructed to present corrugated exterior faces bent to form reverse transverse concaves *d d* and protruding or bulging sides *s s*, with side gutters, *f*, on the upper face of the combined plate, substantially as and for the purposes herein set forth.

300,297. AUTOMATIC SPRING SHADE-ROLLER. JOSEPH J. ADGATE and FRANCIS HEKMAN, New York, N. Y., assignors to Stewart Hartshorn, Millburn, N. J. Filed Mar. 13, 1884. (No model.)

Claim.—The combination, with a shade-roller, of end plate, C, an end cap having a flange, D, the central spindle having ratchet *f*, and a pawl or pawls, *d*, held by its heel in a socket, and between plate C and flange D, and adapted to catch by its toe in the ratchet *f*, substantially as shown and described.

300,298. HARNESS-LOOP STICK. HENRY H. BAKER, Jr., Buffalo, N. Y., assignor of one-fourth to Pratt & Letchworth, same place. Filed Apr. 1, 1884. (No model.)

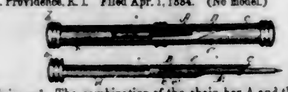


Claim.—1. A loop-stick composed of two or more bars, substantially as described, of unequal widths, and provided with a suitable connecting device, whereby said bars are secured together, substantially as set forth.

2. A loop-stick composed of two or more tapered or wedge-shaped bars having parallel edges, and provided with heads B and a connecting device, whereby said bars are secured together with their parallel edges in contact, substantially as set forth.

3. The combination, in a loop-stick, of two or more bars, one of said bars being provided with a laterally-projecting stud, *d*, and the other of said bars provided with a transverse slot, *e*, whereby said bars are secured together, substantially as set forth.

300,299. CAR-COUPLING. HENRY T. BEAN, Robinson, Ill., assignor of two-thirds to William C. Jones and Thomas Aten, both of same place. Filed Mar. 22, 1884. (No model.)



Claim.—1. The head A, having the passages leading into the compartments B B' beveled upward, and the shaft C, passing therethrough, supported by the floor of the beveled passages, and adapted for engagement with the coupling-hook, in combination with a hook, D, loosely mounted on the shaft C, and the arm or arms *c'*, rigidly mounted on said shaft and passing through the compartments, substantially as shown and described.

2. The combination of the shaft C, arms *c'*, and spring-finger or guides a^4, substantially as shown and described.

3. The combination of the shaft C, and having arms *c'*, with hooks D, having the ribs or flanges *d'*, substantially as shown and described.

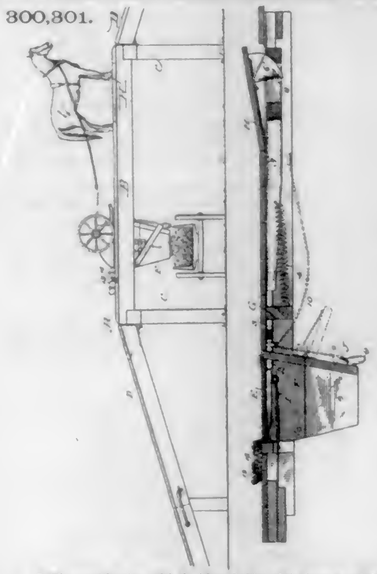
4. The combination of the head A, having the compartments B B', the hook D, and shaft C, with the latch a^3 and spring a^3, substantially as shown and described.

300,300. COMBINED CHAIN-BAR, PENCIL, AND TOOTH-PICK. DANIEL F. BRIGGS, Attleborough Falls, Mass., assignor to William Smith & Co., Providence, R. I. Filed Apr. 1, 1884. (No model.)

Claim.—1. The combination of the chain-bar A and the removable tube D, having a point, *c*, adapted for a tooth-pick, and provided with a slot, *d*, with the pencil mechanism E, provided with a finger-pin adapted to enter the slot *d*, substantially as described.

2. The combination of the chain-bar A and the removable tube D, having a point, *c*, adapted for a tooth-pick and provided with a slot, *d*, with the pencil mechanism E, and the inclined pin *e*, adapted to enter the slot *d*, substantially as and for the purpose set forth.

300,301. PORTABLE BRIDGE FOR UNLOADING EARTH-SCRAPERS. BARTLEY L. BURRIS and CLARENCE S. WOODMAN, Wichita, Kans. Filed Nov. 1, 1883. (No model.)

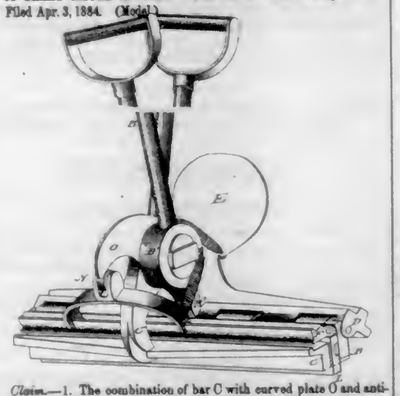


Claim.—1. A portable bridge for the purpose described, consisting of an elevated platform, inclined ways at the opposite ends, a trap-door in the platform, and means operated by the team to permit said trap-door to open, substantially as described.

2. The combination of the elevated platform, a trap-door, and spring-bolts for locking such trap-door, with the hinged section of the platform connected to the said bolts, for the purposes set forth.

3. The combination, with the elevated platform, of the hinged trap-door, the slotted spring-rod and locking-bolts, and the hinged section having the projecting cam, and the springs, substantially as described.

4. The combination, with the elevated platform, of the trap-door and its operating devices, the adjustable hopper having movable sides, and means, substantially as described, for operating the same, for the purpose set forth.

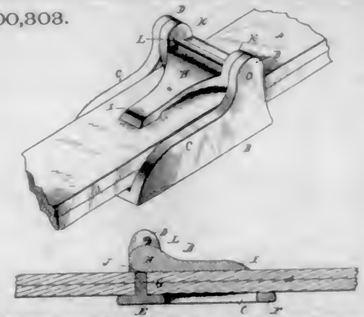


300,301.

5. The combination, with the hinged sides of the hopper, of the yoke J, connected to each of the sides and adapted to operate substantially as described.

6. In combination with the elevated platform having the trap-door, for the purpose set forth, the sliding projection on the floor of the platform adapted to trip the catch of the scraper.

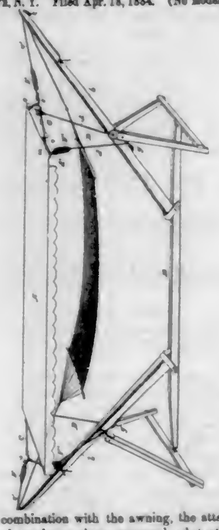
300,302. MACHINE FOR SEAMING OR DOUBLE-SEAMING JOINTS OF SHEET-METAL ROOFING. ORRIN W. BURRITT, Woodsport, N. Y. Filed Apr. 3, 1884. (Model.)



Claim.—1. The combination of bar C with curved plate O and anti-friction roller N, attached to standard on lip F, hinged to cored bar B, and means for operating, substantially as and for the purpose set forth.

2. The means for adjusting the height of the seamer, consisting of cored bar B, with slotted bottom, adjustable gage L, with loops or tongues, and stop-button M, attached to cored bar B, and stop-catch on gage L, the combination arranged to operate substantially as herein shown and described, for the purposes set forth.

300,303. BUCKLE. EDWARD FRANKLIN BUTLER, Whitewater, Wis. Filed Mar. 25, 1884. (No model.)



Claim.—1. The herein-described buckle, comprising the frame, a tongue or stud projecting from the same, and a lever journaled in the sides of the frame, one end of the lever being formed cam-shaped, to bear directly over the tongue, and the other end terminating in a handle, which bears against the leather, as set forth.

300,303.

2. The herein-described buckle, comprising the frame having a projecting tongue or stud at one end, a lever pivoted in the sides of the frame, and having a cam-shaped face at one end, to bear against the leather adjacent to the tongue or stud, and the other end of the lever terminating in a handle, the inner face of the lever and the end of the handle being formed flat, to bear against the leather, as set forth.

300,304. ATTACHING DEVICE FOR AWNINGS. HENRY BUTTERWORTH, Watertown, N. Y. Filed Apr. 18, 1884. (No model.)

Claim.—1. In combination with the awning, the attaching means comprising cords and tension-springs, arranged substantially as indicated, for taking up slack and holding the awning taut, substantially as described.

2. The herein-described attaching devices for awnings, comprising two sets of cords at each end of the awning, one or more springs adapted to yield when tension is applied to the cords, and to take up the slack when the tension is removed, being included in each set, substantially as and for the purpose set forth.

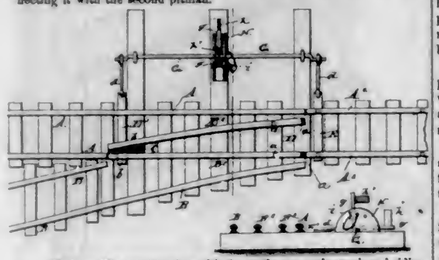
3. The combination of the awning, the suspending-cords, the springs, and fastening devices, all substantially as described, whereby the awning can be quickly fastened to a frame or support, and all the slack therein automatically taken up, as set forth.

4. In an awning attachment, the combination, with the cords having a knot or enlargement at the end, of the spiral springs made smaller at one end than at the other, so as to prevent the knot or enlargement passing through it, substantially as described.

5. The combination of the suspending-cords *c'*, adapted to be fastened to the frame, the device E, having an eye at one end, and the cord *c*, running in said eye and secured at each end to the awning, substantially as described.

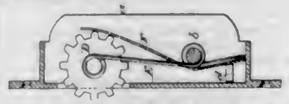
6. The combination, with the awning, of the two sets of attaching devices C and D, the former comprising a spring, a hook connected therewith, and a cord running through an eye formed at the end of said hook, and attached at each end to the awning, the latter set comprising a cord

and springs, and likewise attached at each end to the awning, both sets being provided with means—such as hooks, eyes, or rings—for attachment to a frame or support, substantially as described.



300,305. CUTTER-HEAD. ULDERIC D. BYRON, Chicago, Ill., assignor of one-half to Albert K. Dike, same place. Filed Oct. 9, 1883. (No model.)

Claim.—As an improvement in solid cutter-heads for molding leather or wood, the cutters formed with curves on their faces *c*, to cut the desired contour, with flat outsides *d*, for the purpose of sharpening them without changing their shape, and with enlarged recesses between the cutters for the escape of chips, as specified.



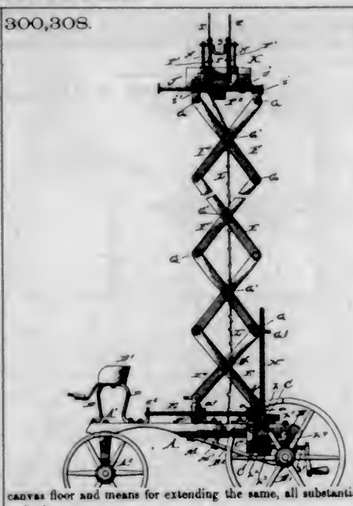
300,306. RAILROAD-TRACK. THOMAS CHRISTIE CARROLL, West Plains, Mo. Filed Jan. 4, 1884. (No model.)

Brief.—The device embraces a horizontal crank-shaft, two arms rigidly secured to the shaft ninety degrees apart, to serve both as signals to indicate the position of the switch and as levers for rocking the shaft, pitmen, spring switch-rails of the common track, a rod pivoted to said rails and connected to one of the pitmen, spring converging inner rails of main track, and siding fixed at ends abutting on said switch-rails and vibrating at their converging ends, a block placed between said vibrating ends, leaving space for wheel-flanges, and having the said converging rails loosely connected thereto, and a rod pivoted to the block and connecting it with the second pitman.

Claim.—The combination, with the stationary main-track and siding rails, of the springing switch-sections B^3 B^3, connected to a block, *c*, the rod E', pivoted or otherwise loosely connected to this block, the springing rail-sections A^3 A^3, the rod E, pivoted or otherwise loosely connected to these sections, the signal-arms connected to crank-shaft G, and the rods *d*, connecting the rods E E' to said shaft, all constructed and adapted to operate substantially in the manner and for the purposes described.

300,307. SASH-HOLDER. JOSEPH PETER CENTNER, Pittsburg, Pa. Filed Sept. 24, 1883. (Model.)

Claim.—1. A sash-holder consisting of a box or casing containing a pinion journaled in a spring secured to a cross-pin, and bearing against a cross-bar, *d*, substantially as shown, and for the purpose set forth.



2. The combination of racks C, secured to a window sash or frame, with pinions D, journaled in a forked spring, E, secured to a pin, *b*, attached to a receptacle, *a*, and an auxiliary spring, F, all constructed and arranged substantially as and for the purpose herein set forth.

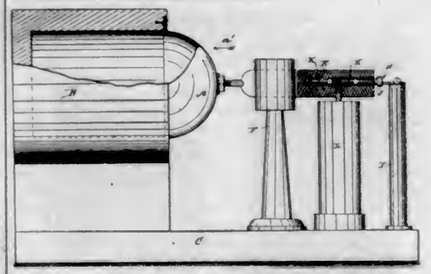
300,308. FIRE-ESCAPE. JUDEX A. CRANDALL, Brooklyn, N. Y., assignor to himself, John Wood, and WM. H. Flandrow, all of same place. Filed Feb. 7, 1884. (No model.)

Brief.—The top of the lazy-tongs structure is provided with a horizontally-extensible bridge having a flexible fire-proof canvas flooring and means for extending it. The flexible ladder inside the structure is arranged to bear against the fulcrum-bars of the lazy-tongs as a support.

Claim.—1. A vertically-extensible portable frame, in combination with a horizontally-extensible bridge provided with a flexible fire-proof

300,308.

canvas floor and means for extending the same, all substantially as described.



2. The combination, with the reaches of a carriage, of an extensible lazy-tongs frame, an extensible platform at the upper end thereof provided with a fire-proof fabric, applied as described, with a ladder arranged inside of said frame and adapted to bear on the internal fulcrum-bars of the levers thereof, substantially as described.

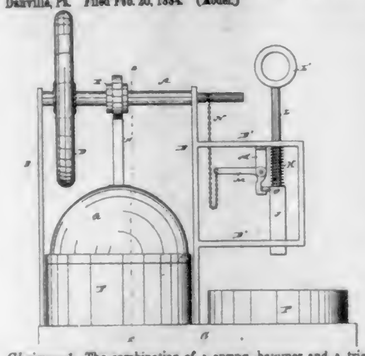
3. The combination of vertically-movable lazy-tongs or levers, the platform at the upper end thereof, the horizontally-extensible bridge provided with a flexible floor, the internal bracing-bars, G', a windlass and a lever, T, all constructed and adapted to operate substantially in the manner and for the purposes described.

4. The combination of a vertically-extensible lazy-tongs frame, with a cage or platform at the upper end thereof, a horizontally-extensible frame applied to the said platform, and flexible fire-proof canvas floor therefor, substantially as described.

5. In a fire-escape, the combination of a horizontally-extensible fire-proof bridge, a flexible fire-proof floor therefor, a vertically-extensible frame, a flexible ladder inside thereof, and a carriage on which the whole is mounted, substantially as described.

300,309. BURGLAR-ALARM FOR SAFES. WM. Y. CRUIKSHANK, Danville, Pa. Filed Nov. 16, 1883. (Model.)

Claim.—1. In a safe-blower alarm, the combination of clamps for holding matches and the fuse of an explosive with a movable friction-plate secured to a head adapted to be operated by the force of the explosive, and thereby ignite the matches and fuse and sound an alarm, substantially as set forth.



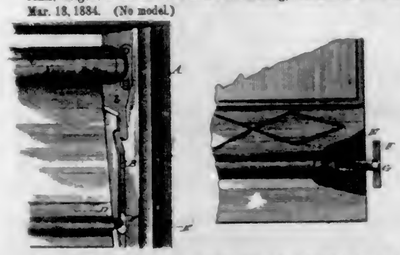
2. In a safe-blower alarm, the combination, with the cylinder B, of the elastic head A on the same, the roughened plate or strip E, secured to the head A, and the clamps H, substantially as herein shown and described.

3. In a safe-blower alarm, the combination, with the cylinder B, of the elastic head A on the same, the roughened plate or strip E, secured to the head A, the guide-standard F, and the clamps H, substantially as herein shown and described.

4. In a safe-blower alarm, the combination, with the cylinder B, of the elastic head A on the same, the roughened plate or strip E, secured

to the head, the standard I, the clamps H, pivoted to the top of the standard I, and the elastic band or spring J, substantially as herein shown and described.

300,310. BURGLAR-ALARM FOR SAFES. WM. Y. CRUIKSHANK, Danville, Pa. Filed Feb. 20, 1884. (Model.)



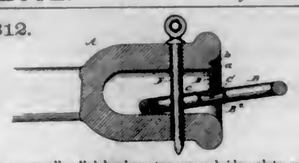
Claim.—1. The combination of a spring-hammer and a trigger therefor with a cylinder provided with a collapsible cover or cap, and suitable connections between the said cap and the trigger, whereby when an attempt is made to enter a safe provided with the above alarm, by the use of explosives, the air within the safe will be compressed, thereby causing the cover or cap to collapse and through its connection withdraw the trigger from contact with the hammer, substantially as set forth.

2. In a burglar-alarm for safes, the combination, with the spring-hammer J, of the trigger-lever M, the shaft connected by a chain with the trigger M, the chamber F, the rubber cap G on the same, and the band H, connecting the cap G with the shaft A, substantially as herein shown and described.

3. In a burglar-alarm for safes, the combination, with the shaft A, of the fly-wheel D, the pulley E, the chamber F, the rubber cap G, the band H, secured to the cap and to the pulley E, the spring-hammer J, the trigger M, and the chain N, connecting the trigger M with the shaft A, substantially as herein shown and described.

4. In a burglar-alarm for safes, the combination, with the shaft A, of the wheel D, the pulley E, the chamber F, the rubber cap G, the band H, secured to the pulley E and to the cap G, the hammer J, having projection O, the spring K, the ring L', the trigger M, and the chain N, connecting the shaft A with the trigger M, substantially as herein shown and described.

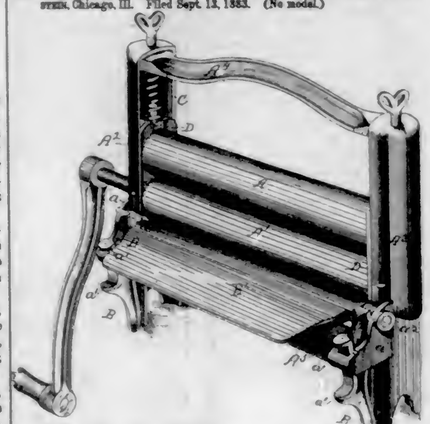
300,311. CURTAIN-SHADE FIXTURE. JAS. DENYER, New Haven, Conn., assignor of one-half to William H. Paulding, Peekskill, N. Y. Filed Mar. 18, 1884. (No model.)



Claim.—The combination of the spring-roller, the curtain, the rod D, having female screw-recesses at opposite ends, adjustable screws E G, inserted into said recesses, disks or rollers F, and rabbeted grooves or ways B, substantially as and for the purpose herein shown and specified.

300,312. CAR-COUPLING. FRANK S. DINON, Fort Scott, Kans., assignor of one-half to George B. Phinney, Benjamin F. Bepler, and John D. Hill, all of same place. Filed Mar. 24, 1884. (No model.)

Claim.—1. A car-coupling link having a longitudinally-shiftable suspension link or ring adapted to assume vertical and horizontal positions in relation to said link, and a draw-head provided with suitable projection or hook for receiving said suspension-link, substantially as herein set forth.

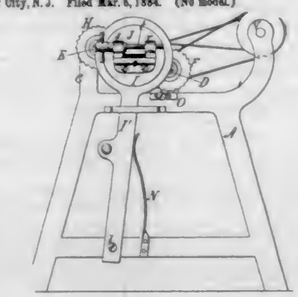


300,312.

2. A car-coupling link having a transverse bridge-plate and a longitudinal keeper or staple arranged on the top of said plate, in combination with a suspension ring or device fitted on said staple, and a draw-head provided with a suitable projection adapted to receive the suspension device of the coupling-link, substantially as herein set forth.

3. The car-coupling link having the longitudinal keeper or staple provided with depressions or notches, and the suspension-ring fitted on said keeper, in combination with a draw-head provided with a suitable projection for receiving the suspension-ring, substantially as herein set forth.

300,313. CLOTHES-WRINGER. EDWARD DUTHIL and FRITZ ROSENSTEIN, Chicago, Ill. Filed Sept. 12, 1883. (No model.)



Claim.—1. In a wringing-machine, the combination of the fixed clamping-jaws having slotted lugs, and loose clamping-jaws having lips a' a', for the purpose set forth.

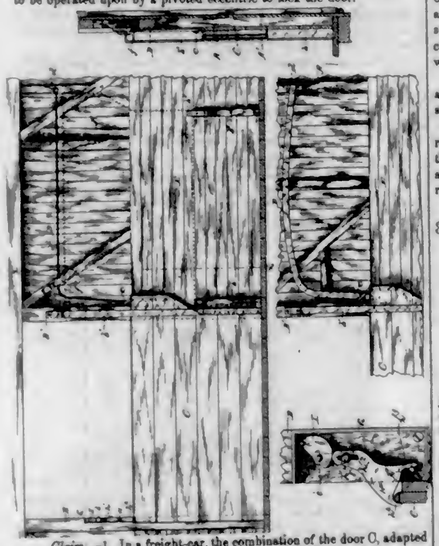
2. In a wringing-machine, the combination of the fixed clamping-jaws having slotted lugs, loose and clamping jaws having lips a' a', and means for forcing the lower ends of the jaws together, substantially as described.

3. In a wringing-machine, the combination of the fixed clamping-jaws having slotted lugs, loose clamping-jaws having lips a' a', and an apron having cam ends interposed between the clamping-jaws, substantially as described.

4. In a wringing-machine, the combination of the fixed clamping-jaws having slotted lugs, loose clamping-jaws having lips a' a', and an adjustable apron having shoulder-cams b, substantially as described.

300,314. BLIND-SLAT-TENONING MACHINE. SETH C. ELLIS, Jersey City, N. J. Filed Mar. 6, 1884. (No model.)

Claim.—1. The combination of the revolving disk I, having a central slat-opening and slat-clamp, the disk-carrier I', the tenoning-saws F F, and intermediate clearers, G, and the separating-saw H, the whole adapted to operate substantially as described.



2. The combination of the revolving disk I, having a central slat-opening and slat-clamp, the slat end gage, K, the disk-carrier I', the tenoning-saws F F, and intermediate clearers, G, and the separating-saw H, the whole adapted to operate substantially as described.

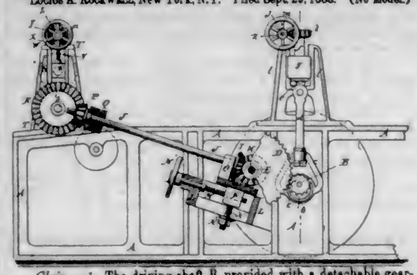
3. The revolving disk I, having a central slat-opening and slat-clamp, the disk-carrier I', having a swinging motion, the spring N, for supporting the disk-carrier, and the stop O, for regulating the position of the carrier in relation to the tenoning-saws, in combination with the tenoning-saws and intermediate clearers, and the separating-saw, the whole adapted to operate substantially as described.

4. The revolving disk I, having a central slat-opening and a slat-clamp consisting of the ledge q, the adjustable stationary jaw r, the movable jaw s, and the screw t, acting on the movable jaw, in combination with the tenoning-saws and intermediate clearers and the separating-saw, the whole adapted to operate substantially as described.

300,315. RAILWAY FREIGHT-CAR DOOR. BEN EYSTER, Chicago, Ill., assignor of one-half to Anthony G. Van Schaick, same place. Filed Apr. 15, 1884. (No model.)

Brief.—A slotted loop is secured to one end of the door, and attached to and adapted to slide upwardly and horizontally upon a stationary guide-rail. A movable slotted dog provided with teeth is adapted to be operated upon by a pivoted eccentric to lock the door.

Claim.—1. In a freight-car, the combination of the door C, adapted to rest against the inside of the usual door-posts of such car, having a slotted iron or loop rigidly secured to one end, and attached to and adapted to slide upon a stationary guide-bar commencing at or near one of said door-posts, and extending thence upward about the height of the block b, and thence horizontally to a point near the end of said car, whereby said door may be guided upward and backward and retained in position upon the side and between the doorway and the end of said car, substantially in the manner and for the purposes set forth.



2. In a freight-car, the combination of the door C, adapted to rest, when closed, against the posts B B', guide-bar b', looped or slotted iron c, guide-rail D, and means for locking said door in position when closed, substantially as and for the purposes set forth.

3. In a freight-car, the combination of the door C, adapted to rest, when closed, against the posts B B', guide-bar b', looped or slotted iron c, guide-rail D, and dog H, substantially as and for the purposes specified.

4. The combination, with a freight-car, of the door C, adapted to rest, when closed, against the posts B B', guide-bar b', blocks b b^3, looped or slotted iron c, guide-rail D, and guard f, for the uses and purposes substantially as described.

5. In a freight-car, the combination of the dog H, having teeth h^3 h^3, pin h^4, and adapted to be raised and lowered upon a pin or bolt by means of a slot, h', an eccentric, i, or equivalent means for securing the same in position, and a sliding door, C, substantially as and for the purposes set forth.

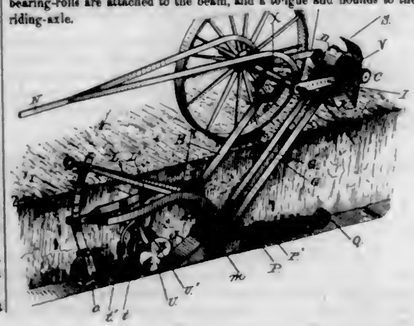
300,316. CRACKER-MACHINE. CHARLES S. FOWLER, Brooklyn, and LUCIUS A. ROCKWELL, New York, N.Y. Filed Sept. 29, 1883. (No model.)

Claim.—1. The driving-shaft B, provided with a detachable gear-wheel, the shaft S, and its gear, in combination with the shaft J, pinion P, mounted thereon by a feathered connection, the said shaft J being provided with gearing at its other end, connecting it with the gear on the driving-shaft, and a bearing for the shaft J and the said gearing adjustable longitudinally of the said shaft J, substantially as set forth.

2. In a cracker-machine, the combination, with the gear-wheels P R, the feed-rolls, the gear-wheels D H I, and the driving gear-wheel C, of the sliding shaft J, the plate G, provided with bearings F F O, the adjusting-screw M, the clamping-screw N, and the supporting-frame L, substantially as herein shown and described, whereby the said gearing can be readily adjusted for use with a larger or a smaller driving gear-wheel, as set forth.

3. The combination of the cross-head g, flanged nuts f A, and mechanism for simultaneously operating said nuts, with the screws e, driving-shaft B, and their connecting devices, substantially as set forth.

4. In a cracker-machine, the combination, with the screws e, jointed rods d, and eccentrics b, the worm-wheels i, worms j, and shaft k, and the cross-head g, of the long nuts f, having end flanges, A, substantially as herein shown and described, whereby the said cross-head can be readily and accurately adjusted, as set forth.

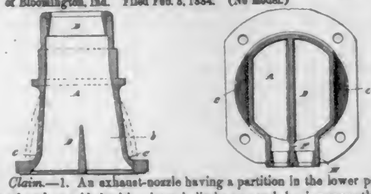


300,317. BIT FOR INSERTING SCREW-EYES. CHAS. E. GRIFFITH, Storm Lake, Iowa. Filed Mar. 21, 1884. (No model.)

Claim.—In combination with the brace A, the pivoted clamping-jaw C, having projections H, and the locking-ring E, the jaws B C being recessed to receive the eye F, and the whole adapted to serve as and for the purposes set forth.

300,318. DITCHING-MACHINE. DANIEL HERSEBERGER, Millville, assignor to Samuel Watson, Strangha's, and Jacob Spence and Adam Spence, both of Jackson, Ind. Filed Nov. 8, 1883. (No model.)

Brief.—A gear on one riding-wheel drives a pinion on the elevator-belt shaft, from which the belt-supporting bars run down to the plow, which has two parallel bars curving upward and forward, forming the beam. Through the forward end of the beam is adjusted a bar carrying a roller, and secured to draft-bars pivoted to the rear of the plow-beam, from which also runs a bar to the riding-axle. Rotary cutters and side bearing-rolls are attached to the beam, and a tongue and bounds to the riding-axle.



Claim.—1. In a ditching-machine, the plow-shaped excavator composed of the beam and standard K K', the mold-board J, the draw-bar L L', and arm M, with the wheel O, in combination with the rollers *t t'* and cutters U U', all constructed and operating in the manner and for the purpose herein described.

2. In a ditching-machine, the combination, with the tongue and bounds N, of the arms G G', the arm H, and the beam and standard K K', with the axle X, as herein described.

3. In a ditching-machine, the cog-wheel B, the pinion C, and drum D, the arms G G', shaft V, and endless-belt carrier F, in combination with the beam and standard K K', rollers *t t'*, cutters U U', standard M, and wheel O, substantially as herein set forth and described.

4. In a ditching-machine, the beam and standard K K', combined with the rollers *t t'*, cutters U U', and standard M, with wheel O, all in the manner and for the purpose herein set forth and described.

300,319. EXHAUST-NOZZLE. GEORGE D. HUNTER, Terre Haute, Ind., assignor of two-thirds to Morton C. Hunter and Thomas C. Van Nuys, both of Bloomington, Ind. Filed Feb. 8, 1884. (No model.)

Claim.—1. An exhaust-nozzle having a partition in the lower part thereof, and provided with a lateral discharge-neck having more than one passage through it.

2. An exhaust-nozzle having a lateral discharge-neck and a partition in the lower part thereof distended through said neck.

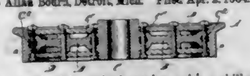
3. An exhaust-nozzle having its walls contracted at diametrical points and a partition located in the lower part thereof, and provided with a lateral discharge-neck.

4. An exhaust-nozzle having its walls contracted at diametrical points and a partition located in the lower part thereof, and provided with a lateral discharge-neck having one or more passages through it.

5. An exhaust-nozzle having its walls contracted, and a lateral discharge-neck, and provided with a partition in the lower part thereof distended through said neck.

6. An exhaust-nozzle having its walls contracted at diametrical points, and provided with a lateral discharge-neck having one or more passages through it.

7. An exhaust-nozzle having its walls contracted at diametrical points, and provided with a discharge-neck.

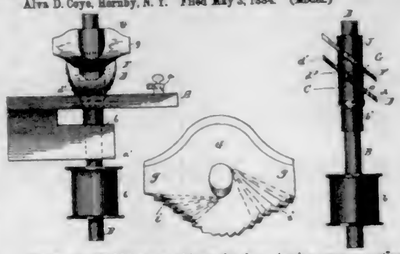


300,320. BOTTLE-STOPPER. MORRIS JOEL, Roanoke, Va., assignor of one-half to Millard F. Charles, same place. Filed Apr. 23, 1884. (No model.)

Claim.—1. The combination of a stopper, a bail carrying the same, a support for encircling the bottle-neck, a swinging lever attached at its extremities to the said support and pivotally connected with the ends of the bail, and a push-piece projecting horizontally, or approximately so, from one of the bail-arms, for swinging the lever, substantially as described.

2. The combination of the yoke-lever pivoted at its extremities to a support on the bottle, and having eyes intermediate its ends, with the stopper-carrying bail having one arm pivoted to one of the lever-eyes and the other arm passed through the other lever-eye, and extended horizontally, or approximately so, therefrom, to provide a push-piece, substantially as described.

300,321. CAR-WHEEL. GEORGE P. KING, St. Thomas, Ontario, Canada, assignor to Allan Bourn, Detroit, Mich. Filed Apr. 2, 1884. (No model.)



Claim.—1. A wheel formed of cast-iron with a chilled tread and a web connecting the tread and hub, in combination with wrought-metal plates having their inner faces bearing against the faces of the web, and securely fastened thereto at many points between the hub and the rim, substantially as and for the purposes described.

2. The combination, with a cast wheel provided with a chilled tread and a web joining the tread and hub, of wrought-metal plates having their inner faces resting against the web and securely riveted or bolted thereto at many points between the hub and the rim, substantially as described.

3. A car-wheel of cast-iron with a chilled tread provided with wrought-iron plates extending from the hub to the rim, and arched channel C^2 adjacent to the rim, substantially as described.

300,322. WABBLE-SAW. SAMUEL F. KEES, Monterey, assignor to Alva D. Ceye, Hornby, N. Y. Filed May 3, 1884. (Model.)

Claim.—1. Wabble-saws of irregular form, having upon a portion of their surfaces teeth of varying angles, arranged at different distances from the axis of motion, adapted to serve with a revolving spindle and beveled collars, as and for the purposes set forth.

2. The combination, with the spindle B *b'*, beveled collars C and F, and securing means, of the interchangeable wabble-saws, of various irregular contours, having teeth at different angles arranged at different distances from the axis of motion, the whole adapted to serve in cutting irregular forms, as set forth.

300,323. MATERIAL FOR PACKING BOTTLES. OLIVER LONG, Brooklyn, N. Y., assignor of one-half to Charles Schlatter and Charles Forster, both of New York, N. Y. Filed June 29, 1883. (No model.)

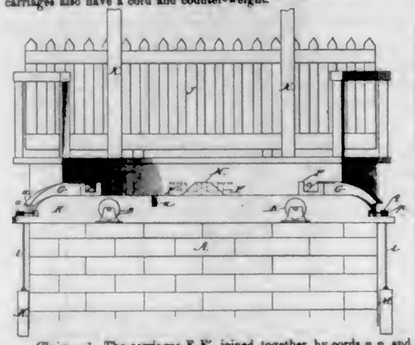
Claim.—As an article of manufacture, a material composed of two sheets of paper, each sheet having recesses or corrugations, secured together with the recesses in the sheets opposing each other, thus forming cavities, which are filled with hay, &c., substantially in the manner set forth, and for the purposes specified.

300,324. ALLOY FOR COATING METALS. CHARLES E. MANBY, McKeesport, assignor to Edmund C. Converse, Pittsburg, Pa. Filed Oct. 19, 1883. (Specimens.)

Claim.—The alloy composed of the following ingredients, in the following proportions: lead, from sixty to eighty per cent.; zinc, from ten to fifteen per cent.; tin, from fifteen to twenty per cent., and nickel from six one-hundredths of one per cent. to one per cent., substantially as set forth.

300,325. CAR-DOOR LOCK. SAMUEL CLARK NORTON, Hinckley, Minn., assignor to Maggie L. Norton, same place. Filed Sept. 24, 1883. (No model.)

Brief.—The lock is provided with an indicating mechanism to show how often the car has been unlocked.

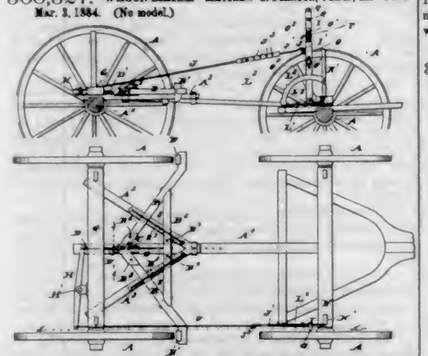


Claim.—1. The combination of a sliding car-door, a bolt, D, located in the body of the car and adapted to be thrown out and locked against the end of the door, a graduated drum, G, and mechanism connecting the bolt and drum, whereby the movement of the bolt for locking against the door moves the drum, substantially as and for the purpose herein specified.

2. The combination, with a sliding car-door, B, having hasp K, of the bolt D, having slot *r*, the said hasp and bolt having corresponding seal-openings, *t t*, and means for locking said bolt outward, substantially as described.

3. The combination of a car-door, B, a locking-bolt, D, located in the car-body and adapted to be thrown out and locked against the end of the door, bolt-locking lever E, graduated drum G, provided with ratchet-teeth H, pawl *i*, and key F, substantially as and for the purpose herein specified.

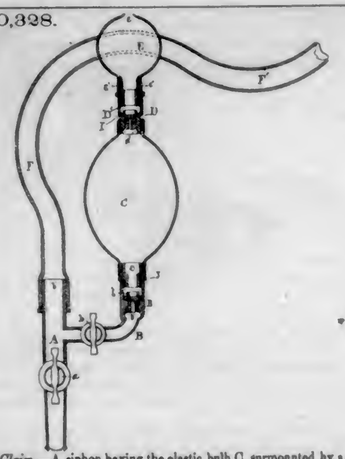
300,326. TURN-BRIDGE GATE. JOHN OSTERTAG, Jr., Chicago, Ill. Filed Feb. 19, 1884. (No model.)



Brief.—An arm pivoted on the bridge engages and operates one of two carriages on the abutment, said carriages being connected by cords, and also connected to a vertically-moving counterweighted gate. The carriages also have a cord and counter-weight.

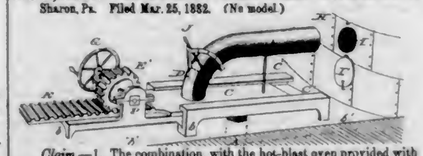
Claim.—1. The carriages F F', joined together by cords *n p*, and to gate J by cords *f*, in combination with said gate J, bridge C, and arm I, pivoted to said bridge, as and for the purpose set forth.

2. The carriages F F', provided with weights M, and joined together and to gate J by suitable cords, in combination with gate J, provided with weights L, bridge C, and arm I, pivoted to said bridge, as described.



300,327. WAGON-BRAKE. MATTHEW T. PRESTON, Butler, Ill. Filed Mar. 3, 1884. (No model.)

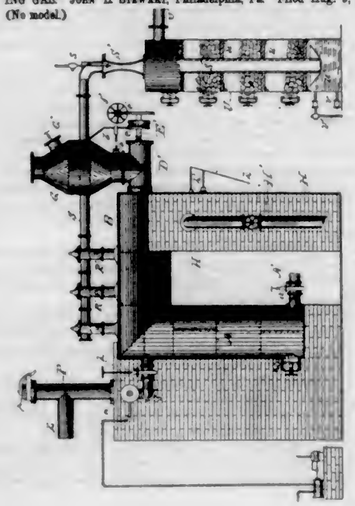
Claim.—1. In a wagon-brake, the combination of the brake-beam provided with a brace-rod connected to the brace and passing back through the beam and rear bolster of the wagon, spiral spring surrounding the rod between the bolster and beam, lever to which the rod is connected, and a pull-rod connecting the said lever with a hand-lever at the front end of the wagon, substantially as set forth.



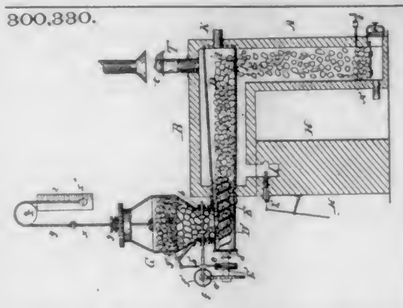
2. In a wagon-brake, the combination of beam B, brace B^2, bracket B^3, loops B^4, rod D, spring D', lever H, rod J J', bracket L, hand-lever I, with pins O', spring P, and pawl O, with slots O^2, all substantially as set forth.

300,328. SIPHON. FRANCIS D. RYAN, St. Louis, Mo., assignor of one-half to WM. H. STONE, same place. Filed Feb. 1, 1884. (No model.)

Claim.—A siphon having the elastic bulb C, surmounted by a glass globe, E, having a vent-hole and a stop-cock, *b*, between the bulb and the discharge-tube A, said discharge-tube having the stop-cock *a*, all combined substantially as and for the purpose described.



300,329. VALVE FOR HOT-BLAST OVENS. JOHN J. SPEARMAN, Sharon, Pa. Filed Mar. 25, 1882. (No model.)



Claim.—1. The combination, with the hot-blast oven provided with opening I, the main A, and bed-plate provided with an opening connecting with said main, of the pipe D and slide-valve C, secured to said pipe, and means for actuating the same, as and for the purposes described.

2. The combination, with the hot-blast oven provided with opening I and door I', the pipe D and slide-valve C, secured to said pipe, and means for actuating the same, of the main A and the bed-plate provided with an opening connecting with said main, as described.

300,330. PROCESS OF AND APPARATUS FOR MANUFACTURING GAS. JOHN L. STEWART, Philadelphia, Pa. Filed Aug. 9, 1883. (No model.)

300,330.

Claim.—1. The process of generating gas, which consists in producing water-gas by the decomposition of steam in contact with heated carbon, drawing such gas while hot directly into a vaporizing and mixing conduit by means of a jet of oil under pressure, and thereby forcing the gas into the vaporizer and carbureting it, and then combining and fixing the mixture in heated retorts.

2. The process of generating gas, which consists in raising a body of fuel to a state of incandescence by a blast of air, heating one or more coal-distilling retorts by the hot gaseous products, and also heating one or more sets of fixing-retorts by the combustion of such products by means of air, decomposing steam in the incandescent fuel, and distilling bituminous coal by the heat of the resulting gases, then conducting such gases and the carbureted hydrogen from the coal to the heated retorts, and therein carbureting them with hydrocarbons and converting the mixture into a fixed gas.

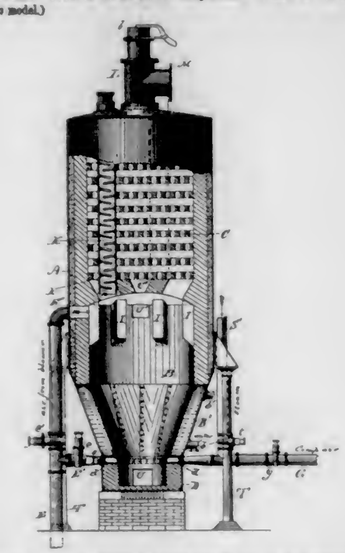
3. The process of generating gas, which consists in raising a body of fuel in one generator to incandescence by an air-blast, and heating one or more coal-distilling retorts by the waste gaseous products, and the partial combustion of the same, reducing the coal to coke, and at the same time decomposing steam in the other generator and distilling bituminous coal, conducting away the gases, carbureting and fixing them in heated retorts, and replenishing the fuel as it is consumed in the steam-decomposing chamber by discharging therein hot coke from the distilling-retorts.

4. The two decomposing and generating furnaces A, in combination with a chamber, C, containing retorts for combining and fixing gas, and a perforated flue extending through and across chamber C, the valved flue connecting generators A with chamber C, and an air-supply pipe extending into such flue, whereby air is heated for supporting combustion of the waste gaseous products from the generators around the retorts.

5. The generating-furnaces A, the connected retort-chambers B, in combination with the coal-retorts, a gas-eduction pipe conducting gas from both the furnace and retorts, the tight coal-feeding apparatus and supply-hoppers, and the operating mechanism therefor, as described.

6. The combination of a steam decomposing and generating furnace having air and steam supply pipes, a connected retort-chamber containing a coal-retort, with the fixing-retorts and connecting-pipes.

7. The process of generating gas, which consists in raising a body of fuel to a state of incandescence by a blast of air, heating one or more coal-distilling retorts by the initial heat of the resultant gases, and a partial combustion of them, and also heating one or more sets of retorts by the complete and final combustion of the same, decomposing steam meantime by the incandescent fuel, utilizing the heat of resultant gases to distill bituminous coal, then conducting such gases and the carbureted hydrogen from the bituminous coal to heated mixing-conduits, carbureting them with hydrocarbon, then converting the mixture into a fixed gas in one or more fixing-retorts, from whence they are conducted to scrubbers and holders.



8. The combination of the coal-distilling retort, the feeding-screw therein, the tightly-closed coal-hopper opening into the retort, and having a toothed agitator in its mouth, and the connected mechanism for operating the screw and agitator, as described.

9. A gas-generator, in combination with the vaporizing and mixing conduit or retort, a connecting-pipe, an oil-forcing pump, and a pipe connecting it with the vaporizing-conduit near the entrance of the gas-pipe.

10. A gas-generator, in combination with a vaporizing and mixing conduit or retort, a connecting-pipe, an oil-spraying nozzle in the head of the vaporizing-conduit, an oil-forcing pump, and a pipe connecting it with the oil-nozzle, as and for the purpose described.

11. The combination of the vertical retorts, the eduction-pipe S, the direct connecting-pipes, an exhauster, and a dip-pipe leading therefrom into a hydraulic seal, whereby one sealed pipe serves for all the retorts.

300,331. PROCESS OF AND APPARATUS FOR MANUFACTURING GAS. JOHN L. STEWART, Philadelphia, Pa. Filed Oct. 9, 1883. (No model.)

Claim.—1. The process of manufacturing gas, which consists in raising a body of fuel to incandescence by combustion thereof with air and decomposing steam in contact with the incandescent fuel by intermittent operations, and periodically raising and breaking up the body of fuel by sudden puffs or blasts of a gaseous or seriform fluid under high pressure greater than the ordinary air-blast, for the purpose described.

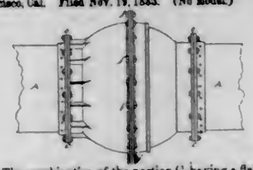
2. The process of generating gas, which consists in distilling bituminous coal by direct contact with incandescent or highly-heated fuel in a furnace, decomposing steam by passage through the heated fuel, and periodically fracturing and disintegrating the caked masses of coal or coke by the admission of sudden puffs or blasts of highly-compressed gaseous or seriform fluid.

3. In the manufacture of gas with bituminous coal in furnaces, the method of fracturing and disintegrating the caked masses of coal or coke, which consists in admitting to the fuel periodically sudden puffs or blasts of highly-compressed gaseous or seriform fluid.

4. In the manufacture of gas by the distillation of bituminous or soft coal in a furnace, the method of fracturing and disintegrating the caked masses of coal or coke, which consists in periodically forcing the fuel by sudden puffs or blasts of gaseous or seriform fluid under high pressure against rigid projections in the furnace, whereby the air to promote combustion and steam for decomposing may be passed freely through the fuel and in contact with a much greater number of carbon surfaces.

5. In combination with a gas-generating furnace, the ordinary blast-pipe connecting with a blower, and a blast-pipe for gaseous or seriform fluid connecting the generator with a compression-chamber for such fluid.

6. A gas-generating furnace having a fuel-chamber which tapers from above downward toward the ash-pit, and having projecting brick or other rigid obstructions extending into the fuel-chamber, for the purpose described.

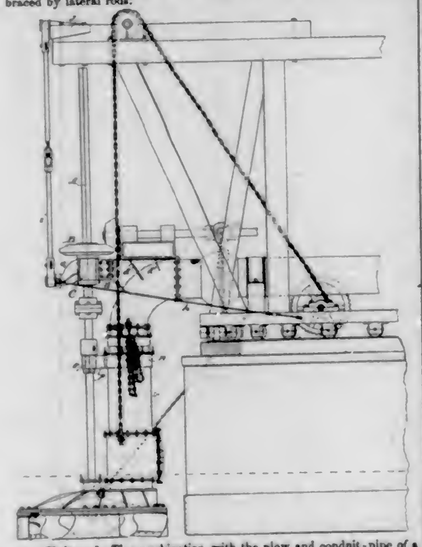


7. In combination with the fuel-chamber of a gas-generating cupola, the fixed projections extending into the fuel-chamber from the sides or top, and a connecting blast-pipe for admitting compressed gaseous or seriform fluid in sudden puffs, for the purpose described.

8. The fuel-chamber of a gas-generator, provided with rigid projections extending into it from the walls or top, in combination with a storage-chamber for compressed gaseous or seriform fluid, and a connecting blast or puffing pipe, for the purpose described.

9. The fuel-chamber of a gas-generating cupola, having a tapering form toward the ash-pit, and provided with rigid projections extending into it from the walls, in combination with a compression-chamber and a connecting blast-pipe, for the purpose described.

10. A gas-generating furnace having a water-jacket of tapering form downward and forming the inner wall, and also having fixed projections extending from the walls or top into the fuel-chamber, for the purpose described.

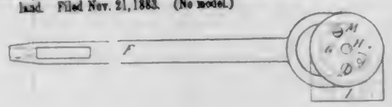


300,332. UNIVERSAL BALL-JOINT. ALEXEY W. VON SCHMIDT, San Francisco, Cal. Filed Nov. 19, 1883. (No model.)

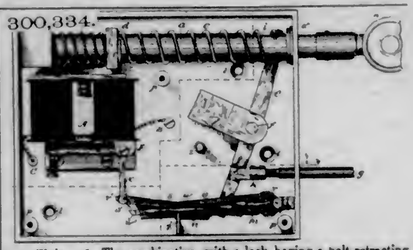
Claim.—The combination of the portion C, having a flange to which the pipe is joined by a similar flange, and the strengthening-ribs, for the purpose set forth, the portion B, adapted to enter the portion C, and the securing-ring E, the portion C and the ring E each having openings *a*, for the reception of a packing-ring, substantially as described.

300,333. DREDGING-MACHINE. ALEXEY W. VON SCHMIDT, San Francisco, Cal. Filed Jan. 14, 1884. (No model.)

Brief.—An angular rotating plow or cutter-shaft is supported from a dredger suction-pipe by a bracket made in two parts and receiving the shank of a crown-wheel, through which such shaft passes. The forward end of this bracket is supported by a rod adjusted by a turn-buckle and braced by lateral rods.



Claim.—1. The combination, with the plow and conduit-pipe of a dredger of the kind specified, of the shaft A, angular in cross-section, the crown-wheel B, having a central opening adapting it for the reception of a shaft, A, and the bracket C, made in two parts and adapted for the reception of the shank of the wheel B and secured to the pipe, substantially as described.



2. The combination, with the plow-shaft and conduit-pipe of a dredger of the kind specified, of the bracket-bearing made in two parts, and the gear-wheel B, having the shank *d* and central angular opening, substantially as described.

3. In combination with the conduit-tube and plow-shaft of a dredger of the kind specified, the bracket C, constructed as described, and the rod *i*, having turn-buckle, substantially as described.

4. The combination, with the plow-shaft and conduit-tube of a dredger of the kind specified, of the bracket C, having the projection *e* and the rods A, substantially as described.

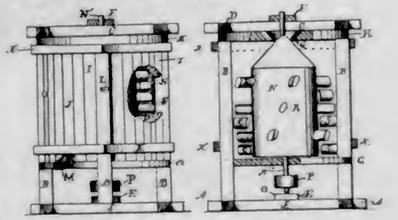
300,334. ELECTRIC DOOR-LOCK. CONRAD WÜRST, Zurich, Switzerland. Filed Nov. 21, 1883. (No model.)

Claim.—1. The combination, with a lock having a bolt-retracting spring which is automatically contracted through the instrumentality of a lever by the opening or shutting of the door and held by a trigger, of a rod pivoted to the door-casing and attached to the lever of the bolt-retracting mechanism, whereby the latter is automatically set, when the door is swung open, by the movement of the rod with respect to the lock, substantially as and for the purpose described.

2. The combination, with a lock having an automatically-retracting bolt mechanism held by a trigger-lever, of a rod pivoted to the door-casing and attached to the bolt-retracting mechanism, and an electro-magnet, the armature of which engages and holds said trigger-lever, whereby the bolt-retracting mechanism is set in operation by an electric impulse, and the same is then automatically reset when the door is swung open, substantially as and for the purpose set forth.

3. The combination, with the sliding bolt *a* of a self-setting lock, of two coiled springs, *b* and *c*, of different strength encircling the bolt, the weaker of which operates to project the bolt and the stronger to retract it, together with the lever *e*, which operates to compress and hold the spring *c*, and a trigger mechanism holding said lever, substantially as and for the purpose set forth.

4. The combination, with the sliding bolt *a*, having the head *a'* and the slot *i* of an automatically-setting lock, said bolt passing through a lug, *d*, attached to the casing, of a weak projecting-spring, *b*, encircling the bolt between the lug and head, and a strong retracting-spring encircling the bolt between the lug and slot, together with the spring compressing and holding lever *e*, passing through the slot, substantially as and for the purpose set forth.



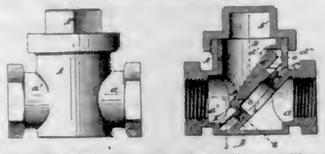
5. The combination, with a lock having an automatically-retracting bolt mechanism, of the spring compressing and holding lever *e*, the weighted hook *m*, pivoted at the lower end thereof, and the trigger-lever *o*, having a notch or shoulder with which the hook *m* can engage, substantially as and for the purpose set forth.

6. The combination, with a lock having an automatically-retracting bolt mechanism, of the spring compressing and holding lever, and a system of compound levers, each of which has a projection near its fulcrum with which the preceding lever can engage, and an articulated tip to engage with the succeeding lever, together with a trigger-lever engaging with the tip of the last of the system, the whole forming a trigger mechanism which holds the bolt-retracting spring with a slight pressure on the trigger, substantially as and for the purpose set forth.

7. In combination with a lock having an automatic bolt-retracting mechanism, the bracket L, adapted to be fastened to the casing of a door, and having the notched block L', together with the ring G, having cam H and rod *g*, connected with the lock, the block L' fitting within the ring and forming a surface for the same to bear against, substantially as and for the purpose set forth.

8. In combination with a lock having an automatic bolt-retracting mechanism, the bracket L, adapted to be fastened to the casing of a door, and having the notched block L' and friction-roller J, together with the ring G, having cam H and rod *g*, connected with the lock, the block L' and friction-roller J fitting within the ring and forming a surface for the cam to bear against, substantially as and for the purpose set forth.

300,335. RICE-HULLING MACHINE. ANDREW M. PATRICK, Brewton, Ala. Filed Oct. 26, 1883. (No model.)



Claim.—1. In a hulling-machine, the combination of the following elements, viz: a supporting-frame constructed as described, the floor and top piece, G and H, the latter having the feed-opening Q, the conical-ended drum N, provided with slightly-flattened beaters R, arranged spirally on its periphery, the hulling-chamber composed of the stave-sections J, having slightly-flattened beaters S, the ribs or bands K, made in sections, suitable fastening devices for the latter, the shaft N', the pulley P, and the exit-spout M, all as shown and described.

2. In a rice-beating apparatus, the supporting-frame, the grain-chamber composed of the top and bottom pieces, G and H, the stave-sections J, having slightly-flattened beaters S, the sectional enveloping ribs K, having notched ends *k*, and suitable securing devices for said ribs, combined with the drum N, having spiral beaters R, substantially as described.

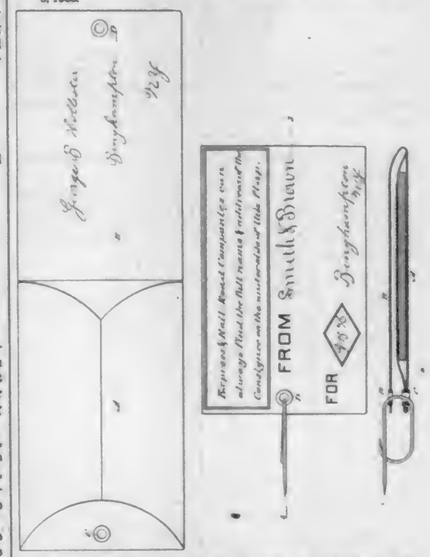
REISSUES.

10,487. CHECK-VALVE. JAMES H. BLESSING, Albany, N. Y. Filed Oct. 9, 1883. Original No. 281,439, dated July 17, 1883.

Claim.—1. In a straight-way valve, the combination, with a valve-casing, A, having a transverse partition or diaphragm, B, arranged in an inclined position, as herein shown and described, and removable seat C, fixed on said partition, of the removable sleeve D, having its lower end made to conform to the angle of the partition B, the said sleeve being adapted to secure the seat C in its place, as herein specified.

2. In a straight-way valve, the combination, with a valve-casing, A, provided with a transverse partition or diaphragm, B, fixed in an angular position therein, as herein described, of the removable sleeve D, provided with recesses d^3, and the clack-valve E, provided with trunnions *e*, adapted to engage in the recesses d^3, as and for the purpose herein specified.

3. In a straight-way valve, the combination, with a removable sleeve provided with recesses or pockets, which are adapted to form one part of the hinge-joint on which the valve vibrates, of a clack-valve provided with trunnions adapted to engage in the recesses or pockets in the removable sleeve, in the manner and for the purpose herein specified.



4. The combination, in a straight-way valve, of a valve-casing, an inclined removable valve-seat, an inclined valve, and a removable sleeve, the valve being pivoted in the sleeve, substantially as described.

5. In a straight-way valve having an inclined partition provided with an annular tongue or extension, combined with a valve-seat provided with an annular cavity, and adapted to inclose said extension, a packing between said valve-seat and partition, and a valve closing against the valve-seat, substantially as described.

6. The combination, in a straight-way valve, of a valve-casing, an inclined valve-seat, and a valve pivoted in a sleeve within the casing independent of the valve-casing itself, substantially as described.

7. The combination of the valve-casing A, the valve E, the detachable valve-seat C, and the bonnet A', the opening in the valve-casing closed by the bonnet being greater in diameter than the valve-seat C, or the valve E, thereby allowing of the removal of the valve and valve-seat through the opening closed by the bonnet, substantially as described.

10,488. COMBINED TAG AND ENVELOPE. JOSEPH T. DURHAM, Brooklyn, N. Y. Filed Mar. 13, 1884. Original No. 277,245, dated May 8, 1883.

Claim.—1. A combined tag and envelope, substantially as described, wherein the flap which closes the mouth of the envelope is fastened down by the cord or other device which secures the tag to the merchandise, as set forth.

2. A combined tag and envelope, substantially as described, the flap having an eyelet-hole which, when the said flap is folded down on the envelope, coincides with an eyelet-hole in the envelope, whereby the cord or hook for attaching the tag may be passed through both holes, substantially as set forth.

3. In a combined tag and envelope, the combination, with an envelope, A, having a flap, B, at one end, of the eyelet D in the free end of the flap, and the eyelet C in that end of the envelope opposite the one to which the flap is attached, substantially as herein shown and described, and for the purpose set forth.

PHOTO-LITH. NORRIS PETERS WASHINGTON, D.C.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

TURNER & SEYMOUR MANUFACTURING COMPANY *v.* DOVER STAMPING COMPANY.

Decided April 14, 1884.

1. It is immaterial whether or not a certain construction might have been covered by the language of the specification, since the claims are to be dealt with and nothing else.
2. Reissue Letters Patent No. 6,542, granted July 13, 1875, to Timothy Earle, for an improvement in egg-beaters, eleven years after the grant of the original patent, and with a broader claim than the latter, held to be invalid.

APPEAL from the Circuit Court of the United States for the District of Connecticut.

Mr. Jno. S. Beach and *Mr. Jno. K. Beach* for the appellants.

Mr. Thos. Wm. Clarke and *Mr. Elias Merwin* for the appellee.

Mr. Justice MATTHEWS delivered the opinion of the Court.

This is a bill in equity filed by the appellees as assignees of Timothy Earle, for an injunction and an account against the appellants as infringers of Reissued Letters Patent No. 6,542, for an improvement in egg-beaters, dated July 13, 1875, for which the application was filed June 8, 1875, the original No. 39,134, dated July 7, 1863. The bill was filed July 14, 1877, an interlocutory decree declaring the infringement and granting a perpetual injunction was pronounced July 9, 1879, and a final decree in favor of the complainants, confirming the master's report of the amount of profits made by defendants, was entered April 26, 1881. From this decree the present appeal is prosecuted.

The following is a copy of the reissued letters patent, in which the parts in italics are not in the original and the parts inclosed in [ ] are in the original and excluded from the reissue.

To all whom it may concern:

Be it known that I, Timothy Earle, of Lincoln, *(formerly Smithfield,)* in the county of Providence and State of Rhode Island, have invented [a] *certain* new and useful Improvements in Egg-Beaters; and I do hereby declare that the following specification, taken in connection with the drawing making a part of the same, is a full, clear, and exact description thereof.

Figure 1 is a view of the beater. Fig. 2 is another view of the same, with the rack which works it shown. Fig. 3 is a top view of the same.

Various devices have been employed for the purpose of beating eggs more expeditiously than by the familiar hand process. One of these devices consists of two wire frames, one within the other, and made to revolve in opposite directions; another consists of a propeller-blade inside of a wire frame, the frame and blades being made to revolve in opposite directions; and still another consists of a propeller-blade, which is made to rotate, while a pair of beaters have at the same time a reciprocating motion.

All these machines, and all others with which I am acquainted, possess the common fault that the beaters, whether of wire or of the form of propeller-blades, do not cut the yolk and white of the egg, but literally beat them.

Now, as the albumen of an egg consists of a peculiar thick glairy substance, it can be worked more effectually with a cutting instrument than with one which has a blunt edge. In fact, so well is this understood that housewives [universally] *commonly* make use of the blade of a knife for the purpose.

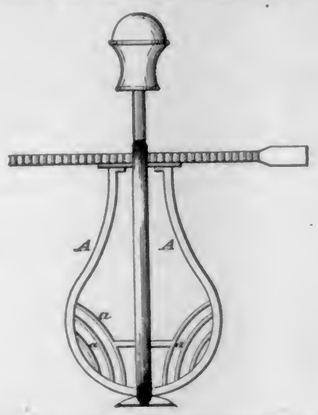
My invention is designed to obviate the difficulty referred to; and consists in the use of *a revolving* frame, A, *formed of thin strips of metal of the form shown, and* mounted upon a spindle, B, around which it can freely rotate; *and also of* an outer *fixed* frame, C, of the same general form as the inner one, but large enough to permit the inner frame to rotate within it. *The outer frame* is attached to the spindle B, and *with it* furnishes a support *or frame for the operative parts of the machine* [for it.] The inner frame is *further* provided with a series of cutters *or blades*, [a a a a] *a a*, &c., arranged in any manner suitable for cutting *through* the fluid in many different [planes] *places*. These cutters *or blades* are simply pieces of sheet-tin or other suitable metal of the width of the inner frame, and *are attached to the same by their ends, as is shown, and they are all* so placed that their edges shall cut the material to be agitated when the frame A is rotated. *The blades which form the outer fixed frame C are also placed in a similar position, and when the machine is in operation, cut through the current of material which is carried past them by the revolving frame, and thus aid in the operation in a similar manner.* Upon the top of the frame A is attached a toothed wheel, D, through which, by means of the rack E, Fig. 3, worked by the hand, a rotary motion is given *to the inner frame A* in alternate directions. *The frame C, at its upper end, is so formed and arranged in relation to the pinion D as to leave the proper space between them, upon either side, to receive the rack E, and serve as a guide or bearing to keep the rack in gear with the pinion; and H is a circular flange attached to the lower side of the pinion to prevent the rack from falling down.*

My invention also relates to the method of holding the machine in position while it is used. In the previous machines for this purpose the machine has been generally attached to or supported upon and in connection with the vessel which contained the materials to be operated upon, thus requiring a specific kind of vessel for the purpose, which, in effect, formed part of the machine; or the frame of the machine was fixed to some stationary object, with the revolving beater or beaters projecting downward below the machine into the vessel which contained the matters to be treated, the vessel being held below the machine, and entirely detached from it. But by my improvement the machine becomes a separate detached implement, which can be used in any vessel, and without any mechanical fastening of the machine to the vessel or to any other object. This part of my invention, therefore, consists in providing the bottom of the fixed frame C of the machine with a foot, F, or other suitable support, to rest upon the bottom of the vessel to support the lower part of the machine and raise the revolving beater-frame A above the fixed frame C sufficiently to permit it to revolve freely; and also providing the top of the machine with a handle, G, by which the machine can be held upright upon the bottom of the vessel by one hand, while the beater-frame is operated by the other, as is described.

When the machine is to be used it is placed with its foot F resting upon the bottom of the vessel containing the broken eggs. The left hand bears upon the handle G and holds the machine in position. The rack E, held by the handle in the right hand, is engaged with the pinion D, and the proper motion imparted to the frame A.

It is obvious that a continuous rotary motion may be easily imparted to the frame A by means of a crank and suitable gearing, and the beneficial effect of the *blades or* cutters [a a a] *A a, &c.*, would be obtained as well; but I prefer the method described of communicating motion to the frame A, for the reason that the machine is more easily cleaned and is more convenient for domestic use.

[What I claim as my invention, and desire to secure by Letters Patent, is—



The use of a series of cutting-edges, *a a a a*, when attached to a frame, A, which is capable of being rotated substantially as described, for the purpose specified.]

What I claim is—

1. *The revolving beater-frame formed of thin plain blades or cutters, arranged to cut edgewise through the material by their rotation, substantially as described.*

2. *The combination of the fixed frame, which contains and supports the operative machinery, provided with a foot or support at the bottom, the handle at the top, and suitable mechanism for rotating the beater, substantially as described.*

The following is a copy of Figure 2, annexed to the specifications, and sufficiently illustrates them.

The cutting portion of the appellant's beater consists of an outer frame and inner frame, each of which is made to revolve around a central spindle by means of a cog-wheel and pinion. Each frame is composed of two curved pieces of tin joined together, or of one piece joined at its two ends, so as to make nearly a circle. These pieces are thin, plain, flat pieces of tin, and are so arranged as to cut edgewise through the material by their rotation. In neither the inner nor the outer frame are there any additional blades or cutters like the blades *a a a a*.

It is represented in the following drawing:

The controversy in the circuit court seemed to be mainly on the question of infringement; and that turned on the construction to be given to the first claim of the reissued patent, no point being made as to the second claim. It was insisted by the defendants below that their device was not an infringement of the claim as contained in the original patent, and that a fair construction of the first claim in the reissued patent would limit it substantially to the same thing. In deciding the point, the learned judge holding the circuit court said:

> The question of infringement of the first claim of the reissued patent depends upon the construction of the claim. If it should be properly limited so as to be confined to the frame with the cutters or blades, which are described in the specification and in the drawings—to wit, a frame with the cutters *a a a a*—then there is no infringement; but if the claim is to be constructed so as to include a beater-frame formed of thin plain blades, then the invention which is recited in the first claim is found in the defendant's egg-beater.

The devices which were in use prior to the invention of the plaintiffs' assignor were composed of round wire, which by their rotation broke rather than cut the material. The part of the invention which is the subject of the first claim consisted in such an introduction of the knife-blade of the housewife and the mechanism for operating the blade into an egg-beater that the egg could be rapidly cut and the egg-matter could be aerated and be beaten into froth. The original and also the reissued specification dwelt upon the particular form of the cutters of the inner frame, and the original claim limited the invention to the cutters *a a*, &c.; but the scope of the invention was larger, and the principle was embodied in any revolving frame composed of thin and plain, as distinguished from corrugated, cutting-surfaces, so arranged as when rotated to cut edgewise through the material, provided the frame was constructed and arranged substantially in the manner described in the specification. It is not claimed that the reissue is void upon the ground that it is for a different invention from that shown or indicated in the original specification, but such a construction is attempted to be given to the reissued claim as would limit it to the precise language of the surrendered patent. The patent was surrendered because the grant was not coextensive with the invention, and it would be an unnatural construction of the reissued patent which should cramp the claim within the limitations which had been discarded. In my opinion, the natural meaning of the words which were used is to be permitted, and, giving to the claim such a freedom of construction, the defendants' device is an infringement.

We are quite satisfied that the difference between the original claim and the first claim of the reissued patent is substantial and not verbal. The former is necessarily limited to the particular device described as a frame, with a series of cutting-edges attached in the mode designated and capable of rotation. The latter embraces every revolving beater-frame formed of thin plain blades or cutters, arranged to cut edgewise through the material by their rotation. It is immaterial whether or not the latter might have been covered by the language of the specification as included in the invention. We are dealing with the claims, and nothing else. And it cannot be successfully contended that the original claim implicitly contained all that is expressed in the claim of the reissued patent. The original claim has been made broader by the reissue, so as to embrace the device used by the appellants which was not previously an infringement. And that raises the question whether, under the circumstances disclosed by this record, the reissue is valid. To avoid this question it is, indeed, contended now by the appellees that the two claims under examination are identical; that their apparent differences are merely literal; that their meaning is the same; and this conclusion is thought to be reached, not by restraining the reissue to the language of the original, but by a process of construction, by the use of supposed implications, to expand the words of the original so as to cover everything embraced in the reissue, the only alternative, indeed, that could be adopted to escape the inconsistency of maintaining that claims which were diverse upon the question of infringement were identical upon the question of the validity of the patent. But, as already intimated, this position is not tenable. There is nothing in the language or recitals of the original patent, nor are there any just and reasonable inferences of which they are susceptible, which justify a construction of the claim that would embrace any device other than that described in the specifications and represented in the drawings, much less to include every mechanical arrangement which embodies a cutting-edge with a revolving frame to cut instead of break the egg material upon which it is meant to operate.

The question then recurs, what are the circumstances which affect the validity of the reissue, and how do they affect it? They are few, but decisive. The original patent was issued July 7, 1863. Eleven years after, in 1874, the competition of the appellants' device became apparent and was felt. In 1875 application was made for the reissue, the original patent was surrendered, and the reissued patent granted July 13, 1875. Here is a delay of nearly twelve years, without the offer of an explanation or excuse, without even the suggestion of inadvertence or mistake in the original application. The only inference that can be drawn is that the discovery and experience of successful competition in 1874 suggested first and led to the discovery that the original claim did not cover everything that might

have been embraced, and was not broad enough to maintain the monopoly desired but not secured. This brings the case directly within the principle of *Miller* v. *Brass Co.* (104 U. S., 350) and the numerous others which have followed it, including that of *Clements* v. *Odorless Apparatus Co.*, (109 U. S., 641,) all of which have been decided since the interlocutory decree in this case was pronounced.

For these reasons the decree of the circuit court is reversed, and the cause is remanded, with directions to dismiss the bill, and it is so ordered.

U. S. Circuit Court—Eastern District of Wisconsin.

SALADEE v. RACINE WAGON AND CARRIAGE COMPANY *et al.*

Decided April 28, 1884.

1. The scope of a patented invention may be so narrowed by the prior state of the art that infringement cannot be adjudged to exist unless there has been an appropriation in substantial form of construction of the identical elements which the inventor had a right to claim as new in his patent.
2. To constitute infringement, it must appear that all the elements of a patented combination, or their equivalents, have been appropriated.
3. The bill dismissed upon the ground of non-infringement, without deciding the validity of the reissue patent.

Messrs. Cotzhausen, Sylvester & Scheiber for the complainant.

Messrs. Fish & Dodge for the defendants.

DYER, *J.*:

This is a bill to restrain the alleged infringement by the defendants of Reissue Letters Patent No 9,729, granted to the complainant May 31, 1881, for certain improvements in running-gear for vehicles. The original patent (No. 148,497) was issued March 10, 1874. It is essential to determine first precisely what the complainant's invention is.

The specification and claims of the original patent are as follows:

> The first part of my invention consists in bending the front and rear bolsters and side perches in one piece, and splicing them together at or about the cross-center of the gearing, in such manner as to make, literally, an endless perch for carriage-gearing.
>
> The second part of my invention consists in supporting and operating two half-elliptic side springs between the two outside perches and upon two separate connecting-rods, the bearings of which latter are also secured to the perches.
>
> Carriage-gearing with two or more perches have a bolster resting upon both the front and rear axles, and in or upon which is secured the opposite ends of the two outside perches, each corner of the gearing presenting two ends, viz., the end of the perch and the end of the bolster, to be finished with a scroll, or otherwise, besides involving the cost of bolts and other necessary fastenings to make these connections secure. To obviate all this, I proceed to unite the bolsters and side perches as follows, viz: In the first place, I take two pieces of wood of the required thickness and depth for the bolsters at their heaviest point, and of a length equal to the length of one bolster and the half-length of each perch. These pieces are now bent into substantially the form shown from H to F of the drawing, and with the round corners S S S S. The opposite ends of these pieces A and A′ are then finished up as required, and are spliced together at F and F, after which the side perches, A and A, are plated with iron, in the usual way. It will now be seen that I have produced an endless perch by bending the bolsters A′ with the side perches, A, and splicing the latter at or about the cross-center of the gearing. By this means, I not only get rid of joining the perches A to the ends of the bolsters A′ at S, and the work of finishing the ends of each, as is required upon the old plan, but I produce a cleaner and smoother finish at these points, and save a great deal of work in the iron connections, otherwise necessary at these points. In all cases where elliptic springs are to be used over the front and rear axles, they are made to rest upon the ends of the perches or bolsters A′, between the dotted lines E, but in this case the front bolster A′ will be made considerably shorter than the hind one, so that the rear ends of the perches A will be farther apart than the front ends, and not parallel to each other, as seen in the drawing. If preferred to bend the perches in one piece, only one splice, F, will be necessary.

I am aware that two perches have been bent in one piece, as shown and described in the patent of John Curtice, of Cincinnati, Ohio, and in a former patent of my own. In the former case the perches are closed by the bend in front of the head-block over the front axle, with the rear ends of the perches left open and framed into the hind axle-bed or bolster, while in the latter case the perches are closed by the bend in the rear of the hind axle, and the front ends left open and framed into the head-block over the front axle. But my present invention, let it be well understood, differs materially from both of the forms above described, as well as from all other kinds of bent perches of which I have any knowledge, in this, that both ends of the perches are closed by the bend of the wood—making the bolsters and perches, when completed, in one continuous piece, or, in other terms, an endless perch.

The half-elliptic side springs B and B are linked to two separate connecting-rods, C and C, at D, between the two opposite perches A and A, and the body of the vehicle is then supported upon the center of the springs, in the usual way. The bearings in which the connecting-rods are hung and operate are also secured to the perches, and not to the bolsters, as is the general custom.

Two advantages are attained in this mode of suspending the springs upon and between the perches, viz., first, the springs being suspended and operating between the perches, instead of on the one side of them, as is usual, the body can never strike the perches by the over-depression of the springs; and, second, the perches being on the outside of the springs, I can attach the steps directly to the perches, and not to the springs, as is usual, by which I gain the advantage of relieving the springs of the strain imposed upon them in all cases where the steps are secured to either the body or springs, as is now the almost universal custom.

I claim as my invention—

1. An endless perch, A and A′, substantially as and for the purpose set forth.
2. Connecting-rods C and C, pivoted at or near the opposite ends of the perches A and A, and provided with links D and springs B and B, all combined to operate between the opposite perches A and A, substantially as and for the purpose set forth.

The specification and claims of the reissue patent are as follows:

> My invention relates to that class of road-wagons in which the front and rear bolsters or axles are connected by side bars or perches, and in which the body is hung upon semi-elliptic springs; and the object of my invention is to hang the body low down and close to the side bars, without being liable to strike the latter. This object is secured by arranging the side springs inside the side bars or perches instead of outside, as heretofore, and by connecting their adjacent ends to an equalizing device arranged to operate between said bars, as fully described hereinafter.
>
> The frame connecting the axles is made of one or more strips or pieces, as shown in the accompanying drawing, which is a plan of sufficient of a road-wagon to illustrate my invention. It consists of two pieces A, A′, each sufficient to form one bolster and the half of each perch, and bent to the U shape shown, the ends of the two bent pieces being then spliced at F F. The frame thus formed has no jointed corners, and constitutes an endless perch of great strength.
>
> Heretofore, in hanging the bodies between side bars or perches, it has been necessary, to prevent the body from tilting and striking said bars, to arrange the latter at such a distance from the body that they limit the movement of the wheels in turning, so that a "short turn" cannot be made. I obviate this by hanging the springs inside the perches, and by so equalizing the action of the springs that the body is prevented from tilting laterally, permitting the perches to be arranged much closer to the body than heretofore. To secure this action I unite the adjacent ends of the side springs, arranged between the perches, to ears D of an equalizing-bar, C, turning in suitable bearings, so that any excess of weight upon one spring turning the bar C also lowers the other spring to an equal extent, and preserves the body horizontal, so that it will not strike the side perches.
>
> The arrangement of equalizing-bars in combination with both ends of the springs, as shown, secures a like effect at each end of the spring-platform. Another result of this arrangement is the suspending of the body lower down than is possible when the springs are outside of the perches, which would be struck by the body if it were not raised well up above them.
>
> I am aware that equalizing-bars have been used in connection with bodies hung to springs outside the perches; but in such cases the result which I effect is not attained, which is the perfect support of the body, while allowing all desirable vertical movement without unduly spreading the springs apart.
>
> I claim—
>
> 1. In a road-wagon, the combination, as set forth, of a body, side perches, semi-elliptic springs arranged between the perches, and means for equalizing the action of such springs, as set forth.
> 2. The combination, with the semi-elliptic springs supporting a body between the side bars or perches of a vehicle, of an equalizing-bar arranged opposite and connected to the adjacent ends of said springs, substantially as set forth.

From the language of the specification in the original patent and of the claims also it is plain that the invention of the complainant consisted of (1) the endless perch and (2) the connecting rods pivoted at or near the opposite ends of the perches, and provided with links and springs, so as to operate between the opposite perches. In the reissue patent the same form of perch is described—that is, it is constructed so as to form by its conpection with the bolster an endless

perch without jointed corners. Neither of the claims in the reissue distinctly specify an endless perch as in the original, but the claims must be read with the specifications, and when so read there is no doubt the patentee intended to claim the same form of perch in the reissue as in the original patent. So, too, in the reissue, the parts described in the original patent as connecting-rods are made another essential element in the patentee's invention. In the reissue they are described as equalizing-bars, and their operating effect is more elaborately stated than in the original patent; but in both it is evident that it was the intention of the patentee to claim that the effect of the connecting-rods or equalizing-bars is to equalize the action of the springs. The conclusion, then, must be that the endless perch and the equalizing-bars, constructed as described, are alike claimed in the original and reissue patents. These devices are not, either separately or in combination with other parts of a vehicle, anticipated by any patent here exhibited.

In the Curtice patent, No. 147,613, dated February 17, 1874, two perches bent in one piece are shown; but the perches are closed by the bend in front of the head-block over the front axle, with the rear ends of the perches left open and framed into the rear axle-bed or bolster. In the Saladee patent of February 20, 1872, No. 123,937, the perches are closed by the bend in the rear of the rear axle, and the front ends left open and framed into the head-block over the front axle. In the Miller patent of September 6, 1870, No. 107,076, for an improvement in buckboard-wagons, the buckboard rests upon the springs, which are attached to a cross-bar at the forward end, which is fastened to the reaches; but the springs at the rear end are attached to two hangers fastened to the under side of the axle. In the Miller patent, No. 134,916, dated January 14, 1873, the endless perch is not shown nor the half-elliptic side spring. In the Topliff and Ely patent, No. 122,079, of December 19, 1871, the springs are outside the perches or reaches, and are arranged upon separate rock-rods secured directly to the front and rear axles. In the Curtis patent of March 26, 1867, No. 63,223, the perches are open at the rear end and mortised into the rear axle, with end springs attached to the axles. But these various inventions which preceded the complainant's show the state of the art when the complainant obtained his patents, and narrow the scope of his invention to such extent that the defendants cannot be adjudged infringers unless they have appropriated in substantial form of construction the identical elements which the complainant has the right to claim as new in his patent. Side springs placed between the perches are shown in the Curtis patent, No. 147,613. The complainant in the specification of his patent, No. 123,937, states that the idea of equalizing the action of springs by means of cross-bars or connecting-rods was at that date, February 20, 1872, old and well known, although the particular form of construction and attachment of such connecting-rods shown in the patents in suit was not exhibited before the issuance of those patents. Perches bent at one end were also old when the complainant obtained his patents. Assuming, therefore that the reissue patent sued on is valid, the question is, do the defendants make a running-gear for vehicles in which there are combined an endless perch and an equalizing-bar connected to the adjacent ends of semi-elliptic springs supporting the body of the vehicle between the perches. If they do not, then there is no infringement. In other words, to make the defendants liable as infringers, it must appear that they have appropriated all the elements of the complainant's combination, or their equivalents, and this they have not done.

First. The gearing made by the defendants does not exhibit the endless perch. It is true that in their gearing two perches are bent in one piece, but only the front end is closed, while the rear ends are open, each end being connected with the rear axle. In short, instead of making the Saladee perches, the defendants make the perches shown in the Curtis patent of 1874.

Secondly. The defendants connect the springs with an equalizing-rod at the rear of the gearing substantially as is shown in the complainant's patents; but the springs are connected at the front end of the gearing directly with the bent end of the perches, and there is no equalizing-rod at that end of the running-gear. That the complainant, when he obtained his patent, regarded two equalizing-bars, one at each end of the vehicle, as essential parts of his invention is apparent (1) from the drawings which he submitted to the Patent Office and (2) from the language of the specifications and second claim of the reissue. In the specification he says that, to secure an equalized action of the springs—

> I unite the adjacent ends of the side springs, arranged between the perches, to ears D of an equalizing-bar, C, turning in suitable bearings, so that any excess of weight upon one spring turning the bar C also lowers the other spring to an equal extent and preserves the body horizontal, so that it will not strike the side perches.
>
> The arrangement of equalizing-bars in combination with both ends of the springs, as shown, secures a like effect at each end of the spring-platform.

In the second claim there is claimed as part of the combination—

> An equalizing-bar arranged opposite and connected to the adjacent ends of said springs.

From all this it is apparent that the defendants omit from their running-gear one of the parts necessary to make the complainant's combination; and, as the court has already indicated, the field of invention with reference to running-gear for vehicles was so covered prior to the complainant's patents that upon settled principles of patent law his patents cannot have the broad construction to which a patent for a wholly new and original device might be entitled. The defendants make a vehicle with side springs between the perches, which are as fully shown in the Curtis patent of 1874 as in the complainant's reissue. They make the Curtis perch, and not an endless perch. They omit one of the equalizing-rods described and claimed in the complainant's patent.

Upon this state of facts, can the defendants be adjudged infringers? The court is clearly of the opinion that they cannot; and upon the ground of non-infringement, without deciding the points made by defendants' counsel involving the validity of the reissue patent, the bill will be dismissed.

FOREIGN PATENT LAWS.

Patent Law of New Zealand.

The following is from an official copy of the patent laws of New Zealand, furnished for publication by W. P. Thompson, C. E., Liverpool, England:

ANALYSIS.

Title.
1. Short Title.
2. Division of Act.
3. Interpretation.

PART I.

MODE OF OBTAINING LETTERS PATENT.

(1.) *For what patent may issue.*

4. Power to grant patents. Monopolies forbidden.

(2.) *Regulations.*

5. Governor in Council to make regulations.
6. Patent Officer. Patent Office.
7. Deputy Patent Officer.

(3.) *Procedure to obtain patent.*

8. Appointment of local offices and officers. Saving of existing appointments.
9. Mode of application. First Schedule. Receipt for documents. Second Schedule.
10. Protection of invention. Third Schedule.
11. Patent of true inventor not to be affected by specification of pretended inventor.
12. Hearing of application. Fourth Schedule. Particulars of objections may be lodged.
13. Patent Officer to hear applications and objections.
14. Hearing may be adjourned.
15. Patent Officer may award expenses and costs. Fifth Schedule.
16. Patent Officer may issue warrant for letters patent. Sixth Schedule.
17. Amendments.
18. Letters patent to be issued on application and during the protection.
19. Letters patent may issue after that time in certain cases.
20. Duplicate letters patent may be issued.
21. Letters patent to bear date of deposit of specification, and to be conclusive as to preliminary steps.

(4.) *Form and conditions of patent.*

22. Conditions for granting letters patent. Seventh Schedule.
23. Matters rendering letters patent void.
24. Invention to be brought into actual and public use.

(5.) *Repeal of patent.*

25. Letters patent may be repealed, or issued with restrictions, or specification may be canceled.
26. Letters patent not to prevent the use of inventions in foreign ships in New Zealand ports.

(6.) *Letters of registration.*

27. Letters of registration for foreign patents. Effect of registration. Tenth Schedule. Copy to be filed.

PART II.

DISCLAIMERS AND ALTERATIONS.

28. Notice of application to disclaim or make alterations. Procedure thereon. Eighth Schedule. Opposition. Power to dispense with appointment, &c.
29. Application for disclaimer to be heard.
30. How disclaimer may be entered and alterations made. Effect of disclaimer.
31. Actions not to be brought in certain cases. Proceedings conclusive.

PART III.

EXTENSION OF TERM.

32. Mode of obtaining extension of term. What petition to set forth.
33. Appointment of commissioners.
34. Notice of commission to be published. Ninth Schedule. Caveat may be entered.
35. Commissioners to hear all parties and report.

PART IV.

MISCELLANEOUS PROVISIONS.

(1.) *Records of office.*

36. Specification, &c., of invention to be kept in Patent Office and be open to inspection.
37. Indices to specifications, disclaimers, &c.
38. Register of patents to be kept.
39. Register of proprietors to be kept and of assignments of letters and of licenses thereunder.

(2.) *Assignments.*

40. Conditions for registering assignment.
41. Every assignment or license to be made by separate deed.
42. Register of proprietors to be open to public inspection, and copies or extracts may be made.

(3.) *Seal.*

43. Seal to be made and noticed judicially. Certified copies to be evidence.

(4.) *Offenses.*

44. Falsification or forgery of entries.
45. Entries may be expunged.
46. Penalty for unauthorized use of the word "patent."

(5.) *Procedure in actions for infringement.*

47. In actions for infringement particulars of breaches and objections to be delivered. What shall be stated in particulars. Order of proceedings.
48. Particulars to be regarded in taxing costs. Effect of record and certificate.

(6.) *Fees.*

49. Fees to be paid. Eleventh Schedule. Governor may reduce fees.

(7.) *Repeals.*

50. Repeal. Twelfth Schedule. Saving. Schedules.

—

AN ACT to consolidate the law relating to letters patent for inventions.

September 8, 1883.

Be it enacted by the General Assembly of New Zealand in Parliament assembled, and by the authority of the same, as follows:

1. The short title of this act is "The Patents Act, 1883."

It shall come into operation on the 1st day of January, one thousand eight hundred and eighty-four.

2. This act is divided into parts, as follows: Part I, mode of obtaining letters patent; Part II, disclaimers and alterations; Part III, extension of term and confirmation of invalid patent; Part IV, miscellaneous provisions.

3. In this act "Invention" means and includes any manner of new manufacture the subject of letters patent and grants of privilege within the meaning of the fourth section hereof. "Patent Office" means the patent office appointed under this act, but does not include any local patent office. "Patent Officer" means the person appointed to be patent officer under this act. "Regulations" mean regulations made under this act.

PART I.

MODE OF OBTAINING LETTERS PATENT.

(1.) *For what patent may issue.*

4. It shall be lawful to make and issue, in the manner hereinafter mentioned, letters patent and grants of privilege, for any term not exceeding fourteen years from the date thereof, of the sole working or making of any manner of new manufactures within New Zealand, to the true and first inventor of such manufactures, which others, at the time of making such letters patent and grants, shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities, or hurt of trade, or generally inconvenient; and all other monopolies, commissions, grants, licenses, charters, and letters patent hereafter to be made or granted to any person of or for the sole buying, selling, making, working, or using of anything within New Zealand, or of any other monopolies, or of power, liberty, or faculty to dispense with any others, and all matters and things whatsoever in anywise tending to the instituting, erecting, or countenancing of the same or any of them shall be utterly void and of none effect and in no wise to be put in execution.

(2.) *Regulations.*

5. The Governor in Council from time to time may make such regulations, not inconsistent with the provisions hereof, as may appear to be necessary and expedient for the purposes of this act; and all such regulations shall be gazetted. All regulations in force under any act hereby repealed shall remain in force as if made under this act until other regulations are made as hereinbefore provided.

6. The Governor may from time to time appoint such person as he thinks fit to be Patent Officer, and in like manner may appoint a place to be the "Patent Office." The person who, at the commencement of this act, holds the office of Patent Officer under the acts hereby repealed shall be the Patent Officer under this act, without any further appointment. The place at the commencement of this act used as the Patent Office shall be deemed to have been appointed under this act.

7. The Governor at any time may appoint a fit and proper person to be Deputy Patent Officer, to act in case of the death, illness,

or unavoidable absence of the Patent Officer, and such deputy shall, during the time he shall so act, have all the powers and privileges, and shall perform all the duties, and be subject to the responsibilities of the Patent Officer. Whenever the Patent Officer shall die, the Deputy Patent Officer shall act as such from the day of such death, and, in the case of illness or absence, shall act as such from such day as the Patent Officer shall certify under his hand to the Deputy Patent Officer that he is ill and unable to perform his duties, or that he is about to be absent; and such Deputy Patent Officer shall cease to act as such on the day on which he shall receive from the Patent Officer a certificate under his hand to the effect that he has resumed his duties.

(3.) *Procedure to obtain patent.*

8. The Governor may, for all such purposes as he may deem necessary for the public convenience, appoint local patent offices and Patent Office agents in the various centers of population throughout the colony, and from time to time alter or revoke the appointment of such offices and agents, respectively. The local patent offices and the Patent Office agents appointed under "The Patents Act Amendment Act, 1882" shall be deemed to have been appointed under this act without further appointment. Such agents shall not demand or receive from the applicant, or any one on his behalf, any fees or charges whatever other than such as are payable under this act.

9. Every application under this act for the grant of letters patent for an invention shall be made as follows, that is to say:

(1.) The applicant shall deposit at the Patent Office, or at any local patent office, a specification, written in a plain legible hand or printed in fair legible type, upon parchment or paper, and under his hand and seal, in the form or to the effect in the First Schedule hereto, particularly describing and ascertaining the nature and details of the said invention with precision, and in what manner the same is to be performed, and containing a distinct claim for the especial novelty thereof, and accompanied by drawings, if necessary, for the full description and understanding of the said invention, and also a copy of such specification and drawings.

(2.) The title of the invention must state distinctly and specifically the nature and object of the invention, and every specification must be limited to one invention.

(3.) If such deposit be made at any local office, the Patent Office agent shall give the applicant or his agent a receipt therefor in the form contained in the Second Schedule hereto, or to the like effect, and shall forthwith transmit the documents and a copy of his receipt to the Patent Officer.

10. (1.) The exact time of the deposit of every specification which, upon examination by the Patent Officer, is found to be in accordance with this act and the regulations shall be recorded at the Patent Office, and indorsed upon such specification, and a certificate thereof, under the hand of the Patent Officer and in the form contained in the Third Schedule hereto, shall be given or transmitted to such applicant or his agent.

(2.) And thereupon, subject and without prejudice to the provisions hereinafter contained, the said invention shall be protected under this act for the term of twelve months next after the said deposit, and the applicant shall have during such term the full powers, rights, and privileges as might have been conferred upon him by letters patent for such invention issued under this act and duly sealed as of the day of such deposit.

(3.) During the continuance of such powers, rights, and privileges under this provision, such invention may be used and published without prejudice to any letters patent to be granted for the same.

11. In case of the deposit of any such specification as aforesaid in fraud of the true and first inventor, any letters patent granted to the true and first inventor of such invention shall not be invalidated by reason of such deposit, or of any use or publication of the invention subsequent to such deposit and before the expiration of the said term of protection.

12. The Patent Officer shall make an appointment for the hearing of every application, in the form contained in the Fourth Schedule to this act or to the like effect; and shall publish a notification of the said appointment once in the *Gazette*, not less than sixty clear days prior to the day appointed. Any person having an interest in opposing the grant of letters patent shall be at liberty, not less than fourteen clear days before the day so appointed, to leave particulars in writing of his objections to the said application at the Patent Office.

13. At the place and time named in the said appointment the Patent Officer shall hear and consider the said application, and all objections to the same, if any, mentioned in the said particulars, and may call to his aid such scientific or other person as he may think fit. The applicant, the objectors, and their respective witnesses and evidence shall be respectively heard, examined, and considered separately and apart from and in the absence of the other, his witnesses, and evidence. The Patent Officer shall have full power to examine applicant, objectors, and witnesses upon oath and to administer an oath to any or all of them.

14. The Patent Officer may adjourn from time to time the hearing of any application for letters patent.

15. The Patent Officer may require that the applicant and the objector shall deposit such sums as the Patent Officer may think fit, to meet any costs of or incident to the hearing, and may, by writing under his hand, order to be paid to any person he may call to his aid as aforesaid some remuneration for his attendance, and may also, in like manner, order that the costs of any hearing upon any objections, or otherwise in relation to the grant of such letters patent, or the protection acquired by the applicant under this act, shall be paid; and, in and by such writing, shall fix the amount of such remuneration or costs and by or to whom the same respectively shall be paid. Every such order shall be in the form contained in the Fifth Schedule or to the like effect, and may be made a rule of the Supreme Court.

16. If there shall be no objection to the grant of letters patent, and he is satisfied that this act and the regulations have been complied with, the Patent Officer may, on the day appointed, or as soon as may be thereafter, and, when there are objections, after such hearing and consideration, issue a warrant under his hand for the granting of letters patent for the said invention; and by such warrant shall direct the insertion in such letters patent of all such restrictions, conditions, and provisos as he may deem usual and expedient in such grants or necessary in pursuance of this act. Such warrant shall be the authority for the making and sealing of letters patent under this act, according to the tenor of the said warrant. Every such warrant shall be in the form set forth in the Sixth Schedule or to the like effect.

17. In case the title of the invention or the specification be too large or insufficient, or clerical errors exist therein, the Patent Officer, on the hearing of the application for the grant of the letters patent, may allow or require such specification to be amended or another and sufficient specification to be deposited in lieu thereof, and every such amended or new specification shall have the same force, effect, and operation as if it had been originally deposited in its amended or new state. When an applicant desires to amend his specification or drawings or to substitute an amended specification, he must deposit particulars of such amendment or such amended specification at the Patent Office at least fifteen days before the day of hearing.

18. (1.) The Patent Officer, after the issue by him of the said warrant, and on application in writing by the applicant or his agent, with payment of the fee thereon, shall cause to be prepared letters patent for the invention according to the tenor of the said warrant, and the Governor may cause such letters patent to be sealed with the public seal of the colony.

(2.) Such letters patent shall be made applicable to the colony and its dependencies, and shall be valid and effectual as to the whole of the same respectively; but, except as hereinafter mentioned, no letters patent shall issue on any warrant granted as aforesaid, unless application be made to seal such letters patent during the continuance of the protection conferred under this act, by reason of such deposit as aforesaid.

19. (1.) When the application to seal such letters patent has been made during the continuance of such protection as aforesaid, and the sealing of such letters patent has been delayed from accident, and not from the willful default of the applicant, then such letters patent may be sealed at such time after the expiration of such protection as the Governor may direct.

(2.) Where the applicant for such letters patent dies during the continuance of such protection as aforesaid, such letters patent may be granted to the executors or administrators of such applicant during the continuance of such protection, or at any time within three months after the death of such applicant, notwithstanding the expiration of the term of such protection; and the letters patent so granted shall be of the like force and effect as if they had been granted to such applicant during the term of such protection.

20. In case any letters patent shall be lost or destroyed, duplicate letters patent of the like tenor and effect, and sealed and dated as of the same day as such lost or destroyed letters patent, may be issued upon evidence of such loss or destruction being produced to the satisfaction of the Patent Officer.

21. Notwithstanding any enactment to the contrary, all letters patent to be issued in pursuance of this act shall be sealed and bear date as of the day of the deposit of such specification as aforesaid, and shall be of the same force and validity as if they had been sealed on the day as of which they are expressed to be sealed and bear date. After any letters patent shall have been issued in pursuance of this act it shall not be necessary or material to inquire whether such appointment as aforesaid has or has not been delivered and published in the manner hereinbefore mentioned and directed.

(4.) *Form and conditions of patent.*

22. All letters patent for inventions granted under this act shall be in the form contained in the Seventh Schedule, or to the like effect, and shall be made subject to the provisions of this act, and to the conditions and restrictions that may be inserted in such patent by virtue thereof or that are imposed by this act—that is to say—

(1.) That the powers and privileges thereby granted shall cease and determine at the expiration of five years from the date thereof, unless there be paid within such five years the sum or sums of money required to be paid under this act, and the Patent Officer shall indorse a receipt for the same on the letters patent.

(2.) No letters patent shall extend to entitle the patentee to use or imitate any invention or work which, before the date of such patent, had been found out or invented by any other person and publicly used or exercised, or to whom like letters patent or privileges have been already granted for the sole use, exercise, and benefit thereof within the colony.

(3.) The patentee and all and every other person and persons to whom like letters patent or privileges have been granted shall distinctly use and practice their several inventions by them invented and found out according to the true intent and meaning of the same respective letters patent.

(4.) Nothing contained in any letters patent shall prevent the patentee from granting licenses in such manner and for such considerations as they may by law be granted.

23. All letters patent and all privileges and advantages whatsoever thereby granted shall utterly cease and become void—(1) if the specification does not particularly describe and ascertain the nature of the invention, and in what manner the same is to be performed; (2) if at any time during the term for which such letters are granted it appears that the grant is contrary to law, or prejudicial or inconvenient to the public good, or that the invention therein mentioned is not a new invention, or that the patentee is not the true and first inventor thereof within this colony; (3) if the patentee shall not supply or cause to be supplied for the government of the colony all such articles of the said invention as he is required to supply by the persons administering the department of the public service for the use of which the same are required in such manner, at such times, and at and upon such reasonable prices and terms as shall be settled for that purpose by the said persons requiring the same.

24. Every invention protected by letters patent issued under this act shall be brought into actual and public use within the colony within the space of two years from the date of such letters patent, or in default thereof such letters patent shall at the expiration of such period of two years cease and be of no effect.

(5.) *Repeal of patent.*

25. (1.) An action shall lie for the repeal of any letters patent granted under this act, and may be commenced in any district of the Supreme Court, in such form as may be authorized by its rules in substitution for the process by writ of *scire facias*; and in case the grantee does not reside in New Zealand it shall be sufficient to file the writ in the Supreme Court and to serve notice of such action in writing at the last-known place of residence or business of such grantee.

(2.) The Governor in Council, upon the issue of the writ in such action, may order such Patent Officer to withhold such warrant as aforesaid, or that any letters patent for the granting whereof he may have issued a warrant, as aforesaid, shall not issue; or may order the insertion in any such letters patent of any restrictions, conditions, or provisos in addition to or in substitution for any restrictions, conditions, or provisos which would otherwise be inserted therein under this act.

(3.) The Governor in Council may also order any specification in respect to the invention described, in which no letters patent may have been granted, to be canceled, and thereupon the protection obtained by the deposit of such specification shall cease.

26. No letters patent granted for any invention shall extend to prevent the use of any such invention in any foreign ship or vessel, or for the navigation of any foreign ship or vessel which may be in any port of New Zealand, or in any of the waters within the jurisdiction of any of her Majesty's courts in New Zealand, where such invention is not so used for the manufacture of any goods or commodities to be vended within or exported from the same. But this enactment shall not extend to the ships or vessels of any foreign State the laws of which authorize subjects of such foreign State having patents or like privileges for the exclusive use or exercise of inventions within its territories to prevent or interfere with the use of such inventions in British ships or vessels, or in or about the navigation of British ships or vessels, while in the ports of such foreign State, or in the waters within the jurisdiction of its courts, where such inventions are not so used for the manufacture of goods or commodities to be vended within or exported from such foreign State.

(6.) *Letters of registration.*

27. The Governor, in his discretion, on the application of any person being the holder or assignee of any letters patent or like protection issued in Great Britain or any other country or colony for an invention or discovery, and upon such proof as the Governor may by regulations require that such person is the *bona fide* holder or assignee thereof, and that the same are or is in full force, and upon payment of the sum of ten pounds may grant letters of registration to such applicant.

(2.) Such letters of registration shall be in the form contained in the Tenth Schedule or to the like effect, and shall have the same force and effect as letters patent granted under this act, and shall inure to the benefit of the grantee thereof, his executors, administrators, and assigns, during the continuance of the original letters patent or other protection in the country or colony where the same was or were granted, and no longer; and all the provisions of this act shall apply to such letters of registration in the same way, *mutatis mutandis*, and as fully as to letters patent granted under this act.

(3.) A copy of all such letters of registration shall be filed in the Patent Office.

PART II.

DISCLAIMERS AND ALTERATIONS.

28. (1.) Any person who shall obtain letters patent under this act, his executors or administrators, or, in case he or they shall part with the whole or any part of his or their interest by assignment, he or they, together with the assignee, if part only has been assigned, or the assignee alone if the whole has been assigned, may apply to the Patent Officer for leave to enter a disclaimer of any part of either the title to the invention, or the specification, or a memorandum of any alterations in the said title or specification, not being such disclaimer as shall extend the exclusive right granted by the said letters patent.

(2.) Thereupon the Patent Officer shall deliver to the person or persons applying, or to their agent, or to one of them, or the agent of one of them, an appointment in the form contained in the Eighth Schedule, or to the like effect, and the person or persons so applying shall cause such disclaimer, (stating the reason for the same,) or such memorandum of alteration, to be written at the foot of the said appointment, and shall cause the same, respectively, to be published forthwith in the *Gazette*.

(3.) Any person having an interest in opposing the said application shall be at liberty to leave particulars in writing of his objections to the same at the Patent Office within such time, not less than fourteen clear days prior to the day so appointed.

(4.) Where such application shall be for leave to enter a disclaimer of any part of the title of the said invention, or a memorandum of any alteration in such title, the Patent Officer may dispense with such appointment and publication, and in that case shall certify in the flat hereinafter mentioned that he has dispensed with the same.

29. At the time and place named in such appointment the Patent Officer shall hear and consider the said application, and all objections to the same mentioned in the said particulars, if any, and all such powers and authority shall and may be exercised upon that occasion by the Patent Officer as, by virtue of the provisions herein contained, can and may be exercised in relation to the hearing and considering an application for letters patent and objections to the same, and shall and may be enforced in like manner.

30. (1.) After such hearing and consideration, or without such hearing or consideration where the said appointment and publication shall have been dispensed with as aforesaid, the person or persons applying, or one of them, may by leave of the Patent Officer, to be certified by a flat under his hand, to be written at the foot of the same paper or parchment with the said disclaimer or memorandum, enter such disclaimer, (stating the reason for the same,) or such memorandum of alteration, and at the time of entering such disclaimer or memorandum of alteration, shall deposit a copy thereof in the office next hereinafter mentioned.

(2.) Such disclaimer or memorandum of alteration, being filed in the Patent Office, shall be deemed and taken to be part of such letters patent or such specification, and subject to the several incidents thereof, in all courts whatever, and shall be valid and effectual in favor of any person in whom the rights under the said letters patent may then be or thereafter become legally vested.

31. (1.) No action shall be brought upon any letters patent in respect of which or the specification of which any disclaimer or memorandum of alteration shall have been filed in respect of any infringement committed prior to the filing of such disclaimer or memorandum of alteration, (unless the Patent Officer shall certify in his said flat that any such action may be brought, notwithstanding the entry or filing of such disclaimer or memorandum of alteration,) and no such disclaimer or alteration shall be receivable as evidence in any action or suit (save any proceedings for the repeal of letters patent) pending at the time when such disclaimer or alteration was filed as aforesaid; but in every such action or suit the original title and specification alone shall be given in evidence, and be deemed and taken to be the title and specification of the invention for which the letters patent have been or shall have been granted.

(2.) When any such flat shall have been granted under this act it shall not be necessary or material to inquire or ascertain whether such appointment as last aforesaid has or has not been delivered and published or dispensed with in accordance with this act; and such filing of any disclaimer, or memorandum of alteration, in pursuance of the leave of the Patent Officer, certified as aforesaid, shall (except in cases of fraud) be conclusive as to the right of the party to enter such disclaimer or memorandum of alteration under this act.

PART III.

EXTENSION OF TERM.

32. (1.) Any person who has obtained letters patent under this act or any other act relating to letters patent heretofore in force in New Zealand, or the executors or administrators of such person, or (in case such person shall have parted with the whole or any part of his interest in such patent by assignment) he or they, together with the assignee when part only has been assigned, or the assignee alone when the whole has been assigned, may, six months before the expiration or other determination of such letters patent, present to the Governor a petition for the extension of the term in such letters patent mentioned.

(2.) Such petition shall set forth that the petitioner has been unable to obtain a due remuneration for his expense and labor bestowed in perfecting such invention, and that an exclusive right of using and vending the same for some further period, to be named in such petition, in addition to the said term, is necessary for his reimbursement and remuneration, and the Governor may refer the consideration of the said petition to one or more commissioners, to be appointed for that purpose in the manner hereinafter mentioned.

33. For the purpose of considering any such petition, the Governor, if he shall think fit, may issue and direct, in the name of Her Majesty, to one or more persons a commission reciting such petition, and requiring and authorizing such person, or some stated number of such persons, to meet at some time, not being less than two months from the publication of such commission in the *Gazette*, and at some place to be respectively fixed in the said commission, and then and there to consider the said petition, and to report to the Governor (in case such petioner shall have prayed for an extension of the term in the letters patent mentioned) whether any, and if any, what, further extension of the said term should be granted, according to the prayer of the said petition.

34. (1.) Two months at least before the time fixed in the said commission for the consideration of any such petition as aforesaid the petitioner shall cause to be published, in the same manner as is hereinbefore required with respect to the first-mentioned appointment, an advertisement of the contents of the said commission in the form contained in the Ninth Schedule, or to the like effect.

(2.) Any person having an interest in opposing the said petition shall be at liberty to enter a caveat against the same at the Patent Office at any time not less than one week before the time named in the said commission for the consideration thereof.

35. (1.) At the time and place fixed in the said Commission the Commissioners, or some of them not less than the said stated number, shall proceed to consider such petition, and the petitioner shall be heard by his counsel and witnesses to prove his case as stated in such petition, and the publication of the said last-mentioned advertisement, as required by this act, and the persons entering caveats shall likewise be heard by their counsel and witnesses; and all such witnesses shall be examined upon oath, which oath such Commissioners are hereby authorized to administer.

(2.) Thereupon, and on hearing and inquiry of the whole matter, (in case such petitioner shall have prayed for an extension as aforesaid,) the said Commissioners may report whether any, and if any, what, further extension of the said term should be granted; and the Governor is hereby authorized and empowered, if he shall

think fit, to grant to the petitioner new letters patent for the said invention not exceeding three years after the expiration of the first term, anything herein contained to the contrary notwithstanding. Such new letters patent shall be sealed and bear date as of the day after the expiration of the term of the first letters patent.

PART IV.

MISCELLANEOUS PROVISIONS.

(1.) *Records of office.*

36. Every specification deposited at the Patent Office, and the drawings and models accompanying the same, if any, and all other documents so deposited, shall be kept in the Patent Office, and shall be open to the inspection of the public at all reasonable times, as well before as after the grant of letters patent, and whether such letters patent be granted or not, but subject to regulations.

37. Indices to all specifications, disclaimers, and memoranda of alterations, heretofore or to be hereafter enrolled or deposited as aforesaid, shall be prepared, and shall be open to the inspection of the public at the Patent Office, subject to regulations.

38. There shall be kept at the Patent Office a book, to be called "The Register of Patents," wherein shall be entered and recorded in chronological order all letters patent and letters of registration granted under this act or "The Patents Act, 1870;" the deposit and filing of specifications, disclaimers, and memoranda of alterations filed in respect of such letters patent; all amendments in such letters patent and specifications; all confirmations and extensions of such letters patent; the expiry, determination, vacating, or canceling of such letters patent, with the dates thereof respectively, and all other matters and things affecting the validity of such letters patent as the Governor may direct. Such register or a copy thereof shall be open at all convenient times to the inspection of the public, subject to such regulations as the Governor may make in that behalf.

39. There shall be kept at the Patent Office a book, entitled "The Register of Proprietors," wherein shall be entered the assignment of any letters patent or letters of registration, or of any share or interest therein; any license under letters patent or letters of registration, and the district to which such license relates, with the name of any person having any share or interest in such letters patent or letters of registration or license; the date of his acquiring such letters patent or letters of registration, share, or interest, and any other matter or thing relating to or affecting the proprietorship in such letters patent or letters of registration or license.

(2.) *Assignments.*

40. Before any assignment or license shall be registered, the assignee or licensee shall furnish—

(1.) A statutory declaration by one of the attesting witnesses to the said assignment or license of the due execution of the said assignment or license: *Provided* that if it be proved to the satisfaction of the said Patent Officer that the attesting witness to any such assignment or license is dead or cannot be found, the execution of the said assignment or license may be proved by a statutory declaration of any other person capable of declaring to the same;

(2.) A certified copy or copies of the assignment or license, and other instruments or documents of title.

41. No assignment or license of two or more letters patent or letters of registration included in one deed or instrument shall be registered, and no certificate of assignment or license shall be granted, unless a fee for such registration or certificate be paid in respect of each such letters patent or letters of registration in respect of which such registration or certificate is desired.

42. (1.) A copy of any entry in such book, certified as hereinafter mentioned, shall be given to any person requiring the same, and shall be *prima facie* proof of the assignment of such letters patent or letters of registration, or share or interest therein, or of the license or proprietorship as therein expressed.

(2.) Until such entry shall have been made, the grantee of the letters patent or letters of registration shall be deemed to be the sole and exclusive proprietor thereof, and of all the licenses and privileges thereby given.

(3.) Such register, or a copy, shall be open to public inspection subject to regulations.

(3.) *Seal.*

43. (1.) The Governor may cause a seal to be made for the purposes hereinafter mentioned, and all courts, judges, and other persons whosoever shall take notice of such seal, and receive impressions thereof in evidence, in like manner as impressions of the seal of the Supreme Court are received in evidence.

(2.) All copies or extracts, certified by the Patent Officer and sealed with such seal, of letters patent, letters of registration, specifications, disclaimers, memoranda of alterations, and all other documents or books recorded, filed, and kept in pursuance of this act shall be received in evidence in all proceedings relating to letters patent for inventions and letters of registration in all courts and by all judges and other persons whomsoever.

(4.) *Offenses.*

44. If any person shall wilfully make or cause to be made any false entry in any such register, or shall wilfully make or forge, or cause to be made or forged, any writing falsely purporting to be a copy of any entry therein, or shall produce or tender, or cause or suffer to be produced or tendered, any such writing, knowing the same to be false, he shall be guilty of a misdemeanor, and shall be liable, on conviction, to be kept in penal servitude for any term not exceeding five years, or to be imprisoned and kept to hard labor for any term not exceeding two years.

45. If any person shall deem himself aggrieved by any entry made under color of this act in any such register, such person may apply by motion to the Supreme Court, or by summons to a judge of such court, for an order that such entry may be expunged, vacated, or varied; and upon any such application such court or judge may make such order for expunging, vacating, or varying such entry and as to the costs of such application as to such court or judge may seem fit; and the Patent Officer, on the production to him of any such order, shall expunge, vacate, or vary the said entry according to such order.

46. (1.) If any person shall write, paint, print, mold, cast, carve, engrave, stamp, or otherwise mark upon anything made, used, or sold by him, for the sole making or selling of which he has not or shall not have obtained letters patent, the name or any imitation of the name of any other person who has or shall have obtained letters patent for the sole making and vending of such thing, without leave in writing of such patentee or his assigns, or shall upon any such thing, not having been purchased from the patentee or some person who purchased it from or under such patentee, or not having had the license or consent in writing of such patentee or his assigns, write, paint, print, mold, cast, carve, engrave, stamp, or otherwise mark the word "patent," the words "letters patent," or the words "by the Queen's patent," or any words of the like kind, meaning, or import, with a view of imitating or counterfeiting the stamp, mark, or other device of the patentee, he shall for every such offense forfeit and pay the sum of one hundred pounds, one half to Her Majesty and the other half, with full costs of suit, to any person who shall sue for the said penalty.

(2.) If any person shall, upon any such thing for which no letters patent or like protection shall have been obtained, write, paint, print, mold, cast, carve, engrave, stamp, or otherwise mark the word "patent," the words "letters patent," or the words "by the Queen's patent," or any words of the like kind, meaning, or import, or by advertisement, or in any other way imply or give reasonable cause to believe that letters patent or like protection have been granted for such thing, he shall for every such offense be liable to a penalty not exceeding fifty pounds, one-half of which shall be paid to any person who shall sue for the said penalty.

(3.) But nothing herein contained shall be construed to extend to subject any person to any penalty in respect of stamping, or in any way marking the word "patent" upon anything for the sole making or vending of which letters patent before obtained shall have expired or otherwise determined.

(5.) *Procedure in actions for infringement.*

47. (1.) In any action for the infringement of letters patent the plaintiff shall deliver with his statement of claim particulars of the breaches complained of in the said action; and the defendant on pleading thereto shall deliver with his statement of defense, and the prosecutor in any proceedings by action to repeal letters patent shall deliver with his statement of claim, particulars of any objections on which he means to rely at the trial in support of the said action, or of the suggestions of the statement last mentioned, respectively. At the trial of any such action no evidence shall be allowed to be given in support of any alleged infringement, or of any objection impeaching the validity of such letters patent, which shall not be contained in the particulars delivered as aforesaid.

(2.) The place or places at or in which and in what manner the invention is alleged to have been used or published prior to the date of the letters patent shall be stated in such particulars; and any judge at chambers may allow such plaintiff or defendant or persecutor, respectively, to amend the particulars delivered as aforesaid upon such terms as to such judge shall seem fit.

(3.) At the trial of any proceeding to repeal letters patent the defendant shall be entitled to begin, and to give evidence in support of such letters patent; and in case evidence shall be adduced on the part of the prosecutor impeaching the validity of such letters patent the defendant shall be entitled to the reply.

48. (1.) In taxing the costs in any action for infringing letters patent regard shall be had to the particulars delivered in such action, and the plaintiff and defendant, respectively, shall not be allowed any costs in respect of any particular, unless certified by the judge before whom the trial was had to have been proved by such plaintiff or defendant, respectively, without regard to the general costs of the cause; and the judge before whom any such action shall be tried may certify on the record that the validity of letters patent in the statement mentioned came in question.

(2.) The record with such certificate being given in evidence in any action for infringing the said letters patent, or in any proceeding in an action to repeal the letters patent, shall entitle the plaintiff in any such action, or the defendant in such proceeding, on obtaining a decree, order, or final judgment, to his full costs, charges, and expenses, to be taxed as between solicitor and client, unless the judge making such decree or order, or the judge trying such action or proceeding, shall certify that the plaintiff or defendant, respectively, ought not to have such full costs.

(6.) *Fees.*

49. There shall be paid in respect of the several matters and things respectively mentioned in the Eleventh Schedule such fees as are therein enumerated, and all such fees shall be paid into the public account and form part of the consolidated fund. The Governor may reduce any of such fees respectively from time to time by notification in the *Gazette*.

(7.) *Repeals.*

50. (1.) The acts enumerated in the Twelfth Schedule are hereby repealed.

(2.) But such repeal shall not affect any proceedings or things lawfully taken or commenced, or any letters patent or letters of registration granted, or any protection or right conferred, under the said repealed acts before the commencement of this act, and all such proceedings and things shall be as valid, and all such letters patent, letters of registration, protections, and rights shall have the same force and efficacy as if this act had not passed.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, June 11, 1884.

The Examiner in charge of Division III is hereby authorized to form a new sub-division in Class 42, Gas, and entitle the same "Sub-class 22, Gas Distribution."

BENJ. BUTTERWORTH,
Commissioner.

Issue of June 17, 1884.

DESIGNS.

15,062.—TOILET CABINET.—*Edward Bourne*, Allegheny, Pa. Application filed May 26, 1882. Term of patent 7 years.

15,063.—EARTHENWARE DISH.—*Elijah Cheteynd*, Hanley, county of Stafford, England, assignor to *Thomas H. Taylor*, New York, N. Y. Application filed April 16, 1884. Term of patent 7 years.

15,064.—GEM-SETTING.—*William R. Dutemple*, Providence, R. I. Application filed April 25, 1884. Term of patent 7 years.

15,065 to 15,067, inclusive.—WALL-PAPER.—*Paul Groeber*, New York, N. Y. Applications filed April 11, 1884. Term of patents 3½ years.

15,068.—WALL-PAPER.—*Paul Groeber*, New York, N. Y. Application filed April 15, 1884. Term of patent 3½ years.

15,069.—WALL-PAPER.—*Paul Groeber*, New York, N. Y. Application filed April 11, 1884. Term of patent 3½ years.

15,070.—WALL-PAPER.—*Paul Groeber*, New York, N. Y. Application filed April 15, 1884. Term of patent 3½ years.

15,071.—CLAMP OR LOOP FOR TRUNK-STRIPS.—*Samuel Hermann*, Cincinnati, Ohio. Application filed November 12, 1883. Term of patent 7 years.

15,072.—CHAIR-FRAME.—*Adolph G. Hofstatter*, New York, N. Y. Application filed April 3, 1884. Term of patent 7 years.

15,073.—SPRING-ROCKER BRACKET.—*Joseph W. Kenna*, Chicago, Ill. Application filed April 22, 1884. Term of patent 3½ years.

15,074.—ORNAMENTATION OF LEATHER.—*J. Wayland Kimball*, New York, N. Y. Application filed March 27, 1884. Term of patent 3½ years.

15,075.—WALL-PAPER.—*Augustin Le Prince*, New York, N. Y. Application filed April 11, 1884. Term of patent 3½ years.

15,076.—CARPET.—*David McNair*, Boston, Mass., assignor to *The Roxbury Carpet Company*, same place. Application filed April 28, 1884. Term of patent 3½ years.

15,077.—CARPET.—*David G. Melville*, Medford, assignor to *The Roxbury Carpet Company*, Boston, Mass. Application filed April 28, 1884. Term of patent 3½ years.

15,078 and 15,079.—OIL-CLOTH.—*Charles T. Meyer* and *Victor E. Meyer*, Bergen, N. J., assignors to *Edward O. Sampson*, New York, N. Y. Applications filed April 26, 1884. Term of patents 3½ years.

15,080 to 15,084, inclusive.—PRINTING-TYPE.—*John K. Rogers*, Brookline, Mass. Applications filed January 6, 1883. Term of patents 7 years.

15,085.—TOY SAVINGS-BANK.—*Charles G. Shepard* and *Peter Adams, Jr.*, Buffalo, N. Y.; said *Adams* assignor to said *Shepard*. Application filed January 29, 1884. Term of patent 7 years.

15,086.—FRINGE.—*John Zebley*, Philadelphia, Pa. Application filed April 2, 1884. Term of patent 3½ years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

11,256.—CIGARS.—*C. H. Brenaman & Co.*, Baltimore, Md. Application filed January 28, 1884.
"The words 'LIVE INDIAN' and the monogram 'C H B & Co.'"

11,257.—EMBROIDERY CHENILLE.—*Hugo Maul & Co.*, New York, N. Y. Application filed May 14, 1884.
"The figure of a star."

11,258.—CRACKERS, BISCUITS, WAFERS, AND CAKES.—*F. A. Kennedy & Co.*, Cambridge, Mass. Application filed May 8, 1884.
"The emblematical figure of Justice, represented by a female blindfolded and holding in the left hand a sword and in the right hand a pair of scales having one pan filled with crackers."

11,259.—TABLE SAUCE.—*Kibbe & Robinson*, Hartford, Conn. Application filed December 31, 1883.
"A pictorial representation of a youth standing on an elevation and bearing in one hand a flag on which is the word 'EXCELSIOR.' This figure is inclosed by one or more lines of circular or irregular outline. Above the figure are the words 'EXCELSIOR TABLE SAUCE.'"

11,260.—WHISKY.—*Charles H. Myers & Bro.*, Baltimore, Md. Application filed May 19, 1884.
"The word-symbol 'PATAPSCO CLUB.'"

11,261.—HARNESS, SADDLERY, AND CARRIAGE HARDWARE.—*O. B. North & Co.*, New Haven, Conn. Application filed March 13, 1884.
"The representation of an arrow in the usual form, consisting of a shaft, spear-pointed at one end and feather at the opposite end."

11,262.—TWINES, THREADS, ROPES, LINES, AND CORDAGE.—*Travers Brothers*, New York, N. Y. Application filed May 15, 1884.
"The arbitrary word 'PEERLESS.'"

11,263.—BAKING-POWDER.—*Joseph H. Brown*, Fort Worth, Tex. Application filed May 10, 1884.
"The words SILVER LOAF.'"

11,264.—BAKING-POWDER.—*Charm Manufacturing Company*, St. Louis, Mo. Application filed April 26, 1884.
"The words 'GOLDEN RULE.'"

11,265.—HARNESS-SOAP.—*James S. Kirk & Co.*, Chicago, Ill. Application filed May 15, 1884.
"The word 'EBONY.'"

11,266.—BRUSHES AND COMBS.—*William L. Vennard*, New York, N. Y. Application filed May 21, 1883.
"The representation of a mural coronet, an arm with a hand carrying a flag, and laurel-branches."

11,267.—NIGHT-LIGHTS, NIGHT-LAMPS, AND NURSERY-LAMPS OR FOOD-WARMERS.—*Samuel Clarke*, South Hampstead, London, England. Application filed April 26, 1884.
"The word 'PYRAMID.'"

11,268.—ARTIFICIAL HONEY.—*John G. Gorrell*, Oaslan, Ind. Application filed April 19, 1884.
"The representation of a clover-blossom with a bumble-bee thereon."

11,269.—CRUSHED OATS AND WHEAT.—*Francis H. Leggett & Co.*, New York, N. Y. Application filed April 2, 1884.
"The figures and words 'LEGGETT'S 15 MINUTE OAT FLAKES,' and 'LEGGETT'S 15 MINUTE WHEAT FLAKES,' arranged as follows: The words 'LEGGETT'S OAT FLAKES' and 'LEGGETT'S WHEAT FLAKES' are surrounded by sprays of grain, (wheat and oats.)"

11,270.—SLEEPING AND DRAWING-ROOM CAR.—*Mann's Boudoir Car Company*, New York, N. Y. Application filed April 4, 1884.
"The word 'BOUDOIR.'"

11,271.—TRUNK AND FURNITURE CASTERS, CATCHES, AND BRACES, AND SIMILAR HARDWARE.—*S. M. Michelson & Co.*, Milwaukee, Wis. Application filed April 23, 1884.
"The arbitrarily-selected word-symbol 'NONESUCH,' arranged as either one or in two words."

11,272.—COUNTRY HOMESPUN YARN FOR HAND-KNITTING.—*P. S. Peckham & Co.*, Washington, R. I. Application filed April 10, 1884.
"A woman standing at a spinning-wheel in the act of spinning. On her right is represented in part an old-fashioned fireplace with crane, hanging kettle, and andiron; on the mantelpiece a candle and candlestick, and in the background the upper part of an old-fashioned standing clock, the picture being inclosed in a circle, above which are the words 'COUNTRY KNITTING YARN' and below the word 'HOMESPUN.'"

LABELS.

4,149.—Title: "THE SUFFERER'S RELIEF."—*Joseph Bard*, Chicago, Ill. Application filed May 5, 1884.

4,150.—Title: "THE HAIR BEAUTIFIER."—*Joseph Bard*, Chicago, Ill. Application filed May 5, 1884.

4,151.—Title: "WHITE PINE BALSAM."—*Horne & Abel*, Los Angeles, Cal. Application filed April 14, 1884.

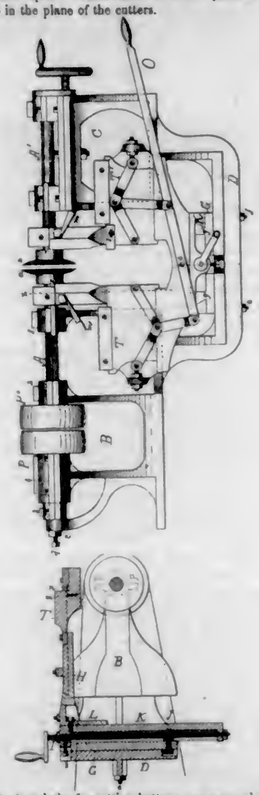
4,152.—Title: "AROMATIC SYRUP OF THE HYPOPHOSPHITES COMP." *B. F. Raymond*, Essex, Mass. Application filed May 1, 1884.

4,153.—Title: "PRATT'S SPECIFIC-DIRECTION LABEL."—*G. Wells Root*, Hartford, Conn. Application filed April 2, 1884.

4,154.—Title: "TYREE'S DIGESTIVE TABLETS."—*Josiah Samuel Tyree*, Staunton, Va. Application filed May 24, 1884.

DISCLAIMER.

280,295.—*William McLean*, Los Angeles, Cal. Patent dated November 27, 1883. IMPROVEMENT IN THE PROCESS OF LAYING PAVEMENTS. Disclaimer filed June 12, 1883, by the patentee.



Enters his disclaimer to the following words in lines 50, 51, 52, 53, 54 of the first page of the specification: "and plaster, coat, or wash the edges of the pavement with common clay brought to the proper consistency, either with brush or other suitable tool, such as trowel, or the like." And to the following words in lines 61, 62, 63, 64, 65; "and that these non-cohesive partitions shall allow each section to shrink or change its level relative to contignous sections without breaking the tiles or concrete blocks forming the sections H." Also to the following words in lines 7, 8, 9 of page 2: "sixthly, in thinly coating the edge of the block first formed with non-cohesive material." He also disclaims "the forming or laying pavements by plastering, or coating, or washing the edges of the pavement with common clay or other substances brought to the proper consistency, in any manner, or by interposing any substances between adjoining blocks of concrete during the process of formation, or at any time."

PATENTS

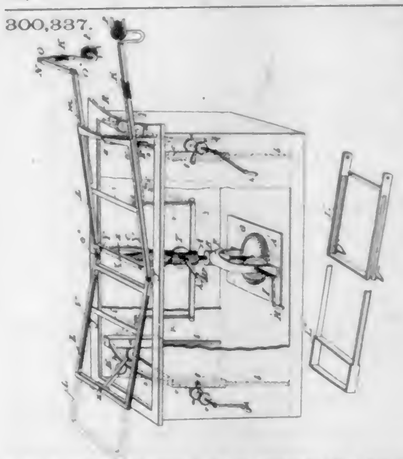
GRANTED JUNE 17, 1884.

300,336. MACHINE FOR MAKING HEADS OF CASKS, &c. GEO. H. ALLEN, Neenah, Wis. Filed Oct. 24, 1882. (No model.)

Brief.—The sliding cutter-stocks on opposite sides of the barrel-head, held between rotary disks, are operated by adjustable knuckle-joints connected by links to a lever, as described. The support for said slides is adjustable upon a center which is in the plane of the barrel-head, and also in the plane of the cutters.

Claim.—1. In a lathe for cutting bottoms, covers, and beading for wooden ware and cooperage, the tool-stock holder H, having tool-stocks T T' sliding therein in the same vertical and horizontal plane, said tool-stocks containing the tools *n n'* for cutting off, and the tools *m m'* for chamfering, rabbeting, rounding, grooving, or molding, the tool-stock T being connected to the tool-stock holder H by the knuckle-joint levers *q q'* and the tool-stock T' by the knuckle-joint levers *q'' q'''*, and advanced toward and receded from each other simultaneously by the action of the lever O upon the knuckle-joint levers aforesaid, the lever O being fulcrumed upon the tool-stock holder H and connected to the pins of the knuckle-joints by the links *p p'*, and in combination therewith the stop *s*, whereby the forward movement of the tool-stocks T and T' are governed and the depth of cut of the cutters *m m'* upon the piece being formed gaged as desired, substantially as described.

2. In a lathe for cutting bottoms, covers, and heading for wooden ware and cooperage, the tool-stock holder H, having tool-stocks T T' sliding therein in the same vertical and horizontal plane, said tool-stocks having tools for cutting off, chamfering, rabbeting, rounding, grooving, or molding, and being connected to the tool-stock holder H by the knuckle-joint levers *q q'* and *q'' q'''*, one end of each pair being connected therewith by a pin or bolt, and the opposite end with the tool-stock holder H by means of the spade-handle bolts R and R' and the adjusting and retaining nuts *r r'* and *r'' r'''*, the tool-stocks being simultaneously moved toward and from each other by the action upon the knuckle-joint levers aforesaid of the lever O, the lever O being fulcrumed on the tool-stock holder and connected to the pin of the knuckle-joint by the links *p p'*, substantially as described and shown.



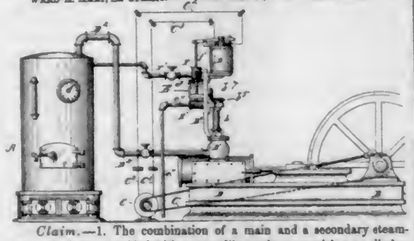
3. The combination, in a lathe for cutting bottoms, covers, and heading for wooden ware and cooperage, of a tool-stock holder having tool-stocks sliding therein in the same vertical and horizontal plane, and having mechanism for their simultaneous movement toward and from each other, consisting of the knuckle-joint levers *q q'*, connecting one and *q'' q'''* the other of said tool-stocks with the holder aforesaid, and the links *p* and *p'*, connecting the pins of the knuckle-joint in said levers, respectively, with the lever O, which is fulcrumed upon the aforesaid holder, the tool-stocks having tools for cutting off, chamfering, rounding, rabbeting, grooving, or molding, and the tool-stock holder means for its adjustment horizontally, both parallel with and in a transverse direction to the axial line of the flanges *a* and *b*, between which flanges is secured and with which is rotated the article to be cut, whereby the position of said tool-stock holder, its tool-stocks and their cutting-tools, can be adjusted in the position required relative to the aforesaid flanges for the production of articles differing from each other in their diameter, substantially as described.

4. In a lathe for cutting bottoms, covers, and heading of wooden ware and cooperage, the adjustable tool-stock holder H, having tool-stocks T T' sliding therein in the same vertical and horizontal plane, and having also mechanism for their simultaneous movement toward and from each other, the tool-stocks having cutting-tools therein, and in combination therewith the bed-piece G, suitably located and secured in a horizontal plane, its longitude being parallel with the plane of rotation of the flanges *a* and *b*, the screw I, nut J, and sliding table K, the screw I and nut J operating to adjust the sliding table K longitudinally upon the bed-piece G, said table having upon it the pivotal point L, upon which is pivoted the tool-stock holder H, and around which point it is adjustable within determined limits, and having also means for securing it therein, said pivotal point being located at the base of a vertical plane passing in a longitudinal direction through the cutting-off tools *n n'*, and in a transverse direction through the piece to be cut, and which is held between the flanges *a* and *b*, the base of the tool-stock holder being a plane at right angles with the aforesaid vertical planes, whereby its partial revolution around said point within established limits, while presenting the cutting-off tools *n n'* to the piece to be cut at an acute or obtuse angle, does not materially affect the diameter of said piece or the point of connection of the tools *n n'* in the plane in which said piece is revolving, and thereby producing articles having their external circumference forming a bevel with their plane of rotation, substantially as set forth.

300,337. GYNECOLOGICAL AND SURGEON'S OPERATING-TABLE. J. DALZELL ALEXANDER, Wooster, Ohio. Filed Aug. 31, 1883. (No model.)

Claim.—1. In combination with the table-frame J and supporting-structure with concave end R and mattress-frame L L', the rise post D, adjusting-screw B, standard F, gear G, and bed-plate I, the lateral tilt-

300,337.



ing-bar C with adjusting-screw T, and the longitudinal bar Y, provided with adjustable arms *v*, substantially as and for the purpose specified.

2. In combination with table-frame J, supporting-structure, and mattress-frame L L', the tilting-bars E, attached to each of said mattress-frames, provided with track-pulleys *p*, the vertically-adjustable pulley-tracks *s*, together with racks *o*, pinions *a*, and the operating-shaft, provided with ratchet *e* and pawl *t*, and devices for giving an inclined position to the mattress-frame, substantially as and for the purpose specified.

3. In combination with the table proper, consisting of table-frame J, supporting-structure, and mattress-frame L L', as shown and described, the stirrups P and stirrup-shafts *m*, the said shafts being provided with double joints O O', and movable sheath K', substantially as and for the purpose specified.

300,338. ELECTRICAL GOVERNOR FOR STEAM-ENGINES. EDWARD H. AMET, La Grange, Ill. Filed Jan. 25, 1884. (No model.)

Claim.—1. The combination of a main and a secondary steam-motor, the latter provided with a controlling-valve comprising a cylinder, an upper and a lower opposite port, and a piston arranged to cover either or both of said ports, with an independent supply-pipe for each motor, and with a solenoid directly connected to said valve of the secondary motor, and electrically connected with a dynamo driven by the main motor, the secondary motor being adapted to control the steam supplied to the main motor, substantially as specified.

2. In an apparatus comprising a main motor, a dynamo operated thereby, a solenoid in circuit with said dynamo, and a secondary motor, the combination, with said solenoid and with said secondary motor, of a supply-valve comprising a chest or valve body having opposite ports in different planes, and a valve or piston head adapted to cover either or both of said ports, substantially as shown and described.

3. The combination of a main steam-motor, an independent rotary steam-motor provided with oppositely-located ports, and a valve having separate connections with each of said ports, with a solenoid connected with said valve and with the valve of the main motor, substantially as specified.

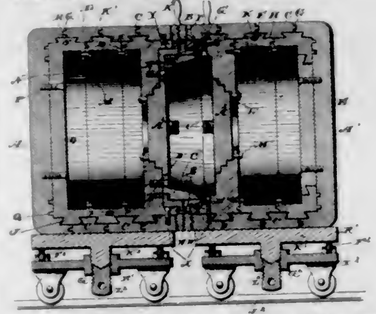
4. The combination of a governing-valve of a steam-motor, the stem of which is screw-threaded and provided with a nut, with an independently-supplied steam-motor, a suitably-connected solenoid, and mechanism for rotating said nut in opposite directions, as specified.

5. The combination of the valve B', stem *b*, gears b^2 b^3, and motor E, with the solenoid D, substantially as shown and described.

6. The combination of the valve B', stem *b*, guide *b'*, bracket b^4, nut b^5, gear b^3, and collar b^6, with an electrically-governed motor, substantially as shown and described.

7. The combination of the valve B', standard B^4, and motor E, and solenoid D, supported on the standard, substantially as shown and described.

8. The combination of the valve B', standard B^4, motor E, and solenoid D, substantially as shown and described.



9. The combination of the motor E, pipes e^3 e^4 F', valve F, and solenoid D, substantially as shown and described.

10. The combination of the motor E, having ports e^3 e^4, valve F, having ports e^6 e^6, pipe F', piston *f*, and solenoid D, substantially as shown and described.

11. The combination of the valve F, piston *f*, elastic stem *f''*, lever G, and solenoid D, substantially as shown and described.

12. The combination of the valve F, stem *f''*, lever G, bracket *g*, core D', spring g^3, and a bolt provided with adjusting-nuts g' g^3, substantially as shown and described.

300,339. SAFE. THOS. M. BRINTNALL, Kansas City, Mo. Filed Jan. 25, 1883. Renewed Mar. 22, 1884. (No model.)

Claim.—1. The combination, with a safe consisting of two sections, of a ring associated with the open end of one section, and adapted to be rotated independently thereof, and provided with devices constructed to engage and interlock with like devices carried by the open end of the other section, substantially as set forth.

2. In a safe consisting of two sections, the combination, with one section and a movable ring associated with its open end, the exposed face of the ring being provided with screw-threaded segments, of the other section of the safe, having its open end provided with segmental screw-threaded projections arranged to interlock with the segments of the ring, substantially as set forth.

3. In a safe, the combination, with the rotary doors thereof, of studs having enlarged heads secured to the inner faces of said doors, and bearings or jambs formed to receive the doors, and provided with curved slots having enlarged ends to receive the stud-heads, whereby the studs are passed through the jamb and their heads brought to bear up against the inner side thereof, and the doors locked when partially rotated, substantially as set forth.

4. In a safe consisting of two sections, the combination, with removable doors fitting into said sections and having screw-threaded studs projecting from their outer faces, of detachable carriers for removing and replacing said doors, and consisting, essentially, of uprights mounted on rollers and pivoted to the standards of the respective safe-sections, and internally-threaded sleeves journaled in the upper ends of the uprights, and provided with handles, substantially as set forth.

5. A safe the shell of which is composed, essentially, of a series of outer and a series of inner peripherally-interlocked rings, the inner rings being arranged to break the joints of the outer, substantially as set forth.

6. A safe the shell of which is composed of a series of the outer rings having interlocked edges, and a series of inner rings having interlocked edges and bolted together, the contiguous faces of the inner and outer rings being mortised and dovetailed, as described, to interlock, substantially as set forth.

7. The combination, with a safe consisting of two sections, of adjustable rotating standards for said sections, the said standards being secured, respectively, to the sections, and being provided each with a center adapted to adjustably unite with a carriage, substantially as set forth.

8. A safe the shell of which is composed, essentially, of outer and inner contiguously or edge-locked rings, the inner series of rings being arranged to break the joints between the outer series, substantially as set forth.

9. The combination, with a safe consisting of two sections, of rotating standards rigidly secured to said sections, and carriages for the respective standards, the standards being constructed to rotate with the sections independently of the carriages, and the latter being arranged to run on the same trackway, and to be thereby held against rotation, substantially as set forth.

10. The combination, with a safe consisting of two sections and rotating standards secured thereto and provided with a center, of a carriage for each standard, having devices for adjusting the relative position of the standard thereto, substantially as set forth.

11. The combination, with a safe consisting of two sections, and the described adjustable hinge for uniting said sections, of a rotating standard and a carriage for each section, whereby they are separated after being unlocked, and then rotated to present their open ends to the front, substantially as set forth.

300,340. ANTI-FRICTION BEARING FOR MACHINERY. PATRICK BROWNLEE, St. John, New Brunswick, Canada. Filed Nov. 9, 1883. (No model.)

Claim.—1. An anti-friction bush, box, or bearing provided with a series of revolving rollers supported between plates or disks, said disks being adapted to revolve in independent bearings, substantially as shown and described.

2. An anti-friction box or bearing provided with a series of revolving rollers supported between plates provided with bearing-recesses so arranged that the rollers shall not touch each other, and connected loosely by rivets, rods, or bars in such manner that the said plates also revolve in independent bearings, substantially as shown and described.

3. In an anti-friction box or bushing, the combination, with the casing A, of revolving plates B C, the former adapted to work in a bearing-recess in the casing, and the latter against the end thereof, and a series of rollers, F, arranged in position to support a shaft or ship's blocks, carriage-wheels, or for other suitable purpose, substantially as described.

4. In an anti-friction bush, box, or bearing, the combination, with a fixed case or frame, of a pair of connected revolving disks or plates adapted to work in independent bearings, and a series of anti-friction rollers working in recesses in said plates, substantially as described.

5. An anti-friction bush, box, or bearing adapted to keep the rollers in position and equally apart by means of the recesses and projections on the end of plates B and C, and to work in suitable bearings, substantially as described.

6. A casing provided with a recess in one of its ends, and its other end having a non-recessed bearing, in combination with revolving disks secured to each other, and having anti-friction rollers interposed between said disks, substantially as described.

7. The combination of disks having raised projections from their faces, in which are formed recesses for journal-bearings for anti-friction rollers, the said disks having bearings, and being arranged face to face and suitably secured to each other by tie-rods, substantially as set forth.

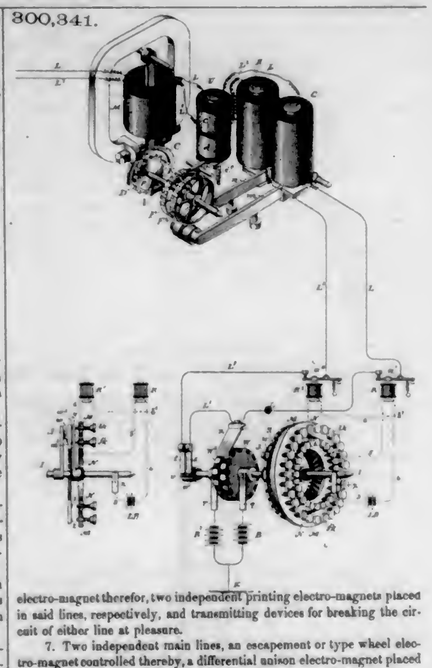
8. The combination, in a device for lessening friction in journal-bearings, of the plates or disks provided with oil-jackets beyond the bearings of the anti-friction rollers which are between said disks, substantially as shown and described.

9. The combination, in an anti-friction journal-bearing box, of the bearing disks and rollers, the said disks having projecting bearings and recesses therein, the walls of said recesses being cut away so as to permit the ready removal of the rollers when the nest is detached from the box, substantially as set forth.

300,341. PRINTING-TELEGRAPH. CHARLES L. BUCKINGHAM, New York, and WILLIAM R. VANSIZE, Brooklyn, assignors to the Western Union Telegraph Company, New York, N. Y. Filed Mar. 8, 1884. (No model.)

Claim.—1. The combination, in a printing-telegraph, of two main lines, two independent press-magnets respectively placed therein, two type-wheels, and an electro-magnetic device therefor for controlling their rotation.

2. The combination, in a printing-telegraph, of two independent main lines, two independent press-magnets respectively placed therein, two type-wheels connected together, and an escapement device and electro-magnet for controlling their rotation.



3. The combination, in a printing-telegraph, of two main lines including the multiple-arc coils of the escapement or type-wheel magnet, and two independent press-magnets whose coils respectively form parts of said main lines.

4. The combination of two independent main lines, an escapement electro-magnet controlled thereby, and two independent printing-magnets whose coils form parts, respectively, of said lines.

5. The combination of two independent main lines, a type-wheel escapement device controlled thereby, a differential unison-magnet, and two independent printing electro-magnets placed in said lines, respectively.

6. The combination of two main lines, an escapement or type wheel

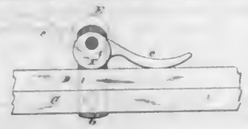
300,341.

electro-magnet therefor, two independent printing electro-magnets placed in said lines, respectively, and transmitting devices for breaking the circuit of either line at pleasure.

7. Two independent main lines, an escapement or type wheel electro-magnet controlled thereby, a differential unison electro-magnet placed in said lines, two independent printing electro-magnets, and unison transmitting devices for breaking the main circuit through one of said lines to release the unison mechanism.

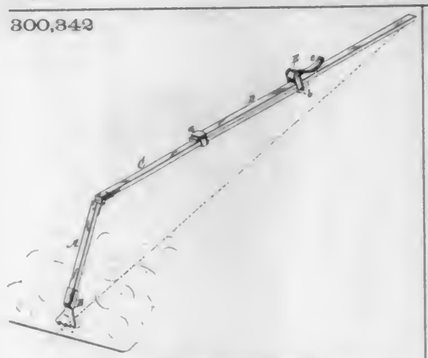
8. Two independent main lines, commutating devices for simultaneously transmitting thereon short electrical impulses, devices for lengthening an impulse upon one line and for breaking the other line, substantially as described, a multiple-arc type-wheel electro-magnet, and two independent printing electro-magnets in said lines.

9. The combination of the differential unison electro-magnet U, armature-lever *l*, unison-arm *p*, type-wheel lines L L', and a circuit-breaker for periodically breaking line L', substantially as described.



10. The combination, in a printing-telegraph instrument, of a rotating transmitter-arm, a series of transmitting-keys for arresting said arm, circuit-breaking connections for said keys, a sunflower arrangement, as described, two main lines, and relays R R', for breaking the main lines, substantially as specified.

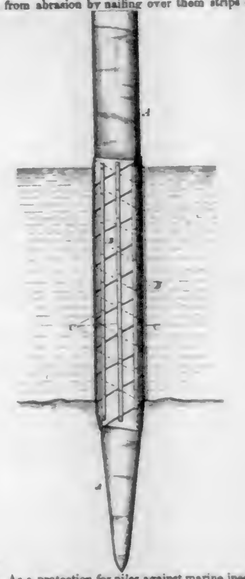
11. The combination, in a printing-telegraph, of a rotating circuit wheel or wheels, a rotating transmitter-arm, and two series of keys for arresting said transmitter-arm, a sunflower arrangement, as described, two main lines, and transmitting devices for breaking either of the main lines by its associated series of transmitting-keys, substantially as described.



12. In a printing-telegraph, the combination of two independent main lines, each having an independent printing-magnet, two independent press-levers, two type-wheels rigidly connected together, and transmitting devices for prolonging an electrical impulse upon one line while the other line is broken, and vice versa.

300,342. CARPET-STRETCHER. FRED W. BURNS, Lemars, Iowa. Filed Apr. 24, 1884. (No model.)

Claim.—A carpet-stretcher consisting of two arms hinged together, one of which is provided with a suitable claw, an extensible arm, and a cam or eccentric locking device for holding the arm in an adjusted position, substantially as and for the purpose specified.

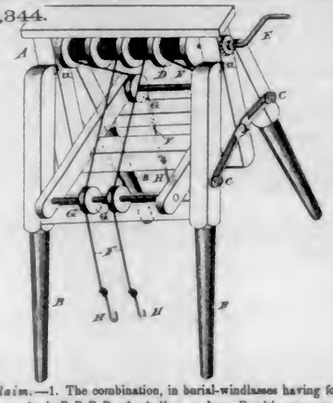


300,342

300,343. PROTECTING PILES. JACOB A. CAMP, Sandusky, Ohio. Filed Feb. 19, 1884. (No model.)

Brief.—Consists in covering a pile with strips of canvas or cloth spirally wound and saturated with asphalt or similar material, and protecting the same from abrasion by nailing over them strips of board.

Claim.—1. As a protection for piles against marine insects, a covering of cloth or other fibrous material secured around a pile, and wooden or other strips secured to the outer face of the flexible covering for the purpose of protecting the latter against abrasion.



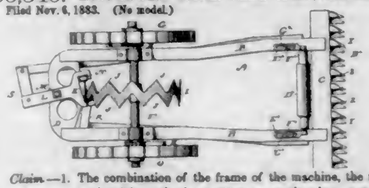
2. As a protection for piles against marine insects, a covering of cloth impregnated with asphalt or other similar material, and secured around the pile, and wooden or other strips secured to the covering for the purpose of protecting the latter against abrasion.

3. The combination, with a pile wholly or partly coated with asphalt or other similar material, of a flexible covering secured around the pile and impregnated with asphalt or other similar material, and wooden or other strips secured against the outer face of the flexible covering, substantially as set forth.

4. The combination of a pile wholly or partly covered with asphalt or other suitable material, a strip of canvas wound spirally around the pile and coated or impregnated with asphalt, and a second strip of fibrous material wound spirally in the opposite direction around the first strip, substantially as set forth.

300,344. BURIAL-WINDLASS. CHARLES M. CHAMBLIN and THOMAS WALTZ, Newton, Ill. Filed Apr. 17, 1884. (No model.)

300,344.



Claim.—1. The combination, in burial-windlasses having folding legs or standards B B B B, of windlass or drum D with ropes or cords F F F F, pulleys G G G G, and hooks H H H H, all substantially as set forth.

2. The combination, in burial-windlasses with grappling-hooks having bar *d*, of rings *e e e*, swinging rods *f f*, and brace-rods *g g*, substantially as set forth.

3. The grappling-hooks provided with bar *d*, rings *e e e*, swinging rods *f f*, and brace-rods *g g*, passing through center ring, *i*, substantially as described, and shown in Fig. 4, and for the purpose set forth.

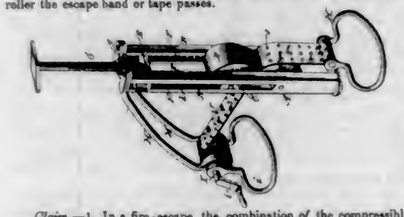
300,345. LAWN-MOWER. CHARLES WARREN CHENEY, Athol, Mass. Filed Nov. 6, 1883. (No model.)

Claim.—1. The combination of the frame of the machine, the rotary axle carrying the drive-wheels, a cutter-supporting bar secured across the front of the frame, a cam-wheel secured about centrally on the axle, a horizontally-oscillating lever fulcrumed on the frame just in rear of the cam-wheel, longitudinal oscillating levers fulcrumed at the sides of the frame, pivoted links connecting these longitudinal levers with the main oscillating lever respectively in front and in rear of its fulcrum, and the transverse cutter-bars pivotally connected with the ends of the longitudinal levers, substantially as set forth.

2. The combination of the inclined frame of the machine, the cutter-supporting bar secured to the lower front end thereof, the supporting-roller journaled just back of said bar, the rotary axle having the cam-wheel, a lever fulcrumed on the frame in rear of the axle and oscillated by the cam, the longitudinal side levers pivoted on the frame at its sides, the links connecting said levers with different ends of the oscillating levers, and the oppositely-moving cutter-bars arranged one above the other, and pivotally connected to the lower ends of the longitudinal levers, substantially as set forth.

3. In a lawn-mower, the combination of the independent series of knives or cutters disposed one series directly above the other and reciprocating in opposite directions, the teeth being formed with one straight edge at about a right angle to the cutter-bar, substantially as and for the purpose set forth.

300,346. CASE FOR PENCILS AND SIMILAR INPLEMENTS. RICHARD M. COLLARD, New York, N. Y., assignor to Le Ray W. Fairchild, same place. Filed Apr. 19, 1884. (No model.)

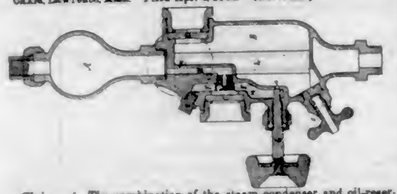


Claim.—1. The tube C, having the screw mechanism or tube *a* rigidly secured to it at one end, and provided with the internal shoulder or stop at its opposite end, in combination with the tube D, provided with the external shoulder or stop, all arranged to operate substantially as shown and described.

2. The telescopic case consisting of the external tube, C, having the screw mechanism or tube *a* rigidly secured to it at one end, and provided with the internal shoulder or stop, *b*, at its opposite end, and the tube D, provided with the external shoulder or stop, *d*, in combination with a holding sheath or case, A, all arranged to operate substantially as shown and described.

300,347. FIRE-ESCAPE. MATTHEW C. CORRIGAN, Hollyrood, Kans. Filed Apr. 7, 1884. (No model.)

Brief.—A fire-escape in which springs are interposed between the follower-plate and the compressible roller, between which and the fixed roller the escape band or tape passes.



Claim.—1. In a fire-escape, the combination of the compressible roller journaled in fixed bearings, a similar roller journaled in movable bearings, springs arranged to bear against said bearings, whereby the rollers are pressed together, and a suitable tape, substantially as set forth.

2. The combination of the stationary roller, the movable roller, a follower-plate, springs arranged between the follower-plate and the bearings of the movable roller, and a set-screw turned through a threaded bearing and pressing against the follower-plate, whereby the tension of the device may be regulated and adjusted, substantially as set forth.

3. The combination, with the stationary roller and the movable roller, of springs arranged to press against the bearings of the movable roller and force same against the stationary one, and means whereby the tension of said springs may be varied, substantially as set forth.

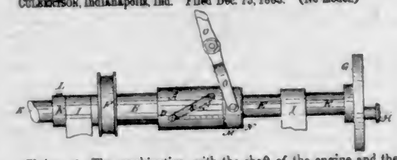
4. The fire-escape, substantially as herein described and claimed, consisting of the main frame, the stationary roller journaled therein, the movable roller journaled in bearing-blocks held in guides in the main frame, the follower-plate, the springs arranged between the follower-plate and bearing-blocks, the adjusting-screw, the bracket-arms extended from the framing, the reel journaled therein, and the tape, substantially as and for the purposes specified.

300,348. LUBRICATING STEAM-ENGINES. WARREN HILLIARD CRANE, Lawrence, Mass. Filed Apr. 4, 1884. (No model.)

Claim.—1. The combination of the steam-condenser and oil-reservoir with a passage leading from the said condenser to and opening into the lower part of the said reservoir, and having to its educt leading into the said reservoir a screw-plug or valve, and containing, or having in common with it and said passage, an observation-chamber adapted to hold a suitable liquid, through which the water on its way from the condenser to the reservoir may pass visibly in drops, substantially as described, such suitable liquid being separate and distinct or differing from the oil used for lubricating.

2. The combination of the steam-condenser A and the oil-reservoir B, (the latter having a feeding-outlet, *g*, provided with a suitable valve or screw-plug,) with the chamber F, furnished with an observation-pane, C, and connecting with the said condenser and opening into the lower part of the oil-reservoir, and having to its educt leading into the said reservoir a screw-plug or valve, all being substantially as shown and described.

3. The combination of the steam-condenser A and oil-reservoir B, (the latter having a feeding-outlet, *g*,) with a chamber, F, provided with an observation-pane, C, and containing a charge of oil or liquid lighter than water and incapable alone of chemical combination therewith, the said chamber having a passage to it from the said condenser, and communicating with the oil-reservoir by another passage having a suitable screw-plug or valve, all being substantially as hereinbefore described, and as represented.



4. The combination of the condenser A, educt E, water-trap H, chamber F, observation-window C, and oil-reservoir B, such reservoir being connected with the said chamber and provided with a suitable outlet, and all being substantially as herein set forth.

5. The combination of the condenser A, educt E, water-trap H, chamber F, observation-window C, and the oil-reservoir B, (the latter having an outlet, *g*,) with means, substantially as described, viz: the screw-plug G, for opening and closing the communication between the said chamber and reservoir, regulating the passage of water from the chamber to the reservoir and of oil from the reservoir to the part to be lubricated, all being substantially as set forth.

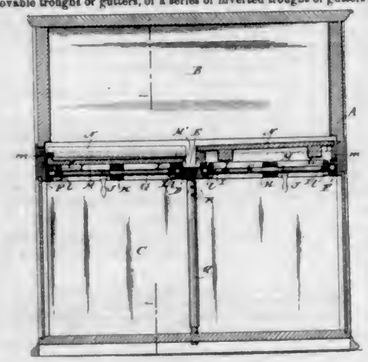
6. The improved art or method of lubricating steam-engines, it consisting in causing water to first pass visibly in drops through a liquid lighter or having a specific gravity less than that of water and incapable alone of chemical combination therewith, and separate and distinct or differing from the oil used for lubricating, and afterward to pass into the reservoir at its lower part only, containing such oil, so as to force upward such oil to a position for discharge of it from the said reservoir, all being substantially as set forth.

7. The combination of the steam-condenser and oil-reservoir with a passage leading out of the former into the lower part of the latter without having any separate communication with the upper part of the said reservoir, but containing, or having in common with it, the said passage, an observation-chamber adapted to hold a suitable liquid, through which the water in its way from the condenser to the reservoir may pass visibly in drops, substantially as described.

300,349. VALVE-GEAR FOR REVERSING ENGINES. WILLIAM CULKERTON, Indianapolis, Ind. Filed Dec. 15, 1883. (No model.)

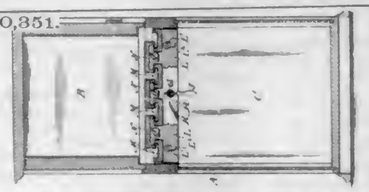
Claim.—1. The combination, with the shaft of the engine and the sleeves A and B, the latter and the eccentric made in one piece, of the pins D *d* and the slots *a* and C, all arranged as shown and described.

2. The combination, in a valve-gear, of the shaft and the sleeves A and B with the pins D *d* and the slots *a* C, said slots being inclined in opposite directions, whereby the eccentric is shifted by a slight movement of the outer sleeve, substantially as shown and described.



300,350. GRAINING COMPOUND. WILLIAM HENRY DOW, Burlington, Vt. Filed Dec. 29, 1883. (No specimens.)

Claim.—The herein-described graining composition, consisting of whiting, wheat-flour, and burnt umber, mixed with vinegar or beer, in about the proportions specified.



300,351. REFRIGERATOR. ISAAC T. DYER, Quincy, Ill., assignor of one-half to John T. Pieper and Henry C. Pfeiffer, both of same place. Filed Mar. 20, 1884. (No model.)

Claim.—1. A refrigerator provided with a rack formed of vertically-movable troughs or gutters, over which fixed troughs or gutters are held, the said lower gutters being arranged to close the spaces between the upper gutters, whereby communication between the two chambers may be shut off, substantially as herein shown and described.

2. In a refrigerator, the combination, with a series of vertically-movable troughs or gutters, of a series of inverted troughs or gutters held

300,351.

above the vertically-movable troughs or gutters, adapted to close the spaces between and receive the adjacent flanges of the upper gutters, and of means for moving the lower troughs or gutters vertically, substantially as herein shown and described.

3. In a refrigerator, the combination, with a series of vertically-movable troughs or gutters, of a series of inverted troughs or gutters held above the vertically-movable troughs or gutters, adapted to cover the spaces between the upper troughs, of means for moving the lower troughs or gutters vertically, and of means for locking the lower troughs or gutters in place when raised, substantially as herein shown and described.

4. In a refrigerator, the combination, with a series of gutters or troughs held on vertically-movable bars, of inverted fixed gutters held over the vertically-movable gutters, the said troughs being adapted by their interlocking flanges to act as valves between the two chambers, substantially as herein shown and described.

5. In a refrigerator, the combination, with a series of gutters, of vertically-movable bars supporting them, and a cam-shaft for moving the said bars vertically, substantially as herein shown and described.

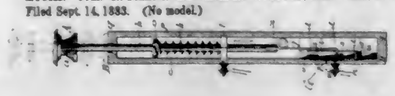
6. In a refrigerator, the combination, with a series of gutters, of vertically-movable oars supporting them, cam-shafts for moving the supports vertically, handles for turning the cam-shafts, and means for locking the handles in place after turning the shafts, substantially as herein shown and described.

7. In a refrigerator, the combination, with a series of gutters or troughs, of vertically-movable bars for supporting them, cam-shafts for moving the supports vertically, pivoted handles on the cam-shafts, and of notched crossed bars adjoining the handles, substantially as herein shown and described.

8. In a refrigerator, the combination, with a transverse beam, D, having a gutter, E, of the cam-shafts G, the handles J, pivoted to the same, the cross-bars H, provided with notches K, for receiving the handles and holding them in place, and the gutters M, resting on the bars L, supported by the cam-shafts, substantially as herein shown and described.

9. In a refrigerator, the combination, with the transverse beam D, having a groove in its upper surface, of the cam-shafts G, the gutters M, and the inverted gutters N, held above and overlapping the sides of the gutters M, substantially as herein shown and described.

10. In a refrigerator, the combination, with the gutters or troughs M, resting on vertically-movable supports, of the fixed inverted gutters or troughs provided with the blocks O on their under surfaces, substantially as herein shown and described.



11. In a refrigerator, the combination, with a central cross-bar, D, provided with a groove in the upper surface, the end bars, F, the cam-shafts G, journaled in the cross-bars H and F, the strips L, held on the bars D and F by pintles passing through vertical slots, the gutters M, resting on the strips L, and the inverted gutters N, resting above and overlapping the sides of the gutters M, and provided on their under surfaces with blocks O, which pass in between the adjoining sides of the gutters M, substantially as herein shown and described.

12. In a refrigerator, the combination, with a cross-beam, D, having a gutter, E, of the cross-beams F, the gutters M, the inverted gutters N, and the outlet-pipe Q, having apertures R, extending from the trough or gutter E through the refrigerating-chamber to the bottom of the refrigerator-casing, substantially as herein shown and described.

300,352. TANNING PROCESS. SAMUEL S. EDDY, Rochester, N. Y. Filed Apr. 10, 1884. (Specimens.)

Claim.—The improved method of tanning pickled hides, or hides fresh from the pickle, which consists in first partially tanning by subjecting them in the pickled condition to an acidulating composition substantially of the character set forth, then washing and draining, and next completing the operation of tanning by the action of an alkaline tanning composition substantially of the character set forth, and then drying.

300,353. TELEGRAPHIC TRANSMITTER FOR UNSKILLED OPERATORS. JOHN N. FARRAR and CHARLES W. MORSE, New York, N. Y. Filed Sept. 14, 1883. (No model.)

Claim.—1. The guide-piece G, for governing the action of the stylus-pole *j*, in combination with the transmitting-track *g d*, having saw-like click-steps *s s*, with the return-track *s h s*, with the partition-ridge *i*, substantially as described, and for the purpose set forth.

2. The stylus-wire *j*, forming one pole of the battery, in combination with the tracks *s s* and *s h s* in the guide-body G, containing the opposite pole, substantially as described, and for the purpose set forth.

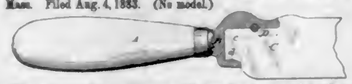
3. The metallic partition *l* in the key-groove to which is connected one of the battery-wires *m*, in combination with the key-rod *b*, extending through said partition, and the stylus-pole *j* and guide-body G, connected substantially as described, and for the purpose set forth.

300,354. LATCH-CLASP FOR DRIVING-REINS. JOHN H. FENTON, Chicago, Ill. Filed Oct. 30, 1882. (No model.)

Claim.—1. The combination, with a rein or strap doubled on itself to form a loop, of the frame provided with the pivoted latch depressed between its ends and applied so as to receive within the depressed portion the double portion of the rein to form a loop beyond the end of the frame, substantially as described.

2. The combination, with the frame provided with the pivoted depressed cross-latch, of the rein or strap doubled upon itself, and having the doubled portion lying upon the latch and extending beyond the end of the frame, so as to form a loop, substantially as described.

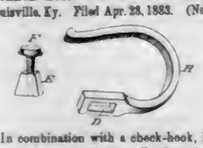
300,355. HOSE-REEL. HENRY L. GARDNER, Springfield, Mass., assignor to David S. Loomis, same place. Filed July 3, 1883. (No model.)



Claim.—1. A hose-reel consisting of two wheels connected by bent bars secured to the rims of the wheel, substantially as shown and described.

2. A skeleton hose-reel consisting of two rims without spokes or hubs, and rigidly connected together by bent bars, substantially as shown and described.

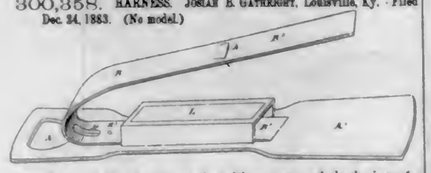
3. A hose carriage or reel having the hose-supporting parts *b* depending inwardly and secured to the side portion at or near their peripheries, substantially as described.



300,356. KNIFE AND FORK. JOS. W. GARDNER, Shelburne Falls, Mass. Filed Aug. 4, 1883. (No model.)

Claim.—1. In combination with handle A and bolster B, part C, having its end inserted in the bolster, and a locking-pin, D, passed transversely through the bolster and through part C, and serving to retain said part in place without the aid of other fastening.

2. In combination with a handle provided with bolster B, having slot *a*, and socket *b*, the latter formed with curved wall *d*, part C, curved to conform to wall *d*, whereby said part is adapted to move upon said wall as a center of motion, and thus to be swung into the socket *b*, and a transverse locking-pin, D, passing through the bolster and through part C, as shown, whereby part C is prevented from being withdrawn from the bolster without first withdrawing the pin.

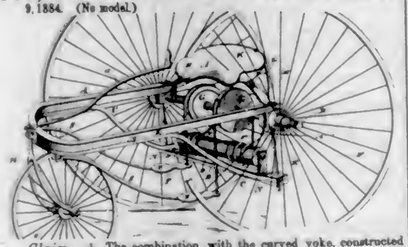


300,357. CHECK-HOOK FOR HARNESS-SADDLES. JOSIAH B. GATHRIGHT, Louisville, Ky. Filed Apr. 23, 1883. (No model.)

Claim.—1. In combination with a check-hook, H, provided with a suitable hole, D, a tapering or beaded nut, E, adapted to project into the hole from below until practically flush with the under surface of the shank of the hook, and up into the bolt-hole of the tree, and a screw, F, adapted to enter said bolt-hole and nut from above, substantially as set forth.

2. In a fastening for check-hooks, the combination of the screw F and the tapering or beaded nut E, said nut being adapted to penetrate through the check-hook and up into the bolt-hole of the tree, and tapped obliquely, as and for the purpose set forth.

300,358. HARNESS. JOSIAH B. GATHRIGHT, Louisville, Ky. Filed Dec. 24, 1883. (No model.)



Claim.—1. In the construction of hame-tugs and check-pieces for harness, to adapt these parts for sale without trimmings, the combination of a folded or doubled buckle-strap and a box-loop secured to one layer only of the buckle-strap, as and for the purpose shown and described.

2. In the construction of hame-tugs and check-pieces for harness, adapted for sale without trimmings, the combination of a folded or doubled buckle-strap, a box-loop secured to one layer only of the buckle-strap, and a safe, all as shown and described.

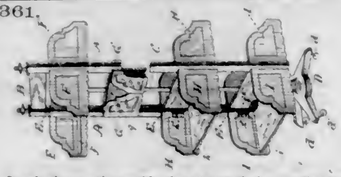
3. In the construction of hame-tugs and check-pieces for harness, adapted for sale without trimmings, the combination of a folded or doubled buckle-strap, a box-loop secured to one layer only of the buckle-strap, and a supplementary strap covering the inside bottom of the loop, all as and for the purpose shown.

300,359. TRICYCLE. JOHN GOWDEY, Janesville, Wis. Filed Apr. 9, 1884. (No model.)

Claim.—1. The combination, with the curved yoke, constructed substantially as described, having bearings or boxes secured thereto at its free ends, an axle journaled in said boxes, wheels secured to the axle, and pulleys connected to said axle by friction-clutches, of a cross-bar suspended below the axle by the rods and bar, as described, a roller journaled in bearings in said cross-bar, ropes secured to said roller and passing up over the pulleys, and pedal-levers, the front ends of which are secured to the curved portion of the yoke, while their rear ends are secured to the free ends of the ropes.

2. A tricycle consisting, essentially, of the curved U-shaped yoke, the axle journaled thereto, wheels secured to the axle, the steering-wheel, the pulleys, the cross-bar suspended below the axle in the manner described, the roller journaled in bearings on said cross-bar, the pedals, and ropes connecting the roller and pedals, all of the above parts constructed and combined substantially as and for the purpose set forth.

300,360. BASE-BALL BAT. WM. GRAY, Hartford, Conn., assignor of one-half to Ernest Cady, same place. Filed Mar. 27 1884. (No model.)



Claim.—1. As an improved article of manufacture, a base-ball or cricket bat or the like implement having its handle-section covered with sand or the like granulated material firmly cemented thereto, all substantially as described, and for the purpose set forth.

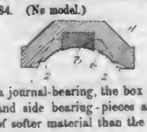
2. As an improved article of manufacture, a base-ball bat, *a*, having the surface of its handle-section *b* roughened by a covering-layer of granulated material firmly attached thereto by shellac or the like cementing material, all substantially as described.

300,361. BOOK-CASE. HENRY S. HALE, Philadelphia, Pa. Filed Aug. 6, 1883. (No model.)

Claim.—1. In a book-case, the combination of a vertical supporting-frame, end boards projecting from the frame at the ends of the shelves, and shelves hinged at their inner edges to the vertical frame at points intermediate between the end boards, substantially as set forth.

300,361.

2. In a book-case, the combination of a vertical supporting-frame, end boards hinged at their inner edges to the supporting-frame by vertical pivots, and shelves arranged between the end boards and supported upon horizontal pivots, substantially as set forth.

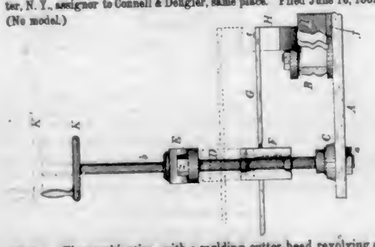


3. The combination of a vertical supporting-frame, end boards hinged at their inner edges to the supporting-frame by vertical pivots, shelves arranged between the end boards, and hooks and staples attached to the end boards and the horizontal shelves, and connecting them, and adapted to support the end boards against outward thrust, substantially as set forth.

4. In a book-case, the combination of a vertical supporting-frame, end boards projecting from the supporting-frame at the ends of the shelves, shelves arranged between the end boards and hinged to the main frame by horizontal pivots, and vertical partitions which constitute a part of the main frame between the inner hinged edges of two adjacent horizontal shelves, substantially as set forth.

5. In a book-case, the combination of a vertical supporting-frame, end boards hinged by their inner edges to the supporting-frame, swinging shelves hinged by their inner edges to the main frame intermediate between the end boards, and devices for connecting the ends of the shelves with the swinging end boards, substantially as set forth.

6. In a book-case, the combination of a base-piece adapted to rest upon the floor, a vertical shaft supported at its lower end in a base-piece, a vertical supporting-frame pivoted upon the vertical shaft, a series of horizontal shelves hinged at their inner edges upon opposite sides of the frame, and a series of vertical end boards hinged at their inner ends to opposite sides of the frame, substantially as set forth.

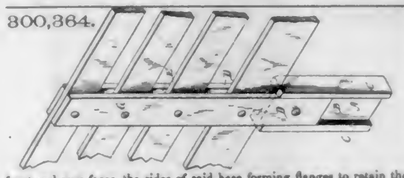


300,362. CAR-AXLE BOX. WILLIAM A. HARDY, Fitchburg, Mass. Filed Mar. 24, 1884. (No model.)

Claim.—1. In a journal-bearing, the box and casing having a central bearing-piece and side bearing-pieces all of lining material, the central piece being of softer material than the side pieces, substantially as described.

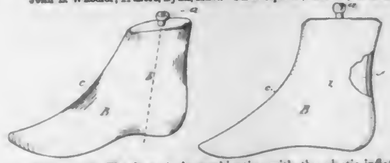
2. In a journal-bearing, the box or casing having a central bearing-piece and side pieces of lining material, the said central bearing-piece having its bearing-surface raised or projecting beyond that of the side pieces, and constituting the sole bearing when the box is first applied to the journal, substantially as described.

300,363. GUARD FOR CUTTER-HEADS. THOMAS HARPS, Rochester, N. Y., assignor to Connell & Deagler, same place. Filed June 16, 1882. (No model.)



Claim.—The combination, with a molding cutter-head revolving on a vertical shaft above a suitable work-supporting table, of the yielding guard H, supported between the operator and the head by one or more springs, G, attached to the table in rear of the head, and having its lower edge constructed to bear on the work opposite the head, and operating to steady the work during the cutting operation, substantially as and for the purposes set forth.

300,364. FENCE-POST. ABRAHAM C. HARRISON, Providence, Ohio. Filed Nov. 13, 1883. (No model.)



Claim.—In a post for fences and the like, the base constructed of earthenware or tiling and provided with vertical recesses formed in its

300,364.

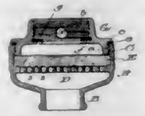
front and rear faces, the sides of said base forming flanges to retain the standards in place, in combination with the standards adjustably secured within said recesses, as and for the purpose set forth.

300,365. DEVICE FOR EXPANDING ARTICLES OF FLEXIBLE MATERIAL. CHARLES L. HOGGINS, Montreal, Quebec, Canada, assignor to John E. Wheeler, Trustee, Lynn, Mass. Filed Apr. 14, 1884. (No model.)

Claim.—1. The form A, in combination with the elastic inflator B, arranged and adapted as described, and for the purposes specified.

2. In a device for giving shape to flexible hollow articles by elastic pressure, a narrow form held within the device, having the general outline of the article, substantially as and for the purposes set forth.

300,366. CARPET-FASTENER. ERNEST HORNECK and ELSIE HORNECK, St. Paul, Minn. Filed Feb. 21, 1884. (No model.)

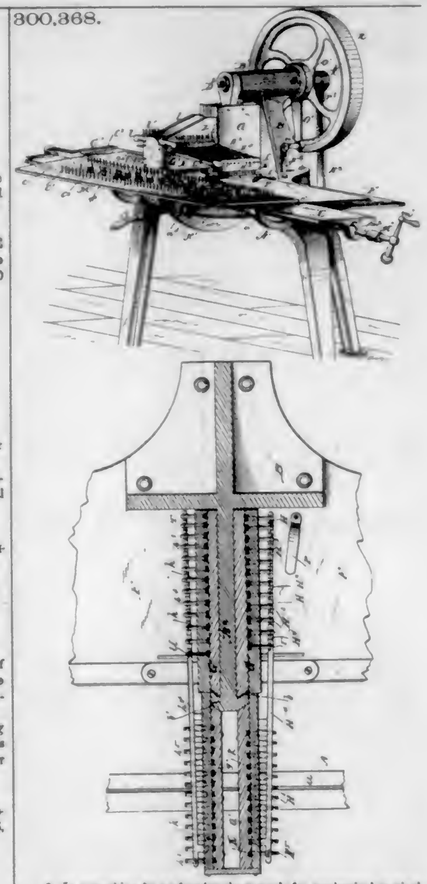


Claim.—1. A carpet-fastening consisting of a flexible strip of leather, cloth, or metal, provided with metal washers or plates on the upper and lower sides in which tacks or nails are rigidly set, substantially as set forth.

2. As a new article of manufacture, a carpet-fastening consisting of a flexible strip of leather, cloth, or metal, provided with tacks or nails rigidly secured thereto by washers or metal plates, and having rings or handles at one or both ends, substantially as set forth.

300,367. FILTER. BENJAMIN HOLLAND, Jr., Providence, R. I., assignor of one-half to Thomas S. Nowell, Boston, Mass. Filed July 16, 1883. (No model.)

Brief.—The part E is composed of felt.



Claim.—The combination and arrangement, substantially as shown and described, in a filter, of the shell A, having the internal foraminous shelf, D, cast therewith, and forming chambers above and below the shelf, the attaching cap or cover G, screw-threaded to engage an internal screw-thread in the shell to connect the two, and the disk of felt or textile filtering substance E, supported by the said shelf, and held in place by the said cap or cover screwed down upon it, as set forth.

300,368. MACHINE FOR PUNCHING PERFORATED SHEET-MUSIC. HENRY B. HORTON, Ithaca, N. Y., assignor to the Automatic Music-Paper Company, Boston, Mass. Filed Sept. 30, 1881. (No model.)

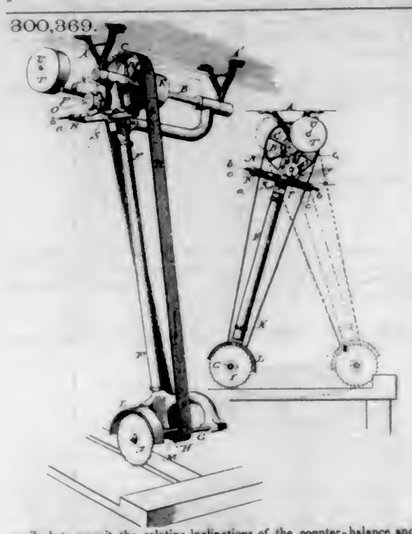
Claim.—1. In a machine for perforating sheet-music for mechanical musical instruments, the combination, substantially as before set forth, of a reciprocating head, a series of independent punches movably mounted therein, and a corresponding series of bolts, also mounted in said head, and adapted to engage with and drive one or more of said punches.

2. In a machine for perforating sheet-music for mechanical musical instruments, the combination, substantially as before set forth, of two rows of independent punches and dies, the punches and dies in one row being arranged opposite to the spaces between the punches and dies in the other row.

300,368.

3. In a machine for perforating sheet-music for mechanical musical instruments, the combination, substantially as before set forth, of a reciprocating head carrying a row of independently-movable punches, and corresponding independently-movable feelers, and locking bolts and levers intermediate between the feelers and punches, and a step-wise fed pattern under that portion of the reciprocating head assigned to the feelers.

4. In a machine for perforating sheet-music for mechanical musical instruments, the combination, substantially as before set forth, of two rows of punches and corresponding dies, the step-wise fed pattern at one end and at right angles to said rows, and the feed-apron connected laterally with the pattern-carriage, and adapted to move through between the punches and dies for the attachment of the sheet or sheets to be punched.

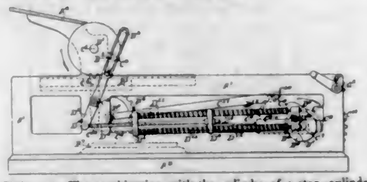


5. The combination, substantially as before set forth, of the reciprocated feelers of a machine for perforating sheet-music for mechanical musical instruments, and a changeable pattern composed of a plate provided with rows of holes, and changeable pins or pins and blocks.

300,369. CIRCULAR SAWING MACHINE. LEVI HOUSTON, Montgomery Station, Pa. Filed Apr. 9, 1884. (No model.)

Claim.—1. In combination with a swinging saw-frame, a counter-balance, and an arm or lever for said counter-balance connected with the swinging frame, substantially as described, the pivot of said arm or lever being located below the center of gravity and at a point intermediate between the limits of movement of said counter-balance, substantially as and for the purpose explained.

2. In combination with a swinging saw-frame, a counter-balance therefor, and an intermediate coupling connecting the frame and the counter-balance, said connection being adjustable, substantially as described, to permit the relative inclinations of the counter-balance and the swinging frame to be regulated or varied at will.



300,369.

3. In combination with hanger A, swinging saw-frame F, provided with yoke R, counter-balance Q, provided with hub P and weight T, and pivoted to hanger A, and band S, passing about the hub P, and having its ends attached, respectively, to opposite ends of the yoke, substantially as shown and described.

4. In combination with a hanger or support, a swinging saw-frame, F, provided with a yoke, R, an arm, Q, provided with counter-balance T, and hub P, journaled upon support independent of the swinging frame, a band, S, passing about the hub P, attached at its ends to opposite end of the yoke R, one or both ends of the band being provided with a threaded stem and nut, substantially as and for the purpose set forth.

300,370. STOP-CYLINDER PRINTING-MACHINE. BERTHOLD HUBER, Trenton, Mass. Filed July 6, 1883. (No model.)

Claim.—1. The combination, with the cylinder of a stop-cylinder printing-press, of a series of springs, or equivalent cushioning device, substantially as described, together with a crank, or an equivalent cam with one or more rollers, and also suitable and proper connecting mechanism, substantially as shown, and so arranged as to help to relieve the pressure on the cams which stop and start the cylinder, substantially as shown.

2. The combination, with the cylinder of a stop-cylinder printing-press, of a disk, D', on cylinder-shaft, roller D^4, slotted lever D^3, working therewith, connecting-rod D^4, together with a series of springs or equivalent cushioning device, substantially as described, the connecting-piece D^7, the crank-disk D^6, and pin D^{12}, or an equivalent cam with one or more rollers, substantially as described, and for the purpose set forth.

3. The combination, with the crank-disk D^6 and pin D^{12}, or an equivalent cam with one or more rollers, together with connecting-piece D^7, of a series of springs or an equivalent cushioning device, substantially as described, connecting-rod D^4, lever D^3, stude D^{10} and C^2, and having for its object the changing of the direction of the effective pressure of the springs or cushioning device, substantially as described.

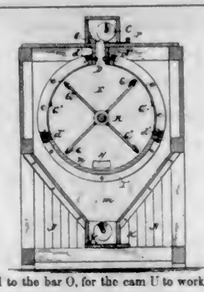
300,371. FLOUR-DRESSING MACHINE. ANDREW HUNTER, Chicago, Ill. Filed Jan. 25, 1884. (No model.)

Claim.—1. The combination, in a flour-dressing machine, of the sliding valve P, vertical cam U, reciprocating bar O, pins *l*, and projections V, fastened to the bar O, for the cam U to work in, substantially as described.

2. The combination, in a flour-dressing machine, of the conveyers C C', sliding valve P, vertical cam U, reciprocating bar O, pins *l*, and projections V, fastened to the bar O, for the cam U to work in, substantially as described.

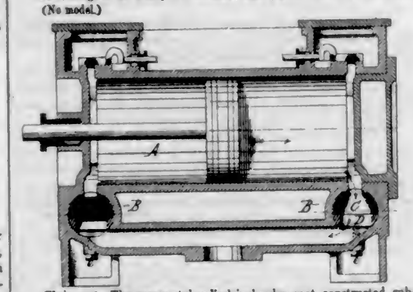
3. In a flour-dressing machine, the combination of hoppers B B', conveyers C C', air-discharge openings N N, center partition, S, beaters G G, and cylinder I, with discharge-openings H H at the end, substantially as described.

4. In a flour-dressing machine, the combination of a longitudinal feed device, stationary bolting-cylinder I, having a longitudinal feed-opening in the top and discharge-opening H, and rotary beaters G, having bent ends, substantially as described.



5. In a flour-dressing machine, the combination of rotary shaft R, radial arms G'' G'', and lifting convex beaters G G, substantially as described.

6. In a flour-dressing machine, the combination of rotary shaft R, radial arms G'' G'', and lifting convex beaters G G, with their rear sides flat, substantially as described.



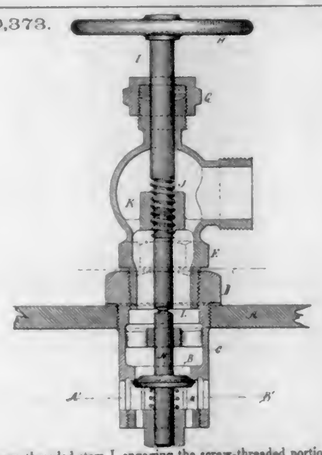
7. In a flour-dressing machine, frames *y y*, clothed with loose unstretched bolting-cloth *s*, in combination with rotary beaters G G, substantially as described.

8. In a flour-dressing machine, the combination of frames *y y*, clothed with loose unstretched cloth *e*, and ribs *d d*, with rotary beaters G G, substantially as described.

300,371.

300,372. SLIDE-VALVE SEAT. HENRY JAMES JOHNSON, Providence, R. I., assignor to Henry W. Gardner, same place. Filed Feb. 29, 1884. (No model.)

Claim.—1. The segmental cylindrical valve-seat, constructed, substantially as before set forth, with its bearing smaller than a semi-cylinder and perforated transversely for screw-bolts.



2. The combination, substantially as before set forth, of the shell of the valve, the segmental cylindrical valve-seat constructed with a bearing less than a semi-cylinder, and the transverse screw-bolts by which the first two are secured to each other.

300,373. VALVE FOR ENGINERY AND VESSELS. JOHN E. JERROLD and CHRISTIAN L. BURGERSTEIN, Allegheny, assignors of one-third to THOMAS M. REES and WILLIAM M. REES, both of Pittsburg, Pa. Filed Feb. 6, 1884. (No model.)

Claim.—The combination, with the three-part casing C D E, the former having the stem N, provided with the valve B and spring M, of

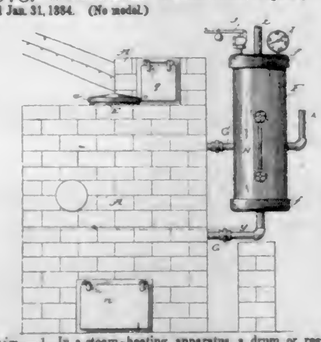
300,373.

the screw-threaded stem I, engaging the screw-threaded portion K, and passing through the parts D E, and resting on the top of the stem N, and the wheel H and packing-piece G, substantially as shown and described, and for the purposes set forth.

300,374. WALL-PAPER, PAPER-BOARD, &c. HENRY W. JOHNS, New York, N. Y. Filed Nov. 17, 1883. (No specimens.)

Claim.—Paper, paper-board, slabs, tiles, &c., having an embossed surface, when such paper, paper-board, slabs, tiles, &c., are produced wholly or in part from asbestus in any suitable form, substantially as hereinbefore fully explained.

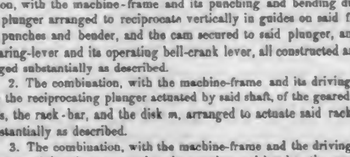
300,375. PENCIL-SHARPENER. JOHN T. KNAGGE, Cincinnati, Ohio, assignor of one-half to George Herzog, same place. Filed Jan. 21, 1884. (No model.)



Claim.—1. A pencil-sharpener consisting of a tapering roughened plate bent along a central line, to bring the roughened faces at about right angles to each other, substantially as described.

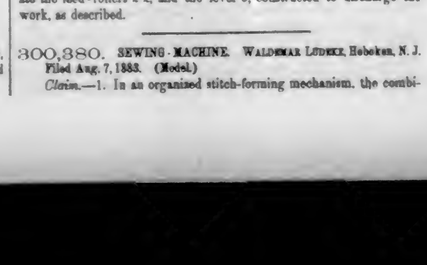
2. The combination of the sharpening-plate provided with groove *b*, inclined at bottom and sides, and the block D and cover H', provided with opening *f* and flanges *e*, respectively engaging the sides and ends of the block D, substantially as and for the purpose specified.

3. The combination of the sharpening-plate provided with groove *b*, inclined at bottom and sides, and the block D and cover H', provided with opening *f* and flanges *e*, respectively engaging the sides and ends of the block D, and having indentations *h* in its flanges, said indentations entering the block, substantially as and for the purposes specified.



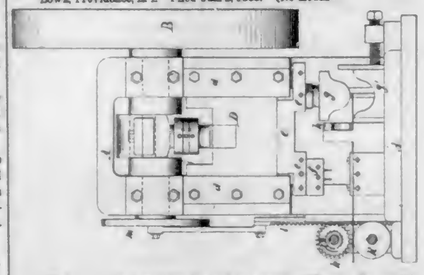
300,376. STEAM-HEATER. WILLIAM J. LANE, Poughkeepsie, N. Y. Filed Jan. 31, 1884. (No model.)

Claim.—1. In a steam-heating apparatus, a drum or reservoir, pipes G G', and a series of coils composed of straight sections and curved connections around the magazine, substantially as described.



2. In a steam-heater, and in combination, a magazine, the pipes G G', and the coils or turns *g h*, said pipes being united above and below, as set forth.

300,377. TWO-WHEELED VEHICLE. JOHN D. LEBY, Lima, Ind. Filed Jan. 19, 1884. (No model.)



Claim.—In combination with the body A, the single elliptical supporting-spring B, the single clip D, the single auxiliary spring E, and double eyebolt F, the clip D uniting both the supporting-spring and auxiliary spring to the axle, as described.

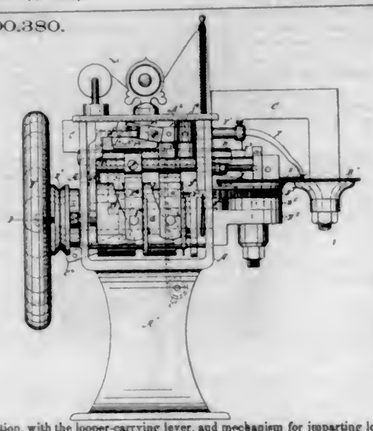
300,378. TRUNK. PHILIP LOEWE, Chicago, Ill. Filed Apr. 2, 1884. (No model.)

Claim.—In combination with the body of a trunk, a lid formed in two parts by transverse division, with an overlapping portion on one part, said parts being hinged to the ends of the trunk, and provided with means, substantially as described, for securing them when closed.

300,379. MACHINE FOR MAKING SHANK-STIFFENERS. JOHN LOWE, Providence, R. I. Filed Jan. 2, 1883. (No model.)

Claim.—1. In a machine for making shank-stiffeners, the combination, with the machine-frame and its punching and bending dies, of the plunger arranged to reciprocate vertically in guides on said frame, the punches and bender, and the cam secured to said plunger, and the shearing-lever and its operating bell-crank lever, all constructed and arranged substantially as described.

2. The combination, with the machine-frame and its driving-shaft and the reciprocating plunger actuated by said shaft, of the geared feed-rolls, the rack-bar, and the disk *m*, arranged to actuate said rack-bar, substantially as described.



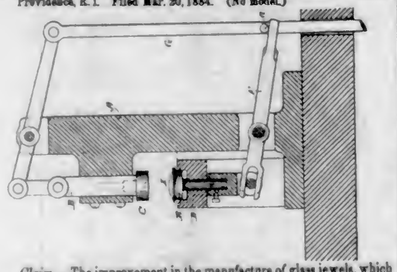
3. The combination, with the machine-frame and the driving-shaft thereon, of the plunger carrying the punches and bender, the punching and bending dies, and the cam *o'* and lever *o*, substantially as and for the purposes described.

4. The combination, with the frame of the machine, of the shaft C, the balance-wheel B, the plunger D, provided with the clamp *e*, the punches *f f*, and the die *g*, the disk *m*, rack-bar *l*, constructed to operate the feed-rollers *k k*, and the lever *o*, constructed to discharge the work, as described.

300,380. SEWING-MACHINE. WALDEMAR LUDEKE, Hoboken, N. J. Filed Aug. 7, 1883. (Model.)

Claim.—1. In an organized stitch-forming mechanism, the combination, with the looper-carrying lever, and mechanism for imparting longitudinal and vertical movements thereto, of a vertical lever impinging against said looper-carrying lever and serving to move the same laterally, means for operating said vertical lever, and a spring for moving the looper-carrying lever in opposition to the said vertical lever, substantially as set forth.

300,380.

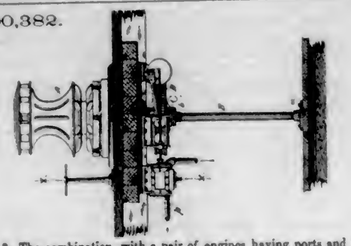


2. The combination, in an organized stitch-forming mechanism, with the looper-carrying lever F', having the extension F³, and mechanism for imparting longitudinal and vertical movements to said lever, of the vertical lever K³, having an arm, K⁴, the cam L, and the spring M, substantially as described.

3. The combination, in an organized stitch-forming mechanism, of the lever F', having the extensions F³ and F⁴, the latter formed with the cam-slot *f'*, the looper F, carried by the lever F', the fixed bracket I', having the stud I, the lever K³, the cam L, the spring M, and means for imparting longitudinal movement to the said lever F', substantially as set forth.

4. The combination, in an organized stitch-forming mechanism, of the feed-disks B and B', the toothed wheel B⁵, the ring B⁶, having arm B⁸, the pawl B⁹, the bent arm B³, the cam B⁴, and the spring B⁷, substantially as set forth.

300,381. MANUFACTURE OF GLASS JEWELS. HENRY C. LUTHER, Providence, R. I. Filed Mar. 20, 1884. (No model.)

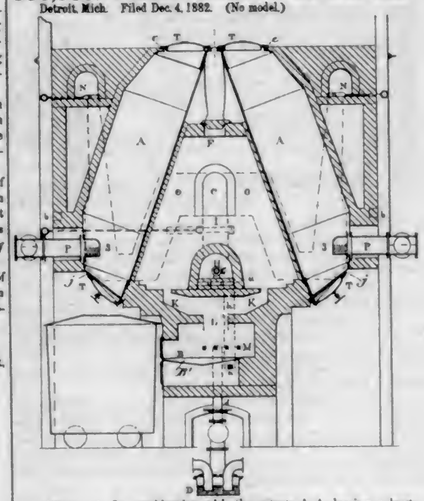


Claim.—The improvement in the manufacture of glass jewels, which consists in the combination of the upper die and the lower die, made in two parts, and means for operating the same, substantially as described, with the tongs provided with the grooved jaws adapted to remove the jewel in a plastic condition from the elevated inner portion of the lower die without danger of distortion, substantially as described.

300,382. POWER-CAPSTAN. JOSEPH P. MANTON, Providence, R. I. Filed Jan. 25, 1884. (No model.)

Claim.—1. The combination, with a capstan, of a worm-gear adjustably secured to the capstan-spindle, and a nut directly connected with said gear for throwing the worm-gear into and out of mesh with the worm, substantially as specified.

2. The combination of a worm-wheel having a recessed collar secured to it, and a nut which engages with said collar and with a screw-thread on the spindle, whereby said worm-wheel can be moved up and down, to throw it in and out of gear with the worm, substantially as set forth.



300,382.

3. The combination, with a pair of engines having ports and passages, as described, of a reversing-valve connected by pipes with said passages, and means for operating said valve from the deck, substantially as specified.

4. In a power-capstan having worm-wheel secured adjustably to a spindle, the combination of a pair of engines, a reversing-valve adapted to admit and exhaust steam to and from the engine-cylinders, and means for operating said valve from the deck above the engines, substantially as set forth.

300,383. APPARATUS FOR DISTILLING WOOD. JEAN A. MATHIEU, Detroit, Mich. Filed Dec. 4, 1882. (No model.)

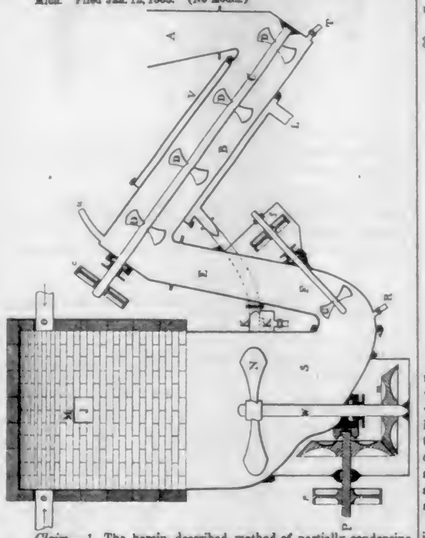
Claim.—1. In combination with the retorts A A, having a heat-chamber between them, the flues O O, adapted to lead the products of combustion across the lower ends of said retorts before passing the same out of the furnace, substantially as and for the purposes set forth.

2. The combination of the retorts A A, arch C, passage I, and arch G, substantially as herein shown and described.

3. The combination of the retorts A A, inclosing a heat-chamber, combustion-chamber B, flues L K K, and man-hole F, having a removable cover, substantially as herein shown and described.

4. In combination with the retorts A A, a draft-flue opening from the outside air, running through the heated space between said retorts and opening into the combustion-chamber, from which said retorts are heated, either above or below the grate therein.

5. In combination with the retorts A A, the box *x*, connected with the exit-pipes of said retorts, having the swinging discharge-pipe *i*, and connected with a condensing-coil, *z*, substantially as herein shown and described.



6. The combustion-chamber B, flue L, and flues K K, in combination with the retorts A A, substantially as herein shown and described.

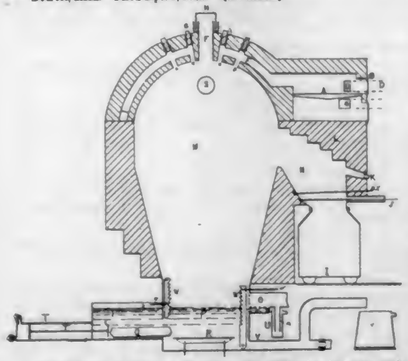
7. The herein-described process of condensing a portion of the vapor arising from the distillation of wood, consisting in bringing said vapor in contact with a spray of cold pyroligneous acid, whereby condensation is effected by the chemical affinity of the acid and vapor, as well as by reducing the temperature of said vapor.

8. In combination with the retorts A, the pipes *f*, leading from the lower end of each retort, and having at their inner ends a grating, *a*, substantially as described.

9. The condenser herein described, having vessel E, with pipes *k d'*, and vessel E', having a faucet, and pipe *w*, said vessels being connected by pipes J, substantially as herein shown and described.

300,384. DISTILLATION OF WOOD. JEAN A. MATHIEU, Detroit, Mich. Filed Jan. 12, 1883. (No model.)

Claim.—1. The herein-described method of partially condensing the vapors resulting from carbonizing the upper portion of a mass of material contained in a retort, consisting in passing such vapors through the uncarbonized portion of the material in said retort.



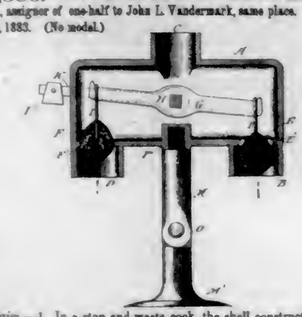
2. The combination of the screw N with the retort M, chute E, trunk B, and auxiliary screws D G, substantially as shown and described.

3. The combination of the jacket V and trunk B with the exit-pipe of the retort, whereby a preliminary distillation of the material is effected by the hot vapors issuing from the retort.

4. The combination of the jacketed trunk B, hopper A, chute E, and screw D, substantially as shown and described.

5. The combination of a retort having a pipe at or near its top for entry of hot vapor with mechanism for introducing the substance to be distilled at the bottom of the retort and forcing the same upward as fast as the distilled solid material is removed from the retort, whereby distillation is effected from above upon a mass of material raised up within the retort to the source of heat.

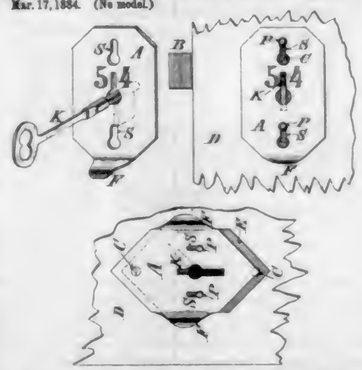
300,385. RETORT FOR CARBONIZING WOOD. JEAN A. MATHIEU, Detroit, Mich. Filed Apr. 2, 1883. (No model.)



Claim.—1. A retort for carbonizing wood, having in its top a flue communicating through apertures with the interior of the retort, a combustion-chamber communicating with said flue, an air-pipe and a gas-pipe leading into said combustion-chamber, and a gas-pipe leading into said retort near its top, substantially as described.

2. In combination with retort M, the ratchet-toothed bars W W', provided with push-rods *w w'*, substantially as shown and described.

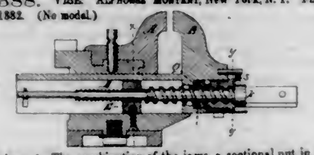
3. The combination, with retort M, of the box P P', cylinder T', having piston and rod T', and block R, having attached thereto suitable mechanism for raising the same, substantially as described.



300,386. STOP AND WASTE COCK. OWEN J. MCGANN, Pullman, Ill., assignor of one-half to John L. Vandermark, same place. Filed Nov. 14, 1883. (No model.)

Claim.—1. In a stop and waste cock, the shell constructed to connect with the service and waste pipes, and having two of its ports and valve-seats thereat at one of its sides, in combination with a pair of valves respectively opening into the service and waste pipes, and having their stems respectively connected with opposite ends of an oscillatory lever, which said valves are arranged so that while susceptible of moving in unison to simultaneously open one and close the other of said ports they shall alternately open in one and the same direction away from their seats, and outwardly from the shell, substantially as described.

2. In a stop and waste cock, the shell constructed to constitute a joint in the service-pipe, and provided with a valve apparatus for opening and closing its ports, in combination with a jointed support for the shell, consisting of a leg composed of two members, one being connected with the shell, the other provided with a perforated base-plate, and both being pivoted together to form a hinge-joint in the leg, whereby the shell can be set at various angles, substantially as described

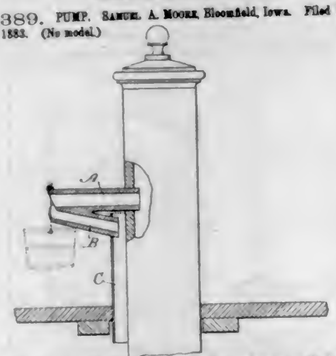


300,387. KEY-FASTENER. ROBT. T. MILLER, Covington, Ky. Filed Mar. 17, 1884. (No model.)

Claim.—1. In a key-fastener, the combination of a rigid escutcheon provided with headed pins and a secondary escutcheon or tag with key permanently affixed thereto, said tag being provided with a finger-piece, F, and slotted openings, to engage with the pins on the rigid escutcheon, and with a slot from the opening through which the shank of the key passes, and which, when operated substantially as shown and described, can be removed from the door or lock or bind the key, as set forth.

2. A secondary escutcheon and key inseparable from each other, the former provided with a slot extending from the opening through which the shank of the key passes, the said escutcheon being adapted to fasten the key in the lock or permit its release therefrom by means of slots S S engaging or disengaging with pins above and beneath the key-hole, substantially as shown and described.

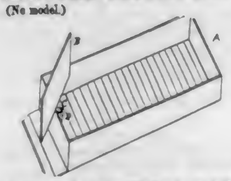
300,388. VISE. ALPHONSE MONTANT, New York, N. Y. Filed May 11, 1882. (No model.)



Claim.—1. The combination of the jaws, a sectional nut in the stationary jaw, a screw partly sectional and partly entire in the movable jaw, the sectional threads of the two being arranged in a direction other than that of the entire threads, and a turning-nut whereby the sectional screw and nut are locked without advancing the movable jaw, substantially as hereinbefore set forth.

2. The combination of the vise-jaws with a section-nut and a locking-screw which has its threads reversed in pitch with the turning-nut, substantially as before set forth.

3. The combination of the stationary jaw carrying the sectional nut, the sectional screw, the turning-nut, the movable jaw, and a spring located between said nut and jaw, substantially as hereinbefore set forth.

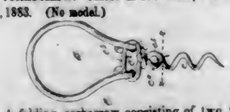


300,389. PUMP. SAMUEL A. MOORE, Bloomfield, Iowa. Filed Dec. 24, 1883. (No model.)

Claim.—1. As an improved article of manufacture, a discharge-spout for pumps having a cut-off and return spout formed integral therewith, for the purposes set forth.

2. The combination of a duplex pump-spout, A B, with a pump, and an auxiliary tube extending from the rear end of the part B downward, to convey drippings back into the well, substantially as and for the purposes set forth.

300,390. WAGON-DASHER. ELIJAH MYRICK, Harvard, Mass. Filed Apr. 2, 1884. (No model.)

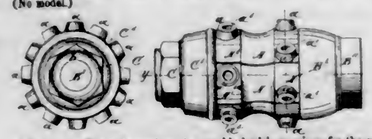


Claim.—1. A wagon-dasher pivoted to the wagon-body and adapted to be rotated upon a vertical axis, as described.

2. A wagon-dasher pivoted to the wagon-body and adapted to be removed from its supporting-socket, as set forth.

3. A wagon-dasher pivoted to the wagon-body, as set forth, combined with a spring operating to return the dasher to its normal position, substantially as described.

300,391. CORKSCREW. JAMES K. P. NOURSE, West Medway, Mass. Filed Nov. 17, 1883. (No model.)

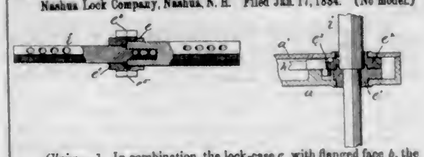


Claim.—1. A folding corkscrew consisting of two pieces of wire, one of which is formed into a screw having a shank formed with an elongated transverse loop, a portion of which forms the pivot around which the ends of the other piece of wire shaped to form the handle or guard are bent, for the purpose and substantially in the manner described.

2. In a folding corkscrew formed from two pieces of wire shaped and connected substantially as set forth, the inclined outer surfaces of the knuckles formed by the extremities of the holder or guard, in combination with the loop formed in the shank of the screw, substantially in the manner and for the purpose described.

3. In a folding corkscrew formed from two pieces of wire shaped and connected substantially as set forth, the recesses or depressions formed in the knuckles, which are shaped from the extremities of the holder or guard, in combination with the loop formed in the shank of the screw, for the purpose and substantially in the manner described.

4. A corkscrew constructed of a single piece, one extremity of which is formed into the screw, having a shank formed with a loop, and the other extremity of which is formed with a cutting-edge, for the purpose and substantially in the manner described.



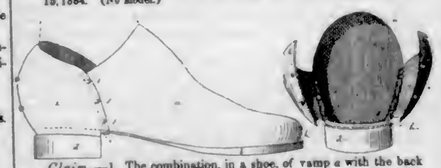
300,392. HUB. JOHN F. PACKER, Chicago, Ill. Filed Mar. 26, 1884. (No model.)

Claim.—1. The hub-sections A, provided with openings for the passage of the spokes, in combination with the pipe-box B, having the flange B', and screw-cap C, having the flange C', substantially as and for the purpose specified.

2. The hub-sections A, provided with openings for the passage of the spokes, substantially as specified.

300,393. LOCK. EMERY PARKER, New Britain, Conn., assignor to the Nashua Lock Company, Nashua, N. H. Filed Jan. 17, 1884. (No model.)

Claim.—1. In combination, the lock-case *c*, with flanged face *b*, the reversible latch-bolt *c*, the swivel-spindle with shoulder or stop, the reversible hub *e*, with parts fitting the respective swivel-sections, and the latch mechanism, all substantially as described.



2. In combination, in a latch, a swivel-spindle having a shoulder and a partible hub also having a shoulder, which, by contact with that on the spindle, keeps the parts from moving toward or upon each other when they are in position in the latch-case, all substantially as described, and for the purpose set forth.

3. In combination, in a lock, the swivel-spindle composed of parts of different cross-section and the hub formed in parts, one of which bears the grooved lug adapted to be engaged by the bolt in either position of the hub, all substantially as described.

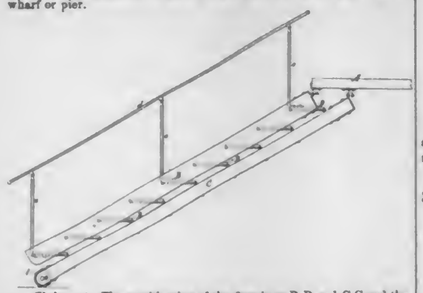
4. In a reversible lock, the spindle-hub *e*, composed of parts *e'* and *e²*, the part *e²* having the lug *e³*, with the groove that is engaged by the bolt A in either of the described positions of the hub, all substantially as described.

5. In a latch, the combination of the case *a*, the lever *d*, with the bearing-faces *d' d²*, and the reversible hub *e*, with lugs *e' e³* and the arm *e²*, all substantially as described.

300,394. SHOE. MARX F. PELLETIER, New York, N. Y. Filed Apr. 15, 1884. (No model.)

Claim.—1. The combination, in a shoe, of vamp *a* with the back quarters, *c c*, connected thereto, the quarters *c* being separated at the back and provided with catch *g*, substantially as specified.

2. The combination, in a shoe, of vamp *a* with sole *b*, grooved heel *d*, and gasket *h*, and with the movable back quarters, *c*, substantially as specified.



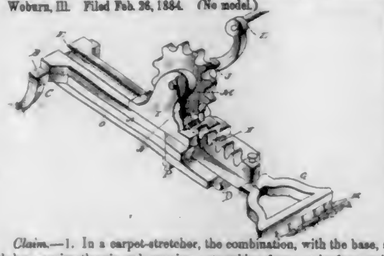
3. The combination, in a shoe, of vamp *a* with sole *b*, heel *d*, gas-

ket *h*, movable back quarters, *e*, pins *i*, and catch *g*, substantially as specified.

4. The combination, in a shoe, of the vamp with the back quarters attached to said vamp and adapted to be opened and closed, and with means, substantially as described, for rendering the back and bottom joints of said back quarters water-tight, substantially as specified.

300,395. FOLDING STAIRS. THEODORE PETERSON, Boston, Mass. Filed Mar. 3, 1884. (No model.)

Brief.—A series of steps pivoted to four bars, and posts which carry hand-rails extending upward from certain of said steps. The bars are hinged to projections upon the under side of a fixed part of the wharf or pier.



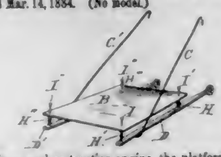
Claim.—1. The combination of the four bars B B and C C and the series of steps D, arranged with and pivoted to such bars as described, with the posts *c*, projecting upward from and permanently fastened to certain of the said steps, and with the hand-rails *d d*, pivoted to such posts at their upper ends, all being substantially and to operate as set forth.

2. The combination of the four bars B B and C C and the series of steps D, arranged with and pivoted to them as described, with the stair head or platform A, disposed at the upper ends of such bars, and connected therewith by means substantially as described.

3. The combination of the four bars B B and C C, the series of steps D, arranged with and pivoted to such bars as described, the stair-head A, adapted, as explained, to the upper ends of such bars, the posts *c*, extended up from and permanently fixed to certain of the steps, and the hand-rails *d d*, pivoted to the upper ends of the said posts, all being substantially and to operate as represented.

300,396. CARPET-STRETCHER. ERNEST PATTERSON POUNDSTONE, Woburn, Ill. Filed Feb. 26, 1884. (No model.)

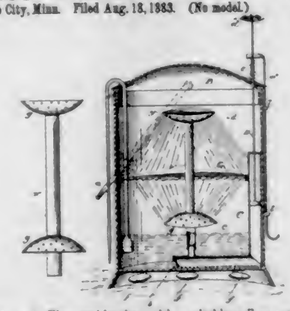
Claim.—1. In a carpet-stretcher, the combination, with the base, a rack-bar moving therein and carrying a stretching-frame at its front end, and means for operating said rack-bar, of a supplemental beam hinged to the rear end of the base and provided with teeth on its end, said beam being adapted to be either extended to stretch the carpet at both ends of the device or folded up in position against the under side of the base, as set forth.



2. In a carpet-stretcher, the combination, with the base provided with a dovetail slot, of a rack-bar having its lower end dovetailed to fit in said slot, and provided with a stretching-frame at its front end, uprights mounted on said base and having a shaft journaled therein, a gear-wheel mounted on said shaft and engaging with the rack-bar, and a crank or handle for operating the shaft, as set forth.

3. In a carpet-stretcher, the combination, with the base provided with a dovetail slot, of a rack-bar having its lower end dovetailed to fit in said slot, and having a stretching-frame at its front end, uprights mounted on the base, a shaft journaled in the uprights, and carrying a gear-wheel which is disposed between the uprights, and a crank or handle at the end of the shaft, and a yoke or bail journaled in the uprights and engaging with the rack-bar to hold the same from backward movement, as set forth.

4. The carpet-stretcher having its base provided with legs C C at its rear end, and an extension projecting downwardly from the front end of the base, to raise the device from above the carpet, as set forth.



5. In a carpet-stretcher, the combination, with the base, of the supplemental beam hinged at its rear end to the same, and provided at its other end with a cross-piece having projecting teeth or spurs, and a stud projecting from the inner face of the beam at this end and fitting in a recess of the base when said beam is folded up, as set forth.

300,397. TRACTION-ENGINE. FRANCIS W. ROBINSON, Richmond, Ind. Filed Mar. 14, 1884. (No model.)

Claim.—In a road or traction engine, the platform B, resting upon springs H H' H'' H''', in combination with the frame D D', in the manner and for the purposes herein set forth.

300,398. APPARATUS FOR WASHING DISHES. CHAS. L. RUDD, Lake City, Minn. Filed Aug. 18, 1883. (No model.)

Claim.—1. The combination, with a suitable pail or tank provided with a sprinkling or washing device, and a force-pump having a piston adapted to be operated by hand, of a treadle attachment consisting of a rod passing through guides upon the exterior of the pail or tank, and connected at its upper end to the piston-rod, and a spring coiled around it and bearing against the top or cover of said tank or pail and against the bent or upper end of the treadle-rod, whereby the pump is adapted to be operated either by hand or foot power, substantially as specified.

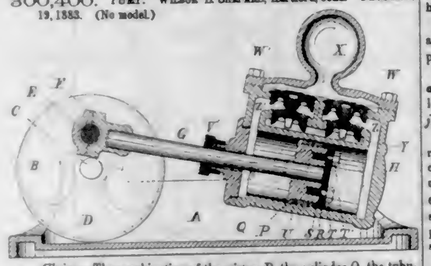
2. A suitable pail or tank having arranged within the same a suitable pump adapted to be operated by hand or foot power, in combination with a shelf or rack and a centrally-arranged tube communicating with the lower extremity of the pump and extending upwardly through the shelf or rack, and provided with sprinklers, one above and the other below said shelf or rack, whereby the water will be forced upward through a single tube and be ejected in opposite directions and at an angle against the articles resting on the shelf, substantially as and for the purpose specified.

300,399. PLANE. SOLON R. RUST and ARTHUR E. RUST, Pine Meadow, Conn. Filed Mar. 26, 1884. (No model.)

Claim.—1. In combination, in a flexible face-plane, a plane-body, *a*, a flexible face, *b*, levers *c d*, pivotally connected to the plane-body, to each other by connecting-rod *g*, and to the flexible face-plate, with means for changing the position of said levers and of the flexible face, all substantially as described.

2. The combination of a plane-body, flexible face, pivoted levers connecting the said face and the body, a yoke, *h*, pivotally connected to the said levers, and an adjusting-screw, *i*, having bearings in the yoke and in the plane-body, all substantially as described, and for the purpose set forth.

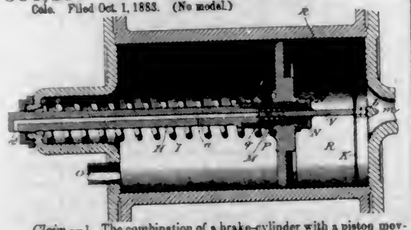
3. The combination of a plane-body, *a*, a carriage, *k*, with the central bearings, *l l'*, fitted to suitable bearings in the plane-body, and with



lugs *k' k²*, bearing upon opposite extremities of an adjusting-screw, *m*, attached to the body, all substantially as described.

4. In a plane, the combination of a plane-body, *a*, a carriage, *k*, with central bearings, *l l'*, projections lugs *k' k²*, and projections *w'*, an adjusting-screw, *m*, with its opposite ends bearing on the inner faces of the lugs, plane-iron *p*, and clamp-iron *o*, with clamp-screw *o'*, all substantially as described.

5. In a plane, the combination of a plane-body and a carriage having lugs bearing upon opposite extremities of an adjusting-screw, *m*, movable in a socket in a plane-body, all substantially as described, and for the purpose set forth.

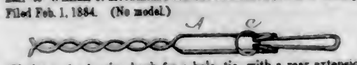


6. In combination, a plane-body, *a*, having bed *a'*, cross-bars a^2 a^3, and socket a^4, the forked levers *c d*, pivoted to the body, connecting-rods *g*, yoke *h*, pivoted to the levers, and adjusting-screw *i*, with plane-iron *p* and means for holding the same in the body, all substantially as described, and for the purpose set forth.

300,400. PUMP. WILBUR L. SHEPARD, Hartford, Conn. Filed Nov. 19, 1883. (No model.)

Claim.—The combination of the piston P, the cylinder Q, the tubular journals I and I', the water-ways Y and Y', the valves W and W', the water-ways Z and Z', and the air-chamber X, all constructed and combined substantially as described, and operating together in an oscillating pump, substantially as explained in this specification.

300,401. AUTOMATIC AIR-BRAKE. C. AXEL T. SJÖGREN, Denver, Colo. Filed Oct. 1, 1883. (No model.)



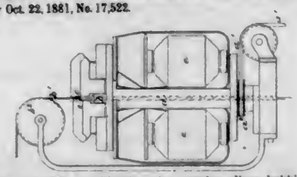
Claim.—1. The combination of a brake-cylinder with a piston movable on the piston-rod, the disk K, attached to the valve, and valve-stem V, the valve-seat P, the valve-seat *s*, the grooves *g*, *c*, and *r*, the spring *p*, and the holes *q*, *a*, and *a'*, for purpose set forth, and substantially as described.

2. The combination, in a brake-cylinder for automatic air-brakes, of a piston and piston-rod with a valve-stem, V, valve-seat *s*, spring *p*, spring-seat, and disk K, substantially as described.

3. In a brake-cylinder, the combination of a piston-rod with a piston movable on the same between the valve-seat P and the end nut, N, forming a valve which is open when the piston is up against the nut N by means of the grooves *g*, *r*, and *c*, and which is closed when the piston is up against the valve-seat P, substantially as described.

4. In a brake-cylinder, the combination of a disk, K, with the valve-stem V, valve-seat *s*, spring *p*, and spring-seat, all substantially as set forth.

300,402. BALE-TIE. BENJAMIN SMITH, Dayton, Ohio, assignor of one half to William J. McCausland and Robert Barnett, both of same place. Filed Feb. 1, 1884. (No model.)



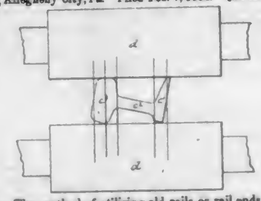
Claim.—1. A wire hook for a bale-tie, with a rear extension to stay the curved end of said hook, substantially as set forth.

2. A wire hook for a bale-tie, with a rear extension and an interlocked ring in said hook, substantially as set forth.

3. As a new article of manufacture, a bale-tie with eye to engage the hook of the same, having a rear extension to bear upon said eye, substantially as shown and described.

300,403. WIRE-COVERING MACHINE. HENRY SPLITDORF, New York, N. Y. Filed Feb. 14, 1881. (No model.) Patented in England Mar. 22, 1881, No. 1,272; in France May 27, 1881, No. 141,886, and in Germany Oct. 22, 1881, No. 17,522.

Claim.—1. The combination of a rotating sliver bobbin-carrier provided with feed-rollers constructed and operated to untwist the sliver as it leaves the feed-rollers, with a conveying device for carrying the untwisted sliver to the wire to be covered, substantially in the manner hereinbefore set forth.

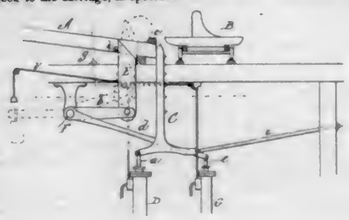


2. The combination, with the grooved roller *m* and the spring-acting knife-edge slide *l*, of the cams *m'*, substantially as and for the purpose set forth.

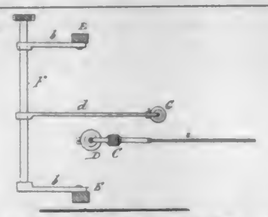
3. The combination, with the fixed hollow spindle *b* and the frame *a c i'*, adapted to be rotated thereon, of the feed-rollers *n* and *n'*, carried in the upper part, *i*, of the frame, and system of gear-wheels *g*, *h*, *d''*, *j*, j^2, j^3, and n^2, substantially as and for the purpose set forth.

4. A rotating sliver bobbin-carrier provided with a pair of feed-rollers and operated to untwist the sliver as it leaves the feed-rollers, a conveying device composed of a series of rollers adapted to carry the untwisted sliver toward the wire being covered, and a pair of feed rollers or guides located in close proximity to the wire, in combination with suitable connecting-gearing to cause the various devices to move with a positive and uniform motion as the machine revolves around the wire, substantially as and for the purpose hereinbefore set forth.

5. A rotating sliver bobbin-carrier provided with a pair of feed-rollers, a spreading device composed of a grooved roller and a reciprocating knife for spreading the untwisted sliver, and aprons and their supporting-rollers for conveying the spread sliver to the center of the machine, in combination with their actuating-gearing, constructed and operated substantially in the manner and for the purpose hereinbefore set forth.



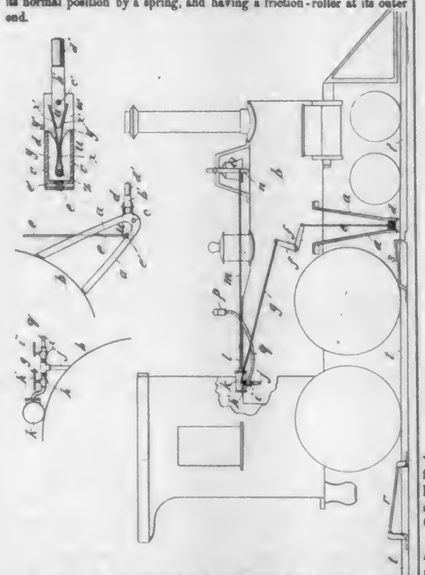
300,404. METHOD OF UTILIZING OLD RAILS. GOTTLIEB A. STIENER, Allegheny City, Pa. Filed Feb. 7, 1884. (No model.)



Claim.—The method of utilizing old rails or rail ends in the manufacture of sheet or plate metals, which consists in cutting off one side of the flange, and then forcing the remaining side of the flange into the same plane as that of the web, and drawing out the rail to a plate of the desired gage, substantially as and for the purposes described.

300,405. LOG LOADER AND TURNER. WARREN C. STETSON, Minneapolis, Minn. Filed Nov. 3, 1883. (No model.)

Claim.—In log rolling and canting apparatus, the combination and arrangement, substantially as described, with the canting-bar C and its operating mechanism, of the sliding bumper E and its operating steam-cylinder G, arranged for independent operation for carrying a log from the deck to the carriage, as specified.



300,405.

300,406. RAILWAY-SIGNAL FOR LOCOMOTIVES. JOSEPH JOHN STORTZEL, La Salle, Ill., assignor to himself and Edward P. Furay, same place. Filed July 17, 1883. (No model.)

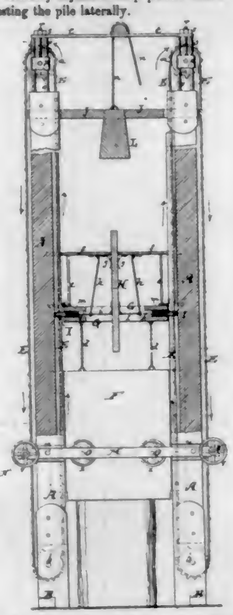
Brief.—A locomotive having attached thereto a pivoted arm adapted to be moved up and down by contact with a fixed inclined rail or way at the side of the track, and is connected by rods and an angle-lever to the valve of a small steam-cylinder for driving a piston therein, which is either connected to the bell, ringing the same twice for every stroke of the piston, or to the valve controlling the steam-whistle. The pivoted arm is provided with a pivoted head-bar arranged to swing in a horizontal plane, to clear obstructions along the track, and returned to its normal position by a spring, and having a friction-roller at its outer end.

Claim.—1. The combination of the signal-arm *d*, ways *r s*, angle-lever *f*, rods *e g*, valves *h i*, cylinder *k*, connections *l m n* to the bell *o*, whistle *p*, and pipe *q*, substantially as and for the purpose set forth.

2. The combination of signal-arm *d*, ways *r s*, angle-lever *f*, rods *e g*, valve *h*, cylinder *k*, and connections *l m n* to the bell *o*, substantially as shown and described.

3. The combination of signal-arm *d*, ways *r s*, angle-lever *f*, rods *e g*, valve *i*, pipe *q*, cylinder *k*, and whistle *p*, substantially as and for the purpose set forth.

4. The combination, with the ways *r s*, angle-lever *f*, and rods *e g*, connecting with the bell and whistle signals, substantially as specified, of the signal-arm *d*, adapted to be rocked in vertical plane on its pivot *c* by contact with ways *r s*, and also having a head-bar, *b'*, pivoted to swing in horizontal plane for clearing obstructions, substantially as shown and described.



5. The signal-arm *d*, constructed with a casing, *u*, pivoted at *c* to swing vertically in supports on the locomotive, and with a head-bar, *b'*, pivoted to casing *u*, so as to swing in horizontal plane, substantially as shown and described.

6. The combination, with the pivoted vertically-swinging signal-arm casing *u*, of the pivoted horizontally-swinging head-bar *b'* and spring or springs *x*, substantially as shown and described.

7. The signal-arm *d*, constructed with a casing, *u*, having sides *v* shorter than its top and bottom plates *w*, the pivoted head-bar *b'*, carrying the anti-friction roller *d'*, the slotted block *y*, the bent spring *x*, and the pin *z*, substantially as shown and described.

300,407. PILE-DRIVER. THOMAS TANGNEY, New York, N. Y. Filed Jan. 25, 1883. (No model.)

Brief.—The hammer is lifted by means of endless continually-moving chains running in guides on the leaders, which chains are engaged by spring-actuated bolts or catches sliding in horizontal ways in a vertically-reciprocated frame from which the hammer is suspended, the engagement and disengagement of the bolts being effected by means of a bar jointed to the bolts, and arranged to slide vertically in the frame, and operated by concussion with the hammer when the blow is delivered, and by pressure against a vertically-adjustable stop placed above. Means are provided for adjusting the pile laterally.

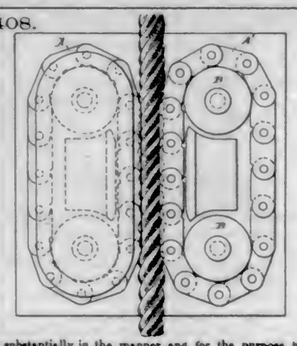
Claim.—1. In a pile-driver, the combination of the leaders A A with the endless chains E E, and mechanism, substantially as described, for supporting and moving said chains, and with the traveling beam G, having laterally-projecting catches I I, that are adapted to engage with said chains, and with the hammer F, that is suspended from said beam G, substantially as described.

2. The traveling beam G, combined with the vertical slide H, links *h i*, pushers *j j*, catches I I, chains E *d*, and hammer F, for operation in a pile-driver, substantially as described.

3. The combination of the traveling beam G, links *h i*, pushers *j*, catches I, and springs *m*, with the chains *d*, and hammer F, and with the upper traveling cross-beam, *f*, chains E, and slide H, for operation substantially as specified.

4. The combination of the beam G, having movable catches I, that are adapted to be engaged by the chain E of a pile-driver, with the vertical slide H, upper cross-bar, J, chains E, and hammer F, and with means, substantially as described, for operating the catches I from slide H, all arranged so that the slide H will be moved at the terminus of each stroke to disengage and engage the hammer, as specified.

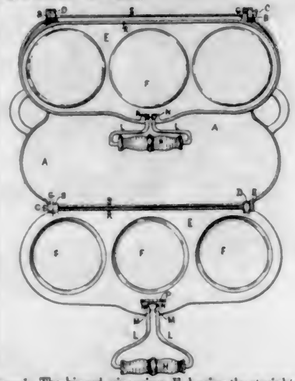
5. The hammer F, combined with the traveling beam G, vertical slide H, catches on said beam, lifting-chains, upper cross-bar, *t*, and vertically-adjustable disengaging-block L, substantially as specified.



6. In a pile-driver, the combination of the leaders A A, bar M, screw-threaded braces N O, and pile-guides P R, substantially as and for the purpose specified.

300,408. CLAMP FOR WIRE ROPES. HENRY R. TAYLOR, San Francisco, Cal. Filed Jan. 25, 1884. (No model.)

Brief.—Endless traveling grip-chains which contact with the propelling-cable pass around pulleys at each end of their tread.



Claim.—In combination with traveling or moving clamps for wire ropes, the guiding-rollers or friction-pulleys, constructed, arranged, and

300,408.

operating substantially in the manner and for the purpose herein set forth and specified.

300,409. CAKE-GRIDDLE. JONATHAN V. TAYLOR, Boston, Mass. Filed Sept. 29, 1883. (No model.)

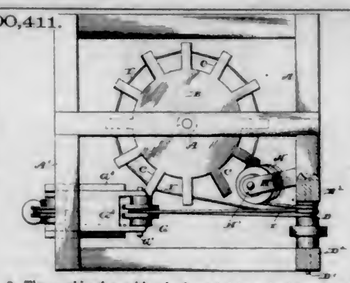
Claim.—1. The hinged wing-piece E, having the straight rib R arranged so as to fall inside of the rib of the main portion when folded together, substantially as shown and described, as and for the purposes set forth.

2. The handle H, having spring side portions, L, provided with eyes K, in combination with the wing-piece E, provided with the notches N and pivots M, substantially as described, as and for the purposes set forth.

3. The hinged wing-piece E, provided with notches N and short pivots M, adapted to engage with the eyes K of the handle, substantially as described, as and for the purposes set forth.

300,410. ELECTRIC CONDUCTOR. ANSON COLEMAN TREMOR, Alameda, Cal. Filed Sept. 15, 1883. (No model.)

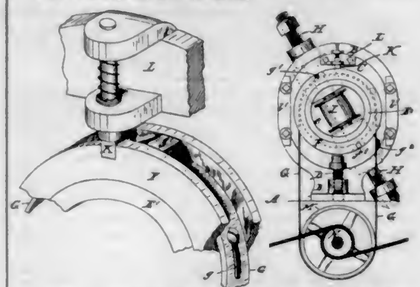
Claim.—1. A flexible cable or conductor for electrical purposes, consisting of a carbon core and an outer inclosing and protecting cover, case, or envelope, substantially as described.



2. An electric cable or conductor composed of a center of carbon, a wrapping of textile or fibrous material, and a superposed coating of non-conducting material, substantially as set forth.

3. An electric cable or conductor for transmitting electric currents, composed of a flexible or pliable tube containing a body of pulverized carbon.

300,411. HORSE-POWER. ROBERT H. TINDALL, Sumter, S. C. Filed Dec. 6, 1883. (No model.)

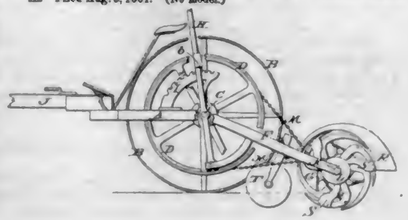


Claim.—1. The combination, with a drive-wheel, of a guide-pulley, tension-pulley, a double-grooved band-pulley, and an endless rope passing from said wheel around the guide-pulley, around the band-wheel, the tension-pulley, back around said band-pulley, and then back around said wheel, the above parts being arranged to operate substantially as set forth.

300,411.

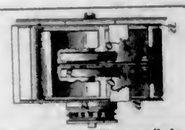
2. The combination, with a horizontal drive-wheel provided on its rim with teeth or prongs, of a guide-pulley situated in close proximity thereto, a vertical-tension pulley, a double-grooved band-pulley, and an endless rope or its equivalent, all of the above parts being constructed and arranged to operate substantially as set forth.

300,412. WOOD-MOLDING MACHINE. MELVIN L. TOWLE, Concord, N. H. Filed Apr. 17, 1884. (No model.)



Claim.—1. In a wood-molding machine, a spindle having cutters upon both ends thereof driven by an ordinary belt-pulley, and hung in suitable bearings, which are swiveled, substantially as shown, to a suitable frame attached to the operating-table, for the purpose of reversing and using either end of said spindle, all constructed and operating as herein described and set forth.

2. In a wood-molding machine, a spindle having cutters upon both ends thereof driven by an ordinary belt-pulley, and hung in suitable bearings, which are swiveled, substantially as shown, to a vertically-adjustable frame carried upon a stationary frame attached to the operating-table, all constructed and operating substantially as described, for the purpose of reversing said spindle, as set forth.

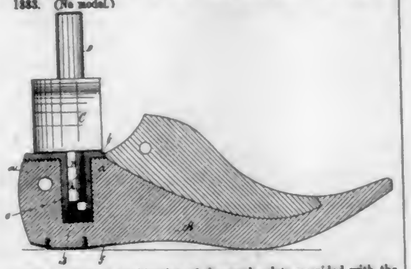


3. In a wood-molding machine, the combination, with the spindle H and the spindle-bearings E, having a cylindrical projection, E', by which they are swiveled to and supported in a suitable adjustable or stationary frame secured to the operating-table, of the flanged ring F, having slots *f f'*, and a suitable spring-latch, K, attached to said adjustable or stationary frame, for the purpose of maintaining said spindle in a vertical position, substantially as described and set forth.

4. In a wood-molding machine, the combination, with the spindle-bearings E, having cylindrical projection E', of the flanged ring F, having slots *f f'*, a suitable latch, K, and means, substantially as described, whereby said latch is released from said slots and said spindle is reversed, as and for the purpose specified.

300,413. HORSE SPADING-MACHINE. JOHN B. TURCHIN, Radom, Ill. Filed Aug. 8, 1881. (No model.)

300,413.

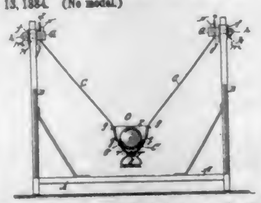


Claim.—1. In a spading-machine, a cylinder consisting of a hub or hubs carrying a series of curved arms, *d*, having curved wings N pivoted thereto transversely, with a fixed cam, O, and connecting rods or springs arranged to hold said wings in position for receiving the earth as it is cut, and then causing them to swing outward and deliver the earth into the furrow in rear of the cylinder, substantially as shown and described.

2. The combination of the stationary axle K, having the grooved cam O secured thereon, with the rotating spading cylinder or drum carrying the pivoted buckets or wings N, and the slotted rods P, provided with a pin, *p*, arranged to work in the groove of said cam, said rods having one end connected to the buckets or wings, and their slotted ends working loosely on the axle K, substantially as and for the purpose set forth

3. A rotating spading drum or cylinder provided with the pivoted wings or buckets N, arranged to operate as described, and mounted in the pivoted frame or bars F, in combination with the main frame A, mounted on wheels B B, with clutches *a*, and driving-wheels D L, connected by chains M, all constructed and arranged for joint operation, substantially as shown and described.

4. A cylinder or drum for spading-machines, consisting of a series of curved arms, *d*, having cutters *e* secured to their outer ends, with buckets or wings N, pivoted to said arms in rear of the cutters, and arranged to operate substantially as shown and described.

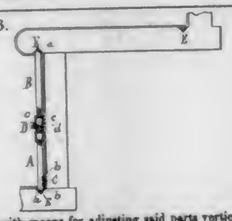


300,414. LAST. JAMES C. TURNER and LOUIS COTÉ, Boston, Mass., assignors of one-third to B. Curtis Young, same place. Filed Aug. 22, 1883. (No model.)

Claim.—1. The combination of the comb-plate provided with the shank or socket, the disk or cushion *d*, and the last, substantially as described.

2. A heeling-machine yoke, C, provided with a single spindle having three or more sides, in combination with a last provided with the disk or cushion *d*, and the comb-plate and shank, forming a socket conforming in shape with and adapted to receive said spindle, constructed as set forth, for the purposes and substantially as described.

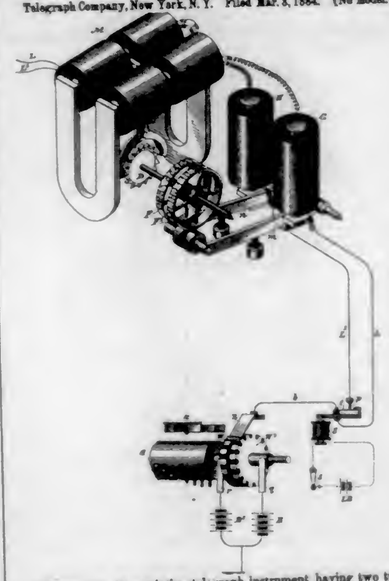
300,415. BALL-TRAP. ABRAHAM VAN ALLEN, New York, N. Y. Filed Mar. 13, 1884. (No model.)



Claim.—In a toy ball-thrower, the bed-plate A, the standards B B having holders G attached thereto, the elastic ball-thrower C, fastened to the said holders G, and having a flexible cup-shaped ball-holder, P, and handle S fastened thereto, all arranged and combined substantially as and for the purpose set forth.

300,416. STAIR-CARPET FASTENER. ZENAS A. VAN DEVENTER, Wilmington, Del. Filed Feb. 13, 1884. (No model.)

Claim.—1. A vertical stair-carpet fastener composed of two parts, the upper part being formed with points to fit under the nosing, and the lower part being formed with points to fit into the tread of the stair, in



300,416.

combination with means for adjusting said parts vertically in relation to each other and to hold them securely together, substantially as set forth.

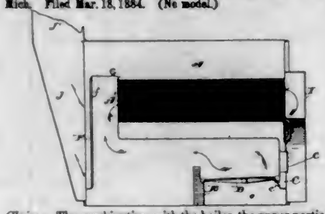
2. A stair-rod fastener composed of an upper and lower part, and means for adjusting and securing said parts, said lower part being provided with two rearwardly-projecting lugs, in combination with a stair-rod adapted to be held between said lugs, substantially as set forth.

300,417. PRINTING-TELEGRAPH. WILLIAM R. WARNER, Brooklyn, and CHARLES L. BUCKINGHAM, New York, assignors to the Western Union Telegraph Company, New York, N. Y. Filed Mar. 8, 1884. (No model.)

Claim.—1. In a printing-telegraph instrument having two type-wheels, the combination of a main line controlling a platen for taking an impression from one type-wheel, a second main line controlling a platen for taking an impression from the second type-wheel, an escapement mechanism under control of either line, a transmitter, and a switch for connecting either line thereto at pleasure.

2. In a printing-telegraph instrument having two type-wheels, the combination of a main line embracing the coils of an electro-magnetic impression device, a second main line embracing the coils of a second electro-magnetic impression device, and an electro-magnetic escapement common to both wires, a transmitter, and a switch for connecting either line thereto.

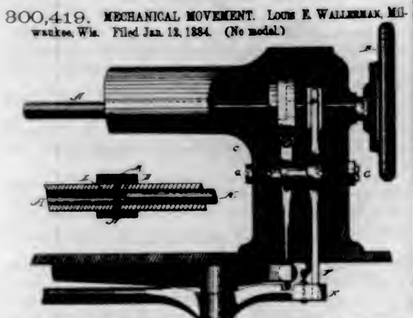
3. In a printing-telegraph, a letter-type wheel, an impression electro-magnet, and a main line containing the coils of said magnet, a figure-type wheel, a second impression electro-magnet, and a second main line containing the coils of said second magnet, in combination with an escapement electro-magnet having two coils located in said lines, respectively, a transmitter for directing to line reverse impulses, and a switch for connecting and disconnecting either line therewith at pleasure



4. In a printing-telegraph having two type-wheels and two main lines, the combination of two independent press-magnets, one for each line, a transmitter, and a switch for connecting and disconnecting either line thereto.

5. In a printing-telegraph, the combination of the type-wheels F F', main lines L L', magnets H G, a transmitter, and an electro-magnetic switch, S, for connecting the transmitter with either main line.

6. In a printing-telegraph, the combination of the type-wheels F F',



main lines L L', electro-magnets M, H, and G, a transmitter, and a switch, S, for connecting either line with said transmitter, substantially as described.

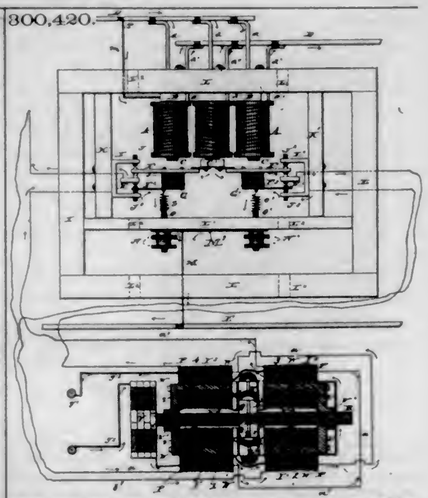
300,418. STEAM-GENERATOR. EBENEZER I. WALDEN, Ishpeming, Mich. Filed Mar. 18, 1884. (No model.)

Claim.—The combination, with the boiler, the upper portion thereof, at the rear end, projecting beyond the flue-sheet and communicating with the water-back, the water-front in open communication with the boiler, and tubes passing through the front of the boiler, of heaters B, having tubes which pass through the front and rear end of the boiler, and the smoke-boxes I and J, all of the parts combined substantially as set forth.

300,419. MECHANICAL MOVEMENT. LOUIS F. WALLERMAN, Milwaukee, Wis. Filed Jan. 12, 1884. (No model.)

Claim.—1. The mechanical movement herein described, consisting in the combination of a circular adjustable cam, D, having a uniform diameter, with the shaft A and arms H H of lever F, said cam being adapted by its adjustable attachment with said shaft to be adjusted more or less eccentric thereto within said arms, whereby the vibration of said lever F is increased or diminished, substantially as and for the purpose specified.

2. The combination, with the shaft A, of the adjustable cam D, provided with bearings M N, rod K, provided with eccentric pin L, and lever F, provided with arms H H, said cam D being adapted, by turning said rod K, to be adjusted eccentric to said shaft A, substantially as and for the purpose specified.

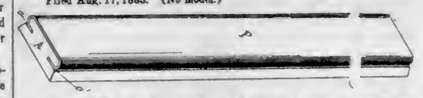


3. The combination of shaft A, adjustable cam D, of uniform diameter, and lever F, having rigid arms H H, said cam being adapted to vibrate said lever F in both directions unaided by spring, and to be adjusted eccentric to said shaft between said arms, all substantially as and for the purpose specified.

300,420. REGULATOR FOR DYNAMO-ELECTRIC MACHINES. JOHN EDWARD WATSON, Louisville, Ky. Filed Sept. 24, 1883. (No model.)

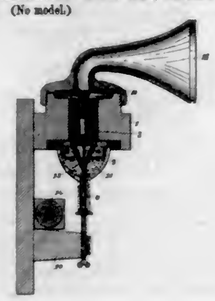
Claim.—1. An automatic current-regulator for dynamo-electric machines, composed of any suitable form of current-breaking, vibrating, and current-reversing mechanism connected in a derived circuit or shunt from the main-line or lamp circuit, operated by one or more low-resistance electro-magnets connected in the main-line or lamp circuit, having the derived or shunt circuit through the current-breaking, vibrating, and current-reversing mechanism so connected as to pass through a set of fine-wire coils wound on the outside of the coarse wire forming the field-magnet coils of any form of dynamo-electric machine, the fine wire on the outside of the field-magnets being wound in the same direction as the coarse wire and connected together in diagonally-opposite pairs to produce magnets of unlike polarity, but of the same polarity as is produced by the coarse wire, for the purpose of automatically regulating the current induced in the armature of such dynamo-electric machine and supplied to the lamp-circuit, as specified and set forth.

2. The field-magnet coils of a dynamo-electric machine, made of a number of turns of coarse insulated copper wire connected in series, so as to make like and unlike poles opposite each other, and having the coarse wire a part of the main or lamp circuit, and having wound on



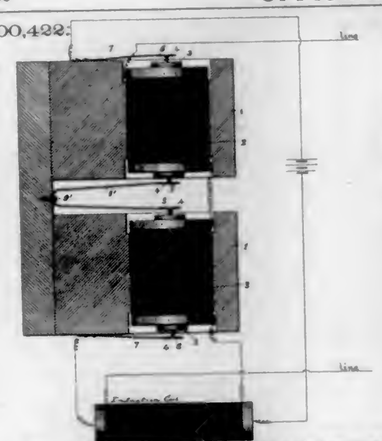
300,420.

their outside and in the same direction a greater number of turns of fine wire, connected together in diagonally-opposite pairs and supplied from a derived or shunt circuit from the main-line or lamp circuit through any suitable form of current-breaking, vibrating, and current-reversing mechanism operated by one or more low-resistance electro-magnets connected in the main-line or lamp circuit for the purpose of automatically regulating the current induced in the armature of the dynamo-electric machine, and supplied to the lamp-circuit, as specified and set forth.



3. A dynamo-electric machine having its field-magnet coils formed of a number of turns of coarse insulated copper wire connected in series, and in the main-line or lamp circuit, so as to make the coarse wire a part of the main-line or lamp circuit, with a greater number of turns of fine wire wound in the same direction on the outside of the coarse wire, and so connected together as to make the iron cores of the field-magnets the same polarity as the coarse wire, but connected together in diagonally-opposite pairs, and supplied from a derived or shunt circuit from the main-line or lamp circuit, in combination with any suitable form of current-breaking, vibrating, and current-reversing mechanism, composed of one or more low-resistance electro-magnets connected in the main-line or lamp circuit operating such mechanism.

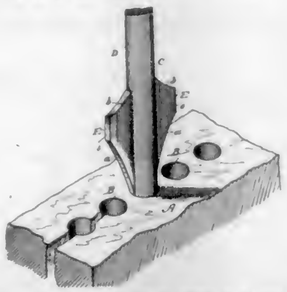
300,421. BLOTTING PAD AND RULER. JULIUS WEIS, Chicago, Ill. Filed Aug. 17, 1883. (No model.)



Claim.—The noiseless blotting and absorbing ruler A, doubly beveled and in one piece, provided with slots *a* and *a'*, to receive the turned ends of a blotting-pad, in combination with such pad or other absorbent material, to catch falling ink and for a blotter.

300,422. TELEPHONE. WM. A. WEST, Bellefontaine, Ohio. Filed July 25, 1883. (No model.)

300,422.

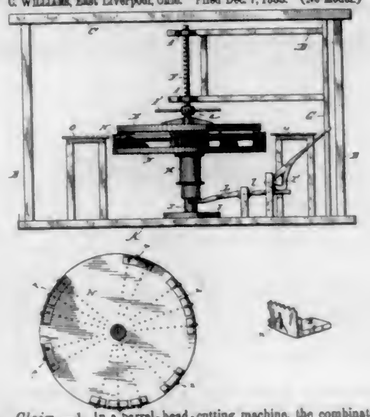


Claim.—1. The combination of a main and a local circuit, a number of electro-magnets in series in the main circuit, a number of sets of microphonic contacts in series in the local circuit, means for simultaneously actuating the contacts by the action of the electro-magnets, and an induction apparatus having the primary in said local and the secondary in said main circuit.

2. The combination of an electro-magnet having a perforated core and placed vertically, an armature at each end thereof, a diamagnetic needle passing through said core and rigidly connected to one armature while making a microphonic contact with the other armature, a mercury-float forming an elastic support for one armature, an induction-coil and a main and a local circuit, the former including the electro-magnet and the secondary of the induction-coil, the latter including the local battery, microphonic contact, and primary of the induction-coil.

3. The combination of an electro-magnet having a perforated core and placed vertically, a horizontal diaphragm therefor, two armatures for said magnet, a diamagnetic needle passing through said core and rigidly connected to one armature while making a microphonic contact with the other armature, and a float in mercury forming an elastic support for one armature.

4. The combination of an electro-magnet having a perforated core and placed vertically, an armature at each end thereof, a diamagnetic needle passing through said core and rigidly connected to one armature while making a microphonic contact with the other armature, and a float in mercury forming an elastic support for one armature.

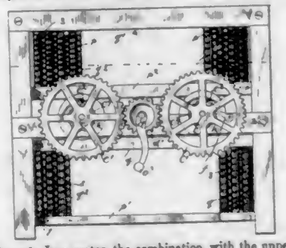


300,423. TOOL FOR SPLITTING STONE. WARREN W. WILD, Lee, Mass. Filed Jan. 16, 1884. (No model.)

Claim.—1. A stone-working tool for cutting or splitting the cores separating the holes drilled in marble or other stone, comprising a cylindrical body having one or more wedging fins or extensions formed thereon, said fins having an inclined edge, *a*, and a straight edge or portion, *s*, as and for the purpose set forth.

2. A stone-working tool for cutting or splitting the cores separating the holes drilled in marble or other stone, comprising a cylindrical body having its lower end rounded or beveled, and wedging fins or extensions formed on the body above the rounded end, said fins or extensions having inclined edges *a b* and a straight portion, *s*, as set forth.

300,424. MACHINE FOR CUTTING BARREL-HEADS. SYLVESTER C. WILLIAMS, East Liverpool, Ohio. Filed Dec. 7, 1883. (No model.)



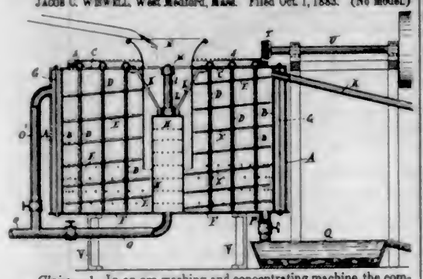
Claim.—1. In a barrel-head-cutting machine, the combination, with a rotary table provided with upright sawing and cutting devices and means for raising or lowering the table, of a circular bed-piece located above the latter, substantially as set forth.

2. In a barrel-head-cutting machine, the combination, with a rotary table provided with upright sawing and cutting devices and means for raising or lowering it, and a bed-piece located above the table, of a platen located above the bed-piece, and mechanism for vertically adjusting said platen, substantially as set forth.

3. In a barrel-head-cutting machine, the combination, with a rotary table and a bed-piece above the table, of a platen provided with a mechanism adapted to swing it on and off from said bed-piece, substantially as set forth.

300,425. MECHANICAL POWER. DAVID WIRE, Cottendale, Tex. Filed Apr. 10, 1884. (No model.)

Claim.—1. In a motor, the combination, with the upper and lower columns of coil-springs incased in fixed guides, and provided with pulleys at their movable ends, and their operating-cord, of a power-shaft provided with a winding-drum movable laterally thereon, and a loose cog-gear, with a spring-pawl engaging a fixed ratchet-wheel on said shaft, the latter being journaled in an adjustable box at one end on the bearing-rail of the frame, substantially as specified.



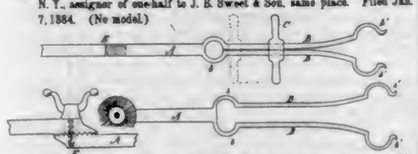
2. In a motor, the combination, with the shafts *c* and *e*, provided with the cog-gears *c'* and *d'*, the pawls and ratchets, and winding-drums, said shafts being mounted in adjustable boxes on one bearing-rail of the frame, of the intermediate shaft, *d*, having the pinion *d'*, and the brake at the opposite bearing-rail, and the columns of coil-springs, and the operating-cords connected to the drums, substantially as specified.

3. In a motor, the combination, with the bearing-rail having recesses in its upper face and guides at said recesses, of the spring-actuated boxes, the shifting-levers, and wedges for throwing the cog-gears on the shafts *c* and *e* out of gear with the pinion on the shaft *d*, substantially as specified.

4. In a motor, the combination, with one of the bearing-rails of the frame and the shaft *d*, journaled in a box thereon, of a lower fixed half-box and an upper adjustable half-box, secured thereto by a bolt and a lever-bolt, to be operated as a brake for the motor, substantially as specified.

5. In a motor, the shaft *d*, provided with a sprocket-wheel at one end and a crank at the other end, and mechanism, substantially as herein described, for applying power to said shaft *d*, substantially as specified.

300,426. MACHINE FOR WASHING AND CONCENTRATING ORES. JACOB C. WHEWELL, West Medford, Mass. Filed Oct. 1, 1883. (No model.)

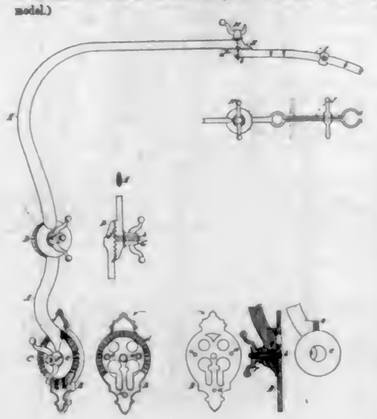


Claim.—1. In an ore washing and concentrating machine, the combination of the cylinders A B, having an intermediate water-space between them, the rotating top C, vertical rods D, and inclined bars E, substantially as described.

2. The combination of the cylinder A, the perforated cylinder B, and the perforated central pipe, H, provided with their several supply-pipes, as and for the purpose specified.

3. The combination, in an ore washing and concentrating machine, of the hopper or funnel N, the rotating top C, the boxes L and M, spindle I, and the central perforated pipe, H, as and for the purpose set forth.

300,427. CLAMP FOR CANOPY-TOPS. THEODOR ZANGER, Buffalo, N. Y., assignor of one-half to J. B. Sweet & Son, same place. Filed Jan. 7, 1884. (No model.)

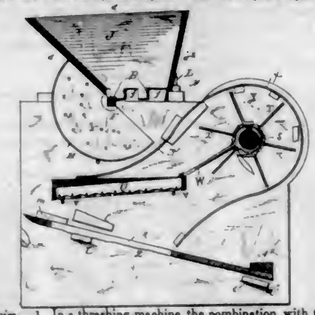


Claim.—1. As a new article of manufacture for sustaining parasols upon their supports, a spring-clamp controlled and confined by means of sleeve C, and having a main or body portion, A, bifurcations B B, having curves *b* and *b'*, and a circular joint-head, E, provided with cogs *d*, and a threaded perforation, all substantially as shown, and for the purposes set forth.

2. As an article of manufacture, a spring-clamp composed of malleable cast-iron, having spring-bifurcations, and means for readily connecting it to and detaching it from its support.

3. As an article of manufacture, a bifurcated spring-clamp adapted for use on children's carriages for supporting parasols, composed of malleable cast-iron, and having a sliding sleeve, C, for controlling the position of the bifurcations in relation to each other, and a joint-head formed for ready connection to the supporting-rod.

300,428. CANOPY-TOP. THEODOR ZANGER, Buffalo, N. Y., assignor of one-half to J. B. Sweet & Son, same place. Filed Jan. 7, 1884. (No model.)



Claim.—1. In supports for parasols and canopy-tops upon children's carriages, the combination, with the base-piece B, having apertures *a a a*, central axial support, *b*, circumferential cogs *d*, and thumb-nut F, of a supporting-rod having circular foot *c*, with central aperture and a depression, *e*, a joint, D, provided with cogs *d*, center post, *b*, and thumb-nut G, joint E, having clamping means H, and spring-clamp I, all substantially as shown, and for the purposes set forth.

2. The combination, with a support, A, having circular foot *c*, with central aperture and a depression, *e*, as described, of a base-piece, B, having a central axial support, *b*, nut F, apertures *a*, and cogs *d*, constructed and operated substantially as described.

3. The combination, in supporting-rods such as described, of the joint E, set-screw H, the spring-arms, and clamp I, substantially as shown, and for the purpose set forth.

4. A support for parasols and canopy-tops having cog-joint C, rendering the rod adjustable right and left, cog-joint D, rendering it adjustable front or rear, and joint E, rendering the parasol adjustable in a horizontal plane, substantially as shown, and for the purposes set forth.

300,429. MACHINE FOR THRASHING PEAS, BEANS, &c. BENJAMIN FRANKLIN ARCHER, Marietta, Miss. Filed Feb. 19, 1884. (No model.)

Claim.—1. In a thrashing-machine, the combination, with the supporting-frame and the thrashing-disks, of the detachable hopper arranged above the same, one side, *e*, being vertical and fitting over one of the disks, and the remaining sides converging inward toward the inner face of the disks, a series of slots, *f*, cut in the hopper to allow the passage of the spikes of the disks, suitable stops secured to the frame for receiving the lower ends of the hopper, and hooks and eyes to secure the hopper in place, as set forth.

2. In a thrashing-machine, the combination, with the frame, operating-shaft, and hopper, of the revolving and stationary disks, the fan-cylinder Y, the fan-shaft, gearing connecting the fan-shaft with the operating-shaft, the inclined shaking screen, the stationary screen Z, arranged below the shaking screen, the top wall, X, of the fan-cylinder, sloping or curving downward, so that the material is deposited on the shaking screen, and the bottom wall of the cylinder, likewise sloping or curving downward, so as to prevent the material dropped from the shaking screen from escaping outward, as set forth.

300,430. BACK-BAND BUCKLE. BENJAMIN FRANKLIN ARCHER, Marietta, Miss. Filed Mar. 5, 1884. (No model.)

Claim.—1. The combination, with the back-band, of the buckle-frame provided with a hook at its end, and a wedging-frame journaled in the said buckle-frame and having a corresponding hook, arranged and adapted to operate for the purpose set forth.

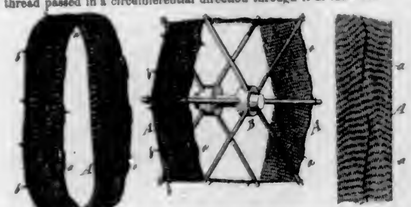
2. The herein-described buckle-frame, comprising the base formed with an upwardly-projecting hook at one end and a wedging-frame pivoted at its other end, and having a hook to fit over the hook of the base, as set forth.

3. The herein-described buckle, comprising the base having a hook at one end, flanges at its other end, a cross-bar extending across the base and fitted in the flanges, and a wedging-frame pivoted in the flanges and provided with a hook to fit over the hook of the base, as set forth.

4. The herein-described buckle, comprising the base formed with a hook at one end of the wedging-frame, pivoted at the other end, and provided with a hook to fit over the hook of the base, and a projection

formed in the hook of the wedging-frame and adapted to facilitate the separation of the parts, as set forth.

5. The combination, with the back-band, of the buckle comprising the base, formed with a hook at one end and a transverse slot at or near the center, and a wedging-frame pivoted at the other end and formed with a book to fit over the hook of the base, and provided with a projection to facilitate the separation of the parts, as set forth.

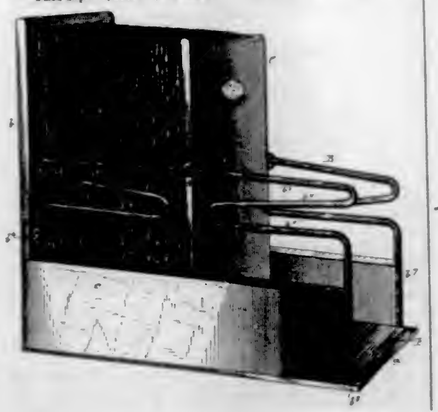


6. The herein-described buckle, comprising the base having a hook at one end, flanges projecting up from said base, the wedging-frame pivoted in said flanges and provided with a supplemental notched plate to engage with the material, a hook at the end of the wedging-frame to fit over the hook of the base, and a projection to separate the parts, as set forth.

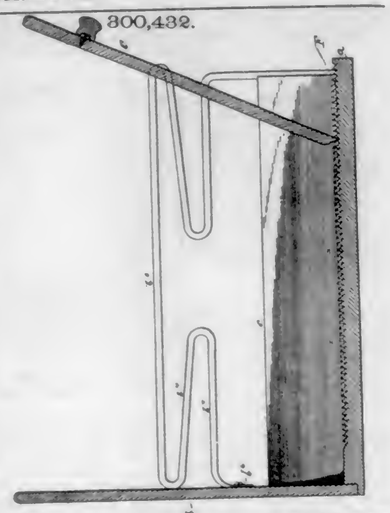
7. The combination, with the back-band, of the buckle provided with a hook at one end, and a wedging-frame journaled at the other end of the buckle, and having a corresponding hook to fit over the hook of the base, said wedging-frame engaging with the back-band, and provided with a ring secured to its outer face, for the purpose set forth.

8. The combination, with the back-band, of the buckle comprising the base having a hook at one end, flanges at the other end, and a cross-bar connecting the flanges, the wedging-frame provided with a suppplemental notched plate to engage the band, and pivoted in the flanges, the end of said wedging-frame terminating in a book adapted to fit over the hook formed on the base, and a ring secured to the wedging-frame, for the purpose set forth.

300,431. SILK AND OTHER SKEINS. ORLO ATWOOD, New London, Conn. Filed Oct. 6, 1883. (No model.)



Brief.—Silk or other thread wound upon the reel in the form of a wide band, the thread being laid or crossed diagonally with a quick traverse and secured at the edges by lacing or tying, or having a lacing-thread passed in a circumferential direction through it at intervals.

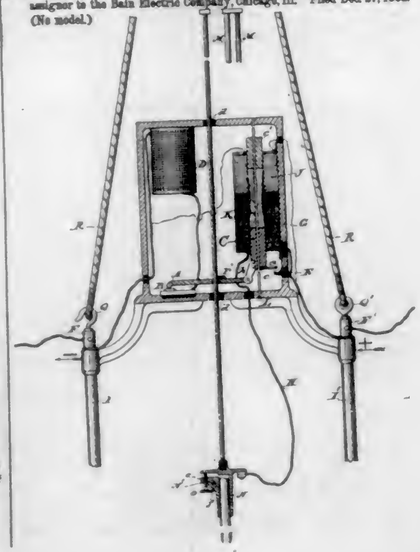


Claim.—1. A skein of silk or other fibrous material wound upon a reel diagonally from side to side with a quick traverse, and secured at the edges only by lacing or tying, leaving the skein free to be pulled apart or spread throughout its entire circumference, substantially as herein described.

2. A skein of silk or other fibrous material wound upon a reel diagonally from side to side with a quick traverse, and having a lacing cord or thread passing in a circumferential direction and through it at intervals, leaving the skein free to be pulled apart or spread throughout its entire circumference, substantially as described.

300,432. FILE-HOLDER. THOMAS E. BADEN, Washington, D. C. Filed Sept. 17, 1883. (No model.)

300,432.



Claim.—1. In a file holder or box, the combination of smooth-surfaced spring-arms or elastic follower-guides, adapted to spring out of a straight line by the locking action of the follower-board, with stationary end and bottom boards, and a follower-board adapted to slide and rock on said spring-arms and engage with the inner surface of the stationary bottom board by the downward pressure of the spring-arms, substantially as herein set forth.

2. In a file-holder, the combination of the spring arms or guides, consisting of a straight guide or upper portion and reversely-bent spring members at its ends, with a movable follower having side loops or staples, and a stationary end and bottom board, substantially as herein set forth.

3. In a file-holder, the combination of the spring arms or guides, consisting of a straight longitudinal top portion, reversely-bent spring-arms, and vertical downward extensions of the latter, all made of one piece of metal, with the bottom board, the end board, and the movable follower, substantially as herein set forth.

300,433. ELECTRIC-ARC LAMP. FOREST BAIN, Minneapolis, Minn., assignor to the Bain Electric Company, Chicago, Ill. Filed Dec. 27, 1882. (No model.)

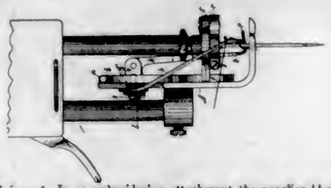
Claim.—1. In an electric lamp, the combination, substantially as herein set forth, with a normally-closed short circuit having a resistance substantially equal to that of the lamp, and including the clutch mechanism, of main and shunt magnet coils, the core of which is connected directly with the clutch mechanism.

2. In an electric lamp, the combination, substantially as herein set forth, of a short circuit including the clutch or carbon-lifting device, a magnet in the main and a magnet in the shunt circuit, and a core directly connected with the clutch device, the arrangement being such that normally there are three paths for the current, and that the short circuit is made or broken in accordance with the varying currents flowing through the main and shunt circuits.

3. The combination, in an electric lamp, of a carbon-carrier composed of two rods or pipes arranged parallel to each other and firmly attached together, with a clamp or clutch adapted to clamp or clutch either or both of the rods or tubes in the act of lifting the same, substantially as described.

4. The combination, in an electric lamp, of a carbon-carrier composed of two rods or tubes arranged parallel to each other and firmly attached together, and a clutch constructed substantially as described.

5. The combination, in an electric lamp, of a carbon-carrier composed of two rods or tubes arranged parallel to each other and firmly attached together, and a clutch composed of two parts, connected together as described, and adapted to bite at four geometrical points, substantially as set forth.



6. In an electric lamp, a clutch device consisting of a plate in the form of a cross, having another plate connected thereto above the cross-bar of the cross, substantially as described.

7. In an electric lamp, the binding or connecting posts provided with binding-screws having their upper ends formed into hooks or eyes, and adapted for connection with a non-conducting suspension-cord, substantially as described.

8. A carbon-clamp for securing the carbons in the carrier, composed of two parts connected together by a pivot working in an inclined slot, and an adjusting thumb-screw, substantially as described.

300,434. EMBROIDERING ATTACHMENT FOR SEWING-MACHINES. GEORGE W. BAKER, Cleveland, Ohio, assignor to the White Sewing Machine Company, same place. Filed May 19, 1883. (No model.)

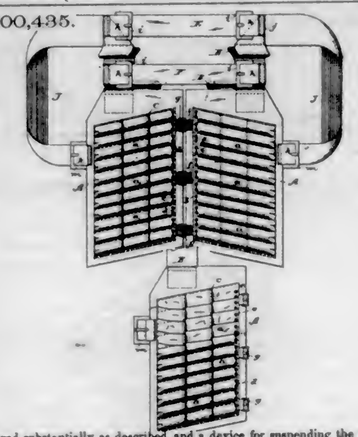
Brief.—The loops are extended on one side of the row of stitching by means of the looper. When it is desired to form the embroidery alike on both sides of the row of stitching, the looper is removed by taking out the screw on which it vibrates, whereupon the thread-laying arm alone, acting with the needle, will operate to cause the embroidery-thread to lie without any extended loops closely interwoven with the needle-thread.

Claim.—1. In an embroidering attachment, the peculiar U-shaped groove *c c*, with converging boundary-ribs *f f*, the rocking wedge *b*, and thread-laying arm A, connected thereto, in combination with the operating-finger C, pivoted on the needle-bar of a sewing-machine, adapted to enter the groove *c c*, engage with the rocking wedge, and operate the thread-laying arm, substantially as herein set forth.

2. In combination with the body A, having the groove *c* therein, rocking wedge *b*, thread-laying arm A, connected thereto, and finger C, carried by the needle-bar, the detachable looper *k*, and means for connecting the same with the thread-laying arm, adapted to engage the embroidery-thread at each alternate vibration of the said arm, substantially as herein set forth.

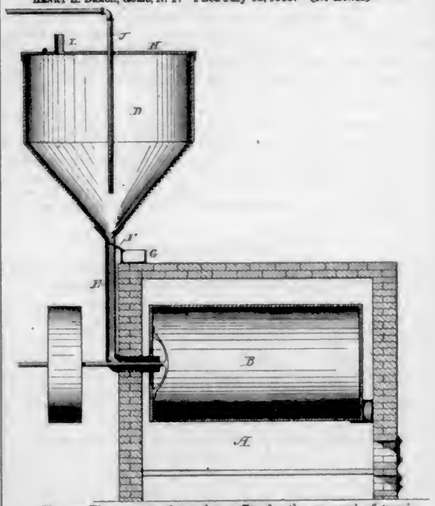
3. In an embroidering attachment for sewing-machines, a body with the groove *c c* formed by converging ribs *f f* therein, a rocking wedge pivoted thereon, connected to a thread-laying arm, and provided with means for retaining it in position while the needle descends, in combination with the needle-bar provided with an operating-finger suitably pivoted thereto, reciprocating therewith, and adapted to swing laterally thereon, substantially as and for the purpose set forth.

300,435. SHOULDER-BRACE. WARD BATCHELOR, Washington, D. C. Filed Feb. 23, 1884. (No model.)



Claim.—1. In a device for the treatment of round shoulders, the combination of a weight or weights with a support for the same, arranged substantially as described, and a device for suspending the same from the neck and shoulders of the wearer, as set forth.

2. In a shoulder-bracing device, the combination of a series of diagonal weighted pockets with a proper support for the same, substantially as described, and a means of suspending the same from the body of a person, as described.

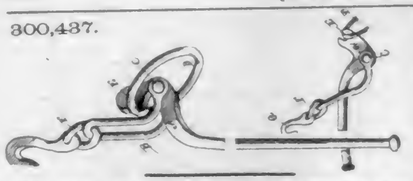


3. In a shoulder-bracing device, the combination of a series of weighted pockets provided with flexible joints *c c* with a proper support, substantially as described, and a means of suspending the same from the shoulders of a person, as shown.

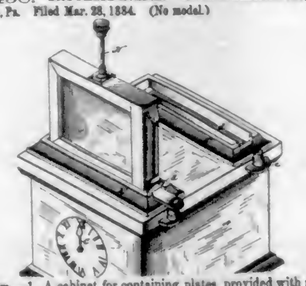
4. In a shoulder-bracing device, the combination of a series of detachable weights with a support for the same, arranged substantially as described, and the means described of suspending the same from the body of a person.

300,435.

300,436. PROCESS OF REMOVING TANNIC ACID FROM COFFEE. HENRY H. BEACH, Rome, N. Y. Filed July 13, 1883. (No model.)



Claim.—The process of treating coffee for the removal of tannic acid and other deleterious substances therefrom, which consists in heating the green coffee by means of steam to about 212° Fahrenheit for about the time specified, and removing the matter extracted from the berry, substantially as hereinbefore set forth.



300,437. LOG-BINDER. JOHN H. BENJAMIN, Saginaw, Mich. Filed Dec. 8, 1883. (No model.)

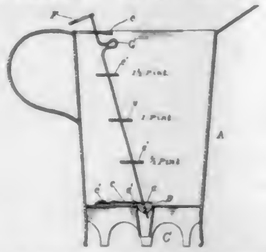
Claim.—The combination, with the lever A, of the clevis B, fulcrum C, and ring D, in the manner and for the purpose specified.

300,437.

300,438. DRY-PLATE HOLDER. EDWIN L. BERGSTRESSER, Hublersburg, Pa. Filed Mar. 28, 1884. (No model.)

Claim.—1. A cabinet for containing plates, provided with mechanism which automatically registers each plate upon a dial as it is placed therein after exposure, substantially as set forth.

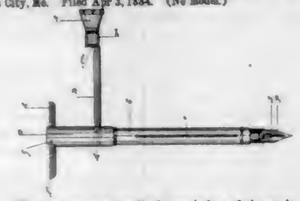
2. In a cabinet for holding plates, the combination, with mechanism for automatically registering each plate as it is inserted, of a pusher for moving the plates forward, substantially as set forth.



3. In a cabinet for holding plates, the combination, with a suitable dial having figures marked thereon, of a shaft carrying a ratchet-wheel, and an indicator, and a lever provided with means for operating said ratchet-wheel, as set forth.

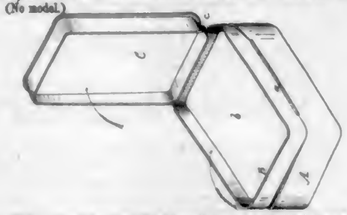
4. In a cabinet for holding plates, the combination, with a suitable dial having figures marked thereon, of a shaft carrying an indicator, and ratchet-wheel, a spring-pressed pawl engaging said ratchet-wheel, and a lever provided at its forward end with an arm to engage said ratchet-wheel, substantially as set forth.

5. In a cabinet for holding plates, the combination, with a dial having figures marked thereon, of a shaft carrying a ratchet-wheel and indicator, and having bearing at its rear end in a bracket secured to a strip inclosing said ratchet-wheel, a spring-pressed pawl adapted to engage said ratchet-wheel, and a lever provided with an arm for actuating the same, substantially as set forth.



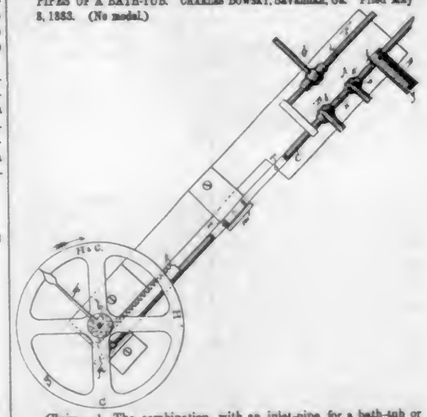
6. In a cabinet for holding plates, the combination, with a dial having figures marked thereon, of a shaft carrying a ratchet-wheel and indicator, a spring-pressed pawl adapted to engage said ratchet-wheel, a lever provided with an arm at its forward end for actuating said ratchet-wheel, a spring for retaining the same in position, said lever being provided at its forward end with an upwardly-projecting extension, and a coil-spring, located between the end of said lever and the floor, substantially as set forth.

300,439. COMBINED LIQUID-MEASURE AND FUNNEL. THOMAS T. ESHOP, Washington, D. C. Filed Apr. 12, 1884. (No model.)



Claim.—As a new article of manufacture, the measure A, provided with guide *e* and bottom B, having funnel C, in combination with the rod E, having handle F and curved extension G made integral therewith, and having the washers *d'*, and the valve D secured to the bottom B by means of the double-hinged bar *c*, substantially as and for the purpose set forth.

300,440. COMBINATION WRITING-INSTRUMENT. SAML. BLITZ, Kansas City, Mo. Filed Apr. 3, 1884. (No model.)



Claim.—The instrument described, consisting of the main shell or body carrying the inscribing device at one extremity, and being provided at the other with the pivoted rubber stamp and ink-pad shells, the steel-knife eraser fixed within the upper end of the aforesaid ink-pad shell and shielded by the rubber eraser, which is adapted to fit over the same, and by reason of its elasticity to retain its position within the upper end of the ink-pad shell, all constructed and combined in the manner and for the purposes set forth.

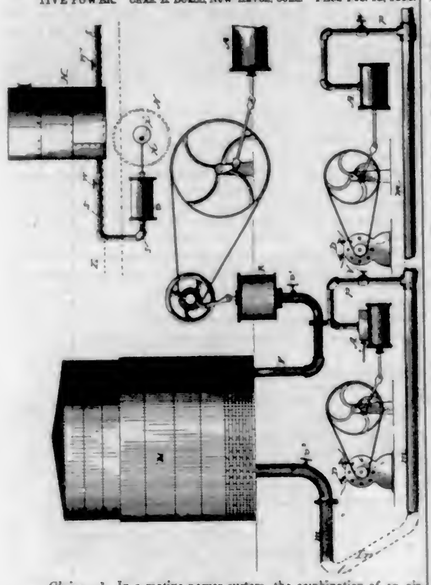
300,441. BOX. GEORGE BORST, Rochester, N. Y. Filed Apr. 16, 1884. (No model.)

Claim.—As a new article of manufacture, a portable box consisting of two open-topped compartments hinged together at the back to turn crosswise, one compartment forming a cover for the other, and a cover hinged to the upper compartment at one end to turn longitudinally and at right angles to the other hinge, as herein shown and described, and for the purposes specified.

300,442. DEVICE FOR CONTROLLING THE INLET AND OUTLET PIPES OF A BATH-TUB. CHARLES BOWSKY, Savannah, Ga. Filed May 8, 1883. (No model.)

Claim.—1. The combination, with an inlet-pipe for a bath-tub or similar tank, of a transversely-perforated rod sliding through said pipe transversely, whereby the flow of water is started or stopped by the movement of the rod, substantially as and for the purpose set forth.

2. The combination, with the hot and cold water pipes of a bath-tub, and their spigots, having stuffing-boxes arranged in line with each other, of a sliding rod passing through the boxes in both pipes, and provided with transverse perforations which register with the passages in spigots and pipes as the rod is shifted, and an operating hand or pointer registering on a marked dial the position of the perforations in the rod, substantially as shown and described.



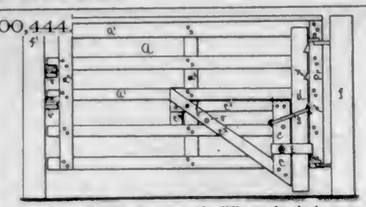
3. A bath-tub or similar tank having a frame or cylinder through which the escape-opening is made, and provided with a spring-actuated

ping or valve adapted to close this opening when forced down, in combination with a sliding rod formed with a beveled nose arranged across the outer end of the spring-plug, whereby the escape may be opened or closed without putting the hand into the water, substantially as shown and described.

4. In a sliding cut-off for water-pipes, the combination, with the water-pipe provided with suitable stuffing-boxes, and a transversely-perforated rod sliding therein, of an operating-handle and a graduated scale or dial marked to correspond with the perforations in the rod, substantially as and for the purpose set forth.

5. In a bathing apparatus, the inlet-pipes A B G, provided with stuffing-boxes, in combination with the perforated valve-rods C F, having stops *m m*, the toothed rack *k*, pinion *l*, hand or pointer M, and dial M', having indicating-marks, substantially as and for the purpose set forth.

300,443. MEANS FOR UTILIZING COMPRESSED AIR AS A MOTIVE POWER. CHAS. E. BUELL, New Haven, Conn. Filed Feb. 13, 1880.



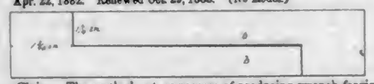
Claim.—1. In a motive-power system, the combination of an air-compressing apparatus and an expansible air-holder located between said apparatus and the compressed-air mains, and serving to maintain a uniform pressure of air in said mains, with outlying stations, each provided with a motor arranged to be propelled by the compressed air from the mains, and cut-offs in the branch pipes extending from the mains, whereby all the motors may be separately controlled and the supply of compressed air regulated at will, substantially as shown and described.

2. The combination, with an air-compressing apparatus, of an air-holder provided with induction and eduction pipes, and means for controlling the flow of air through said pipes, whereby air may be stored under pressure in the holder for use when the compressing apparatus is not in operation, or compressed air can be forced through the holder into the supply-mains, substantially as shown and described.

3. The combination, with a railway-car, of an air-compressing apparatus located thereupon and suitably operated, an air-holder arranged to be charged by the air-compressing apparatus, and a supply-main for conveying the compressed air to the point or points of consumption, substantially as set forth.

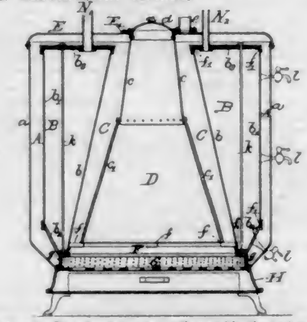
4. The combination, with a railway-car, of an air-compressing apparatus located thereon and suitably operated, an air-holder arranged to be charged by the air-compressing apparatus through a suitable induction-pipe, an eduction-pipe from said air-holder to convey the compressed air to the point or points of consumption, and means for controlling the flow of air through said pipes, whereby air may be stored under pressure in the air-holder for use when the car has ceased to move, or compressed air can be forced through the holder to the point or points of consumption when the car is in motion.

300,444. GATE. JAMES G. CALHOUN, Edinburg, Ohio, assignor of one-half to Samuel Calhoun, same place. Filed Nov. 26, 1883. (No model.)



Claim.—1. A vertically-adjustable sliding and swinging gate, consisting of a main frame, *a*, and a supporting-frame, *b*, provided with a guide, *c*, and a link, *s*, hinged at one end to the upright part *c* of frame *b*, in combination with the hinged post *d*, formed with notches *n* on its side opposite from frame *b*, the link *s*, engaging with the notches and embracing the upright part *c* of frame *b*, and post *d*, substantially as described.

2. In a vertically-adjustable sliding and swinging gate, the main frame *a*, formed with the front ends of boards *a'*, projecting beyond the upright piece a^2, in combination with post *f'*, provided with one or more blocks, *v*, the hinged post *d*, formed with notches *n*, link *s*, and frame *b*, the blocks *v*, boards *a'*, and notches *n* being relatively arranged substantially as and for the purpose specified.

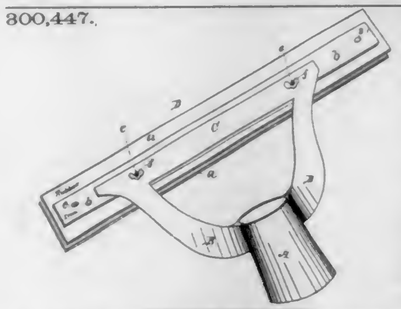


3. The sliding and swinging gate-frame *a*, formed with boards *a'*, with projecting front ends, in combination with post *f'*, formed with notched blocks *v*, and with the supporting-frame *b*, provided with pin *o*, slightly above board *a'*, link *s*, guide *c*, hinged and notched post *d*, and post *f*, substantially as described.

300,445. MANUFACTURE OF WRENCH-FORGINGS. LUKE CHAPMAN, Collinsville, Conn., assignor to the Collins Company, same place. Filed Apr. 22, 1882. Renewed Oct. 29, 1883. (No model.)

Claim.—The method, art, or process of producing wrench-forgings, consisting in cutting bar-sections *a* into the blanks *b b*, and then heading the blanks in dies, all substantially as herein described.

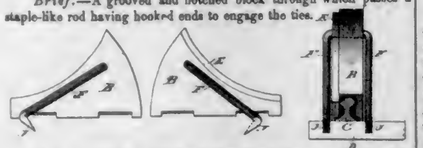
300,446. STEAM-GENERATOR. BENJAMIN S. COMSTOCK, New York, N. Y. Filed Feb. 17, 1882. (No model.)



Claim.—1. In a steam-generator, the combination, substantially as hereinbefore set forth, of a combustion-chamber and an annular water-chamber, the inner wall of which converges toward its upper extremity, and a fuel-magazine having its wall approximately parallel with said inner wall of said water-chamber, and forming therewith an intervening flue in the form of a truncated cone.

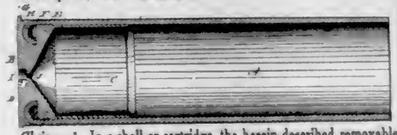
2. In a steam-generator, the combination, substantially as hereinbefore set forth, of a combustion-chamber, having a grate with a circular shoulder and perforations therein, with the annular water-chamber, an enveloping cylinder forming a hot-air chamber, and a conical fuel-magazine depending from the top of said cylinder.

300,447. SCRUBBER. WILBER F. CORNELIUS, Muncie, Ind. Filed Oct. 17, 1883. (No model.)



Claim.—The combination, with a holder formed with arms connected by a bar, as described, of a flexible scrubber-head, consisting of rubber strips having a wooden strip interposed between them, and metallic strips secured upon their outer faces, and bolts and thumb-nuts for removably securing said scrubber-head to the bar of the holder, substantially as set forth.

300,447.

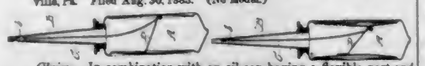


300,448. CAR-CHECK FOR PREVENTING CARS ON SIDE TRACKS FROM BEING BLOWN THEREFROM. JAS. M. DE WITT, Grand Junction, Colo. Filed Dec. 20, 1883. (No model.)

Brief.—A grooved and notched block through which passes a staple-like rod having hooked ends to engage the ties.

Claim.—In a check-block for railway-tracks, the grooved and recessed block combined with the staple-like rod passing through and embracing the sides thereof, and having the hook ends to engage with the ties or track structure, substantially as shown and described.

300,449. CARTRIDGE-SHELL. AARON F. DICKEY, Somerset, Pa. Filed Apr. 18, 1884. (No model.)

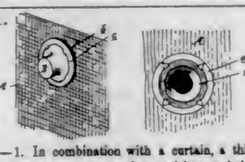


Claim.—1. In a shell or cartridge, the herein-described removable metallic breech, comprising the cylindrical body, the circular cap at the rear end, the circular series of teeth or crimpers, and the semicircular recess or depression at the rear thereof, for the purpose set forth.

2. The combination, with the shell or cartridge-case, of the herein-described detachable breech, formed with threads or crimpers on its exterior face at one end, and a recess or depression beyond the crimpers, for the purpose set forth.

3. The combination, with the shell or cartridge-case, of the herein-described detachable breech, formed with teeth, threads, or crimpers on the exterior face at one end, a recess or depression beyond the teeth or crimpers, and a wall or flange projecting over the recess, for the purpose set forth.

4. The herein-described metallic breech, comprising the cylindrical body and circular cap formed integral, threads, teeth, or crimpers on the exterior face of the body, a recess or depression between the teeth and the circular cap, and a wall or flange projecting inward from the cap over the recess, as set forth.

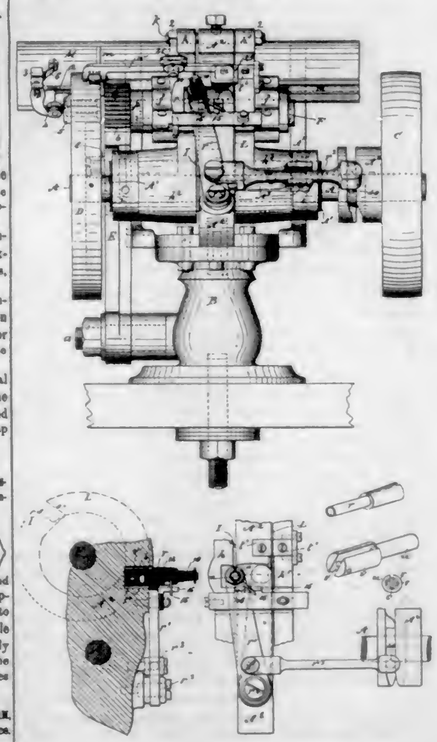


300,450. OIL-CAN. WILLARD D. DORMAN, Washington, D. C., assignor to himself and Samuel R. and John T. Stratton, both of Strattonville, Pa. Filed Aug. 30, 1883. (No model.)

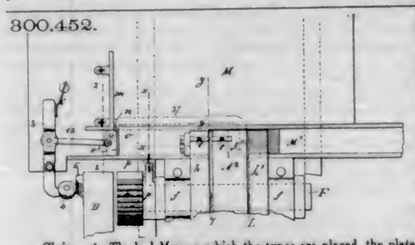
Claim.—In combination with an oil-can having a flexible part and a nozzle with a tapering oil-passage, a spring attached to the can opposite said flexible part, and a plunger with a diameter corresponding to that of the oil-passage at the point of the nozzle, arranged in said nozzle and connected with said spring, whereby the plunger is longitudinally moved by the movement of the spring, the latter being actuated by the flexible part, and the whole operating to serve as and for the purposes set forth.

300,451. CARRIAGE-CURTAIN ATTACHMENT. WM. DOWNHAM, St. John's, Mich., assignor of one-half to Porter K. Perrin, same place. Filed Apr. 26, 1884. (No model.)

300,451.



Claim.—1. In combination with a curtain, a thimble made of elastic material and secured over and around button-holes in said curtain, as a means of securing said curtain to a button-stud, substantially as described.



2. In combination with a stud-button, the thimble B, provided with annular flange *b*, the annular ring *c*, and the ring *d*, as a means of securing a curtain to a button, substantially as and for the purposes specified.

300,452. TYPE-RUBBING MACHINE. GEORGE S. EATON and JAMES W. LYON, Brooklyn, N. Y., assignors to said Eaton. Filed May 9, 1883. (No model.) Patented in England May 15, 1883, No. 2,439; in Belgium June 15, 1883, No. 61,487; in Austria-Hungary Aug. 17, 1883, No. 33 and No. 1,573; in France Sept. 13, 1883, No. 155,646, and in Germany Jan. 23, 1884, No. 25,584.

Brief.—The types to be operated upon are advanced from an inclined table onto the shoulder of a vibrating blade, which carries them one by one between two stationary cheeks of the rubbing device, to grind two of their opposite faces. At the end of the sweep of said blade each type is dropped into a notch in a carrier supported by a hub attached to a vibrating arm. As this hub vibrates, the carrier is by suitable mechanism turned a quarter-rotation, the type being thereafter ejected from the notch onto the shoulder of another blade vibrating in a direction opposite to the first. This blade, on its return-sweep, carries the types between two other stationary cheeks, to grind the remaining two sides, and deposits them into a galley provided for the purpose, the type being advanced in this galley by a reciprocating pusher. Instead of the vibrating carrier, a curved channel leading from between the first two cheeks to the second pair of cheeks may be employed.

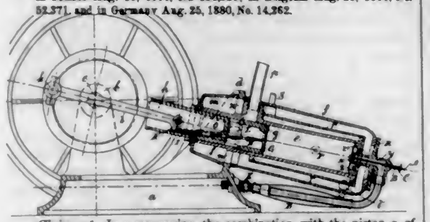
300,452.

Claim.—1. The bed M upon which the types are placed, the plate *e*, and pusher *e'*, in combination with the type-carrier, means, substantially as specified, for giving to the same an oscillating motion, and the type dressing or rubbing devices, substantially as set forth.

2. In a type rubbing or dressing machine, the combination, with two type-carriers upon one shaft, and mechanism for giving to the same an oscillating movement, of means, substantially as specified, for feeding the types, and a transfer mechanism for receiving the types from one carrier and delivering the same to the other carrier, substantially as set forth.

3. The combination, with the oscillating shaft, type-carrier, and rubbing devices, of a bed upon which the types are received, a pusher to move along the line of types to the carrier, and a cutter for nicking the bases of the types, substantially as set forth.

4. The combination, with the oscillating type-carriers and the body A^2 and cheek-pieces k k', of the slotted transfer-block, and the mechanism, substantially as specified, for moving, partially rotating the same, and transferring the type from one carrier to the other, substantially as set forth.



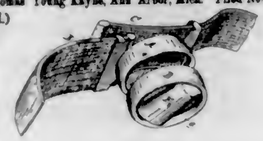
5. In combination with the type-carriers, a slotted transfer-block, a sliding plate in the same, and mechanism, substantially as specified, for moving the said plate and ejecting the type, substantially as set forth.

6. The combination, with the body A^2, the shaft, and type-carriers, of the cheek-pieces and cutters, the motor-shaft, revolving cam, the rack, and the pinion for giving to the shaft an oscillating motion, substantially as set forth.

7. The combination, with the oscillating shaft and the type-carriers, of the cheek-pieces, the body A^3, and cutters for dressing the types, and the rule or receptacle into which the types as rubbed are received, substantially as set forth.

8. The combination, with the oscillating type-carriers, the body A^2, and shaft, of cheek-pieces having tubular bearings, and means for supporting and adjusting such cheek-pieces, substantially as set forth.

300,453. GAS-ENGINE. EDMUND EDWARDS, 40 Southampton Buildings, County of Middlesex, England. Filed Oct. 11, 1883. (No model.) Patented in England Feb. 20, 1880, No. 760, and Apr. 23, 1881, No. 1,765 in France Aug. 19, 1880, No. 138,326; in Belgium Aug. 20, 1880, No. 52,371, and in Germany Aug. 25, 1880, No. 14,262.

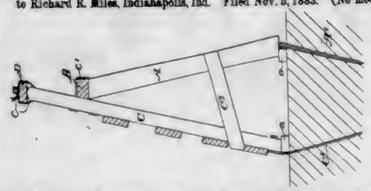


Claim.—1. In a gas-engine, the combination, with the piston *g*, of the exhaust-valve G, tail-piece K on the connecting-rod *i*, and the hollow trunk *h*, having holes L, substantially as set forth and shown.

2. In a gas-engine, the combination, with the engine-cylinder, of the outer casing, *f*, its cover R, air-casing *m*, and the plate *d*, having openings *n n*, substantially as set forth and shown.

3. In a gas-engine, the combination of the engine-cylinder, the outer casing, *f*, the cover R, and the openings *n n*, with the openings *o o* in the guide *l*, and the air-casing *m*, substantially as set forth and shown.

300,454. TRUSS. JAMES Y. EGAN, Toronto, Ontario, Canada, assignor to Thomas Young Kayde, Ann Arbor, Mich. Filed Nov. 21, 1883. (No model.)



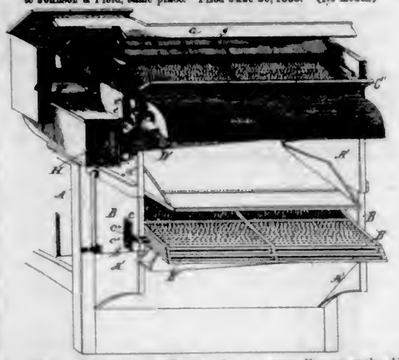
Claim.—1. In a truss, in combination with the strap-plate A, provided with flange *a*, internally grooved to receive the spring C, said spring C, and plate D, said plate provided with the projection *d*, peripherally grooved to receive the opposite end of the spring, substantially as described.

2. In a pad for trusses, the plate D, having the flange *e*, internally grooved to hold a central pad, substantially as described.

3. In a pad for trusses, in combination with the cup-shaped plate D, internally grooved, the oblong central piece, E, fitted into the said plate, as set forth, whereby it can be adjusted in the cup to suit the wearer, substantially as and for the purpose described.

4. In a pad for trusses, the plate D, having on one side the flange *e*, internally grooved to hold a central pad, and its other side provided with a groove, in combination with a spring constructed to be sprung into said groove, substantially as described.

300,455. FENCE. NELSON FAUGHT, Pittsborough, assignor of one-half to Richard R. Miles, Indianapolis, Ind. Filed Nov. 5, 1883. (No model.)



Claim.—1. The combination, in a fence, of the post A, provided with the bent iron rod A', the cap-piece B, and the post C, having at its lower end the bent iron rod C', said rods being inserted in the ground, as described, and means for securing the post C to the cap-piece B, substantially as set forth.

2. In a fence, the combination of the posts A, provided on their lower ends with bent iron rods A', cap-piece B, secured on top of said posts, posts C, provided at their lower ends with bent iron rods C', said iron rods A' and C' being inserted in the soil to within a short distance of the wooden posts, and means for securing the parts in position, substantially as set forth.

3. In a fence, the combination of the posts A, provided on their lower ends with iron rods A', posts C, having iron rods C' upon their lower ends, said iron rods A' and C' being inserted in the soil each at an opposite angle from the other, and bent so as to bring the tops of the posts together or in line with each other, and means consisting of the cap-piece B and tie *c'*, or its equivalent, for securing said tops together, substantially as set forth.

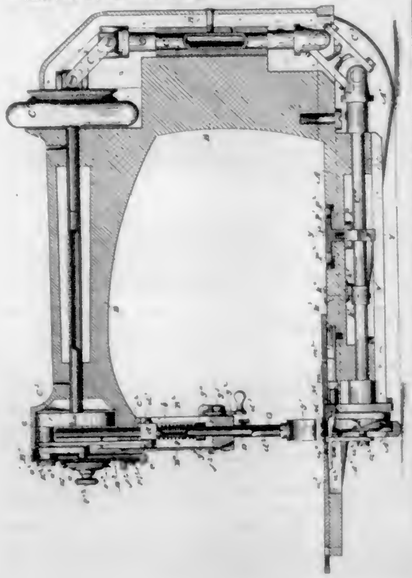
300,456. FANNING-MILL. MARTIN S. FIELD, Racine, Wis., assignor to Johnson & Field, same place. Filed June 26, 1883. (No model.)

Claim.—In a fanning-mill, a broad screen extending out at the side thereof, a plate extending nearly into contact with the same, so as to permit the passage of fine particles, but prevent the passage of grain, a hood over said screen, an exhaust-trough under the screen leading to a fan, and an exhaust-fan, all combined and relatively arranged as stated.

300,457. PLOW. DANIEL E. FISH, Worthington, Minn. Filed Mar. 22, 1884. (No model.)

Claim.—1. The combination of the landside, the landside-block having a central pivot or stud seated in a suitable opening in the landside, and provided with a series of serrations on its inner face, the standard pivoted at its upper end and having its foot provided with elongated

300,457.



bolt-holes, and serrated on its inner face, and the retaining-bolts, substantially as set forth.

2. The combination, with the standard and the mold-board, of the serrated standard-block provided at one end with a flange embracing one edge of the standard, and the double-winged coupling-plate having one wing secured to the mold-board, and its other wing serrated and engaging the standard-block and the retaining-bolt, substantially as set forth.

3. The combination, substantially as set forth, of the mold-board, the landside, the tapered landside-block having a pivot-stud and serrated on its inner face, the standard having a foot provided with elongated bolt-holes and serrated on its inner face, the retaining-bolts, the standard-block secured to the upper end of the standard and serrated on its inner face, and the double-winged coupling-plate having one wing secured to the mold-board, and its other wing serrated and bolted to the standard-block, as and for the purposes specified.

300,458. SEWING-MACHINE. JOSEPH L. FOLLETT, New York, N. Y. Filed June 26, 1883. (No model.)

Claim.—1. The combination, with a swiveled crank-pin bearing, of a vibratory take-up lever pivoted to a stationary part of the machine, and extending through and adapted to slide in said swiveled crank-bearing during the rotary movement of the latter, substantially as hereinbefore set forth.

2. The combination, with a take-up lever consisting of a straight wire provided with a hook at one end and a block to which said wire is secured at its opposite end, of a stationary pivot-pin for said block, and a swiveled rotary crank-pin bearing adapted to slide on said take-up lever and impart positive variable movements thereto, substantially as hereinbefore set forth.

3. The combination, with the take-up lever pivoted to a stationary part of the machine, of the rotating crank-pin for operating the needle-bar, the rigid arm secured to said crank-pin, and a pin swiveled to said arm and arranged to furnish a sliding bearing for the take-up lever, substantially as and for the purposes hereinbefore set forth.

4. The combination, with a vibratory take-up lever adapted to engage the thread when moving in one direction only, of means, substantially as described, for lightly holding said thread when left by the take-up, yielding it only as it is required by the shuttle, as set forth.

5. The combination, with a vibratory take-up lever, of a curved check tension spring arranged near the path described by the thread-hook of said lever, substantially as set forth.

6. The combination, with a vibratory take-up lever adapted to engage the thread when moving in one direction only, of a check tension spring serving to gently hold the thread subject to the requirements of the shuttle when said take-up lever is moving in the opposite direction, substantially as set forth.

7. The combination, with the presser-bar and a screw on which the lifter for said bar is pivoted, of a lug secured to said bar, and having its vertical portion arranged to move in a guide-slot in said screw, whereby the presser-bar and screw are prevented from turning, substantially as set forth.

8. The combination, with a rotating shuttle and shuttle-carrier, of a yielding or spring-acting shuttle-brace arranged to work through an opening in the rear of the carrier, and normally impelled in the direction of the shuttle by spring-pressure, and means, substantially as described, for retracting the said carrier from the shuttle against the stress of its impelling-spring during a predetermined portion of the rotation of the latter, substantially as hereinbefore set forth.

9. The combination, with a rotary shuttle and a shaft by which said shuttle is operated, of a shuttle-brace arranged within a recess in said shaft, and means, substantially as set forth, for causing said shuttle-brace to intermittingly press said shuttle toward the needle, as described.

10. The combination, with a rotary shuttle and a shaft by which said shuttle is operated, said shaft being provided with a central recess, of a shuttle-brace arranged within said recess, a spring for pressing said shuttle-brace outward, also arranged within said recess, a stationary cam-surface, and an intermediate device connected with said shuttle-brace and engaging said cam-surface in its rotation, substantially as set forth.

11. The combination, with a bobbin-ejector placed in rear of the shuttle, of a shuttle provided with an aperture for the passage of said ejector, substantially as set forth.

12. The combination, with a bobbin-ejector and a shuttle pierced for the passage thereof, of a device for projecting the ejector into said shuttle, and a spring for retracting said ejector, substantially as set forth.

13. The combination, with a rotary shuttle pierced for the entrance of a bobbin-ejector, of a shaft for operating said shuttle, a bobbin-ejector arranged within said shaft, and means for projecting and retracting said ejector, substantially as set forth.

14. The combination, with a shuttle, its operating-shaft, and a bobbin-ejector, all arranged beneath the bed-plate of the machine, of a device for operating said ejector, said device passing through said bed-plate and having an actuating-handle on the upper side thereof, substantially as described.

15. The combination, with a shuttle-brace and a bobbin-ejector, of a spring adapted to assist in the operation of the former, and serving also to retract the latter after the bobbin has been forced from the shuttle, substantially as set forth.

16. The combination, with a rotary shuttle and a hollow operating-shaft for the same, of a shuttle-brace and a bobbin-ejector, both arranged within said shaft, substantially as set forth.

17. The combination, with a feed-adjusting bar provided with a yoke, of a disk arranged within said yoke, and means for adjusting said disk from the upper surface of the bed-plate, substantially as set forth.

18. The combination, with a pivoted feed-adjusting bar carrying a stop which serves as a fulcrum for the feed-lever, of means for changing the position of said bar, whereby said feed-lever is caused to come in contact with said stop sooner or later in the course of its movement, as set forth.

19. The combination, with a rotary shaft arranged beneath the bed-plate, of a feed-adjusting bar arranged below said shaft, and serving as a guard therefor, substantially as set forth.

20. The combination, with a feed-lever, of an eccentric for operating the same, an adjustable stop, a projection or finger on said lever for engaging said stop, an adjusting-bar by which said stop is carried, and means for changing the position of said adjusting-bar, whereby said feed-lever is caused to have contact with said stop sooner or later in the course of its movement, substantially as set forth.

21. The combination of the feed-lever, a stop which serves as a fulcrum for the same, an adjusting-bar to which said stop is secured, a yoke on said adjusting-bar, an adjusting-disk arranged within a recess in the bed-plate, and a secondary disk eccentrically secured to said adjusting-disk and arranged within the arms of said yoke, substantially as set forth.

22. The combination, with a movable feed-regulating disk provided with a graduated scale and a segmental slot, of a stationary index-finger arranged within said slot, substantially as set forth.

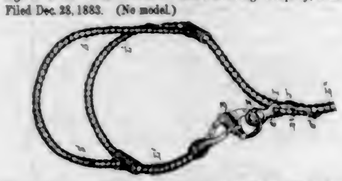
23. A bed-plate provided on its under side with strengthening-ribs, said ribs being made deeper as they run rearward until they reach a depth equal to that of the shuttle-race secured to the forward end of the said bed-plate, combined with said shuttle-race, so that it and the ribs form a supporting-base for the machine, substantially as set forth.

24. A bobbin-case having a notch in its edge and thread-slots in its face, converging to form a point around which the thread is drawn, in combination with a tension-spring secured to the periphery of said bobbin-case, with its free end between said notch and one of said thread-slots, substantially as set forth.

25. The combination, with a bobbin-ejector, of ejector-actuating mechanism arranged to be operated by hand from above the bed-plate of the machine, for the purpose of ejecting the bobbin, substantially as and for the purposes set forth.

26. The combination of the upper main or driving shaft for actuating the needle-bar, the lower counter-shaft for imparting movement to the feed and hook or shuttle, intermediate universal-joint connections, substantially as described, whereby the two shafts are caused to revolve in unison, and the driving pulley or wheel located on said upper shaft at a point intermediate between the needle-bar and the universal-joint connections, substantially as and for the purposes hereinbefore set forth.

300,459. SETTING FOR JEWELRY, &c. CHARLES A. FOWLER, New York, N. Y. Filed Mar. 6, 1884. (No model.)



Claim.—As a new article of manufacture, a setting for jewelry, buttons, and similar goods, substantially as hereinbefore described, the same being composed of stone, glass, or other friable materials or compounds having a practically lusterless surface, and in whole or in part covered with practically parallel corrugations.

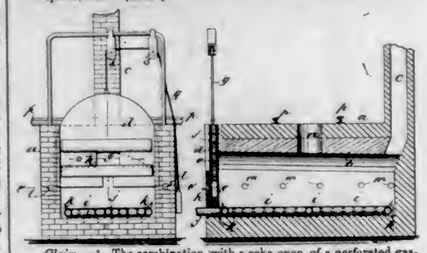
300,460. HOG-CHOLERA MEDICINE. MICHAEL FREY, JR., Chillicothe, Ohio. Filed Jan. 17, 1884. (No specimens.)

Claim.—The herein-described composition of matter to be used for preventing and treatment of hog cholera, consisting of slaked lime, copperas, salt, and pulverized tobacco, in the proportions specified.

300,461. HALTER-TRIMMING. JOHN GIBSON, West Troy, N. Y., assignor to the Union Hardware Manufacturing Company, same place. Filed Dec. 28, 1883. (No model.)

Claim.—As an improved article of manufacture for halter-trimmings, the within-described device, in combination, consisting of the parallel bars B' B², made with interior concave surfaces, the central semicircular strap, J, connecting with said bars, the spur D on the interior of said strap J, the end semicircular straps, C' C², connecting with said bars, and the eye E on the end strap C², constructed and arranged as herein shown.

300,462. SPINDLE-BOLSTER. JAMES R. GRAY, Ayer, assignor to Geo. Draper & Sons, Hopedale, Mass. Filed Aug. 13, 1883. (No model.)



Brief.—The bolster is composed of two sleeves tapered or made conical in the direction of their length. The inner sleeve is bored to fit the spindle, and its tapering end or portion of smallest external diameter is placed in the bottom of the bolster-case. The bore of the outer sleeve is equal to the largest diameter of the inner sleeve. The tapering end or portion of smallest diameter of said outer sleeve is uppermost. Thus tapering or wedge-shaped spaces are formed, the larger alternately at top and bottom, which construction permits the spindle to move radially, to a limited extent, to find its true center of rotation.

300,462.

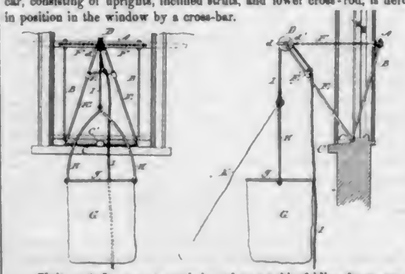
Claim.—The spindle bolster-case, pin or projection, combined with the compound bolster, composed of two or more tapering sleeves adapted to receive oil in the tapering oil-receiving space between them, substantially as set forth.

300,463. COKE-OVEN. JONATHAN GREEN, Leisenring, Pa. Filed Apr. 22, 1884. (Model.)

Claim.—1. The combination, with a coke-oven, of a perforated gas-pipe cradle adapted for the distribution of steam for quenching the fire, and having a handle for drawing out the cradle for discharging the coke, substantially as described.

2. In coke-oven, the cradle comprising the gas-pipe frame, having series of apertures and prongs upon its upper surface, said prongs being adapted to support and retain the coke upon the cradle while being drawn, substantially as set forth.

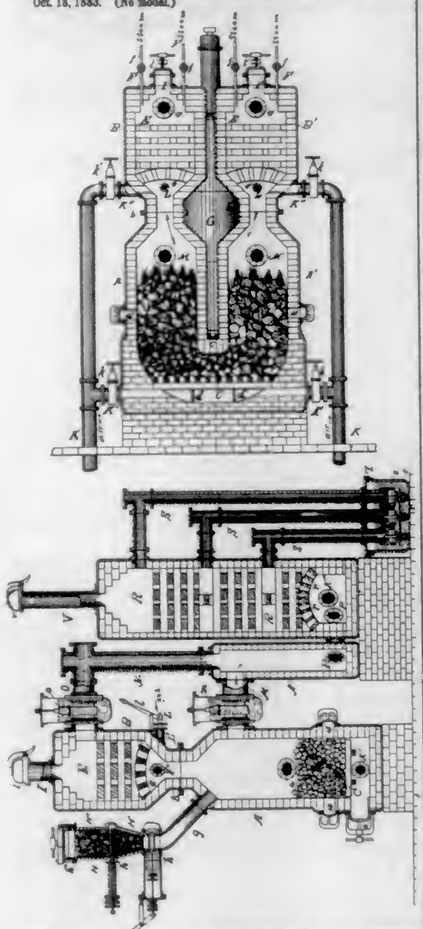
3. The coke-oven having the side wall air-passages *l*, connecting by inlets *m* with the oven-chamber, in combination with the cradle having a series of apertures and a pipe-connection, J, substantially as shown and described, and for the purpose set forth.



300,464. COMPOUND MATERIAL FOR THE MANUFACTURE OF SHEETS, BOARDS, BLOCKS, ARTIFICIAL WOOD, &c. LEVI HAAS, Chester, Pa. Filed Mar. 15, 1884. (No specimens.)

Claim.—1. A compound material composed of vegetable fiber, leather or shoddy waste, crude asbestus, litharge, and sulphur, pitch, and whiting blended with thinned asphaltum, to supersede the use of lumber, metal, and other materials for the production of various useful articles for use and ornament, substantially as herein described.

2. The process of producing a compound material from vegetable fiber, leather or shoddy waste, crude asbestus, litharge, and thinned asphaltum, blended with sulphur, pitch, and whiting, substantially as described, and for the purpose set forth.



300,465. FIRE-ESCAPE. THOMAS HALE, Claydon, County of Suffolk, England. Filed Mar. 20, 1884. (No model.) Patented in England May 16, 1883, No. 2,459.

Brief.—A portable pulley-frame for holding the escape-rope and car, consisting of uprights, inclined struts, and lower cross-rod, is held in position in the window by a cross-bar.

Claim.—A fire-escape consisting of a portable folding frame composed of a cross-bar, A, adapted to be arranged across the inner side of a window-opening, uprights B, secured to the cross-bar A at their upper ends, and provided at their lower ends with the cross-bar C', inwardly-inclined struts E, pivoted to the bar C' at their lower ends, and carrying a pulley, D, between their upper ends, flexible connections F, bag B, having handle H, and rope I, secured to the latter and passing over the pulley D, substantially as shown and described.

300,466. PROCESS OF AND APPARATUS FOR MANUFACTURING GAS. JOHN HANLON, New York, N. Y., assignor, by direct and mesne assignments, to the United Coal and Oil Gas Company, of New York. Filed Oct. 18, 1883. (No model.)

Claim.—1. The process of manufacturing gas which consists in heating up the generating and fixing chambers by the combustion of fuel in the former and of products from such fuel in the latter, thereby heating a large body of refractory material in the fixing-chamber; then decomposing steam in the fuel, enriching the resulting gases with hydrocarbons; then combining and fixing the carbureted gas by passing it through a small portion of the heated refractory material and to the seal-box; then, as the first portion is cooled, passing the succeeding volume of gas through another heated portion of refractory material and out to the seal-box or main, and thus passing successive volumes of gas as produced through succeeding bodies of heated refractory material, whereby destructive decomposition of the hydrocarbons is prevented, and a uniform quality of gas as to candle-power is produced.

2. The closed generating-chambers having a single grate common to both and communicating with each other at their bases above the grate, in combination with a gas-discharge pipe connecting with the top of one of the chambers.

3. In combination with a gas-generator, the sleeve and the sliding oil-supply pipe fitting in such sleeve, so that the oil-pipe may be projected beyond the furnace-wall internally when oil is supplied and withdrawn when the supply of oil is shut off.

4. The two reciprocating generators having a connecting-base, in combination with the grate and one or more vertical partitions in the ash-pit for causing the gases to pass from one chamber into the other above the grate.

5. The two generating-chambers connected by a common base, in combination with steam-supply pipes connecting with their upper portions, the connecting air-blast pipes, and the gas-outlet pipes leading from the upper portion of each chamber.

6. The two generating-chambers connected at their bases, in combination with the steam-superheating chambers placed above them, the gas-outlet pipes leading from the generators below the steam-superheating chambers, and the air, steam, and oil supply pipes connected as described.

7. The two generating-chambers having a connecting-base, in combination with the steam-superheating chambers mounted above them, the gas-outlet pipes leading from the upper portions of the generators, the outlet-pipes for products of combustion leading from the superheating-chambers, and supply-pipes for air and steam, connected as and for the purposes described.

8. The two closed reciprocating gas-generating chambers having a connecting-base and an arch extending from front to rear above the bottom of the chamber, so as to form a passage from one chamber to the other and support the wall or walls separating the two generating-chambers, in combination with connecting air-blast pipes and gas-discharge pipes, as described.

9. The two gas-generating chambers connected at their bases, in combination with the steam-superheating chambers above them, the gas-outlet pipes from the upper portions of the generators, the outlet-pipes from the superheaters for products of combustion, a fixing-chamber, and pipes connecting the outlet-pipes from the generators and superheaters with the fixing-chamber.

10. A gas-generator, in combination with a fixing-chamber having gas-outlet pipes leading from it at different distances from the gas-inlet pipe, whereby a small portion of the fixing-chamber may be used at one period for fixing the gas and another portion used at a succeeding period, and destructive decomposition of hydrocarbons thereby prevented, and gas of a uniform candle-power produced.

11. A gas-fixing chamber containing a filling of refractory material, and having gas-outlet pipes provided with controlling valves or seals, and connecting therewith at different distances from the gas-inlet pipe, for the purpose described.

12. A gas-fixing chamber, in combination with a hydraulic-seal box, pipes connecting different sections or portions of the fixing-chamber with the seal-box, and the valves for closing the pipes arranged in the seal-box, for the purpose described.

13. The combination of a gas-eduction pipe of a gas apparatus with a hydraulic main or box, said pipe projecting into the box, a valve for closing the end of the pipe connected to one end of a pivoted lever in the box, and a rod connected to the other end of the lever and passing up through the top of the box, for operating the valve.

14. A gas-generator, in combination with a fixing-chamber containing refractory material separated into different sections or bodies by intervening spaces, gas-outlet pipes communicating with the spaces between the bodies of material, and a pipe connecting the generator with one end of the fixing-chamber, for the purpose described.

15. In combination with a gas-generator, a fuel-feeding hopper having a valve in its bottom, a charge-chamber holding a single charge of coal, a storage-chamber adapted to hold several charges of coal, a slide for separating its charge-chamber from the storage-chamber, and a tight-fitting lid or cover closing the top of the storage-chamber.

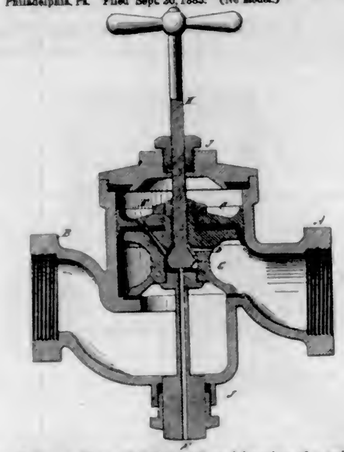
16. The charging-hopper having a water-cooled valve in its bottom, and a grated slide between the charge-chamber and the storage-chamber, in combination with a furnace.

17. The charging-hopper having a water-cooled valve at its bottom, a grated slide between its charge-chamber and its storage-chamber, and a tight-fitting lid closing its top, in combination with a gas-generator.

300,467. ANTI-FRICTION GLASS BEARING. JOHN J. HARDEN, Chicago, Ill., assignor to the Harden Crystal Bearing Company, same place. Filed Jan. 10, 1884. (No model.)

Claim.—1. As an improved article of manufacture, an anti-friction glass bearing having its bearing-surface grooved or corrugated, essentially as set forth.

2. A bearing or journal, A, formed of glass and provided with grooves *a* in its bearing-surface, essentially as set forth.



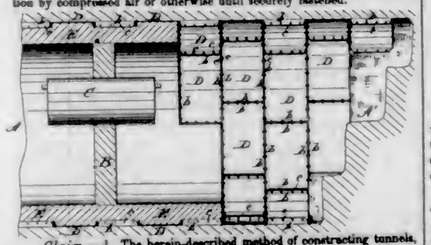
3. A bearing or journal, A, formed of glass and provided with spiral grooves *a* in its bearing-surface, essentially as set forth.

4. A bearing or journal, A, formed of glass and having its bearing-surface provided with spiral grooves *a*, arranged in reverse directions, so as to cross each other, essentially as set forth.

5. A bearing or journal, A, formed of glass and having a plain marginal rim around the edges of its grooved bearing-surface, essentially as set forth.

6. A bearing or journal, A, formed of glass and provided with a plain marginal rim, *a'*, and a spirally grooved or corrugated bearing-surface, such grooves being arranged in opposite directions, essentially as set forth.

300,468. VALVE. CHARLES S. HASKELL and WILLIAM B. FLEMING, Philadelphia, Pa. Filed Sept. 20, 1883. (No model.)



Claim.—1. The combination, with an inlet-pipe, of a main valve arranged directly in the pipe and an auxiliary valve in a valve-opening communicating with the inlet-pipe, the arrangement being such that the main valve is operated by the direct pressure of the water in the pipe, and is closed by the pressure of the water controlled by the auxiliary valve, as set forth.

2. The combination, with an inlet-pipe, of a main valve arranged directly in the pipe, and an auxiliary valve consisting of a three-way cock in a channel communicating with the inlet-pipe, the arrangement being such that the direct pressure of the water operates to open the main valve, and the pressure controlled by the three-way cock operates to close the same, as set forth.

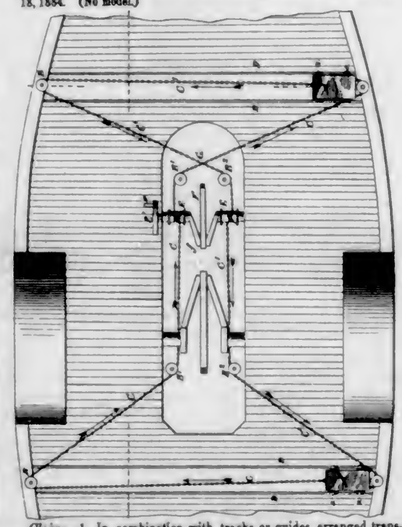
300,469. ART OF CONSTRUCTING TUNNELS. DE WITT C. HASKIN, New York, N. Y. Filed Jan. 31, 1883. (No model.)

Brief.—In constructing an underground tunnel having an exterior shell made of plates of boiler-iron curved and flanged and bolted together, the excavation is made and the plates inserted in the manner set forth in the claims, the plates being held to the sides of the excavation by compressed air or otherwise until securely fastened.

Claim.—1. The herein-described method of constructing tunnels, which consists in excavating a small portion of the earth in the crown of the heading and inserting therein one or more iron plates and securing the same to the upper part of a completed section of the tunnel, thereby forming a partial hood projecting in front of said section, then excavating the heading in advance of said hood and inserting another plate or plates and attaching the same to the partial hood, afterward excavating the earth under the first-named partial hood sufficiently for the insertion of one or more plates at the sides thereof, and attaching said side plates to the completed section of tunnel and to said hood-plates, and continuing the operation till each circle of plates in succession is completed and the whole earth is excavated in a step-like manner from within them, as shown and set forth.

2. The herein-described method of constructing tunnels, consisting in forming in the excavation a tube or shell composed of plates having facial flanges, the said plates being supported in position while being bolted together by compressed air, as set forth.

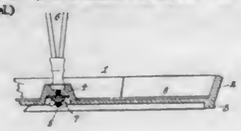
300,470. CONDUIT FOR ELECTRIC WIRES. MARVIN P. HATHAWAY, Milwaukee, Wis. Filed Mar. 3, 1884. (No model.)



Claim.—1. In a conduit for electric wires, the bridges B, having side grooves, *b'*, and recesses *b²* above the tops of the grooves at intervals, whereby space is provided for the expansion and contraction of the cables when in said grooves.

2. In a conduit for electric wires, the boxes A A', having beveled ends and longitudinal gains *a a'*, in combination with the section-wires *c c'*, fitted within said gains, and bent down at each end to conform to the bevel.

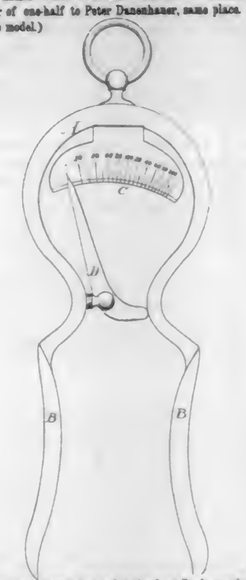
3. In a conduit for electric wires, the combination of the bridge B with side grooves, the cables B', fitted within said grooves, and the cord E, wrapped around the whole, substantially as set forth.



300,471. BALLAST FOR VESSELS. EDMUND P. HEXEY, Washington, D. C., assignor of one-half to Albert Edelen, Baltimore, Md. Filed Apr. 18, 1884. (No model.)

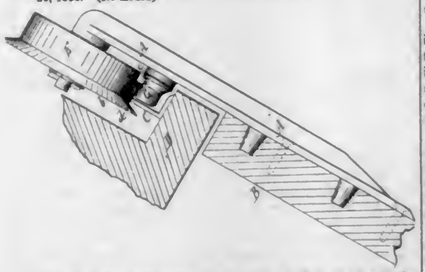
Claim.—1. In combination with tracks or guides arranged transverse to the plane of the ship, and ballast-cars adapted to travel on such tracks, two chains arranged to cross each other and with the cars constitute an endless chain, and a single shaft at E, adapted to operate such chain to force the cars in the same direction simultaneously, as set forth.

2. The combination, with the tracks D D and cars A A', as described, of the chains C and C', attached to the cars as shown, and crossing each other, as at G, and the shaft E, operating said chains to move the cars in the same direction simultaneously, and the rollers B B' B², all arranged and adapted to operate as and for the purpose set forth.



300,472. TRAY. JOHN B. HIGBEE, Pittsburg, Pa. Filed Apr. 30, 1884. (No model.)

Claim.—1. An uncovered or open-topped tray, in combination with a handle arranged and secured in the center of the tray, substantially as set forth.



2. A tray provided with a series of seats or compartments in the upper surface, in combination with a handle arranged and secured in the center of the tray, substantially as set forth.

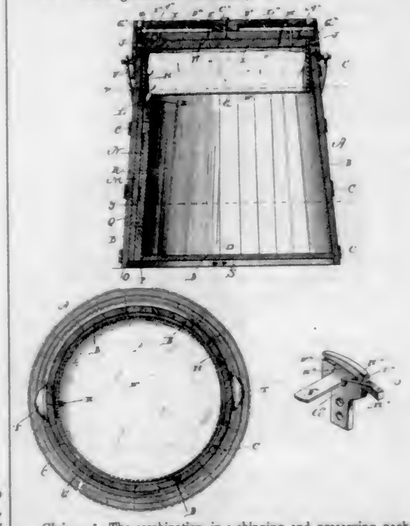
300,473. HAND-GRIP TESTER. MATHIAS J. HINDIN, Cleveland, Ohio, assignor of one-half to Peter Danenhauer, same place. Filed Feb. 7, 1884. (No model.)

Claim.—The hand-grip tester herein described, consisting of the arc A, having handles B B, the curved scale C, suspended in the arc A, and the pointer D, pivoted to one of said handles and operated upon by the opposite handle when pressed for recording the number of pounds pressure applied, as described.

300,474. DOOR-HANGER. WARREN IDE, Medina, N. Y. Filed Dec. 26, 1883. (No model.)

Claim.—In a door-hanger, the two wheels E G, attached to the hanger A, one above the other, and provided with beveled flanges on opposite sides, in combination with a track consisting of a flat horizontal thread, *d*, on opposite sides of which the wheels run, a vertical flange, *f*, and supporting-feet *g*, as shown and described, and for the purpose specified.

300,475. BOLT-NUT. ALONZO JOHNSON, Springfield, Mass., assignor to George Dwight, Jr., same place. Filed Jan. 30, 1884. (No model.)



Claim.—1. A nut having two parallel straight edge bearing-surfaces on the same side and recessed between the bearings, substantially as set forth.

2. A nut having two parallel straight edge bearing-surfaces on the same side or face, between which surfaces is an arch-shaped concavity, the curve of which is in the direction in which the rolled grain of the iron runs of which the nut is made, substantially as set forth.

3. A nut having two opposite straight bearing-surfaces on both its sides, between which surfaces is an arch-shaped concavity extending from edge to edge of the nut, substantially as set forth.

300,476. REFRIGERATING PACKAGE FOR SHIPPING AND PRESERVING BUTTER, OYSTERS, &c. OLIVER P. JOHNSON, Washington, D. C. Filed Aug. 23, 1883. (No model.)

Claim.—1. The combination, in a shipping and preserving package, of a body, a block secured vertically against the side of the same on its interior, and provided with a longitudinal drip-channel, and an ice pan or vessel extending across the top portion of the body, and supported on said block, and provided with a drip-opening registering with the channel in the supporting-block, substantially as and for the purpose set forth.

2. The combination of the body of the package, a block secured inside the body against the sides thereof, and provided with a longitudinal perforation terminating at its top in a mouth or recess, and an ice-pan extending across the top portion of the body, and provided with a tubular extension or pipe in its bottom edge that enters said mouth, to convey the drip and retain the pan from lateral displacement, said pan being removable, substantially as set forth.

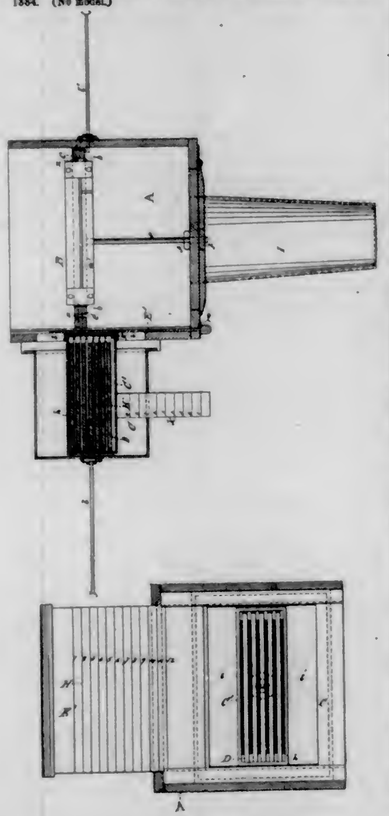
3. The combination, with the body of the package having an ice pan or vessel in its top portion, and provided with an angular opening in its bottom at its side, of a drip-block having a corresponding bottom and fitted in said opening, and provided with a longitudinal drip-channel, said block being secured vertically against the side of the body, substantially as set forth.

4. The combination of the body of the package having the open mouth, sides, and bottom formed with the opening at its side, the drip-block fitted in said opening and secured vertically against the interior sides of the body, and provided with a longitudinal perforation terminating in a mouth or recess at the top, and the ice pan or vessel supported in the mouth of the body by an annular lateral flange it its top edge, and provided with the tubular extension at its side edge, substantially as and for the purpose set forth.

5. As an improvement in shipping and preserving packages, a body having its sides extending down below its bottom to form an inclosed cold-air space, and provided with a closed interior ice-chamber, and with a drip-conducting channel extending down from the ice-chamber and opening into the said cold-air space, which is filled by the cold air descending from said channel, the contents being placed between the ice-chamber and the bottom forming the top of the air-space, substantially as set forth.

6. The combination, with the body of the package having a series of plates or castings projecting above the edge of its mouth, and provided with a simple inclined groove in their inner faces, of the cover having a centrally-pivoted plate formed with integral radial arms having flat outer ends, which enter the inclined grooves and are guided downwardly thereby to clamp the cover, substantially as set forth.

7. The combination, with castings or plates having a groove in their inner faces, and provided with a shoulder having a series of holes or recesses, of clamping plates or arms pivoted and adapted to enter said grooves, and provided at their end with a hook adapted to engage said holes, substantially as and for the purpose set forth.



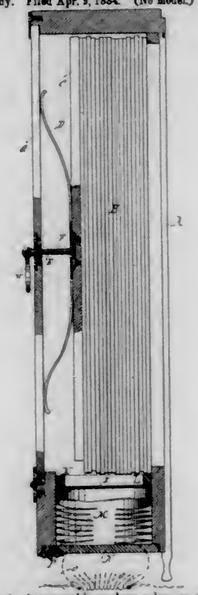
8. The combination of the castings or plates having a groove in their inner faces, the cover, a spider-plate pivoted thereto, and having radial arms to enter said grooves, and hooks secured at the end of said arms to engage the castings and retain the arms in position, substantially as set forth.

9. The combination of the body of the package, the castings or plates projecting above the top edge thereof, and formed with inclined grooves in their inner faces, and with a shoulder having holes or recesses, the cover-disk, the spider pivoted thereon, and having a series of radial arms adapted to enter the grooves, and hooks pivoted on the ends of the arms and engaging said holes, substantially as and for the purpose set forth.

10. The herein-described casting or plate having an inclined groove in its face and provided with a shoulder at the lowermost end of said groove, having holes or recesses, substantially as and for the purpose set forth.

11. The combination of the castings or plates projecting above the cover of the package, the spider-plate having radial arms engaging said castings, the spider being on a lower plane than the castings, and a transverse strip secured across the spider-plate to bring the same up to the plane of the top edge of the castings, substantially as and for the purpose set forth.

300,477. PHOTOGRAPHIC CAMERA. HENRY G. JONES, Philadelphia, Pa., assignor of one-half to Henry S. Keller, same place. Filed Apr. 1, 1884. (No model.)



Claim.—1. The sliding plate E', having a scale, H, in combination with the camera-box A and sliding case C', provided with a handle, *k*, having a scale, H', for regulating the adjustment of the case C', substantially described.

2. The plate-rest B, having pivots *x*, and adjusting screw-rod *e*, provided with nuts *f f*, in combination with the camera-box A, for regulating the position of said rest, substantially as described.

3. The combination of the adjustable strips *a* and *a'*, provided with arms *b*, with the side strips, *c c*, of the plate-rest B by means of pivots *b'* and pins *d*, for expanding or contracting said strips to receive plates D of different sizes, substantially as described.

300,478. PHOTOGRAPHIC EXCHANGE-BOX. HEINRICH KAYSER, Berlin, Germany. Filed Apr. 9, 1884. (No model.)

Claim.—1. A photographic exchange box or case for securing the changing of the plates in full daylight, consisting of a box, A', having a hinged bottom or back, O, slide A, movable false bottom or partition C, spring or springs D, adapted to press said bottom or partition forward, and the door I and a sleeve, O, composed of a fabric impervious to light, substantially as and for the purpose set forth.

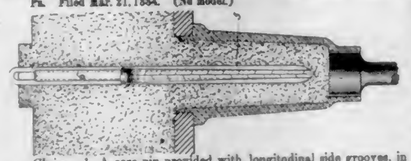
2. The movable false bottom C, provided with a rod, F, having a knuckle or other joint, F, at about the center of its length, and a ring, H, or its equivalent, at the outer end, spring or springs D, and the sleeve O, of impenetrable material or fabric, substantially as and for the purpose set forth.

3. The combination of the box or case A', having doors N and I, and the sleeve O, of light-excluding fabric, substantially as and for the purpose set forth.

300,479. ORE-CONCENTRATOR. WILLIAM B. KENNEDY and WATSON M. NESBIT, Silver Reef, Utah. Filed Dec. 13, 1883. (No model.)

Claim.—1. The combination, with a sluiceway, *a*, of independent detachable agitators *b* and vertically-adjustable governors *c*, arranged below each agitator, substantially as described.

2. The combination, with a sluiceway, *a*, of independent detachable agitators *b*, adjustable governors *c*, and independent removable wings *d*, arranged substantially as described.

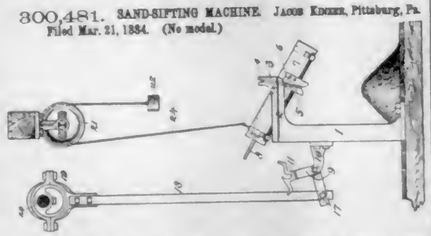


3. An ore-concentrating sluiceway, *a*, having agitators *b*, governors *c*, and wings *d*, which are independent and detachably connected to said sluiceway for removal, to enable the concentrates to be washed out through the tail end of the sluiceway and collected thereat, substantially as described.

4. In an ore-concentrator, the combination of the bottom of the sluice with the agitators *b*, made narrower than the said sluiceway, and removable therefrom independently of each other, substantially as and for the purpose set forth.

5. In an ore-concentrator, the combination, in a sluiceway, of independent detachable agitators *b* and governors *c*, the lower face of each agitator being nearer the upper face of each governor than the lower face of each governor is to the upper face of the next succeeding agitator, substantially as and for the purpose specified.

6. In an ore-concentrator, the combination, in a sluiceway with detachable agitators and governors vertically adjustable, as described, of the detachable wings *d*, said wings and agitators being provided with hasps *g*, engaging staples *h* on the sluice, as specified.



300,480. PIN FOR VENTING CORES. JACOB KINZER, Pittsburg, Pa. Filed Mar. 21, 1884. (No model.)

Claim.—1. A core-pin provided with longitudinal side grooves, in combination with a staple-shaped wire constructed to fit within said grooves, substantially as set forth.

2. A core-pin provided with longitudinal side grooves, in combination with the vent-former consisting of a staple-shaped wire and a body of metal uniting and filling the upper portion of said staple, substantially as set forth.

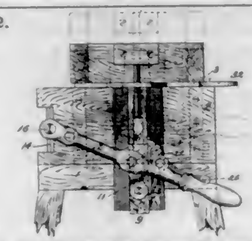
300,481. SAND-SIFTING MACHINE. JACOB KINZER, Pittsburg, Pa. Filed Mar. 21, 1884. (No model.)

Claim.—1. In a sand-sifting machine, the swinging stirrup 5 and standards for supporting said stirrup, in combination with the screen 7, having notched plates secured to its sides forward of its center, and adapted to fit over and on said stirrup, and mechanism for imparting a reciprocating longitudinal movement to the screen, substantially as set forth.

2. In a sand-sifting machine, the swinging stirrup and standards for supporting the stirrup, in combination with the screen 7, resting on the stirrup, the bell-crank lever 9, having one of its arms connected to the screen, and mechanism attached to its opposite end for imparting motion to the lever, substantially as set forth.

3. In a sand-sifting machine, the screen 7, swung in suitable bearings and provided with the loop 8, in combination with the bell-crank lever 9, having the curved notch 12, and mechanism for operating said lever, substantially as set forth.

4. In a sand-sifting machine, the screen 7, swung in suitable bearings and provided with the loop 8, in combination with the bell-crank lever 9, having at one of its ends the horizontal arms 13 and 14, located in different horizontal planes, and the curved notch 12, and mechanism for operating said lever, substantially as set forth.



5. In a sand-sifting machine, the screen 7, pivotally swung in suitable bearings and provided with the loop 8, in combination with the oscillating bell-crank lever 9, having the curved notch 12, and mechanism for automatically disconnecting the loop and lever, substantially as set forth.

6. In a sand-sifting machine, the screen 7, pivotally swung in suitable bearings, in combination with the oscillating bell-crank lever, said lever and screen being detachably connected, and mechanism for automatically disconnecting the screen and lever, substantially as set forth.

7. In a sand-sifting machine, the screen 7, pivotally swung in suitable bearings and provided with the loop 8, in combination with the oscillating bell-crank lever 9, having the curved notch 12, the cord 20, pulley 21, and weight 22, substantially as set forth.

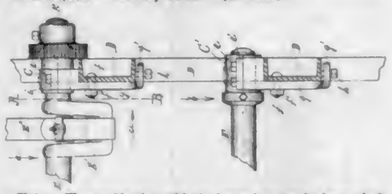
300,482. SAND-MOLDING MACHINE. JACOB KINZER, Pittsburg, Pa. Filed Mar. 21, 1884. (No model.)

300,482.

Claim.—1. In a molding-machine, the frame 2, in combination with the top plate having the core-boxes secured thereto, the core-lifters 20, and mechanism for raising and lowering said core-lifters, substantially as set forth.

2. In a molding-machine, the frame 2, in combination with the top plate having the core-boxes secured thereto, the core-lifters 20, flask-raising rods 21, and mechanism for raising and lowering the core lifters and rods, substantially as set forth.

3. In a molding-machine, the frame 2, in combination with the top plate having core-boxes secured thereto, the core-lifters 20, flask-raising rods 21, the cross-head 8, carrying the lifters and rods, and mechanism for raising and lowering the cross-head and holding the same in such raised and lowered positions, substantially as set forth.



4. In a molding-machine, the frame 2, having slotted sides, in combination with the cross-head 8, having its end located in said slots, and the hand-levers 12, connected between its handle and pivoted point to said cross-head, and rigidly secured at one end to the pivotal rod 13, substantially as and for the purpose set forth.

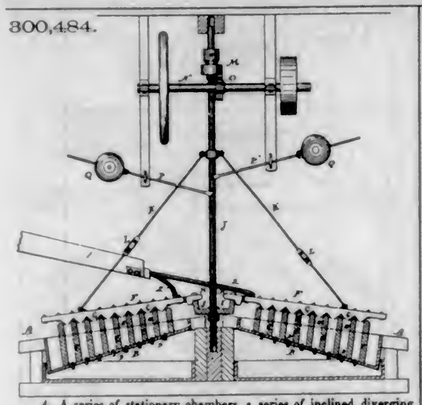
5. In a molding-machine, the frame 2, having slotted sides, in combination with the cross-head 8, having its ends located in said slots, the cap-plates 9, secured to the ends of the cross-head, the links 11, and levers 12, rigidly secured to the pivotal rod 13, substantially as and for the purpose set forth.

6. In a molding-machine, the frame 2, having slotted sides, in combination with the cross-head 8, the levers 12, connected to the cross-head and rigidly secured to the rod 13, the stops 24 and 25, and the bell-crank levers 26, pivoted to the levers 12, substantially as and for the purpose set forth.

7. In a molding-machine, the frame 2, having slotted sides, in combination with the cross-head 8, levers 12, connected to the cross-head, the stop 24, adjustable stop 25, and the bell-crank levers 26, pivoted to the levers 12, substantially as and for the purpose set forth.

300,483. SHAFT-BEARING FOR LOOMS. LUCIUS J. KNOWLES, Worcester, Mass. Filed July 16, 1881. (No model.)

Claim.—The combination, with the loom-frame and a loom-shaft, of the bearing C, having a detachable cap *d'*, clamping-arms *g g'*, and set-screw A, substantially as shown and described, for the purpose stated.



300,484. CONCENTRATOR. ERNEST KOCH, San Francisco, Cal. Filed Dec. 28, 1883. (No model.)

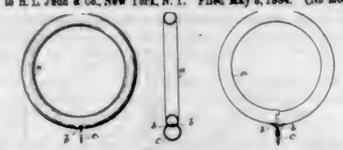
Claim.—1. An inclined sectional concentrating-table having transverse V-shaped troughs with discharge-openings at their bottoms, in combination with suitable stationary chambers and mechanism by which an upward knocking action is produced upon the bottoms of said troughs, substantially as herein set forth.

2. In a concentrator, an inclined sectional table having transverse V-shaped troughs with discharge-openings at their bottoms, in combination with a series of stationary chambers formed with iron bars, upon which the concave or highest parts of the troughs rest, and mechanism by which the sections of the table are raised and let fall upon the bars, substantially as herein described.

3. In a concentrator, a series of table-sections having slotted V-shaped troughs extending transversely thereof, and a series of inclined stationary chambers having holes in their bottoms and means for closing the same, in combination with mechanism by which the table-sections are raised and let fall upon the upper edges of the chambers, substantially as and for the purpose set forth.

300,484.

4. A series of stationary chambers, a series of inclined diverging table-sections, F, arranged around a center, and having transverse slotted V-shaped troughs and a projection at the apex of each, and the central ring, in combination with a vertical shaft having a collar beneath the ring, rods extending from the vertical shaft to the outer ends of the table-sections, a tappet upon said shaft and a horizontal shaft, and a cam by which the vertical shaft and table-sections are raised and let fall, substantially as herein described.



5. A series of stationary chambers, and the inclined diverging table-sections having slotted troughs, in combination with the central vertical shaft, tappet, horizontal shaft, cam, and the diverging supporting-rods K, having turn-buckles, by which the grade of the tables may be adjusted, substantially as herein described.

6. The stationary chambers, the diverging table-sections having slotted troughs, a vertical central shaft, a horizontal shaft, a cam, a tappet, and rods K, having turn-buckles, by which one side may be shortened to give a side shaking motion, all combined to operate substantially as herein described.

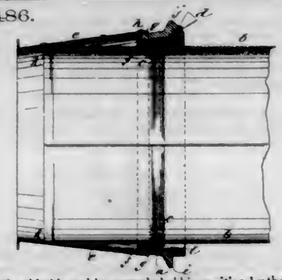
7. The stationary chambers, the diverging table-sections having slotted troughs, means whereby their center and outer ends are suspended, the shafts and tappet, and cam by which they may be raised and let fall, in combination with the counterbalance weights and levers, substantially as and for the purpose set forth.

8. A means for producing a jigging action upon material to be concentrated, consisting of the combination of a series of chambers into which water is admitted, a superposed table having troughs with openings in their bottoms, and mechanism by which the table is raised and let fall upon the edges of the chambers, to provide an abrupt shock while the lower portions of the troughs dip into the water, substantially as herein described.

300,485. CURTAIN-RING. FRANK L. LATHROP, Brooklyn, assignor to H. L. Judd & Co., New York, N. Y. Filed May 8, 1884. (No model.)

Claim.—1. The hollow metallic cornice-ring having two holes, in combination with the loop or ring of wire passing into such holes, substantially as set forth.

2. The hollow metallic cornice-ring having two holes, in combination with the wire loop, the ends of which are hooked into such holes and the wire twisted together, as shown.

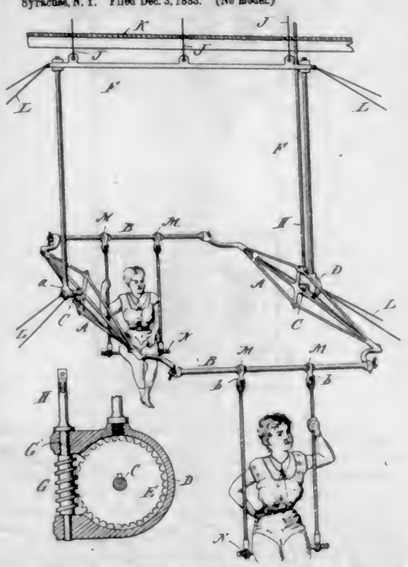


3. The sheet-metal tube bent into the form of a cornice-ring, with a saw-cut in the metal across one end, so that the ends are interlocked, substantially as set forth.

4. The tubular sheet-metal cornice-ring having the ends interlocked by passing into each other, in combination with the suspending-loop passing into the two holes in the tubular ring, substantially as set forth.

300,486. STOVE-PIPE THIMBLE. GODFRIED LAUBE, Huron, Dak. Filed Nov. 5, 1883. (No model.)

Claim.—1. A tapering stove-pipe thimble provided at its forward end with inclined set-screws passing into the interior of the said thimble, whereby the end of a stove-pipe may abut against the tapering inner



300,486.

portion of the thimble and be securely held in position by the set-screws bearing on its annular bead, substantially as set forth.

2. The combination of the flaring ring *a*, formed with an annular contraction or shoulder, *l*, on its inner surface, and the inclined screws *d*, passing through the ring to a position in front of said contraction or shoulder, with the section *e* secured to the inner edge of the ring *a* and contracting toward its rear end, whereby the end of a stove-pipe may obtain a bearing in said section, as at *k*, and its bead be clamped between the shoulder *l* and the set-screws, substantially as set forth.

300,487. REVOLVING DOUBLE TRAPEZE. EDWARD J. LEARY, Syracuse, N. Y. Filed Dec. 3, 1883. (No model.)

Claim.—1. The combination, with a frame adapted to revolve in the vertical plane, of trapezes suspended from the said frame, substantially as herein shown and described.

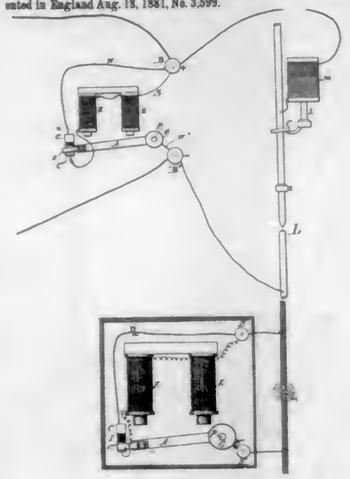
2. The combination, with a revolving frame, of trapezes suspended from the same, substantially as herein shown and described.

3. The combination, with a centrally-pivoted frame, of means for revolving the same, and of trapezes suspended from the said frame, substantially as herein shown and described.

4. The combination, with a revolving frame, of means for revolving the same, contained in one of the journal-boxes, and of trapezes suspended from the said frame, substantially as herein shown and described.

5. The combination, with a revolving frame, of a worm-wheel mounted on one of the pivots, a worm engaging with the worm-wheel, a rod for turning the worm, and a casing surrounding the worm-wheel and worm, in which casing the said pivot is journaled, substantially as herein shown and described.

6. The combination, with the side bars, A, provided at the middle with outwardly-projecting pivots C, of the cross-bars B, the worm-wheel E, mounted on one of the pivots C, the worm G, engaging with the worm-wheel, the casing D, and the frame F, substantially as herein shown and described.



7. The combination, with the side frames, A, each having a central pivot, C, of the cross-bars B, the worm-wheel E, mounted on one of the pivots, the worm G, engaging with the worm-wheel, the frame F, and the rod H, extending upwardly from the worm G, parallel with and adjoining the corresponding shank of the frame F, substantially as herein shown and described.

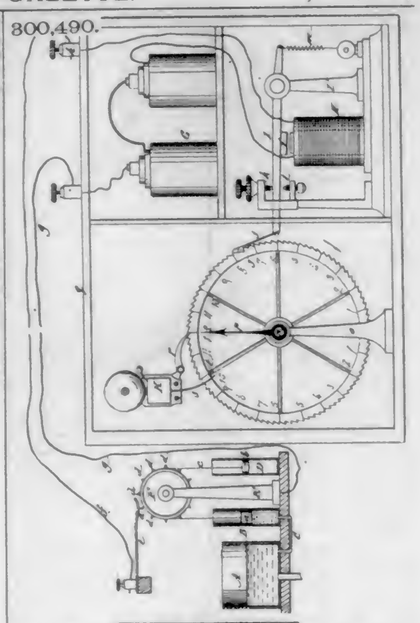
300,488. SUSPENSION-HOOK FOR EAR-RINGS, &c. EMIL A. LEHMANN, New York, N. Y. Filed Mar. 12, 1884. (No model.)

Claim.—The combination of a spring suspension-hook, *a*, with a shorter part, *b*, hinged to the lower end of the spring-hook, and provided with a cup-shaped socket, *b'*, at the upper end, said socket having a recess, *c*, at that side facing the spring-hook, and a projection, *d*, integral with the socket, for releasing the closing part *b* from the spring-hook, as herein shown and described, substantially as set forth.

300,489. CUT-OUT FOR ELECTRIC LAMPS. CHARLES LEVER, Bowden, County of Chester, England. Filed Nov. 25, 1881. (No model.) Patented in England Aug. 18, 1881, No. 3,599.

Claim.—1. The combination, in an electric lamp, of a main circuit containing the carbons and an electro-magnet or solenoid for regulating the arc, a normally-closed shunt-circuit containing a magnet of high resistance and a switch, two insulated frictional contact-points, and a direct connection from one of them to one of the binding-posts, and from the other contact-point to the magnet of high resistance, whereby a portion of the current passes from the main magnet through the shunt-magnet and switch when the lamp is in operation, but the lamp is entirely cut out by the switch if the arc is unduly lengthened, substantially as specified.

2. In a combined regulating and cut-out device for electric-arc lamps, the combination of an electro-magnet in a shunt-circuit, the armature A, metal piece S, metal studs C C', pivot *p*, and screw-head G, substantially as and for the purposes specified.



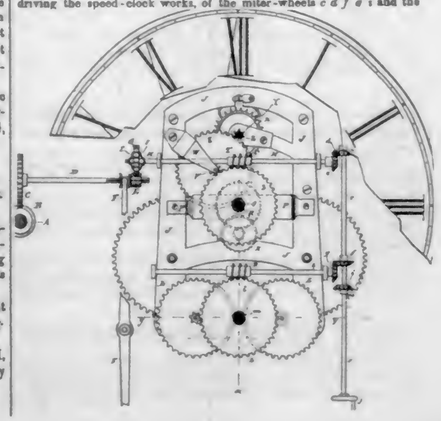
300,490. ELECTRIC REGISTER FOR FLUID-RESERVOIRS. CHAS. S. LOCKWOOD, Newburg, N. Y. Filed Feb. 4, 1884. (No model.)

Claim.—1. In an electric register for fluid-reservoirs, the combination, with the float *a*, opposing weight *b*, and cord *c*, of the circuit-operating wheel F and contact-spring *e*, the said wheel and spring being interposed in an electric circuit communicating with a distant point, as specified.

2. The combination of the circuit-operating wheel F, float *a*, weight *b*, cord *c*, contact-spring *e*, circuit-wires *f g*, and electro-mechanical registering mechanism, as described.

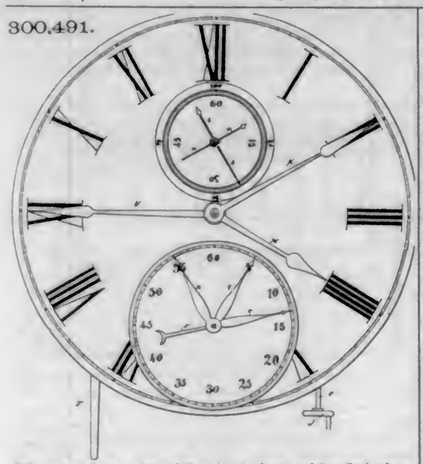
3. The combination of the electro-magnet H, armature-lever I, pawl *j*, ratchet-wheel J, and circuit-controlling mechanism operated by the float *a*, as described.

300,490.



300,491. SPEED-CLOCK FOR MACHINERY. WILLIAM H. LORD, New York, N. Y. Filed Mar. 14, 1884. (No model.)

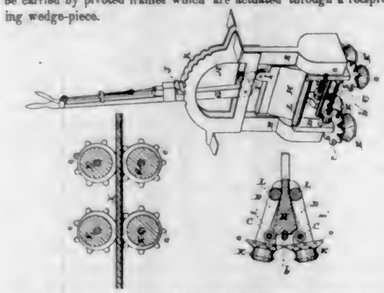
Claim.—1. In a speed-clock, the combination, with the frame J, the hollow post O, carrying the hour-hand M, and the hollow post R, carrying the speed-hand U, and the worm-wheel S, of the bridge P and the hollow journal Q, substantially as herein shown and described, whereby the speed mechanism will be kept from contact with the time mechanism, as set forth.



2. In a speed-clock, the combination, with the worm-wheel S, of the speed mechanism, and the post of the seconds-hand *a*, of the large gear-wheel X, the small pinions V Y, and the speed seconds-hand *b*, substantially as herein shown and described, whereby the gain or loss in speed will be accurately shown, as set forth.

3. In a speed-clock, the combination, with the speed-clock works L, provided with two hands, revolving, one, *q*, in sixty hours, and the other, *s*, in one hour, of the seconds-hand *o*, revolving once a minute, and its driving mechanism, substantially as herein shown and described, whereby the amount of speed lost in a given time can be accurately shown, as set forth.

4. In a speed-clock, the combination, with the worm-shaft H, driving the speed mechanism of the time-clock works, and the worm-shaft *h*, driving the speed-clock works, of the miter-wheels *c d f a i* and the



300,491.

sliding rotary shaft *e*, substantially as herein shown and described, whereby the speed-hands of the two clock-works K L can be adjusted together, or the hands of the latter independently of those of the former, as set forth.

300,492. CABLE-GRIP. RALPH W. MCGOVERN, San Francisco, Cal. Filed Dec. 14, 1883. (No model.)

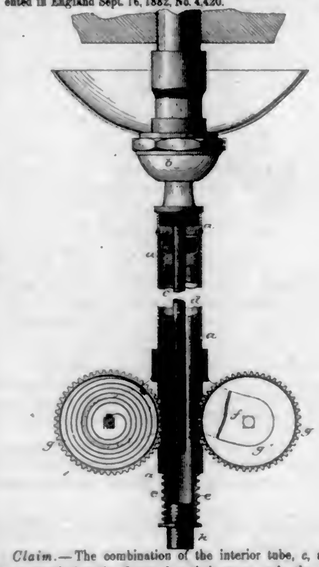
Brief.—The grip-rollers are in pairs, and are eccentrically mounted or have cam-faces, and are geared together in pairs. The rollers may be carried by pivoted frames which are actuated through a reciprocating wedge-piece.

Claim.—1. In a cable-grip, oppositely-placed eccentric rollers or pulleys, between which the moving cable passes, in combination with suitable mechanism for forcing said eccentric pulleys or rollers against the cable, substantially as herein described.

2. In a cable-grip, oppositely-placed eccentric rollers or pulleys, between which the moving cable passes, said rollers or pulleys being geared together to cause their eccentricities to correspond in their revolution, in combination with suitable mechanism for forcing them against the cable, substantially as and for the purpose herein described.

3. In a cable-grip, the oppositely-located rollers or pulleys E, between which the moving cable passes, said rollers or pulleys having grooved cam-faces—that is to say, formed eccentrically with relation to the axis of revolution of said rollers or pulleys—in combination with mechanism for forcing the faces of said rollers or pulleys against the moving cable, substantially as herein described.

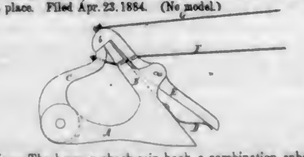
4. In a cable-grip, the oppositely-located rollers or pulleys E, between which the moving cable passes, said rollers or pulleys having grooved cam-faces, as described, and the cogged flanges *e* on said pulleys, whereby they engage in pairs to cause their timely revolution to make their cam-faces correspond, in combination with mechanism for forcing the faces of said rollers or pulleys against the moving cable, substantially as herein described.



5. In a cable-grip, a suitable frame and swinging arms or frames pivoted thereto on each side, said arms or frames carrying the eccentric or cam rollers or pulleys E, oppositely located, and between the faces of which the moving cable passes, in combination with the wedge-block H, guided in the main frame, and lying between the swinging arms or frames and impinging thereon, and a means for reciprocating said wedge to force together or apart said arms or frames to cause their rollers or pulleys to bear against or relieve the moving cable, substantially as herein described.

6. In a cable-grip, the main body-plate A and the downwardly-extending arms B, the side arms, D, pivoted to arms B by shafts C, and having the friction-rolls L in their tops, and the oppositely-located eccentric or cam rollers or pulleys E, geared together and mounted on said arms D, in combination with the inverted wedge-block H, guided between arms B, and having its sides impinging against the friction-rolls L, the pivoted elbow-lever G, and the pivoted bar or link I, connecting said lever with the wedge H, substantially as and for the purpose herein described.

7. In a cable-grip, the main plate A, arms B, shafts C, set between said arms, the arms D, pivoted on said shafts and having the inwardly-projecting foot portion *m'*, and the friction-rolls L, and the eccentric or cam rollers or pulleys E, geared together and arranged as shown, in combination with the inverted wedge H, having the rounded corners *m*, adapted to impinge on the foot portion *m'*, and means for reciprocating said wedge, substantially as herein described.

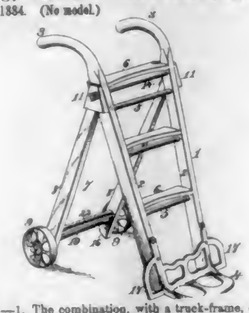


8. In a cable-grip, the plate A, arms B, having cross-bar *b*, shaft C, arms D, having inwardly-projecting portion *m'*, and friction-rolls L, and the eccentric or cam rollers or pulleys E, geared together and arranged as shown, in combination with the inverted wedge H, having rounded corners *m*, and means for reciprocating said wedge, all arranged and operating substantially as and for the purpose herein described.

300,493. EXTENSION-CHANDELIER. MOSES MERICHENSKI, Poplar, County of Middlesex, England. Filed Oct. 13, 1882. (No model.) Patented in England Sept. 16, 1882, No. 4,420.

Claim.—The combination of the interior tube, *c*, and exterior tube, *a*, attached to the fixture *b* at their upper ends, the intermediate sliding tube, *d*, having a packing at the upper end around the tube *c*, and rack-teeth at opposite sides, the two spring-barrels with gear-wheels at opposite sides of the tube *d*, and the brackets *f*, attached to the tube *a*, and supporting the central shafts of the spring-barrels, substantially as specified.

300,494. HARNESS CHECK-REIN HOOK. HUGH MURPHY, Lowell, Mass., assignor, by mesne assignments, to himself and Francis McClorey, same place. Filed Apr. 23, 1884. (No model.)



Claim.—The harness check-rein hook, a combination, substantially as set forth, consisting of the base A, horn B, pivoted arm C, catch-lever E, and spring D, arranged and applied essentially in manner to operate as and for the purpose as represented.

300,495. SUSPENDER-END. ADOLF NASCHER, New York, N. Y. Filed Jan. 17, 1884. (No model.)

Claim.—A suspender-end braided continuously from button-hole to button-hole and provided with a connecting ring or hook inserted at an intermediate point and braided therein, in combination with a loop or loops made integral with the suspender-end and provided with a fastening device at the ends to support the drawers, substantially as described.

300,496. HAND-TRUCK. JAMES S. NELSON, Springfield, Ohio. Filed Mar. 19, 1884. (No model.)

Claim.—1. The combination, with a truck-frame, of legs or supporting-bars pivoted to the truck-frame near the handles, and having the wheels journaled near their opposite ends, and a stop for limiting the spread of the supporting-bars, substantially as described.

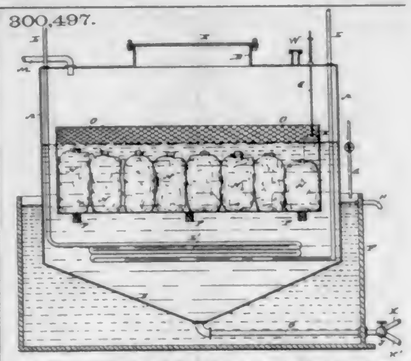
2. The combination, with a truck-frame, of legs or supporting-bars pivoted to the truck-frame near the handles, wheels journaled near the ends of said bars, the truck-frame being provided with steps, and the supporting-bars connected by rounds, substantially as described.

3. The combination, with a truck, of a pivoted supporting-frame, in the free end of which the truck-wheels are journaled, whereby the device may be used either as a truck or as a step-ladder, substantially as described.

4. The combination, with the truck-frame, of a stop for limiting the movement of the pivoted supporting-frame, said stop being provided with a groove or recess to receive and support the end of the step, substantially as described.

5. The combination, with a truck-frame, of a pivoted supporting-frame carrying the truck-wheels and fenders extending over said wheels, substantially as described.

6. The combination, with a truck-frame, of a pivoted supporting-frame having its free ends rounded or curved at an angle, and truck-wheels journaled in said supporting-frame, the distance between their axis and the end of the support being greater than the radius of the wheel, whereby placing the end of the bar upon the floor will remove the wheels from contact, substantially as described.



7. The combination, in a hand baggage-truck, of a supporting-frame and a wheeled frame, the two frames pivoted together at or near one end, and one of the frames provided with steps to produce a combined baggage-truck and step-ladder, substantially as described.

300,497. APPARATUS FOR TREATING LEATHER-STOCK WITH NAPHTHA TO EXTRACT OILS. FRANK F. NEWELL, Chelsea, Mass. Filed Mar. 25, 1884. (No model.)

Claim.—1. The combination, with a tank for treating leather with naphtha, of a water-receptacle surrounding the lower part of the said tank, substantially as herein shown and described.

2. The combination, with a tank for treating leather with naphtha, of a water-receptacle surrounding the lower part of the tank, and of a steam pipe and coil in the naphtha-tank, substantially as herein shown and described.

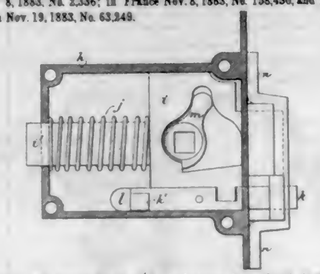
300,497.

3. The combination, with the tank A, for treating leather with naphtha, of the water-tank F, surrounding the lower part of the tank A, the water-inlet pipe G, the water-overflow pipe H, the pipe C, extending from the bottom of the tank A through the side of the water-tank, and of a steam coil and pipe in the naphtha-tank, substantially as herein shown and described.

300,498. FIRE-ESCAPE. HOWARD PADDOCK and HERMAN WALTER MILLER, Albany, N. Y. Filed Aug. 21, 1883. (No model.)

Brief.—A double-armed pivoted lever having bearing-surfaces at opposite sides is made to bear against the rope where it passes from one groove in the friction-block to another, through the perforations therein.

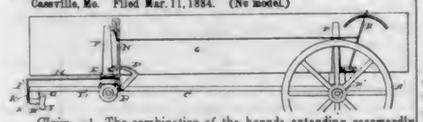
Claim.—1. In a portable fire-escape, the combination of the rope R R', the friction-block A A', provided with the sinuous passage *d d' d'' d'''*, the central pivot, *p*, and the double-armed lever B B', substantially as described.



2. In a portable fire-escape, the combination of the rope R R', the friction-block A A', provided with the sinuous internal or double-ogee passage *d d' d'' d'''*, extending to the surface at opposite sides of the block, and the double-armed pivoted lever B B', having two branches encircling the block and reunited at their outer ends to bear upon the rope R R', substantially as described.

3. In a portable fire-escape, the combination of the rope R R', the tubular friction-block A A', provided with the sinuous groove *d d' d'' d'''*, and the double-armed pivoted lever, one arm, B', of which consists of two forked branches, *b b'*, reunited and bent inwardly at their outer ends, whereby the arm B' comes in frictional contact with the sides and top of the rope section occupying the space *d d'*, substantially as shown and described.

4. The combination, substantially as described, of a barrel, A A', a lever, B B', a detachable support or seat, and a rope, for the purposes specified.

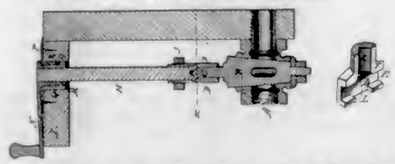


5. The combination, with the grooved friction-block, of the double-armed pivoted brake-lever having separate bearing-surfaces at opposite sides of the block, whereby a double frictional contact is secured between the brake and rope, substantially as described.

300,499. DOOR-LATCH. HENRY PARKIN, Albert Terrace Bow, and CHARLES JAMES REYNOLDS, Downs Park Road, Clapton, County of Middlesex, England. Filed Dec. 4, 1883. (No model.) Patented in England May 8, 1883, No. 2,336; in France Nov. 8, 1883, No. 158,430, and in Belgium Nov. 19, 1883, No. 63,249.

Claim.—The combination of the lock-case, the spring-bolt, the recessed striking-plate, the spring-actuated retaining-catch upon and reciprocating with the bolt, and means, substantially such as described, for engaging the catch with the lock-plate, these members being and operating substantially as hereinbefore set forth.

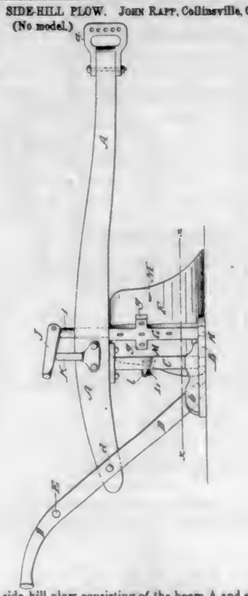
300,500. WAGON-BRAKE. WARREN PARKS and SAMUEL M. SMITH, Caseville, Mo. Filed Mar. 11, 1884. (No model.)



Claim.—1. The combination of the bounds extending rearwardly from the axle E, the cross-bar connecting the bounds near their rear ends, the brake-bars H H, pivoted to said connecting-bar, a double-cranked rock-bar mounted upon said connecting-bar, one arm of which is connected with the inner ends of the brake-bars, a brake-lever, and a link connecting the other arm of the rock-bar with the brake-lever, substantially as set forth.

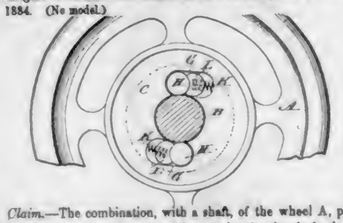
2. In a wagon, the combination of the bounds extending rearwardly from the axle E, the cross-bar connecting the bounds near their rear ends, the brake-bars H H, pivoted below the cross-bar, and having their inner ends close together near the center of the cross-bar, the rocking bar K, mounted upon the rear face of the connecting-bar, having an arm, *k*, connected to the inner ends of brake-bars H, and an arm, *k'*, a brake-lever mounted upon the rear axle outside of the post F, a rod connecting the brake-lever with the arm *k'*, and mechanism adapted to lock the brake-lever in any position, substantially as set forth.

3. The combination of the bounds extending rearwardly from the axle, the cross-bar connecting the bounds near their ends, the brake-bars H H, pivoted to said connecting-bar, and mechanism, substantially such as described, for operating said brake-bars, as set forth.



300,501. STOP-COCK CLAMP. WALTER S. PAYNE, Titusville, Pa. Filed Aug. 9, 1882. Reissued Dec. 30, 1883. (No model.)

Claim.—1. The combination, as described, of the T-headed plug, the square operating-rod having its lower end swaged to form a head, the clamping-jaws having recesses to receive the head of the plug, the head of the operating-rod, and the lower end of the latter, and provided with screw-threaded shanks, and a nut, as and for the purpose set forth.



2. The combination of the operating-rod, mechanism, substantially as described, for connecting the same to the stop-cock plug, the sleeve M, having crank N and lug or flange O, and the semicircular plates P P, having semi-tubular bearings Q R, of unequal length, one of said bearings, Q, forming a stop for the lug or flange O, as set forth.

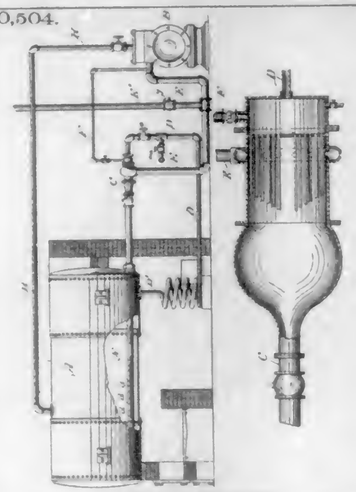
300,502. SIDE-HILL PLOW. JOHN RAFF, Collinsville, Conn. Filed Mar. 5, 1884. (No model.)

Claim.—A side-hill plow consisting of the beam A and shoe B, connected together by the standard C and handles D, braces *b*, connecting the handles and standard C, staple *l*, secured to standard C, and having the hooks L, pivoted standard G, lever J, fulcrum-bar K, and moldboard F, secured at the center of its rear face to the pivoted standard, and provided with eyes M on both sides of its center for engaging said hooks L, substantially as set forth.

300,503. FRICTION-CLUTCH. WILLIAM H. RASCOE, Plattsburg, N. Y., assignor to himself and Charles S. Rascoe, same place. Filed Apr. 19, 1884. (No model.)

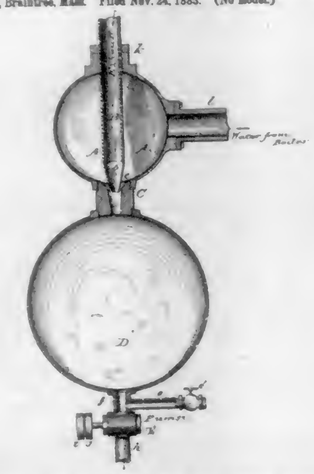
Claim.—The combination, with a shaft, of the wheel A, provided with the recesses G in the sides of the opening for the shaft, the rollers H in the recesses, the plugs or blocks L, resting against the rollers, and the springs K, interposed between the blocks L and the ends of the recesses, substantially as herein shown and described.

300,504. UTILIZING THE EXHAUST OF ENGINES. DAVID RENSHAW, Braintree, Mass. Filed Aug. 7, 1883. (No model.)



Claim.—1. The method herein described of utilizing the heat from the exhaust of steam-engines by causing said exhaust to be carried to an injector, where it meets a current of water from the boiler or generator at the temperature and pressure of the contents of the boiler, and the commingled steam and water are then forced back into the water-space of the boiler or generator, substantially as shown and described.

2. In an apparatus for utilizing the heat from the exhaust-steam of engines, the combination of the pipe E, injector C, and pipe D, all arranged to admit mingled exhaust-steam and water below the water-line of the boiler, substantially as described.



3. In an apparatus for utilizing the heat from the exhaust-steam of engines, the combination of the pipe E, injector C, pipe D, and delivery-pipe N, provided with the perforations *d d*, all substantially as shown and described.

4. The combination, in an apparatus substantially such as described, of the pipes E and D, injector C, and overflow-valve *m*, and valve *o*, all as and for the purpose shown and specified.

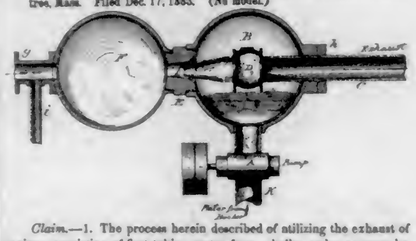
300,504.

300,505. UTILIZING THE EXHAUST OF ENGINES. DAVID RENSHAW, Braintree, Mass. Filed Nov. 24, 1883. (No model.)

Claim.—1. The method herein described of utilizing the exhaust of engines by returning it into the boiler from which it was taken by first uniting it in a reservoir with a body of water from the boiler under boiler-pressure, then pumping the combined mixture into the said boiler.

2. The method herein described of utilizing the exhaust of engines by uniting water from the boiler under boiler-pressure with the exhaust, and then pumping them from the suction end of the vessel, whereby increased velocity is imparted to them, and returning them into the boiler from which they were taken.

3. The combination, in an apparatus for returning the exhaust of the engine to the boiler from which it was taken, consisting of the receiving-vessel for boiler-water under boiler-pressure, the exhaust-pipe and the pump located at the suction end of said apparatus, substantially as described.



4. The combination, in an apparatus for utilizing the exhaust of engines, consisting of the vessel or reservoir A, adapted to be connected with the boiler and under boiler-pressure, the exhaust-pipe, the nozzle of which is located within the out-neck of said vessel, and the pump arranged at the suction end of the vessel, as described.

5. The combination, in a device for returning the exhaust of engines by returning it into a boiler under pressure equal to the source of supply, consisting of the vessels A and D, united by a neck, into which the exhaust-nozzle enters, a pump arranged at the outlet end of the device, all arranged for combined action, for the purpose set forth.

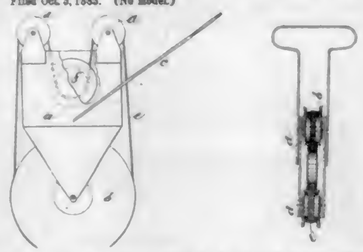
6. The combination, in an apparatus for utilizing the exhaust of engines, consisting of the vessel or reservoir A, exhaust pipe and nozzle B *b*, live-steam chamber D′, and the pump E, arranged at the outlet or suction end of said apparatus, for the purpose set forth.

7. The combination, in apparatus for returning the exhaust of engines into boilers under pressure, of the vessel A, exhaust pipe and nozzle B *b*, entering the outlet of said reservoir, and the live-steam chamber D′ and its nozzle, with the overflow-pipe, all arranged for joint operation in the manner and for the purpose set forth.

300,506. UTILIZING EXHAUST-STEAM. DAVID RENSHAW, Braintree, Mass. Filed Dec. 17, 1883. (No model.)

Claim.—1. The process herein described of utilizing the exhaust of engines, consisting of first taking water from a boiler under pressure by positive means, forcing it into a receiving-vessel larger than the supply-pipe, bringing the said water into contact with the exhaust-steam, and then forcing the mingled product into a boiler under equal pressure, or into the boiler from which they were taken, substantially as set forth.

2. The process herein described, consisting in taking water from a boiler under pressure, forcing the same into a receiving-vessel of larger area than the supply-pipe, then bringing the exhaust of the engine in contact with said water-jet at the point of its greatest velocity, thereby forcing it into a boiler under pressure, or into the boiler from which it was taken, as set forth.



3. The combination, in an apparatus for utilizing the exhaust of engines, of a pump interposed between a receiving-vessel at its induction end and the boiler, with the said receiving-vessel and the exhaust-pipe, substantially as shown and described.

4. The combination, in an apparatus for utilizing the exhaust of engines, which consists of the receiving-vessel, the pump located as described, and the exhaust-pipe provided with the back-pressure or check valve, the latter being located within said vessel, for the purpose set forth.

5. The combination, in an apparatus for utilizing the exhaust of engines, consisting of a vessel such as described, the exhaust-pipe extending into said vessel, and provided with a check-valve and nozzle, as and for the purpose set forth.

6. The combination, in an apparatus for utilizing the exhaust of engines, of the receiving-vessel B, exhaust-pipe C, provided with a suitable check-valve, the vessel F, and overflow-pipe i, with suitable operating mechanism, as set forth.

300,507. LAWN-MARKER. ROBERT B. REYNOLDS, Stockport, N. Y. Filed Oct. 5, 1883. (No model.)

Claim.—The combination, with the liquid-tank *a*, mounted on the carrying-wheel *b*, and the belt *e*, arranged to run on the carrying-wheel, of the guide-rollers *d*, located on opposite sides of the top of the tank, and the tension and stirring roller *f*, arranged to be suspended and carried in the bight of the belt, and to cause the belt to run through the liquid in the tank, substantially as described.

300,508. GLOVE-FASTENING. WILLIAM S. RICHARDSON, Boston, Mass., assignor to the Ball and Socket Fastener Company, Nashua, N. H. Filed Apr. 20, 1883. (No model.)

300,508.

Claim.—1. A socket or cup-shaped member of a glove or other fastening, having spring sides, the flanges a^2, and an integral fastening or attaching device, all substantially as described.

2. A socket or cup member of a fastening device, having the yielding sides a', the recess a^3, the flange a^2, and the integral tubular eyelet or prong-fastening extension, all substantially as and for the purposes described.

3. A socket or cup member of a fastening device, having the thumb or finger piece d, all substantially as and for the purposes described.

4. The combination of the socket-member of a fastening device, having the yielding sides a' and the flange a^2, with the ball member of the fastening device, having the projection c', all substantially as and for the purposes described.

5. The ball member of the fastening, having the bent shank, all substantially as and for the purposes described.

300,509. FASTENING FOR GLOVES, &c. WILLIAM S. RICHARDSON, Boston, Mass., assignor to the Ball and Socket Fastener Company, Nashua, N. H. Filed Dec. 19, 1883. (No model.)

Claim.—1. In a fastening for gloves and other articles, the ball member thereof fastened to the article on which it is used, substantially as described, with a socket member also fastened to such article, and having, when so fastened, its mouth toward the surface of the article, whereby it is adapted to be shut over the ball and cover or partly cover it, as specified, substantially as and for the purposes set forth.

2. A ball member of a fastening device having the flat under surface, a', adapted to rest upon the surface of the material to which the ball is attached and steady the same thereon, all substantially as and for the purposes described.

3. In a fastening for gloves and other articles, a ball member having the stops or projections a^3, in combination with a socket member, all substantially as and for the purposes described.

4. In a fastening for gloves and other articles, the combination of the ball member having the fulcrum projection a^3 and a socket member adapted to shut upon and inclose the ball member of the fastening, all substantially as and for the purposes described.

5. In a fastening device for gloves and other articles, the socket member having the upper surface adapted to be ornamented, and downwardly-extending yielding sides adapted to inclose the other member of the fastening device upon its edge and upper surface, all substantially as and for the purposes described.

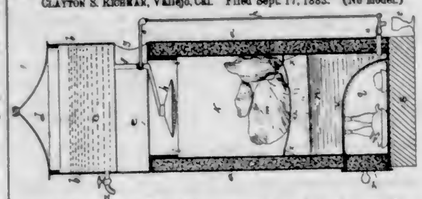
6. A socket member of a fastening device having the yielding sides b', the arm or shank b^3, curved in cross-section, as described, all substantially as and for the purposes set forth.

300,510. GLOVE-FASTENER. WILLIAM S. RICHARDSON, Boston, Mass., assignor to the Ball and Socket Fastener Company, Nashua, N. H. Filed Jan. 23, 1884. (No model.)

Claim.—1. A member of a fastening for gloves and other articles, consisting of a section having the flange a^3, yielding sides a^2, and an eyelet, b', having a flange, b^2, and end section, b, turned within the recess formed by the flange a^2, all substantially as and for the purposes described.

2. A member of a fastening device for gloves and other articles, having the yielding sides a^2, shaped substantially as specified, and the flange a^3, bent or drawn to form the recess a^4, for receiving and holding the end of a device for securing the member in place, all substantially as and for the purposes described.

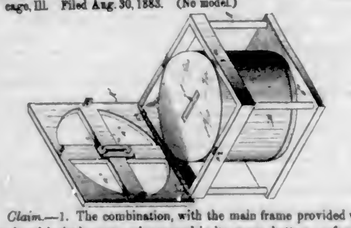
3. The ball member of a fastening device, having the seat provided with the flange c^2 and the recess c^3, all substantially as and for the purposes described.



4. The ball member of a fastening device, its seat and flange c^2, forming the recess c^3, and conical projection c', all substantially as and for the purposes described.

5. The combination of the ball member of a fastening device, having the flange c^2, forming the recess c^3, with the eyelet c', having the flange c^2, all substantially as and for the purposes described.

6. A member of a fastening device for gloves and other fastenings, having the yielding sides a^2, the seat a^4, the turning surface a', and the flange a^3, bent or drawn to form the space or recess a^4, within which the end of the device for securing the member in place is turned to lap upon the upper surface of the flange a^3, all substantially as and for the purposes set forth.

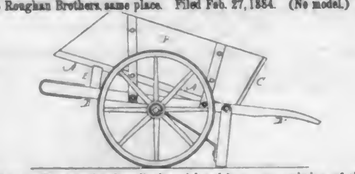


7. A ball-fastening having an arm integral therewith, but extending therefrom tangentially or out of a radial direction, all as described.

300,511. COMBINED WATER-COOLER AND REFRIGERATOR. CLAYTON S. RICHMAN, Vallejo, Cal. Filed Sept. 17, 1883. (No model.)

Claim.—In a water-cooler, the movable top *b b* and reservoir *c*, outlet-pipe *f*, spraying device *h*, and ice-vessel *a a*, in combination with the drawer *r*, cock or valve *g*, discharge-cock *o*, the ice-chamber, and rod *p*, connecting said cocks, whereby they may be operated simultaneously, substantially as shown and described.

300,512. BALLOT-BOX. ALVIN L. RINGO and AMOS PETTIBONE, Chicago, Ill. Filed Aug. 30, 1883. (No model.)

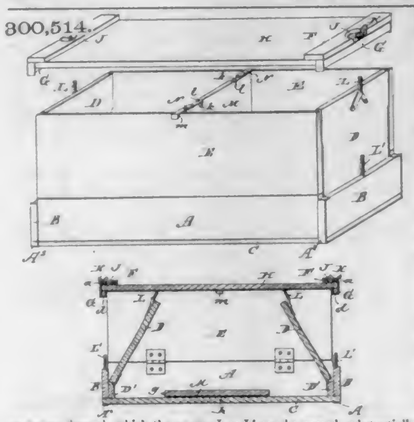


Claim.—1. The combination, with the main frame provided with a hinged and locked cover and grooved in its upper bottom surface, of a vessel having its top provided with a slot, and having its lower end open and resting in the groove, substantially as and for the purpose set forth.

2. A ballot-box consisting, essentially, of a frame inclosing a receptacle having an open bottom and a closed top formed with a slot, in combination with a cover secured, when closed, by two or more locks, each having a different key, substantially as and for the purpose set forth.

3. In a ballot-box, the frame A, formed with groove *a′* in its bottom, and having cover A′, secured by two or more different locks having different keys, and provided with slot a^2, having flanged plate *c c′*, in combination with the glass vessel B, having closed and slotted top and an open bottom, provided with a rubber gasket, substantially as shown and described.

300,513. COAL-BARROW. JAMES ROUGHAN, Boston, Mass., assignor to Roughan Brothers, same place. Filed Feb. 27, 1884. (No model.)



Claim.—The herein-described coal hand-barrow, consisting of the inclined bottom A, sides B, front C, and open rear end, combined with the frame D D′ and prop E.

300,514. FOLDING EGG-CASE. WILLIAM G. RUGE, Washington, Mo. Filed Mar. 22, 1884. (No model.)

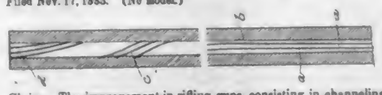
Claim.—1. In a folding egg-case, the combination, with the bottom C, the sides A, and the ends B, of the hinged side pieces, E, the hinged end pieces, D, the screws I, I′, projecting from the upper edges of the end pieces, D, and the ends B, and of the cover H, provided with nuts K, and

300,514.

apertures through which the screws L or L' can be passed, substantially as herein shown and described.

2. In a folding egg-case, the combination, with a box having upwardly-projecting screws, of the cover H, having the nuts K, and means for holding the nuts on the cover so that they are capable of rotation, substantially as herein shown and described.

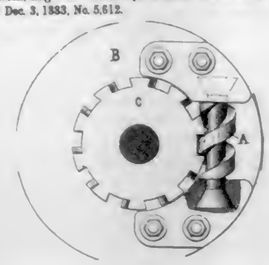
3. In a folding egg-case, the combination, with a box having upwardly-projecting screws, of the cover H, the nuts K, having annular grooves *a*, and of the wires *b*, secured on the cover and passed through the grooves in the nuts, substantially as herein shown and described.



4. In a folding egg-case, the combination, with a box having upwardly-projecting screws, of the cover H, the cross-pieces F, provided with recesses J, the nuts K, having annular grooves *a*, and the wires *b*, secured to the cover and passed through the said grooves, substantially as herein shown and described.

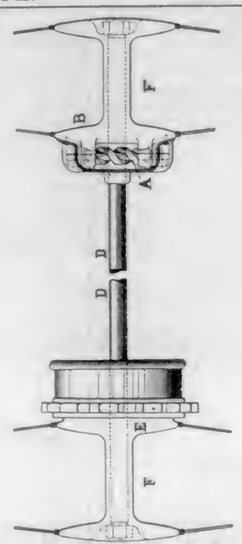
5. The combination, with a box, of the removable partition M, having hook-clips N pivoted to the upper edge at the ends of the same, substantially as herein shown and described.

6. The combination, with a box, of the removable partition M, having recesses *k* and notches *l* in its upper edge at the ends, and of the hook-clips N, pivoted on the upper edge of the partition M, substantially as herein shown and described.



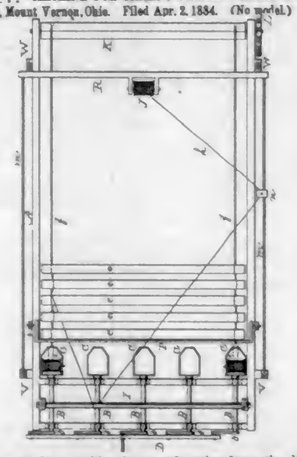
7. The combination, with a box having notches *m* in the upper edges of its sides, of the removable partitions M and the hook-clips N, pivoted on the upper surface of the same at the ends, substantially as herein shown and described.

300,515. RIFLING GUNS. ALOIS SCHNEIDER, San Francisco, Cal. Filed Nov. 17, 1883. (No model.)



Claim.—The improvement in rifling guns, consisting in channeling the interior of the gun with grooves, the first portions of which nearest the breech are nearly or quite parallel with the axis of the bore, the second portions form a slight curve opposite to the final spiral, and the third portions form an increasing spiral to or near the muzzle of the gun, substantially as herein described.

300,516. VELOCIPEDE. EDWARD RICHARD SETTLE, Coventry, County of Warwick, England. Filed Apr. 9, 1884. (No model.) Patented in England Dec. 3, 1883, No. 5,612.

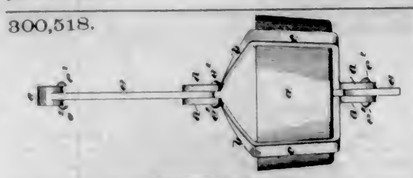


300,516.

Claim.—In tricycles or velocipedes, the combination of the driving-axle having a fixed and a loose main wheel, a worm-gear keyed to the axle, and a worm turning in bearings of the hub of the loose wheel, said worm-gear locking the loose wheel to the axle, so that both wheels run at the same speed when the velocipede is traveling straight, but allowing the loose wheel to run at a different speed to the fixed wheel when the velocipede is traveling in a curve or circle, substantially as set forth.

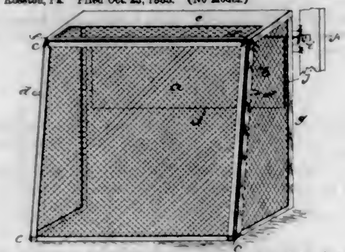
300,517. MACHINE FOR MAKING FENCES. GEORGE H. SHELLABERGER, Mount Vernon, Ohio. Filed Apr. 2, 1884. (No model.)

Claim.—1. In a machine for manufacturing fence, the depressing device to carry down the diagonal wire to interlace the same into the panel, consisting of a notched board suspended by pivotal arms from the frame, substantially as set forth.



2. The combination of the roller I, rods *m*, guide *n*, and bar R, carrying a spool to give position to a diagonal wire, substantially as described.

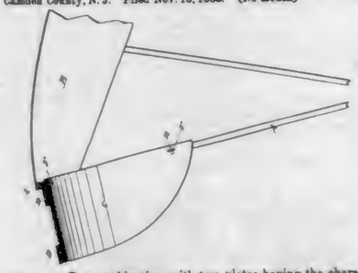
300,518. COMBINED CHAIN AND ELEVATOR-BUCKET. MORRILL A. SHEPARD, Lebanon, Ill. Filed Dec. 1, 1883. (No model.)



Claim.—1. An elevator-bucket secured between two sections of the elevator-chain, substantially as described and set forth.

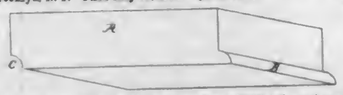
2. The elevator-chain composed of sections, substantially as described.

300,518.



300,519. FOLDING FIRE-PLACE FENDER. ISAIAH W. SHOEMAKER, Roseton, Pa. Filed Oct. 23, 1883. (No model.)

Claim.—1. The combination, with the fender and brackets *h*, secured near the upper ends of the sides of the fender, and provided with set-screws or other analogous devices for attachment to the sides of the mantel, of the sheet-metal back plate, *j*, suspended from the same brackets that secure the fender to the mantel sides, as set forth.

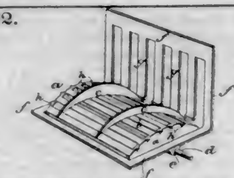


2. The combination, with the improved fire-place fender consisting of the front panel, *a*, and side panels, *b*, hinged together and arranged to incline from the bottom upward toward the fire-place front, and having the brackets or equivalent devices for connecting the sides to the fire-place front, of the sheet-metal back plate, *j*, arranged to be suspended from the brackets *h*, substantially as described.

300,520. HOOD FOR VEHICLE-TOPS. CHAS. T. SERVIS, Delaware, Camden County, N. J. Filed Nov. 13, 1883. (No model.)

Claim.—The combination, with two plates having the characteristics of flexibility and stiffness, as described, of hinges joining them, and means for securing them to a carriage-top, substantially as and for the purpose specified, whereby the said plates may be folded flat together when not in use, and may be sprung to fit the curves of a carriage-top, as described.

300,521. TILE OR BRICK FOR FLOORS, &c. THOMAS C. SMITH, Brooklyn, N. Y. Filed May 22, 1884. (No model.)



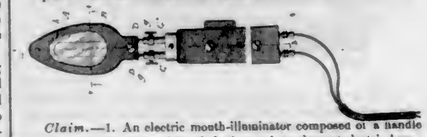
Claim.—A tile or brick the back surface of which is projected on one or two sides in the form of a lip, and the opposite sides of the back surface recessed to correspond with the size and form of the lip, substantially as shown and herein described.

300,522. GRATE. JOHN T. SNYDER, Luzerne, Pa. Filed June 25, 1883. (No model.)

Claim.—1. A rocking grate having the upper surface of its grate-bars provided with diagonal bars projecting above the same to form clinker-sweeps, substantially as herein described.

300,522.

2. A grate constructed with an arched top of ends *a* and bars *b*, and fitted diagonally with the clinker-sweeps *c*, substantially as shown and described.



3. The combination, with the grate *a b*, of clinker-sweeps *c*, ranging diagonally across the grate, said sweeps being tapered toward the ends, substantially as shown and described.

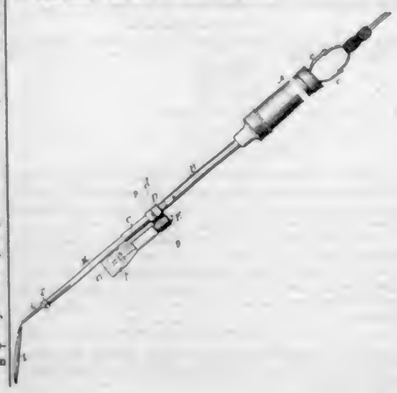
4. The combination, with the arched top grate, *a b*, of clinker-sweeps *c*, varying successively in height at the crown toward the end or ends of the grate, substantially as shown and described.

5. The combination, with the arched top grate, *a b*, fitted with clinker-sweeps *c*, of the end spurs, *h*, substantially as shown and described.

6. A grate constructed with arched top of ends *a* and bars *b*, clinker-sweeps *c*, rock-shaft or axis *d*, and end spurs, *h*, substantially as shown and described.

300,523. ELECTRIC MOUTH-LAMP. ELI T. STARR, Philadelphia, Pa., assignor to the S. S. White Dental Manufacturing Company, same place. Filed Nov. 17, 1883. (No model.)

Claim.—1. An electric mouth-illuminator composed of a handle carrying a circuit make and break device, an incandescent electric lamp, and a non-conducting guard or casing partially surrounding the lamp-globe, substantially as described.



2. In an electric mouth-illuminator, a casing surrounding a lamp-globe, the front side of which is substantially flat, and the outer side convex or curved, so as to form a cheek-distender, substantially as described.

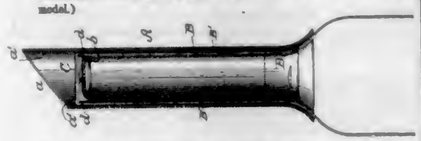
3. The combination, in an electric mouth-illuminator, of the lamp-globe, the incandescing filament thereof, and the sectional non-conducting casing of said globe.

4. The handle of the mouth-lamp, containing the divided or sectional conducting-connection, the normal condition of which is separated or broken, in combination with a sliding sleeve or thimble fitted to unite the section of said conducting-connection to complete the circuit, substantially as described.

5. The combination of a mouth-lamp with a handle arranged at an angle thereto, substantially as described, whereby the back of the lamp faces said handle.

300,524. ELECTRIC MOUTH-ILLUMINATOR. ELI T. STARR, Philadelphia, Pa., assignor to the S. S. White Dental Manufacturing Company, same place. Filed Jan. 25, 1884. (No model.)

Claim.—1. A handle for portable electric lamps, consisting of a main section through which the conducting-wires pass, and a front insulating-section fitted with an external lamp-holding and circuit making and breaking device, substantially as described.



2. A handle for portable electric lamps, having a main section through which the conducting-connections pass, and a reduced front end, in combination with an external lamp-holding device mounted on said reduced end of the handle, and an electric lamp carried by said device, so as to lie close thereto, and a longitudinally-adjustable mirror fitted in a socket in the front end of said handle, substantially as described.

3. The combination of a handle, an external electric lamp carried thereby, and an adjustable shield or guard around said lamp to protect the eyes from the direct glare of the light.

4. The combination of the handle, the external electric lamp carried thereby, and an adjustable shield or guard surrounding said lamp, having an opening in the guard for the passage of the rays of light, the guard being adjustable, so as to direct the rays of the lamp upon any portion of the mouth or down the throat, if desired.

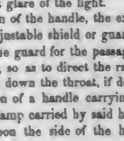
5. The combination of a handle carrying conducting-connections through it, an electric lamp carried by said handle, and projecting conducting-connections upon the side of the handle, between which the lamp is supported and held.

300,525. ELECTRIC-LIGHT SPECULUM. ELI T. STARR, Philadelphia, Pa., assignor, by direct and mesne assignments, to the S. S. White Dental Manufacturing Company, same place. Filed Feb. 11, 1884. (No model.)

Claim.—1. An insulating and heat non-conducting casing—such as a hard-rubber casing—containing and carrying an incandescent electric lamp, substantially as described.

2. An insulating and heat non-conducting casing—such as a hard-rubber casing—provided with a reflecting lining or interior surface, and containing and carrying an incandescent electric lamp, and said casing being also provided with an opening therein to permit the passage of the light of the lamp, substantially as described.

3. A tubular non-conducting casing surrounding an incandescent electric lamp, said casing being open at its front end to permit the passage of the light-rays of said lamp, substantially as described.



4. The semicircular incandescent electric lamp, consisting of the semicircular vacuum-casing and the inclosed filament or incandescent body sealed therein, substantially as described.

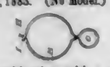
5. A tubular transparent speculum-casing—such as a glass casing—substantially as described, whereby the cavity in which the speculum is inserted may be inspected in different directions through the walls of the casing, substantially as described.

6. A tubular transparent speculum casing or guard—such as a glass casing or guard—carrying an incandescent vacuum or inclosed electric lamp, substantially as described.

7. An electric-light speculum, consisting of a tubular or open casing fitted near its front end with a shoulder or abutment projecting into the bore of the casing, and an incandescent electric lamp fitted in front of said abutment, so as to be out of the line of vision of the operator in looking through said casing, substantially as described.

300,526. SHOE. MARTIN L. STOWE, Worcester, Mass. Filed Apr. 29, 1884. (No model.)

Claim.—1. In a shoe-upper, the back or foxings formed in a single piece with the upward-extending portion B', side wings, B^2 B^2, and the central notch or cut-away section, F, at the lower edge thereof, substantially as and for the purpose set forth.

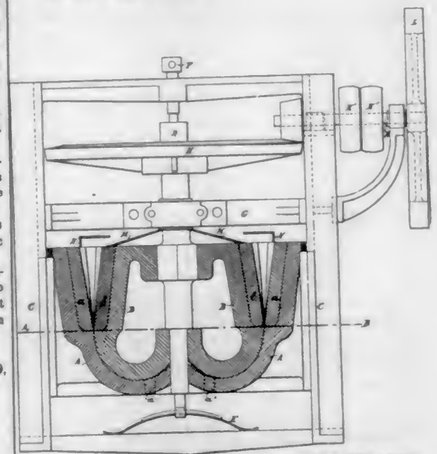


2. A shoe having an upper constructed substantially as hereinbefore described, with the central upward-extended back portion and side foxings formed in a single piece, with seaming edges shaped as at *a b d*, in combination with side or top pieces, A, shaped as shown, and having their edges *a' b' d'* fitted and stitched to said back and foxings, in the manner set forth.

300,527. CASK OR HOGSHEAD. JOSEPH STRÜBEL, New Haven, Conn., assignee of one-half to Henry Kenold, same place. Filed Nov. 26, 1883. (Model.)

Claim.—The cask-head having that portion of its periphery which is on the sides of the man-hole of substantially the thickness of the main part of the head, combined with a cask-body interiorly grooved to correspond to such shape of the cask-head and to form shoulders c^3, against which the sides of the man-hole abut, all substantially as described.

300,528. CURTAIN-RING. JOSHUA SUMNER, Colorado Springs, Colo., assignor of two-thirds to A. E. Mook and Edward W. Frost, both of same place. Filed Oct. 31, 1883. (No model.)

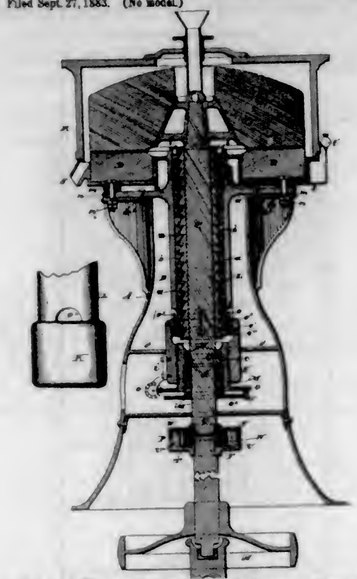


Claim.—1. The combination, with a curtain-ring, of a detachable ring or clasp having a loop or eye, substantially as and for the purpose set forth.

2. A detachable ring or clasp for curtain-rings, comprising a small loop or eye, curved arms extending from the same and adapted to encircle the body of the curtain-ring, and a suitable catch or fastening whereby the ends of said arms may be connected, substantially as set forth.

3. As an improvement in curtain-rings, the herein-described clasp, comprising the eye C, curved arms E G, forming the ring D, and the catch F and tooth or latch H at the ends of said arms, as and for the purpose set forth.

300,529. QUARTZ CRUSHER OR MILL. HORATIO SUTHERLAND, London, England. Filed Oct. 29, 1883. (No model.) Patented in England June 8, 1883, No. 2,867; in France Oct. 22, 1883, No. 158,163; in Belgium Oct. 22, 1883, No. 62,944; in Victoria Nov. 1, 1883, No. 3,585; in New South Wales Jan. 16, 1884, No. 308; in Queensland Jan. 17, 1884, No. 561, and in New Zealand Jan. 1884.



Claim.—1. The combination of the mortar provided with corrugations at its upper part, and uncorrugated at and near its lower part, and the concentrically-revolving pestle provided with corrugations opposite those of the mortar, and uncorrugated at its lower part, where it is adapted to fit closely within the mortar, substantially as and for the purpose hereinbefore set forth.

2. The combination of the mortar uncorrugated at its lower part, the corrugated ring within its upper part, the pestle uncorrugated at its lower part and adapted to fit within the corresponding part of the mortar, and the corrugated ring about the upper part of the pestle, substantially as and for the purpose hereinbefore set forth.

3. The combination of the mortar having the discharge-openings *a'* in its bottom, the driving-shaft, and the rotating pestle fitting within the mortar at its lower part, except about the driving-shaft, where a recess is provided which communicates with the discharge-openings, as and for the purpose described.

300,530. GRINDING-MILL. ABE L. TEETOR, Cambridge City, Ind. Filed Sept. 27, 1883. (No model.)

Claim.—1. The combination, with a suitable runner or upper stone and table, of a bushing suspended from the table, a spindle passing through the bushing, and devices whereby the spindle is vertically adjusted at or near the lower end of the bushing, substantially as and for the purpose set forth.

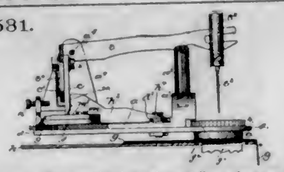
2. The combination, with a runner or upper stone and table, of a bushing secured at or near its upper end to the table, and a spindle supported at or near the lower end of the bushing, substantially as and for the purpose set forth.

3. The combination, with a runner or upper stone and table, of a bushing supported at or near its upper end by the table, and provided at its lower end with collars, and a spindle having a flange, which latter rests between the collars, whereby when the latter are vertically adjusted the spindle is also moved in the same direction, substantially as set forth.

4. The combination, with a runner or upper stone and table, of a depending bushing, the sleeve K, collars M M', the spindle provided with the flange *c'*, and devices for turning the collars simultaneously in the same direction, substantially as set forth.

5. The combination, with a runner or upper stone and table, of a depending bushing, the sleeve K, collars M M', provided, respectively, with worm-wheels O and O^2, the spindle provided with the flange *c'*, the rings *c* and *d*, the worm-shaft O', and devices for locking the worm-wheels together.

6. The combination, with an elongated bushing and a spindle, of the wedges provided with a series of small steps or wedges, the followers provided with steps adapted to register with the steps on the wedges, and devices for vertically adjusting the wedges, whereby the followers are moved toward and away from the spindle, substantially as set forth.



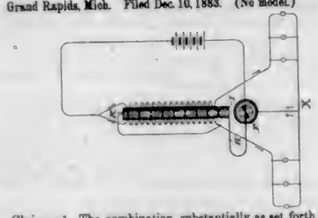
7. The combination, with an elongated bushing, the spindle, and sleeve K, of the wedges *a*, followers *b*, and screws *o*, whereby the wedges are vertically adjusted, substantially as set forth.

8. The combination, with a two-part spindle, the adjacent ends of each part being provided with a plate having two or more yielding cushions secured thereto, of an interposed spider for connecting the plates, substantially as set forth.

9. The combination, with a two-part spindle, of the plates F and F', provided with the cushioned lugs, and the interposed spider, substantially as set forth.

10. The combination, with a divided shaft, the two parts of which are yieldingly connected together, of the pulley H, the arms of which are curved, so that the power will be supplied to the shaft on a line with the step supporting the shaft, substantially as set forth.

300,531. SEWING-MACHINE ATTACHMENT. EDDY T. THOMAS and THOMAS S. HUNTINGTON, New York, N. Y., assignors to the New Home Sewing Machine Company, Orange, Mass. Filed Jan. 10, 1884. (No model.)



Claim.—1. The combination, substantially as shown and described, of the base *a*, having the socket *a'* and set-screw a^3, the lever *d*, pivoted to said base, the feed-annulus *e*, fitted to said lever, and provided with a ratchet, the spring-pawl h^3 in contact with such ratchet, the pawl-carrier, the lever *b*, and means to vibrate the lever *d*, as and for the purpose set forth.

2. The combination, substantially as shown and described, of the base *a*, having the socket *a'* and set-screw a^3, the lever *d*, pivoted to said base, the feed-annulus *e*, fitted to said lever, and provided with a ratchet, the spring-pawl h^3 in contact with such ratchet, the pawl-carrier, the lever *b*, having the wing b^4 and spring-finger *c*, and the switch comprising the pivoted member *f*, having the stud 6, and the shouldered plate *m'*, as set forth.

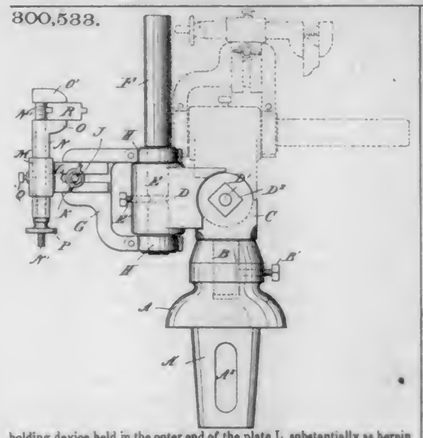
3. The frame or base, the pivoted lever *d*, provided with the annulus *e*, and the detachable grooved shoe n^2 thereon, combined with the actuating-lever *b* and the switch, substantially as shown and described.

300,532. AUTOMATIC ELECTRICAL CUT-OUT. WM. M. THOMAS, Grand Rapids, Mich. Filed Dec. 10, 1883. (No model.)

Claim.—1. The combination, substantially as set forth, of the main circuit, the double wound helix in which the electric current from the main line is normally divided, the loop-circuit, a series of lamps or other electrical appliances contained in the loop, conductors for conveying one branch or division of the current to a given number of the lamps or other appliances, conductors for conveying the other division of the current to the remaining appliances, and a shunt-circuit, substantially such as described, whereby the entire current is shunted and cut out from all the appliances whenever a disturbance or disarrangement occurs in one branch of the loop-circuit.

2. The combination, substantially as set forth, of the main circuit, the double wound helix in which the electric current from the main line is normally divided, the core of the helix, its armature, the loop-circuit, an electrical connection between the loop and the main line, an electrical conductor jointed to one branch of the circuit between the helix and the loop and to the core, and an electrical connection between the armature and the main line, whereby the entire current will normally pass into the loop, but will be shunted and cut out from the loop whenever a disturbance or disarrangement occurs therein.

300,533. GAGE FOR ADJUSTING PLANER-KNIVES. FRANCIS B. THOMPSON, Beaumont, Tex. Filed Oct. 13, 1883. (Model.)



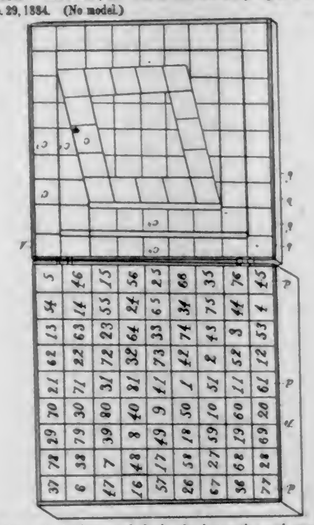
Claim.—1. The combination of a swinging sleeve and a mandrel mounted to turn therein, with a pattern-holding device, also secured to said sleeve in a plane parallel with the mandrel, whereby the side head of a planing-machine may be placed upon the said mandrel and its bits adjusted to correspond to the pattern-block, substantially as set forth.

2. The combination of a base-piece constructed to be secured to a bench or table, a sleeve held to swing and turn on the same, and a mandrel held to turn in said sleeve, with a device for holding a pattern-block, also secured to said sleeve, whereby the sleeve carrying the mandrel and pattern-holding device may be swung or turned to any desired position and still occupy the same position relatively to each other, substantially as set forth.

3. The combination of the base-piece A, provided with stem A' and slot A^2, block C, mounted to turn in a socket therein, block D, hinged vertically to said block C, and transverse sleeve E, formed in said block D, with the mandrel F, mounted to turn in said sleeve, and a pattern-holding device, also secured to said sleeved portion, and in a plane parallel with the said mandrel, substantially as set forth.

4. The combination, with a base-piece of a sleeve held to turn and swing on the same, of a mandrel held in the said sleeve, a frame, G, held on the sleeve, a forked plate, L, held on the frame G, and a pattern-block-

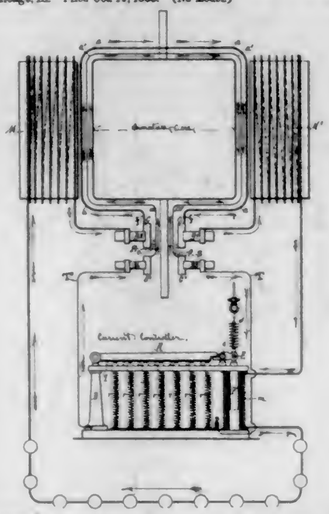
300,533.



holding device held in the outer end of the plate L, substantially as herein shown and described, and for the purpose set forth.

5. The combination, with the base-piece A, of the sleeve E, held to turn and swing on the same, the frame G, held on the sleeve E, the forked plate L, held on the frame G, the hollow stem N, provided with the jaw O, the stem N', provided with the jaw O', and the nut P, mounted on the lower threaded end of the stem N', substantially as herein shown and described, and for the purpose set forth.

6. The combination, with the base-piece A, of the sleeve E, held to turn and swing on the same, the mandrel F, the frame G, held on the sleeve E, the forked plate L, held on the frame G by a screw-bolt, J, and nut K, the hollow stem N, provided with the jaw O, the stem N', provided with the jaw O', which stem is provided with scale-graduations, and the nut P, screwed on the threaded end of the stem N', substantially as herein shown and described, and for the purpose set forth.



300,534. GAME-BOARD FOR PRODUCING MAGIC SQUARES, PLAYING CHECKERS, &c. JAS. D. VAN BEBBER, Springfield, Mo. Filed Feb. 29, 1884. (No model.)

Claim.—1. An improved device for instruction and amusement, composed of a box, D, having a cover, A, which is marked off in the square of an odd number of squares, combined with a frame, C, composed of hinged pieces c c^2, &c., and blocks numbered consecutively equal to the number of said squares, all substantially as shown and described.

2. The combination of a box, D, with a cover, A, marked off in squares, a frame, C, having parts c c^2, &c., which expose the square of an odd number of squares—as three, five, seven, or nine, &c., squared—and blocks numbered consecutively, substantially as and for the purpose set forth.

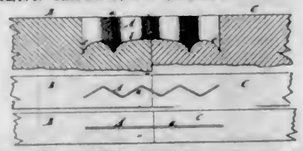
300,535. DYNAMO-ELECTRIC MACHINE. CHAR J. VAN DEPOELE, Chicago, Ill. Filed Oct. 19, 1883. (No model.)

Claim.—1. In a dynamo-electric machine, an armature provided with two sets of coils, one of said sets being arranged and connected so as to excite the field-magnets and feed the external circuit, the other set being arranged and connected so as to react directly upon and to intensify the magnetism of said armature-core, so as to strengthen the current produced in the coils connected to the working-circuit, substantially as described.

2. In a dynamo-electric machine, an armature provided with two sets of coils, one set—the main—being in circuit with the field-magnets of said dynamo and with the outside work, the other set—the auxiliary—being set apart and so connected as to impart to the armature-core a higher degree of magnetism than that due to the action of the field-magnets, thus strengthening the current produced in the main coils of said armature, substantially as set forth.

3. In a dynamo-electric machine, an armature provided with two sets of coils and connections, whereby one set is adapted to be used to keep up the magnetic field and do the work outside of the machine, while the other set is used to energize the armature-core with more or less strength independent from the field-magnets influencing said armature, in order to regulate the current produced in the main coils to the work demanded from the same, substantially as described.

4. In a dynamo-electric machine, an armature provided with two or more sets of coils or circuits, one or more of said sets of coils being connected and arranged to do work outside of the armature, the remaining set of coils being utilized to directly energize said core to modify the current produced in the armature-coils doing the outside work, substantially as described.



5. In a dynamo-electric machine, an armature-core carrying independent sets of coils arranged to be partly influenced by its field-magnets and partly by an auxiliary circuit including a portion of the coils wound thereon, in combination with a current-controller arranged in circuit with the coils acting directly on the armature, and adapted to regulate the flow of current in the said auxiliary circuit in order to regulate the production of current in the main coils of the armature, substantially as set forth.

6. In a dynamo-electric machine, an armature wound with two or more sets of coils, one or more of said sets being employed to feed the external circuit and magnetize the field-magnets of the machine, and the remainder being so disposed and connected that they will react directly upon the armature-core, in combination with means for controlling and regulating the amount of current circulating in the latter set of coils, in order to regulate the production of current in the machine, substantially as described.

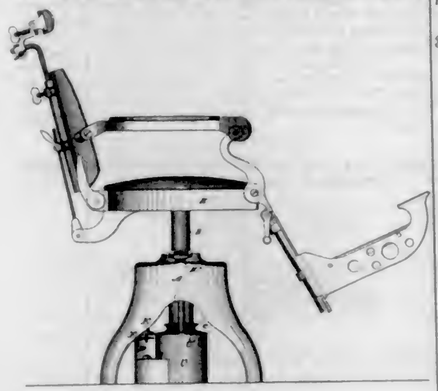
7. In a dynamo-electric machine, the combination, with the main or working coils of its armature, of an auxiliary set of coils adapted to energize the core of said armature independent from the field-magnets of said machine, as set forth.

8. In a dynamo-electric machine, the combination, with field-magnets of such proportions compared with its armature that the former is incapable of bringing the latter up to its maximum efficiency, of the outside or working coils of its armature, and a set of coils disposed around said armature-core, the sole office of which is to surexcite the armature-core by re-enforcing the action of the field-magnets thereon to bring it up to its maximum, as set forth.

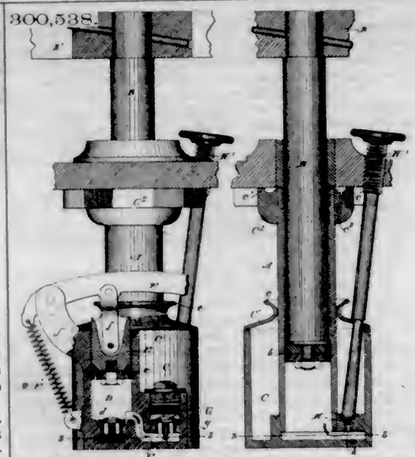
300,536. MEANS FOR UNITING WOOD. ALBERT H. WALKER, Brooklyn, assignor to the Sove & Fleming Manufacturing Company, New York, N. Y. Filed Jan. 26, 1884. (No model.)

Claim.—1. A strip of metal which is serrated at one edge, or which is corrugated or bent into sinuous form, and adapted to be driven in the direction of the length of its corrugations or bends into adjacent portions of two pieces of wood placed close together, so as to secure said pieces of wood together, substantially as specified.

2. The combination, with two pieces of wood placed close together, of a strip of metal which is serrated, or which is corrugated or bent longitudinally into sinuous form, and driven edgewise into adjacent portions of the two pieces of wood, substantially as specified.



300,537. CARBON-BATTERY. JOHN H. WALLACE, Ansonia, Conn., assignor to the Electrical Supply Company, same place. Filed May 10 1882. (No model.) Patented in England May 27, 1882, No. 2,416.

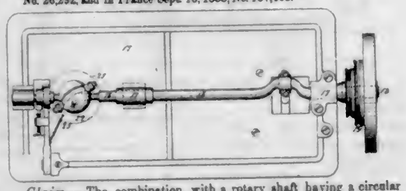


Claim.—The herein-described improvement in carbon-batteries, consisting of the glass or insulated material cover B, constructed with a central opening, a, and with a series of openings, e, in a circle around said central opening, and substantially concentric therewith, combined with the ring D, constructed with a series of openings, f, corresponding to the series of openings e in the cover, a clamping device at each of the openings in said ring, a series of carbons, E, in the openings of said ring, and secured therein, and a zinc, C, suspended through the central opening in the cover, substantially as described, and so that said series of carbons stand in a circle around the zinc, substantially as specified.

300,538. DENTIST'S CHAIR. JOHN B. WARING, New York, N. Y., assignor to J. Clarence White, Joshua H. Morris, William S. Hagany, and Samuel S. White, Jr., executors of Samuel S. White, deceased. Filed Jan. 2, 1878. Patented in England Jan. 8, 1878, No. 109.

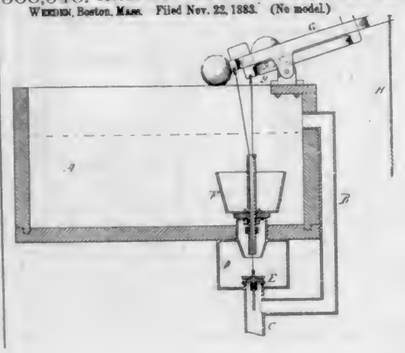
Claim.—1. The combination, substantially as hereinbefore set forth, of the base, the plunger, the chair-body capable of varying adjustment mounted thereon, the fluid supporting-column, the elevating foot-lever, and the handle or lever H', independent of the elevating foot-lever or elevating mechanism, for operating the valve or mechanism that permits

300,538.



of the escape of the fluid from beneath the plunger to lower the chair, these members being constructed and operating in combination as specified.

2. A chair-body mounted upon a plunger sustained at any desired height by means of a fluid medium, the said chair-body being adapted to be variably inclined, and being provided with means for securing it at any desired angle, substantially as described.



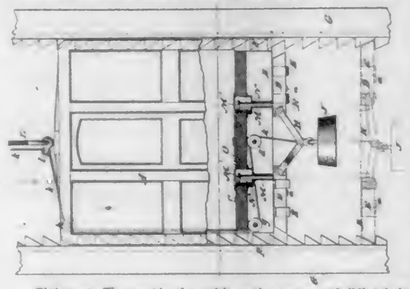
3. The combination, substantially as hereinbefore set forth, of a base or stand, a vertically-movable support, a fluid medium for sustaining said support, a chair-body carried by said support, adapted to be adjusted vertically, horizontally, and as to inclination relatively to the base, and mechanism for accomplishing these adjustments of the chair-body.

300,539. MECHANICAL MOVEMENT. JAMES WARWICK, Manchester, County of Lancaster, England. Filed Apr. 18, 1884. (No model.) Patented in England Feb. 24, 1883, No. 1,009; in Germany July 20, 1883, No. 26,292, and in France Sept. 10, 1883, No. 157,465.

Claim.—The combination, with a rotary shaft having a circular groove or projection inclined to its axis, of a shaft having secured to it an arm or arms furnished with a roller or slide, or rollers or slides, to work in or on the said inclined groove or projection, substantially as and for the purpose herein described.

300,540. SUPPLY-VALVE FOR WATER-CLOSETS, &c. HENRY CORY WEEDEN, Boston, Mass. Filed Nov. 22, 1883. (No model.)

Claim.—1. In a flushing apparatus for water-closets and kindred structures, the improved compound or double lever herein described, consisting of two counterbalanced lever parts, one of said parts being provided with a suitable stop adapted to check the fall of the other at a given point, substantially as and for the purposes herein described.

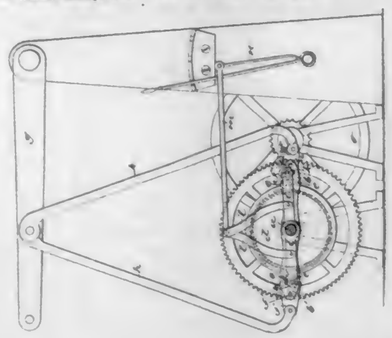


2. In a flushing apparatus for water-tanks, the combination of a two-part or double lever with a water-detaining pan, an independently-movable valve for regulating the outflow of water from the tank and chamber D, and means, substantially as described, for holding said valve away from its seats during a predetermined flushing period, all substantially as herein described and shown.

3. The combination, with a double or compound flushing-lever, of a water-detaining cup carrying a valve for opening and closing the flow of water from a chamber, D, the said cup being connected to both parts of the compound lever with connections of variable lengths, all substantially as herein described and shown.

4. The combination, with the main flushing-tank, of a chamber, D, a valve for opening and closing the inlet to and exit from said chamber, a water-retaining pan or cup, and means, substantially as described, whereby the said valve is automatically held, so as to keep open both the entrance to and exit from the chamber during the flowing out of a predetermined quantity of water from the main tank, and no longer.

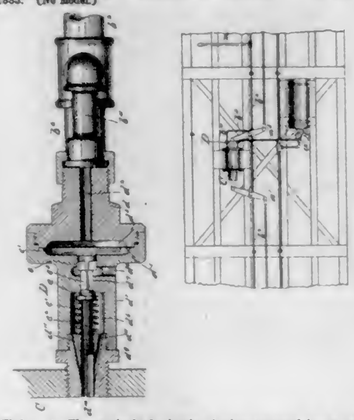
5. The combination, with a valve for opening and closing the inlet and outlet of a chamber, D, of the character herein described, of a water-detaining pan or cup provided with a passage-way extending through said cup and above the height of its rim, and of suitable connections for raising and suspending the said cup and the said valve independently, all substantially as and for the purposes herein set forth.



300,541. SAFETY-CATCH FOR ELEVATORS. FRANK ARTHUR WEEKS, Enniskillen, Ontario, Canada. Filed Feb. 9, 1884. (No model.)

Claim.—1. The combination, with an elevator-car, of sliding bolts held on the under side of the car, a toggle-joint uniting the inner ends of the sliding bolts, a weight suspended from the middle of the toggle-joint, locking-pins resting on the sliding bolts, and of a rope or chain for raising the weight and middle of the toggle-joint to force the sliding bolts outward, substantially as herein shown and described.

2. The combination, with an elevator-car, of the sliding bolts D, the toggle-joint H, uniting the inner ends of the same, the casings N, the locking-pins M in the same, the weight J, suspended from the toggle-joint, and the safety-rope *k*, substantially as herein shown and described.



300,542. MECHANISM FOR CONVERTING MOTION. NORMAN D. WELLS, Hastings, Minn. Filed May 1, 1884. (No model.)

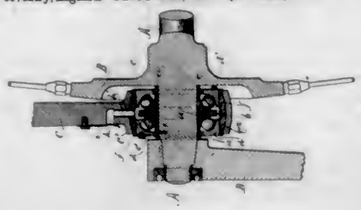
Claim.—1. The combination and arrangement, substantially as described, of the operating-rods *h*, pawls *f*, arms *b*, bands *c c*, pins or stops *k*, wheel *d*, and shaft *a*, for operation to give a continuous rotary motion to the shaft, as specified.

2. The combination of lever *n*, rod *m*, links *l*, arms *i*, and pins *k* with the pawl-arms *b*, pawls *f*, bands *c*, and wheel *d*, substantially as and for the purpose specified.

300,543. APPARATUS FOR RELIEVING PRESSURE IN BRAKE-CYLINDERS. GEORGE WESTINGHOUSE, Jr., Pittsburg, Pa. Filed Nov. 30, 1883. (No model.)

Claim.—1. The method of releasing brakes operated by an artificially-created fluid-pressure, consisting in releasing the pressure in the brake-cylinder by increasing the fluid-pressure on a movable diaphragm, substantially as set forth.

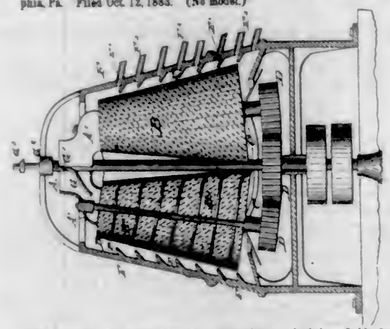
2. The combination of a brake-cylinder, an exhaust-valve, an independent signal-pipe, the main reservoir, and a cock for admitting the full pressure of the main reservoir into the signal-pipe, substantially as set forth.



3. In a fluid-pressure brake mechanism having a brake-pipe for operating the brakes by the use of any desired pressure, and a signal-pipe normally charged with a less pressure, both connected with the brake-cylinder, and, in combination therewith, a pressure-relieving mechanism arranged in the line of communication from the signal-pipe to the brake-cylinder, and a cock arranged in the pipe which connects the main reservoir with the signaling-pipe, substantially as set forth.

4. A fluid-pressure brake and signaling apparatus having, in combination, a brake-pipe and an independent signaling-pipe, a connection from one to the other through a common reservoir, and means for keeping the signaling-pipe continuously charged with fluid-pressure, but at a less pressure than that normally contained in the brake-pipe, substantially as set forth.

5. In combination with a brake-cylinder, C, and a pipe, a^3, for the supply and discharge of fluid-pressure in the normal operation of the brakes, an independent exhaust-valve, a movable diaphragm for operating said valve, a spring to hold said valve to its seat as against normal pressure, and a fluid-pressure-supply pipe and cock for applying an excess of fluid-pressure to unseat said valve, substantially as set forth.



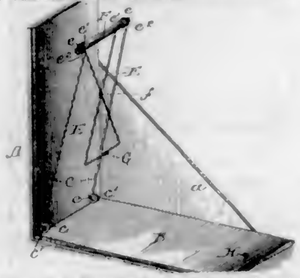
6. In an exhaust-valve, the combination of the parts *d* and *d'*, the part *d* having the passage d^3 and recess d^2, the part *d'* having the passages d^{10}, d^{11}, d^9, d^7, and d^8 and recess d^5, the diaphragm d^6, the presser-stem *e*, the valve *c*, provided with guides, and the spring *c'*, substantially as set forth.

300,544. BALL-BEARING FOR VELOCIPEDES. JOSEPH WHITE, Coventry, England. Filed Feb. 18, 1884. (No model.)

Claim.—In a ball-bearing for wheels, whether containing one or two sets of balls, a box composed of a split ring, *f*, and threaded internally to receive adjustable side ring-bearings, *c d*, having curved bearing-surfaces for the balls, such split ring being segment-shaped in cross-section and fitting a corresponding annular recess in yokes which are capable of being tightened up, all substantially as and for the purpose above described.

300,545. CENTRIFUGAL DRAINER. S. LLOYD WIEGAND, Philadelphia, Pa. Filed Oct. 12, 1883. (No model.)

Claim.—1. In a machine for separating or draining fluids from solids by centrifugal force, the combination of a series of rotating vessels having screws therein and rotating with them, adapted to progressively move the charge from the entrance to the exit, in combination with mechanism holding said charge from rotation with the screw by centrifugal effect, substantially as set forth.



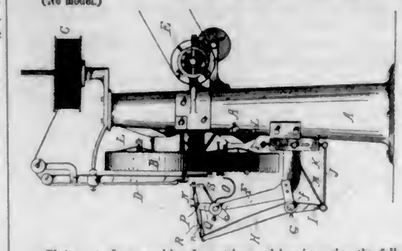
2. The combination of a series of perforated revolving vessels having screws formed within, and arranged to slowly rotate therewith, so placed in relation to a common axis of rotation at high velocity as to rotate the charge through arcs of increasing radius during its progress through the machine.

3. The combination of draining-vessels, each having screws rotating therewith slowly upon their own axes, with a gearing adapted to produce such slow rotation, in conjunction with a frame and driving-gearing adapted to rotate the series of vessels with a high velocity, substantially as set forth and shown.

4. In combination with a series of vessels having internal screws adapted to progressively move the charge of matter through such vessels into a case or curb, shelves adapted to collect and separate fluids expelled at different points in the progressive motion of the charge, substantially as and for the purposes set forth.

5. In combination with a series of draining-vessels arranged to rotate about a common center at high velocity, and to pass charges of matter slowly through them, the pipes G and G', for introducing washing or purging fluids, substantially as set forth.

300,546. FILE-HOLDER. ALEXANDER R. WILLIAMS, Washington, D.C. Filed June 21, 1883. (No model.)

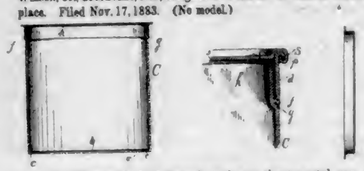


Claim.—1. In a file-holder, the base A, having the spring-frame C, composed of the parts *c*, *c'*, E, and G, constructed and arranged substantially as set forth.

2. In a file-holder, the base A and spring-frame E C, having handle G, in combination with the front B, provided with the hook H, substantially as and for the purpose set forth.

3. In a file-holder, the base A, having spring-hooks I, in combination with a holder-case having the cross-bar M, as and for the purpose set forth.

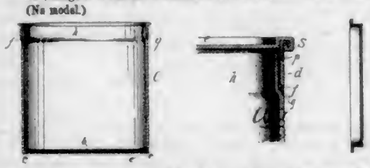
300,547. ATTACHMENT FOR RECEIVING AND COLLECTING LOOPED AND CUT WIRE. WILLIAM WILSON, Jr., Greenville, Del., assignor of one-half to Charles Green, same place. Filed Oct. 29, 1883. (No model.)



Claim.—1. In a machine for cutting and looping wire, the following instrumentalities in combination: first, a rotating head provided with devices which are suitably operated to automatically form loops upon wire and to automatically cut off a given section of looped wire; second, an automatically-operating wire-seizing device for grasping the severed sections of looped wire; third, devices for removing or stripping the sections from the grip of the wire-seizing device; fourth, means for operating the wire-seizing device; and, fifth, a receiver for receiving the severed sections.

2. The combination of the head-plate provided with devices which are suitably operated to automatically form loops upon wire and to cut the looped wire to predetermined lengths, jaws, strippers, receiving-frames, suitable mechanism for causing the advance and retreat of the jaws, and mechanism for causing the opening and closing of the jaws.

3. The combination of the jaws, the wedge-bar, and the jaw-springs, substantially as and for the purposes specified.



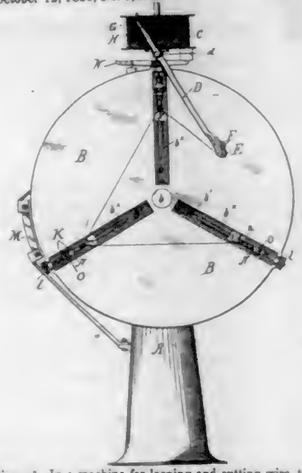
4. The combination of the head, provided with devices for forming loops upon wire and for cutting the looped wire to given lengths, and provided also with a series of camways, the pivoted lever, the link, rocker, rock-shaft, rock-shaft arms, and spring-jaws, the whole combined and operating substantially as set forth.

300,548. METHOD OF MAKING SHEET-METAL CANS. WILLIAM WILSON, Jr., Greenville, Del., assignor of one-half to Charles Green, same place. Filed Nov. 17, 1883. (No model.)

Claim.—The method of manufacturing a sheet-metal can, which consists, first, in forming a side body proper, then in striking from a blank of predetermined contour and proportions a saucer-shaped form, then in striking the bottom from said saucer-shaped form to form the bottom of the side body, then in connecting the flanged rim remaining after striking the bottom from the saucer-shaped form with the side body by means of a ripping-wire and solder, and then in double-seaming a top with the flanged rim, all substantially as hereinbefore set forth.

300,549. SHEET-METAL CAN. WILLIAM WILSON, Jr., Greenville, Del., assignor of one-half to Charles Green, same place. Filed Feb. 8, 1884. (No model.)

Claim.—1. As a new article of manufacture, an uncovered sheet-metal can the side body of which is provided with a flanged rim secured thereto by solder and a ripping-wire, substantially in the manner and for the purposes hereinbefore set forth.



2. In combination with the side body of a sheet-metal can, and with a flanged rim secured to said side body by solder and a ripping-wire, a top adapted to be double-seamed with the flange of the solder-secured rim, substantially as described.

3. The combination, to form a hermetically-sealed slip-cover wire-rip can, of the side body, the flanged rim, the ripping-wire, the solder,

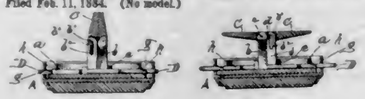
and the top double-seamed with the flanged rim, substantially as described.

300,550. MACHINE FOR MAKING LOOPED WIRE. WILLIAM WILSON, Jr., Greenville, Del., assignor of one-half to Charles Green, same place. Filed Feb. 8, 1884. (No model.)

Brief.—Improvement on Patent No. 214,977, dated April 29, 1879; reissued October 12, 1880, No. 9,404.

Claim.—1. In a machine for looping and cutting wire, the following instrumentalities in combination: first, a rotating head provided with devices which are suitably operated to automatically form loops upon wire and to automatically cut off a given section of looped wire; and, second, a feed-arm supported independently of the head, arranged to overhang the head, and provided at its extremity, which so overhangs, with a directing-wheel, by means of which wire passed around the wheel is in the rotation of the head fed to the devices for forming the loops upon the wire.

2. In a machine for looping and cutting wire, the following instrumentalities in combination: first, a rotating head; second, devices for forming loops upon the wire; third, devices for cutting off a given section of looped wire; fourth, devices for discharging the looped wire from the looping devices; fifth, a device for feeding the wire to the looping devices; and, sixth, suitable means for operating said several instrumentalities, substantially as set forth.

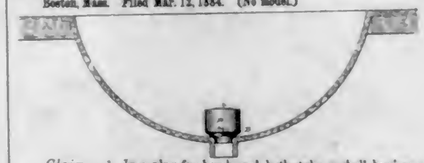


3. In a machine for looping and cutting wire, in combination with a rotating head, devices which are suitably operated to automatically form loops upon wire, devices which are suitably operated to automatically cut off a given section of looped wire, the loop-discharging arm S, and means for operating said loop-discharging arm, substantially as set forth.

4. The combination of the rotating head provided with devices which are suitably operated to automatically form loops upon wire, and to automatically cut off a given section of looped wire, of a feed-arm which overhangs the head, and is provided with directing wheels or pulleys, which serve to guide and direct the feed of the wire.

5. In combination with the rotating head provided with radial slots, devices for forming loops upon wire, devices for automatically cutting off a given section of looped wire, means for discharging the cut wires, and means for securing the support and radial adjustment of said several devices with respect to said rotating head.

6. In combination, the twisting-hooks, means for actuating said hooks to predetermined rotations, the chisels, means for effecting the predetermined lift and drop of said chisels, the loop-discharging arm, means for securing the operation of said arm to effect the discharge of the looped wires, a slide-bearing or kindred device for containing said assembled devices, a rotating head with respect to which said slide-bearing is radially adjustable, and means for securing the radial adjustment of said bearing and its connected devices.



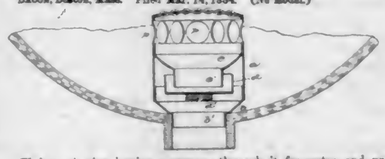
300,551. BUTTON OR STUD. GEORGE E. ADAMS, Providence, R. I. Filed Feb. 11, 1884. (No model.)

Claim.—1. In a button or stud having the posts or standards B B, the combination, with the shoe-lobes C C, pivoted in said standards and provided with bearings *d* and apertures *d'*, of the pushers D D, having vertical arms *b b*, provided with slots b^2 and locking-lugs b^3, substantially as described.

2. In a button or stud, the combination of the head A, having guides *e g*, the standards B B, the shoe-lobes C C, pivoted in the standards and provided with bearings *d* and apertures *d'*, the pushers D D, having vertical arms *b*, provided with slots b^2 and locking-lugs b^3, and the spring *a*, engaging said pushers, substantially as described.

300,552. PLUG FOR BOWLS AND BATH-TUBS. JAMES D. BACON, Boston, Mass. Filed Mar. 12, 1884. (No model.)

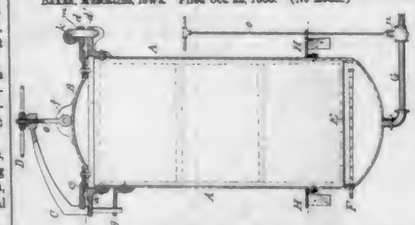
Claim.—1. In a plug for bowls and bath-tubs, a shell having a passage through it for water, and a seat, combined with an upwardly-closing valve to close the said passage against the action of sewer-gas inward through the hole closed by the plug, substantially as described.



2. The plug-shell provided with a valve-seat, combined with an upwardly-closing valve, and with a spring to support the valve and force it normally upward against the weight of the water resting above the plug, substantially as described.

3. The hollow plug-shell, its bottom and top pieces, and valve, combined with a strainer, substantially as described.

4. The hollow sheet-metal plug-shell, its upper portion, C, valve, and bottom piece, combined with the weight or ring *g*, to aid in holding the plug down in the hole to be closed by it, substantially as described.

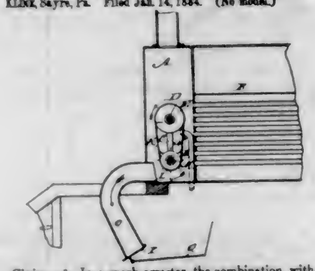


5. The plug-shell and valve, combined with a valve-locking device, to operate substantially as described.

300,553. TRAPPED PLUG FOR BOWLS AND TUBS. JAMES D. BACON, Boston, Mass. Filed Mar. 14, 1884. (No model.)

Claim.—A plug having a passage through it for water, and provided with means for water-sealing the same, substantially as described.

300,554. PROCESS-KETTLE FOR COOKING CANNED FRUIT. JOHN BAKER, Muscatine, Iowa. Filed Oct. 22, 1883. (No model.)



Claim.—1. The combination, with the upright kettle A, having the bracket *g* and rim *a*, of the removable cover B, provided with the rim *c*, having the recess *i*, the crane C, provided with the bearing-shoulder *k*, and extending through the rim *a* and bracket *g*, the threaded wheel D, and the screw-rod *e*, having pivotal connection with the cover B, substantially as and for the purposes described.

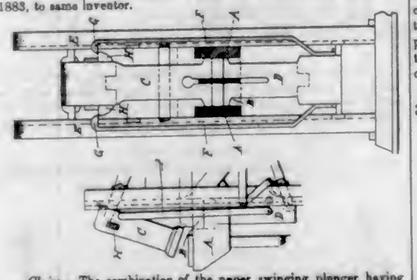
2. The combination, with the upright kettle A, provided with the rim *a*, lugs *d'*, and bracket *g*, of the removable cover B, provided with the rim *c* and lugs *d*, the crane C, and the threaded rod *e*, extended through the end of the crane and provided with the wheel D, and having pivotal connection with the cover, the eccentrics *k*, and links *m*, having pivotal connection with the lugs *d'*, substantially as and for the purposes described.

3. In an upright kettle, the perforated trays K, each provided with a bar, *p*, rest *s*, and bail *g*, pivoted to the bar and constructed to be turned down upon the rest within the tray in position to allow the trays

to be placed one above another in the kettle, and in position for the bails to be readily accessible in removing the trays from the kettle, substantially as and for the purposes described.

300,555. SPARK-ARRESTER. ELIAS B. BALDWIN and EPPINGER R. KLINE, Sayre, Pa. Filed Jan. 14, 1884. (No model.)

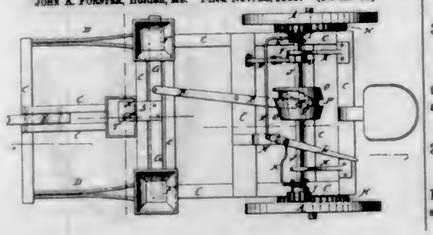
Claim.—1. In a spark-arrester, the combination, with the exhaust-pipes, of a winged wheel in front of the upper ends of the exhaust-pipes, and a fan-wheel for throwing the cinders into an outlet-pipe operated by the said winged wheel, substantially as herein shown and described.



2. In a spark-arrester, the combination, with the smoke-box A, of the pipe O, extending downward and backward from the bottom part of the smoke-box, and of means, substantially as described, for conveying the cinders into the upper end of the pipe O, substantially as herein shown and described.

3. In a spark-arrester, the combination, with the smoke-box A, of the pipe O, extending downward and outward from the bottom part of the said box, means, substantially as described, for conveying the cinders into the upper end of the pipe O, and of the gate or valve P, for closing the lower end of the pipe O, substantially as herein shown and described.

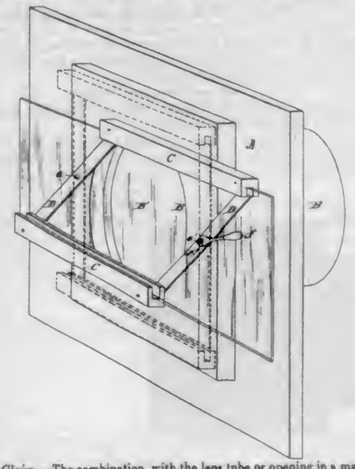
4. In a spark-arrester, the combination, with the standards C C in the smoke-box, of the shaft D, journaled in the upper ends of the standards C, the winged wheel E, and the pulley J, mounted on the shaft D, the exhaust-pipes H, the shaft M, the fan-wheel N on the same, the pulley L, the belt K, and the outlet-pipe O, substantially as herein shown and described.



300,556. BRICK-MACHINE. HENRY C. BARKER, Sedalia, Mo. Filed July 14, 1883. (No model.)

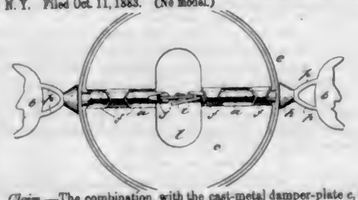
Brief.—Improvement on Patent No. 274,700, dated March 27, 1883, to same inventor.

Claim.—The combination of the upper swinging plunger having the laterally-projecting lugs upon its sides, with the lower plunger having the upwardly-projecting catches engaging the lugs, as and for the purpose shown and set forth.



300,557. CHECK-ROW CORN-PLANTER. EDWARD P. BARRETT and JOHN A. FORSTER, Holden, Mo. Filed Nov. 22, 1883. (No model.)

Claim.—1. In a corn-planter, the combination, with the reciprocating seed-slide G, of the slotted lime-hopper T, provided with the aperture *n* in its bottom, and rigid arm *t'*, projecting inwardly over the aperture *n*, and the arm S, provided with holes *t t*, and rigidly secured to the seed-slide, and projecting into the lime-hopper, substantially as herein shown and described.



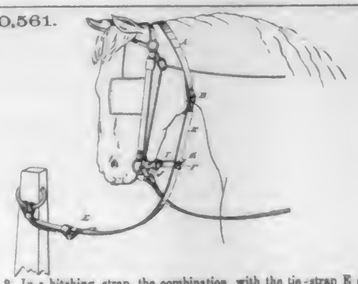
2. In a corn-planter, the combination, with the frame C, wheels A, provided with the gear-wheels H, shaft J, carrying the gear-wheels I, and wheel O, having the cam-groove P, lever R, seed-slide G, and hoppers F, of the arm S, secured to the middle of the seed-slide, and provided near its outer end with the holes *t t*, and the slotted hopper T, provided with a hole, *n*, in its bottom, and inwardly-projecting arm *t'*, substantially as shown and described.

300,558. SLIDE-HOLDER FOR MAGIC-LANTERNS. WILLIAM S. BARSTOW, Brooklyn, N. Y. Filed Jan. 9, 1884. (No model.)

Claim.—The combination, with the lens tube or opening in a magic-lantern, heliostat, or similar instrument, of an adjustable slide-holder consisting of two movable bars adapted to engage the edges of the slide, the opposite edges of which are kept always parallel by means of two parallel transverse strips, each pivoted at its ends to said bars, and in the middle to the plate or frame of the instrument on each side of said opening, substantially in the manner and for the purpose herein set forth.

300,559. STOVE-PIPE DAMPER. WILLIAM E. BELLMAN, Buffalo, N. Y. Filed Oct. 11, 1883. (No model.)

Claim.—The combination, with the cast-metal damper-plate *c*, having pivot-sockets *f*, and a central opening, *l*, of the sectional pivot-rod *a* and a wire-tie, *i k*, connecting said sections of the pivot-rod, substantially as described.

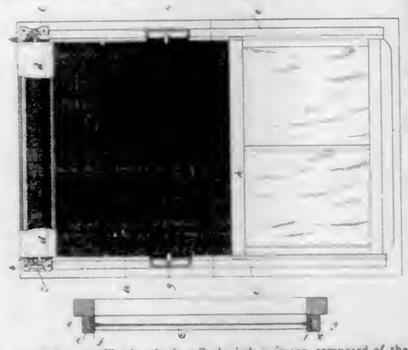


300,560. COMPOUND FOR THE MANUFACTURE OF ARTIFICIAL STONE. HERMANN BRÜNG, New York, N. Y., assignor to himself and Chester A. Weller, same place. Filed Oct. 12, 1883. (No specimens.)

Claim.—The herein-described compound for the manufacture of artificial stone, consisting of sand, cement, oxalic acid, chalk, muriatic acid, iron filings, and water, in the proportions specified.

300,561. HITCHING-STRAP. SAMUEL BIRDSALL, Susquehanna, Pa. Filed Apr. 24, 1884. (No model.)

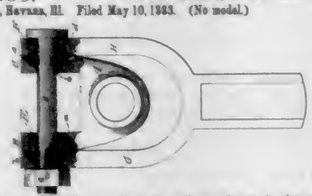
Claim.—1. In a hitching-strap, the combination, with the tie-strap E and the brace-strap I, of a headed bolt and a nut for clamping the said brace-strap to the tie-strap, substantially as set forth.



300,561.

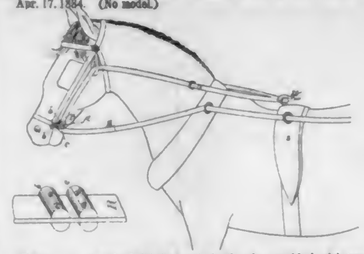
2. In a hitching-strap, the combination, with the tie-strap E and the brace-strap I, of the bolt F, having shoulder F', and the nut and washer G H, substantially as herein shown and described, whereby the said brace-strap will be firmly connected with the tie-strap, and can be readily swung to either side, as set forth.

300,562. WINDOW-SCREEN. NICHOLAS J. BISHOPRICK, Brooklyn, N. Y. Filed Mar. 2, 1883. (No model.)



Brief.—The edges of a screen winding upon a roller move in slotted face-strips located on vertical grooved strips on the window-facing. Buttons on the screen edges move in said grooved strips.

Claim.—1. The herein-described window-screen, composed of the reticulated fabric *a*, the headed buttons *g*, secured to its longitudinal edges, a roller to which said fabric is connected, the grooved strips *e*, arranged longitudinally of the window, and provided with the face-pieces *f*, slotted lengthwise and receiving the buttons and edges of the fabric, and the transverse stiffening-bar *h*, engaging the slotted face-pieces, all and severally as and for the purpose specified.

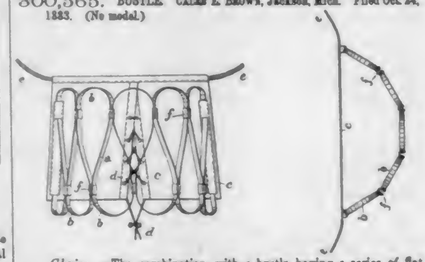


2. The combination and arrangement, substantially as shown and described, of the reticulated fabric *a*, the headed buttons *g*, secured to its longitudinal edges, a roller, and tapes or ribbons *i*, by which said fabric is connected to the roller, the grooved strips *e*, to receive the headed buttons, and the longitudinally-slotted face-pieces *f* of said strips, in which the edges of the fabric are arranged to form insect-tight joints, and a transverse stiffening-piece, *h*, also engaging said slotted face-pieces, to hold the fabric extended and guide it in its movements.

300,563. CULTIVATOR. HENRY BORSELT, Jr., and LUCIAN P. DORSELT, Havana, Ill. Filed May 10, 1883. (No model.)

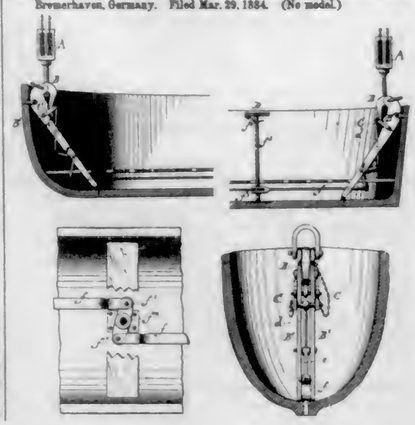
Claim.—A clevis of a plow or cultivator beam, having suitable arms, one of said arms having upon its inner side a mortise, and the opposite arm a hole of equal diameter, in combination with a sleeve through which the axle passes, provided with arms having a hole and a mortise similar to those on the arms of the clevis, and thimbles fitting therein, and a bolt passing through the arms to hold them together, the mortises being arranged with relation to each other, and also the thimbles, as shown and described.

300,564. DRIVING-REIN. WILLIAM S. BOWIE, Gardiner, Me. Filed Apr. 17, 1884. (No model.)



Claim.—1. A united driving and check rein provided with two sets of attached buttons, stops, or projections, to restrict the upward and downward movements of the bit and head of a horse, combined with a clasp or link to connect the rein between the attached buttons with the bit, to operate substantially as described.

2. A combined driving and check rein provided near the bit with a button, stop, or projection attached thereto by a screw, and adapted to prevent the head of the horse from being lowered, substantially as described.



3. The united driving and check rein provided each side the horse's head with a button, stop, or projection, *b*, and the bit, combined with a clasp to connect the bit and rein and co-operate with the said button, substantially as described.

300,565. BUSTLE. CALEB E. BROWN, Jackson, Mich. Filed Oct. 24, 1883. (No model.)

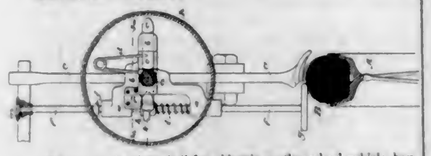
Claim.—The combination, with a bustle having a series of flat metal-band spring-loops, *b*, and a cloth band, *c*, of V-shaped hasps, securing the loops together, forming a V-shaped connection between the loops to produce a curvature of the combined section, as shown and described.

300,566. DETACHING APPARATUS FOR BOATS. HINRICH REIMS, Bremerhaven, Germany. Filed Mar. 29, 1884. (No model.)

Claim.—1. The combination, with the mousing-hooks of the davit fall-blocks, of hooks pivoted to inclined brace-irons secured at their upper ends to the stem and stern posts of the boat and at their lower ends to the keel, locking-links pivoted below the hooks, and connecting-lever mechanisms operated and arranged substantially as described, whereby both hooks are simultaneously released from the fall-blocks, substantially as specified.

2. The combination of inclined brace-irons secured at their upper ends to the stem and stern posts of a boat and at their lower ends to the keel, hooks pivoted to the brace-irons, locking-links pivoted to the brace-irons below the hooks, lever mechanisms connecting the links with a crank-shaft at a point between the stem and stern posts, and a retaining device for locking the crank-shaft and detaching devices in normal position, substantially as set forth.

3. The combination of inclined brace-irons secured at the lower ends to the keel and at the upper ends to the stem and stern posts, respectively, hooks pivoted to the upper ends of the brace-irons, locking-links pivoted below said hooks, said links having transverse detachable bolts, a crank-shaft supported in bearings of the keel and seat of the boat, and intermediate lever mechanisms by which the crank-shaft is connected with the locking-links, substantially as set forth.



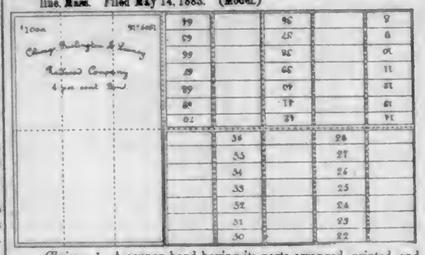
4. The combination of inclined brace-irons B' B', secured at the lower ends to the keel and at the upper ends to the stem and stern posts of the boat, pivoted hooks B B, engaging the mousing-hooks of the fall-blocks, locking-links C, pivoted to the brace-irons below the hooks, connecting-rods *d d*, bell-crank levers *e e*, longitudinal lever-rods *f f*, crank-shaft f^3, lever-handle f^4, and spring-catch f^5 of the seat, substantially as described.

300,567. PLOW-POINT. WILLIAM T. BURKE and LEONARD P. KLOTER, Montrose, Mo. Filed Feb. 28, 1884. (No model.)

Claim.—The combination, with a plowshare having a tapering landside-flange, and a bolt-hole, of a detachable point of the form shown and described, forming a socket adapted to fit upon the share-point, having a longitudinal groove in the inside of its under side to receive the flange of the plowshare, and a projecting shoulder to fit the recess under the share, and a fastening-bolt, as and for the purpose shown and set forth.

300,568. BICYCLE-BELL. JOSEPH BUTCHER, Boston, Mass. Filed Mar. 17, 1884. (No model.)

Claim.—1. An alarm-bell for a bicycle or other wheel-vehicle, having a striking-bolt arranged to slide longitudinally in a socket, as described, and said bolt provided with an operating-spring adapted to shoot the bolt and then slightly retract it, substantially as and for the purposes set forth.

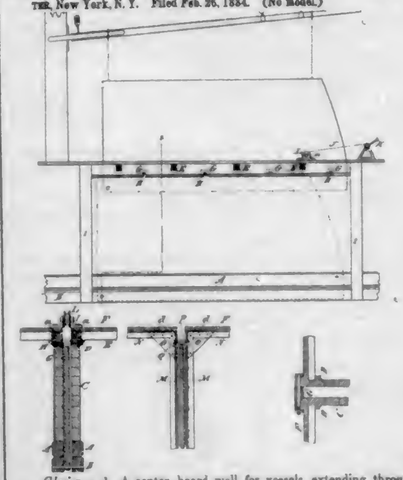


2. In an alarm-bell for bicycles or other wheel-vehicles, the combination, with the striking-bolt and its spring, constructed and arranged substantially as described, of means, substantially as described, for actuating said striking-bolt, said means comprising a claw on a rotatively-mounted shaft, adapted to catch and draw back the said bolt, and a disk fixed on the said shaft, adapted to be brought into contact with the tire of the vehicle-wheel at will to effect the rotation of the disk and shaft, as set forth.

3. The mechanism for causing the rotating wheel of the vehicle to actuate the striking-bolt, comprising the combination of the rotatively-mounted shaft *f*, the disk *g*, fixed thereon, the collar *h*, fixed on said shaft and provided with a claw, *k*, the spring *i*, for raising or retracting shaft *f*, the sliding bolt *c*, provided with a recess, *l*, adapted to be engaged by claw *k*, and the spring *d* for shooting the bolt, all arranged to operate substantially as set forth.

4. The shaft *f*, provided with a disk, *g*, fixed to its lower end, and the button *m*, mounted rotatively on its top, in combination with the collar *h* and its claw, fixed on shaft *f* in position for the claw to engage the striking-bolt when said shaft is depressed, the spring *i*, arranged to lift or retract shaft *f*, and the striking-bolt and its spring, all arranged to operate substantially as set forth.

5. The combination, with the shaft *f*, provided with the disk *g*, button *m*, claw *k*, and spring *i*, and with the recessed bolt *c*, of the shield *r*, mounted on the socket-piece *b*, substantially as and for the purposes set forth.



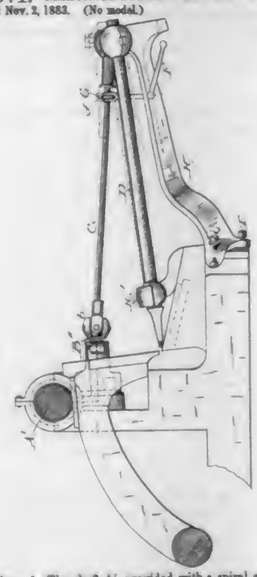
300,569. COUPON-BEARING BOND. JAMES LOWELL CARTER, Brookline, Mass. Filed May 14, 1883. (Model.)

Claim.—1. A coupon-bond having its parts arranged, printed, and folded substantially as described, so that the coupons will be arranged in series in the subdivisions formed by folding the bond, detachable in the order of their becoming due, and without the bond being unfolded, substantially as and for the purpose herein described.

2. A coupon-bond having its parts arranged substantially as described, and provided with a cut or opening between the bond and coupon-sheet, the bond and coupon-sheet being folded independent, whereby the coupons may be detached in the order they become due and without unfolding the bond, and the bond may be unfolded without disturbing the coupons, substantially as described.

300,570. CENTER-BOARD WELL FOR VESSELS. ROBERT CENTER, New York, N. Y. Filed Feb. 26, 1884. (No model.)

Claim.—1. A center-board well for vessels, extending through both keel and deck, and provided with forward and after head-ledges, and having heavy upper trunk-logs into which the beams are framed, and provided with stay-bolts and chocks or sleeves above and below the deck, as specified.



2. The combination, with a center-board well made as herein described, and extending through both keel and deck, of a hand-tight piece for closing the well, as specified.

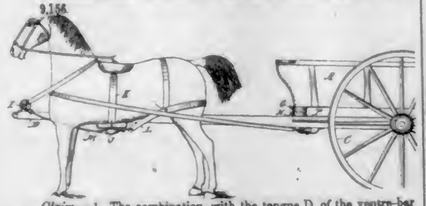
3. The combination, with the center-board well having parrallel forward and after head-ledges, as herein described, of a windlass, K, and removable sheave L.

4. The combination, with a center-board well constructed as herein described, and extending through both keel and deck, of a slotted hatch-combing and hand-piece fitting thereto, as herein described.

5. The combination, with a center-board well formed of iron plates M, riveted to vertical stiffening-bars, as described, of the plate-knees O, secured to the vertical stiffening-bars of the well and to the iron deck-beams N, the deck-beams N, and lodger-plates *d*, as specified.

300,571. NAIL-PLATE FEEDER. HARVEY B. CHESS, Pittsburg, Pa. Filed Nov. 2, 1883. (No model.)

Claim.—1. The shaft A', provided with a spiral gear, A, the spiral gear B, provided with the hole *b'*, and box B', in combination with the shaft B'', passing through the box, and carrying on its rear end a crank, *a*, and wrist-pin *a'*, and on its front end a portion, *b*, of a universal joint, all constructed to operate substantially as and for the purpose herein specified.



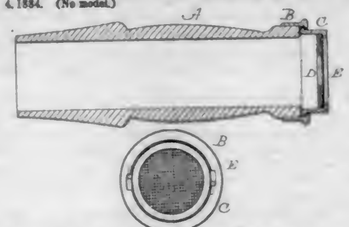
2. The shaft A', provided with spiral gear A, the spiral gear B, and shaft B'', in combination with the shaft C, provided with a ball-pinion, D', sleeve E, and spring *c*, all constructed to operate substantially as and for the purposes herein specified.

3. The shaft C, provided with a ball-pinion, D', supported in spherical bearings, in combination with a ball-gear, D'', rigidly mounted on the feeder-barrel, and the feeder-barrel D, all constructed to operate substantially as and for the purpose set forth.

4. The shaft C, provided with a collar, G, the sleeve E, and spring *c*, in combination with the shaft B'' and bell-crank lever F, substantially as and for the purpose set forth.

5. The driving-shaft A', the shaft B'', and the shaft C, in combination with gears A, B, D', and D'', whereby the feeder-barrel is adapted to be driven by power directly from the driving-shaft, substantially as herein shown and described.

300,572. DUMP-CART. ROBERT CLARK, Brockville, Ontario, Canada. Filed Jan. 3, 1884. (No model.) Patented in Canada Aug. 31, 1878, No. 9,156.

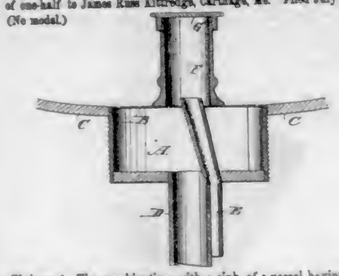


Claim.—1. The combination, with the tongue D, of the ventre-bar J, secured thereto at a point of its length adapted to bring it beneath the harness-saddles, as and for the purpose specified.

2. The combination, with the tongue D and the ventre-bar J, secured thereto, of the supporting-straps K for connecting the ventre-bar with the harness-saddle, as described.

3. The combination, with the tongue D, the ventre-bar J, and the supporting-straps K, of the strap L, connecting the ventre-bar with the breeching, as shown and described.

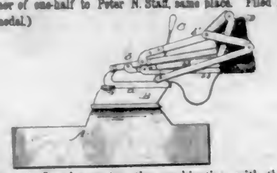
4. The combination, with the tongue D, the ventre-bar J, the supporting-strap K, and the breech-connecting strap L, of the strap M, connecting the yoke and ventre-bar, as shown and described.



300,573. PUMP-SPOUT. HENRY CLAYTON, Dayton, Ohio. Filed Mar. 4, 1884. (No model.)

Claim.—1. The band B, with notched interior rim, strainer-thimble C, with lugs for engaging the same, in combination with a pump-spout, substantially as set forth.

2. In a strainer-thimble for a pump-spout, the combination of ring D, wire-gauze E, and thimble C, substantially as set forth.

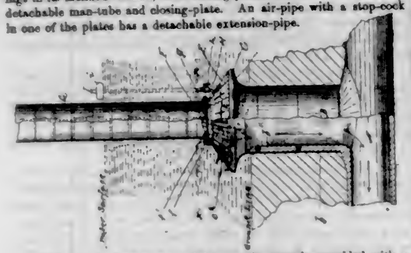


300,574. SINK-SPOUT. JOHN G. COBURN, South Carthage, assignor of one-half to James Russ Kittredge, Carthage, Mo. Filed July 7, 1883. (No model.)

Claim.—1. The combination, with a sink, of a vessel having a perforated top, a waste-pipe secured to the bottom of the said vessel, and an additional pipe extending from the perforated top of the said vessel along one side of the waste-pipe, substantially as herein shown and described.

2. The combination, with a sink, of a vessel having a perforated top, a waste-pipe secured to the bottom of the said vessel, an additional pipe extending from the perforated top of the vessel along one side of the waste-pipe, and a cup secured on the perforated top and over the upper end of the additional pipe, substantially as herein shown and described, and for the purpose set forth.

300,575. BUGGY-TOP. ALBERT MIFFLIN COCHRAN, Terre Haute, Ind., assignor of one-half to Peter N. Staff, same place. Filed Feb. 23, 1884. (No model.)



Claim.—1. In a buggy-top, the combination, with the bows b b^2, having offsets *d'*, and the rock-shaft, of the jointed side brace D, movably connected at its upper end to the bow b by pins turning in said offsets, and rigidly attached at its lower end to the rock-shaft, and the horizontal jointed side brace E, movably connected at its forward end to the bow b by the same pin, while its rear end is similarly connected to bow b^2, all substantially as described and shown.

2. In a buggy-top, the bows b b' b^2 b^3, pivoted at the forward end of the side rails, said bows b' and b^2 provided, respectively, with the offsets *d'* d^2, in combination with brace E, pivoted at its rear end in the offset d^2, and rigidly attached at its forward end to a pin loosely journaled in offset *d'*, and the brace D, similarly attached at its upper end to said pin, while its lower end is rigidly attached to the rock-shaft extending across the rear of the seat, substantially as and for the purpose described.

300,576. SUBMERGED TUNNEL-INLET. JOHN A. COLE, Hyde Park, Ill. Filed Mar. 24, 1884. (No model.)

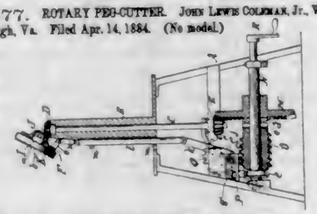
Brief.—The inlet-pipe to an aqueduct-tunnel has a cap flared out a little above the ground-surface, with a truncated conical top having openings in its inclined surface, with closing-plates and an open top with a detachable man-tube and closing-plate. An air-pipe with a stop-cock in one of the plates has a detachable extension-pipe.

Claim.—1. A submerged inlet-cap for tunnels, provided with a flange or enlarged projection extending out beyond the main body of the inlet and arranged a little above the ground-line of the water-bed, substantially as and for the purposes set forth.

2. The submerged inlet-cap C, of cylindrical form, and provided with a flange, *c*, projecting out beyond the body of the cap and arranged a little above the ground-line, in combination with the main tunnel A and the inlet-cylinder B, composed of the sections *b*, substantially as and for the purposes set forth.

3. A submerged inlet-cap, C, provided with a flange, *c*, extending outward from the main body a little way above the ground-line and having a conical top provided with side openings, c^2, and a central opening, *c'*, substantially as and for the purposes set forth.

4. The submerged inlet-cap C, provided with a conical top having side openings, c^2, in combination with detachable covering-plates E, for closing the side openings, substantially as and for the purposes set forth.



5. The submerged inlet-cap C, having a conical top provided with a central opening, *c'*, and side openings, c^2, in combination with the side closing-plates, E, and central closing-plate, F, substantially as and for the purposes set forth.

6. The submerged inlet-cap C, provided with a central opening, *c'*, and side openings, c^2, in combination with the closing-plates E and F and the removable pipe or cylinder G, substantially as and for the purposes set forth.

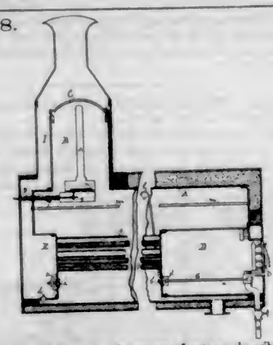
7. A submerged inlet for tunnels, in combination with a detachable air-tube, whereby communication may be made between the interior of the inlet and the atmosphere above the water-body when the inlet is closed, substantially as and for the purposes set forth.

8. The tunnel A, in combination with the inlet-cylinder B, inlet-cap C, air-pipe H, attached to one of the closing-plates and provided with a stop-cock, and the air-tube I, substantially as and for the purposes set forth.

300,577. ROTARY PEG-CUTTER. JOHN LEWIS COLEMAN, Jr., Wattsborough, Va. Filed Apr. 14, 1884. (No model.)

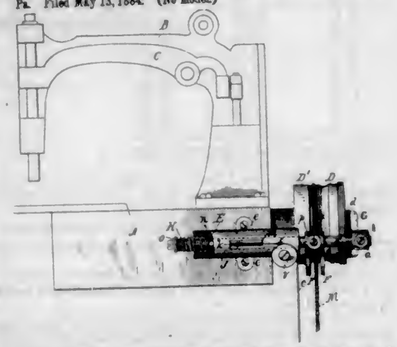
Claim.—1. In a peg-cutter, a rotary cutter provided with two sets of oppositely-arranged cutting-edges, alternating with each other, as described.

2. The combination, with the rotary cutter K, of the arbor I, plate F, and the mechanism for rotating and oscillating the said rotary cutter, as specified.



3. The combination, with the rotary cutter K, arbor I, and mechanism for rotating the same, of the worm O, worm-wheel Q, crank-pin *j*, pivoted plate F, and connective devices, as specified.

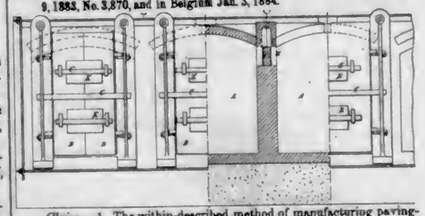
4. The combination, with the rotary cutter K, of the arbor I, universal bevel-wheels D J, shaft C, pinion E, beveled wheel M, worm O, worm-wheel Q, connecting-rod *k*, sliding rod *l*, and link *n*, as described.



5. In a rotary peg-cutter, the combination, with the support of the rotary cutter, of the worm-wheel Q and connective devices, worm O, provided with clutch-teeth *c*, clutch-teeth *d*, formed on the wheel M, and the shifting-lever P, as herein described.

300,578. BOILER. JOHN DARNER, New Orleans, La. Filed Mar. 27, 1882. (No model.)

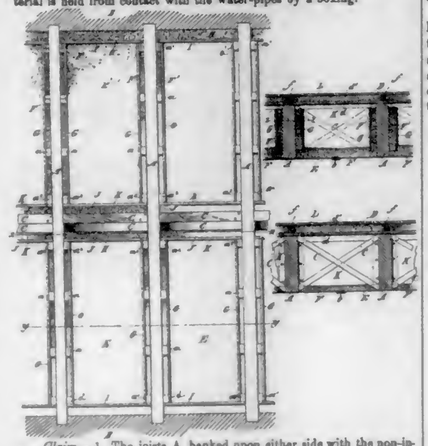
Claim.—The combination, in a steam-boiler, of the fire-box D and smoke-box E, the fire-box provided with a water-grate, G, which is adapted to be secured in position by means of nuts, as described, and the smoke-box provided with a covered opening, *i*, for the admission of a socket-wrench, whereby the said grate can be disconnected at will, substantially as and for the purpose set forth.



300,579. BELT-SHIFTING DEVICE. WILLIAM DIEHL, Philadelphia, Pa. Filed May 13, 1884. (No model.)

Claim.—The combination, with the bed-plate A, of the tube J, mounted directly thereon, and having an internal shoulder, *n*, and slot *m*, the spindle E, and spring H, arranged within said tube, and the collars *p* and *q*, respectively, carrying the shifting-fingers and brake, and suitable means for securing said collars upon said spindle, the whole arranged and operating substantially as set forth.

300,580. MANUFACTURE OF PAVING-BLOCKS FROM FURNACE-SLAG, &c. CHARLES JAMES DOBBS, Middlesbrough, County of York, England. Filed Jan. 23, 1884. (No model.) Patented in England Aug. 9, 1883, No. 3,870, and in Belgium Jan. 3, 1884.



Claim.—1. The within-described method of manufacturing paving-blocks from furnace-slag, the same consisting in running the slag into metallic molds and letting it "set" therein, then, and while the slag blocks still retain their initial heat, transferring them into a kiln or chamber of proper dimensions and inclosing them therein, whereby the initial heat contained within the slag blocks without the aid of extraneously-applied heat will anneal the blocks, substantially as set forth.

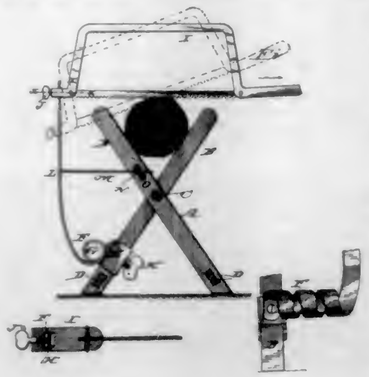
2. In an annealing-kiln, the combination of a series of chambers located side by side and communicating with each other through suitable passages, whereby the heat evolved from the slag blocks in one chamber will pass into the communicating-chamber to heat the same, substantially as set forth.

3. A kiln for annealing slag blocks, composed of a series of chambers located side by side and communicating with each other through suitable passages and mounted upon wheels, substantially as and for the purpose set forth.

300,581. FIRE-PROOF BUILDING. WILLIAM H. DOLMAN, Brunswick, Me. Filed Feb. 15, 1884. (No model.)

Brief.—Non-inflammable material is laid over a metallic ceiling, and the joists and bridging are banked with said material held in place by boards raised slightly above the ceiling. The non-inflammable material is held from contact with the water-pipes by a boxing.

Claim.—1. The joists A, banked upon either side with the non-inflammable material F', held in place by the boards G, substantially as described.



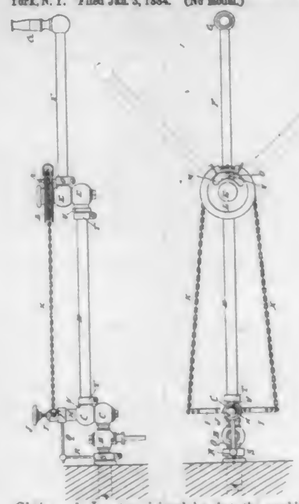
2. The joists A, banked at their ends by the non-inflammable material H, held against the walls B by the boards I, substantially as and for the purposes set forth.

3. The bridging or braces C of the joists banked with non-inflammable material J, held in place by the boards K, substantially as and for the purposes set forth.

4. The horizontal body of non-inflammable material placed upon the metallic ceiling E, in combination with vertical bodies of non-inflammable material banking the joists, bridging, &c., and held in place by boards held slightly above the ceiling E, whereby the vertical and horizontal bodies of non-inflammable material are made to join, substantially as described.

5. The water-pipe M, having the boxing N placed around it where it passes through the ceiling E and floor D to prevent water from coming in contact with the non-inflammable material, substantially as described.

300,582. DRAG-SAW. CUNNINGHAM DRAKE, Philadelphia, Pa. Filed May 15, 1884. (No model.)



Claim.—1. In a drag-saw, the combination, with a saw-horse, comprising the pivoted frames B B, of a sleeve adjustable upon one of the legs of the said frames, and a spring attached to the said sleeve and adapted to be connected adjustably with the front end of the saw-frame, substantially as set forth.

2. The combination of a saw-horse, a sleeve connected adjustably to one of the pivoted frames of the same, a spring secured to the said sleeve and coiled in front of the same, and a saw having a slot adapted to receive the free upper end of the spring, and a thumb-screw, whereby the said spring may be securely connected with the saw substantially as set forth.

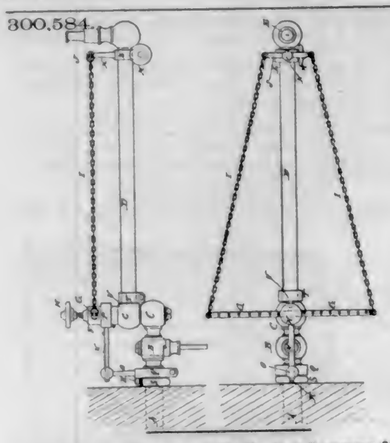
3. As an improvement in drag-saws, the combination of a saw-horse comprising a pair of pivoted frames, a sleeve connected adjustably to one of the legs of one of the frames, a spring secured to the said sleeve and extending upwardly through a slot in the front end of the saw-frame, and a supplemental spring connected pivotally to the main spring, and extending through an opening in a brace connecting the legs of one of the pivoted frames, substantially as herein set forth.

300,583. GAS AND LAMP BRACKET. HENRY PHILIP DREW, New York, N. Y. Filed Jan. 3, 1884. (No model.)

Claim.—1. In a two-jointed bracket, the combination, with the joints C E, the perforated cap P, secured upon the upper pivot of the joint C to prevent its rotating thereon, and the adjustable cross-bar, of the chain K and the wheel L, substantially as herein shown and described.

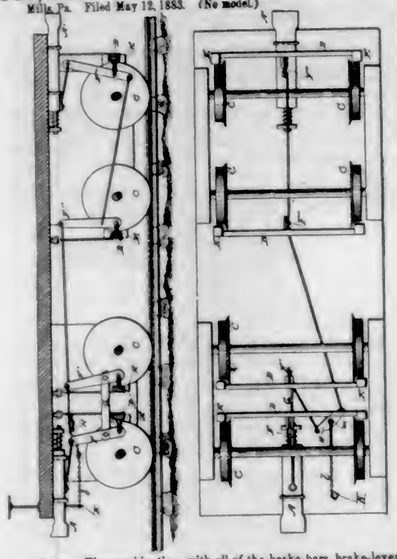
2. In a two-jointed bracket, the combination, with the adjustable bar I, means for preventing its bearing from turning, and the chain K, of the wheel L, connected with the outer joint, and having the curved slot M, and the outer pipe F, provided with the pin N, substantially as herein shown and described.

3. In a two-jointed bracket, the combination, with the cap P, the joint C, and the pipe A, of the rods Q R and the band or clip S, substantially as herein shown and described, whereby the said joint will be strengthened against the pull of the chain and the weight of the bracket, as set forth.



4. In a two-jointed bracket, the combination, with the pipe D and the joints C E, of the clips T, having toes U, substantially as herein shown and described, whereby the said pipe will be prevented from turning, as set forth.

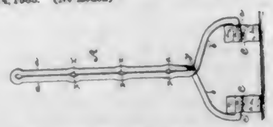
300,584. GAS AND LAMP BRACKET. HENRY PHILIP DREW, New York, N. Y. Filed Jan. 3, 1884. (No model.)



Claim.—1. In a gas or lamp bracket, the combination, with the joint C, pipe D, and perforated cap P, secured upon the upper pivot of said joint to prevent its rotating thereon, of the adjustable cross-bar G, the post K, adjustably secured on the pipe D, and the chains I, connected to the said cross-bar and post, substantially as herein shown and described.

2. In a one-jointed gas or lamp bracket, the combination, with the joint C, the post F, the cap P, the rod O, the toe R, and pipe D, of the adjustable cross-bar G, the two chains I, and the cross-bar J, post K, and clip L M, substantially as herein shown and described, whereby the pipe D can be held rigid or allowed to have any desired amount of swing in either direction, as set forth.

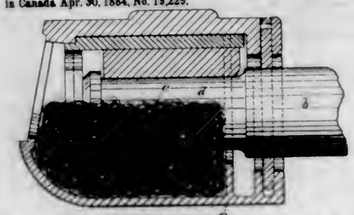
300,584.



300,585. AUTOMATIC CAR-BRAKE. ENOCH FARNSWORTH, Smith's Mills, Pa. Filed May 12, 1883. (No model.)

Claim.—The combination, with all of the brake-bars, brake-levers, and both sliding bumpers of a car, and an operating-stem near one end of the car, of a governor-lever in connection with all of the brake-levers of the car, and a chain connecting said governor-lever through its fulcrum-point to the operating-stem, substantially as specified.

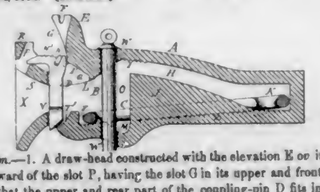
300,586. FENCE-POST. JOHN C. FIERO, Mills Centre, N. Y. Filed Nov. 14, 1883. (No model.)



Claim.—1. The wrought-iron fence-post composed of a single rod doubled or bent upon itself to form its body portion, the two halves *a a* of which lie close together and are crimped at intervals to form openings *z*, for receiving and holding the fence-wires, substantially as shown and described.

2. The fence-post formed of an iron rod bent double and brought close together to form the body thereof, and having lateral legs or braces that stand in diagonal relation to the body, as shown and described.

3. The combination of the following elements: the fence-wires B, the post A, formed of the doubled rod, whose end portions, *b b*, have abutting shoulders *y*, and are thence bent outward and stand in diagonal relations to said wires and the faces of the post, and the pedestals C C, which are also placed in the diagonal position shown and described, for the purpose specified.



300,587. CAR-AXLE LUBRICATOR. SAMUEL A. FLOWER and PHILIP REES, Jersey City, N. J. Filed Apr. 17, 1884. (No specimens.) Patented in Canada Apr. 30, 1884, No. 19,229.

Claim.—1. A fibrous packing for car-axle boxes, consisting of cocoanut or other resilient fiber and jute or equivalent absorbent fiber in combination, substantially as described.

2. A fibrous packing for car-axle boxes, consisting of combined cocoanut or other resilient fiber and jute fiber or other equivalent absorbent woody fiber chemically treated with caustic alkali for the removal of the natural resinous and gummy matters of the fibers, substantially as described.

300,588. CAR-COUPLING. GEO. FORBES, New York, N. Y. Filed Apr. 14, 1884. (No model.)

Claim.—1. A draw-head constructed with the elevation E on its top part rearward of the slot P, having the slot G in its upper and front part made so that the upper and rear part of the coupling-pin D fits into it, and the slot F in the top part of the slot G for the ring N in the top part of the coupling-pin D to rest in, whereby the coupling-pin D is held up and out of the chamber X, substantially as shown and described.

2. The coupling-pin D, constructed with the depression N', by which the ring N becomes flush with the upper part of the coupling-pin D, substantially as described.

3. The combination, with a draw-head, of the elevation E, the slot G, the slot F, the coupling-pin D, the ring N, and the depression N', for the purpose described and set forth.

4. The depressions M and L in the bottom and the top of the chamber X, and similar depressions in the sides of the chamber X, to allow the lateral motion or play of the rear end of the stationary link C at K, as and for the purpose described and set forth.

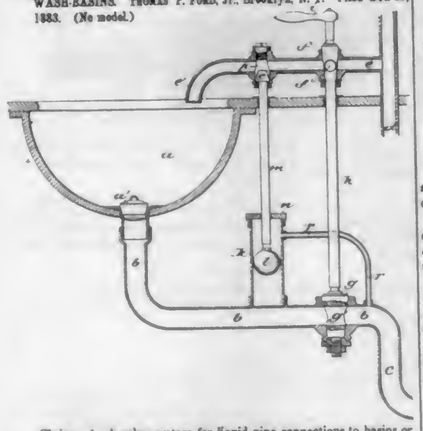
5. The draw-head A, constructed with the two lateral slots W and W', which are widened laterally, whereby the stationary pin B is given a lateral but not a longitudinal play, as and for the purpose set forth.

6. The stationary link C, with the widened part K, as and for the purpose described and set forth.

7. The combination, in the chamber X, of the stay J and the stay I, with the stationary link C, whereby the stationary link C is held out of its draw-head, for the purpose described.

8. The combination, with the draw-head, of the link C, the pin B, the slots W and W', depressions in the sides of the chamber X similar to the depressions L and M in the top and bottom of the chamber X, for the purpose of giving sufficient play or room for the rear end of the link C at K to move laterally when in the space O, the stay J, the stays I, and the beveled or widened front part of the chamber X, as and for the purpose described and set forth.

9. The combination, with a draw-head, of the depressions L and M, the link C, the pin B, the stay J, the stays I, and the beveled or widened front part of the chamber X, as and for the purpose described and set forth.



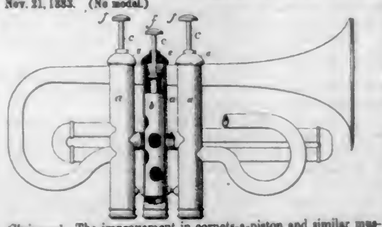
10. The combination, with a draw-head, of the depressions L and M in the top and bottom of the chamber X, depressions in the sides of the chamber X similar to the depressions L and M in the top and bot-

tom of the chamber X, for the purpose of giving sufficient play or room for the rear end of the link C at K to move laterally when in the space O, the pin B, working in the slots W and W' in the top and bottom of the draw-head, the stay J, the stays I, the slots W and W', the link C, and the chamber X, having its front part beveled or widened, as and for the purpose described and set forth.

11. The combination, with a draw-head, of the elevation J and that part of the depression L which forms the passage H, as and for the purpose described and set forth.

12. The combination, with a draw-head, of the groove T' and the lower end of the beveled edge of the coupling-pin D, for the purpose of taking the sudden strain from the upper end of the coupling-pin D, by that means throwing its upper end frontward and around the block S, when the pin is struck by an entering link from another draw-head, as and for the purpose described and set forth.

300,589. COMPOUND AND SELF-ACTING PLUG-VALVE FOR WASH-BASINS. THOMAS P. FORD, Jr., Brooklyn, N. Y. Filed Dec. 18, 1883. (No model.)



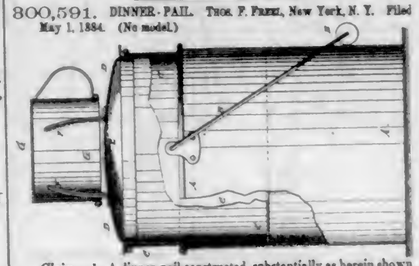
Claim.—1. A valve system for liquid pipe-connections to basins or other vessels, consisting of rigidly-connected valves *f g*, working in the supply and discharge pipes *a b*, respectively, and arranged to simultaneously close the inlet and open the discharge, or vice versa, and a self-acting float-valve, *o*, adapted to seat itself by liquid-pressure, and fitted in the pipe *a* between the valve *f* and the inlet discharge-nozzle, substantially as shown and described.

2. The combination, with the supply and discharge pipes *a b*, of the valves *f g*, apertured at *f' g'* at right angles with each other, the float-chamber *k*, and the float-valve *l m o*, said float-chamber and float *k l* and the valve *g* being located in front of the trap *c*, to be sealed thereby, substantially as shown and described.

3. The combination, with the pipe *b*, its float-chamber *k*, and float *l*, of the relief-pipe *r*, substantially as shown and described.

4. The combination, with the pipe *b* and the float-chamber *k* and float *l*, of the relief-pipe *r*, discharging into pipe *b* in front of the trap *c*, to be sealed by the trap, substantially as shown and described.

300,590. CORNET. FRANK F. FRANCESCHINI, Philadelphia, Pa. Filed Nov. 21, 1883. (No model.)



Claim.—1. The improvement in cornets-a-piston and similar musical instruments, consisting in the combination, with the valve, piston-rod, and case, of the lateral elastic band or bands, the upper end of which is secured to a fixed support and the lower end thereof to the piston-rod, all constructed and adapted to operate substantially as and for the purpose set forth.

2. The combination of the retracting-spring, the piston-rod and attached valve, the case, and the plate *d*, said rod and plate being respectively provided with means, substantially as shown, for securing said spring, all constructed and adapted to operate substantially as and for the purpose stated.

3. The combination of case *a*, valve *b*, rod *c*, provided with hooks *h*, plate *d*, provided with studs *s*, the cap *f*, and springs *x*, substantially as and for the purpose described.

4. The combination of the piston-rod having the hooks *h* or their equivalent, and the longitudinal slot *i*, the case *a*, and the plate *d*, provided with the lug *g*, fitting into slot *i*, and with the studs *s*, adapted to fit into the notches on the top of case *a*, all constructed and adapted to be used substantially as and for the purpose specified.

300,591. DINNER-PAIL. THOS. P. FREEL, New York, N. Y. Filed May 1, 1884. (No model.)

Claim.—1. A dinner-pail constructed, substantially as herein shown and described, with perforations in the middle part of its cover and with curved cup-supporting wires attached to the said cover, as set forth.

2. In a dinner-pail, the combination, with the lunch-receptacle C, of the cover D, having perforations E, substantially as herein shown and described, whereby air can pass into and out of the said receptacle to keep the food fresh, as set forth.

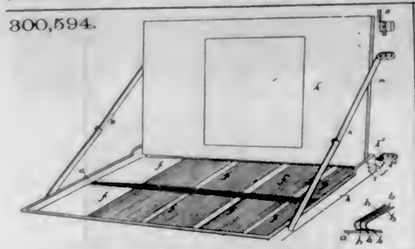
3. In a dinner-pail, the combination, with the lunch-receptacle cover D, having perforations E, of the curved wires F, substantially as herein shown and described, whereby the cup can be carried without obstructing the passage of air through the said perforations, as set forth.

300,592. PROJECTILE FOR CARRYING EXPLOSIVE SHELLS. JOSEPH GARRICK, Michigan City, Ind. Filed Feb. 26, 1884. (No model.)

Claim.—1. The combination, with the barrel A, suitably charged, of the secondary projectile having body tightly fitting the bore thereof down to and in contact with the charge, and constructed with the enlarged head having the chamber F for the reception of a shell, the explosive shell fitting therein having attached to its forward end a fulminating-cap, and an elastic cushion located in the chamber intermediate of the inner end of said shell, substantially as and for the purpose described.

2. The combination, with the secondary projectile constructed with the body B, having the enlarged front end, in which is formed a chamber, of the shell O, filled with nitro-glycerine or other explosive, and an elastic cushion located in said chamber intermediate of the shell, said cushion having its center slightly concave or hollowed out, substantially as and for the purpose described.

300,593. CONCRETE PAVEMENT. FREDRICK GEIS, Buffalo, N. Y. Filed Feb. 26, 1884. (No specimens.)

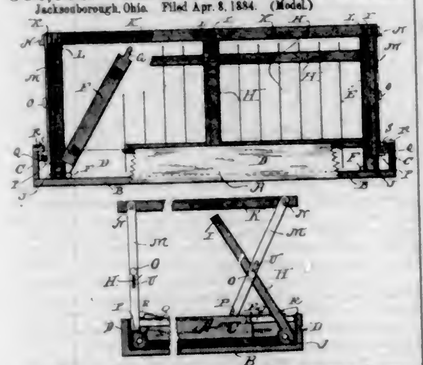


Claim.—The compound for paving-blocks herein described, consisting of common clay, fire-clay, mixed with pulverized glass, salt, stone, slate, and coal cinders and ashes, substantially in and about the proportions herein described, the whole made plastic with lime-water, pressed into blocks, dried, and burned, as set forth.

300,594. LETTER-FILE. WILLARD H. GILMAN, Boston, Mass., assignor to the Challenge Letter File Company, Concord, N. H. Filed Aug. 13, 1883. (No model.)

Claim.—1. A letter-file composed of a base extending across the pockets, and superposed leaves of substantially uniform width secured at their inner edges to said base at points successively farther from a given side thereof, so as to form a series of overlapping pockets, substantially as described.

2. A letter-file composed of a flat base and a series of single leaves or sheets of substantially uniform width, each having a portion, *b'*, pasted at its under side to the base, and bent over to form a pocket, as set forth.



300,594.

3. The combination of a box or case, one or more files constructed substantially as described, inclosed in said box, a cover adapted to enter the box and bear on the files therein, means as specified for pivoting the inner edge of said cover at different heights from the bottom of the box, and means as specified for securing the swinging edge of the cover to the box at different heights from the bottom thereof, as set forth.

4. The combination of a box or case having vertical series of orifices *j* near its back, and a vertical notched plate, *p*, at its point, one or more files inclosed in said box, a cover adapted to enter the box, and provided with removable pivots *i*, adapted to enter the orifices *j*, and with a catch, *g*, adapted to engage with either of the notches of the plate *p*, as set forth.

300,595. FOLDING POULTRY-COOP. FREDERICK E. GOLDSMITH, Jacksonborough, Ohio. Filed Apr. 8, 1884. (Model.)

Claim.—1. The combination of tray A, hinged coop-ends E, hinged coop-sides H, mortised coop-top K, pivoted tie-bars M, and locking-springs Q, substantially as and for the purpose set forth.

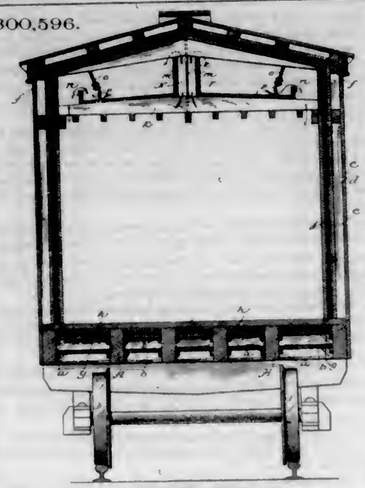
2. The combination, with the elements of claim 1, of the hook-springs R, arranged to engage the locking-springs Q, substantially as and for the purpose set forth.

300,596. REFRIGERATOR-CAR. HENRY CARR GOODELL, Atchison, Kans. Filed Apr. 21, 1883. (No model.)

Claim.—1. The combination, in a refrigerator-car, of the outer wall, *a*, intermediate wall, *d*, forming an air-chamber, the inner walls of matched boards, suitable linings for said inner wall and wall *d*, and non-conducting filling between said walls, substantially as described.

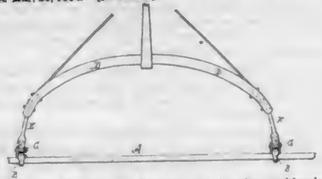
2. The combination, with the retaining-walls of a car, of a filling of lamp-black mixed with mica, substantially as described.

3. In a refrigerator-car, an ice-box separated into longitudinal compartments by walls *n n*, with the intermediate air-passage, and with floors inclined downward from the center to the sides, as described.



4. In a refrigerator-car, an ice-box having its bottom sloping downward from center to the sides, the central air-passage, and the outer walls, *n n*, and depending flanges *o o*.

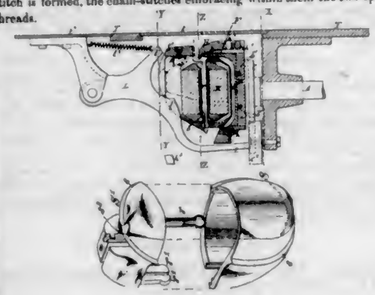
5. In combination with the box having downwardly-sloping floors from the center to the sides, the walls *r*, and the depending flanges *o o*, and the prongs supporting the rods, substantially as described.



6. The combination, in a refrigerator-car, of double walls with suitable spaces between, a cloth or equivalent lining for said walls, and the filling of lamp-black, or mixture of lamp-black with other material, substantially as described.

7. In a refrigerator-car, an ice-box located in the top of the car, said ice-box being divided by two walls, *m m*, forming an air-passage which opens into the car below and the box above, said box having also openings in its outer sides for the downflow of the cooled air, substantially as described.

300,596.



300,597. THILL-COUPLING. JOHN ADAMS GREEN, Waltham, Mass. Filed Mar. 20, 1884. (No model.)

Claim.—In adjustable couplings for vehicles, the combination, with the clip B, the adjustable piece E, and their bolts C *d*, of the reversible block G, substantially as described.

300,598. SEWING-MACHINE. HENRY GRELLIER, Brixton, County of Surrey, England. Filed Nov. 7, 1883. (No model.) Patented in England Aug. 28, 1883, No. 4,159.

Brief.—The machine is designed to make lock-stitches, employing an ordinary reel or spool for the under thread, or to make several kinds of compound lock and chain stitches, or to make chain-stitches without an under thread. In the latter case the spool and its thread in the stationary bobbin-case are dispensed with, and a stationary catch-hook is fixed to the under side of the slide in the bed-plate, and a projecting ridge provided on the rounded face of the rotating hook-shell serves to keep the thread up on the catch-hook until said ridge has passed and the needle descends. This catch-hook may be located on the upper part of the spool-case instead of being fixed to the slide. The provision of a back hook on the hook-shell assists in producing a twisted chain-stitch or cable-stitch. By using the catch-hook with the spool and its thread in the bobbin-case a combination of lock-stitch and chain-stitch is produced. By employing the catch-hook attached to the upper part of the spool-case and two spools within the spool-case a compound stitch is formed, the chain-stitches embracing within them the two spool-threads.

Claim.—1. In a sewing-machine, the combination of a revolving hook having an inwardly-turned outer edge, a stationary spool-case having an equatorial rim adapted to be engaged by the inwardly-turned edge of the hook and provided with recesses, a lever having horns adapted to enter said recesses, and means for operating said lever to bring said horns alternately into engagement with said spool-case, substantially as described.

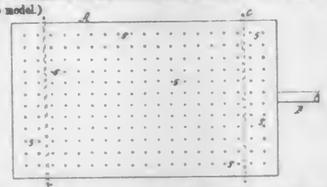
2. The combination of the disk B, having a projecting flange, F, the annular hook-shell H, hinged to the said disk, and provided with a hook, K, a spool-case having an equatorial rim, *s*, and means adapted to permit of the passage of loops of needle-thread, for preventing the rotation of said spool-case with said hook-shell and hook, substantially as described.

3. The combination of a revolving hook having an inwardly-turned edge, a spool-case provided with an equatorial rim, *s*, adapted to engage said inwardly-turned edge, said rim having an undercut recess at one part to form a hook, s^2, and means for preventing the rotation of said spool-case with said hook, substantially as described.

4. The combination of the revolving hook, the stationary spool-case having recesses, the shaft A, the cam C, the lever C^2, having rollers *c* and c', and counter-weight c^3, the lever L, having horns *l* and *l'*, and the spring l^2, substantially as described.

5. The combination, with the disk B and the revolving hook-shell and hook operated thereby, of the stationary spool-case having an equatorial rim, *s*, and the shell *b*, carried by said disk and adjustable relatively to said rim, substantially as described.

6. The combination of the disk B, the hook-shell H, hinged thereto, and a spring-catch for holding said hook-shell in its operative position, substantially as described.



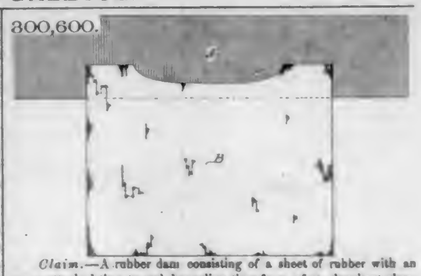
7. The combination, with a revolving hook and a stationary spool-case having a hook, s^2, for dividing the loops of needle-thread, of a stationary catch-hook adapted to co-operate with said revolving hook and spool-case to produce chain-stitches, substantially as described.

8. The combination, with the revolving hook and stationary spool-case, of the slide *t*, the catch-hook D, secured thereto, and provided with the horizontal lip D', substantially as described.

9. The combination, with the revolving hook-shell H, having the hook K and the projecting ridge K^3, of a stationary spool-case, and a catch-hook adapted to co-operate with the rotating hook to produce chain-stitches, substantially as described.

10. The combination, with the revolving hook-shell H, having the hooks K and K^2 and projecting ridge K^3, of a stationary spool-case, and a stationary catch-hook, substantially as described.

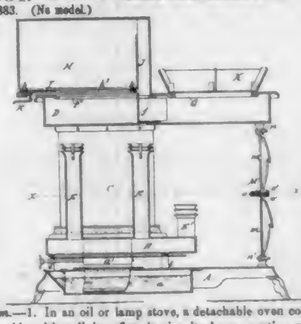
300,599. PROCESS OF AND APPARATUS FOR CRYSTALLIZING TIN. CHARLES R. H. M. HABENICHT, New York, N. Y. Filed Dec. 29, 1883. (No model.)



Claim.—1. The process of crystallizing tin plates, which consists in heating and cooling the plates, subjecting them to the action of an aqueous solution of caustic soda to remove the oxide coating, and finally developing the crystallization by subjecting the plates to the action of an acid, substantially as described.

2. The within-described process of crystallizing tin plates, which consists in first heating the plates to melt the tin, then cooling the plates with water to produce the crystallization, then treating the plates with an aqueous solution of caustic soda to remove the oxide coating, and finally treating the plates with nitro-muriatic acid to develop the crystallization.

3. An apparatus for heating tin plates in the process of crystallization, consisting of a gas-receiving chamber having a plane upper surface perforated throughout with holes, a portion of which, adjacent to the edges of the chamber, are larger than the other or remaining holes, substantially as shown and described, for the purpose set forth.



4. An apparatus for cooling tin plates in the process of crystallization, consisting of a water-distributing chamber and of a series of spouts projecting upwardly from the top of such chamber in a fixed relation to each other, and with their orifices in the same horizontal plane, said spouts serving as supports for plates to be crystallized, substantially as shown and described, for the purpose set forth.

300,600. DENTAL RUBBER DAM. LOUIS M. HALSEY, Brooklyn, N. Y. Filed Feb. 21, 1884. (No model.)

Claim.—A rubber dam consisting of a sheet of rubber with an apron attached thereto and depending therefrom, of an absorbent character to take up and absorb the fluids which may flow from parts in or about the parts being treated, all as and for the purposes set forth.

300,601. OIL-STOVE. CHARLES T. HAM, Rochester, N. Y. Filed Dec. 10, 1883. (No model.)

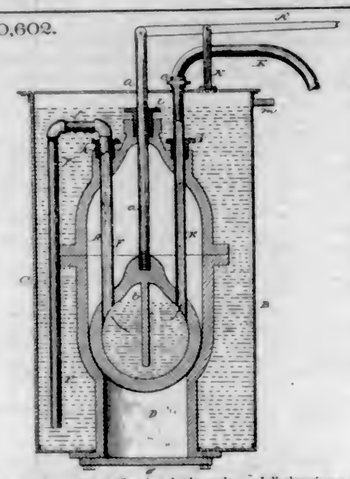
Claim.—1. In an oil or lamp stove, a detachable oven constructed at its rear side with a diving-flue, having its lower portion projecting downwardly and rearwardly beyond the oven, and adapted to close the passage in the oil-stove leading from the flame-chamber to the outlet for the products of combustion, and to engage under the top plate of the stove, thereby securing the oven on the stove, substantially as set forth.

2. In an oil or lamp stove, a detachable oven adapted to receive bottom plates having openings of different shapes, whereby the oven can be placed over the elongated opening in the front of the stove-top or over the circular opening in the rear of the same, and its bottom opening made to coincide with either, substantially as set forth.

3. In an oil or lamp stove, a detachable oven provided with a catch, K, adapted to engage under the top of the oven, substantially as set forth.

4. The combination, with the base of the stove and a flame-chamber provided with a top extending rearwardly over the base and resting loosely on the base, so as to be capable of being tilted backward to expose the wicks, of a toggle-joint supporting in its extended upright position the overhanging rear portion of the top on the base, and permitting the rear portion of the top to be lowered and the front portion of the flame-chamber to be raised upon being folded together, substantially as set forth.

5. The combination, with the base A and a flame-chamber resting loosely on the base, and provided with a rearwardly-overhanging top, D, of the toggle-links *m*, connecting the overhanging rear portion of the top with the base, and provided with square contact-faces *o'*, which close against each other and support the top in a horizontal position when the links *m* are arranged perpendicularly, substantially as set forth.



300,602. WATER-COOLED VALVE. JOHN HANLON, New York, N. Y. Filed Mar. 3, 1884. (No model.)

Claim.—1. In combination with a conduit, a hollow water-cooled slide-valve having a partition provided with an opening or passage, and the inlet and outlet pipes for the cooling-fluid, connected on each side of such partition, as described, for securing a better circulation of the cooling-fluid.

2. The hollow valve having a pendent partition, *b*, provided with a passage near or at its bottom, in combination with the inlet and outlet water-pipes connecting on each side of such partition, as set forth, and passing through stuffing-boxes in the casing, whereby they may be moved up and down with the valve.

3. The hollow valve having a partition provided with an opening, in combination with the inlet-pipe passing through a stuffing-box in the valve-casing and connecting with a flexible supply-pipe, and the outlet-

300,602.

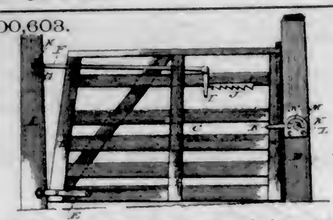
pipe passing through a stuffing-box in the casing and discharging on the outside of such casing, said pipes connecting with the water-space of the valve, as set forth, whereby a complete and uniform circulation of water through the valve is secured.

4. The hollow sliding valve, in combination with its casing, an inlet water-pipe adapted to discharge water tangentially against the inner curved surface of the valve, and connecting with a flexible supply-pipe, and an outlet water-pipe passing through a stuffing-box in the casing, and discharging outside thereof, as and for the purpose described.

5. A hollow sliding valve and its casing, in combination with the inlet-pipe connected with a flexible supply-pipe, an outlet-pipe discharging outside of the casing, said pipes connecting with the water-space of the valve, as set forth, and a water-tank surrounding the valve-casing, all constructed and arranged as described.

6. In combination with a pipe and valve, a dust-chamber opening in proximity to the valve-seat, as set forth, for receiving deposits of soot and ashes, and thereby preventing clogging of the valve and its seat, as described.

7. The combination of a hollow sliding valve and its casing with an inlet-pipe, a flexible supply-pipe connected with its outer end, an outlet-pipe passing through the casing and extending down below the valve-seat and discharging into a water-tank, and the water-tank surrounding the valve-casing and pipe-section containing the valve, for the purpose described.

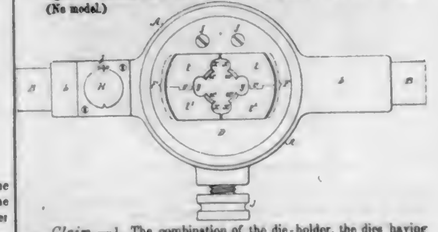


8. In combination with a pipe and valve, a dust-chamber leading from the valve-seat and extending outside of the pipe, as and for the purpose described, and having at its outer end a removable tight-fitting lid, for the purpose described.

9. A pipe-section for a valve having a closed valve-casing extending in one direction, and a dust-chamber opening at the valve-seat and extending in another direction, and lying outside of the conduit, as set forth, and having means for closing its outer end, for the purpose described.

10. The combination of the pipe or conduit, a valve-casing, a dust-chamber opening at the valve-seat, lying outside the conduit, a slide-valve, and a surrounding water tank or jacket, for the purpose described.

11. The combination, in a water-cooled valve, of the casing of a valve containing a circulation-chamber, a water-delivery pipe connecting therewith, through which water is directly forced tangentially against the inner curved surface of the valve, a discharge-pipe connecting with said chamber and delivering into the water-chamber surrounding the valve-casing, and an escape-pipe connected with said water-chamber, whereby a continued forced circulation is maintained through the valve and the cooling-chamber surrounding the casing, substantially as described.



300,603. GATE. BENJAMIN F. HARRELL, New Marion, Ind. Filed Aug. 29, 1883. (No model.)

Claim.—1. The combination of the hinge-post A, having pintle H, gate C, having slanting or inclined heel D, hinge E, and rack-bar J, hinge-rod F G, and hinged yoke or stirrup I, substantially as and for the purpose shown and set forth.

2. The combination of the hinge-post A, having pintle H, gate C, having slanting or inclined heel D, hinge E, and rack-bar J, hinge-rod F G, having the hinged yoke or stirrup I, and latch-post B, having the drop-latch K, the whole constructed and combined to operate substantially as and for the purpose shown and set forth.

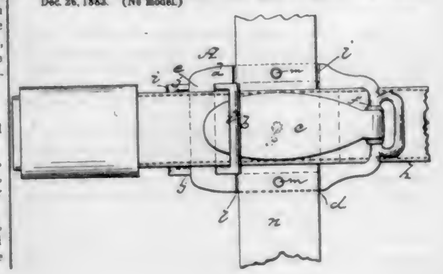
300,604. DIE-STOCK. WILLIAM C. HARTMANN, Philadelphia, Pa., assignor of one-half to John J. Mowrey, same place. Filed Oct. 11, 1883. (No model.)

Claim.—1. The combination of the die-holder, the dies having grooves *c*, the retaining-bar *d*, adapted to said grooves, and the taper screws *f*, for adjusting said bar, as set forth.

2. The combination of the outer ring or casing, A, the die-holder having teeth A, and the spring-pawls G G', adapted to act upon said teeth, and sliding in a projection of the ring, with means, substantially as described, for retaining either of said pawls in a retracted position, as set forth.

3. The combination of the ring or casing A, the die-holder having teeth A, the spring-pawls G G', having grooves *m*, and the knob H, having a pin, *k*, adapted to said grooves, as set forth.

4. The combination of the ring or casing A, the die-holder having teeth A, the spring-pawls G G', having grooves *m*, the knob H, having a pin, *k*, and means for retaining said knob in the positions to which it is adjusted, as set forth.

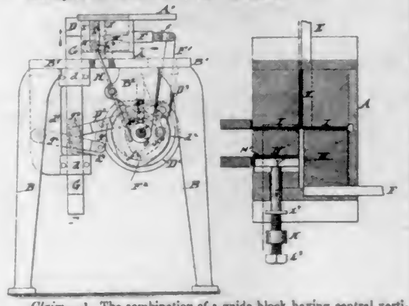


5. The combination of the ring or casing A, the die-holder having teeth A, and the spring-pawls G G', of semicircular cross-section, whereby they are adapted to a circular opening in the casing, as set forth.

6. The within-described cutting-die, made in halves bolted together, as described, and having cutting-bits *w*, opposite recesses *x*, and central recesses, *y*, the latter being bounded by true segments extending to the points of the teeth of the bits *w*, as set forth.

7. The within-described cutting-die, made in halves bolted together, and having a tongue-and-groove connection, said die having cutting-bits *w*, opposite recesses *x*, and central recesses, *y*, the latter being bounded by true segments which extend to the points of the teeth forming the bits *w*, as set forth.

8. The mode described of making dies for die-stocks, said mode consisting in first bolting together two blocks, W W', forming a central threaded opening therein, transversely severing the compound block on a line passing centrally through the opening, then separating the parts W W', and finally milling recesses *x* and *y* in each of the segments thus produced, so as to form thereon a cutting-bit, *w*, as set forth.

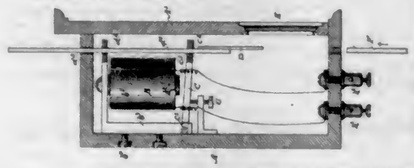


300,605. TRACE-BUCKLE. PHILIP HAYES, Waynetown, Ind. Filed Dec. 26, 1883. (No model.)

Claim.—1. In a trace-buckle, the buckle-frame *a*, having its side bars depressed as shown, and pointed tongues *m m*, for attaching the same to the back-band, as and for the purpose set forth.

2. The combination, in a trace-buckle, of the link *b*, hinge-plate *c*, having the tongue *g*, and the buckle-frame *a*, having tongues *m m* on the side bars *d d* in the center of the depressions *l l*, made therein, as shown and described.

300,606. PAPER-FOLDING MACHINE. FREDERICK C. HELLMUTH, Brooklyn, N. Y. Filed Oct. 27, 1883. (No model.)



Claim.—1. The combination of a guide-block having central vertical transverse and longitudinal guide-slits, and a horizontal and a vertical guide-slit at one side of the central vertical transverse guide-slit, a vertically-reciprocating folder, a laterally-reciprocating folder, a horizontally-reciprocating folder, a second smaller reciprocating folder, a reciprocating plunger adapted to press the folded sheet together, and mechanism, substantially as described, operated from a driving-shaft, whereby the folders and plunger are successively actuated, so as to fold one sheet at each rotation of the driving-shaft, substantially as set forth.

2. The combination of a guide-block, A, having a vertical guide-slit extending through its entire height and one-half of its width, a vertical folder, IV, a vertically-guided arm, G, a pivoted lever, D^2, having an anti-friction roller, d^3, a rotating cam, D′, having a groove, d^2, and links $g' g^2 g^3$, whereby the lever D^2 is connected to the vertical arm G, substantially as set forth.

3. The combination of a guide-block, A, having a cheek, H′, a horizontally-movable and spring-actuated plunger, V, having a headed shank, *h*, a fulcrumed lever, H, having a set-screw, h^2, at its upper end, and a rotating cam, F^2, having a projection, h^4, engaging the lower end of the lever H, substantially as set forth.

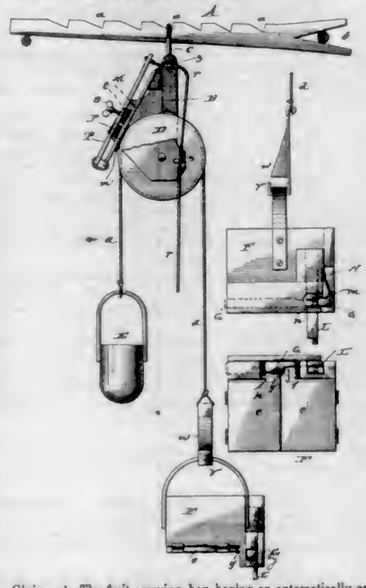
4. The combination of a guide-block having vertical and longitudinal guide-slits provided with abutments at one end, vertically and horizontally reciprocating folders, a reciprocating plunger to press the folded sheet together, means, substantially as described, whereby said folders and plunger are actuated, and a supporting-table having a slit below the last vertically-reciprocating folder to admit the dropping of the folded sheet out of the guide-block, substantially as set forth.

300,607. ANNUNCIATOR. ROBERT JOSEPHUS HEWETT, St. Louis, Mo. Filed Mar. 5, 1884. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of an electro-magnet, its armature and armature-lever, an annunciator-drop, a supporting-rod for the same, and a clutch for said rod carried by said armature-lever, and consisting of an extension of the armature or its lever, having formed therein an aperture of greater diameter than said rod.

2. The combination, substantially as hereinbefore set forth, of an annunciator-drop, a rod for supporting the same in its normal position, an electro-magnet, and an armature applied to said electro-magnet, and having an aperture formed in one extremity, through which said rod extends, the sides of which aperture grasp said rod when said armature is remote from said electro-magnet.

3. The combination, substantially as hereinbefore set forth, of an electro-magnet, an annunciator-drop, a rod attached to the same, and an electro-magnetic clutch consisting of an opening formed in said armature, which clutch serves to grasp said rod when said electro-magnet is not vitalized, and to release the same when vitalized.

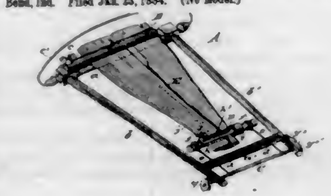


4. The combination, substantially as hereinbefore set forth, of an annunciator-drop, a rod attached thereto, an electro-magnet, and an armature applied thereto, which armature is pivoted at one extremity, and has an aperture formed in its remaining extremity for receiving and serving as a clutch for said rod, substantially as described.

5. The combination, substantially as hereinbefore set forth, of an electro-magnet, a clutch actuated by said electro-magnet, an annunciator-drop, and a rod carrying the same, which rod is of greater size at the point grasped by said clutch than through the other portions which are designed to pass through said clutch.

6. The combination, substantially as hereinbefore set forth, of an electro-magnet, an armature having an aperture formed therein, and a movable rod extending through said aperture and designed to be normally held in a given position thereby, which rod is of greater size at the point normally held by said apertare than through the other portions which are designed to pass therethrough.

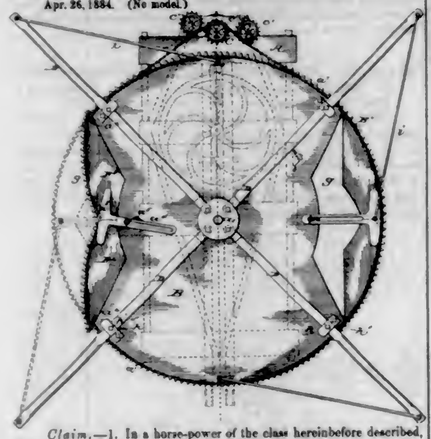
7. The combination, substantially as hereinbefore set forth, of a movable rod of greater size at one point in its length than at other points, an electro-magnet, its armature, which armature serves as a clutch for engaging said rod, and a stop for limiting the movement of said armature, which stop is normally out of contact with said armature.



300,608. FRUIT-HARVESTING DEVICE. AMOS HIBBS, Sewellsville, Ohio. Filed Jan. 29, 1884. (No model.)

Claim.—1. The fruit-carrying box having an automatically-opening bottom and connected by a cord to a counterbalancing-weight, in combination with a hanger having a pulley and adjustable friction-brake, substantially as specified.

2. The hanger described, having a grooved pulley-spring friction-brake adapted to operate on the pulley-cord connecting the fruit-box and counterbalancing-weight, set-screw S, and releasing-lever, substantially as specified.



300,609. PANTALOON-STRETCHER. ZACHARIAH M. JOHNSON, South Bend, Ind. Filed Jan. 23, 1884. (No model.)

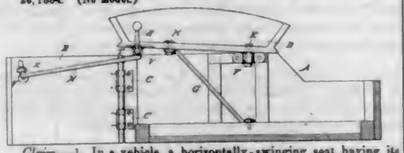
Claim.—1. The frame A, having the hinged clamp B and slotted piece *a′*, in combination with the roller C, the pawl and ratchet, and the clamp D, substantially as set forth.

2. The combination, with the frame A, having clamp B, of the roller C, clamp D, elastic rings *f*, and the cords *e*, substantially as and for the purpose set forth.

300,610. HORSE-POWER. DANIEL KAUFMAN, Bloomington, Ill. Filed Apr. 26, 1884. (No model.)

Claim.—1. In a horse-power of the class hereinbefore described, the master-wheel B, provided with contractile segments B^2 B^2, and means, substantially as shown and described, for securing them in both their contracted and expanded positions, substantially as and for the purpose specified.

2. In a horse-power of the class hereinbefore described, the master-wheel B, provided with contractile segments B^2 B^2, pivoted at their outer ends to the master-wheel and at their adjacent ends to the plate a^3, said plate being removably secured to the master-wheel, substantially as described.



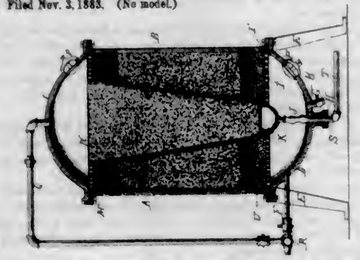
3. In a horse-power, the master-wheel B, provided with contractile segments B^2 B^2, and means, substantially as shown and described, for securing them in both their contracted and expanded positions, in combination with the draft-levers D D, pivoted to the hub of the master-wheel and detachably secured to the periphery of the master-wheel, substantially as and for the purpose specified.

4. In combination with the master-wheel having contractile and pivoted segments B^2 B^2, the driving-shaft and intermediate gearing, a brake-wheel mounted upon the driving-shaft, and brake-shoes adapted to embrace the periphery of said brake-wheel and retard or stop the machinery at the will of the operator, substantially as shown and described.

5. The combination, with the master-wheel, the driving-shaft, and intermediate gearing, of the fly-wheel geared with the driving-shaft, the brake-wheel mounted upon said driving-shaft, brake-shoes pivoted in close proximity to said brake-wheel, and means, substantially as shown and described, under the control of the operator, for applying said brake-shoes to the periphery of the brake-wheel to stop or retard the machinery, substantially as specified.

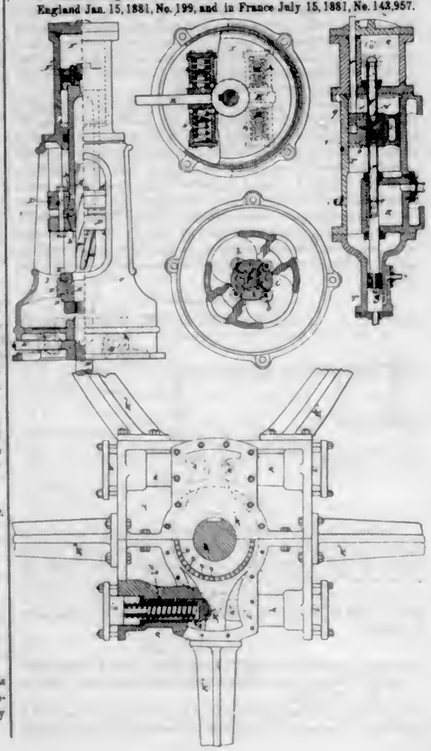
6. The combination, with the master-wheel, the driving-shaft, and intermediate gearing, of the fly-wheel geared with the driving-shaft, and means, substantially as described, for automatically disconnecting the fly-wheel from the driving-shaft upon the machinery being stopped, for the purpose specified.

300,611. WAGON-SEAT. PHAON J. KERN, Frankfort, Ind. Filed Mar. 26, 1884. (No model.)



Claim.—1. In a vehicle, a horizontally-swinging seat having its pivot near one end, and an eccentric brace extending obliquely downward from its free end, and pivoted to the sill of the vehicle eccentrically with reference to the seat-pivot, substantially as specified.

2. In a vehicle, the combination, with a horizontal swinging seat and hinged gate, both pivoted on the same side of the vehicle, of the outer latch-handle having a bearing in the gate, the inner latch-handle having a bearing in the seat, and a connecting-rod pivoted to the gate-latch, and the inner handle connecting the seat and gate, substantially as specified.



3. In a vehicle, the combination, with the swinging seat having an oblique eccentrically-pivoted brace and a hinged end-gate, of the inner latch-handle, the outer latch-handle, the latch, and the connecting-rod having angular pivot-lugs respectively connected to bearings on the latch and on the inner or seat handle, substantially as specified.

300,612. FILTER. ROBERT LIVINGSTON KEISTER, Philadelphia, Pa. Filed Nov. 3, 1883. (No model.)

Claim.—In a water-filter, the combination, with the outer casing having the convex top and concave bottom, the upper and lower plates, and the inlet-pipe, of the inner tapering pot having the perforated bottom plate and a connection at its lower end with the outlet-pipe and filtering material both within and around it, substantially as specified.

300,613. STEERING-GEAR FOR SHIPS. JOSEPH KNIGHT KILBOURN, Brixton, County of Surrey, and GEORGE FOSBRY, Stockton-on-Tees, County of Durham, England. Filed July 11, 1883. (No model.) Patented in England Jan. 15, 1881, No. 199, and in France July 15, 1881, No. 143,957.

Claim.—1. In a steering-gear in which the power is transmitted to the rudder by means of a screw or spiral bolt, the nut which turns the screw or spiral bolt, constructed in segments, substantially as and for the purpose hereinbefore described.

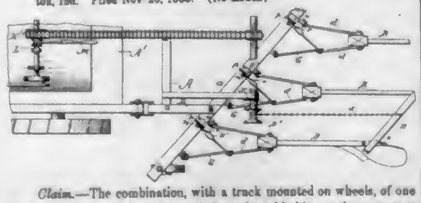
2. In a steering-gear in which the power is transmitted to the rudder by means of a screw or spiral bolt, the nut which turns the screw or spiral bolt, constructed in segments, with their external surfaces in the form of a double-truncated cone, combined with cross-heads fitted thereto, and clamping-bolts, substantially as and for the purposes hereinbefore described.

3. In a steering-gear in which the power is transmitted to the rudder by means of a rotating screw or spiral bolt, and in combination with said screw, anti-friction balls or their equivalents, arranged as herein set forth, for receiving the end-thrust in both directions, substantially as herein described.

4. In a steering-gear in which the power is transmitted to the rudder through a rotating screw or spiral bolt, one or more relief-springs interposed between said screw and the rudder, and anti-friction balls or their equivalents, upon which to suspend the tiller or its substitute, in order that it may be free to move and sensitive to the action of the said springs, substantially as hereinbefore described.

5. A steering gear operated by hydraulic or steam pressure applied to rotate a spiral bolt in line with the rudder-head, combined with relief-springs interposed between said rotating spiral bolt and said rudder-head, substantially as and for the purpose hereinbefore described.

6. In a hydraulic or steam steering-gear, the combination and arrangement, with the moving but non-rotating nut, the rotating spiral bolt actuated thereby, and the rudder, of the horizontal relief-springs interposed between the rotating bolt and the rudder-head, substantially as herein shown and described.



7. The steering-gear, rudder-head, and interposed springs H, combined with boxes A, to inclose said springs, attached to and moving with said rudder-head, whereby the springs always act against the tiller at the same or nearly the same angle, irrespective of the position of the rudder, substantially as and for the purpose hereinbefore described.

8. In a steering-gear, the rudder-head and actuating-piston F, a rack or racks and pinion, as herein set forth, shrouded to the pitch-line, and in combination therewith rollers or roller M, maintained in contact with the rack and shrouding.

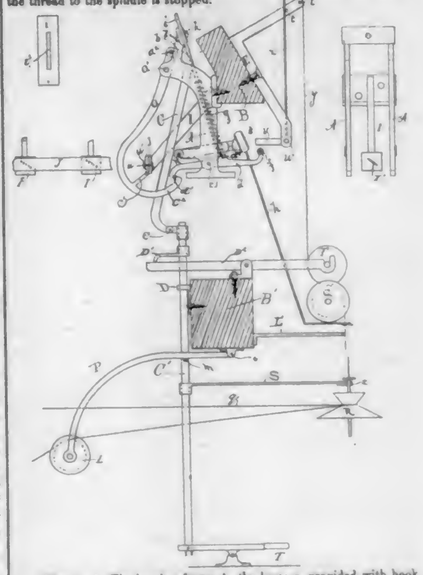
9. In a steering-gear operated by steam or hydraulic pressure, in which the main valve is opened by hand and closed automatically, the combination, with the actuating-piston and cylinder, of the wheel-valve *m*, the rudder or main valve *l*, with its tubular spindles *p p'*, the pressure-chamber Q, the exhaust-chamber R, and a connection with said piston, substantially as hereinbefore described.

10. In a steering-gear operated by steam or hydraulic pressure, in which the main valve is opened by hand and closed automatically, the combination, with the wheel-valve, of the rudder or main valve, with its tubular spindles, the pressure and exhaust chambers, arranged as herein set forth, the piston S, connected to the rudder or main valve and working in the cylinder T, which is capable of being placed at one end in communication with the pressure and exhaust-passages, and at its other end in communication by a pipe containing liquid with the cylinder V, and the plunger W, connected to the main ram, the whole of the parts being constructed, arranged, and combined together so as to operate substantially as hereinbefore described, and illustrated in the accompanying drawings.

300,614. GANG-PLOW CANTING DEVICE. WILLIAM KIMMEL, Milton, Ind. Filed Nov. 26, 1883. (No model.)

Claim.—The combination, with a truck mounted on wheels, of one or more plows, each having two independent hitching-rods to connect it with said truck, a lever pivoted to said truck above one of said rods and connected therewith by a link, a toothed segment fixed concentric with said pivot, and a latch upon said lever, whereby said rod may be quickly raised or lowered, and then held to cant the plow, substantially as described.

300,615. DYNAMO-ELECTRIC MACHINE. JOHN A. LANNERT, Buffalo, N. Y., assignor to the Buffalo Electric Works, same place. Filed Jan. 9, 1884. (No model.)

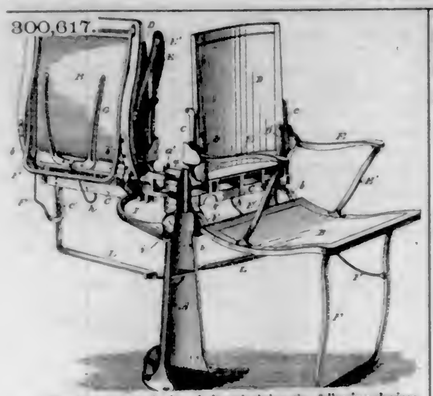


Claim.—The combination, with a drum or cylinder composed of radial arms C, connected at their inner ends and having their outer ends

provided with separate polar extensions C', of internal coils, *f*, wound lengthwise upon the arms C in the same direction and connected to form a closed circuit, and external coils, A, wound lengthwise around the drum and connected to form a closed circuit, substantially as set forth.

300,616. STOP-MOTION MECHANISM FOR SPINNING-MACHINES, &c. CHARLES H. LARNED, Willimantic, Conn., assignor of one-half to C. FRANK MORRISON, same place. Filed July 6, 1883. (No model.)

Brief.—Upon the breaking of a thread, either above or below the feed-rollers, the drop-rod is caused to descend or fall, loosening the tension on the driving-band, and a brake attached to the drop-rod engages the whirl of the spindle, thereby stopping the rotation of the spindle. At the same time the lever-arm carrying the upper feed-roller is acted upon to raise the said roller from the lower roller, whereby the feed of the thread to the spindle is stopped.



Claim.—1. The bracket-frame A, the lever *a*, provided with hook *c*², the connecting-rod C, provided with elbow or projection *b*, the tripping-latch *d*, having hook end *d'*, and wire *f*, in combination with the bracket E, having the rocking arm *v*, and wire *x*, provided with a guide-eye at its upper end, drop-rod C', and the belt-tightening device P L, substantially as shown and described, and for the purpose set forth.

2. The combination, with the bracket-frame A, having the extension *l*, the lever *a*, the connecting-rod C, provided with elbow or projection *b*, the tripping-latch *d*, the slotted plate *i*, attached to the extension *l*, and the screw *k*, of the spring *g*, attached to the tripping-latch and to the plate *i*, as shown and described, and for the purpose set forth.

3. The combination, with the bracket-frame A, the lever *a*, slotted plate *i*, and tripping-latch *d*, having wire *f*, and the spring *g*, connected to the plate and latch, of the connecting-rod C, pivoted to the lever *a*, drop-rod C', the lever D³, carrying the roll F, the arm D', for operating said lever, the bracket E, having rocking arm *v*, the wire *x*, and the belt-tightening device P L, substantially as shown and described.

4. The combination, with the bracket-frame A, the lever *a*, provided with the projection *c'*, and brackets I, provided with oblique slots I', of the rod J, provided with bolts *u*, adapted to move in the slots of the brackets, and arranged to slide diagonally to engage with the projection *c'* on the lever *a*, as and for the purpose specified.

300,617. FOLDING CHAIR. JAS. STEELE MACKAYE, New York, N. Y., assignor, by mesne assignments, to the Brent Manufacturing Company, Bridgeport, Conn. Filed Oct. 30, 1883. (No model.)

Claim.—1. A swinging chair embodying the following devices, namely: first, a columnar stand; second, a chair-bracket hinged vertically to said stand; third, a back attached to the chair-bracket; fourth, a folding seat hinged to the front of said chair-bracket; fifth, a folding leg pivoted to said seat.

2. A duplex swinging chair embodying the combination of the following devices, namely: first, a single columnar stand; second, two chair-brackets hinged vertically to said stand; third, two backs attached one to each chair-bracket; fourth, two folding seats hinged one to the front of each chair-bracket; fifth, two folding legs pivoted one to each seat.

3. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the folding seat hinged to the front of said chair-bracket, the pivoted leg, and the back pivoted to said chair-bracket and independent of the seat, as described, so that such back may turn freely to accommodate itself to the position of the occupant.

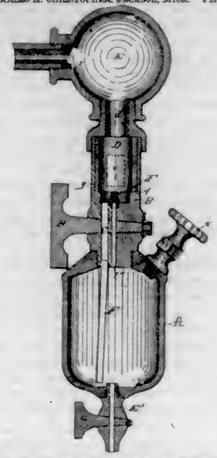
4. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the folding seat hinged to the front of said chair-bracket, the pivoted leg, and the back pivoted to said chair-bracket, as described, so that being independent of the seat it may turn freely to accommodate itself to the position of the occupant, and the folding arms.

5. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the seat hinged to the front of said chair-bracket, the leg pivoted to said seat, and the link connecting the leg with the chair-bracket.

6. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the seat hinged to the front of said chair-bracket, the frame-like leg pivoted to the seat and formed as described, so that it may fold close against the bottom of the seat between the side bars of the seat-frame, and the link connecting the leg with the chair-bracket.

7. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the seat and back attached to said chair-bracket, substantially as described, and the rearwardly-projecting ring-like bracket on the said stand.

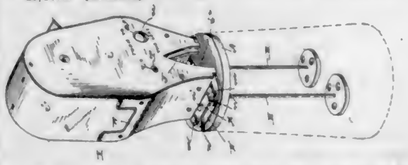
8. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the seat hinged to the front of said chair-bracket, and provided on its under side with an anti-friction roller, and the rearwardly-projecting ring-like bracket provided with a socket adjacent to the stand for receiving the anti-friction roller when the seat is turned down, so that the chair is then prevented from swinging.



9. The combination, substantially as before set forth, of the columnar stand, the swinging chair-bracket hinged vertically to said stand, the seat and back attached to said chair-bracket, substantially as described, and the ring-like bracket provided with means, substantially as set forth, for checking the rearward swing of the chair at any desired point.

300,618. FAUCET. JOHN MOLONEY, Pittsburg, Pa. Filed Dec. 12, 1883. (No model.)

Claim.—A cock consisting of a barrel, A, having openings *a'* and *a*², with a strainer having screw-threaded opening *c'*, and attached to the end *a* of said barrel, a stem extending from end to end of the barrel, and having screw-threaded end inserted in screw-threaded opening *c'*, and the opposite end extending through opening *a*², and provided with means on its outer end for turning the stem, and a valve in said stem at a point within the strainer, and having a seat on the end of the barrel, substantially as described.



300,619. LUBRICATOR FOR STEAM-ENGINES. CHARLES B. MCALWAY and CHARLES H. CHRISTOPHER, Jackson, Mich. Filed Apr. 24, 1884. (No model.)

Claim.—1. In a lubricator, the combination of the chambered casting E, communicating with a steam-chamber, coupling *d*, casting B, provided with chamber D, having transparent material *e* and glass cylinder *g* to form a viewing-chamber, passage C', having nozzle F, and passage C, having tube F", connecting chamber D with reservoir A, substantially as shown, and for the purpose described.

2. The combination of the chambered casting E, coupling *d*, casting B, provided with chamber D, having transparent material *e*, glass cylinder *g*, apertured plug B', registering with small passage C' having nozzle F, and large passage C, having tube F', and reservoir A, substantially as shown, and for the purpose described.

300,620. CHURN-MOTOR. JOSEPH L. MCKAY, Neoga, Ill. Filed Apr. 25, 1884. (No model.)

Claim.—1. The combination, with a churn top or cover having dasher-actuating mechanism, of a removable casing secured upon the top or cover, and carrying motor mechanism, substantially as described, adapted to operate the devices thereon, substantially as set forth.

2. The combination, with a churn top or cover having a perpendicular standard, in which is journaled a rotary crank-shaft provided with a gear-wheel and adapted to operate the dashers, of motor mechanism, substantially as described, secured upon the churn top or cover, and embodying a gear-wheel meshing with the gear-wheel upon the rotary shaft, substantially as and for the purpose set forth.

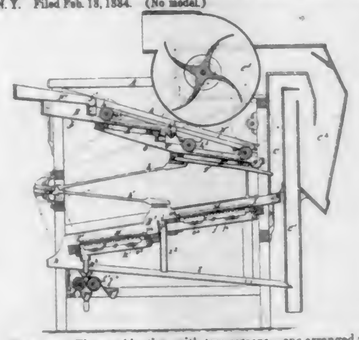
3. The combination, with the top or cover of a churn having fastening devices on opposite sides, and provided with a perpendicular standard carrying dasher-actuating mechanism, of a removable casing fastened upon the top or cover and inclosing the standards, and carrying motor mechanism, substantially as described, meshing with the mechanism upon the standard, substantially as set forth.

4. The combination, with the top or cover of a churn having fastening-plates, of a removable motor-casing having projecting bottom flanges engaged by these plates to retain the casing in position, substantially as set forth.

5. The combination, with a churn top or cover having the lip-plate and the oppositely-disposed slotted plate sliding upon guide-pins, of a removable motor-casing having transverse bottom flanges projecting at its ends and engaged by the said fastening-plates, substantially as and for the purpose set forth.

6. The combination of a churn top or cover having dasher-perforations, two parallel perpendicular standards arranged between these perforations and embodying guide-slots, the sliding heads adapted to receive the dasher-staffs, the rotary crank-shaft, pitmen connecting the ends of the crank-shaft with the sliding heads, the gear-wheel secured upon the said shaft and working between the standards, and means, substantially as described, for operating this gear-wheel, substantially as set forth.

7. The combination, in an improved churn-motor, of the interior frame embodying the side pieces having having the inwardly-projecting flanges, the spring-motor mechanism contained within this frame and having its bearings thereon, and the outer casing embodying the side pieces secured to the sides of the inner frame, and having its top and ends secured to the inwardly-projecting flanges, substantially as set forth.



8. The herein-described improved motor-casing, comprising the inner frame consisting of side pieces having the inwardly-projecting flanges and the transverse flanges projecting at its bottom, the side boards or pieces of the outer frame, and the bent end and top piece secured to the inwardly-projecting flanges, substantially as set forth.

9. The combination, in an improved spring-motor, of the casing having the perforations on opposite sides, the set-screws projecting through these perforations to the outside of the casing, and the balance-wheel shaft having its bearing in the set-screws, substantially as set forth.

10. The combination, in an improved churn-motor, with the spring-motor mechanism comprising a train of gear-wheels, of a rod journaled transversely in relation thereto and adapted to be brought into engagement with the teeth of one of the gear-wheels to stop the operation of the motor, substantially as set forth.

11. The combination of the casing, the spring-motor mechanism contained therein, the transverse angular rod journaled in the casing and having its operating-head projecting through the same, and the spring-plate interposed between the crank of the rod and the inner face of the casing, substantially as and for the purpose set forth.

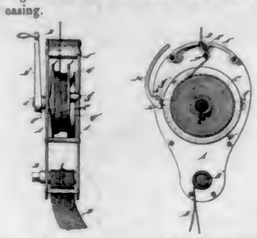
300,621. GRAIN-SEPARATOR. CHARLES E. MCNEAL, Silver Creek, N. Y. Filed Feb. 18, 1884. (No model.)

Claim.—1. The combination, with two screens—one arranged with its head below the tail of the other and both inclined in the same direction—of an endless belt or apron arranged to travel in close proximity to the upper surfaces of both screens, substantially as set forth.

2. The combination, with two screens—one arranged with its head below the tail of the other and both inclined in the same direction—of an endless belt or apron arranged to travel in close proximity to the upper surfaces of both screens, and guide-rollers whereby the lower side of said belt or apron is guided from the tail of the first screen to the head of the second screen, substantially as set forth.

3. The combination, with a shaking-shoe containing a screen or sieve, of a stationary rack or grate supported in said shaking-shoe underneath said sieve, substantially as set forth.

4. The combination, with a shaking-shoe containing a screen or sieve, of a rack or grate supported in said shoe underneath the screen or sieve, and held stationary with reference to the shaking motion of the shoe, while being capable of adjusting itself vertically with the shoe, substantially as set forth.

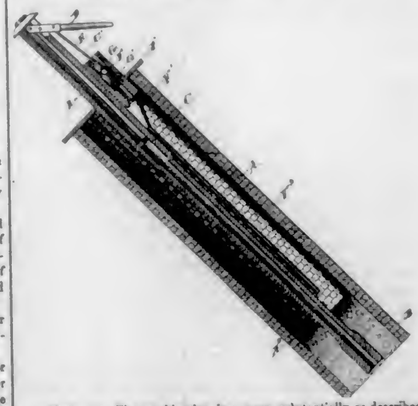


5. The combination, with the stationary frame A and a shaking-shoe containing a sieve, and provided with side openings, p, of a rack or grate, O, having cross-pieces o^2, projecting through the openings p, and bars p^3, whereby the rack or grate is attached to the stationary frame, substantially as set forth.

6. The combination, with the two screens inclined in the same direction, and one arranged with its head below the tail of the other, of a tight plate whereby the material passing through the first screen is collected and conducted to the head of the second screen, a trough arranged below the tail of the first screen to collect the material escaping from the tail of the first screen, and tubes extending downwardly from the said trough through said tight plate, for discharging the material from said trough, substantially as set forth.

7. The combination, with a shaking-shoe provided with an opening in its side, of a rack or grate supported in said shoe, and a screen or sieve adapted to be inserted and removed through said opening in the side of the shoe, and constructed with a thin rear piece, q, to clear said rack or grate, substantially as set forth.

300,622. FIRE-ESCAPE. GEORGE W. MERKLE, Amherstburg, Ontario, Canada. Filed Mar. 28, 1884. (No model.)



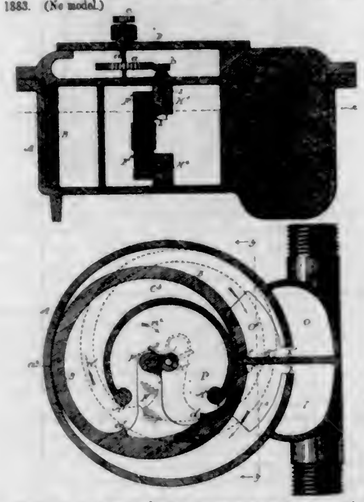
Brief.—A fire-escape in which a brake-shoe passes half-way around the reel within a groove on one side thereof, and is applied by a lever pivoted to the casing.

Claim.—1. A fire-escape consisting of the face-plates A, rigidly connected together, the reel C, the friction-posts E and F between the upper parts of the face-plates, the body-belt B, the wire or cable D, the brake-shoe G, pivoted at one end between the face-plates, and extending partially around the reel to act thereon, and the pivoted brake-lever H, having its pivoted end arranged between the face-plates, and resting against the free end of the brake-shoe, substantially as described.

2. A fire-escape consisting of the stationary connected face-plates A, the reel C, having the channel or groove G', the wire or cable D, the friction-posts E and F, the body-belt B, the brake-shoe G, pivoted at one end between the face-plates, and extending partially around the reel under the same to enter the channel or groove, and provided at its free end with a shoulder, g', and the pivoted brake-lever H, having its pivoted and arranged between the face-plates, and provided with a shoulder, h', to engage the shoulder on the brake-shoe, substantially as described.

300,623. PUMP. ELI A. MILLER, Conneaut, Ohio. Filed Dec. 30, 1883. (No model.)

Claim.—1. The combination, in a pump substantially as described and shown, of the stock, the sucker arranged therein, the sucker-rod, the handle, the air-cylinder arranged alongside the pump-stock, and provided with a tube extended into the well, a piston arranged in the air-cylinder, a rod connecting the piston and the pump-handle, and the escape-pipe, arranged substantially as described, with its lower end opening into the well and its upper end extended above the well-cover, as and for the purposes specified.



2. The combination, substantially as described, of a pump-stock, an air-cylinder having a discharge into the well, a piston arranged in said air-chamber, and means connecting the pump-operating devices and the said piston, as and for the purposes specified.

300,624. HOLLOW PUNCH. BENJAMIN F. MITCHELL, Middletown, Conn., assignor to Wilcox, Crittenden & Co., same place. Filed Nov. 30, 1883. (No model.)

Claim.—A hollow punch consisting of the handle A, having the transverse channel b, the smooth tubular projection a, and the lateral shoulder e at the base of the projection and below the transverse channel, and the hollow cutter B, having one end formed into a cutting-edge, and constructed with the lateral interior shoulder, d, and smooth socket c, said cutter being detachably applied to the tubular projection, and the bore of the latter equal to or greater than the bore of the cutter, substantially as and for the purposes described.

300,625. OSCILLATING METER. LEWIS HALLOCK NASH, Brooklyn, assignor to the National Meter Company, New York, N. Y. Filed Dec. 18, 1883. (No model.)

Claim.—1. The combination, in a water-meter, of an eccentrically-moving piston open from end to end, having a longitudinal slot, f, at its side, and an inclosing-case having a radial abutment extending from one head of the case to the other, having an enlarged end and forming a joint within the piston, with a crank and shaft having a bearing within the case, adapted to connect the said open piston with a train of speed-reducing gearing, substantially as described, for the purpose specified.

2. The combination of an eccentrically-moving piston having one or more central studs and a side longitudinal slot, with an inclosing-case having a dividing-abutment upon which the piston slides, adapted to form a joint within it, suitable inlet and outlet ports, and one or more fixed central studs adapted to co-operate with the central studs of the piston to control the eccentric movements of the same, substantially as described, for the purpose specified.

3. The combination, in a water-meter, of an eccentrically-moving piston having one or more central studs and a side longitudinal slot, with an inclosing-case having a dividing-abutment upon which the piston slides, adapted to form a joint within it, suitable inlet and outlet ports, and one or more fixed central studs adapted to co-operate with the central studs of the piston to control the movements of the same, and suitable means for registering the said movements of the piston operated by it, substantially as described.

4. The combination of an eccentrically-moving open-ring piston having a longitudinal slot, f, in its side, with an inclosing-case having an abutment extending from one head of the case to the other, adapted to divide the case and to make a joint upon the inner wall of the open piston, whereby the inclosing-case and the interior of the piston are divided into receiving and discharging spaces, communicating with suitable inlet and outlet ports of the case, substantially as described.

5. The combination of an inclosing case or cylinder having a radial abutment extending from head to head of the cylinder, and terminating at its inner end in an enlargement open at one side, and having suitable bearing-points, with an eccentrically-moving open-ring piston having a longitudinal slot in its side forming a guide upon said abutment, and suitable means connected with the case for controlling the motion of the piston, substantially as described.

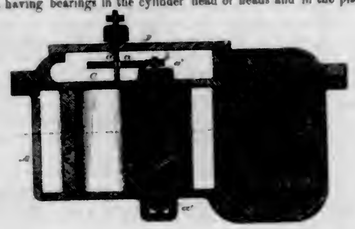
6. The combination of an inclosing-case having interior wall bearing-points and a radial abutment extending around the center of said case from head to head, terminating in suitable bearing-points, with an eccentrically-moving open-ring piston having a longitudinal slot in its side and bearing-points upon its exterior and interior wall, adapted to form a joint to divide the said case and the interior of the open piston into receiving and discharging spaces, which communicate with suitable inlet and outlet ports in the case, substantially as described.

7. The combination, in a water-meter, of an inclosing case or cylinder having a radial abutment extending around the center of said case from head to head, and forming around said center an enlargement open at one side, having end or corner bearing-points, with an eccentrically-moving piston open from end to end, having bearing-points adapted to co-operate with those of the abutment, a longitudinal slot, f, on one side, forming a guide upon said abutment, and a radial arm, F, extending between the arms or bearing-points of said abutment, provided with central studs co-operating with fixed central studs of the case, substantially as described, for the purpose specified.

8. The combination, in a water-meter, of an inclosing-case having a radial abutment extending around the center of the case from head to head, and fixed central studs, H' H^3, with an eccentrically-moving open-ring piston having a longitudinal slot, f, in its side, central studs, F' F^3, the shaft 2, having a bearing in said case-stud H', and a crank-arm, 1, arranged to bear upon the piston-stud F', and suitable registering mechanism connected with said shaft, substantially as described.

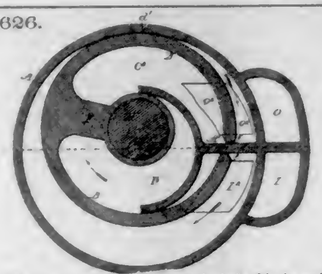
9. The combination, with an inclosing-case having suitable inlet and outlet ports and a radial abutment terminating in an enlarged end centrally in said case, of an open-ring piston having a guide-bearing arm, and means for connecting said arm, with means for controlling the movements of the piston to continually make a joint-contact with the said abutment to divide the piston into receiving and discharging spaces, for the purpose specified.

10. The combination, in a water-meter, of an eccentrically-moving piston open from end to end, with means, substantially such as described, for dividing its interior into receiving and discharging spaces, and means for controlling its movements to effect such division, substantially as described, for the purpose specified.



11. The combination, with an inclosing-case having suitable inlet and outlet ports and a radial abutment terminating in an enlarged hollow end in the central part of said case, of an open-ring piston provided with an arm extending into said hollow end, by means of which, co-operating with means carried by the case, the motion of the piston is controlled in said case, for the purpose specified.

12. The case A, having inlet and outlet head-ports divided by an abutment, as described, and the ports X X' in the vertical walls of said case on each side of said abutment, combined with a ring-piston having a side slot adapted to form a joint-bearing upon said abutment, controlled in its eccentric movements to divide said case, the said vertical wall-ports allowing a free inflow and outflow of the water into and from said case the full height of the piston.

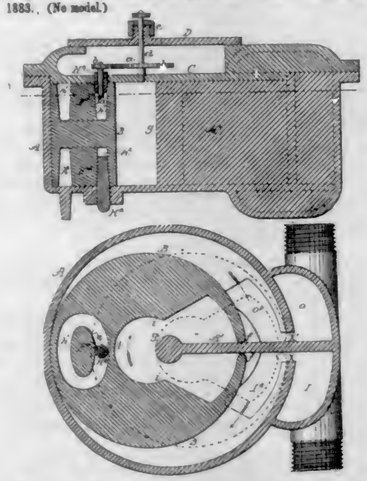


300,626. OSCILLATING METER. LEWIS HALLOCK NASH, Brooklyn, assignor to the National Meter Company, New York, N. Y. Filed Dec. 18, 1883. (No model.)

Claim.—1. The combination of a case or cylinder having a radial abutment extending within the piston from head to head of said case, and suitable inlet and outlet ports, with an eccentrically-moving piston open from end to end, having a longitudinal slot in its side, and an eccentric shaft having bearings in the cylinder head or heads and in the piston, whereby the action of the eccentric shaft adapts the piston to constantly maintain a dividing-joint with the case, and to intermittently maintain a dividing-joint with the interior of the piston, substantially as described.

2. The combination, in a water-meter, of a case or cylinder having a radial abutment extending within the piston from head to head of said case, and suitable inlet and outlet ports, with an eccentrically-moving piston open from end to end, having longitudinal side slot, an eccentric shaft having bearings in the cylinder head or heads and in the piston,

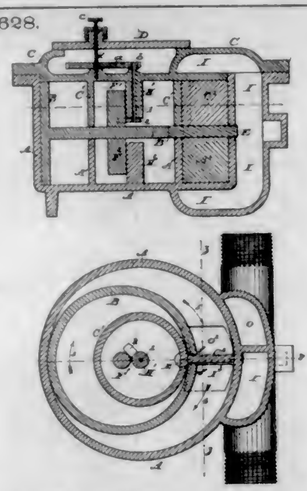
300,626.



and suitable means connecting said eccentric shaft with the registering mechanism by intermediate speed-reducing gearing, substantially as described.

3. The combination of a case or cylinder having a radial abutment extending within the piston from head to head of said case, and suitable inlet and outlet ports, with an eccentrically-moving piston open from end to end, having a longitudinal side slot and an interior radial arm or web terminating in a central sleeve-bearing, and an eccentric shaft having a bearing within said sleeve and within the heads of the case, substantially as described, for the purpose specified.

4. The combination of a case or cylinder having a radial abutment extending within the piston from head to head of said case, and suitable inlet and outlet ports, with an eccentrically-moving piston open from end to end, having a longitudinal side slot, and means, substantially such as herein described, whereby the dividing-joint of the case is maintained in all positions of the piston, and maintained within the interior of the piston during a portion only of the period of its motion, substantially as herein described, for the purpose specified.



300,627. OSCILLATING METER. LEWIS HALLOCK NASH, Brooklyn, assignor to the National Meter Company, New York, N. Y. Filed Dec. 18, 1883. (No model.)

Claim.—1. The combination, in a water-meter, of an inclosing-case have suitable inlet and outlet ports, an abutment, and one or more pins eccentrically placed in said case-heads, with an eccentrically-moving piston having a side slot and a projection out of its center, of a form adapted, in connection with the fixed pin, to control the motion of the piston, and suitable registering mechanism, substantially as described.

2. The combination, in a water-meter, of a piston having an oval groove or projection out of center in one or both of its ends, and a longitudinal side slot, with an inclosing-case having one or more pins, H^3 H^3, placed out of center of said case, a shaft passing through one of said pins, having a crank-arm, a dividing-abutment, and suitable registering mechanism, substantially as described.

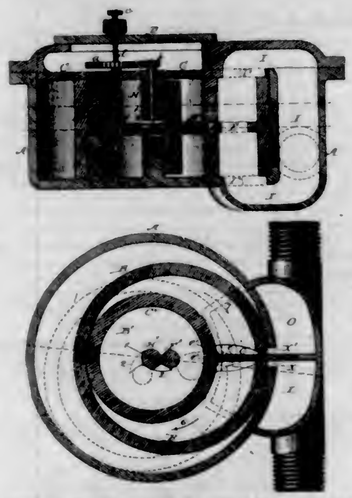
300,628. OSCILLATING METER. LEWIS HALLOCK NASH, Brooklyn, assignor to the National Meter Company, New York, N. Y. Filed Dec. 18, 1883. (No model.)

Claim.—1. The combination, in a water-meter, of an eccentrically-moving piston having a transverse dividing plate or web, B', and a longitudinal slot, *f f*, at its side, an inclosing-case having radial abutments C' A^2 and concentric ring projections C' A', and an interior movable abutment, E, with a shaft having a bearing within the case driven by the piston, and a train of speed-reducing gearing connected with said shaft, substantially as described, for the purpose specified.

2. The combination, in a water-meter, of an eccentrically-moving piston having a transverse dividing plate or web, B', a longitudinal side slot, and a centrally-projecting stud or studs, F' F^2, with an inclosing-case having dividing-abutments, center ring projections, and an interior projecting stud or studs, H' H^2, and means, substantially such as described, supported by the case-stud, whereby the motion of the piston is communicated to the registering mechanism.

3. The combination, in a water-meter, of the case A, having the interior concentric cylindrical ring projections, C' A', the central projecting studs, H' H^2, and the fixed abutments C^2 A^2, dividing the inflow from the outflow, with the movable joint-forming abutment E, arranged within the case, and an eccentrically-moving cylindrical piston having a transverse dividing plate or web, B', a longitudinal slot, *g*, in its outer surface, and having its joint-forming bearing maintained by the contact of the projecting studs of the piston and case, substantially as described.

4. The combination of the inclosing-case having a removable cap formed with a depending hollow stud, H', with an eccentrically-moving piston having a transverse web, B', formed with a central stud, F', the crank-shaft 1 2, having its bearing within the said case-stud, and the interior speed-reducing gearing, substantially as herein set forth.



5. The rotary water-meter herein described, consisting of the case A, having inlet and outlet ports, interior concentric projections, A' C', interior central studs, H' H^2, and fixed abutments C^2 A^2, the interior movable joint-forming abutment, E, the eccentrically-moving piston having the transverse web B', the central studs, F' F^2, and the longitudinal slot *g* in its outer surface, and the crank-shaft 1 2, supported by said case-stud, and operated by the piston, all constructed and arranged for operation substantially as described.

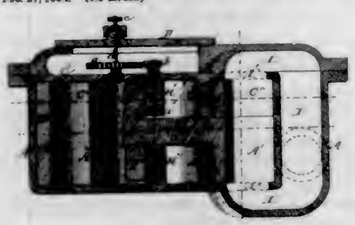
6. The combination of an eccentrically-moving piston having a longitudinal side slot and a transverse dividing-web, with means for connecting the latter with fixed means for controlling the movements of the piston, and an inclosing-case having a fixed interior abutment extending from each head to said web, having a form adapted to make a joint with the interior walls and with the web of said piston, substantially as described.

7. A meter-case having fixed ring projections C' A', and a fixed radial abutment having a movable section, E, combined with an eccentrically-moving piston having a transverse dividing-web, a longitudinal side slot, and means, substantially such as described, carried by said piston-web, for controlling the movements of the piston.

8. The combination, in an oscillating water-meter, of a ring-piston having a transverse dividing-web, with an inclosing-case having ring projections, and a radial abutment with which the piston is adapted to co-operate, to divide its interior and to form a joint with both sides of its web, and means having a fixed relation to the case connecting with the piston-web for controlling the motion of the piston, substantially as described, for the purpose specified.

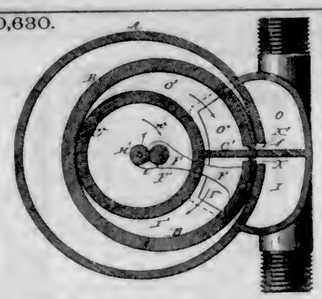
300,629. OSCILLATING WATER-METER. LEWIS HALLOCK NASH, Brooklyn, assignor to the National Meter Company, New York, N.Y. Filed Feb. 27, 1884. (Model.)

Claim.—1. The combination of an eccentrically-moving piston having a transverse dividing-web, B', and a longitudinal side slot opening into a slot in said web, with an inclosing-case having ring projections extending inward from each head, and means co-operating with means carried by the piston-web to control the movements of said piston, with a non-moving radial abutment co-operating with said piston-web, substantially as described, for the purpose specified.



2. A meter-case having ring projections and a non-moving radial abutment, combined with an eccentrically-moving piston having a transverse dividing-web, a longitudinal side slot, and a web-slot, and means, substantially such as described, carried by said piston-web and the case, for controlling the movements of the piston.

3. The combination of an eccentrically-moving piston having a transverse dividing-web, B', and a longitudinal side slot opening into an oval slot in said web, with an inclosing-case having ring projections and a non-moving radial abutment adapted to form a joint with the piston-web, and a shaft having a bearing within the case driven by the piston to operate the registering mechanism, substantially as described.

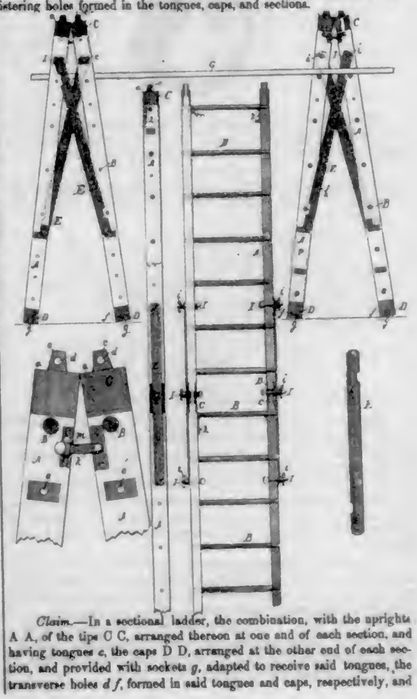


4. The combination of the inclosing-case having concentric ring projections, and a non-moving radial abutment having the projecting joint-forming end E', with an eccentrically-moving piston having a transverse dividing-web, B', and a longitudinal side slot, *g*, opening into an oval slot in said web the said oval slot having a form adapting the piston to move over the said non-moving abutment and to form a joint therewith in every position of the movement of the piston, substantially as herein set forth.

5. The inclosing-case provided with a fixed radial abutment terminating in a hollow enlarged end in the center of said case, and a piston having a transverse dividing-web provided with an oval slot, combined with a fixed joint-forming abutment, E', adapted to form a joint with the walls of said slot, for the purpose described.

300,630. OSCILLATING WATER-METER. LEWIS HALLOCK NASH, Brooklyn, assignor to the National Meter Company, New York, N.Y. Filed Feb. 27, 1884. (No model.)

300,630.

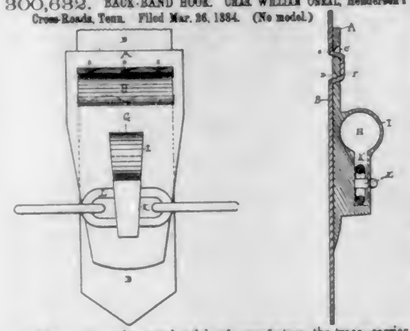


Claim.—1. The combination of an eccentrically-moving piston open from end to end, having a longitudinal slot at its side, and an inward-extending radial arm, F, with the radial abutment terminating in a cylinder within the piston, having a horizontal oblong slot in its side, adapted to receive and form a joint with the piston-arm, substantially as described, for the purpose specified.

2. The radial abutment having at its inner end a non-divided ring enlargement, provided with a horizontal oblong slot, A, having the joint contact end A^2, and the piston having the arm F, adapted to form a joint with three sides, of the oblong abutment slot in the movements of said piston, combined with an inclosing-case having suitable inlet and outlet ports and passages, and suitable means for transmitting the motion of the piston, substantially as described.

3. The combination, in a water-meter, of an open-ring piston having the radial arm F, with an inclosing-case having a radial abutment terminating in a central ring-abutment adapted to make a joint bearing with said radial arm, as herein set forth.

300,631. SECTIONAL LADDER. JOHN T. O'BRIEN, Philadelphia, Pa. Filed May 12, 1884. (No model.)

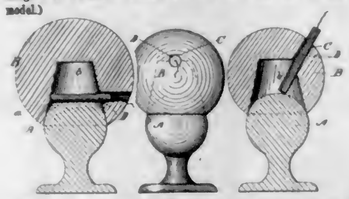


Brief.—The upper ends of the sections have tips having tongues, and the lower ends caps provided with receiving-sockets. Stay-bars are clamped to the meeting sections by bolts which pass through registering holes formed in the tongues, caps, and sections.

Claim.—In a sectional ladder, the combination, with the uprights A A, of the tips C C, arranged thereon at one end of each section, and having tongues *c*, the caps D D, arranged at the other end of each section, and provided with sockets *g*, adapted to receive said tongues, the transverse holes *d f*, formed in said tongues and caps, respectively, and

boles *e e*, formed in the uprights A A, and the stay-bars E, having bolts which pass through said holes, the whole arranged and operating substantially in the manner set forth.

300,632. BACK-BAND HOOK. CHAS. WILLIAM ONEAL, Henderson's Cross-Roads, Tenn. Filed Mar. 26, 1884. (No model.)

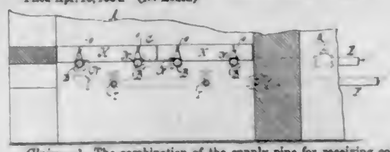


Claim.—As an improved article of manufacture, the trace-carrier described, consisting of the plate A, having the transverse parallel slots C and D near its upper end, provided with the teeth E and F on opposite sides, as shown, below the said slots a loop-lug, G, which tapers downwardly on its outer walls, having its upper portion provided with a transverse circular opening, and beneath the said opening a straight narrow vertical offset, K, substantially as shown and described.

300,633. COUNTER FOR MULES. DANIEL ORME and FRANCIS HEAMS ORME, Oldham, County of Lancaster, England. Filed Oct. 15, 1883. (No model.) Patented in England Dec. 13, 1881, No. 5,437.

Claim.—The combination of the shaft carrying a worm, *e*, with a lever, *c*, having a worm-wheel gearing into said worm, and a pinion, *f*, adapted to be acted on by said lever, substantially as set forth.

300,634. TOY MORTAR. ALFRED W. PARTRICK, Washington, D. C., assignor to William C. Eaton, Newark, N. J. Filed Feb. 14, 1884. (No model.)

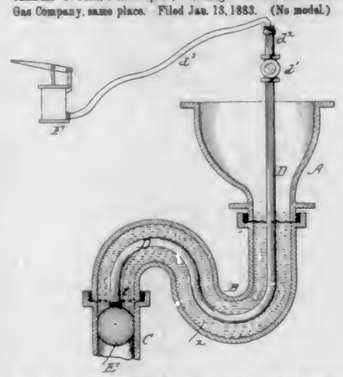


Claim.—1. The combination, with a base, of a projectile adapted to rest upon said base, bored on its under side to form a chamber, and provided with a second bore for the insertion of the charge and opening into the chamber, substantially as shown and described.

2. The combination, with a base adapted to support a fire-cracker, of a projectile adapted to rest upon said base, bored on its under side to form a chamber, and provided with a second bore for the insertion of the charge and opening into said chamber, substantially as shown and described.

3. The combination, with a base, of a projectile bored on its under side to form a chamber, and adapted to fit over and rest upon said base, and provided with a second bore for the insertion of the charge and opening into the chamber, substantially as shown and described.

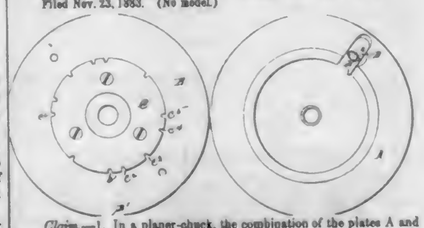
4. A base having a recess in its top for the reception of a fire-cracker, in combination with a projectile having a chamber on its under side resting upon the base, and provided with a hole for the insertion of a fire-cracker, substantially as shown.



300,635. FURNACE. HORACE W. PEASLEE, Malden Bridge, N. Y. Filed Apr. 10, 1884. (No model.)

Claim.—1. The combination of the supply-pipe for receiving cold water independently of a steam-boiler, a series of water-pipes supporting the fire-grate and alternately connected with each other at one end, a discharge-pipe connected with one of the series of water-pipes, and a shower pipe or pipes for receiving the discharge-water, substantially as described.

2. In a furnace for steam-boilers or the like, a series of water-pipes arranged to support the fire-grate and constructed to communicate with each other alternately at the opposite ends, in combination with a supply-pipe connected to the water-pipe at one end of the series, a discharge-pipe connected to the water-pipe at the other end of the series, and a shower pipe or pipes arranged to extend from the discharge-pipe horizontally below the water-pipes, substantially as shown and described.



300,636. DISINFECTING AND CLEANSING WATER-CLOSETS. CHARLES F. PIKE, Philadelphia, Pa., assignor to the National Anti-Sewer Gas Company, same place. Filed Jan. 13, 1883. (No model.)

Claim.—1. In an apparatus for cleaning water-closet traps, soil-pipes, &c., a removable sealing device adapted to be placed through an inlet at any point within said fixtures without removing the parts, and means, substantially as described, for holding said sealing device at any desired point.

2. In an apparatus for cleansing water-closet traps, soil-pipes, &c., the combination of a pipe, D, having cock *d'*, and an air-tight collapsible ball or bag, E, with means, substantially as described, for inflating said ball or bag, and maintaining it in such condition, for the purpose set forth.

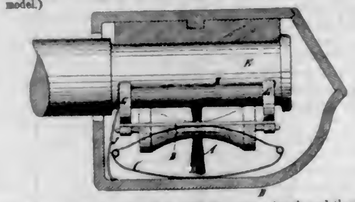
300,637. PLANER-CHUCK. WALLACE PORTER, New Haven, Conn. Filed Nov. 23, 1883. (No model.)

Claim.—1. In a planer-chuck, the combination of the plates A and B, one of which is provided with a disk or plate, C, having notches in its edge, as described, and the other being provided with a dog, and means, substantially as described, for throwing it into and out of engagement with the notched disk C, as set forth.

2. In a planer-chuck, the combination, with the plates A and B, of the division-plate C, having the notches *c' c²*, &c., the dog D, and bolt F, having eccentric-pin *e*, as set forth.

3. In a planer-chuck, the combination of the two plates A and B, having the scale A' and mark B', with the middle plate, C, provided with notches *c' c²*, &c., a dog, D, for engagement with said notches, and a bolt, F, provided with eccentric-pin *e*, for operating the dog, as set forth.

300,638. TOY MORTAR. SAMUEL B. PRATT, Boston, Mass., assignor to Eaton & Parker, Newark, N. J. Filed Feb. 25, 1884. (No model.)

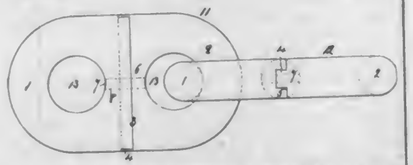


Claim.—1. A projectile having a chamber on its under side, in combination with a base adapted to enter said chamber, the base having a vertical perforation therethrough, serving as a charge-chamber, and provided with an opening at the bottom of sufficient size for the insertion of the charge, substantially as shown and described.

2. A base having a vertical perforation therethrough for the reception of the charge, and provided with openings at the top and bottom of sufficient size for the insertion of the charge, in combination with a projectile having a chamber on its under side and adapted to fit over the base, substantially as shown and described.

3. A projectile having a chamber therein, in combination with a base adapted to enter said chamber, and provided with a perforation therethrough for the reception of an explosive, and a packing arranged upon the portion of the base which enters the chamber, substantially as shown and described.

300,639. CAR-AXLE LUBRICATOR. HENRY R. RANDALL, Brooklyn, assignor to William Thorpe, New York, N. Y. Filed Apr. 28, 1883. (No model.)

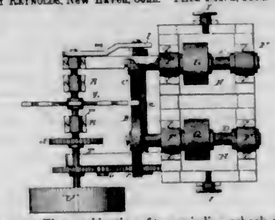


Claim.—1. The combination, with the rotary brush and the frame B, wherein it is journaled, of the elliptic springs C, supporting said frame and extending lengthwise of the brush, and the springs G, supported upon the frame and arranged transversely to the springs C, all substantially as herein described.

2. The combination, with the frame B and the brush journaled therein, of the elliptic springs C, supporting said frame, the springs G, arranged transversely to the springs C, the rods H, connecting corresponding ends of the springs G, and pieces I, of felt or like material, depending from said rods, substantially as herein described.

3. The combination of the frame B, the brush A, journaled therein, and the elliptic springs C, the upper leaves of which have an upward curvature at their ends, substantially as herein described.

300,640. MANUFACTURE OF CHAINS. CHARLES HOLLOWAY REED, Sunderland, County of Durham, England. Filed Oct. 3, 1883. (No model.) Patented in Belgium Oct. 4, 1883, No. 62,780; in France Oct. 5, 1883, No. 157,853; in Germany Oct. 5, 1883, No. 26,853, and in England Oct. 6, 1883, No. 4,752.

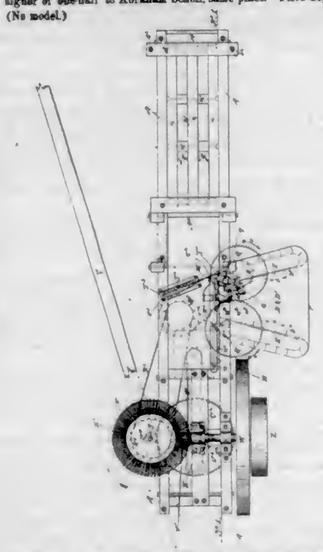


Claim.—1. A chain-cable consisting of a series of links, each made in two parts or halves united by a tranverse joint, substantially as described.

2. A chain-link made in two halves, united by a transverse dovetailed or undercut joint, and a pin to prevent lateral movement of one half on the other, substantially as set forth.

3. A chain-link made in two halves, 1 2, each having openings 13, and transverse pieces 6, and united by a dovetailed or undercut joint and a retaining-pin, substantially as described.

300,641. MACHINE FOR FINISHING BOLT-HEADS AND NUTS. HENRY REYNOLDS, New Haven, Conn. Filed Feb. 2, 1884. (No model.)



Claim.—1. The combination of two grinding-wheels arranged upon axes parallel to each other, so as to revolve in substantially the same plane, a carrying-wheel arranged to revolve in a plane between the faces of said grinding-wheels and upon an axis at right angles to the axes of said grinding-wheels, said carrying-wheel provided with seats to receive the bolts or nuts, so as to present opposite sides of said nuts or heads of the bolts between the said grinding-wheels, substantially as described.

2. The combination of two grinding-wheels arranged upon axes parallel to each other, so as to revolve in substantially the same plane, and a carrying-wheel arranged to revolve in a plane between the faces of said grinding-wheels and upon an axis at right angles to the axes of said grinding-wheels, said carrying-wheel provided with seats to receive the bolts or nuts, so as to present opposite sides of said nuts or heads of the bolts between the said grinding-wheels, with mechanism, substantially such as described, to impart to said carrying-wheel a transverse movement, substantially as specified.

3. The combination of the two grinding-wheels B C, arranged to revolve in the same plane, the carrying-wheel I, arranged to revolve in a plane between said grinding-wheels, said carrying-wheel provided with seats *f*, having a recess upon which the nut or head of the bolt may rest, and a spring, *i*, to bear upon the nut or bolt upon the side opposite the bearing upon the seat, substantially as described.

300,642. BALING-PRESS. ALBERT S. ROBINSON, Albany, N. Y., assignor of one-half to Abraham Schell, same place. Filed Sept. 19, 1883. (No model.)

Claim.—1. In a baling-press, a baling-chamber which has one of its horizontal sides provided with a stiff and rigid lining, made substantially continuous and on a line with the plane of the corresponding lining of the platen and press chambers, the combination, with the same, of the oppositely-located horizontal lining, L, having its end at the press-chamber substantially continuous with the corresponding lining of the press-chamber, with its body in its rearward portion free to be inclined toward the oppositely-located rigid lining of the baling-chamber, and mechanism for forcing the body of the lining L to any preferred degree of relative inclination, for the purpose set forth.

2. In a baling-press, a baling-chamber which has rigid horizontal lining *g* at one of its sides, and at the oppositely-located side lining, L, adapted to have its body adjusted to an incline in relation to lining *g*, in combination with depressing-bar *d*, draw-bolt *e*, provided with screw-nuts, and brackets *f*, substantially as and for the purpose set forth.

3. In a baling-press, the combination, with the baling-chamber having rigid lining *g* and the oppositely-located lining, L, which is adapted to have its body deflected rearwardly toward the rigid lining, of the stiff rack N, having bearing against the exterior surface of the lining L, with its rear end adapted to be raised and lowered in relation to its forward end, and mechanism for forcing the rear end of said rack toward the chamber-room of the baling-chamber to deflect lining L, substantially as and for the purpose set forth.

4. In a baling-press, the dogs Y Y, constructed substantially as shown and above described, in combination with the horizontal walls of the platen-chamber, when arranged and pivoted with said walls in such a manner that their rear ends will be adapted to be moved by gravity toward each other and into the said platen-chamber, substantially as and for the purpose set forth.

5. In a baling-press, the combination, with dogs Y Y, pivoted in the oppositely-located horizontal side walls of the platen-chamber, and adapted to be moved by gravity toward each other with the holding ends entering the platen-chamber, of the reciprocating moving platen, having recesses r^2 made in the face end of said platen, whereby the face of the platen will be adapted to be carried to a point rearward past the engaging end of said dogs and thrust the hay away from the same, and thereby permit them to have a free upward movement, substantially as and for the purpose set forth.

6. In a baling-press having duplex platen-chambers and platens moving therein, the combination, with said platens, of double-crank shaft U^3 and pitmen connecting said platens with said double-crank shaft, of gear mechanism actuating said crank-shaft from a vertical driving-shaft, S, actuated by a belt-wheel and gear mechanism or by a sweep-lever, all substantially as and for the purpose set forth.

7. In a baling-press, the combination, with a platen working within a platen-chamber for compressing the material to be baled, and a crank-shaft connected to said platen by a pitman and revolved by gear mechanism from a driving-shaft, S, revolved by a sweep-lever, of a fly-wheel, W, actuated from said driving-shaft by gear mechanism speeding said fly-wheel, whereby the movement of the crank-shaft will be equalized and a rebound of the sweep-lever be prevented.

8. In a baling-press, a baling-chamber which has at two of its oppositely-located vertical sides a single opening, and each of its oppositely-located horizontal sides closed by substantially close linings, which are respectively on a plane with the top and bottom margin-lines of the openings at said vertical sides of said chamber, substantially as set forth.

9. In a baling-press, the combination, with a baling-chamber having its oppositely-located horizontal sides substantially closed, and at each of its oppositely-located sides a single opening terminating at top and bottom on a line with the plane of the close linings, of horizontal ways *m m*, secured to the inner surface sides of the said horizontal linings on lines between the margin-edges thereof and parallel with the same, substantially as and for the purpose set forth.

10. In a baling-press, a baling-chamber which has each of its two oppositely-located horizontal sides provided with a longitudinally-arranged way, *m*, secured to its inner surface side in a line parallel with the line of movement of the platen of the press.

11. In a baling-press, the combination, with the pressing-chamber, of the baling-chamber arranged in relation to the pressing-chamber as shown and described, and provided with two oppositely-located horizontal closed sides and single opening at each of its oppositely-located vertical sides extending from the plane of the inner side surface of the upper horizontal closing sides to the plane of the inner surface of the lower horizontal closing side, and mechanism wholly within the baling-chamber and connected with the closed horizontal sides for guiding the movement of a bale from the press-chamber to its discharge from the baling-chamber.

12. In a baling-press, the combination, with the pressing-chamber, of a baling-chamber arranged in relation to the pressing-chamber as shown and described, and provided with two oppositely-located horizontal closed sides and two oppositely-located vertical side openings, which extend from the plane of the inner surface of one of said horizontal closed sides to the plane of the inner surface of the other, and horizontal ways *m m*, situated within the said chamber and secured to the inner side surfaces of the horizontal closed sides, and extending from the rear end of the baling-chamber forward to or near to the front end of the pressing-chamber in lines parallel with the lines of movement of the platen of the press.

13. In a baling-press, the combination and arrangement, with a baling-chamber provided with two oppositely-located vertical openings extending from the plane of the top to bottom surfaces of two oppositely-located horizontal closed sides which are provided with ways *m*, of the partition-board M, provided in each of its upper and lower edges with grooves *m'*, adapted to hold with ways *m*, secured to the said oppositely-located horizontal sides, whereby the said partition-board will be prevented in its passage through the baling-chamber from shifting laterally in either direction toward the said vertical side openings of the chamber.

14. In a baling-chamber, partition-board M, which is provided in its upper and lower edges with grooves *m'*, adapted to hold with ways *m*, secured to each of the oppositely-located horizontal sides of the baling-chamber, and also provided with spurs m^3, adapted to hold with the compressed material, substantially as set forth.

15. In a baling-chamber, a partition-board which is guided by mechanism in its passage through a baling-chamber which has oppositely-located open sides, and spurs m^3, as and for the purpose set forth.

16. In a baling-press, the combination, with the pressing-chamber and baling-chamber, which have each of their two oppositely-located horizontal sides provided with ways *m*, extending from the front end of the pressing-chamber continuously to the rear end of the baling-chamber, of partition-board M, provided with grooves *m'* and spurs m^3, for operation substantially as set forth.

17. In a baling-press, a feeding-chamber formed by rigidly-secured vertical and horizontal side walls arranged at a feed-opening made in a vertical side wall of the platen-chamber, the said vertical and horizontal walls being so arranged in relation to each other that they will produce a gradually-contracting chamber-wall, which will be adapted to gradually compress the charge of material introduced as it is progressively moved forward to a discharge into the platen-chamber.

18. In a baling-press, the combination, with a platen-chamber provided in one of its sides with a feed-opening, of a feeding-chamber which has its vertical side walls rigidly fixed from moving, and set to flare outwardly at like angles with their contracting ends at the feed-opening, and mechanism located and moving within the feed-chamber at the inner side surfaces of the walls thereof, for the purpose set forth.

19. In a baling-press, the combination, with a feed-chamber which communicates with the platen-chamber of the press, and is provided with oppositely-located vertical side walls which are set at substantially the same angle of inclination for gradually contracting the feed-chamber as it extends toward the platen-chamber, of mechanism moving at the gradually-contracting inner surfaces of the oppositely-located side walls of the feed-chamber, and adapted to engage with the opposite sides only of the charge of material for gradually-compacting the charge and moving it progressively forward and into the platen-chamber.

20. In a baling-press, the combination, with the platen-chamber thereof, and a feeding-chamber communicating with said platen-chamber, and provided with inwardly-inclined or tapering vertical side walls which are set at about equal angles to the side walls of the platen-chamber, of feed mechanism which is operated automatically and independent of the movement of the platen in the platen-chamber.

21. In a baling-press, a feeding-chamber having oppositely-located inclined sides, and a feed mechanism which is continuously moved in direction toward the contracted end of said chamber while the platen is being moved back to the forward end of the platen-chamber.

22. In a baling-press, a feeding-chamber having a feed mechanism which is moved continuously in direction toward the feed-opening in a side of the platen-chamber while the platen is being moved in either direction within the platen-chamber.

23. In a baling-press, an endless feeding mechanism which is continuously moving in direction toward the feed-opening to the platen-chamber while the platen is moving therein for automatically feeding material to be baled into the platen-chamber.

24. In a baling-press, the combination, with a feeding-chamber having two oppositely-located inclined sides, of an endless feed mechanism which is continually moving in direction toward the feed-opening to the platen-chamber while the platen is moving therein, whereby material will be automatically introduced in the platen-chamber in compacted sections to be compressed into a bale, substantially as set forth.

25. In a baling-press, the combination, with platen-chamber B, (or B',) provided with a feed-opening at one of its sides, of feed-chamber D, (or D',) provided with gradually-contracting side walls, as above described, and feeding mechanism E, (or E',) above described, substantially as and for the purpose set forth.

26. In a baling-press, a feeding device for introducing into the platen-chamber sections of compacted material, consisting of the combination, with feed-chamber D, (or D',) having two of its oppositely-located sides, b^3 and b^3, set flaring or inclined outwardly in relation to each other, of feeding mechanism E, (or E',) which is moved continuously in direction from the flaring open end toward the contracted end of said feeding-chamber and the feed-opening to the platen-chamber of the press, as set forth.

27. In a baling-press, the combination, with its platen-chamber having a feed-opening at a side thereof, of a feeding-chamber D, (or D',) having inclined sides b^3 b^3, each provided with a series of slotted ways, *p p*, of endless chains r^3 r^3, carrying spurs *q q* in said ways and revolved in opposite directions by sprocket-wheels from shafts *r r* by means of mechanism driven by revolving mechanism operating platen I (or I',) of the press, substantially as set forth.

28. In a feeding-chamber, D, (or D',) which has gradually-contracted sides b^3 b^3, terminating at a feed-opening of a platen-chamber of a baling-press, and feeding mechanism working in said sides and moving toward the contracted open end of said feed-chamber, the curved wall-surface portion *z*, made with side b^3 of feed-chamber D (or D') at the junction of the contracted end of the same with the platen-chamber, substantially as and for the purpose set forth.

29. In a baling-press, the combination, with a platen-chamber having a feed-opening in a side thereof, and a feed-chamber discharging into said platen-chamber, of a closing-gate which is pivoted at the front margin-edge of the feed-opening and at a point about at the point of termination of the forward transit of the platen, and adapted to be swung rearwardly to the front margin-edge of the same, and when closed be in position parallel with the line of the wall of the platen-chamber, whereby the greatest pressure-strain on said gate will be sustained by the hinged pivots of the same.

30. In a baling-press, the combination, with the platen-chamber and a feeding-chamber communicating with the platen-chamber and a feed-opening made in a side of the latter, of an automatically-operated closing-gate hinged at the intersection of the rear-edge termination, the feed-opening of the platen-chamber with the rearward wall of the feeding-chamber, whereby the gate will be adapted to swing forward to close the feed-opening and rearward to fold against the rear side walls of the feed-chamber without obstructing the movement of the charge of material through the said feeding-chamber to the platen-chamber.

31. In a baling-press having a feed-opening in a side of its platen-chamber, the combination, with said platen-chamber opening and gradually-contracting walls of a feeding-chamber which communicates with said opening, of a gate so hinged at the intersection of the rearward marginal vertical edge of said feed-opening with the rear side walls of the feed-chamber as to adapt the gate to be swung in one direction to close the said opening and in an opposite direction to fold against the rear vertical side walls of the feed-chamber, and mechanism for automatically moving the gate alternately in both directions, as set forth.

32. In a baling-press, the combination, with a platen-chamber having a feed-opening in a side thereof, and feed-chamber communicating with said platen-chamber, and having rigid vertical side walls which effect a gradual contraction of said feed-chamber, of gate F, (or F',) hinged at the intersection of the rear wall of the feed-chamber with the rear marginal side of the feed-opening, mechanism operated by the movement of the platen to close said gate to the opening to the platen-chamber, and mechanism operating independently of the platen for moving the gate outward from said opening, for the purpose set forth.

33. In a baling-press having a feed-opening in a side of its platen-chamber, and a gradually-contracting feed-chamber located exteriorly to the platen-chamber, with its contracted end communicating with the latter through said feed-opening, and in combination with the same, gate F, (or F',) and mechanism for automatically moving said gate alternately toward the platen to close the feed-opening in the platen-chamber, and from said platen to open said gate outward from said feed-opening to fold against a side of the feeding-chamber, for the purpose set forth.

34. In a baling-press, gate F, (or F',) having hollow sleeve c^2, for rigid attachment to a turn-shaft, T, at a side wall of the press, and arms c^3, made in connection with said sleeve and separated by slots c^4, whereby said gate will be adapted to be turned against a side of a feeding-chamber in which spurs of a feeding mechanism are moving, substantially as set forth.

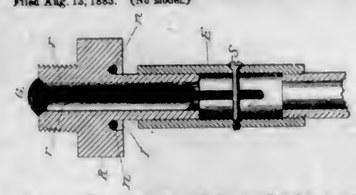
35. In a baling-press, the combination, with a platen-chamber provided with a feed-opening, a feeding-chamber arranged exteriorly to the platen-chamber and communicating with the same through said feed-openings, and feeding mechanism moving in the sides of the feeding-chamber toward the platen-chamber, of a gate which is automatically operated toward the platen-chamber to close the feed-opening thereto, and back from said platen-chamber to a side of the said feeding-chamber, for the purposes set forth

36. In a baling-press, the combination, with the platen-chamber having a feed-opening in a side thereof, and a feeding mechanism which will compact the material while it is being moved forward to the platen-chamber, and feeding mechanism which has its spurs moving continuously in the sides of the feeding-chamber toward the platen-chamber, of a gate which is operated automatically to alternately open and close communication between the feeding and platen chamber.

37. In a baling-press, the combination, with a platen-chamber having a feed-opening in its side, and feed mechanism moving in the sides of a feeding-chamber toward the platen-chamber, of gate F, (or F',) pivoted from the body of the press, and mechanism operated by the forward movement of the platen to swing said gate from a side of the feeding-chamber to a closing position at the feed-opening in the platen-chamber while the platen is being moved forward thereon, and mechanism for effecting a release of the holding of the gate at the feed-opening before the platen has fully completed its forward movement.

38. In a baling-press, the combination, with the platen-chamber having a feed-opening in one of its sides, and a gate adapted to close and open from said feed-opening, and mounted on shaft T, of the quadrant-pinion also mounted on said shaft, and rack-bar H, pivoted to platen I, for operation substantially as set forth.

39. The combination, with gate F (or F') of quadrant-pinion G (or G') and a tripping projection, all secured with shaft T, so as to turn with the same, of rack-bar H, (or H',) pivoted to platen I, (or I',) and having cheek n^4, substantially as and for the purpose set forth.



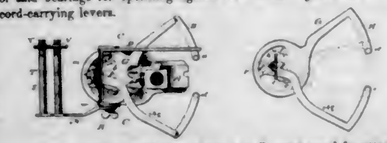
40. The combination, with gate F, (or F',) quadrant-pinion G, (or G',) shaft T, and catching-notch t', made with said pinion, and with a piece secured to said shaft, of elastic dog u^3, and mechanism for releasing said dog by the action of the forward movement of the platen carrying the rack-bar, substantially as and for the purpose set forth.

41. In a baling-press, the combination, with the platen-chamber provided with a feed-opening, and gate F, adapted to be moved in one direction to close said feed-opening, and in the opposite direction to open the same, of mechanism secured to a stationary point of the press and connecting with the gate-shaft, whereby the said gate will be moved from a closed position to an open one, when other mechanism, operated by the movement of the platen, releases its hold on the gate, substantially as set forth.

42. In a baling-press, the combination, with feeding-chamber D and feeding mechanism E, moving at the sides of said feeding-chamber toward a feed-opening made in a side of the platen-chamber of the press, of closing-gate F, adapted to be received in a side of the feeding-chamber at the same time the feeding mechanism is in motion, mechanism operated by the forward movement of the platen for swinging said gate from the side of the feeding-chamber to the opening to the platen-chamber and holding the same closed thereto, and mechanism for releasing said gate from such holding, and for swinging the same back in the side of the feeding-chamber, substantially as set forth.

43. In a baling-press, the combination of a platen-chamber provided with a feed-opening, compressing feeding-chamber, feeding mechanism contained within the feeding-chamber and moving continuously toward the platen-chamber, platen feed-opening-closing gate, and mechanism for operating said gate independently of the mechanism operating the feeding mechanism, all for the purpose set forth.

300,643. GAGE-COCK. CHARLES BUTTERS ROGERS, St. Peter, Minn. Filed Aug. 13, 1883. (No model.)



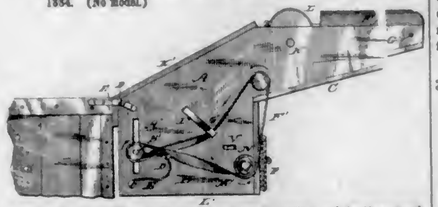
Claim.—1. The combination, with the pipe P, and means, substantially as described, for operating said pipe, of the sleeve E, secured to the upper end of the pipe, and valve G, secured to the sleeve E and working in the shank of a gage-cock, substantially as shown and described.

2. The combination, with a gage-cock and a shank, R, secured thereto, and having a recess, I, in its lower face, provided with a packing-ring, *n*, of the sleeve E and valve G, secured to the sleeve, substantially as shown and described.

3. The combination, with the angular gage-cock V and shank R, secured thereto, and having a recess, I, in its lower face, provided with a packing-ring, *n*, of the sleeve E, valve G, its stem being provided with grooves *r r*, and a hole near its lower end, screw or pin S, pipe P, secured to the lower end of the sleeve, collar O, bracket D, and lever L, having prongs *e l*, substantially as shown and described.

300,644. EMBROIDERING ATTACHMENT FOR SEWING-MACHINES. JOSEPH S. SACKETT and JOSEPH P. LAVIGNE, New Haven, assignors, by direct and mesne assignments, to the Sackett Manufacturing Company, Wallingford, Conn. Filed Jan. 28, 1884. (Model.)

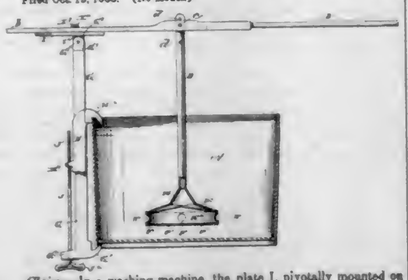
Brief.—The device is attached to the presser-bar of a sewing-machine, and is operated by its needle-bar. The cord-carrying fingers vibrate across the needle-path in front of the needle. The dog carried by the short arm of the bell-crank operating-lever is, by its nose engaging a lug, alternately reciprocated in its bearings, thereby exposing the ends of said bearings for operating against the vertical lugs on one of the cord-carrying levers.



Claim.—1. The combination of the base B, constructed for attachment to or as a part of the presser-foot of a sewing-machine, the vertically-vibrating lever D, constructed for engagement with the needle-bar,

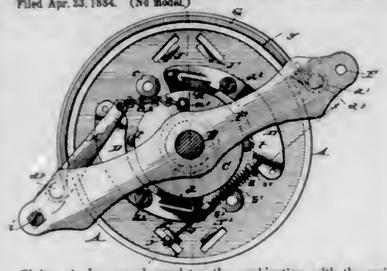
the lever G, pivoted on a vertical stud on the base in rear of the presser-foot, and so as to vibrate in a plane at right angles to the plane of vibration of the lever D, its forward or free end provided with the eye *d*, and the dog *h*, arranged upon the shorter arm of the lever D, and so as to slide from right to left, the lever G provided with the shoulders *e f* on opposite sides of the pivot upon which it turns, and in front of the dog and on the rear extension of the lever G with a stud, *n*, in rear of the dog, said dog provided with a nose, *o*, whereby in one descent of the lever D the dog is thrown to one side, and in the next descent of the lever D the dog is thrown to the opposite side, and so as to alternately engage with the shoulders *f e* on the lever G in the ascent of the lever D, substantially as described.

2. The combination of the base B, constructed for attachment to or made as a part of the presser-foot of a sewing-machine, the lever D, arranged on said base and constructed for engagement with the needle-bar of the sewing-machine, whereby said lever is caused to vibrate in a vertical plane, the lever G, pivoted on a vertical stud on the base in rear of the presser-foot, and so as to vibrate in a horizontal plane, the said lever G extending forward of the presser-foot and there provided with an eye, *d*, and the dog *h*, arranged on the shorter arm of said lever D, and in bearings parallel with the plane of the lever G, the said lever constructed with shoulders *e f* in front of the dog, and with a stud, *n*, in rear of the dog and on the rear extension of the lever G, and the dog provided with a nose, *o*, substantially as and for the purpose described.



3. The combination of the base B, constructed for attachment to or as a part of the presser-foot of a sewing-machine, the lever D, the lever G, constructed with shoulders *e f*, and with a stud, *n*, the dog *h* on the shorter arm of the lever D, and so as to be moved to the right and left, and the lever M, hung to the base in rear of the pivot of the lever G, and constructed to engage the said lever G, each of the said levers G M extending forward of the presser-foot and there provided with an eye, *d*, substantially as described.

300,645. BAND-CUTTING AND FEEDING ATTACHMENT FOR THRASHING-MACHINES. CASS B. SCHERER, Cicero, Ind. Filed Feb. 13, 1884. (No model.)

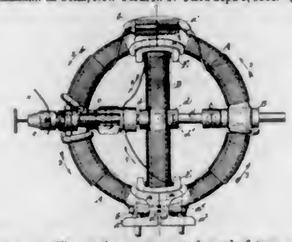


Claim.—The combination, in a band-cutting and feeding attachment for thrashing-machines, of a casing formed with a chute at its receiving end and a rectangular casing at the rear, a downwardly-inclined endless apron traveling in the chute, a roller journaled over the lower end of the inclined apron and provided with a number of curved knives, a feed-apron traveling in the bottom of the rectangular casing, a reciprocating spreader-bar sliding above the forward end of the apron, a fluted roller sliding with its ends in vertical slots in the rear end of the casing, and curved springs formed with bearings for the roller-shaft in their ends, and secured to the casing with their other ends, all constructed and combined as and for the purpose shown and set forth.

300,646. WASHING-MACHINE. MARTIN H. SCHUG, Easton, Pa. Filed Oct. 15, 1883. (No model.)

Claim.—In a washing-machine, the plate I, pivotally mounted on standard G, said plate being provided with a top stud, in combination with a lever having a longitudinal slot in its forward end, and a pounder secured to said lever, substantially as described, and for the purposes set forth.

300,647. SPEED-REGULATOR. JOHN H. SHARP, Doylestown, Pa. Filed Apr. 23, 1884. (No model.)



Claim.—1. In a speed-regulator, the combination, with the main flanged wheel on the shaft B, of the hub loosely applied thereon, and the spring-actuated clamping or gripping devices, all constructed and adapted to operate substantially in the manner and for the purposes described.

2. The combination of the main wheel on the shaft B, the hub loosely applied on the collar of said wheel, the spring-actuated clamping-levers, and the adjustable tension device, as described, for these levers, substantially as described.

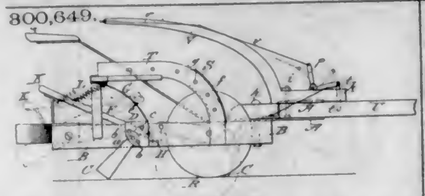
3. The combination, in a speed-regulator, of a main flanged wheel, an internal hub, spring-actuated clamping devices regulated by the adjustable tension device, a stationary arm or stanchion, a pivoted arm flexibly connected to said hub, and the external clamp, G, all constructed and adapted to operate substantially in the manner and for the purposes described.

4. A speed-regulator consisting of a main flanged wheel keyed to the shaft B, a hub having a pulley on it loosely applied to said hub, clamping jaws or lever actuated by a spring provided with the tension device, a stationary stanchion on a pivoted arm, H, and a flexible connection between this arm and the hub, substantially in the manner and for the purposes described.

300,648. ELECTRIC MOTOR. HENRY B. SHERIDAN, Cleveland, Ohio, and HERMANN A. GORN, New York, N. Y. Filed Sept. 5, 1883. (No model.)

Claim.—1. The stationary magnet formed of two magnets, A, which are joined together at their poles by curved cross-heads *a*, and provided at one of the said poles with lugs and fastening devices a^2 a^3, in combination with an armature revolving in a plane at right angles to that of the said magnet.

2. In combination with the magnet A A, the armature consisting of the bar D, wound crosswise, and mounted with its longer axis of cross-section at right angles to its axis of rotation, and the shoes E, secured to the ends of the said bar, the said armature being arranged to revolve in a plane at right angles to that of the said magnet, substantially as and for the purpose set forth.



3. The curved shoes E, U-shaped in cross-section, substantially as shown, in combination with the magnet A A, composed of united magnets, and having at its poles curved and concave cross-heads *a a*, and with the armature-core D arranged to revolve in a plane at right angles to that of the said magnet, substantially as specified.

300,649. CULTIVATOR AND COTTON-CHOPPER. JOSIAH SHERMAN, Atlanta, Ga. Filed Oct. 4, 1883. (No model.)

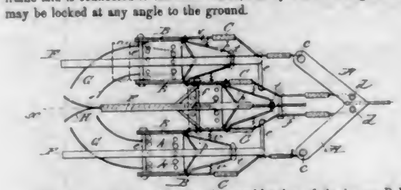
Brief.—A laterally-vibrating tongue controlled by a lever having a spring-pin. Crooked beams to place the teeth on each in different lines of draft. Between the beams at the rear are boxes carrying various implements pivoted on their centers and rocking vertically. Each box has a handle or lever to rock it and a retracting-spring. The boxes may be secured level or at any angle of inclination by a segment and pin.

Claim.—1. In a cultivator, the combination of the front pieces, A A, the crooked beams B B, of varying length, each being bent to form

300,649.

two or more broken lines for the attachment of cultivating devices, the cuffs D, adjustable harrow-teeth C, and the pivoted boxes E, carrying cultivating mechanism, substantially as described.

2. In a cultivator, the combination, with the beams B B, of cultivating devices pivoted between the rear ends of the adjacent beams, and provided with levers K K and springs L L, whereby a vibratory or oscillating movement is imparted to said cultivating devices, substantially as described.



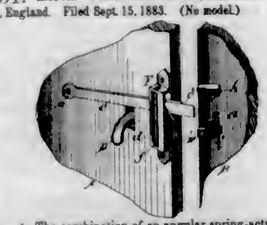
3. In a cultivator, the combination, with the beams B B, of the pivoted boxes E E, carrying cultivating devices, and provided with adjusting mechanism, substantially as described.

4. In a cultivator, the combination of the beams B B, pivoted boxes E E, carrying cultivating devices, and provided with levers K K, springs L L, and yokes F F, the perforated curved standards G G, and pins *e e*, substantially as described.

5. In a cultivator, the combination, with the frame A B and pole U, of the lever V, having foot *k*, the rods *m m*, bell-crank *p*, bolt *l*, and cord *v*, whereby the machine may be turned and held to any desired angle with the line of draft, substantially as described.

300,650. CULTIVATOR AND COTTON-CHOPPER. JOSIAH SHERMAN, Atlanta, Ga. Filed Oct. 4, 1883. (No model.)

Brief.—The cultivating rear teeth are placed upon rocking frames centrally pivoted, and having vertical vibration by means of a handle upon each frame. A yoke slides upon the front arm of each rocking frame and is connected to the main frame, and by it the rocking frames may be locked at any angle to the ground.



Claim.—1. In a cultivator, the combination of the beams B B, pivoted boxes E E, composed of plates *g h k*, and bolts *i*, said boxes being provided with perforated shanks *m*, and handles F, the bails *p p*, springs *o o*, and the laterally-adjustable cultivators attached to said boxes, substantially as described.

2. In a cultivator, the combination of the beams B B, boxes E E, having perforated shanks *m m*, the bails *p p*, and pins for adjustably connecting said bails and shanks, substantially as described.

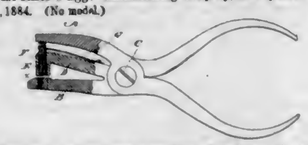
3. In a cultivator, the combination of the frame A B, formed in detachable parts, the harrow-teeth D, the pivoted boxes E, having shanks *m*, and levers F, the bails *p*, and the laterally-adjustable cultivators G H, attached to said boxes, substantially as described.

300,651. LATCH. WILLIAM B. SHORLAND, Manchester, County of Lancaster, England. Filed Sept. 15, 1883. (No model.)

Claim.—1. The combination of an angular spring-actuated friction-plate with a latch-guard and a pivoted latch, substantially as described.

2. The combination of a friction-plate, F', with a latch-guard and latch, whereby the latch is held up by said plate when the door is open, and released by the shoulder *i* on the catch when the door is closed, substantially as described.

3. The combination of a latch, a latch-guard, and a friction-plate located in front of the free end of the latch, all relatively arranged and adapted to operate substantially as described.

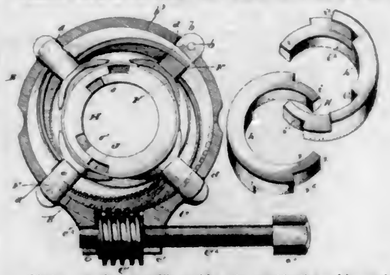


4. The catch-plate G, provided with a shoulder, *i*, adapted to press back a catching-plate, F', and release a latch, *c*, a latching-lip, *g*, for the latch, and a beveled nose, *h*, adapted to act on the upper beveled edge, c^3, of the latch in the act of closing the door, substantially as described.

5. The combination of a pivoted latch, a spring-actuated friction-plate to hold said latch in an elevated position, a catch-plate, and a releasing-shoulder, *i*, arranged to positively press back the friction-plate and release the latch when the door is closed, substantially as described.

6. The combination of a latch having a beveled edge, c^3, a latch-guard having a spring-actuated friction-plate for holding up the latch, a catch having a releasing-shoulder arranged to bear against the plate, and an under beveled nose above said catch and shoulder, substantially as described.

7. The combination of a guard for a gravitating latch, the angular friction-plate F', a spring adapted to act on said plate, a latch, means for raising the latter, a catch, a shoulder arranged to bear against the latch, and an under beveled nose, *h*, all arranged and adapted to operate substantially as described.



300,652. PUNCH. CARL J. A. SJOBERG, Bridgeport, Conn., assignor to the Smith & Egge Manufacturing Company, same place. Filed May 21, 1884. (No model.)

Claim.—1. A ticket-punch consisting of two levers pivoted together, one provided with arms B D, formed in one piece with the handle, and with a head, E, extending downward from the arm D, nearly in contact with the arm B, the other provided with an arm, A, extending over the arm B, a punch-pin in the head E, above an opening in the arm B, operated successively by the arm A and by a lifting-spring, G, substantially as set forth.

2. The combination, with the recessed lower arm of a punch-lever, of an overhanging arm terminating in a head extending downward to leave only a slit between it and the lower arm, a lever having an overhanging arm, intermediate spring, and a punch-pin operated successively by the overhanging arm and the spring, substantially as set forth.

300,653. METALLIC PACKING FOR PISTON AND VALVE RODS. CHARLES T. SLEEPER, Chicago, Ill. Filed Feb. 29, 1884. (No model.)

Claim.—1. In a metallic packing, the combination, with a casing or box and sectional metallic packing-rings located therein, of followers engaging the rings at different points on their peripheries, and means, substantially as described, for imparting simultaneous movement to all of said followers, substantially as set forth.

2. In a metallic packing, the combination, with a casing or box and sectional metallic packing-rings located therein, of followers and a cam-ring for contracting the packing-rings, substantially as set forth.

3. In a metallic packing, the combination, with a casing or box and metallic packing-rings located therein, of radially-adjustable followers, a cam-ring for actuating said followers, and worm-gearing for rotating the cam-ring, substantially as set forth.

4. In a metallic packing, the combination, with a casing or box and metallic packing-rings located therein, of radially-adjustable followers and means, substantially as described, for positively and simultaneously moving said followers either inwardly or outwardly, substantially as set forth.

5. In a metallic packing, the combination, with a box or casing

and metallic rings located therein, of radially-adjustable followers, bands interposed between the followers and packing-rings, and a cam-ring for actuating said followers, substantially as set forth.

6. In a metallic packing, the combination, with a box or casing and metallic packing-rings located therein, of radially-adjustable followers and a cam-ring, said followers and cam-ring being connected by lugs and grooves, substantially as set forth.

7. In a metallic packing, a box or casing made in two sections, in combination with a cam-ring seated in an annular groove formed on the interior of said sections, substantially as set forth.

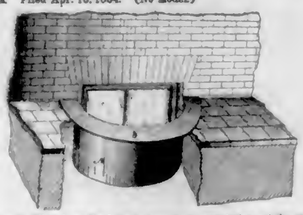
8. In a metallic packing, the combination, with a box or casing and a cam-ring seated in an annular groove formed within the casing, said ring being provided with a segmental worm-gear, of a worm-shaft journaled in bearings formed in a projection formed on the box or casing, substantially as set forth.

9. In a metallic packing, the combination, with a box or casing and sectional packing-rings located therein, of followers engaging the packing-rings at different points for contracting the packing, and annular ring-bearings seated against the outer face of the packing-rings, substantially as set forth.

10. The combination, with a stuffing-box, a box or casing containing adjustable packing-rings, and followers engaging the rings at different points, of an annular ring-bearing seated against the gland of the stuffing-box, and a face-plate for retaining the casing in place, substantially as set forth.

11. A sectional metallic packing-ring for piston and valve rods, and adapted to be contracted in size to compensate for wear, the ends of the sections being formed with double overlapping joints on the sides and periphery of the ring, each section of the ring comprising more than a half-circle, substantially as set forth.

12. The combination, with a stuffing-box, of a casing provided with metallic packing, and a face-plate for retaining the casing between the stuffing-box and face-plate, substantially as set forth.



13. The combination, with a stuffing-box and a box or casing containing adjustable metallic packing-rings, the latter engaging the rod outside of the stuffing-box, of a face-plate and a nut for retaining the box or casing in place, substantially as set forth.

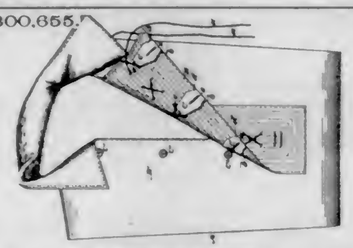
14. The combination, with a stuffing-box and a laterally-adjustable casing containing metallic packing-rings seated against the end of the gland of the stuffing-box, of a face-plate and a nut for retaining the packing-rings against displacement, substantially as set forth.

15. The combination, with a rod, of a detachable casing or box provided with adjustable metallic packing, and means, substantially as described, for allowing the packing a self-lateral adjustment, and for preventing it from moving in the direction of the movement of the rod, substantially as set forth.

16. The combination, with a box or casing provided with adjustable packing, of a device, substantially as described, for automatically compensating for wear of the bearings between the packing and the gland or cylinder, substantially as set forth.

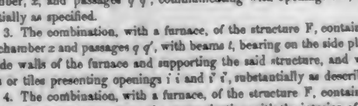
300,654. AREA-WINDOW PROTECTOR. JOSEPH F. SMITH, Pittsburg, Pa. Filed Apr. 10, 1884. (No model.)

Claim.—1. The described area-protector, consisting of the metallic guard or body A, having horizontal flange *b*, adapted by its flange to rest upon the sidewalk and by its ends to rest against a house-wall, substantially as described.



2. The area-protector consisting of the metallic guard or body A, having flange *b* and bottom *c*, substantially as described.

300,655. SHIRT. WALTER M. STEFFACHER, Philadelphia, Pa. Filed Dec. 7, 1883. (No model.)

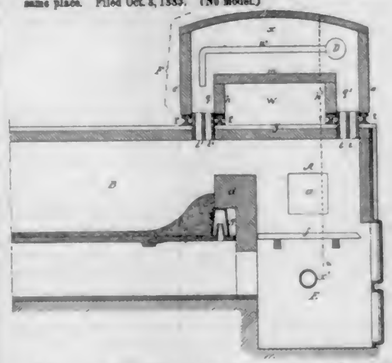


Claim.—1. A shirt having a closing-flap provided with a series of buttoning-tabs independent of each other, each of said tabs being secured to the flap along two of its sides, leaving the outer corner disconnected, substantially as and for the purpose set forth.

2. A shirt having a closing-flap provided with a series of buttoning-tabs independent of each other, each tab being secured to the flap in such manner that its outer corner is left disconnected from the flap, substantially as and for the purpose set forth.

300,655.

300,656. SKATE-SHARPENER. XAVIER ST. PIERRE, Osceola, Nev. Filed Feb. 9, 1884. (No model.)



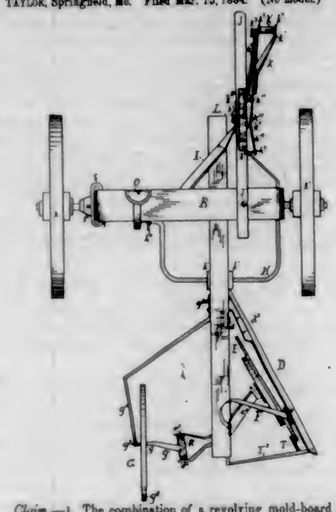
Claim.—1. The skate-sharpening file B, having a stud, *d'*, and flat or rounded sides or edges, in combination with the holder A, having end pieces, *b b'*, one being apertured, substantially as and for the purposes set forth.

2. The file B, formed with the stud *d'*, in combination with the holder A, having cheek-pieces *a* and lip *b*, and end piece, *b'*, having aperture *d*, substantially as and for the purposes set forth.

3. The holder A, having guiding or cheek pieces *a*, lip *b*, end plate, *b'*, and re-enforcing lapping lips *c c*, in combination with the file B, having flat or rounded edges or sides, and formed with the stud *d'* at one end, substantially as and for the purposes set forth.

4. In a skate-sharpening device, the holder A, struck up of sheet metal, with the cheek-pieces *a a*, the end pieces, *b b'*, one having an aperture, *d*, and with the end lapping lips, *c*, all in one piece, in combination with the file B, having the stud *d'*, substantially as and for the purpose set forth.

300,657. PUDDLING AND HEATING FURNACE. WILLIAM STUBLENDK, Bethlehem, Pa., assignor to the Stabblebine Patents Company, same place. Filed Oct. 3, 1883. (No model.)



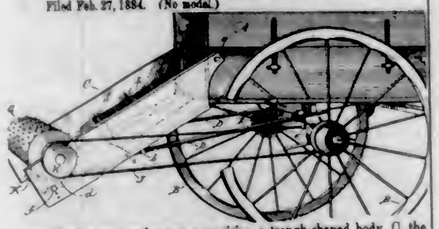
Claim.—1. The combination, with a furnace, of the following elements, namely: first, a gas-chamber, *x*; second, openings *i i*, forming communication between the said chamber and the fire-chamber of the furnace, near the front of the same; third, openings *i' i'*, terminating at or near the rear of the bridge-wall, and, fourth, a blast-pipe communicating with the gas-chamber, all substantially as set forth.

2. The combination, with a furnace, of a structure which is elevated above the roof *y*, so as to leave an opening, W, and which contains a gas-chamber, *x*, and passages *q q'*, communicating with openings *i i'*, substantially as specified.

3. The combination, with a furnace, of the structure F, containing the chamber *x* and passages *q q'*, with beams *t*, bearing on the side plates or side walls of the furnace and supporting the said structure, and with slabs or tiles presenting openings *i i* and *i' i'*, substantially as described.

4. The combination, with a furnace, of the structure F, containing the chamber *x* and passages *q q'*, communicating with the interior of the furnace, and the blast-pipe D, having branches *w*, directed at the ends into or toward the passage *q*, as set forth.

300,658. SULKY ROTARY MOLD-BOARD PLOW. SAMUEL H. TAYLOR, Springfield, Mo. Filed Mar. 15, 1884. (No model.)



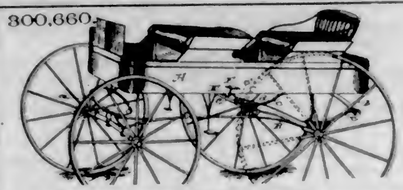
Claim.—1. The combination of a revolving mold-board in a plow with a sleeved support, T, an auxiliary wheel, G, and a continuous revolving axle having an angular joint, substantially as and for the purpose set forth.

2. In a plow, the combination of a beam with a share, a revolving mold-board having an axle which has bearings *d' d'* in a frame, *d*, and an auxiliary wheel, G, having its axle connected by an angular joint with the axle of the said mold-board, all substantially as shown and described.

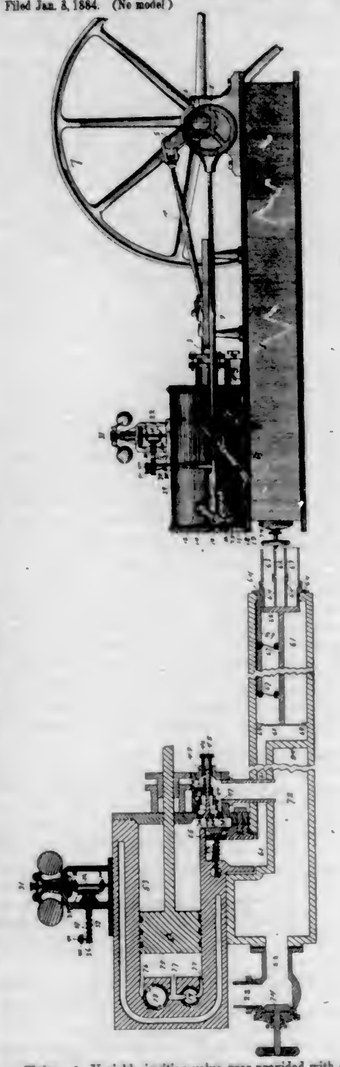
3. An auxiliary wheel, G, combined with a revolving mold-board, E, the axles of which, *g e*, are forked, *g' g' e' e'*, and secured to a block, R, substantially as shown and described, for the purpose set forth.

4. A spring ratchet-lever, K, composed of a handle-piece, *k*, in which is attached a cranked bolt, k^1, having bearings k^2 k^2 k^2, a forked lever, *k'*, having a spring ratchet-rod, k^3, the lower end of which enters holes k^2, and an arm, k^{31}, substantially as shown and described.

300,659. SEED-SOWER. WILLIAM HENRY THOMAS, Fulton, Mo. Filed Feb. 27, 1884. (No model.)



Claim.—A seed-sower comprising a trough-shaped body, O, the upper rear corners of whose sides, extending farther back than its floor, are provided with pins *a*, and a portion of its bottom K pivoted at *e*, in combination with a pin, *f*, and holes in the side boards, a toothed roller, G, journaled in the sides, pulleys H on the shaft of said roller, belts J, adapted to run on the said pulleys and on the hubs of a common wagon, and braces D, having pin-holes and pins *c*, substantially as shown and described, whereby the seeder may be hung at the points *a* to a common wagon, and be adjustably supported by the braces D, and be operated by the turning of the wagon-wheels in traveling.



300,660. SPRING-COUPLING FOR VEHICLES. GEO. F. THOMPSON, Oshkosh, Wis., assignor to himself and Andrew Wilson, same place. Filed Feb. 15, 1884. (No model.)

Claim.—The combination of a transverse rod for connecting the ends and equalizing the action of the side springs of a vehicle, and a pair of brackets secured to the body and each cast with a step and with a socket for supporting said rod, substantially as described and shown.

300,660.

300,661. GAS-MOTOR ENGINE. NILES-HIBBARD THOMPSON and HENRY C. SWAN, Washington, D. C.; said SWAN assignor to said Thompson. Filed Jan. 3, 1884. (No model.)

Claim.—1. Variable ignition-valve gear provided with a movable sleeve having arms or projections thereon, in combination with a graduated cam, from which the said arms are released at varying points in the stroke, according to the position of the said sleeve.

2. In a gas-engine, the combination, with an ignition-valve, of the graduated cam 11 and the movable sleeve 24, having the arms 25 and 26, substantially as and for the purpose specified.

3. The combination of an inlet-valve, an ignition-valve, and variable valve-gear, operating to admit the charges at a fixed point in the stroke, to vary their volume by cutting off the supply at varying points in the stroke, and to cause their ignition at short and regular intervals after the supply is cut off.

4. The combination of an inlet-valve, an ignition-valve, and variable releasing valve-gear, operating to admit the charges at a fixed point in the stroke, to vary their volume by cutting off the supply at varying points in the stroke, and to cause their ignition at short and regular intervals after the supply is cut off.

5. In a gas-engine, the combination, with an inlet and an ignition valve, of the graduated cam 11 and the movable sleeve 24, having the arms 25 and 26, substantially as and for the purpose specified.

6. The combination of an inlet-valve, an ignition-valve, variable valve-gear, an outlet-valve, and an eccentric operating them.

7. The combination of an inlet-valve, an ignition-valve, variable releasing valve-gear, an outlet-valve, and an eccentric operating them.

8. In a gas-engine, the combination, with an inlet and an ignition valve, of the movable sleeve 24, having the arms 25 and 26, an outlet-valve having the crank 10 and cam 11, and an eccentric, substantially as and for the purpose specified.

9. The combination of an inlet-valve, an ignition-valve, variable valve-gear, a compression-reservoir, and a pressure-regulator, operating to admit the charges at a fixed point in the stroke, to vary their volume by cutting off the supply at varying points in the stroke, and to cause their ignition at short and regular intervals after the supply is cut off, without any material variation in the degree of their compression.

10. The combination of an inlet-valve, an ignition-valve, variable releasing valve-gear, a compression-reservoir, and a pressure-regulator, operating to admit the charges at a fixed point in the stroke, to vary their volume by cutting off the supply at varying points in the stroke, and to cause their ignition at short and regular intervals after the supply is cut off, without any material variation in the degree of their compression.

11. In a gas-engine, the combination, with an inlet and an ignition valve, of the graduated cam 11, the movable sleeve 24, having the arms 25 and 26, the compression-reservoir 72, the pressure-regulator valve 44, and the spring 47, substantially as and for the purpose specified.

12. The combination of an inlet-valve, an ignition-valve, variable valve-gear, a compression-reservoir, and an adjustable pressure-regulator, operating to admit the charges at a fixed point in the stroke, to vary their volume by cutting off the supply at varying points in the stroke, and to cause their ignition at short and regular intervals after the supply is cut off, without any material variation in the degree of their compression, and by means of which the degree of their compression at the time of their ignition may be changed when desired.

13. The combination of an inlet-valve, an ignition-valve, variable releasing valve-gear, a compression-reservoir, and an adjustable pressure-regulator, operating to admit the charges at a fixed point in the stroke, to vary their volume by cutting off the supply at varying points in the stroke, and to cause their ignition at short and regular intervals after the supply is cut off, without any material variation in the degree of their compression, and by means of which the degree of their compression at the time of their ignition may be changed when desired.

14. In a gas-engine, the combination, with an inlet and an ignition valve, of the graduated cam 11, the movable sleeve 24, having the arms 25 and 26, the compression-reservoir 72, the pressure-regulator valve 44, and the adjustable spring 47, substantially as and for the purpose specified.

15. The combination of an inlet-valve, variable valve-gear, a compression-reservoir, and an adjustable pressure-regulator, operating to admit the charges at a fixed point in the stroke, and to vary their volume by cutting off the supply at varying points in the stroke, without any material variation in the degree of their compression when cut off, and by means of which the degree of their compression may be changed when desired.

16. The combination of an inlet-valve, variable releasing valve-gear, a compression-reservoir, and an adjustable pressure-regulator, operating to admit the charges at a fixed point in the stroke, and to vary their volume by cutting off the supply at varying points in the stroke, without any material variation in the degree of their compression when cut off, and by means of which the degree of their compression may be changed when desired.

17. In a gas-engine, the combination, with an inlet-valve, of the graduated cam 11, the movable sleeve 24, having the arm 25, the compression-reservoir 72, the pressure-regulator valve 44, and the adjustable spring 47, substantially as and for the purpose specified.

18. The combination of an inlet-valve, variable valve-gear, a compression-reservoir, and a pressure-regulator, operating to admit the charges at a fixed point in the stroke, and to vary their volume by cutting off the supply at varying points in the stroke, without any material variation in the degree of their compression when cut off.

19. The combination of an inlet-valve, variable releasing valve-gear, a compression-reservoir, and a pressure-regulator, operating to admit the charges at a fixed point in the stroke, and to vary their volume by cutting off the supply at varying points in the stroke, without any material variation in the degree of their compression when cut off.

20. In a gas-engine, the combination, with an inlet-valve, of the graduated cam 11, the movable sleeve 24, having the arm 25, the compression-reservoir 72, the pressure-regulator valve 44, and the spring 47, substantially as and for the purpose specified.

21. The combination, with a compression-reservoir, of a pressure-regulator valve controlled by an adjustable spring pressing it against its seat, operating to permit gas and air to escape from the said reservoir into a receptacle provided for the purpose whenever the pressure in the said reservoir exceeds a predetermined maximum, and by means of which said maximum may be changed when desired.

22. The combination, with a compression-cylinder and a compression-reservoir, of an intermediate pressure-regulator valve controlled by an adjustable spring pressing it against its seat, operating to control the escape of gas and air from the said reservoir back into the said cylinder, and by means of which the maximum degree of compression in the said reservoir may be changed when desired.

23. In a gas-engine, the combination, with a compression-cylinder and a compression-reservoir, of the intermediate pressure-regulator valve, 44, and the adjustable spring 47, substantially as and for the purpose specified.

24. The combination of an inlet-valve, an ignition-valve, variable valve-gear, a speed-governor gearing with a shaft having a spiral thread, so as to rotate it either to the right or to the left, when the arms of the speed-governor either rise above or fall below their normal position, and a lever engaging with and disengaging from the said spiral thread and connecting with and controlling the said valve-gear, operating to control the speed of the engine by slight changes in the position of the arms of the speed-governor.

25. In a gas-engine, the combination, with an inlet and an ignition valve, variable valve-gear, and a speed-governor, of the friction-wheels 33, 34, and 35, the shaft 36, having the spiral thread 37, the levers 40 and 42, the spring 38, and the stop 38', substantially as and for the purpose specified.

26. A cylindrical or slightly-conical valve having two inlet or outlet ports of equal area placed opposite each other, in combination with a gas-engine power-cylinder having corresponding inlet or outlet ports, operating to equilibrate the pressure against the valve of the ignited charges.

27. In a gas-engine, the combination, with the power-cylinder 75, having the ports 77 and 78, of the inlet-valve 18, having the ports 20 and 21, substantially as and for the purpose specified.

28. In a gas-engine, the combination, with the power-cylinder 75, having the ports 76 and 77, of the outlet-valve 13, having the ports 15 and 16, substantially as and for the purpose specified.

29. Cylindrical or slightly-conical inlet and outlet valves, each having two ports of equal area placed opposite each other, in combination with a gas-engine power-cylinder having corresponding inlet and outlet ports, operating to equilibrate the pressure of the ignited charges against the said valves.

30. In a gas-engine, the combination, with the power-cylinder 75, having the ports 76, 77, and 78, of the inlet-valve 18, having the ports 20 and 21, and the outlet-valve 13, having the ports 15 and 16, substantially as and for the purpose specified.

31. An ignition-valve provided with a channel or small chamber which communicates with a gas-burner in the said valve at all times, and with a reservoir of compressed gas and air at all times except when the ignition-port of the said valve is open.

32. The combination, with an ignition-valve having therein a gas-burner and provided with a channel or small chamber which communicates with the said burner at all times, and with a reservoir of compressed gas and air at all times except when the ignition-port of the said valve is open, of a piece of platinum or other refractory material, which is rendered incandescent by the jet of the said gas-burner, for the purpose of relighting the jet when it is extinguished.

33. The combination, with a gas-burner in an ignition-valve, the lighted jet of which is exposed for a brief time to the charges, for the purpose of igniting them, and relieved of the products of combustion by the opening of a vent, of a piece of platinum or other refractory material, which is rendered incandescent by the burning jet, for the purpose of relighting the jet when it is extinguished, and a reservoir supplying the gas-burner with compressed gas and air, for the purpose of the more efficiently effecting and maintaining the incandescence of the platinum.

34. The combination, with a gas-burner in an ignition-valve, the lighted jet of which is exposed for a brief time to the charges for the purpose of igniting them, of a piece of platinum or other refractory material, which is rendered incandescent by the burning jet, for the purpose of relighting the jet when it is extinguished, and a reservoir supplying the gas-burner with compressed gas and air, for the purpose of the more efficiently effecting and maintaining the incandescence of the platinum.

35. An ignition-valve provided with the gas-burner 80, the platinum or other refractory material 81, the channel or small chamber 83, the port 89, and the apertures 85 and 86, substantially as and for the purpose specified.

36. The combination, with the compression-reservoir 72, of an ignition-valve provided with the channel or small chamber 83, the gas-burner 80, the platinum or other refractory material 81, and the port 89, substantially as and for the purpose specified.

37. The combination, with the compression-reservoir 72, of an ignition-valve provided with the gas-burner 80, the platinum or other refractory material 81, the port 89, and the apertures 85 and 86, substantially as and for the purpose specified.

38. The combination, with the compression-reservoir 72, of an ignition-valve provided with the gas-burner 80, the platinum or other refractory material 81, and the port 89, substantially as and for the purpose specified.

39. The combination, with the inlet-valve of the compression-cylinder, of a cam and suitable means for operating the same to open the said valve, for the purpose of preventing the engine from reversing when stopping.

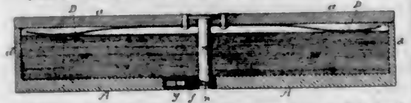
40. In a gas-engine, the combination, with the valve 54, of the rocking shaft 58 and suitable means for operating the same, and the cam 57, substantially as and for the purpose specified.

41. The combination, with the valves of the power-cylinder, of a pivoted lever engaging with the eccentric-rod, and a rocking shaft connecting with the said lever and having a cam for opening the inlet-valve of the compression-cylinder, for the purpose of disengaging the said valves of the power-cylinder from the eccentric-rod, and for preventing the engine from reversing when stopping

42. In a gas-engine, the combination, with the valves of the power-cylinder, of the eccentric-rod 9, the pivoted lever 50, having the pin or projection 51, the rocking shaft 58, connected with the said lever and having the cam 57, and the valve 54, substantially as and for the purpose specified.

43. The combination, with a gas and air chamber, of a gas and air supply valve provided with springs attached transversely to its stem and to a suitable support, and serving as a guide and support to the said valve, for the purpose of controlling the supply of gas and air to the said chamber.

44. In a gas-engine, the combination, with the gas and air chamber 61, of the gas and air supply valve 66 and the springs 67, having a suitable support, substantially as and for the purpose specified.



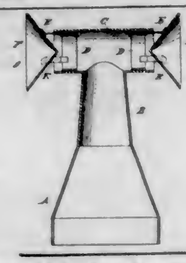
45. The combination, with a gas and air chamber, of a gas and air supply valve provided with a suitable support and guide, having a disk attached to its stem, and provided with a surrounding wall, for the purpose of controlling the supply of gas and air to the said chamber.

46. In a gas-engine, the combination, with the gas and air chamber 61, of the gas and air supply valve 66, provided with a suitable support and guide, the disk 68, and the wall or partition 69, substantially as and for the purpose specified.

47. The combination, with a gas and air chamber, of a gas and air supply valve having a disk provided with a surrounding wall, and springs provided with a suitable support and attached transversely to its stem, for the purpose of guiding, supporting, and controlling the said valve.

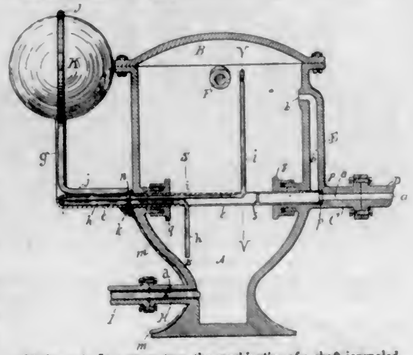
48. In a gas-engine, the combination, with the gas and air chamber 61, of the gas and air supply valve 66, the springs 67, having a suitable support, the disk 68, and the wall or partition 69, substantially as and for the purpose specified.

300,662. TEMPORARY BINDER. WILLIAM TRAUTWINE, Philadelphia, Pa. Filed Nov. 28, 1883. (No model.)



Claim.—1. The combination, in a temporary binder, of the back A, having projections *d*, the cover B, bearing upon said projections, the pin *m*, carried by one of said parts and adapted to openings *y* in the sheets to be bound, and a retainer carried by the other part of the binder and engaging with the pin *m*, as set forth.

2. The combination, in a temporary binder, of the back A, having projections *d*, and the cover B, bearing upon said projections *d*, and having a spring, D, with the pin *m* and the retainer *f*, as set forth.

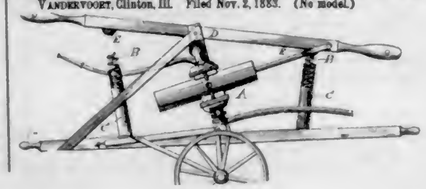


300,663. CHIMNEY-CAP. DAVID CLINTON TRENTER, Adamosa, Iowa. Filed Feb. 4, 1884. (No model.)

Claim.—A chimney-cap having an upwardly-reduced base, surmounted by a tapering neck carrying a transverse pipe open at each end, and connected to the ends of said pipe by band-rings and arms, the obtuse cone-deflectors of larger diameter than said pipe, having their concave surfaces turned from said pipe, substantially as specified.

300,663.

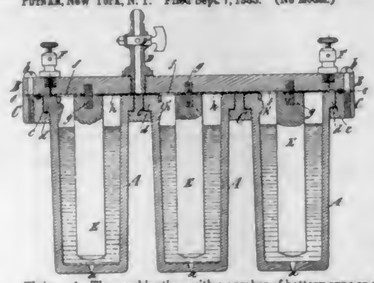
300,664. STEAM-TRAP. WILLIAM VANDERMAN, Willimantic, Conn. Filed Sept. 7, 1883. (No model.)



Claim.—1. In a steam-trap, the combination of a shaft journaled therein and arranged to serve as the valve of the steam-induction passage, a hollow globe mounted upon an arm extending from said shaft and properly counterweighted, an air-escape tube connected with the top of said globe and provided with an automatic valve arranged to close when the globe falls, and two tubes inserted in said shaft and communicating with the interior of the trap and terminating at their opposite ends, one at the top and the other at the bottom of said globe, substantially as specified.

2. In a steam-trap, the combination of body A, provided with the water inlet and outlet passages and their automatic stop-valves, a steam-inlet passage, and a rock-shaft arranged to serve as the valve thereof, a hollow globe and its counter-weight arranged upon arms projecting from said shaft, an automatically-closing air-escape pipe communicating with the top of said globe, and two pipes communicating with the interior of the trap and respectively at their opposite ends with the top and bottom of the chamber in said globe, substantially as specified.

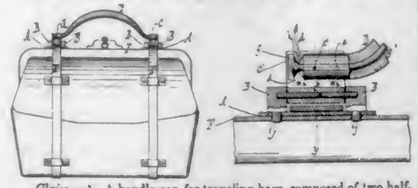
3. In a steam-trap, the combination of a rock-shaft, a hollow globe, and counter-weight arranged upon arms projecting from said shaft, two tubes arranged at one end to communicate with the interior of the trap, and at their opposite ends to communicate, respectively, with the bottom and top of the chamber in said globe, an air-tube communicating with the top of said chamber and provided with an automatic valve, and a steam-controlling valve arranged to be actuated by said shaft when the same is rocked, substantially as specified.



4. In a steam-trap, the combination of a rock-shaft journaled therein and arranged to serve as the steam-controlling valve, a hollow globe suitably counterweighted and arranged on an arm projecting from said shaft, and a system of tubes arranged to allow the water to rise in said globe coincidently with that in the trap and to recede in the same manner when both are being emptied, substantially as specified.

300,665. ATTACHMENT FOR FIRE-ENGINES. MANLY ROAND VANDERVOORT, Clinton, Ill. Filed Nov. 2, 1883. (No model.)

Claim.—In a hand fire-engine, the operating-lever D, provided with rubber bumpers E, combined with the springs B, and spring-holders C, substantially as and for the purpose shown and described.



300,666. ELECTRIC BATTERY. JOSEPH C. VETTER and STEPHEN G. PUTNAM, New York, N. Y. Filed Sept. 7, 1883. (No model.)

Claim.—1. The combination, with a number of battery cups or cells, each having a valveless aperture in its lower portion, of a head wherein the cups or cells are secured and from which they depend, and which contains an air-tight chamber with which all the cups or cells are in communication, and a vent-tube leading from said air-tight chamber and provided with a cock or valve, substantially as and for the purpose described.

2. The combination of the plates B C, secured together in an air-tight manner, and having the air-tight chamber *f* between them, the vent-tube and valve D D′, and the cells or cups A, fixed in the plate C, and having each a valveless aperture, *a*, substantially as herein described.

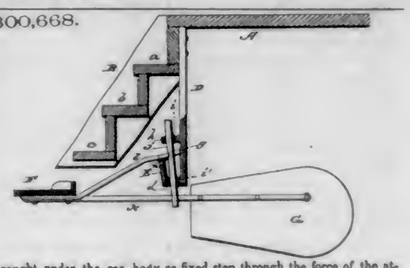
300,667. HANDLE AND HANDLE-CAP FOR TRAVELING-BAGS. FRANZ WALDSCHMITT, New York, N. Y. Filed Apr. 17, 1884. (No model.)

Claim.—1. A handle-cap for traveling-bags, composed of two half-shells, between which the handle is fixedly clamped, and two lugs in which the handle-cap swivels, to permit the cap and the handle to swing together to either side of the bag-frame, substantially as shown and described.

2. The combination of the handle, the handle-cap embracing the end of the handle, and composed of two half-shells, C C′, the former one, C, having a hub, *b*, and the latter one, C′, connected with the former, the lugs B B, and a pin, *a*, mounted in the lugs and forming the axis of the hub on one of the half-shells, substantially as described.

3. The combination, substantially as hereinbefore described, of the two half-shells for clamping the handle, the semi-annular partition in each of the half-shells, and the lugs forming the bearings for gudgeons formed on one of the half-shells.

4. The combination, substantially as hereinbefore described, of the two half-shells for clamping the handle, the semi-annular partition in each of the half-shells, the spurs projecting from the inner surfaces of the half-shells, and the lugs forming the bearings for gudgeons formed on one of the half-shells.



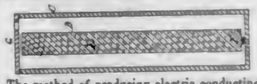
5. The combination, substantially as hereinbefore described, of the two half-shells for clamping the handle, the semi-annular partition in each of the half-shells, and the handle provided with a neck, *g*, and head A.

6. The combination, with the compartments *f*, formed in the handle-cap and with the handle, of a wire extending through the handle, and provided with heads which engage with the compartments *f*, substantially as and for the purpose shown and described.

7. The combination, with the handle D, of a wire, *g′*, extending entirely through the handle, and having heads A formed at its ends, substantially as and for the purpose described.

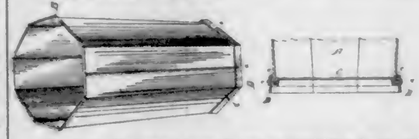
300,668. CAR-STEP. WILLIAM R. WILCOX, St. Joseph, Mich. Filed Mar. 31, 1884. (No model.)

Claim.—1. The combination, with a car, of a pivoted or hinged step having means, substantially as shown, by which the step may be



brought under the car-body or fixed step through the force of the atmosphere caused by the momentum of the car.

2. The combination, with the platform of a car, of a hinged step having a vane connected thereto, and provided with a stop, whereby the step may be automatically operated by atmospheric pressure created by the momentum of the car, substantially as specified.



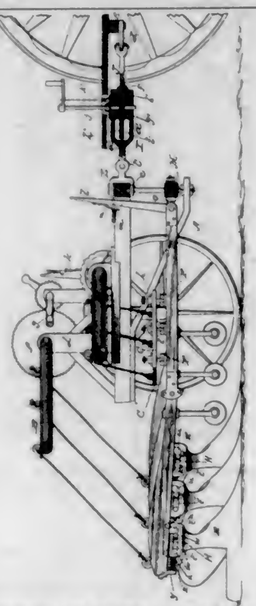
3. In combination, the movable step F, horizontal rod *k*, vane G, brace *l*, rod *j*, bar D, horizontal plate A, provided with the aperture *i*, cross-piece *d*, provided with the aperture *i′*, and bar E, provided with the notch *n*, and terminating in the forked inclined portion *g g′*, substantially as and for the purpose described.

300,669. ELECTRICAL CONDUCTOR. JOHN J. WILLIAMSON, Boston, Mass. Filed Jan. 23, 1884. (No model.)

Claim.—The method of producing electric conducting-wires composed of copper and copper alloys by casting or pouring molten fluid copper or copper alloys to and around a solid bar, or within a hollow ingot of copper or copper alloys, said solid bar or hollow ingot being, while the casting is effected, at such high degree of temperature that the pouring of the molten metal to it will produce metallic fusion between the sections, and afterward reducing such ingot to the diameter proper for electrical conductors by the usual suitable means.

300,670. ASH-BOX. JOHN THOMAS WILSON, Toronto, Ontario, Canada. Filed Feb. 14, 1884. (No model.)

Claim.—1. The tapered pieces A, bent substantially as shown, and suitably jointed together, in combination with the bottom C, provided with the inwardly-inclined flange *b* and hook *c*, the said bottom being arranged in the interior of the box to fit tightly against the sides, the hook *c* extending below and bent over the end edges of the box, substantially as and for the purpose specified.



2. The tapered pieces A, bent substantially as shown, and having the notches *a* made at each point where the bend takes place, in combination with the bottom C, provided with inwardly-inclined flange *b*, having notches *f* cut in it to form the hook *c*, said bottom being arranged tightly in the interior of the box, the hook *c* protruding below and bent over the bottom edge of the sides of the box, substantially as and for the purposes specified.

3. An octagon or similarly-shaped box formed of the tapered pieces A, connected together as specified, and having a flanged bottom, C, arranged tightly within it, the hook *c* protruding below and bent over the lower edge of the sides of the body, in combination with a metal strap, D, secured to the outer circumference of the box at its smaller end, the bottom edge of the strap projecting below said small end of the box to form a ring, upon which the box shall rest, substantially as described.

300,671. GANG-PLOW. SELDEN L. WILSON, Waynesborough, Pa. Filed Mar. 5, 1884. (No model.)

Claim.—1. The combination, with the plow-frame, constructed substantially as described, having its forward transverse bar, *e*, provided with a rack-bar, of the vertically-adjustable transverse bar M, the hinged bars *m*, swiveled at their forward ends to the said adjustable bar, the spring-levers, and plows, all adapted to operate substantially as and for the purposes specified.

300,671.

2. The combination, with the frame A, of the vertically-adjustable transverse bar M, the hinge-bars *m*, swiveled at their forward ends to the said adjustable bar, the hinge-bars having the castings F, the diagonal bar C, having the vertically-perforated castings *h*, the T-bolt *i*, the plows, and spring-levers *l*, substantially as specified.

3. The combination, with the plow-beams provided with the castings G, having the keel-flanges *v* and laterally-extending studs *w w′*, of the plows having their standards bifurcated at their upper ends, and provided with the elongated open slots *t′*, the vertical stop-pin H, the downwardly-extending arm *y*, and the spring interposed between the said arm and the plow-standard, substantially as specified.

4. The means herein described for adjusting and connecting the plow-frame to a moving motive power consisting of the castings *a′ a′*, having the shoulders *b′ b′*, the bifurcated link J, having shoulders *c′ c′*, the segmental rack-bar *h′*, pinion *g′*, its shaft and crank-arm, the perforated collar *j*, secured to the said shaft by a set-screw or key, and the pin *k′*, for connecting the collar to the casting *a′*, whereby the coupling of the plow-frame with the engine is made rigid laterally, substantially as and for the purposes specified.

5. The combination, with the frame, of the hinge-beams M, having castings F, and the plow-beams, the rock-shaft D, the diagonal bar C, carrying castings *h*, cords for connecting the diagonal bar to the rock-shaft, with means, substantially as shown and described, for operating the same.

6. The combination, with a traction-engine, of a plow-frame and mechanism for moving the plow-frame laterally with relation to the engine, the said mechanism being connected to the plow-frame by a vertical hinge-joint, and to the engine by a lateral hinge-joint, substantially as specified.

300,672. SOLDERING IMPLEMENT. CHARLES ADOLPH GUNTHER WINTHER, Boston, Mass. Filed Feb. 18, 1884. (No model.)

Claim.—1. The combination of a soldering-iron and a handle having to their shanks a ball-and-socket connection or joint, and means of clamping the socket part thereof to the ball, all being for the purpose substantially as set forth.

2. The handle having to its stem the cup and female screw and the slotted and spherically-socketed head, its neck and screw in two parts, as described, in combination with the soldering-iron having its stem provided with a ball to enter the socket of the said head, all being substantially and for use as represented.

300,673. BUTTON. GILBERT T. WOOLSON, New York, N. Y., assignor to Woolson & Miller, same place. Filed Mar. 11, 1884. (No model.)

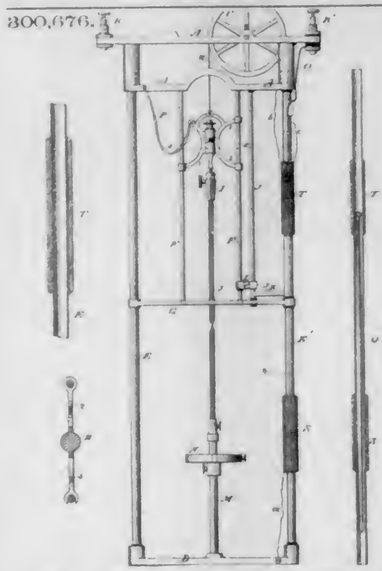
Claim.—A button having the shoe approximately concentric with the head, and having a flat post, B, one end of which is secured to the head at or near its periphery, and the other end of which is rigidly secured to the shoe at its center, and which has the edges *a a′* inclined upward and outward from the shoe, the width of the post at its junction with the shoe being such that said edges are isolated from or considerably inward of the periphery of the shoe, substantially as herein described.

300,674. FIFTH-WHEEL. WILLIAM M. APPLEMAN, Boston, Pa. Filed Mar. 11, 1884. (No model.)

Claim.—1. In an oscillating fifth-wheel, the king-bolt L, rotary king-bolt plate I, and circle *c*, secured to the bed-piece K, in combination with the king-bolt plate H, provided with rocker-bearings *f*, the circle *d*, provided with rocker-bearings *e*, and the bolt F, passing through the rocker-bearings *e* and *f* and secured to the platform A, substantially as and for the purpose shown and described.

2. The king-bolt L, rotary king-bolt plate I, having a circular hollow center, and the circle *c*, secured to the bed-piece K, in combination with the king-bolt plate H, having the raised circular center or bearing *g*, and provided with rocker-bearings *f*, the circle *d*, provided with rocker-bearings *e*, and the bolt F, passing through the bearings *e* and *f* and secured to the platform A, substantially as shown and described.

3. The bolt F, secured to the platform A, the oscillating fifth-wheel G, and king-bolt plate H, mounted upon the bolt F, in combination with the rotary king-bolt plate I, bed-piece K, and king-bolt L, substantially as shown and described.



4. The platform A, having the center bar, C, provided with the brace D, the bolt F, secured to said center bar, C, the oscillating fifth-wheel G, and king-bolt plate H, mounted upon the bolt F, in combination with the rotary king-bolt plate I, bed-piece K, and king-bolt L, substantially as shown and described.

300,675.

Withdrawn

300,676. ELECTRIC-ARC LAMP. JOREK BAIN, Minneapolis, Minn., assignor to the Bain Electric Company, Chicago, Ill. Filed Nov. 11, 1882. (No model.)

300,676.

Claim.—1. In an electric-arc lamp having a constant feed, as described, the combination, with the core of a magnet located within the side frame, of the actuating-coil located outside of said frame, substantially as described.

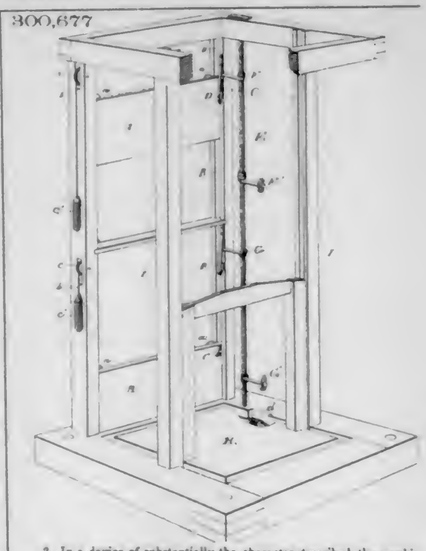
2. In an electric-arc lamp having a constant feed, substantially as described, the combination, with the core of the magnet located within the side frame, of the actuating-coil located on the outside of the frame and adapted to vertical adjustment thereon, substantially as described.

3. In an electric-arc lamp such substantially as described, the combination, with a carbon-carrier, of a core of an electro-magnet connected thereto by a cord or chain, the core and carbon-carrier being attached to the opposite ends of the chain or cord, whereby they tend to counterbalance each other, substantially as described.

4. In the frame of an electric-arc lamp such substantially as described, the carbon and carbon-carrier arranged below the top or head of the frame, in combination with vertical guide rod or rods, an independent conductor-rod, J, connection between said rod and the side frame, and an adjustable clamp arranged upon said rod in the line of travel of the carbon-carrier, substantially as described.

5. In an electric-arc lamp, the combination, substantially as herein set forth, of a carbon-carrier and guide therefor, arranged below the head of the frame, side rods or tubes for supporting the lower carbon, a core arranged within one of said side tubes, coils connected with the circuit and adapted to control said core, arranged outside of the tube, and connections between the carbon-carrier and the core.

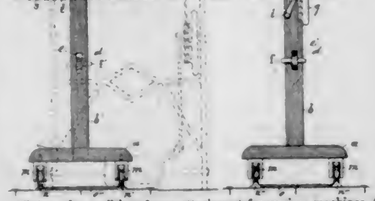
6. The combination, substantially as herein set forth, of a carbon-carrier and guide therefor, arranged below the head of the frame, electrical-circuit connections between the carbon-carrier and the frame, rods or tubes connected to the head of the frame, for supporting the lower carbon, one of the tubes being insulated from the frame, a core arranged inside of one of the tubes and connected to the carbon-carrier, and coils connected to the circuit and supported upon the tube, as set forth.



7. The combination, substantially as herein set forth, with a tube forming part of the frame of the lamp, of a core inside of said tube, and two coils connected to the main and shunt circuits of the lamp, respectively, and made adjustable upon the tube, whereby the movement of the core may be controlled.

300,677. ELEVATOR-GATE ATTACHMENT. ISAAC K. BEEKMAN, Dubuque, Iowa. Filed Mar. 20, 1884. (No model.)

Claim.—1. In a device for automatically closing the vertically-sliding gates of an elevator-shaft, the combination, with the catch C and spring-pawls D, of a series of levers engaging with the spring-pawls to release the gates or doors as the elevator leaves each landing in ascending and descending, substantially as described.



2. In a device for automatically closing the vertically-sliding gates or doors of an elevator-shaft, the combination, with a catch and pawl for holding the gates or doors open, of the vertical rod E, provided with the levers F F' and G G', substantially as and for the purpose set forth.

300,677

3. In a device of substantially the character described, the combination, with the vertical rod E and its series of levers, of the elevator-platform provided with the friction-rollers *d*, substantially as and for the purpose set forth.

300,678. QUILTING ATTACHMENT FOR SEWING-MACHINES. MATHIAS R. BELL and ALBERT H. BELL, Springfield, Ohio. Filed Sept. 8, 1883. (No model.)

Claim.—In a quilting-frame attachment for sewing-machines, the combination of the uprights having vertically-elongated slots formed through them, the cross-beams to the uprights, the rolls supported by said beams, the cross-tie formed at both ends with tenons adapted to pass through and be adjusted vertically in the slots of the uprights, said tenons being perforated at a point that will bring the perforations at the outer faces of the uprights, and wedge-shaped pins entering said perforations and bearing against the outer faces of the uprights, substantially as described.

300,679. APPARATUS FOR PURIFYING MILLET-SEED, &c. ANTON BESSER, Vienna, Austria-Hungary. Filed Sept. 19, 1883. (No model.) Patented in Austria-Hungary Nov. 7, 1881, No. 30,935 and No. 39,348, and in Germany Mar. 6, 1882, No. 20,010.

Claim.—1. In a machine for cleaning and polishing peeled millet-seed, the system of wings D, mounted at suitable distances apart, in combination with the crown C, arms B, and shaft A, the wings being applied with their working-faces nearly tangential to the crown, and covered with suitable elastic material.

2. In a machine for cleaning and polishing millet-seed, the fixed pieces or brackets F, made triangular in cross-section, covered or faced with elastic material on their acting surfaces, and applied at intervals, in combination with the upper half of the mantle or casing, said fixed pieces or brackets having free spaces between them and arranged with their acting surfaces *f'* inclining downward, all substantially as shown and described.

300,679.

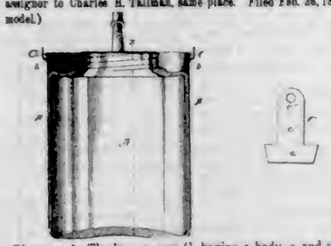
3. In combination, the revolving system of wings D, constructed and applied as set forth, the case having its upper half or mantle E provided with the triangular ribs F, constructed and applied as set forth, and the air-conduits L L', as and for the purposes shown and described.

4. The apparatus for cleaning and polishing millet-seed, consisting of the outer case having the described system of triangular ribs F in its upper part only, its under part being slotted or perforated, as set forth, the revolving system of wings D, these wings and the ribs F having their working-faces constructed and positioned as set forth, and the air-conduits L L', all substantially as shown and described.

300,680. ORNAMENTAL CHAIN-HOOK. CHARLES F. BETERLE, Providence, R. I. Filed Apr. 30, 1884. (No model.)

Claim.—In a chain-hook, the combination of the chain-connecting eye, the shank of the hook, the pivoted hook-arm, the fastening-stud, and the corresponding perforation in the opposite member of the hook, substantially as described.

300,681. ROLLER FOR STORE-SERVICE APPARATUS. ISIDORE BRAUN, Philadelphia, Pa. Filed May 16, 1884. (No model.)

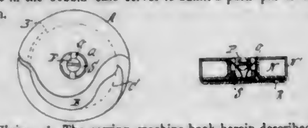


Claim.—1. A roller having a circumferential groove which is clad with elastic material sprung thereinto, substantially as and for the purpose set forth.

2. A roller having a circumferential groove the sides whereof are formed with ridges, and a band of elastic material embracing said ridges, substantially as and for the purpose set forth.

3. A roller having a groove the sides whereof are formed with ridges *a'* and recesses *b*, and a band of elastic material fitted to said groove, substantially as and for the purpose set forth.

300,682. INCASED OIL-CAN. JAMES A. BLANKLEY, Bellaire, Ohio, assignor to Charles H. Tallman, same place. Filed Feb. 26, 1884. (No model.)



Claim.—1. The lugs or ears C, having a body, *c*, and neck *c'*, in combination with the jacket B, having a slit, *b*, the lugs or ears being arranged with the neck outside of the jacket, and the body inside of the same, substantially as and for the purposes described.

2. The combination, with an incased vessel and an incasing-jacket for the same having a slot, *b*, of the ears C, with the body *c* of the same upon the inside of the jacket, and between said jacket and the incased vessel, and the neck *c'* extending out through the slot *b*, substantially as and for the purposes described.

300,683. SEWING-MACHINE HOOK. ADAM BOECHER, New York, N. Y. Filed Nov. 13, 1883. (No model.)

Brief.—A curved slot extends entirely across the face of the oscillating hook and terminates in its rim. The bobbin-case containing the bobbin is placed in the hook through the opening in its back. An adjustable tension-spring is contained in the split hollow post of the bobbin-case, and a set-screw entering said hollow post may be operated by a screw-driver through the central hole in the hook to adjust the tension. A hole in the bobbin-case serves to admit a push-pin to remove the bobbin.

Claim.—1. The sewing-machine hook herein described, provided with the outer face, having a curved slot extending across the face of the hook from the rim thereof, and having an inlet-mouth in said rim, said hook having a hook-point arranged at one side of the inlet-mouth of the slot and projecting outside the plane of the outer face of the hook, for engaging the loop of needle-thread and causing it to enter the inlet-mouth of the slot, substantially as described.

2. The sewing-machine hook herein described, provided with a curved slot in its outer face, which extends inward from the rim of the hook and terminates at the other end in said rim, said hook having a hook-point arranged at one side of the inlet-mouth of the slot, for engaging the loop of needle-thread and causing it to enter the inlet-mouth of the slot, substantially as described.

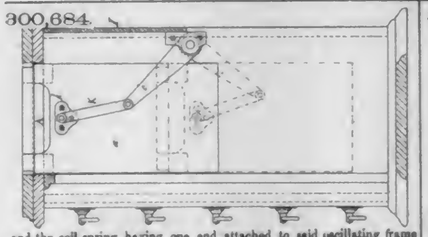
3. The combination of the hook having an open back for the insertion of the bobbin, a closed face provided with a transverse slot, one end of which is closed and the other open through the rim of the hook, to form an inlet-mouth, and a hook-point arranged at the inlet-mouth of the slot, with the bobbin-holder opposite to the open back of the hook, and the shaft supporting both the hook and the bobbin-holder, said hook-point serving to catch the loop of needle-thread and carry one part thereof through the transverse slot and the other part into the inlet-mouth of the slot and cast it about the bobbin, substantially as described.

4. The combination of the hook having an open back for the insertion of the bobbin, a closed outer face provided with a curved slot, having an inlet-mouth opening into the hook-body, and a curved projecting hook arranged at one side of the inlet-mouth of the slot, with the bobbin-holding plate arranged opposite the open back of the hook, and the shaft carrying both the hook and the bobbin-holding plate, said hook-point serving to engage the loop of the needle-thread and carry it into the transverse curved slot and through the inlet-mouth of the slot for casting the loop about the bobbin, substantially as described

5. The combination of the hook having an open back, a slot across its closed face, and a projecting hook-point, with the bobbin-case having an axial post provided with longitudinal slots and arranged in the hook, the bobbin arranged upon the post, the axial tension-spring composed of arms the extremities of which project through the slots of the post against the bobbin, and the set-screw for adjusting the pressure of the arms of the spring against the bobbin, substantially as described.

6. The sewing-machine hook herein described, having an open back, in combination with the bobbin-holder opposite the open back of the hook, the spring or springs acting on the bobbin-holder to keep it in position against and over the open back of the hook, and the hook-shaft supporting the bobbin-holder and the spring or springs, together with the book, substantially as shown and described.

7. The combination of the bobbin-case having the axial hollow post provided with longitudinal slots, the bobbin fitted to the post, the axial tension-spring arranged in the post to project from its slots, thereby acting on the bobbin, and means for adjusting the pressure of the spring against the bobbin, substantially as shown and described.

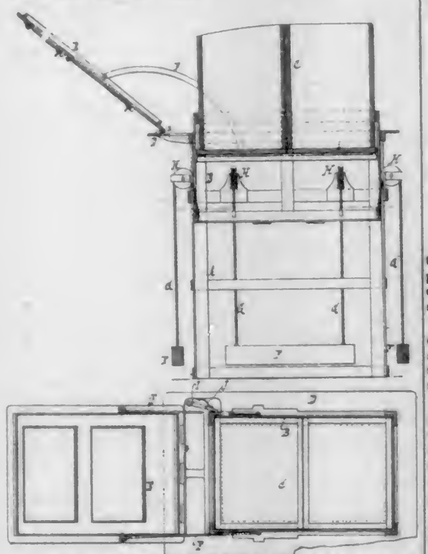


8. The combination of the bobbin-case having the axial hollow post provided with longitudinal slots, the bobbin fitted to the post, the axial V-shaped tension-spring arranged in the post to project from its slots, and the tapering set-screw arranged in the post to act on the tension-spring, substantially as shown and described.

300,684. SEWING-MACHINE TABLE. JAMES BOLTON, Chicago, Ill., and JAMES C. VAN DYKE, Elizabeth, N. J., assignors to the Singer Manufacturing Company of New Jersey. Filed Feb. 24, 1883. (No model.)

Claim.—1. The combination, with a sewing-machine cabinet having an opening in its top and guiding-ways below the said top, of a vertically-movable platform or table located within said ways, and doors hinged to the sides of the cabinet by vertical pivots, and thereby adapted to sustain said platform or table when raised and conceal it when lowered, substantially as and for the purpose set forth.

2. The combination, with the upright sides, perforated top, and vertically-movable platform, of the oscillating frame with projecting arms, the links pivoted to such arms and also to the said movable platform



300,684.

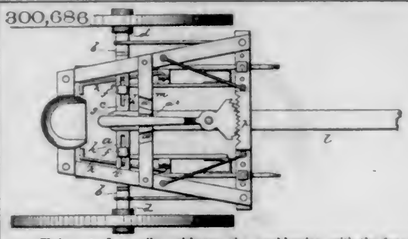
and the coil-spring having one end attached to said oscillating frame and the other secured outside of said frame, substantially as and for the purposes described.

300,685. GARBAGE-RECEPTACLE. VALENTIN BORST, New York, N. Y. Filed Feb. 21, 1884. (No model.)

Brief.—A cover hinged to a projecting rim of a frame is connected to a frame sliding in the main frame by means of pivoted arms. The sliding frame is provided with double chains and lifting-weights, and is held in raised position by a catch.

Claim.—1. The combination, substantially as hereinbefore described, of the main frame, the sliding frame, the cover hinged to the main frame, and pivoted arms connecting the cover to opposite sides of the sliding frame.

2. The combination, substantially as hereinbefore described, of the main frame having its upper end provided with a projecting rim, the sliding frame, the cover hinged to said rim of the main frame at a distance from one side of the frame, and the pivoted arms connecting the cover to opposite sides of the sliding frame.

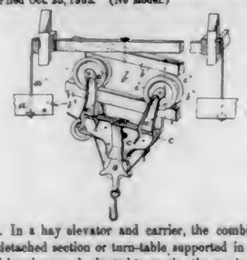


3. The combination, substantially as hereinbefore described, of the main frame, sliding frame, the cover hinged to the main frame, the pivoted arms connecting the cover to opposite sides of the sliding frame, and the lifting-weights of the sliding frame.

4. The combination, substantially as hereinbefore described, of the main frame, the sliding frame, the cover hinged to the main frame, the pivoted arms connecting the cover to opposite sides of the sliding frame, the lifting-weights, and the double chains connecting the weights to opposite sides of the sliding frame.

5. The combination, substantially as hereinbefore described, of the main frame, the sliding frame, the cover hinged to the main frame, the pivoted arms connecting the cover to opposite sides of the sliding frame, and the catch arranged on the main frame to engage the sliding frame in its upper position.

300,686. CULTIVATOR. THOMAS JEFFERSON BOWEN and JAMES FRANKLING BARNES, Pickens, S. C. Filed Mar. 5, 1884. (No model.)



300,686.

Claim.—1. In a sulky-cultivator, the combination, with the frame provided on its forward transverse bar with a loop-rack, *p*, of a tongue pivoted at its rear end to the arched axle, the ratchet-lever pivoted on the pivoted tongue engaging the loop-ratchet, and the transverse notched bar *m*, for seating the lever in its adjustment, substantially as specified.

2. The combination, in an arched axle, of the angle-irons *c*, with spindles *d*, having fulcrum-brackets *i* and studs *i'*, with the axle-bar *c*, having slots *h*, and the bolts *f*, substantially as specified.

300,687. HAY ELEVATOR AND CARRIER. JOHN M. BOYD, Chester, Wis. Filed Oct. 25, 1882. (No model.)

Claim.—1. In a hay elevator and carrier, the combination, with the track, of a detached section or turn-table supported in a horizontal plane on pivotal bearings, and adapted to receive the carrier from either end, and to permit said carrier to be run entirely across it, substantially as described, and for the purposes specified.

2. In a hay elevator and carrier, the combination, substantially as described and shown, of the stop *h*, constructed with the upper lugs, h^4, and the lower inclined lugs, h^3, and the catch-block *g*, provided with the lugs g^3, and placed and sliding in a suitable recess in the body of the carrier, substantially as and for the purposes set forth.

3. The combination, in a hay-carrier, of the single track or way, having stop provided with lateral guides attached to the under side thereof, the catch supported on the carrier and provided with lateral lugs adapted to engage said guides, the grapple pivoted in the carrier, having a hook to engage the sheave-frame, and provided with an extension above its pivotal center, adapted to be engaged by the catch, and the sheave-frame and elevating-rope, substantially as set forth.

4. The combination, with the carrier and the elevating-rope, of the grapple or rope-clamp *i*, supported on the carrier, and hanging between the sheave-frame and the guide-pulley, and provided with means, substantially as described, whereby the draft-rope may be held or released, substantially as set forth.

5. In a hay elevator and carrier, the combination, with the carrier-frame, of the catch *i*, having the upper end of its bars hung upon axle of the pulley c^2, or otherwise fixed to the frame, the roller i^3, journaled in the lower ends of said bars, and the pawl i^2, pivoted to the bars *i'*, and arranged to grasp the rope passed between the trip *d'* and the guide-pulley c^2, and provided with the lever i^4, connected to the operating-cord i^5, substantially as set forth.

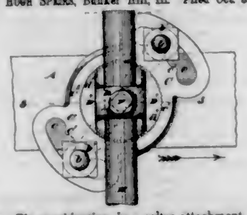
6. The combination, with the frame *c* and the trip d^3, of the grapple *f*, having the hook f', the arm f^3, and upper portion, f^2, and a catch-block sliding vertically and dropping in front of the portion f^2, and locking the grapple when the latter is engaged with the trip, substantially as and for the purposes set forth.

7. In a hay elevator and carrier provided with a catch, having laterally-projected lugs, the stop A, composed of the main piece h^2 and the inclined guide-lugs h^3 h^3, projected out from opposite sides of said piece h^2 at respectively the upper and lower sides thereof, and adapted to engage with the catch, substantially as and for the purposes specified.

8. In a hay-carrier, the combination, with a suitable grasping device for supporting the sheave-frame and a suitable way, of a stop attached to the way, said stop being formed with a downwardly-projecting center piece provided with lateral extensions or lugs on each side, adapted to raise the catch when the carrier approaches from either end of track, and an automatic catch adapted to engage with said stop and pass the same when desired, substantially as set forth.

9. In combination with the carrier-frame, mechanism for supporting the sheave-frame, and a stop secured on the track or way, and provided with means whereby to raise the catch, a sliding catch supported by the carrier-frame and resting upon and being supported by the mechanism for supporting the sheave-frame when in contact with the stop, and arranged in position to drop in engagement with and lock said sheave-frame supporting mechanism when released from the stop, substantially as set forth.

10. The combination, with a hay elevator and carrier and a suitable track or way, of a stop secured to the under side of track, and provided with a lower inclined lug, h^3, and an upper stop-lug, h^4, and an automatic catch supported on the carrier, and adapted to be raised by the lower inclined lug and held in contact with the upper stop-lug of the stop, substantially as and for the purposes specified.



11. In a hay elevator and carrier adapted to run upon a single rail or way, the combination of the stop secured on the track or way, and provided with lower inclined lugs, h^3, and upper stop-lug, h^4, the grapple pivoted in the carrier and provided with an extension, f^2, above its pivot, and the automatic catch provided with lateral lugs arranged to engage the lugs of the stop, said catch being arranged and adapted to alternately engage with said lugs on stop or rest down in front of extension f^2 and lock the grapple, substantially as described, and for the purposes specified.

12. In a hay elevator and carrier adapted to run upon a single track or way, the combination, with the carrier, and suitable means therein for supporting the sheave-frame, of the stop secured on the under side of the track or way, and provided with lateral extensions or lugs, whereby to raise the catch, and suitably formed to permit said catch to pass it, as described, and an automatic catch adapted to alternately engage and lock the mechanism for supporting the sheave-frame as the carrier leaves the stop, and to be locked or held up against the stop by said mechanism when in contact with the stop, substantially as and for the purposes specified.

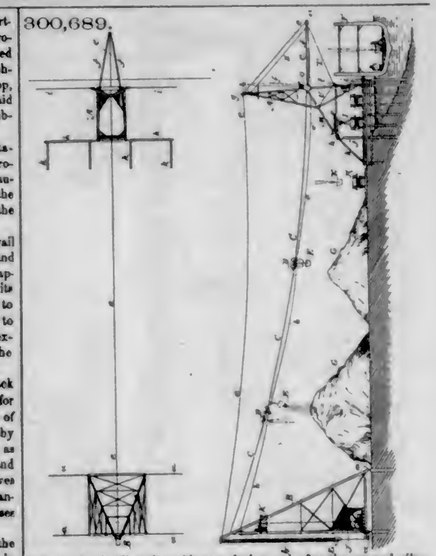
13. In a hay-carrier, the combination, with a stop secured on the track and provided with suitable lateral guides and suitable devices in the carrier for supporting the load, of the catch arranged in the carrier, and having its upper or outer end bifurcated, forming upwardly-projected arms on its opposite sides, and lugs projected or bent inward toward each other from the said arms, substantially as set forth.

14. The hay elevator and carrier substantially as described and shown, composed of the main frame provided with traveling wheels adapted to run upon a single track or way, and pulleys, the grapple arranged therein and formed with hook f', arm f^3, and upward extension f^2, and catch *g*, arranged above the grapple, and adapted to drop down in front of extension f^2 and lock said grapple, and provided with lateral lugs g^3, whereby it may be operated to engage and release the grapple, substantially as set forth.

300,688. COLTER ATTACHMENT. FERDINAND BROTHER, DAVID MORRIS, and HUGH SPENS, Bunker Hill, Ill. Filed Oct. 3, 1883. (No model.)

Claim.—1. The combination, in a colter attachment, of a clamp-plate formed with a central opening to form a socket, and openings in the ends to receive the clip-arms, and a disk having a socket and fitting the central opening in the clamp-plate.

2. The combination of a clamp-plate formed with a central opening to form a socket flaring inwardly, having recesses in the wall thereof to present projections, and a disk having a colter-socket and formed with recesses and projections to fit the socket in the clamp-plate, as set forth.



3. The combination, in a colter attachment, of a clamp-plate having a central opening, and a disk to occupy the opening, having a socket formed with teeth at the inner side, and a screw-bolt to press the shank of the colter against the teeth.

300,689. HOISTING AND CONVEYING MACHINE. ALEXANDER E. BROWN, Cleveland, Ohio. Filed Dec. 7, 1883. (No model.)

Claim.—1. In combination with the piers and cable of a cable tramway for hoisting and conveying apparatus, the hinged bridge or apron, constructed and arranged as specified, so that when raised or turned up the cable is correspondingly bent or turned up, and is thus retained in a taut and useful condition for that portion of its length which remains distended between the two piers, substantially as set forth.

2. In combination with the piers, the cable and the bridge or apron, a device for holding the cable taut during and after the upward vibratory movement of the bridge, and operating as specified, so that during the upward movement of the bridge the pull of the cable cannot operate to either impede or render more difficult the said movement of the said bridge.

300,689.

3. In combination with the outer pier, the cable and the bridge, the device O, (or its equivalent,) capable of being moved out of the way of the carriage D whenever the bridge may be down, all substantially as hereinbefore set forth.

4. In combination with the outer pier and the cable tramway, a hinged bridge or apron arranged and operating, as described, to receive the pulling-strain of the cable in a direction corresponding, substantially, with the direction of the length of the bridge, as set forth.

5. In combination with the piers, the bridge, the main cable C, and the counterbalance-cable *e*, the device for holding the counterbalance-cable whenever the bridge and main cable may be turned up, so that it will continue to work as well then as when the bridge may be down, all substantially as hereinbefore set forth.

6. The movable or adjustable counterbalance-cable-holder device h^5, constructed and operating as specified, so that it may be moved or adjusted out of the way when the counterbalance-cable extends in a substantially horizontal direction from the back pier to the outer end of the bridge, and can be set or adjusted to come over and in line with said counterbalance-cable for the purpose of holding the latter properly when the said cable and bridge shall be turned up, all as hereinbefore set forth.

7. In combination with the apron or bridge, weighted hold-down rods, chains, or guys provided with fasteners, and having arranged with them guide-sheaves, such as seen at *i*, the whole arranged and operating to render easy the securement of the outer end of the bridge to the holdfast-pins near the base of the pier and their releasement therefrom, as occasion may require.

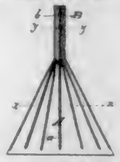
8. In combination with the base of a pier and the track on which it rests, rollers mounted on vertical axes and adapted to facilitate the adjustment of the pier on its tracks, and at the same time prevent any displacement of the pier from the track sidewise of the latter, all as hereinbefore set forth.

9. In combination with a pier and the track on which it rests and on which it is designed to be adjusted, a device, substantially such as specified, for distributing the side strain on the track-beam, and at the same time creating a frictional contact, which tends to hold the pier in place (endwise) on the track, the same constructed and operating substantially as hereinbefore set forth.

10. The rail-clamping device shown and described for holding the pier down on the track-rail, consisting, essentially, of claw-like devices adapted to catch beneath the head of the rail, means for exerting a downward pressure on the rail, and means for easily adjusting the claw-like devices toward each other and for holding them in place, all substantially as hereinbefore set forth.

300,690. HOISTING AND CONVEYING MACHINE. ALEXANDER E. BROWN, Cleveland, Ohio. Filed Dec. 7, 1883. (No model.)

300,690.



Claim.—1. In combination with the two piers, a bridge pivoted to the upper portions of both of said piers, all substantially as and for the purposes hereinbefore set forth.

2. The combination, with the two piers and a bridge pivoted at one end to one of them, of a universal-joint coupling connecting the other end of said bridge and the other pier, all substantially as and for the purposes set forth.

3. The combination, with the bridge, of one pier resting on a double track, another pier resting on one track only, (so that it can be tipped toward or from the pier resting on the double track,) and couplings or connections between the bridge and piers, which will permit one of the piers to tip, as explained, without in the least straining its couplings to the bridge.

4. In combination with the pier capable of tipping (on a single track) and the bridge pivotally connected to said pier, means for clamping together the pier and the bridge-supporting beam, the whole constructed and operating substantially as hereinbefore set forth.

300,691. RIBBED GLASS FUNNEL AND MOLD THEREFOR. JOS. K. BROWN, Canton, Ohio. Filed Feb. 14, 1884. (No model.)

Claim.—1. A glass mold, C, having the narrow tapering fluted or grooved part c and the larger flaring part c', in combination with a plunger, D, having a stem, d, and a larger cone-shaped portion, d'', said parts being adapted to form a glass funnel having an externally-ribbed neck or stem, substantially as set forth.

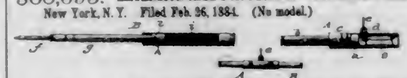
2. A glass mold, C, having the narrow tapering part c and the larger flaring part c', in combination with a plunger, D, having the stem d, and the larger cone-shaped part d'', having grooves d^3 in its face, these parts being adapted to form a glass funnel having a series of internal ribs upon its bell portion, substantially as set forth.

3. A glass mold, C, having the narrow tapering fluted or grooved part c and the larger flaring part c', in combination with a plunger, D, having the stem d, and the larger cone-shaped part d', provided with grooves d^3, these parts being adapted to produce a glass funnel having an externally-ribbed stem and an internally-ribbed bell portion, substantially as set forth.

4. A glass funnel having the neck or stem B provided with a series of external ribs or grooves, substantially as set forth.

5. A glass funnel having the stem B provided with a series of external grooves or ribs, and the bell portion A provided upon its inner face with ribs a, substantially as set forth.

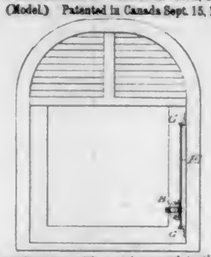
300,692. MOP OR BRUSH HOLDER. WILLIAM BUSCH, St. Louis, Mo. Filed Dec. 26, 1883. (Model.)



300,692.

Claim.—1. A mop or brush holder consisting of the socket A, corrugated plate C, and perforated base-plate B, substantially as described.

2. A mop or brush holder consisting of the socket A, corrugated plate C, and perforated base-plate B, in combination with a brush or other analogous article, substantially as and for the purposes set forth.

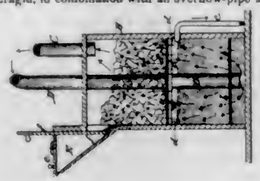


300,693. EXTENSION-CASE FOR PENCILS. RICHARD M. COLLARD, New York, N. Y. Filed Feb. 26, 1884. (No model.)

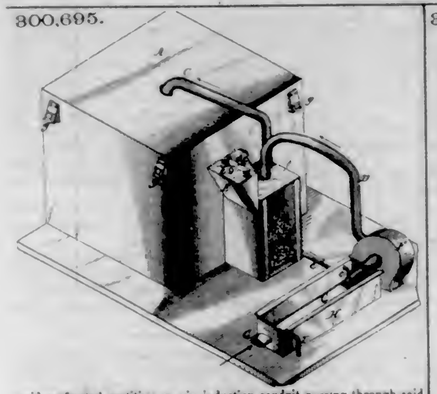
Claim.—1. An extension-case for pencils and similar implements, consisting of two tubes arranged to slide one within the other, with a spring arranged to operate upon the tubes, substantially as shown and described, whereby the case is automatically extended whenever it is withdrawn from its sheath.

2. In combination with an automatic extension-case, substantially such as described, a holding case or sheath provided with friction-springs or equivalent means for holding the extension-case therein, with its spring compressed, substantially as herein described.

300,694. SASH-FASTENER. OSBORN R. COOKE, Salem, Ohio. Filed Apr. 3, 1884. (Model.) Patented in Canada Sept. 15, 1883, No. 17,683.



Claim.—In combination with a rod secured to the window-frame in front of the sash, a casing, B, having raised central portion, b', and flanges a' a', a pivot, b, and a central stop, as B', and a pair of jaws mounted on the pivot b and engaging the rod on the frame, by which the holder is adapted to be attached to the front of the sash without cutting or mortising, as shown and described.



300,695. REFRIGERATING APPARATUS FOR CHAMBERS AND BUILDINGS. JOHN J. CRAVEN, Patchogue, N. Y. Filed Apr. 4, 1884. (No model.)

Claim.—1. For the purpose of refrigerating a preserving-chamber, the combination, with said chamber, of a closed cold-producing chamber containing a solid refrigerant above and separated from a liquid refrigerant, an overflow-pipe entering said chamber into an air-space separating the solid and the liquid refrigerants, a blower delivering the air into the contained liquid refrigerant, and a pipe for delivering the cold air from said cold-producing chamber, substantially as described.

2. In a refrigerating apparatus, a closed cold-producing chamber divided by a horizontal perforated partition, and having a lower perforated diaphragm, in combination with an overflow-pipe arranged below

300,695.

said perforated partition, an air-induction conduit passing through said partition, terminating below the perforated diaphragm, and an air-eduction pipe, substantially as described, for the purpose specified.

3. The combination, in a refrigerating apparatus, of the closed cold-producing chamber, divided by a horizontal perforated partition, with an air-induction pipe passing through and terminating below said perforated partition, an overflow-pipe, a supplemental cooling-tank into which it terminates, and a closed blower receiving air by a pipe passing through said supplemental cooling-tank, substantially as described, for the purpose specified.

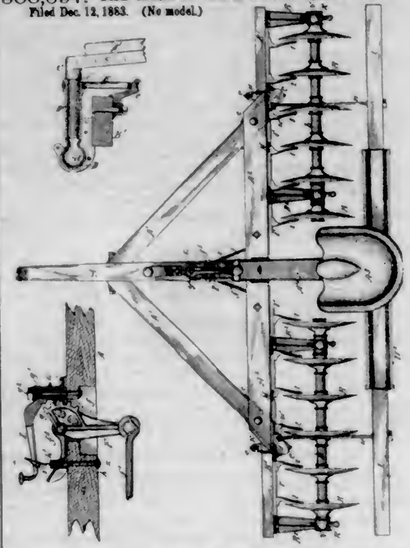
4. The combination, in a refrigerating apparatus, with a closed cold-producing chamber having an induction and an eduction air-blast pipe, of a hopper having a sealing-cover and a charge-delivering sealing-slide, substantially as described, whereby to deliver the ice-charge into said chamber without interrupting the air-current through the same.

5. The combination, with a preserving-chamber, of a connected closed cold-producing chamber containing in separate bodies a solid refrigerant above a liquid refrigerant, an overflow-pipe entering said chamber between these contained refrigerating bodies, a supplemental cooling-tank, and a closed blower having its air-supplying pipe passing into and through said supplemental cooling-tank, substantially as herein set forth.

6. A closed cold-producing chamber divided by a perforated horizontal partition, whereby a solid refrigerant is separated from a liquid refrigerant, a sealing supply-hopper, and an overflow-pipe, in combination with an air-induction, an air-eduction pipe, and a preserving-chamber, substantially as herein set forth.

7. The combination of a preserving-chamber with a closed cold-producing chamber containing a solid and a liquid refrigerant separated by an air-space, an overflow-pipe connecting with said contained air-space between the cold-producing bodies, a closed blower, and suitable inlet and discharging air-pipes, the inlet-pipe being arranged to deliver the air into the liquid body, substantially as described, for the purpose specified.

8. The method herein described of refrigerating a preserving-chamber, which consists in forcing air through and in successive contact with separated liquid and solid refrigerating bodies contained within the same chamber, maintaining the separation of said refrigerating bodies by an intervening air-space, and a sealed overflow to preserve them in condition for the passage of the air to be cooled, and delivering the air so cooled by its successive passage through these separated bodies into the preserving-chamber, substantially as described.



9. The cold-producing chamber B, constructed to hold brine and ice in two separated bodies, one above the other, and having a sealed top door, e, combined with the overflow-pipe c, the separating air-space d, the blower F, and the preserving-chamber, substantially as herein set forth.

300,696. SPECTACLES. ANDREW JAY CROSS, Chester, Pa. Filed Apr. 23, 1884. (No model.)

Claim.—The connection of the nose-piece of a pair of spectacles with the frames of the eye-pieces thereof, by means of flanges on said nose-piece and lips and openings on and in the studs of the frames, the ends of the nose-piece entering the openings of the studs, and the flanges entering the lips, said lips being bent over or on the flanges by any suitable tool or implement, thus clinching the lips on the flanges and firmly connecting the nose-piece and frames of the eye-pieces.

300,697. DISK-HARROW. GEORGE G. CROWLEY, Little Falls, N. Y. Filed Dec. 12, 1883. (No model.)

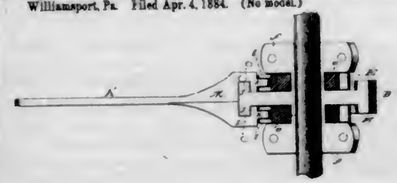
Claim.—1. The combination, with the main frame, of a gang plank or frame, a ball-and-socket joint, whereby the gang plank or frame is attached to the main frame, shaft-bearings secured to the gang plank or frame, and a disk-gang having its shaft journaled in said bearings, substantially as set forth.

2. The combination, with the disk-gang, of a spherical socket rigidly secured to the gang-plank, and a pin-socket movably attached to the gang-plank, and provided with a spherical knuckle seated in said spherical socket, substantially as set forth.

3. The combination, with the main frame and the disk-gang, of a pin secured to the main frame, a spherical socket secured to the disk-gang, and a pin-socket adapted to receive the pin of the main frame, and provided with a spherical knuckle seated in said spherical socket, substantially as set forth.

4. The combination, with the gank-plank, of the spherical socket D, pin-socket D', having a spherical knuckle, d, hooks e, and link E, substantially as set forth.

5. The combination, with the main frame, of disk-gangs, ball-and-socket joints, whereby the disk-gangs are attached to the main frame, and hooks k, whereby the inner ends of the disk-planks can be rigidly secured to the main frame, substantially as set forth.



6. The combination, with the main frame and disk-gangs, of an arm, F, having a gear-segment, g, connecting-rods f'', and a worm-wheel, G, substantially as set forth.

7. The combination, with the main frame and disk-gangs, of an arm, F, having a gear-segment, g, connecting-rods f'', worm-wheel G, provided with arm I, and catch i, substantially as set forth.

8. The combination, with the main frame, of disk-gangs attached to the main frame by swiveling connections, whereby each gang is adapted to adjust itself independently to the inequalities of the ground, and a drag or leveler arranged in rear of the disk-gangs and attached loosely to the main frame, substantially as set forth.

9. The combination, with the disk-gang and disk-plank, of bearings B', oil-cups R, having bars s', cover S, rod s, and spring T, substantially as set forth.

300,698. CAR-STARTER. FRANK DAWSON and JOHN HOLLEYHEAD, Williamsport, Pa. Filed Apr. 4, 1884. (No model.)

Claim.—1. A lever-clutch, A' M, for a car-starter, having a rectangular jaw, *i*, rectangular hooks *j j*, and lugs *k k*, constructed and arranged substantially as described.

2. The combination, in a car-starter, of the lever-clutch A' M, having a jaw, *i*, hooks *j j*, and lugs *k k*, and a driving-wheel having lateral rim-flanges, arranged substantially as and for the purposes described.

3. The combination, in a car-starter, of a lever-clutch with a rectangular jaw-opening, rectangular and inwardly bent hooks, a driving-wheel having lateral rim-flanges, and a loose collar to which the hooks of the lever-clutch are pivoted, substantially as described.

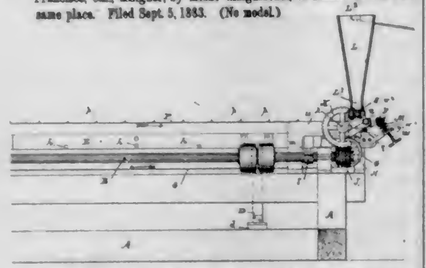
4. In a car-starter, the combination of the loose collar and its yoke with the lever-clutch for the purpose of preventing backward rotation of the traction-wheels of the car, substantially as described.

300,699. PENDANT. BERNHARD DREYFUS, New York, N. Y. Filed Mar. 13, 1884. (No model.)

Claim.—1. The combination, with a flanged crescent-shaped metal holder, of one or more drops or pendants, made of fabric and having their upper ends held within the open ends of the crescent-shaped holder, substantially as herein shown and described.

2. The combination, with a flanged metal holder provided with flat metal tongues projecting from and made integral with the flanges of the holder, of one or more fabric loops or pendants held on the holder by the said tongues, which are bent over the ends of the loops on the inner side of the holder, substantially as herein shown and described.

3. A crescent-shaped piece of sheet metal having flanges along the concave and convex edges, from the edges of which flanges flat metal tongues made integral with the flanges project, the ends of the crescent-shaped holder being open, substantially as herein shown and described.



4. The combination, with a flanged holder, of pendants or drops suspended from the same, the loop K, the cord H, suspended from the crescent, the ball G, suspended from the cord, and the taft J on the cord, substantially as herein shown and described.

300,700. METHOD OF MANUFACTURING STARCH. HIRAM DUREA, New York, N. Y. Filed Feb. 21, 1884. (No specimens.)

Claim.—1. In the manufacture of starch, the application of a solution of alkali to a starch-water, and the subsequent stratification of the resultant liquor, substantially as specified.

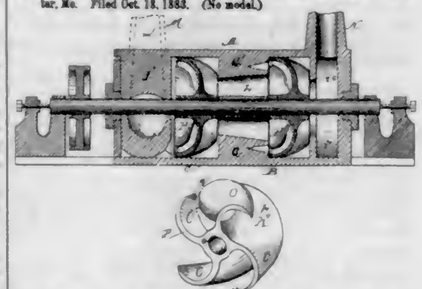
2. The process of manufacturing starch, consisting in grinding grain with water, sieving the same, condensing the starch-water passed through the sieves, applying a solution of alkali to the condensed starch-water, effecting the stratification of the resultant liquor into a solution of starch and glutinous solutions, removing the glutinous solutions and the starch solution separately, and subsequently treating some or all of the glutinous solutions to obtain whatever starch may be contained therein, substantially as specified.

300,701. WET ORE CONCENTRATOR. WILLARD R. FARWELL, San Francisco, Cal., assignor, by mesne assignments, to Fannie M. Farwell, same place. Filed Sept. 5, 1883. (No model.)

Claim.—1. The combination, with the endless traveling concentrator-belt, of endless traveling scrapers and mechanism for imparting to the same a movement over the said concentrating-surface in a direction contrary to its general movement, as set forth.

2. The combination, with the endless concentrator-belt and means for imparting thereto a vibratory and longitudinal progressive motion, of the endless scraper-belts having scraping-edges, and mechanism for imparting to said belts a movement over said concentrating-surface from end to end in a direction contrary to its general movement, as set forth.

3. The combination of the endless concentrating-belt, means for imparting thereto a vibratory and progressive movement, the endless traveling scrapers moving over the concentrating-surface in a direction opposed to its general travel, the inclined apron, mechanism for adjusting its edge with respect to the surface of the concentrating-belt passing beneath it, and the feed-hopper, substantially as hereinbefore described.



4. The combination of the feed-hopper, inclined apron, pocketed feed-roller, mechanism for operating said feed-roller, and the water-distributing pipe located near the top of the surface of the inclined apron.

5. The combination, with the endless traveling concentrating-belt, of the endless traveling scrapers and the tail-spout, substantially as hereinbefore described.

6. The combination, with the endless traveling concentrating-belt, of the apron V, formed of yielding material and set in an inclined position, and the tail-spout T, substantially as set forth.

7. In an ore-concentrating machine, the combination, with the endless traveling concentrating-belt having lateral vibration, of the endless traveling scraping-blades having continuous movement over the belt, the rollers, and the stationary bearings above the vibratory belt-carrying frame, substantially as described.

300,702. PUMP. JOHN R. FISHER and LEANDER T. FISHER, Knobnoster, Mo. Filed Oct. 18, 1883. (No model.)

Claim.—1. The combination, in a pump, of a casing provided with two compartments, each containing a propeller consisting of a hub mounted on a horizontal shaft, said hub being provided with a series of radial curved blades, the rear end of one blade being attached or connected to the succeeding blade, substantially in the manner and for the purpose described.

2. The combination, in a pump, of a casing consisting of upper and lower sections, A B, forming conjointly a central-chamber containing perforated partitions i' i², channeled blocks G G', and recessed and perforated blocks J J', together with the supply and exhaust passages, and a shaft passing longitudinally through the casing and carrying propeller-wheels, substantially as herein set forth.

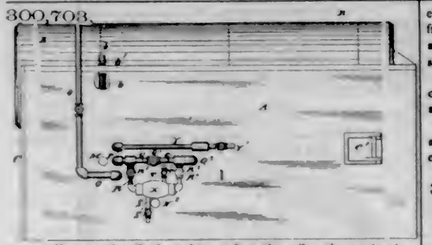
300,703. FURNACE. MICHAEL A. FOSTER, St. Louis, Mo. Filed Sept. 29, 1883. (No model.)

Claim.—1. In a furnace, the combination, with a fire-chamber, grate, and ash-pit, of the slant walls G, projecting into the fire-chamber toward the grate, having vertical and inwardly-projecting air-passages extending from the ash-pit to the fire-chamber, and an arch, H, which springs from the slant walls contiguous to and over the exits of the air-passages, as shown and described.

2. The bridge-wall I, having descending openings I', and the air-pipe M, in communication with the outer air and with the passages I', substantially as set forth.

3. The combination, with the bridge-wall I, having passages I', and the perforate air-pipe N, located at the rear of the bridge-wall and supplying air alike to the products of combustion passing over and through the bridge-wall.

4. The two bridge-walls I and J, with pit K between them, and provided with passages I' and J', in combination with the perforate air-pipe N.



5. A furnace having a pit, K, at the rear of the bridge-wall I when the bridge-wall has passages leading to the lower part of the pit and the pit contains a superheating steam-coil in communication with the steam-space of the boiler.

6. The combination, in a furnace, of a pit, K, a steam-coil, P, within the pit, an injector receiving steam from the coil, and with a perforate pipe or pipes, Z, within the combustion-chamber of the furnace.

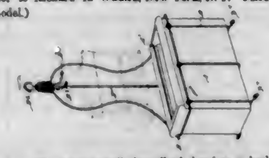
7. The combination of two superheating-coils, P and W, in pit K, and an injector interposed between them to produce circulation therein, and pipe Z, as set forth.

8. The combination of two superheating-coils, P and W, within the combustion-chamber of a furnace, an injector interposed between the coils, an air-supply pipe, S, in communication with the injector, and

300,703.

a pipe, Y, conveying the heated gases from the coil to the combustion-chamber of the furnace or other destination.

9. The combination of coils P and W, injector U V X, air-pipe S, conducting-pipe Y, and perforate pipe Z, discharging into the combustion-chamber of the furnace.

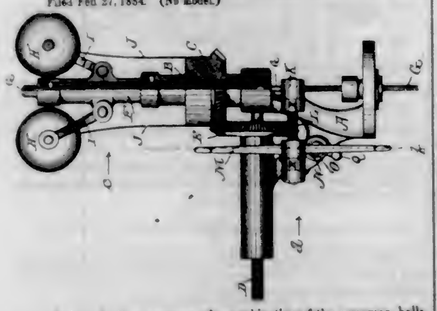


10. The combination, with a furnace, of the pipe *b*, perforated its whole length beneath the setting or top, open at top to the outer air, and extending down between the boiler and the side wall of the setting A to the neighborhood of the fire, adapted to carry smoke down with the air, substantially as and for the purpose set forth.

11. The combination, with the ordinary or any suitable boiler-setting, A, the boiler, and a bridge-wall, of a second bridge-wall, J, and a wall, *a*, built across the side flues between the boiler and setting, forming a part of the second bridge-wall, and extending part of the distance toward the bottom of the boiler, leaving an opening for the passage of the heated current, the boiler forming part of the top of the passage, substantially as shown and described.

12. The combination, in a boiler-furnace, of the air-supplying devices D', E', G', *b*, and N, the perforate arch H, bridge-walls I and J, with passages I' J' through them, the superheating-coils P and W between the bridge-walls, the injector U V X, and connecting-pipes and valves, substantially as set forth.

13. The combination, with the superheating-coils P W, supply-pipe O, and discharge-pipe Y, of the injector U V X, connecting-pipes Q R R', and valves Q', R², and R³, substantially as set forth.



300,704. HANGING WATER-BOWL. EZRA W. FROST, Brooklyn, assignor to Richard R. Watson, New York, N. Y. Filed July 19, 1883. (No model.)

Claim.—1. The water-well described, having a body, A, with an internal wedge-shaped lip, A', at its upper edge, having its upper surface inclined inward, all adapted to serve substantially as herein specified.

2. A wire framing having means, as described, for supporting a water-tight vessel, and having spring-arms, as B², adapted to hold the brush conveniently over the vessel when not in use, as set forth.

300,705. GOVERNOR. ROBERT W. GARDNER and JOHN W. GARDNER, Quincy, Ill., assignors to the Gardner Governor Company, same place. Filed Feb 27, 1884. (No model.)

Claim.—1. In a governor, the combination of the governor-balls, the springs for urging the balls inward and determining their arc of travel, the links I, attached to the balls and having a length less than the radius corresponding to the arc of ball travel, and having their lower pivots free to rise and fall, and a reciprocating body connected to said pivots and adapted to transmit their rising and falling motion to a regulator, substantially as set forth.

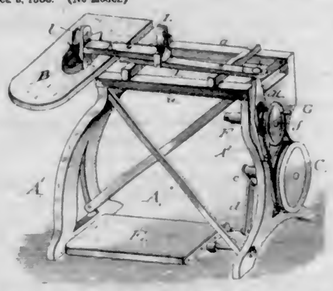
2. In a governor, the combination of the governor-balls, the pivoted links, and the arc-controlling springs J, having a decrease of area at their upper ends, substantially as and for the purpose specified.

3. In a governor, the combination of the housing A, the governor-stem G, the levers K and M, the spiral spring I', and hand-screw Q, combined substantially as and for the purpose specified.

300,706. FASTENING FOR BOWS OF WATCH-CASES. DAVID GLICKMAN, San Francisco, Cal., assignor of one-half to Joseph Nordman, same place. Filed June 22, 1883. (No model.)

Claim.—1. A fastening for bows and pendants of watch-cases, consisting of heads *b b*, formed on the ends of the bow, adapted to enter holes in the pendant, and a locking-plate fitting within the pendant and engaging with the heads *b b* on the inside, to prevent them withdrawing from the pendant.

2. A bow or ring having groove or reduced portions *b'* and a locking device that is adapted to slip over and engage with said grooved ends after they are inserted through the side of a pendant.

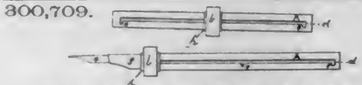


300,707. COMBINED CIGAR-CUTTER AND MATCH-BOX. FERNANDO M. GUINZBURG, New York, N. Y. Filed Feb. 16, 1884. (No model.)

Claim.—1. The combination, with the lid A', carrying the cutter C and catch *c*, of the box-body A, having a notch or opening, *d*, and a spring, B *b b'*, located in the box-body, as described, whereby two chambers, *g* and *f*, are formed in the box, the chamber *f* having an opening, *f'*, and connecting with the opening or notch *d*, as set forth.

2. The combination, with the lid A', carrying a cutter having two or more cutting-edges, and catch *c*, of the box-body A, having two or more notches or openings, *d*, and a spring, B *b b'*, located in the box-body, as described, whereby two chambers, *g* and *f*, are formed, the latter having an opening, *f'*, and connecting with the opening or openings *d*, as set forth.

300,708. IRONING-MACHINE. MARTIN HANKLINE, Joplin, Mo. Filed Oct. 6, 1883. (No model.)

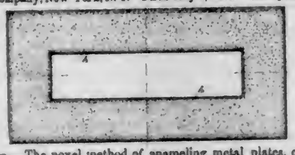


Claim.—1. In an ironing-machine, the table A, having an inwardly-bent support, A', and vertical support A², and board B, in combination with the pivoted lever I and arm K, constructed substantially as described, the iron, and means for vibrating said lever and arm, the parts being organized substantially as shown.

2. In an ironing-machine, the pivoted lever I, supported as shown, and provided with means for reciprocating the same, and bar K, carrying at its end a receptacle for an iron, the bail L pivoted to the lever I, the parts being organized substantially as shown, and for the purpose set forth.

300,709. PEN OR PENCIL CASE. HAZEN PRESCOTT HUNTOON, Boston, Mass. Filed Mar 14, 1884. (No model.)

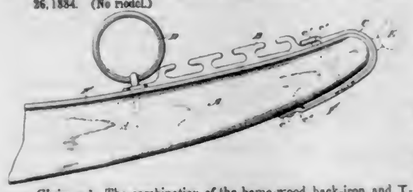
300,709.



Claim.—1. In a tubular pencil-case provided with a slit and notches, as described, and in combination with the same, a slide provided with an elastic band, as and for the purpose shown.

2. In a tubular pencil-case, and in combination with the slide thereof, an elastic band, in the manner and for the purpose substantially as shown.

300,710. REMOVING THE SAND AND GLUE FROM WASTE SAND-PAPER. WILLIAM J. HUSSEY, Boston, Mass. Filed Mar. 17, 1884. (No specimens.)

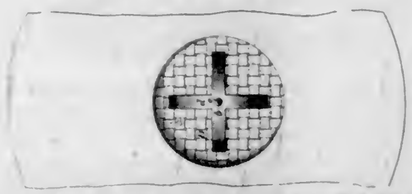


Claim.—The above-described process of removing sand and glue from waste sand-paper, consisting in immersing the same in a hot solution of potash, then removing the paper and immersing it in a warm solution of alum and borax, substantially as and for the purposes set forth.

300,711. METHOD OF ENAMELING METALLIC SURFACES. OLIVER R. INGERSOLL, Brooklyn, assignor to the National Enamel Letter and Number Company, New York, N. Y. Filed May 5, 1884. (No specimens.)

Claim.—The novel method of enameling metal plates, consisting, essentially, in striking the edge of the plate *a a* below the general plane of the body of the plate and then applying the enamel to the plate, substantially as set forth.

300,712. HAME. LLEWELLYN E. JONES, Syracuse, N. Y. Filed Apr. 26, 1884. (No model.)

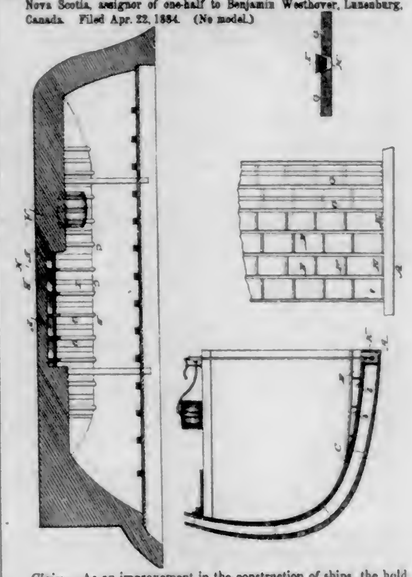


Claim.—1. The combination of the hame-wood, back-iron, and T-shaped loop with the extension or clip, either with or without a ball or other ornament, adapted to be fitted over the top of the hame, and secured by means of a transverse rivet or bolt at its upper end, and by the rein-ring stud at the lower end of the loop, as set forth.

2. In a hame, the combination-loop having a top clip or extension formed integral therewith, and secured to the hame by a transverse bolt or rivet at the top, and by the rein-ring stud at the lower end, substantially as set forth.

3. In a hame, the combination of the loop B, having eyes or holes *b*, with the clip C, having apertures *c'*, substantially as set forth.

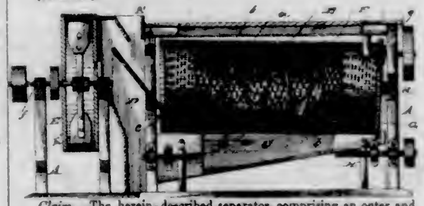
300,713. MECHANICAL TELEPHONE. ADOLPHUS A. KNUDSON, Brooklyn, N. Y. Filed Oct. 30, 1883. (No model.)



Claim.—1. In a mechanical telephone, the composite diaphragm made of thin strips of wood woven, folded, cemented, sewed, or otherwise fastened together, substantially as described.

2. In a mechanical telephone, the composite diaphragm made of thin strips of wood, substantially as described, two layers of which are joined together, with a filling of wood, cloth, paper, vellum, or any other suitable material, substantially as described.

3. In a mechanical telephone, the sound-collector *d*, consisting of a block of resonant material mounted upon the line-wire and resting against or secured to the diaphragm, substantially as described.

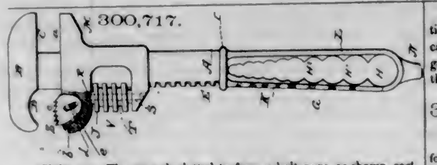


4. In a mechanical telephone, a composite diaphragm the outer surfaces of which are of wood, in combination with the sound-collector *d*, substantially as described.

300,714. CONSTRUCTION OF SHIPS. TITUS LANGILLE, Mahone Bay, Nova Scotia, assignor of one-half to Benjamin Westhover, Lunenburg, Canada. Filed Apr. 22, 1884. (No model.)

Claim.—As an improvement in the construction of ships, the hold constructed with a bottom formed by the parallel cross-timbers B, tapering toward the turn of the bilge on the side of the vessel, set on edge at right angles to the keelson, and having openings *b*, in combination with the holding-cleats E, cross-timbers F, flooring G, and removable stripe I, constructed and combined substantially as and for the purpose shown and set forth.

300,715. SEPARATOR FOR SHELLED CORN, &c. J. SILAS LEAS, Rock Island, and JOHN B. CORNWALL, South Moline, assignors to the Barnard & Leas Manufacturing Company, Moline, Ill. Filed Feb. 7, 1884. (No model.)



Claim.—The herein-described separator, comprising an outer and an inner rotary perforated cylinder, the latter having an open end, and a conveyer, a vibrating shoe, a fan, and a fan-case, and suitable gearing mechanism, all constructed and adapted to operate substantially as set forth.

300,716. BALE-TIE. EDWIN S. LENOX and JACOB HEMTH, Worcester, Mass., assignors to the Washburn & Moen Manufacturing Company, same place. Filed Jan. 21, 1884. (No model.)

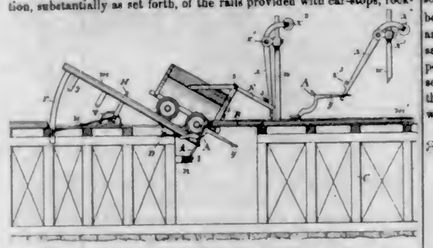
Claim.—A wire bale-tie having but one manufactured end, the same being provided with two contiguous loops in the form of a figure 8, substantially as and for the purpose described.

300,717. WRENCH. FRANK WALDO MERRICK, Sandusky, Ohio, assignor of one-half to Thomas Hickling, same place. Filed Mar. 31, 1884. (No model.)

Claim.—1. The wrench slotted to form a bolt-gage, as shown, cast in one piece with the shank and head, and having the slot-collar shrunk on, substantially as specified.

2. As an improved article of manufacture, the wrench herein described, consisting of the rack-shank A, having at one end a slotted portion to form a bolt-gage and at its opposite end a fixed head, having a recess, D, the sliding jaw M, having a slot for the passage of the shank, the recess *b*, bit Z, seated in the said recess *b*, and provided with the elongated slot *d*, for the passage of the pivot-bolt *e*, and the movable jaw, having the bearings R and S, for the screw T, carrying the turning notched cam V, substantially as specified.

300,718. INTERFERING-PAD FOR HORSES. EDWIN G. MILES, Fenton, Mich. Filed June 11, 1883. (No model.)



Claim.—An interfering-pad, A, made of rubber or other suitable material, having a concave inner face to fit the hoof B, and provided with perforations, as shown and described, whereby the pad is secured rigidly to the hoof direct by means of screws *a a*, all substantially as described.

300,719. CAR-DUMPING APPARATUS. JONAS L. MITCHELL, Logan, Ohio. Filed Jan. 31, 1884. (No model.)

Claim.—1. In an apparatus for dumping the contents of cars, the rails mounted on rockers, as set forth.

2. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the rails provided with car-stops, and rockers to support the rails.

3. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the rails provided with car-stops, rockers to support the rails, having holes in their curved face, and pins adapted to enter the said holes.

4. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the rails provided with pivoted car-stops, a treadle consisting of a horizontal bar mounted at each end on an upright pivoted arm, *g*, and means to connect said treadle with the car-stops.

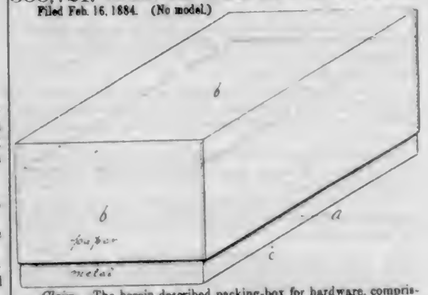
5. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the tilting rails and track-rails pivoted at one end, so that the end adjoining the said tilting rails may spread apart.

6. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the tilting rails, track-rails pivoted at one end, so that the end adjoining the said tilting rails may spread apart, and two upright bars below the track, each having its lower end pivoted, and the upper end of each connected to the free end of one of the pivoted track-rails.

7. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the tilting rails, a friction-bar attached to the rising end of the said rails and depending below, and means to grip the friction-bar.

8. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the tilting rails provided with car-stops, a car having an end-gate, and means to lift the end-gate when the car tips forward.

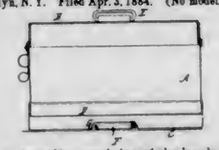
9. In an apparatus for dumping the contents of cars, the combination, substantially as set forth, of the tilting rails provided with pivoted car-stops, a car having an end-gate, a swinging lifter to raise the end-gate when the car tips forward, and a projecting arm attached to one of the pivoted car-stops and adapted to move the said lifter sidewise.



300,720. RECOVERING RUBBER FROM WASTE. N. CHAPMAN MITCHELL, Philadelphia, Pa. Filed May 5, 1881. (No specimens.)

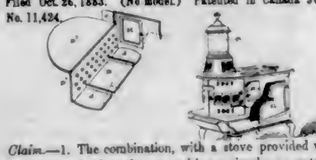
Claim.—1. As an improvement in the art of treating rubber waste for the recovery of the rubber therefrom, boiling said waste in sulphuric or muriatic acid of a strength sufficient to eliminate and destroy the fibrous material with which the waste is combined, substantially as set forth.

2. The within-described process of eliminating woolen fiber from rubber waste containing the same, said mode consisting in boiling the waste in sulphuric, muriatic, or equivalent acid of sufficient strength to eliminate said woolen fibers, as set forth.



3. As an improvement in the art of treating rubber waste for the recovery of rubber therefrom, the process herein described, said process consisting in first boiling the waste in strong sulphuric or muriatic acid, and then washing the mass resulting from the acid treatment, all substantially as set forth.

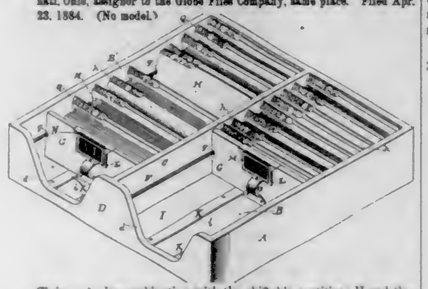
300,721. PACKING-BOX. CHARLES H. MORGAN, Worcester, Mass. Filed Feb. 16, 1884. (No model.)



Claim.—The herein-described packing-box for hardware, comprising the sheet-metal body, with the ends, sides, and bottom firmly united, so as to resist the pressure of heavy articles placed therein, and the pasteboard cover with deep sides and ends, forming an envelope or jacket around the sides and ends of said sheet-metal body from top to bottom, said box having substantially the strength of a metal box, with the appearance and facility for receiving labels of a box of pasteboard, and possessing also less liability to inflict or receive injury than a metal box, the pasteboard cover acting the part of a buffer or protecting-jacket, as well as excluding the dust, as set forth.

300,722. FLOUR-SIFTER. HENRY MORGENROTH and MARKS S. LEVISON, Brooklyn, N. Y. Filed Apr. 3, 1884. (No model.)

Claim.—A flour-sifter consisting of the box-body A, having the sieve secured thereto, the hinged top B, provided with a bail, E, and the loose bottom C, centrally raised to form the cavity G, and provided with a bail, F, adapted to rest within the cavity, substantially as and for the purpose described.

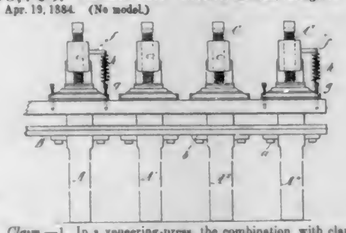


300,723. STOVE. FRANK MOSES and JOSEPH MOSES, Toronto, Ontario, Canada; said Joseph Moses assignor to George Clarke, same place. Filed Oct. 26, 1883. (No model.) Patented in Canada June 21, 1880, No. 11,424.

Claim.—1. The combination, with a stove provided with a semicircular front, and adapted to use either a circular or rectangular fire-pot, of a detachable rectangular fire-pot having the semicircular plate D^2, adapted to fit the front of the stove, as and for the purpose set forth.

2. The combination, with a stove provided with a semicircular front and side grooves, *e*, of a detachable fire-pot, consisting of the horizontal plate D^2, fitted to the stove-front, the vertical plate D', perforated to admit air and having flanges to engage the grooves *e*, and the base-plate D, provided with ribs *d*, to support the wood, substantially as described.

300,724. CHECK AND BILL FILE. GEORGE V. NAUERTH, Cincinnati, Ohio, assignor to the Globe Files Company, same place. Filed Apr. 23, 1884. (No model.)

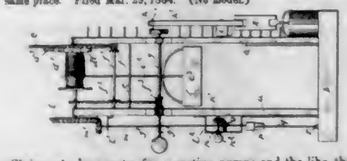


Claim.—1. In combination with the shiftable partitions H and the rods F, the follower G, having the combined pull and spring-foot L, said foot engaging under guide-flanges K on the tray-floor, substantially as and for the purposes set forth.

2. In combination with the shiftable partitions H and the rods F, the follower G, having the combined label-holder, pull, and spring-foot L, said foot engaging under guide-flanges K on the tray-floor, substantially as and for the purposes set forth.

3. The combination, with a series of shiftable partitions and follower, of the tray A, having one or more front openings, *d*, as and for the purpose designated.

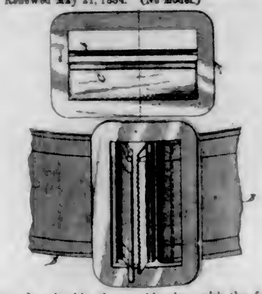
4. The combination of tray A, having the two pairs of gudgeons R, with the case or cabinet T, having the L-formed grooves S, as and for the purposes explained.



300,725. VENEER-PRESS. AUGUSTUS NEWELL, Chicago, Ill. Filed Apr. 19, 1884. (No model.)

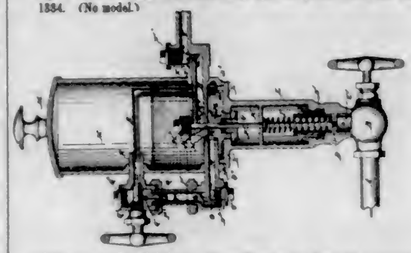
Claim.—1. In a veneering-press, the combination, with clamping-plates provided with suitable supports, of a series of clamping-screws adapted to be operated independently of each other, as and for the purpose set forth.

2. The press or clamping device herein described, consisting of a series of stands, A A' A^2 A^3, connected by tables or plates B, and provided with overhanging screw-threaded bobs *c*, for clamping-screws C C', pivotally coupled with clamp-plates D, all constructed and arranged substantially as described and shown.



300,726. PUMP-MOTOR. BENJAMIN FRANKLIN OFF, Havana, Ill., assignor of one-half to Orlando H. Wright and Horace A. Wright, both of same place. Filed Mar. 29, 1884. (No model.)

Claim.—1. In a motor for operating pumps and the like, the combination, with the frame of the motor, having the main shaft mounted in bearings at its top, and provided with the drum, to one end of which is secured a ratchet-wheel, engaged by a spring-detent on the inner face of the main gear-wheel at one end of the shaft, and the rope and weight connected to the drum, of a second shaft below the main shaft, provided at one end with a small trundle-wheel and at the other with a large gear-wheel, engaging a trundle-wheel on a third shaft below, provided on one end with a fly-wheel and at the other with a crank-wheel to which the pitman is connected, substantially as specified.



2. In a motor for pumps, the combination, with the bevel-gear wheel on the end of the main shaft, carrying the drum, ratchet spring-detent, main gear-wheel, and weighted rope, of the vertical shaft adjustably mounted in bearings on the end of the frame and provided with an upper and a lower miter-pinion, the latter being adapted to engage a miter-pinion on the horizontal crank-shaft, and the shifting-lever, hook-rod, and staple in the base of the frame, substantially as specified.

300,727. BUCKLE. RICHARD W. OWEN, Chicago, Ill. Filed May 11, 1883. Renewed May 21, 1884. (No model.)

Claim.—In a buckle, the combination, with the frame provided with a groove and lip, as described, of the tongue-plate, the tongue-bar, and strap-bar, the tongue-bar and strap-bar being arranged in a plane beneath the inner surface of the buckle-frame, substantially as set forth.

300,728. LUBRICATOR. CHARLES H. PARSHALL, Detroit, Mich., assignor to the Michigan Lubricator Company, same place. Filed Feb. 13, 1884. (No model.)

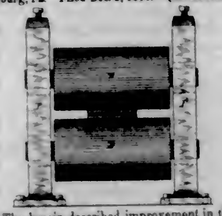
Claim.—1. In a lubricator, in combination with an oil-reservoir and overhead supply-pipe, a lift and force pump, which raises the oil out of the reservoir and forces it also by the action of the plunger, an auxiliary cylinder, C, and plunger-head D, taking pressure in one direction from the cylinder of the engine, and in the other from the spring I or its equivalent, substantially as set forth.

2. In combination with the oil-reservoir M of a lubricator, a pump-cylinder placed inside the reservoir, and having its valves O and T arranged, respectively, in the induction and eduction pipes outside of the reservoir, substantially as set forth.

3. In combination with the pump and chamber P, the valve O, seated in the chambered plug O', substantially as set forth.

4. In a lubricator, in combination with an oil-reservoir and pump, an intermediate transparent vacuum-chamber to which the oil is supplied from a lower level by atmospheric pressure, substantially as set forth.

5. In combination, an oil-reservoir and pump, and an intermediate transparent chamber, P, and nozzle and valve Q Q^2, for regulating the supply of oil to the chamber, from which it is withdrawn directly by the action of the pump as it is fed thereto, substantially as set forth.

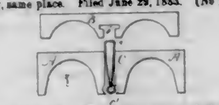


6. In combination with the oil-reservoir M and pump, the intermediate transparent vacuum-chamber, P, the feeding-valve Q, and pipe R R', bringing the oil from the bottom of the reservoir, and induction-pipe N, and valve O, for withdrawing the oil from the bottom of the chamber, substantially as set forth.

7. In a lubricator, in combination with the oil-reservoir and pump, an intermediate transparent chamber, a pipe leading from said reservoir projecting into the upper part of such chamber, and a pipe leading from the lower part of said chamber to the pump, whereby oil delivered into the interior of the chamber will fall through the same in visible quantities, and be thence drawn by the action of the pump, substantially as set forth.

300,729. FIRE AND WATER PROOF COMPOUND. OSCAR F. PARSONS, Eureka, Iowa. Filed Apr. 19, 1884. (No specimens.)

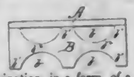
Claim.—The herein-described compound, consisting of coal-tar, air-slaked lime, Spanish brown, sulphur, litharge, fine salt, and American ocher, in substantially the proportions specified.



300,730. MANUFACTURE OF COMBINED METAL PLATES. JOHN PEDDER, Pittsburg, Pa. Filed Dec. 5, 1883. (No model.)

Claim.—1. The herein-described improvement in the art of manufacturing plates of combined iron and steel, or of steels of different carbons, with side edges that, without shearing, shall expose to view the edges of the several strata employed, consisting in preparing the ingot of combined iron and steel, or of steels of different carbons, in the process of casting, in a manner to even the side edges of the several strata employed, and afterward, in the reduction of the ingot by rolling, presenting the same to the rolls edgewise as well as flatwise, substantially as and for the purposes set forth.

2. As an improved manufacture, a rolled plate of combined iron and steel, or of steels of different carbons, the rolled but uncut side edges of which present to view the several strata of different metals employed, substantially as described.



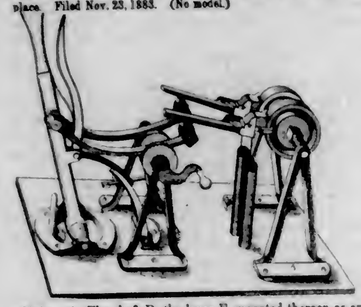
300,731. DEVICE FOR SECURING STEREOTYPE-PLATES IN THE FORM. EDWIN E. PRATT, Chicago, Ill., assignor to the A. N. Kellogg Newspaper Company, same place. Filed June 29, 1883. (No model.)

Claim.—1. The combination, with the plate and the divided supporting-block, of a fastening device having lateral enlargements at each end, both the plate and one or both of the abutting faces of the block having recesses adapted to receive and engage said enlarged portions of the fastening, substantially as specified.

2. The combination, with the recessed plate and the divided supporting bed-block, of a spring held to the block by the embrace of the parts of the latter exerted upon its lower portion, and adapted to be pressed into locking engagement in the recess of the plate by the embracing force of the block, substantially as specified.

300,732. STEREOTYPE-BLOCK. EDWIN E. PRATT, Chicago, Ill., assignor to the A. N. Kellogg Newspaper Company, same place. Filed Aug. 3, 1883. (No model.)

Claim.—The combination, in a form, of a removable stereotype-plate with a bed-block consisting of a central web and side and intermediate supporting-feet, substantially as specified.



300,733. FRICTION-CLUTCH. GEORGE H. PRESTON, Shortsville, N. Y., assignor of one-half to the Empire Drill Company, same place. Filed Nov. 22, 1883. (No model.)

Claim.—1. The wheel A, provided with the laterally-projecting flange or rim *c*, and the lever B, provided with notch *d*, adapted to fit over and grip said edge, as set forth, combined with a supplemental lever, F, provided with the rest *g* for engagement with the lever B at its free end only, whereby the power applied to lever F is compounded upon the rim *c*.

2. The wheel A, provided with a laterally-projecting flange or rim, *c*, and the lever B, provided with the notch *d*, adapted to fit over and grip said edge, as set forth, combined with a supplemental lever, F, in engagement with said lever B at its free end, and a spring, *h*, interposed between the free end of lever B and said lever F, to afford a yielding support or temporary fulcrum for said lever B.

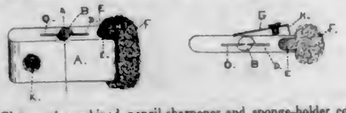
300,734. DEVICE FOR CHANGING SPEED. GEORGE H. PRESTON, Shortsville, N. Y., assignor of one-half to the Empire Drill Company, same place. Filed Nov. 23, 1883. (No model.)

Claim.—1. The shaft D, the lever E, mounted thereon as an axis, and the wheel F, provided with means whereby said lever will engage with said wheel when moved in one direction, and disengage the same when moved in the opposite direction, combined with a device whereby power may be applied to said lever at a variable distance from the axis of shaft D.

2. The shaft D, the wheel F, fixed thereon, and the vibrating lever E, pivoted on said shaft, and provided with means whereby said lever will engage or disengage said wheel, according to the direction of its motion, combined with the lever G, pivoted at one end to a movable fulcrum, and a cam, H, upon the motor-shaft A, whereby power may be applied to said lever E at variable determinate distances from the axis of shaft D.

3. The shaft D and laterally-flanged wheel F, fixed thereon, combined with the lever E, pivoted to said shaft, and the clamping-hook *h*, carried loosely upon said lever, and kept in engagement with said flange by spring *j*, for the purpose set forth.

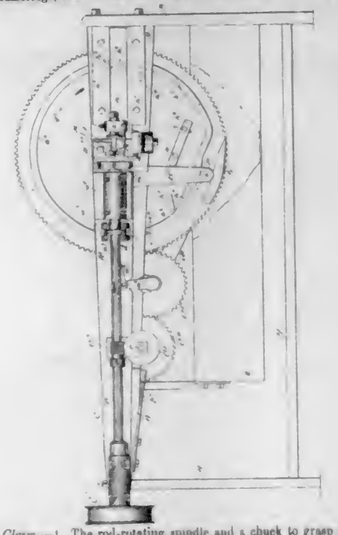
4. The shaft D, wheel F, fixed thereon, and the vibrating lever E, provided with the clamping-hook *h*, to engage the rim of said wheel, combined with the lever G and pivoted lever L, to which said lever is jointed at *k*, and made movable toward or away from the shaft D, and the cam H on shaft A, as and for the purpose set forth.



5. The shaft D, with the wheels F F', fixed thereon, the levers E E', pivoted on said shaft, and each provided with means for engaging and disengaging its wheel, as described, combined with the corresponding levers G G', pivoted to a movable fulcrum, *k*, and the cams H H', set upon the shaft A so as to alternate the motions of the levers, and thereby render the motion of the shaft D continuous.

6. The shaft D, with the wheels F F', fixed thereon, the levers E E', pivoted on said shaft, and provided with means for engaging and disengaging the wheels F F', as set forth, the corresponding levers G G', pivoted to the fulcrum *k*, combined with cams H H', the faces whereof are true spiral planes, and set upon the shaft A so as to alternate, whereby the speed of the shaft D will be rendered continuous and uniform.

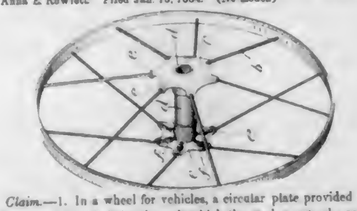
7. The shaft D, wheel F, lever E, with its device for engaging and disengaging said wheel, and the lever G, pivoted at *k*, combined with the cam H and its disk-wheel P, both laterally movable upon the shaft A, whereby the lever G may be transferred to said disk-wheel and the motion of said lever arrested without stopping the driving-shaft A.



8. The lever G, pivoted at *k*, cam H, and disk-wheel P, laterally movable upon the shaft A, combined with the shifting-bar Q and its elastic fork-arms r, as and for the purpose set forth.

300,735. COMBINED SLATE-PENCIL SHARPENER AND SPONGE-HOLDER. GEORGE C. PECK, GEORGE W. F. COOK, and WALLACE C. PECK, San Francisco, Cal. Filed Sept. 1, 1883. (No model.)

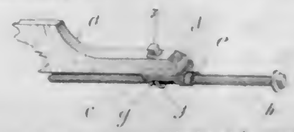
Claim.—A combined pencil-sharpener and sponge-holder consisting of the holder A, having a space, B, the cutters D O, secured in place therein, the space E for the sponge F, and the described means for holding the sponge in place, all substantially as described.



300,736. METAL-SCREW MACHINE. SYLVESTER H. ROPER, Boston, and CHARLES F. ROPER, Hopedale, assignors to Frederick P. Fish, Trustee, Cambridge, Mass. Filed Nov. 5, 1883. (No model.)

Claim.—1. The rod-rotating spindle and a chuck to grasp and rotate the rod, combined with the reciprocating die-jaws 6 7, the guide M, co-operating therewith, and the tappet, substantially as shown and described.

2. In a metal-screw-making machine, the rotating rod-receiving spindle C, provided with the detachable spring-jaws, and the surrounding sleeve provided with a head, combined with struts held between the said head and jaws, and with the means, substantially as described, to move the said sleeve and head longitudinally to operate the jaws, as set forth.

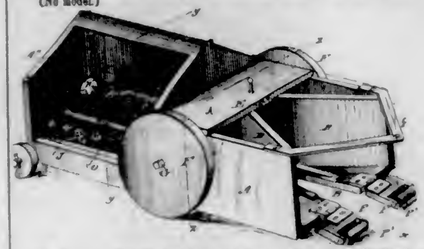


300,737. WHEEL. JACOB V. ROWLETT, Richmond, Ind., assignor to Anna E. Rowlett. Filed Jan. 18, 1884. (No model.)

Claim.—1. In a wheel for vehicles, a circular plate provided near its circumference with holes through which the spokes extend, grooves formed on the inner side of said plate, extending from said holes toward the axle to receive the spokes, and suitable clasps to hold the spokes in said grooves, substantially as described.

2. In a wheel for vehicles, in combination with the spokes, the plate provided on its circumference with the inwardly-curved projections through which the spokes are passed, the semicircular grooves formed on the inner side of the said plate to receive the spokes, and the clasps to hold the spokes in said grooves, substantially as described.

300,738. AXLE-FASTENING. JACOB V. ROWLETT, Richmond, Ind., assignor to Anna E. Rowlett. Filed Jan. 18, 1884. (No model.)

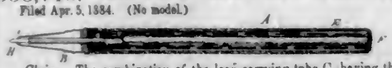


Claim.—1. In a vehicle, the combination of the upper axle, the central clip-plate, the lower axle, and the eyebolt by which the two axles are united and held in place, substantially as described.

2. In combination with the axle provided with notch or recess *m*, the clip-plate provided at one end with a lug to fit into said notch, and at its opposite end with a projection against which the wheel abuts, substantially as described.

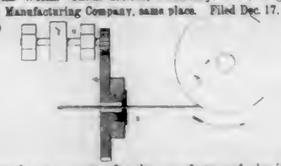
3. The combination of the axle *b*, provided with the notch *m*, with the clip-plate provided with the downwardly-projecting lugs *g*, whereby the turning and endwise motion of the axle is prevented, substantially as described.

300,739. COTTON-HARVESTER. BENJAMIN O. SAVAGE, Scotland Neck, N. C., assignor to Lilian O. Savage, same place. Filed Sept. 4, 1883. (No model.)



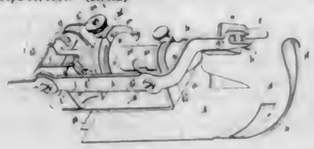
Claim.—1. In a machine for picking cotton of substantially the described construction, the combination of the frame A, constructed as described, and provided with the inwardly-projecting teeth O O, and brushes M, with the revolving brushes J J, and means for rotating the said brushes, as and for the purpose shown and set forth.

2. The combination, with a cotton-picking machine of the described construction, of the attachments P P, provided with rollers P' P'', and hinged to the front of the machine upon either side of the opening B, for the purpose set forth.



3. The combination, with a cotton-picking machine of the described construction, of the removable cotton-receptacles N N, provided with extensions N' N', adapted to serve as covers for the top of the picking-chamber A'', as set forth.

300,740. PENCIL-HOLDER. MORRIS S. SHIPLEY, Cincinnati, Ohio. Filed Apr. 5, 1884. (No model.)



Claim.—The combination of the lead-carrying tube C, having the longitudinal slot *b*, closed at its ends, the plunger D, inclosed within the carrying-tube, and having a guide-pin, *d*, projecting through and moving in the slot in said tube, and a spring, *e*, on the plunger, inside of the carrying-tube, with the longitudinally-slotted tube F, the spirally-slotted tube E, and the barrel A, as shown and described.

300,741. APPARATUS FOR MANUFACTURING IMITATION TWISTED WIRE. JAMES SPENCE, Waterbury, Conn., assignor to the Scovill Manufacturing Company, same place. Filed Dec. 17, 1883. (No model.)

Claim.—In an apparatus for the manufacture of wire in imitation of several round wires twisted together, the combination of a die constructed with an opening through it corresponding in shape to the transverse section of several round wires laid together, said die arranged to revolve upon an axis parallel with the axis of the wire, the mechanism, substantially such as described, to impart rotation to said die, and a wire-block onto which the wire is drawn through the die, substantially as described.

300,742. BUTTON-HOLE ATTACHMENT FOR SEWING-MACHINES. ALONZO E. TURNBULL, Springfield, Ohio, assignor of sixty-five one-hundredths to the St. John Sewing Machine Company, same place. Filed Sept. 15, 1883. (Model.)

Claim.—1. In a button-hole attachment for sewing-machines, the elevated frame, upon which is carried the operative mechanism supported from and above the base-plate by a standard extending upward from the plate, so that a clear space is left between the frame and plate for the fabric being operated upon, substantially as specified.

2. In a button-hole attachment for sewing-machines, the frame upon which the operative mechanism is carried, supported upon the base-plate of the attachment by a curved U-shaped standard or flange arising from the said base-plate, and forming thereby a construction adapted to allow free passage of the fabric being operated upon between such frame and plate, substantially as and for the purpose described.

3. In a button-hole attachment for sewing-machines, a cloth-clamp curved longitudinally upon a circular line, in combination with means for moving it lengthwise around the axis of its curvature, substantially as and for the purpose set forth.

4. In a button-hole attachment for sewing-machines, a cloth-clamp composed of two plates, which at one end are hinged or otherwise connected together, and at such end are curved outward and away from each other to furnish space for the reception of the fabric to be operated upon, and toward their free ends are curved inward toward each other, in combination with means for bringing their free ends together to clamp the fabric, substantially as and for the purpose shown.

5. The hereinbefore-described cloth-clamp, consisting of the plates H H', hinged or otherwise connected together, curved outward from each other at their connected ends, and then inward toward each other, and provided with slots *h'* near their free ends, in combination with the cam-lever I, adapted to bring their free ends together to clamp the cloth, substantially as and for the purpose described.

6. In combination with the cloth-clamp described, the axial bearing-tube D, the cylindrical piece E, the spider F, having the arms *f* and *f'*, and the lever G, provided with the pallets *g* and *g'*, substantially as and for the purpose set forth.

7. As a means for feeding the cloth-clamp longitudinally, the tube D, provided with the opening *d*, the grooved disk K, the strap L, having the radial arm *l* and lug *l'*, the tappet-piece M, the lever N, provided with the stud *n*, the plate O and spring *o*, the lever P, and the lever G, all combined to operate substantially as and for the purpose shown and described.

8. In combination with the grooved disk K, the strap L, having arm *l*, the tappet-piece M, pivotally attached to and adapted to rock on the arm, and to bear against the periphery of the disk as it is rocked, and the nut *m* on the arm above the tappet-piece, substantially as and for the purpose set forth.

9. In combination with the grooved disk K, the strap L, having arm *l*, the tappet-piece M, pivotally and movably attached to the arm by means of a pin passing through a slot, *l'*, in the arm, and provided with a rounded projection or rib, m^2, on its top, a washer on the arm *l* above the tappet-piece, and a nut on the arm above the washer, substantially as and for the purpose described.

10. As a means for varying the relative angles of the lever G and the supplemental part G', which is pivoted thereon, and is provided at its inner end with the elongated opening g^3, the eccentric g^4, journaled upon said lever G, and working within said opening g^3, substantially as and for the purpose shown.

11. The hereinbefore-described button-hole attachment for sewing-machines, in which the frame, the cloth-clamp, and the vibrating and feeding mechanism are constructed and combined to operate in the manner and for the purpose substantially as set forth.

300,743. LOCK FOR FIRE-ARMS. JOSEPH VICTOR, Duquoin, Ill. Filed Mar. 24, 1884. (No model.)

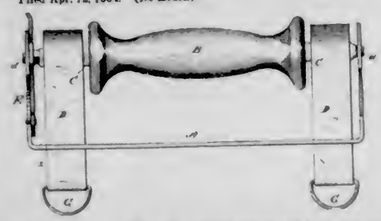
Claim.—1. The combination of the working body, the mainspring pivoted therein and provided with a projecting front end, said spring being pivoted in rear of this front end, and provided with a projection extending above the pivot and adapted to engage the body to limit the dropping of the barrels, and the pivoted fore part engaging the front end of the spring, substantially as set forth.

2. The combination of the working body, the hammer having the recess and notch, the mainspring engaging said recess and having the projecting front end, the spring being pivoted in rear of this end, and provided with the projection extending from its top, and serving as a barrel-check, the fore part engaging the said front end, the sear engaging said notch, and the trigger adapted to elevate the rear end of the sear, substantially as set forth.

3. As an improvement in safety-locks for fire-arms, the combination, with the hammer, of the vertically-sliding safety-block disposed at the side of the same and normally retained down by the nose of the hammer and under the said nose, and means for operating the block simultaneously with the movement of the hammer, substantially as set forth.

4. The combination, as an improvement in safety-locks for fire-arms, of the hammer, the sear, the vertically-sliding safety-block disposed at the side of the hammer and in rear of the fulcrum of the same, the block being normally under the nose of the hammer and retained down thereby, the lever engaging the safety-block and extending parallel with the sear, and the trigger for simultaneously elevating the rear ends of the lever and the sear, substantially as set forth.

5. The combination of the hammer, the vertically-sliding safety-block projecting normally up against the nose of the hammer and retained down thereby, the sear, the lever engaging said block and extending parallel with the sear and above the same, the trigger adapted to elevate the rear ends of the sear and lever, and a coiled spring interposed between the sear and the lever in front of the fulcrum of the latter and in rear of the fulcrum of the former, substantially as and for the purpose set forth.



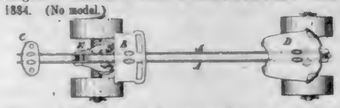
6. The combination, with the sliding head for operating the trigger-locking mechanism, of the barrel-locking lever having the tumbler, the sliding bolt having its rear end acting against said head, and provided with a spring front end adapted to engage the tumbler, and an actuating-spring upon said bolt, substantially as set forth.

7. The combination of the triggers, the sliding locking-plate, the sliding operating-head, the lever connecting the head and plate, the barrel-locking lever having its rear end acting against the head and provided with a front spring end adapted to engage the tumbler, and the actuating-spring upon the bolt, substantially as set forth.

8. The combination of the triggers, the guide-pin in rear of the same, the sliding locking-plate moving upon said guide-pin, the sliding operating-head, the lever connecting the head and plate, the barrel-locking lever having the tumbler, the sliding spring-bolt acting against the operating-head and adapted to engage the tumbler, the spring upon said bolt, and the spring in rear of the head, substantially as set forth.

9. The combination of the lever for locking the barrels, the hammers, mechanism for cocking the hammers by the dropping of the barrels, an automatic safety-block sliding in front of the hammers, the sear, the triggers for simultaneously operating the sear and safety-block, and automatic trigger-locking mechanism operated by the barrel-locking lever, substantially as and for the purpose set forth.

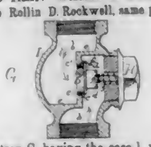
300,744. SHAWL-STRAP. ELBERT A. WHITELSEY, Brooklyn, N. Y. Filed Apr. 12, 1884. (No model.)



Claim.—1. In a shawl-strap, and in combination with the rotating spindle thereof having an angular locking portion, a movable plate provided with angular enlarged slots or openings, substantially as described.

2. In a shawl-strap, and in combination with the main frame, the clamping-straps and the rotating spindle, a pivoted locking-plate embracing the spindle, and provided with angular and enlarged or circular openings to prevent or permit the rotation of the spindle in either direction, substantially as described.

3. In a shawl-strap, the rotating spindle, supported in fixed bearings, in combination with the pivoted plate applied to one of said bearings, provided with a slot angular at one end and circular at the other, for co-operation with the angular portion of the spindle passing through it, substantially as described.



300,745. ROLLER-SKATE. HENRY A. WILSUR, West Somerville, assignor of one-half to Frank W. Lowe, Boston, Mass. Filed Apr. 23, 1884. (No model.)

Claim.—1. The frame A A, composed of two metal plates having a space between, in combination with a hanger capable of being adjusted lengthwise of the frame, as and for the purpose set forth.

2. The adjustable springs G G, arranged one on either side of the hangers E, in combination with the bearings F, substantially as and for the purpose specified.

300,746. VALVED TRAP. WILLIAM H. WILLSON, Westfield, N. Y., assignor of one-half to Rollin D. Rockwell, same place. Filed July 9, 1883. (No model.)

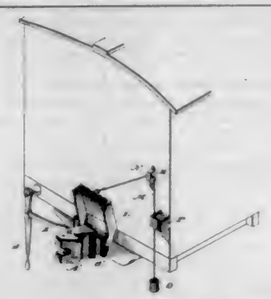
Claim.—The valved trap G, having the case l, with inner passage-projections, *e e*, and through-opening *b b'*, the valve-seat *c c'*, the flat top-hinged vertical valve *d*, and held in place by the frame *f*, and spring *g*, all substantially as specified.

300,747. PROCESS OF TREATING IRON. BROCK WOODRUFF, Albert Lea, Minn., assignor to Warren Buel and Seth B. Tannehill, both of same place. Filed Jan. 9, 1884. (No specimens.)

Claim.—1. The within-described process of treating iron in the course of its manufacture, or when heated for the purpose, by rolling, forcing, or pressing into it a preparation or mixture composed of sand, salt, and black oxide of manganese, and alternately heating the metal and repeating said treatment, and afterward cooling the metal as required for immediate or future use, substantially as specified.

2. In the process of treating iron in the course of its manufacture or while heated with a preparation or mixture of sand, common salt, and black oxide of manganese, first incorporating said mixture with the heated iron, then working or manipulating the iron, afterward reheating it to a higher temperature, and then again treating it with the mixture, essentially as described.

3. The hereinbefore-described process of treating iron, which consists in repeated heating at increasing temperatures, alternated with rolling or pressing into it sand, common salt, and black oxide of manganese, and, before or after fashioning the metal as required, heating it to about a welding-point, and hardening or tempering it, substantially as and for the purposes herein set forth

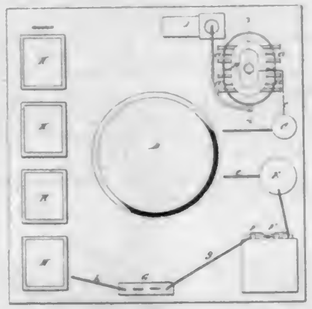


300,748. PACKING BOX OR CARTRIDGE FOR VARIOUS ARTICLES. VICTOR ACHILLE BILLETTE, Rennes, France. Filed Mar. 29, 1884. (No model.) Patented in France May 7, 1883, No. 155,258.

Claim.—A cartridge for containing a ration of coffee or other alimentary or aromatic substance, said cartridge comprising a tubular or cylindrical case of parchment-paper indented at one end, and closed at that end by a disk inserted below the indentations in the cylinder or tube, the triangular pieces or teeth between the indentations being folded down upon said disk, substantially as described.

REISSUES.

10,489. CAR-COUPLING. HENRY L. JOHNSTONE, Palmetto, Ga., assignor to Excelsior Life Saving Car Coupling Company, New York, N. Y. Filed Nov. 16, 1883. Original No. 286,307, dated Oct. 9, 1883.



Claim.—1. A car-coupling composed of a head and body formed in one piece, a draw-rod fitted axially within the rear end of said body, and adapted to move longitudinally within the same, and to have its rear projecting end pivoted upon the frame of a car, and a buffer-spring placed around said draw-rod in rear of said draw-bar, substantially as and for the purpose specified.

2. A laterally-swinging car-coupling composed of a head and body formed in one piece, a draw-rod fitted axially into and adapted to move longitudinally within the rear portion of said body, with its rear projecting end pivoted upon the frame of a car, and means, substantially as shown, whereby said head and body are held with a yielding pressure in position to maintain engagement with another similar coupling, substantially as and for the purpose described.

3. In combination with the laterally-swinging heads of twin-jaw couplings, a locking-plate which is adapted to be placed over two engaging-heads and to embrace the outer sides of the same to prevent accidental disengagement, substantially as set forth.

4. The hereinbefore-described car-coupling consisting of the body A, provided with the head A', hook *a*, shoulder *a'*, and axial opening a^2, the rod B, pivoted to the frame C, and fitted to and adapted to slide within said opening a^2, the spiral spring b^2, placed around said rod, the laterally-operating spring E, casing F, and block G, the lever H, and rod I, all combined to operate in the manner and for the purpose shown.

10,490. MANUFACTURE OF ILLUMINATING-GAS. ALFRED P. SOUTHWICK, Buffalo, N. Y., assignor, by mesne assignments, to the United States Equitable Gas Company. Filed Mar. 22, 1884. Original No. 142,289, dated Aug. 26, 1873; Reissue No. 8,567, dated Feb. 4, 1879

Claim.—The combination of the steam-boiler A, decomposing-cupola B, governing-holder D, carbureting apparatus E F F, and the purifiers H H, all being arranged substantially as described, and for the purposes set forth.

PHOTO-LITH. NORRIS PETERS WASHINGTON, D.C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

EAGLETON MANUFACTURING COMPANY *v.* WEST, BRADLEY & CARY MANUFACTURING COMPANY *et al.*

Decided May 5, 1884.

Letters Patent No. 122,001, granted to the Eagleton Manufacturing Company, December 19, 1871, for an improvement in japanned furniture-springs, as the alleged invention of J. J. Eagleton, *held* to be invalid, and the following points ruled:

(1.) The patent is for steel furniture-springs protected by japan, and tempered by the heat used in baking on the japan;

(2.) Such springs, so protected and tempered, were known and used by various persons named in the answer, before the date of the patent;

(3.) The specification which accompanied the original application by Eagleton, July 6, 1868, did not set forth the discovery that moderate heat, such as may be applied in japanning, will impart temper to the springs, but set forth merely the protection of the springs by japan;

(4.) Not only does the evidence fail to show that Eagleton, who died in February, 1870, in fact made and used, prior to such other persons, the invention covered by the patent as issued, but it shows that he did not, and that, probably, it never came to his knowledge while he lived;

(5.) Japanning by itself was not patentable, and Eagleton, in the specification which he signed and swore to, did not describe any mode of japanning which would temper or strengthen the steel, and did not even mention that the japan was to be applied with heat, and it now appears that the temper and strength are produced by the heat altogether, and not at all by the japan;

(6.) The only invention to which the application and oath of Eagleton were referable was that of merely japanning steel furniture-springs; the authority given to his attorneys was only to amend that application, and ended at his death; the amendments made were not mere amplifications of what had been in the application before; the patent was granted upon them without any new oath by the administratrix, and this defense is not required by statute to be specifically set forth in the answer, and can be availed of under the issues raised by the pleadings, as showing that the plaintiff has no valid patent.

APPEAL from the Circuit Court of the United States for the Southern District of New York.

Mr. F. W. Betts for the appellant.
Mr. W. C. Witter for the appellee.

Mr. Justice BLATCHFORD delivered the opinon of the Court.

This suit was brought in the Circuit Court of the United States for the Southern District of New York on Letters Patent No. 122,001, granted to the plaintiff, the Eagleton Manufacturing Company, December 19, 1871, for an improvement in japanned furniture-springs. The patent contains these recitals:

Whereas J. J. Eagleton, of New York, New York, (Sarah N. Eagleton, administratrix,) has presented to the Commissioner of Patents a petition praying for the grant of letters patent for an alleged new and useful improvement in japanned furniture-springs, (she having assigned her right, title, and interest in said improvement, as administratrix, to Eagleton Manufacturing Company, of same place,) a description of which invention is contained in the specification of which a copy is hereto annexed and made a part hereof, and has complied with the various requirements of law in such cases made and provided; and whereas, upon due examination made, the said claimant is adjudged to be justly entitled to a patent under the law.

The specification of the patent is as follows:

Be it known that I, J. Joseph Eagleton, of New York, in the county of New York and State of New York, have invented a new and useful Improvement in Furniture-Springs; and I do hereby declare that the following is a full, clear, and exact description thereof, which will enable others skilled in the art to make and use the same, reference being had to the accompanying drawing, forming part of this specification, in which the drawing represents a furniture-spring provided, according to my improvement, with a japan covering.

The helical springs heretofore employed for furniture-seats, mattresses, &c., have generally been made of iron wire, brass, or copper; but steel wire, although a far superior material for such springs, has not been commonly employed, owing to the lack of means for protecting such springs from corrosion and the lack of means for imparting to them the necessary stiffness or temper.

The object of this invention is to produce steel furniture-springs that shall not only be protected from corrosion, but shall also be suitably tempered and stiffened.

The drawing is a perspective view of one of my improved springs.

In carrying out my invention I provide a suitable quantity of

steel wire of the size of which the spring is to be made, and this I wind upon blocks in the usual manner, giving the wound spring the ordinary pressing or set. I then provide a suitable bath con-

taining the ordinary preparation of Japan varnish, in which I dip or place the springs so as to cover them with japan. They are then removed and strung on wires or put on pegs to drain, after which they are placed in a baking-oven of the ordinary kind suitable for the baking of japanned articles, in which oven the springs are subjected to a temperature sufficient to bake and harden the japan; after which the springs are removed from the oven and allowed to cool, when they are ready for use. The treatment of the springs in this manner imparts to them two important and valuable qualities: First, the springs, when they come from the oven and are cooled, have firmly attached to their exterior surface a water-proof covering or coating, which perfectly protects them from corrosion and fits them for service in all kinds of climates, hot or cold, dry or damp. Second, the springs thus prepared are strengthened or stiffened, the application of heat to the springs in the oven having the apparent effect to temper the steel of which they are composed, making the springs stronger and more elastic. As between a steel spring not japanned, as I have described, and a steel spring japanned, as described, both being of the same size and made from the same piece of wire, the japanned spring will be found to be much stronger than the spring not japanned. The spring not japanned is therefore not only lacking in strength, but it is also practically useless for want of a protecting covering. But the improved article produced substantially in the manner I have described forms a strong and durable spring, and no article like it has, so far as I am aware, ever been known or used.

While I do not claim, broadly, the making of furniture springs of steel wire, I wish it to be understood I do not limit or confine myself to the exact order or method of operation here described in producing my improved springs, as the order or method may be varied without departing from my invention.]

There are two claims, namely:

1. The method herein described of strengthening metal springs.
2. As an improved article of manufacture, a spring made substantially as herein described.

Eagleton, as inventor, filed in the Patent Office on the 6th of July, 1868, a petition for a patent for an improvement in furniture-springs, accompanied by an affidavit, a specification, a drawing, and a model, and the proper fee, and in the petition appointed Munn & Co. "to act as his attorneys in presenting the application and making all such alterations and amendments as may be required, and to sign his name to the drawings." The affidavit that Eagleton verily believed himself to be "the original and first inventor of the within-described improvement in furniture-springs" was sworn to by him June 26, 1868. The specification then filed was as follows:

Be it known that I, J. Joseph Eagleton, of New York, in the county of New York, and State of New York, have invented a new and useful improvement in furniture-springs; and I do hereby declare that the following is a full, clear, and exact description thereof, which will enable others skilled in the art to make and use the same, reference being had to the accompanying drawings, forming part of this specification, in which the drawing represents a furniture-spring provided, according to my improvement, with a japan covering.

[The nature of this invention relates to improvements in helical furniture-springs, such as are used for mattresses, sofas, &c., the object of which is to provide steel springs which will not be so liable to injury from corrosion as those now in use.

It consists in providing steel springs, such as are commonly used, with a japan outer covering. Steel springs, as is well known, possess in a much higher degree the requisite qualities of strength, flexibility, and elasticity than iron, copper, or brass, and by reason of the susceptibility of steel to be tempered, and thereby regulated to any degree of elasticity, it is much more preferable to use; but, owing to its great liability to deterioration from corrosion, it is but little used for such springs. To obviate this difficulty I propose to provide steel springs coated with japan, which I find to be of great advantage in resisting the corrosive action of the atmosphere on the steel, and whereby steel springs are made very much more durable than any other. To some extent the same purpose may be accomplished by coating the spring with tin or zinc or other similar metal which will not suffer by corrosion; but the process of coating with such metals requires the use of acids for cleaning and preparing the steel, which, adhering to the steel and being to some extent inclosed within the said coating and maintained in contact with the steel, have an injurious effect thereon. I have therefore found that when the springs are protected by japanning they are much more durable and give more satisfactory results, the same being applied by the common japanning process.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

Japanned furniture-springs, as a new article of manufacture, substantially as and for the purpose described.]

The application was rejected on the 10th of July, 1868, the following reasons being assigned by the Examiner:

The application above referred to has been examined, and is rejected for want of patentable invention. The japanning of metal is an old process, and no invention is shown in applying it to a spring for a bed-bottom. It is a common right, possessed by every one, to galvanize, paint, or japan any metal that he may use.

The specification was returned to the applicant. Eagleton died in February, 1870. On December 29, 1870, the application for the patent was renewed on the same specification, it being returned to the Patent Office, and received there January 4, 1871, and a reconsideration requested, the letter being signed "J. J. Eagleton, per Munn & Co., attorneys." Nothing further appears to have been done until, on October 19, 1871, the specification filed was amended by erasing the part above put in brackets, and substituting what is in brackets in the specification of the patent as issued, and by substituting the following as the claim:

Having thus described my invention, I claim as new and desire secure by Letters Patent—

As an improved article of manufacture, a japanned steel furniture-spring, made substantially as set forth.

On the 20th of October, 1871, the application was rejected, the Examiner saying:

The above-named application has been examined on the amended specification, but no reason can be seen for changing the action of the Office in rejecting the same July 10, 1868. The applicant is referred to the Commissioner's decision in the case of Osborn and Drayton, November 5, 1870. The application is again rejected.

On the 31st of October, 1871, Munn & Co. wrote thus to the Office:

In the matter of the application of J. J. Eagleton for letters patent for furniture-springs, filed July 6, 1868, we respectfully request a specific reference on which the rejection of the case may be based, as provided in Rule 34 of Office Rules of Practice.

On November 3, 1871, this answer was returned:

The applicant's letter of the 31st of October has been duly considered. His application has been twice rejected for want of patentable invention, and not for want of novelty. Sufficient reasons, it was deemed, were given for its rejection, and that Rule 34 of Office Rules of Practice is not applicable in the case. The process of japanning is so old that it is not probable that any person ever before applied for a patent for it. Furniture-springs have been painted, galvanized, varnished, and, probably, japanned, as they are found coated with material that would require a chemical analysis to determine of what it was composed. The former action is affirmed.

On the 7th of November, 1871, by a letter to the Office, signed "J. J. Eagleton, per Munn & Co., attorneys," the specification was amended by erasing the claim last presented and inserting in lieu thereof the two claims which are in the patent as issued. The application was again examined, and on November 17, 1871, the patent was ordered to issue. The specification annexed to the patent purports to be signed "J. J. Eagleton," and also to be signed by the two witnesses who signed the specification originally filed.

The bill avers that Eagleton, having invented the improvement, died intestate, and Sarah N. Eagleton was appointed his administratrix, and the invention was assigned to the plaintiff, and afterward the administratrix applied for a patent, and complied with all the necessary conditions and requirements of the statute, and the patent was issued. The answer states that, as to whether or not the patent was applied for or issued in the manner and with the formalities set forth in the bill, the defendants leave the plaintiff to proof thereof. It denies that Eagleton was the first inventor of what is patented by the patent, and avers that before the time of any invention thereof by Eagleton it was known to and used by various persons named at various places mentioned; that the description in the patent is obscure and not sufficient to enable one acquainted with the art to use the alleged process therein attempted to be described, and for that reason the patent is void; that the description and specification of the patent are not in such full, clear,

concise, and exact terms as to enable any person skilled in the art to which it appertains to temper steel wire, but if the description and specification be followed out, there will not be produced a tempered steel furniture-spring; that if the desired effect be to temper or strengthen a steel furniture-spring, then, for the purpose of deceiving the public, the description and specification filed by Eagleton were made to contain less than the whole truth relative to his invention or discovery, and the patent is therefore null and void; that any representation contained in the patent or the specification that treating a spring as described therein tempers it is false; and that treating a steel furniture-spring as described in the patent does not temper it. Infringement also is denied. The circuit court dismissed the bill, assigning its reasons in an opinion which is found in 18 Blatchf. C. C. R., 218.

The court decided the following points:

(1.) The patent is for steel furniture-springs protected by japan, and tempered by the heat used in baking on the japan. (2.) Such springs, so protected and tempered, were known and used by various persons named in the answer before the date of the patent. (3.) The specification which accompanied the original application did not set forth the discovery that moderate heat, such as may be applied in japanning, will impart temper to the springs, but set forth merely the protection of the springs by japan. (4.) Not only does the evidence fail to show that Eagleton in fact made and used prior to such other persons the invention covered by the patent as issued, but it shows that he did not, and that, probably, it never came to his knowledge while he lived. (5.) Japanning by itself was not patentable, and Eagleton, in the specification which he signed and swore to, did not describe any mode of japanning which would temper or strengthen the steel, and did not even mention that the japan was to be applied with heat, and it now appears that the temper and strength are produced by the heat altogether, and not at all by the japan. (6.) The only invention to which the application and oath of Eagleton were referable was that of merely japanning steel furniture-springs; the authority given to his attorneys was only to amend that application and ended at his death; the amendments made were not mere amplifications of what had been in the application before; the patent was granted upon them without any new oath by the administratrix; and this defense is not required by statute to be specifically set forth in the answer, and can be availed of under the issue raised by the pleadings, as showing that the plaintiff has no valid patent.

We are satisfied with the conclusions arrived at by the circuit court, and with the reasons assigned by it therefor. The copy of the file-wrapper and its contents in the matter of the patent from the Patent Office, giving the history of the application, was put in evidence by the plaintiff. It shows, beyond doubt, that there was no suggestion in the specification signed and sworn to by Eagleton of the invention described in the amendment filed October 19, 1871. Prior to that time the process practiced by the defendants, which is the process described in Letters Patent No. 116,266, granted to Alanson Cary, June 27, 1871, for an improvement in modes of tempering springs, was invented and put in use; and there is no sufficient evidence that Eagleton had any knowledge prior to the invention by Cary of the Cary process of either that process or of the process described in the patent in suit. The plaintiff's patent shows on its face that it was granted on the petition of Eagleton, and the allegation of the bill that the patent was granted on the application of his administratrix is not established. In view of the entire change in the specification as to the invention described the patent to be valid should have been granted on an application made and sworn to by the administratrix. (Act of July 8, 1870, chap. 230, sec. 34, 16 Stat., 202.) The specification as issued bears the signature of Eagleton and not of the administratrix, and it is sufficiently shown that the patent was granted on the application and oath of Eagleton, and for an invention which he never made. The renewed application of December 29, 1870, was made in the name of Eagleton, though he was dead. The letter of Munn & Co. of October 31, 1871, treats the matter under consideration as the application of Eagleton, though the amendment of October 19, 1871, had been made. The amendment of November 7, 1871, was not only made in the name of Eagleton, but the letter of that date in his name to the Office states that what is amended is the specification in his application. Although at some time before the issuing of the patent evidence was produced to the Office of the appointment of the administratrix and of her assignment to the Eagleton Company, yet it is very clearly shown that there was no application or oath by the administratrix.

The decree of the circuit court is affirmed.

U. S. Circuit Court—Northern District of New York.

WORSWICK MANUFACTURING COMPANY *et al. v.* CITY OF BUFFALO *et al.*

Decided May 8, 1884.

1. Where an inventor is the first to enter a particular field of invention the claim of his patent should be construed, broadly, to cover any similar apparatus which effects the same result in substantially the same manner.
2. The defendants are held to infringe the patented invention, notwithstanding they have introduced some improvements, have employed a well-known mechanical equivalent, and made certain minor differences, the two mechanisms being in all essential particulars alike.
3. The burden of proof is upon the defendant to show that the complainant is not the first inventor, and a mere preponderance of the evidence in that direction is not enough. The proof must be of such a convincing character as to satisfy the court beyond a reasonable doubt.
4. Letters Patent No. 171,190, granted December 14, 1875, to Edward O. Sullivan, sustained.

Mr. M. D. Leggett and *Mr. John Crowell* for the complainants.

Mr. Giles E. Stilwell for the defendants.

COXE, *J.:*

The complainants are the owners of Letters Patent No. 171,190, granted December 14, 1875, to Edward O. Sullivan, for improvements in harness for fire-engines. The patent relates not only to the construction of the harness, but also to the manner of suspending it above the horse. The object of the invention is to enable the horses to be kept unharnessed until the moment of the alarm, and then to attach them to the engine with great expedition. One man is thus enabled to do the work of three under the old system. The harness is made in sections, is permanently fastened to the neap or thills, and suspended from the ceiling by means of straps and spring-catches, so that it may be dropped upon the horse and quickly secured.

Before the use of this apparatus horses were kept continually in harness night and day. The result was that they were irritated and galled, and the harness was injured and soon destroyed by the constant rubbing which this irritation occasioned.

There can be no doubt regarding the utility of the invention. Its advantages may be summarized as follows: relief to the horses, expedition in reaching the fire, durability and reliability of the harness, economy in the employment of firemen and harness-makers. And when it is remembered that promptness in arriving at

a fire has often prevented a great conflagration, the indirect benefits can hardly be estimated.

The claim in controversy is the third. It is in these words:

3. The combination, with a harness for a fire-engine or like apparatus, of a device for suspending said harness above the place occupied by the horse when attached to the apparatus, substantially as and for the purpose set forth.

The defenses interposed are, first, the claim is void for the reason that there is an attempt to patent a mere abstraction—the idea of suspending a harness from the ceiling in a particular place; second, the defendants do not infringe if the claim is confined to the particular mechanism described in the specification; third, the patentee was not the original inventor.

So far as the records of the Patent Office show Sullivan was the first to enter this field of invention. No other patent, American or foreign, is introduced to anticipate or limit the claim referred to. It should, therefore, be construed, broadly, to cover any similar apparatus which suspends a harness in substantially the same manner. The details of construction both in the harness and the suspending apparatus are non-essentials, inferior, and subordinate to the principle embodied in the patent, which is the paramount and superior consideration. The man who first conceived the idea of suspending the harness above the horse and put it into successful and practical operation is the one who conferred the benefit, and is entitled to the reward. It would be an exceedingly illiberal and narrow construction to hold that he should be deprived of the fruits of his ingenuity by one who simply changed the form of the harness or of the device by which it is suspended. No principle is better settled than that a mere abstract idea is not the subject of a patent, but that principle has little application here for the reason that the inventor has put his idea into tangible shape and given it form and substance. For years the problem was how to get the engine to the scene of the fire in the shortest possible time. By a combination of old devices Sullivan has reduced time to the minimum, and accomplished a confessedly beneficial result. It is not an abstraction he seeks to secure, but the apparatus by which the idea is carried out. With the claim thus construed, and in view of the state of the art, very little need be said upon the question of infringement.

The defendants have adopted an analogous combination. The harness and hoisting apparatus used by them are substantially the same as those described in the patent. They have quite likely introduced some improvements; they have employed the well-known mechanical equivalent of a pulley and weight for a coiled spring; they suspend the whole harness and attach no part of it to the pole, and there are minor points of difference between the two mechanisms; but in all essential particulars they are alike.

The main effort on the part of the defendants has been to show that Sullivan was not the original inventor. Here the burden is upon them to satisfy the court beyond a reasonable doubt. A mere preponderance of evidence is not enough. The proof must be of such a convincing character that the court can say without hesitancy that the allegations of the answer in that behalf are true. Has such proof been offered? It is thought not.

A fair conclusion to draw from the evidence is that the defendants have succeeded only in casting doubt upon the title of the patentee. Instead of capturing the citidel, they have simply made a breach. True it is that before the patent vague conceptions of the invention had entered other minds; true it is that others had approximated more or less closely to the successful realization. No one had quite reached the goal. The evidence shows that in one instance, while the horse was standing harnessed in the stall, the collar was, by means of a cord, pulley, and weight, raised on his neck to prevent chafing, heat, and irritation. In another case a single harness, without collar and hames, was attached to the thills of a light fire-wagon. The harness and thills were elevated to the ceiling by a rope, pulley, and weight. A similar method was at another time applied to the harness of hose-carts, excepting that the collar and hames were left on the horse. There was also evidence tending to show that in 1872, at Louisville, the harness of a hose-cart was suspended by a rope and pulley from the ceiling, and that the collar was hinged and was fastened by a snap or spring lock at the bottom. No witness was called who recollected seeing a harness for fire-engines suspended prior to the date of the patent. But, if not discredited, the evidence relating to the Louisville apparatus would certainly have the effect of restricting the claim within exceedingly narrow limits. The complainants have, however, succeeded in showing that there may well be a mistake both as to the time when and the manner in which the harness was suspended at Louisville. The chief and assistant chief of the fire department of that city during the year 1872 never saw or heard of the apparatus described by the defendants' witnesses. The chief next in succession, who previous to his elevation to that office had been in and about the engine-houses for twenty years, gave like evidence. A member of the Cleveland fire department, who came to Louisville in 1879 for the purpose of explaining and introducing the Sullivan apparatus, testified that he visited the different engine-houses, but saw nothing at all resembling a swinging harness. The Louisville firemen were surprised and pleased with the invention, and it was immediately adopted by them. It must, therefore, be said within the rule heretofore adverted to that the defendants have not succeeded in establishing their defense.

There should be a decree for an injunction and an account, with costs.

Attorneys.

DEPARTMENT OF THE INTERIOR,
Washington, June 17, 1884.

SIR: I am directed by the Secretary to inform you that the order of the Department disbarring William H. Woodward, of Carbondale, Illinois, from practice before this Department and its bureaus has this day been rescinded.

Very respectfully,
GEO. M. LOCKWOOD,
Chief Clerk.

The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., June 18, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that John Algoe, of Flint, Michigan, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
GEO. M. LOCKWOOD,
Chief Clerk.

The Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., June 18, 1884.

SIR: I am directed by the Secretary to inform you that he has ordered that Edwin J. Smith, of Whitehall, Muskegan county, Michigan, be not recognized from and after this date as attorney in the prosecution of any claim or other matter before the Department of the Interior or any bureau thereof.

I am, sir, very respectfully, your obedient servant,
GEO. M. LOCKWOOD,
Chief Clerk.

The Commissioner of Patents.

"A scroll with shield and hat, an oblong eight-sided figure inclosing the name and address 'D'Edouard Pernod,' and an old Swiss in national costume leaning upon the shield, and the paraph 'Ed. Pernod.'"

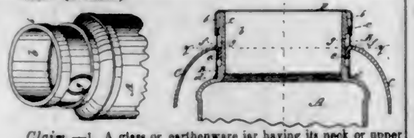
11,284.—FLOAT-LOGS.—*J. Spencer & Co.*, Baltimore, Md. Application filed April 10, 1884.
"Two bands, rings, or grooves encircling the log and joined by a straight line or groove."

11,285.—THERMOMETERS.—*Henry Weinhagen*, Hoboken, N. J. Application filed April 14, 1884.
"A triangular figure inclosing the letter 'W.'"

LABELS.

4,155.—Title: "HIGGINS AUTUMN LEAF" (FOR A DYSPEPSIA REMEDY.)—*Charles A. Higgins*, Flemington, N. J. Application filed July 13, 1883.

4,156.—Title: "THE BOSTON JAVA COFFEE."—*Swain, Earle & Co.*, Boston, Mass. Application filed June 3, 1884.

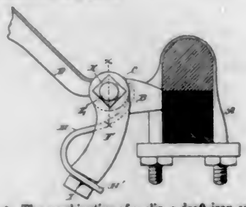


4,157.—Title: "BEEF, IRON, WINE WITH HYDROPEPSIN."—*Thomas & Thompson*, Baltimore, Md. Application filed June 3, 1884.

4,158.—Title: "WILBER'S CELEBRATED FAMILY LINIMENT."—*Rufus R. Wilber*, New York, N. Y. Application filed June 2, 1884.

PATENTS

GRANTED JUNE 24, 1884.



300,749. JAR. SAMUEL ADLAM, Jr., Boston, Mass. Filed Mar. 17, 1884. (No model.)

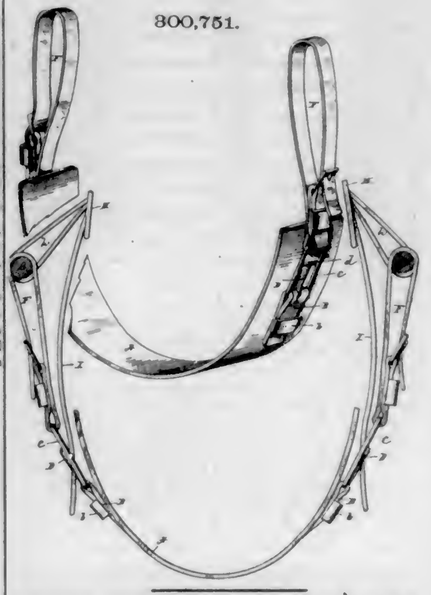
Claim.—1. A glass or earthenware jar having its neck or upper portion encircled by a metal band or collar firmly cemented thereto, and provided with a flange, *d*, in combination with a swinging bail or handle, substantially as and for the purpose set forth.

2. The combination, with a glass or earthenware jar having recesses *g* formed upon opposite sides of the outside of its neck or upper portion, of the metal band or collar B, encircling said neck, and provided at its top with a turned edge, *c*, and at its bottom with a flange, *d*, for the surplus plaster, and having apertures *f* opposite to the recesses *g*, and the swinging bail or handle C, having its ends *e* hooked into the apertures *f* in the band B, and adapted to project into and turn within the recesses *g* in the neck or upper portion of the pail, all constructed and arranged to operate substantially in the manner and for the purpose described.

300,750. THILL-COUPLING. EDWARD P. ALEXANDER, Clinton, N. Y. Filed Aug. 24, 1883. (No model.)

Claim.—1. The combination of a clip, a draft-iron secured therein, arm F, and spring H, secured to said arm, and having its free end bearing against the barrel of the draft-iron, substantially as shown and described.

2. The combination of the clip A, draft-iron D, coupling-bolt E, arm F, secured to said bolt at one end, spring H, and screw I, substantially as set forth.



3. The combination of the clip A, draft-iron D, coupling-bolt E, arm F, secured to said bolt at one end and having its free end bent at right angles, spring H, having the lower straight end, H', and screw I, all combined and arranged to operate substantially as described.

300,751. HARNESS. CHARLES ALLEN and WILLIAM E. DUBBS, Peru, Ind. Filed Apr. 29, 1884. (No model.)

Claim.—1. The girth or belly-band provided near its ends with the buckles, having loops extended in advance of the points of the tongues, and having the thill-loops secured at one end in the extended loops of said buckles, substantially as and for the purposes specified.

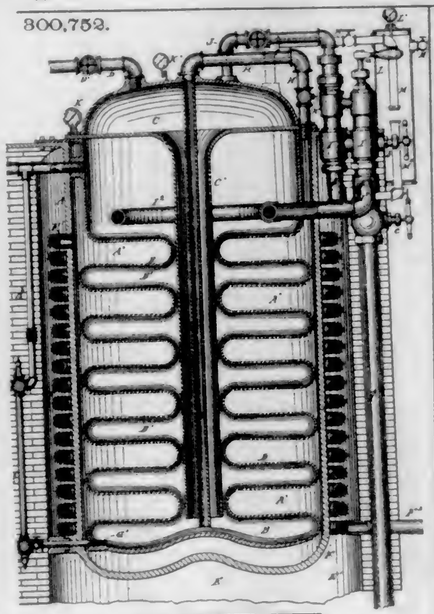
2. The combination of the girth, the buckles secured near the opposite ends of same, and provided with loops extended in advance of the bearing-points of the tongues, the thill-loops secured at one end in said extended loops, the back-band or saddle, and the connecting-straps secured at one end to the back-band, having their opposite ends held by the buckles on the girth, substantially as set forth.

300,751.

300,752. APPARATUS FOR GENERATING GAS OR VAPOR FROM LIQUID HYDROCARBONS. AUGUSTIN I. AKELEY, Washington, D. C. Filed June 9, 1882. (No model.)

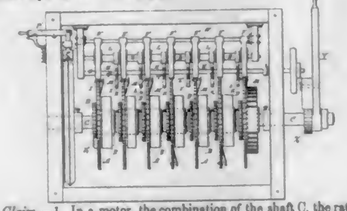
Claim.—1. In combination, the inclosing-cylinder A, the corrugated cylinder A', inclosed within the same so as to leave a steam-space between, and the pipe C', communicating with the corrugated cylinder by which it is inclosed near the bottom, substantially as shown.

2. The corrugated generating-chamber B', surrounded by the corrugated steam-chamber A', the inspirator-chambers I I, the feed-pipe I', the perforated oil-pipe I^2, the oil-supply pipe I^3, the overflow-pipe I^4, the vapor-pipes J and M, the cylinder-trap L, the condensation return-pipe M^3, the gas-pipe M', and the steam-pipe H and H', all combined and relatively arranged substantially as shown and described.



3. The combination of the cylinder A, the cylinder B, the dome C, the pipe C', and the pipe and valve D and D'.

4. The superheater F, pipes F' and F^2, the steam-chamber A', the pipe and valve H and H', the dome and pipe C and C', and the pipe and valve D and D', combined and relatively arranged substantially as stated.

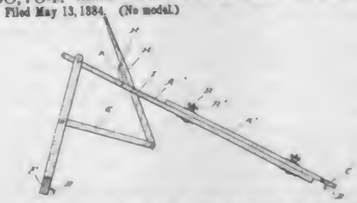


5. The combination of the oil-feed pipe, the inspirator, and the generator with gas-pipes M and M', the cylinder L, and pipes M^3, for returning any liquid of condensation to the generator by means of the feed-pipe of the inspirator, substantially as stated.

6. The combination of the outer steam-jacket, the inner jacket inclosing the generating-chamber, the pipes G and G' with pipe and glass tube G^3, the superheater F and connecting-pipes F' and F^2, pipe and valve H and H', pipe C', dome C, and pipe and valve D and D', and oil-supply pipe I', substantially as shown, and for the purpose set forth.

300,752.

300,753. SPRING-MOTOR. THOMAS K. AUSTIN, New York, N. Y. Filed Apr. 30, 1884. (No model.)

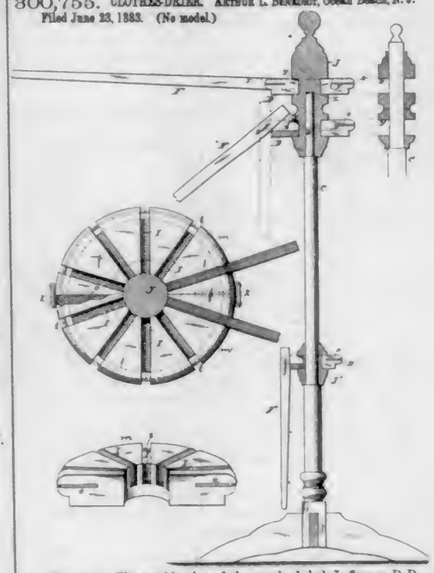


Claim.—1. In a motor, the combination of the shaft C, the ratchet-wheels A D, and pawls E F with the springs, the spring-actuated releasing-pins, and the lifters, substantially as shown.

2. In a spring-motor, the combination of the ratchet-wheels A D, spring-actuated pins I, which are released by the uncoiling of the driving-springs, and the tappet H, provided with a hook or catch upon its end for holding the ratchet-wheel A while the pawl F is out of contact with it, substantially as set forth.

3. The combination of the shaft C, the ratchet-wheels A D, and pawls E F with the springs, the releasing-pins, the tappets, the lifters, and the arms for lifting the tappets so as to release the pins, substantially as described.

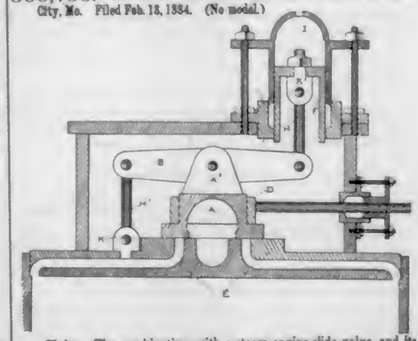
300,754. CARPET-STRETCHER. JOSEPH L. BARRETT, Ansonia, Conn. Filed May 13, 1884. (No model.)



Claim.—1. The adjustable long arm and a short arm pivoted thereto, in combination with a lever pivoted to the short arm about midway of its length, and pivoted at its other end to a hand-lever, which in turn is pivoted to the long arm, substantially as described.

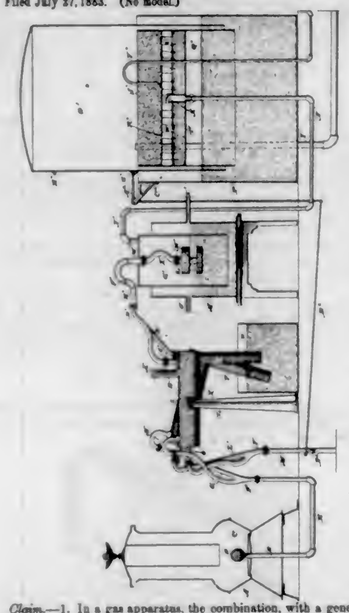
2. The long arm consisting of the slotted parts A A', adjustably secured together by bolts having thumb-nuts, and a hand-lever pivoted in said arm, and having teeth H', as shown, in combination with a short arm pivoted to said long arm, a lever connecting said short arm to the hand-lever, and a pawl engaging the hand-lever to hold the parts in any desired position.

3. The adjustable arm and the short arm, both having cross-pieces with hooks C at their lower ends, in combination with lever G, pivoted to the short arm, hand-lever H, pivoted to the adjustable arm, and to lever G, and a pawl engaging teeth upon the hand-lever, as described, and for the purpose set forth.



300,755. CLOTHES-DRIER. ARTHUR L. BENEDICT, Ocean Beach, N. J. Filed June 23, 1883. (No model.)

Claim.—1. The combination of the standard, hub J, flanges D D, occupying a fixed position in relation to each other upon the hub—one above the other, the upper projecting beyond the lower—provided with radial slots, and with adjustable arms F, arranged with the arms of one flange between those of the other, and each having a sliding pivotal connection, all as and for the purpose specified.



2. The combination, with the hub J, of flanges D D, arms F supported radially in said flanges, each flange being formed in sections detachable from each other, substantially as set forth.

300,756. BALANCED SLIDE-VALVE. JAMES BEWSHER, Kansas City, Mo. Filed Feb. 13, 1884. (No model.)

Claim.—The combination, with a steam-engine slide-valve, and its inclosing steam-chest provided with a vertical packing chamber and plunger near one end, an equalizing-bar pivoted midway of its length to the back of the valve, and having a vertically-vibrating link journaled, as shown, to one extremity for connection with the balancing-plunger, the opposite end being journaled to and connected by a similar link to the bottom of the chest, the described vibrating links each constructed of substantially identical dimensions, and attached to the parts described, as shown, so that the central pivot of the equalizing-bar may reciprocate in a line parallel to the valve-face, and the plunger be devoid of motion, substantially as described and shown.

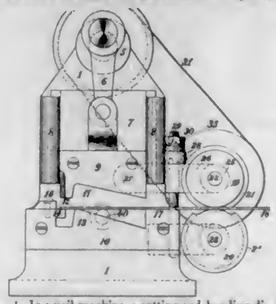
300,757. GAS APPARATUS. JAMES M. BOE, East Aurora, N. Y. Filed July 27, 1883. (No model.)

Claim.—1. In a gas apparatus, the combination, with a generator, of pumping-cylinders connected with the generator and a water-supply, and devices whereby one cylinder is filled with water and emptied of its gas while the other is being filled with gas and emptied of water, substantially as set forth.

2. In a gas apparatus, the combination, with a generator, of a gas-pipe surmounted by a perforated ball located in the combustion-chamber of the generator, and pumping-cylinders connected with the gas-pipe of the generator, and with a water-supply, and arranged to operate alternately in withdrawing the gas from the generator.

3. In a gas apparatus, the combination, with a generator, of two pumping-cylinders poised upon a common fulcrum, and arranged to be depressed when filled with water, inlet and outlet water and gas connections for each cylinder, and a walking-beam uniting the two cylinders, substantially as set forth.

4. In a gas apparatus, the combination, with a generator, of two pumping-cylinders eccentrically hung upon a common fulcrum and poised, inlet and outlet water and gas connections for each cylinder, and a walking-beam uniting the cylinders, substantially as set forth.



5. In a gas apparatus, the combination, with a generator, of two pumping-cylinders poised upon a stationary fulcrum, levers located within the cylinders and rigidly secured to the said stationary fulcrum, and inlet and outlet water-valves located in the cylinders and attached to the opposite ends of the levers, and operated by the oscillations of the cylinders upon their fulcrum, substantially as set forth.

6. In a gas apparatus, the combination, with a generator, of two pumping-cylinders poised upon a stationary fulcrum, inlet and outlet water connections for each cylinder, and means for discharging the water from the cylinders below the surface of another volume of water, substantially as set forth.

7. In a gas apparatus, a purifier consisting, essentially, of a vessel inverted in a tank containing a purifying-liquid, and provided with a flexible inlet-pipe, a short pipe secured to the end of the flexible pipe, perforated disk secured to the lower end of the short pipe, and a float secured to the short pipe above the perforated disk, substantially as set forth.

8. In a gas apparatus, the combination, with a generator, of two pumping-cylinders arranged to be actuated by water in withdrawing the gas from the generator and gasometer, and a system of levers arranged to employ the rise and fall of the gas-tank, to shut off and turn on the water-supply of the pumping-cylinders, substantially as set forth.

300,758. MACHINE FOR MAKING HOOK-HEADED NAILS. BENJAMIN BRAEELLE, St. Louis, Mo. Filed Dec. 26, 1883. (No model.)

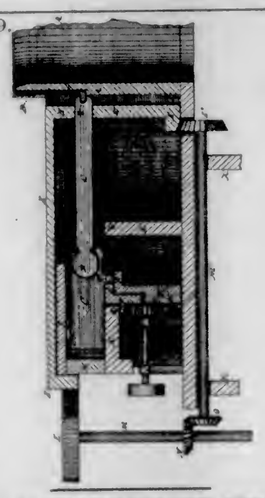
Claim.—1. In a nail-machine, a cutting and bending die, 9, substantially as set forth—to wit, having an angular recess, 11, in its face corresponding in form with the desired outer longitudinal outline of the nail to be cut, with a cutting-edge located at one end of said recess, and a cutting and bending punch, 12, located at the other end thereof.

2. In a nail-machine, the combination, substantially as set forth, of a movable cutting and bending die, 9, having an angular recess, 11, and cutting-edge and punch 12, as described, and a counterpart fixed die, 10, having a corresponding former, 13, and tongue 14.

3. In a nail-machine, the combination, substantially as set forth, of a pair of cutting and bending dies, a pair of feed-rolls, each having a flange on one side, the flanged side of one roll being opposite the plain side of the other, and a spring on the shaft of one of said feed-rolls, the tension of which acts to return said feed-roll to normal position upon the relief of pressure, tending to move said feed-roll in a plane parallel to its axis.

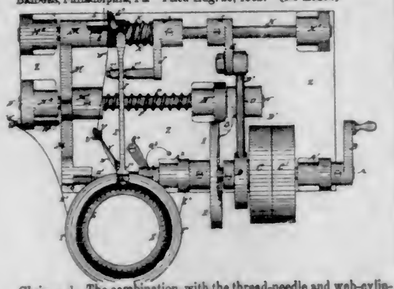
4. In a nail-machine, the combination of a pair of cutting and bending dies, a fixed stop, a pair of feed-roll shafts, each having fixed thereon a feed-roll and a gear which meshes with a corresponding gear on the opposite shaft, a driving-pulley mounted loosely on one of the feed-roll shafts, and having an annular recess in one of its sides, a spring fitting in said recess, and a nut engaging a thread on the shaft of said pulley, and adapted to compress the spring within the recess, substantially as and for the purpose set forth.

5. In a nail-machine, the combination, substantially as set forth, of a pair of cutting and bending dies, a feed-roll mounted in bearings fixed to the frame of the machine, a feed-roll mounted in a bearing on an arm pivoted to the frame, a spring-bearing upon said pivoted arm, and an adjusting-screw and nut for varying the tension of the spring upon said arm.



6. In a nail-machine, the combination of a driving-shaft, a driving-pulley fitting freely thereon and maintained in frictional contact therewith by a spring compressed by a nut engaging a thread thereon, a cutting and bending die having an angular recess and cutting-edge and punch, as described, a connecting-rod, coupling said die to a crank or eccentric on the driving-shaft, a counterpart fixed cutting and bending die having a former and tongue corresponding with the recess of the movable die, a fixed stop in line with one of the cutting-edges of the movable die, a pair of feed-rolls, each having a flange on one side, the flanged side of one roll being opposite the plain side of the other, said feed-rolls being rotated by a belt from the driving-shaft passing around a loose pulley, which is held in frictional contact with one of the feed-roll shafts by a spring compressed by a nut thereon, a discharge-rod adapted to reciprocate toward and from the dies, and a lever coupled to said discharge-rod and actuated by a cam upon the driving-shaft, these members being combined for joint operation, substantially as and for the purposes set forth.

300,759. KNITTING-MACHINE. JOHN R. BRIDGES, Philadelphia, Pa. Filed Aug. 18, 1881. (No model.)



Brief.—The invention is especially designed to render the devices covered by Patent No. 270,928 applicable to machines having a vertical needle-bed.

Claim.—The combination of a series of needles, B, a series of vibratory jacks, C C', detachably connected directly with the feet of said needles, respectively, cam-faces E E', and mechanism to actuate them in unison, and one or more reciprocatory rings, F, constructed and adapted to move the jacks to and from their respective needles, substantially as shown and described.

300,759.

300,760. MACHINE FOR UNITING LOOPED FABRICS. JOHN R. BRIDGES, Philadelphia, Pa. Filed Aug. 29, 1883. (No model.)

Claim.—1. The combination, with the thread-needle and web-cylinder provided with impaling-points, of mechanism to conjointly impart to said needle a lateral and to said cylinder an intermittent rotary movement, as described, whereby said needle is caused to follow and its point thus held or preserved in a line with the loops upon the contiguous impaling-point of said cylinder, as said needle is being actuated to penetrate and passes through said loops, means for actuating the needle to so penetrate said loops, and means for coacting with said needle to form stitches, substantially as set forth.

2. The combination of the thread-needle, a rotating web-cylinder having vertically-set projecting impaling-points, mechanism to actuate said needle in the direction of its length, and means for coacting therewith to form stitches, said cylinder being detachable, substantially as shown, and for the purposes set forth.

3. The combination of the thread-needle, a web-cylinder provided with impaling-points, and a ring, T, having pins T', mechanism to actuate said web-cylinder, mechanism to actuate the needle in the direction of its length, and means for coacting with said needle to form stitches, all substantially as shown, and for the purposes set forth.

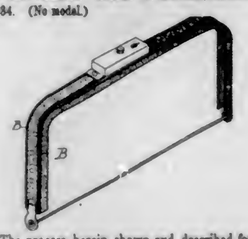
300,761. BASE FOR LOOKING-GLASS FRAMES. CHAS. BROTHERS, New York, N. Y. Filed Aug. 2, 1883. (No model.)

Claim.—1. The combination of the upper frame-supporting base portion, B, provided with the posts *b b'*, with the lower stationary base portion, C, provided with the guide-posts *c c'*, and means, substantially as described, arranged in the central posts, *b c*, for adjusting and maintaining extension, substantially as and for the purpose hereinbefore set forth.

2. The combination of the upper frame-supporting base portion, B, provided with the posts *b b'*, and having the swiveled screw E in the central post, with the lower stationary base portion, C, provided with the guide-posts *c c'*, and having the threaded socket D in the central portion, *c*, substantially as and for the purpose set forth.

300,762. DEVICE FOR FASTENING REMOVABLE PINS TO BROOCHES. GEORGE E. BUTIN, Fredonia, Kans. Filed Apr. 11, 1884. (No model.)

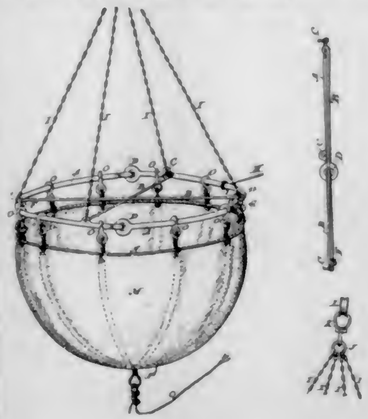
Claim.—1. A brooch having the catch *a*, and provided with the shoulder B, having the opening *b* formed with the countersink, the pin C, and the means, substantially as shown, for retaining said pin in the shoulder.



2. The combination, with a brooch having catch *a*, of the shoulder B, formed as described, the retaining-plate pivoted to said shoulder, and formed with the projection *d*, the pin C, and flange or rib *e*, all substantially as set forth and shown.

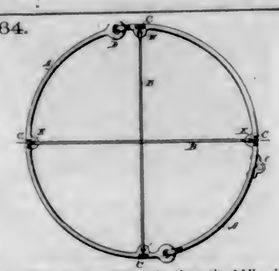
3. The combination, with the pin or brooch, of the removable pin, the lug B, and pivoted plate D, and the retaining device for said plate, substantially as described.

4. As an improvement in brooches, pins, and the like, the lug or projection having an aperture through it, one end of said lug being countersunk, whereby it is adapted to receive a removable-headed pin, and means for securing said pin in position, substantially as described.



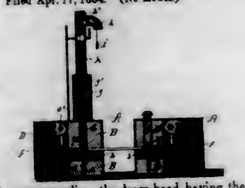
5. A brooch, safety-pin, or the like provided with a removable holding-pin, whereby one pin can be substituted for another.

300,763. PROCESS OF MANUFACTURING IMITATION-LEATHER-COVERED BAG-FRAMES. ROBERT W. CHAPMAN, Newark, N. J. Filed Mar. 13, 1884. (No model.)



Claim.—The process herein shown and described for pebbling or graining metallic bag-frames in imitation of leather, consisting in first pebbling the sheet metal by pressure, then cutting, bending, and working the same into bag or satchel frames, and, finally, in japanning the pebbled surface of such frames, as and for the purpose set forth.

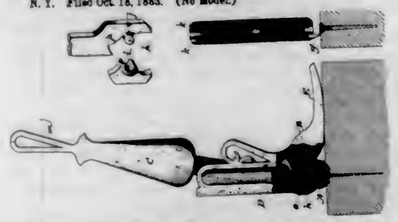
300,764. ADJUSTABLE MARINE DRAG. JOSEPH W. COLLINS, Gloucester, Mass. Filed Mar. 17, 1884. (No model.)



300,764.

Claim.—1. In an adjustable marine drag, the folding hoop A, provided with eyes D, formed as shown, the eyes C on its upper side for attaching the guys I, and eyes E, with which the cross-bars B are connected, in combination with a bag, M, attached to said hoop A, substantially as specified.

2. An adjustable marine drag consisting of a folding hoop, A, provided with eyes for attaching the cross-bars B, and guys I, connected to a swivel-hook, the bag M, supported by hooks O on said hoop, the becket at the bottom of said bag, the tripping-line, the buoy-line, and the fair-leader, all arranged substantially as set forth.

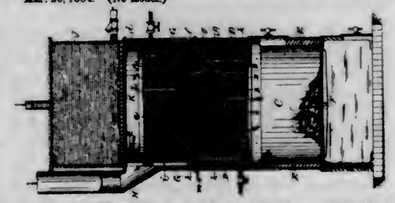


300,765. CAR-COUPLING. JASPER B. COMPTON and ENOCH J. LANE, Williams, Cal. Filed Apr. 17, 1884. (No model.)

Claim.—1. In a car-coupling, the draw-head having the box-casting, with its upper end provided with a box-shaped open-ended inclosure having a tubular vertical extension provided with horizontal tubular arms, and at its extreme upper end with a short tubular arm, in combination with the pin and its operating cords or chains, substantially as and for the purpose set forth.

2. In a car-coupling, the two-part draw-head casting, with the lower part provided with the link-passage, and in alignment with said passage with a narrow slot, the upper part of said casting having a slot in the same vertical plane with said slot, in combination with the right-angled follower sliding in recesses or grooves in the upper corner-edges of the link-passage and its coincident slot, and the lever or arm resting upon said follower, substantially as and for the purpose set forth.

300,766. NAIL-EXTRACTOR. MASCHIL D. CONVERSE, New York, N. Y. Filed Oct. 18, 1883. (No model.)

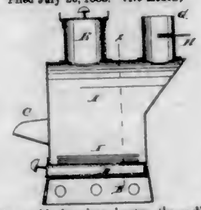


Claim.—1. In a nail-extractor, a leverless fulcrum and guide-piece provided with a sharp point for engaging the wood, in combination with an independent lever having fulcrumless jaws attached to its lower end, which interlock with said leverless fulcrum and guide-piece when said lever is inclined in the act of gripping and extracting a nail, but are each independent thereof during their vertical play, substantially as and for the purposes shown and described.

2. In a nail-extractor having pivoted vertical reciprocating jaws, the combination of a chisel-edged guide-piece, with a fulcrum rigidly attached thereto.

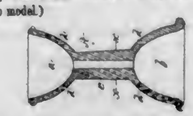
3. In a nail-extractor, the herein-described clamping device, consisting of a segmental-shaped recess formed in one clamping-jaw, at right angles to its inner edge, to embrace a correspondingly-shaped pin formed upon the other jaw at the same relative angle and place, operating together as set forth.

300,767. STEAM-BOILER. JAS. O. DRAPER, Pawtucket, R. I. Filed Mar. 26, 1884. (No model.)



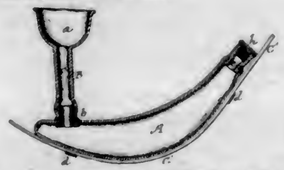
Claim.—1. The combination of the upright boiler provided with the flues B B with the removable perforated plate L, the perforations of the plate being made smaller in area than the internal diameter of the flues and coincident therewith, whereby the heat will be longer retained in the flues, substantially as described.

2. The combination of the upright boiler provided with the flues B B, band *f*, and shell *d*, extended beyond the upper end of the flues B B, and provided with an outlet-orifice, *e*, with the outer casing provided with the flange *g*, the partitions *i* and *j*, and flue H, substantially as and for the purpose specified



3. The combination of the upright boiler A, having an elongated cross-section, with the band *f*, and shell *d*, extended beyond the upper end of the flues B B, and provided with an outlet-orifice, *e*, with the outer casing provided with the flange *g*, for supporting the boiler, and the partitions *i* and *j*, for directing the products of combustion around the upper portions of the boiler, substantially as described.

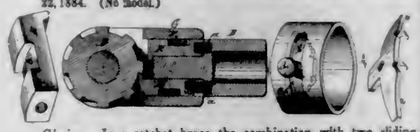
300,768. HEATER FOR SOLDERING-IRONS. WILLIAM DUNLOP, Chicago, Ill. Filed July 26, 1883. (No model.)



Claim.—In a soldering-iron heater, the cylinder A, having the semi-cylindrical grate formed integral therewith and provided with a feed-tube, E, and draft-tube G, having damper H, in combination with the base B, for holding the cylinder in a horizontal position, and provided with an ash-drawer, D, said cylinder having openings J J in its front end, and a rest, C, secured directly under the same, substantially as described.

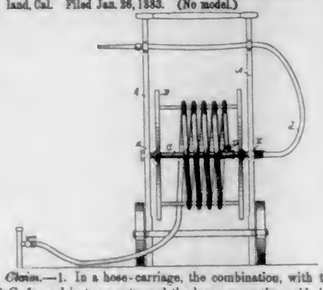
300,769. PESSARY. HIRAM G. FARR, Boston, Mass. Filed Aug. 6, 1883. (No model.)

Claim.—As an improvement in pessaries, an elastic device, A, consisting of an upper cup-shape portion, *a*, for receiving the cervix, a lower inverted cup-shape portion, *b*, having its bearing on the pelvic floor without pressure on the urethra or rectum, and a connecting-stem, *c*, having no bearing on the vaginal walls, said device being provided with one or more passages, *d*, substantially as described.



300,770. MENSTRUAL RECEPTACLE. HIRAM G. FARR, Boston, Mass. Filed Sept. 11, 1883. (No model.)

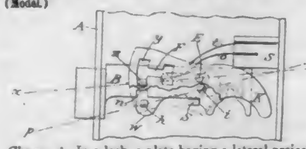
Claim.—An elastic receptacle, A, having an inlet-passage and an outlet-passage, and with the portion of the top between them closed, in



combination with a single elastic conductor, B, having a solid cup-shaped top, *a*, which supports and receives the discharge from the uterus without bearing on the vaginal walls, substantially as described.

300,771. BIT-STOCK. JOHN S. FRAY, Bridgeport, Conn. Filed Mar. 22, 1884. (No model.)

Claim.—In a ratchet-brace, the combination, with two sliding pawls arranged opposite each other, and having recesses upon their outer sides, of a cam-actuating device consisting of a plate having at each end an inclined plane adapted to engage with the recesses of the pawls, substantially as and for the purpose set forth.



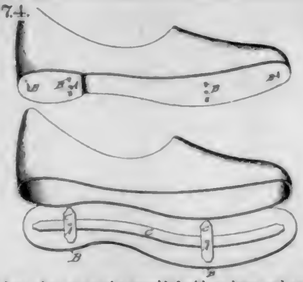
300,772. CARRIAGE FOR GARDEN-HOSE. GEORGE GEISEL, Oakland, Cal. Filed Jan. 26, 1883. (No model.)

Claim.—1. In a hose-carriage, the combination, with the hollow shaft C, formed in two parts, and the hose connecting said shaft to the water-supply, of a coupling, D, uniting the two lengths of shaft and the hose, substantially as set forth.

2. In a hose-carriage, the combination, with the two-part hollow shaft C and frame for supporting the same, of a coupling, D, having the connection at each end for the two parts of the shaft, and a third connection on the side adapted to receive the hose, as set forth.

300,773. LOCK. JAMES GWINN, Detroit, Mich. Filed Feb. 2, 1884. (Model.)

Claim.—1. In a lock, a plate having a lateral projecting pin near each end thereof, and pivotally secured, one of such pins forming a moving bearing for tumblers, and the other designed to engage with the bolt, the pin forming a bearing for the tumblers being on a line approximately vertical to the pivot of the plate, the said plate being so arranged with relation to the tumblers and the bolt that, upon a backward pressure being applied to said bolt, the plate will engage with and lock the bolt in position irrespective of the resistance offered by the tumblers, substantially as described.

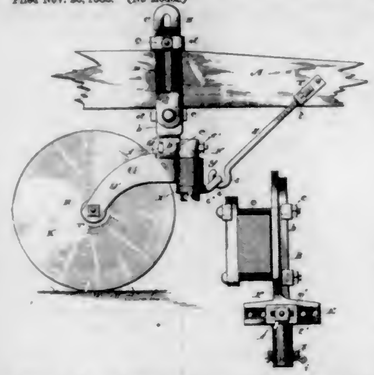


2. In a lock having a plate arranged and operating substantially as described, tumblers having a moving bearing upon one of the pins in said plate, and forming the means by which the backward pressure of the bolt actuates the plate, and thereby locks the bolt in position, substantially as specified.

3. In a lock, a plate having a lateral projecting pin near each end thereof, and pivotally secured, one of such pins forming a moving bearing for the tumblers, and the other designed to engage with the bolt, the pin forming the bearing for the tumblers being on a line approximately vertical to the pivot of the plate, whereby the tumblers are allowed to move freely under a backward pressure applied to said bolt, substantially as set forth.

300,774. OVERSHOE. DAVID HALL, Middletown, Conn. Filed Feb. 8, 1884. (No model.)

Claim.—1. In an improved boot, shoe, or overshoe, the lower or outer sole provided with a longitudinal metallic strip and cross-strips upon its inner side, the longitudinal strip and cross-strips having points projecting through the sole, as set forth.



300,774.

2. A boot, shoe, or overshoe provided with an inner and outer sole, having a longitudinal metallic strip and cross-strips secured between the two soles, the longitudinal strip and cross-strips having teeth or points projecting through the outer sole, all substantially as set forth.

3. In a boot, shoe, or overshoe, the outer sole provided with metallic strips having triangular points struck up from the metallic strips, and projecting through the sole, all substantially as set forth.

300,775. ROLLING COLTER. CHARLES R. HARTMAN, Vincennes, Ind. Filed Nov. 20, 1883. (No model.)

Claim.—1. In a rolling colter, the combination, with the standard provided at its lower end with a horizontal arm, which latter is grooved, serrated, and perforated, as described, of a swivel-post constructed with a serrated-faced projection, which enters the groove in said horizontal arm, and a bolt for securing the swivel-post to the arm in any desired lateral adjustment, substantially as set forth.

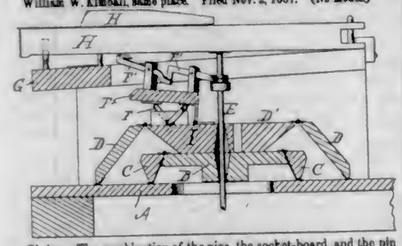
2. In a rolling colter, the combination, with the standard provided with a transverse bearing-arm at its lower end, said arm being grooved, serrated, and perforated, of a swivel-post constructed with a serrated-faced projection, which enters the groove in said standard-arm, said projection provided with an elongated slot, and a bolt for securing the swivel-post in any desired lateral adjustment, substantially as set forth.

3. In a rolling colter, the combination, with the laterally-adjustable swivel-post, of the combined collar and inclined eye, connected to the lower end of the swivel-post, and an adjustable stay-rod, one end of which is provided with a hook which engages said eye, while the opposite end is screw-threaded for its adjustable attachment to a bracket secured to the beam, substantially as set forth.

4. In a rolling colter, the combination, with the plow-beam, a post, and a colter swiveled to the post, of the combined collar and inclined eye secured to the lower end of the post, and a stay-rod one end of which is secured to the eye, while the opposite end thereof is attached to the plow-beam, substantially as set forth.

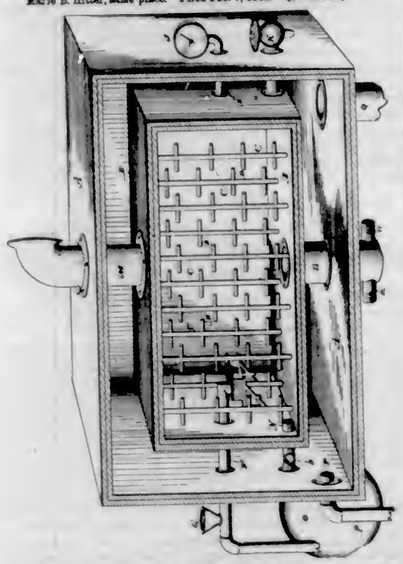
300,776. WINDOW-SCREEN. GEORGE W. HENRY, West Jersey, Ill. Filed Aug. 17, 1883. (No model.)

Brief.—A window-screen consisting of a single frame covered with wire or suitable netting and provided with covered openings for operating the blind-slats.



Claim.—1. In combination with the netting N, having small frame-protected openings therethrough and doors F F, the frame-strips A A A', the centrally upwardly curved bar B, and plate C, pivoted at one end thereto, substantially as and for the purpose specified.

300,776.



2. As a means whereby the upper slats of a blind may be adjusted without permitting the entrance of objectionable insects, a netting, N, having two small openings therethrough, in combination with the frames F' F', fastened to said netting about said openings, and having doors F F, substantially as and for the purpose set forth.

300,777. REED-ORGAN. JACOB HESSLER, Chicago, Ill., assignor to William W. Kimball, same place. Filed Nov. 2, 1881. (No model.)

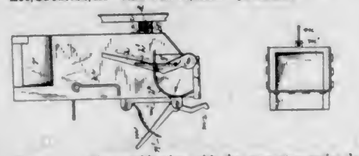
Claim.—The combination of the pins, the socket-board, and the pin rail, said board and rail being provided with an independent close and reversely-tapered socket for each of the pins, substantially as specified.

300,778. PROCESS OF AND APPARATUS FOR TREATING FIBROUS PLANTS. J. ALFRED HITTER, St. Martinsville, La., assignor to Marie B. Hitter, same place. Filed Feb. 7, 1884. (No model.)

Claim.—1. An apparatus for treating fibrous material, consisting of a chamber provided with means for suspending the material therein, and of a reservoir for holding a chemical preparation, and having an induction steam-pipe terminating therein, the said chamber being also provided with an exhaust-pipe and an indicator.

2. In an apparatus for treating fibrous material, the combination, with a chamber provided with means for suspending the fiber therein, of a reservoir adapted to hold a chemical preparation, an induction steam-pipe terminating in said reservoir, an exhaust, an indicator, and a ventilator, substantially as set forth.

3. In an apparatus for treating fibrous material, the combination, with an external chamber, of a smaller chamber located therein, and provided with means for suspending the fibrous material, a reservoir situated within the said internal chamber, a steam-pipe terminating within the reservoir, an exhaust, and an indicator, substantially as set forth.



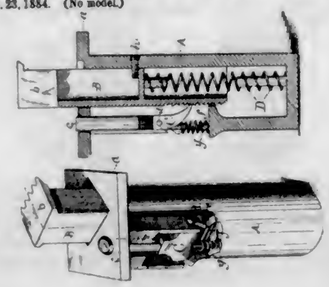
4. In an apparatus for treating fibrous material, the combination, with an outer chamber provided with induction and eduction steam-pipes, of an inner chamber provided with means for suspending the fibrous material, a reservoir, an induction steam-pipe terminating therein, an exhaust leading from the said inner chamber, an indicator, and a ventilator, substantially as set forth.

5. In an apparatus for treating fibrous material, the combination, with an outer chamber provided with induction and eduction steam-pipes, of an interior chamber provided with means for suspending the fibrous material, said interior chamber being provided with a reservoir adapted to contain a chemical preparation, an induction steam-pipe terminating in the reservoir, and provided with a faucet and funnel without the outer chamber, an exhaust leading from the inner chamber, an indicator, a steam-gage, a ventilator, and a pipe leading from a fan to the inner chamber and provided with an opening and valve between the walls of the two chambers, substantially as set forth.

6. A process of treating fibrous material, consisting in first subjecting the material to the action of rollers or breakers, then loosely suspending the same in a steam-tight chamber and subjecting it to the action of steam impregnated with chemical solutions, substantially as set forth.

7. A process of treating fibrous material, consisting in first subjecting the material to the action of rollers or breakers, then loosely suspending the same in a steam-tight chamber and subjecting it to the action of steam after the latter has passed through a solution of sulphate of iron, then to the action of steam after the latter has passed through soft soap, and then dried, substantially as set forth.

300,779. MEASURING APPARATUS FOR SEPARATORS. JACOB HOE, St. Jacob's, Ill. Filed Feb. 16, 1884. (No model.)

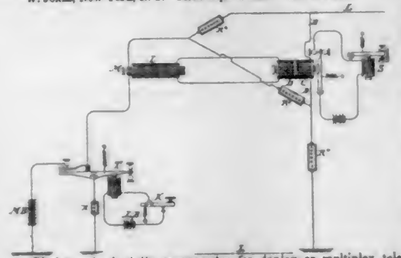


Claim.—1. The combination, with the separator-casing having right-hand and left-hand receiving attachments, of a detachable measuring-box having a cut-off slide and a pivoted bottom operated by a lever engaging a holding-rack, and hook attachments adapted to engage the receiving attachments on the separator-casing, substantially as specified.

2. The measuring-box having the pivoted bottom in its contracted end operated by a lever provided with a spring for holding it in engagement with a curved rack secured to the outside of the box, in combination with the cut-off slide working in ways secured to three sides of the interior of the box and through a slot in the front of the same, substantially as specified.

3. The combination, with the measuring-box having the pivoted bottom, of the rectangular toothed bar *l*, extending along the ends and across under the contracted portion of the box, and the angular distending-lever having a hook at its lower end, and the pivoted guard-rack *n'*, for holding the sack while being filled from the measuring-box, substantially as specified.

300,780. BENCH-DOG. CHAS. C. JOHNSON, Springfield, Vt., assignor to Charles E. Richardson and Adna Brown, both of same place. Filed Apr. 23, 1884. (No model.)



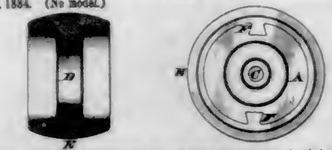
Claim.—1. The bench-dog herein described, consisting of the hollow socket A, provided with the cap-piece *a*, and the dog-head and shank *b* B, fitted to said socket and resting upon spring D, and adapted to be depressed by pressure upon the head *b*, irrespective of other mechanism, and provided with suitable means for automatically holding the dog-head and shank in the socket when depressed, all combined substantially as and for the purposes set forth.

2. The combination, in a bench-dog provided with a socket and cap-piece, of a pawl arranged to be depressed by means of a stem or bar extending through said cap-piece, the said pawl having projections upon each side adapted to move in slots formed in said socket, and a spring arranged to support said pawl in a backward and downward movement in said slots, substantially as and for the purposes set forth.

3. The combination of the socket A, provided with slots *e*, the dog B, provided with head *b*, and a shank having ratchet-teeth upon its side, the spring D, pawl C, provided with stem *c*, and projections *d*, and spring *y*, the said pawl being adapted to move downward and away from the ratchet guided by the projections *d* moving in slots *e*, and to be returned by means of the spring *y*, substantially as and for the purposes set forth.

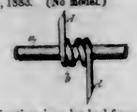
4. In a bench-dog, the combination of the ratchet *f*, pawl C, and spring *y*, the point of said pawl being arranged to operate in connection with said ratchet, and to hold the dog-shank and its head at any stage of its depression in the socket automatically, and adapted to be disengaged by a downward pressure upon the stem *c*, and to allow the dog-shank and head to automatically, and by a single disconnection, assume their highest elevation in the socket, all substantially as and for the purposes set forth.

300,781. STATIC COMPENSATOR FOR TELEGRAPHS. FRANCIS W. JONES, New York, N. Y. Filed Sept. 7, 1883. (No model.)



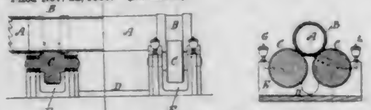
Claim.—1. A static compensator for duplex or multiplex telegraphs, consisting of an inductorium one coil of which is in the circuit, as described, with the signaling-battery and the line, so that the signaling-current sent by the transmitter will flow through said coil, while the other is in a local circuit, including means for counteracting the disturbing effects of the static charge and discharge current upon the receiver.

2. A static compensator for duplex or multiplex telegraphs, consisting of an inductorium one coil of which is connected directly into the signaling-circuit, so as to be charged and discharged by the alternate flow and removal of signaling-current transmitted to line at every complete movement of the transmitter, while its other coil includes a neutralizing-coil applied to the receiver, so as to counteract the effects of the static charge and discharge current flowing in the coils of said receiver.



3. The combination, with the receiver, in a differential or bridge duplex or multiplex telegraph, of an auxiliary coil adapted to exert upon said receiver an effect counter to that of the static charge or discharge current, and an induction-coil whose secondary includes such auxiliary coil, while its primary is in the circuit of the signaling-battery and line, as and for the purpose described.

300,782. CASTER. WILLIAM KOCH, Lawrenceburg, Ind. Filed Mar. 3, 1884. (No model.)

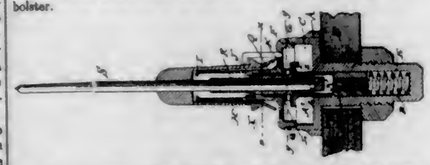


Claim.—The combination, in a furniture-caster, of wheel A, having a series of longitudinal slots, F, communicating with the circumferential groove B, and the rubber tire E, provided with a set of internal ribs, that enter said longitudinal slots, and an inwardly-projecting tongue, D, that engages with said circumferential groove B, whereby the elastic tire is securely anchored in place, and is prevented shifting either laterally or peripherally of said wheel, as herein described.

300,783. BARBED FENCE-WIRE. EDWIN S. LENOX, Worcester, Mass. Filed May 31, 1883. (No model.)

Claim.—The combination, in a barbed fence-wire, of a longitudinal wire having projections at intervals, and barb-wires twisted around the longitudinal wire with the convolutions at both sides of the projections, substantially as set forth.

300,784. TUBE-SAW. MILO FRANK LUCAS, West Newton, Mass. Filed Nov. 22, 1883. (No model.)



Claim.—1. A tubular saw provided with an annular groove near each end, in combination with supporting anti-friction rollers, which are arranged in pairs that take into said grooves, respectively, each roller being journaled independently of any other, substantially as set forth.

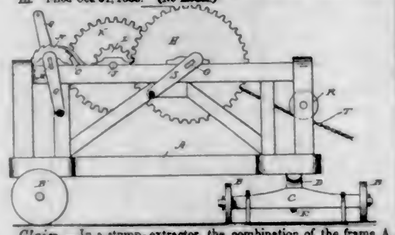
2. A tubular saw having annular grooves, in combination with anti-friction supporting-rollers and their supports, each roller being journaled independently of all the other rollers, substantially as set forth.

3. The base-plate D, having heads E, cast therewith, and provided with spaces F and oil-passages, as shown, in combination with oil-cups G, communicating with said passages, anti-friction rollers C, journaled independently in said heads, and having their journals oiled from said cups and passages, and the tubular saw A, having at or near its ends the grooves B, which, respectively, receive said rollers, substantially as set forth.

300,785. SPINDLE-BEARING FOR SPINNING-FRAMES. GEORGE B. MCCRACKEN and SAMUEL HAMER, Willimantic, Conn. Filed July 7, 1883. (No model.)

Brief.—The base or bolster-case is provided in its top section with an oil-reservoir, and in its lower section with a recess in which is placed a spiral spring upon which is placed a vertical support, which is also provided with a recess, and at its top with a lateral flange. The lower end of the bolster loosely fits the recess in the vertical support, and is supported thereon by a lateral flange corresponding to the flange on said support, said flange on its upper side having projections or teeth. The cap is provided with a central vertical extension having an internal flange at the top, and also having on its under side projections or teeth. Said cap is attached to the base by a screw-threaded connection. The bolster and support are restrained from rotation by the engagement of the teeth upon the under side of the cap with the teeth on the flange of the bolster.

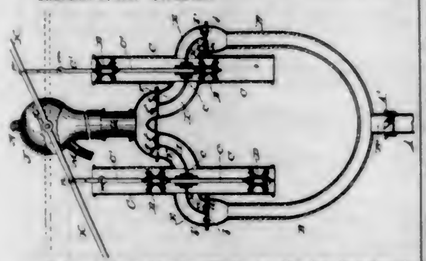
Claim.—1. The combination of the spindle-bolster or bearing-piece having a circumferential lateral flange forming its bottom rest, the spring-actuated supporting-piece having a corresponding supporting-flange extending circumferentially and laterally at its top end, and engaging the flange on the bolster to force the latter upwardly, devices for holding or supporting the bolster or bearing-piece, a device for supporting or holding the supporting-piece and spring, and the spring, substantially as and for the purpose set forth.



2. The combination of the cap-piece F, having the vertical extension H, formed with the interior shoulder, J, and the series of bottom projections, the spring-actuated supporting-piece M, forced upwardly and provided with the lateral top flange, P, the spindle-bolster or bearing-piece having the recess or bore R, the lateral flange T, corresponding to the flange P and engaged thereby, the enlargement V, engaging the shoulder J, the teeth U, projecting laterally and engaging the projections of the flange L, the spindle, means for holding the supporting-piece M and the spring E, and the said spring, substantially as and for the purpose set forth.

3. The combination of the base-piece having the depression or recess C in its top, and the bore D extending from the said recess, the supporting-piece projecting from the bore D and provided with the perforation Z, a spring for forcing said supporting-piece upward in the bore,

the spindle-bolster or bearing-piece Q, having the bearing-recess R, and the perforation A^2, opening into the same, means for supporting the bolster on the piece M, and the spindle journaled in the recess R, whereby the spindle will be automatically lubricated with oil from the reservoir-recess C, substantially as set forth.



4. The combination of the base-piece having the depression C and recess D, the cap F, having the shoulder J, the supporting-piece arranged in the recess D and formed with the perforation Z, the recess N, and the top lateral flange, P, the spindle-bolster or bearing-piece formed with the perforation A^2 in the portion which enters the recess N, and having the enlargement V, formed with the channels W, and engaging shoulder J, the bearing-recess R, and the flange T, having the perforations B^2, and the spring E, whereby the automatic lubrication of the parts is effected, substantially as set forth.

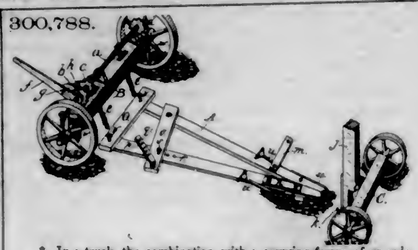
300,786. STUMP-EXTRACTOR. ROBT. M. MCKEEN, Mount Vernon, Ill. Filed Oct. 31, 1883. (No model.)

Claim.—In a stump-extractor, the combination of the frame A, mounted upon wheels, the front axle being adapted to be swung at right angles to the frame, and the rear axle being rigid therewith, with the shafts G J M, mounted in said frame, spur-wheels H K, secured on shafts G J, respectively, pinion I, mounted upon shaft J and engaging with wheel H, and pinion L, mounted upon shaft M and engaging with spur-wheel K, a ratchet-wheel, N, secured to said shaft M, a pawl, O, engaging with said ratchet-wheel, a friction roller or wheel journaled in the frame, a chain, T, and cranks S Q, as set forth.

300,787. DOUBLE FORCE-PUMP. M. FRANK MCNELLY, Sterling, Ill. Filed Nov. 30, 1883. (No model.)

Claim.—1. In combination with the stem G and stock A, the tube B, channels E, F, H, and I, the cylinder C, provided with the partition *c*, the rod C′, and buckets D D, substantially as shown, and for the purpose mentioned.

2. The tubes B, provided with alternately-acting valves *a′* and *b′*, the channels E, F, H, and I, rod C′, cylinder C, and buckets D D, in combination, whereby a constant stream of water is drawn into the tube B and discharged from the cylinder C, substantially as shown, and for the purpose named.

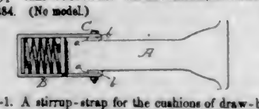


3. The combination of air-chamber J, provided with trunnions L L, integral therewith, lever K, rods *d′*, buckets D D, and cylinders C, substantially as shown, and for the purpose described.

300,788. TRUCK. HAMILTON MEYSHER, Noblesville, Ind. Filed Apr. 5, 1884. (No model.)

Claim.—1. In a truck, the combination, with two axles provided with carrying-wheels, a windlass on one of said axles, and a truck-frame provided with holes *r*, and separably connected to said axles, substantially as described, of link *ρ* and bar *o*, pivoted to said frame and adjustable thereon, substantially as and for the purpose specified.

2. In a truck, the combination, with a frame adapted to be separably connected with a pair of axles, substantially as shown and described, of an axle, a pair of carrying-wheels on said axle, a draft-pole secured to said axle, and provided with a hook, *k*, and a pair of supporting-legs hinged to said frame, all substantially as and for the purpose specified.



300,788.

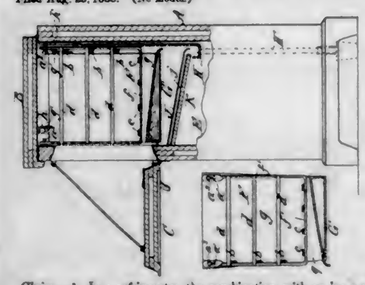
3. In a truck, the combination, with a carrying-frame, of an axle, a pair of carrying-wheels on said axle, and a draft-pole provided with hook *k*, and clevis *l*, for the purposes specified.

4. In a truck frame, A, axle B, a pair of carrying-wheels on said axle, means, substantially as described, for locking said wheels to said axle, windlass *a*, having ratchet-wheels *b* and *c*, lever *f*, pawls *g* and *h*, chains *e e*, and clips *y*, all combined substantially as and for the purposes specified.

300,789. CAR-COUPLING. ROBERT MORRIS, La Crosse, Wis. Filed May 5, 1884. (No model.)

Claim.—1. A stirrup-strap for the cushions of draw-bars, consisting of a U-shaped strap having its ends doubled inward onto its length to form hooks, the extremities of which are intended to bear against the shoulders formed by stepping or increasing the vertical dimensions of the contiguous end of the draw-bar.

2. The combination, with a draw-bar having the vertical dimensions of its end increased to form shoulders, as shown, of a U-shaped stirrup-strap having the ends thereof doubled inward onto its length to form hooks, the extremities of which bear against said shoulders, and a bolt for securing said stirrup in position, said bolt passing through suitable holes suitably aligned in the hooks and the draw-bar, substantially as set forth.



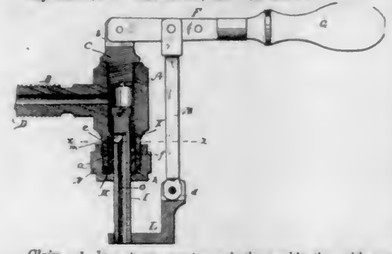
3. The combination, with a draw-bar, A, having shoulders *a a* inversely beveled, of a stirrup-strap, B, having its ends doubled back inwardly onto its length to form hooks *b b*, the extremities of which are beveled the reverse of the shoulders *a a*, and bolt C, substantially as set forth.

4. The combination, with a draw-bar having shoulders *a a*, and having an inverse transverse curvature, of a stirrup-strap having hooks *b*, the extremities of which are curved the obverse of shoulders *a a*, and a bolt passing through the two thicknesses made by said hooks, substantially as and for the purposes set forth.

300,790. HYDRAULIC CEMENT. JOHN MURPHY, Columbus, Ohio. Filed Apr. 2, 1884. (Specimens.)

Claim.—A hydraulic cement composed of fibrolite, margarite, iron slag, shell-marl, and clay, which are mixed, burned, and then reduced to powder, as described.

300,791. REFRIGERATOR. HARVEY W. NASH, Amsterdam, N. Y. Filed Aug. 23, 1883. (No model.)



Claim.—1. In a refrigerator, the combination, with an ice-crate, of a water-filter placed on one side of said crate, and having a top inclined extension under it, as shown and described.

2. A refrigerator ice-crate open in front and formed of the U-shaped irons *f f′*, slotted at the top for suspension, the back cross-bars, *b b*, the bottom cross-bars, *c c*, and the side bars, *d d*, as shown and described.

3. In a refrigerator, the combination of a suspended ice-holder, filter, inclined drip-receivers, and a drip-trough, H, extending up in front of the drip-receivers, whereby the walls of the refrigerator may be kept dry without a zinc or other lining, as described.

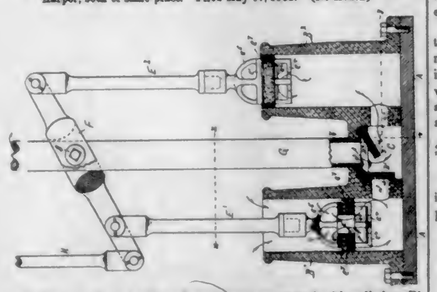
4. The water cooler or filter G, formed with the extension G', and upwardly-projecting plate *g*, the cooler being adapted to be suspended in the refrigerator, substantially as and for the purposes set forth.

300,792. STEAM OR WATER COCK. JOHN ARMERAT NICHOLSON, Fayetteville, N. C. Filed Feb. 13, 1884. (No model.)

Claim.—1. In a steam or water cock, the combination, with a suitable body communicating with the boiler, of the valve, valve-stem operating in the body, an angle plate or casting attached to the end of the valve-stem, a connecting-rod attached to the angle-plate, and a handle secured to the end of the connecting-rod, as set forth.

2. In a steam or water cock, the combination, with a suitable body communicating with the boiler, of a plug at one end of the body, a valve seated at the other end, a stem for the valve, an angle-plate attached to the end of the stem, a connecting-rod attached to the angle-plate, and a handle pivoted in the plug and secured to the connecting-rod, as set forth.

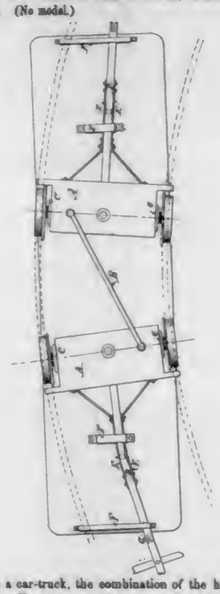
3. In a steam or water cock, the combination, with a suitable body provided with a plug at one end, of a valve seated at the other end and formed with a stem, I, a longitudinal passage, O, through the stem, a cross-opening, *m*, at the end of the passage, a handle pivoted in the plug, and an angle-plate attached to the stem and connecting with the handle, as set forth.



300,793. BELT-FASTENER. JOHN BROWN NORTON, Philadelphia, Pa. Filed Nov. 2, 1883. (No model.)

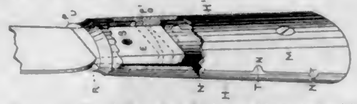
Claim.—1. In a belt-fastening device, the plate A, provided with projecting fastening-points and lacing-holes *e e*, from the edges of which project fenders *i i* to pass into the lacing-holes of the belt, substantially as and for the purpose set forth.

2. In a belt-fastening device, the plate A, provided with suitable fastening devices and the lip or lips *a*, as described.



300,794. DOUBLE-ACTING PUMP. WILLIAM HARVEY ORMSBY, Minneapolis, Minn., assignor of one-half to Lorenzo D. Hill and George A. Harper, both of same place. Filed May 17, 1883. (No model.)

Claim.—1. A double-cylinder pump constructed with cylinders B' B², and water-chamber C, communicating therewith, all in one piece, open at the top and bottom, and having a flange around the lower edge, in combination with a flat base, A, bolted thereto, substantially as and for the purpose herein specified.

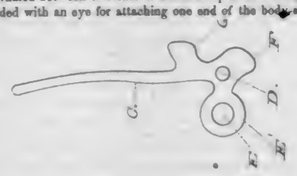


2. The valves D' D², provided with projecting journals *b' b²*, seated in cavities in the inside of the water-chamber C, in combination with clamps *c' c²*, secured in place in the said water-chamber, substantially as and for the purpose herein specified.

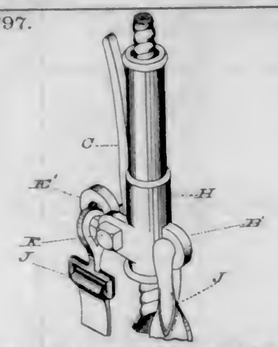
300,795. CAR-TRUCK. AMOS T. PIERCE, Fairhaven, Mass. Filed Apr. 1, 1884. (No model.)

Claim.—In a car-truck, the combination of the hinge-bar D, provided with springs E and supported by straps F, truck A, having inside bearings, as shown and described, and the diagonal connecting-bar B, all arranged for joint operation in the manner substantially as specified.

300,796. KNIFE. PIERCE J. POPE, Sanquoit, N. Y. Filed Aug. 6, 1883. (No model.)



Claim.—1. In a hollow cast-metal separable or sectional knife-handle, composed of the two parts or sections H and H', the lower and upper interior ribs, P' and P, having in each an inwardly-facing recess, R, which form slots for embracing or retaining the shank of a knife-blade when the two parts are put together, and, when connected by a screw or screws, forms but one handle, neither part or section being operative without the other, substantially as set forth and described.

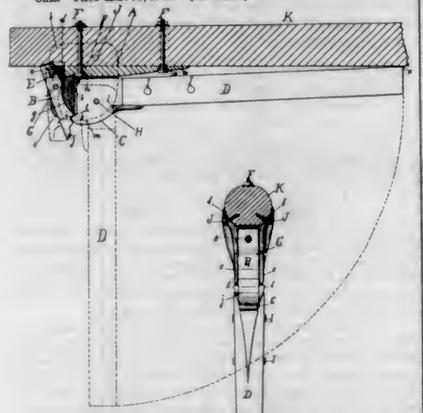


2. In a knife-blade, the flat-formed shank E, having a hole centrally located for the passage of a screw, in combination with a hollow metal separable handle composed of two parts or sections, H H', having interior upper and lower ribs, P P', in each of which is formed an inwardly-facing recess, R, which, when sections are put together, form slots for retaining and embracing the shank of the blade, substantially as set forth and described.

300,797. FIRE-ESCAPE. JAMES EDWARD POST, Poughkeepsie, N. Y. Filed June 11, 1883. (No model.)

Brief.—The lever is provided with two cam-bearing surfaces, and is journaled between two ears or brackets upon the friction-tube, and is provided with an eye for attaching one end of the body-strap.

300,797.

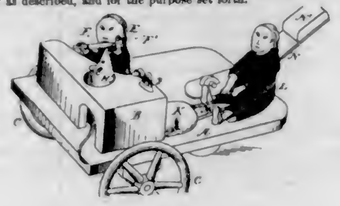


Claim.—1. The combination of the lever C with the cam F and the lateral cam G, substantially as described.

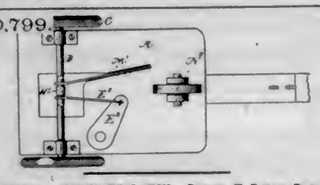
2. The combination of the bracket-lever E' with the lever C, and with the cam F, and with the ear or bracket B', substantially as above described, and for the purposes described.

3. The combination of the juxtaposed brackets D' with the shaft K, and with the lever C, and with the cam F, and with the ear or bracket B, and with the lateral cam G and the rope I and sling-seat J, as above described, and for the purposes set forth.

300,798. TONGUE-SUPPORT. SYLVESTER B. REID, Wiley's Station, Ohio. Filed Mar. 19, 1884. (No model.)

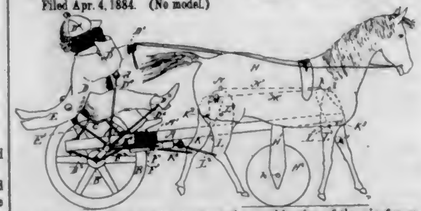


Claim.—A tongue-support constructed substantially as herein shown and described, consisting of the tongue-connection A, in combination with the spiral spring E, trip-latch B, staff-connection C, staff D, and fastening devices F F and J J, connected as set forth.



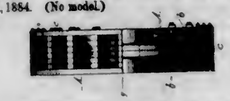
300,799. MECHANICAL TOY. REUBEN H. RICKER, Boston, Mass. Filed Dec. 6, 1883. (No model.)

Claim.—1. In a mechanical toy, the combination of the image E, pivot E', arm E², link E³, and crank D' with the image H, pitman H', and crank D', all operating together substantially as described, and for the purpose set forth.



2. In a mechanical toy, the combination of the images L and K with the link M' M and the crank D', all operating together substantially as described, and for the purpose set forth.

300,799.



300,800. MECHANICAL TOY. REUBEN H. RICKER, Boston, Mass. Filed Apr. 4, 1884. (No model.)

Claim.—1. In a mechanical toy, the combination of the gig-frame A A', wheel B, crank-axle B B¹, links E D¹ D⁴, whereby the several parts—viz., coat-tails E, right arm, D⁴, and foot D⁴ of image D—are all operated substantially as described, and for the purpose set forth.

2. The combination of the crank-shaft B' B¹ and link F², whiffle-tree F, links K² L², and the links M' M', whereby the fore legs of the image representing the horse are made to operate substantially as described, and for the purpose set forth.

300,801. GEARING. JOHN JEROME RYHAL, Milwaukee, Wis. Filed Feb. 26, 1884. (No model.)

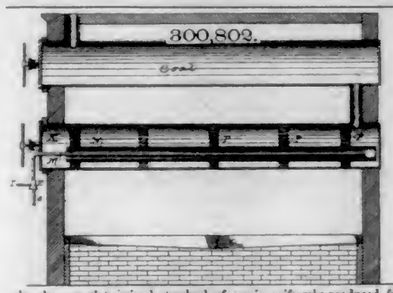
Claim.—1. In a gear-wheel, the combination, with metallic supporting and confining plates, of an intermediate body of leather or equivalent material having teeth formed therein and adapted to receive the entire wear and strain.

2. In a gear-wheel, the combination of an elastic toothed body portion, consisting of sheets of leather or equivalent material, external metallic plates with corresponding teeth of a size less than the others, and fastening devices connecting the plates and passing through the intermediate body.

3. In a gear-wheel, a laminated body of leather or equivalent material having peripheral teeth formed thereon, and external metallic plates provided with teeth of a size slightly less than the teeth of the body portion, whereby the metallic portions are relieved from wear but caused to support the elastic teeth.

4. In a gear-wheel, the combination, with external plates with peripheral teeth, of an intermediate laminated body of elastic material, also provided with teeth, and transverse bolts or fastening devices passing through the teeth of the body and of the external plates, as described and shown.

5. A gear-wheel consisting of toothed side plates provided with central openings to receive the shaft or arbor, and an intermediate toothed body of elastic material having a central opening of greater diameter than those of the plates.

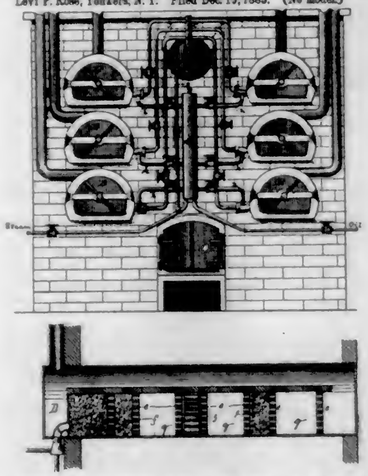


6. In a gear-wheel having a body portion composed of leather with spur-teeth formed thereon, metallic side plates, and transverse bolts or rivets passed through the said plates and through the teeth of the body portion.

300,802. PROCESS OF AND APPARATUS FOR MANUFACTURING ILLUMINATING-GAS. SILAS C. SALISBURY, New York, assignor to Levi P. Ross, Yonkers, N. Y. Filed Dec. 6, 1883. (No model.)

Claim.—1. The retort K, connected at one end, with the coal-retort above it, and provided with the pipes M N and the perforated tile partitions P, for preparing hydrogen gas and passing it into and through a charge of distilling-coal, as set forth.

2. The process of making illuminating-gas, which consists in delivering hydrogen gas or the liberated gases of decomposed steam in among the red-hot gas-coals within the retort during the early stages of its decomposition, thereby reducing the coal-gas to a standard quality and preventing its condensation into tar, and afterward introducing a light hydrocarbon vapor regulated in quality and gradually increasing the quantity of said hydrocarbon as the richness of the coal-gas diminishes,



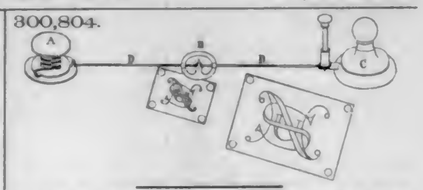
300,802.

whereby a predetermined standard of gas is uniformly produced from the beginning to the end of the charge.

3. The process of manufacturing illuminating-gas from coal, which consists in introducing under pressure, first, hydrogen gas or the liberated gases from decomposed steam, and, afterward, such hydrogen gas accompanied by hydrocarbon vapors, increasing in quantity of hydrocarbon as the richness of the coal diminishes, whereby said introduced gases are forced into and through the mass of coal in the retort, and the extraction and union of the gases are facilitated.

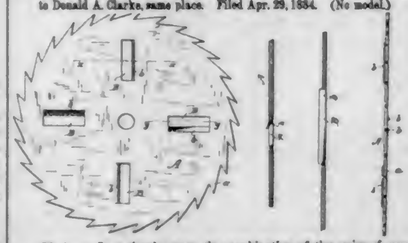
300,803. PROCESS OF AND APPARATUS FOR MANUFACTURING ILLUMINATING-GAS. SILAS C. SALISBURY, New York, assignor to Levi P. Rose, Yonkers, N. Y. Filed Dec. 19, 1883. (No model.)

Claim.—1. The process, as herein fully described and set forth, of making a rich fixed illuminating-gas from liquid hydrocarbons and the liberated gases of decomposed steam, which consists in first decomposing steam by passing it through a retort charged with pieces of hot iron, and afterward forcing the residual hydrogen with previously-heated hydrocarbon oil in regulated quantities through a mixing and fixing retort by means of an injector, whereby a carbureted fixed vapor gas is formed of uniform quality, as herein fully described and set forth.



2. A steam-decomposing retort, a mixing-injector, and a fixing-retort, in combination with a heater, whereby the liquid hydrocarbon is heated prior to its delivery to the mixing-injector and fixing-retort, as set forth.

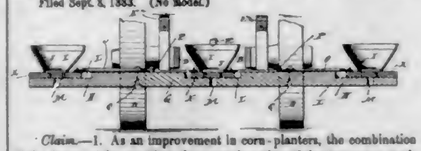
3. A gas-retort with a horizontal partition, and below the same transversely interior divisions of perforated tile or brick, and the several compartments thereby formed, alternately vacant for mixing-chambers, and filled with iron tubes, pieces of pig-iron, iron borings, &c., as and for the purposes set forth.



300,804. AMPLIFIER. GEORGE F. SCHILD, Vallejo, Cal. Filed Feb. 20, 1884. (Model.)

Claim.—The combination of the four principal parts composing the instrument—namely, the tack or pivot A, the pointer B, the pencil-holder C, and the elastic graduated string D—substantially as set forth.

300,804.



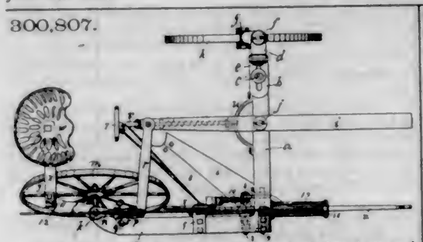
300,805. SAW. GEO. PIERE SCOTT, Sedalia, Mo., assignor of one-half to Donald A. Clarke, same place. Filed Apr. 29, 1884. (No model.)

Claim.—In a circular saw, the combination of the pairs of rectangular openings disposed in a radial series, and having one of the side edges of each opening beveled longitudinally from end to end and turned out from the face of the saw, whereby a radial series of straight integral planing-edges is formed, the openings comprised in each pair being on diametrically-opposite sides of the eye of the saw, and having their integral planing-edges formed on relatively opposite sides, substantially as and for the purpose set forth.

300,806. CORN-PLANTER. WILLIAM AUSTIN SHARPE, Tama, Iowa. Filed Sept. 8, 1883. (No model.)

Claim.—1. As an improvement in corn-planters, the combination of the frame of the machine, the central section of the transverse seeding mechanism bar hinged to said frame and vertically adjustable in relation thereto, the end sections of said bar hinged to the central section and carried thereby in its vertical adjustment, and means for independently adjusting the end sections, substantially as set forth.

2. As an improvement in corn-planters, the combination of the frame of the machine, the central section of the transverse seeding mechanism bar having the vertical standards at its ends, the end sections of this bar hinged to the central section, the seeding mechanism arranged directly on these sections and embodying a jointed slide-bar, the cords passing from the end sections up and engaging the standards, and the levers fulcrumed on the main frame and operating these cords, substantially as set forth.



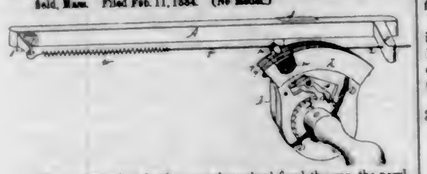
3. The improved corn-planter, comprising the combination of the frame of the machine, the transverse jointed bar carrying the seeding mechanism, a hinged plate or bars hinged to the frame and secured to the central section of the said transverse bar, standards on the end of the central section, the levers I^2, fulcrumed on the frame, and having the projecting plates or arms, chains, or cords secured to the end sections and passing through the standards and secured to said levers I^2, and the lever U, carrying the chains or cords that are connected with the central section, substantially as and for the purpose set forth.

4. As an improvement in corn-planters, the combination of the frame of the machine, the pole or tongue, the central section of the transverse seeding mechanism bar, plates T T, secured to said bar, and pivoted to the tongue, the levers U and Y, fulcrumed on the frame, the rod Z, connecting these levers and engaging the end of the tongue, cords connecting the said levers with the said central section, the end sections hinged to the central section, the levers I^2, fulcrumed on the frame, and the cords connecting these levers and the end sections, substantially as set forth.

300,807. SULKY-PLOW. JACOB SECKLER, Otterbein, and EDWARD E SECKLER, Indianapolis, Ind. Filed Oct. 5, 1883. (No model.)

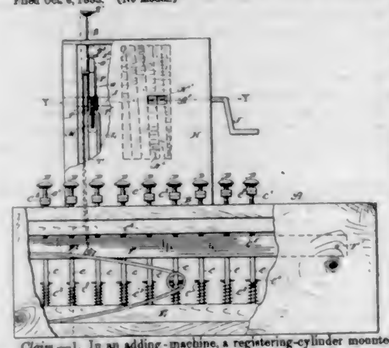
Brief.—The tongue when unlocked will turn upon the frame, turning the rear wheel upon its swiveled standard, the forward caster-wheel being free and adjustable as to width and height.

300,807.



Claim.—1. The combination, with frame *a*, of pivoted tongue *i*, spring-latch *v t*, rack *u*, connecting-bar *r*, caster-wheel *m*, crank-standard *l n*, and connecting devices whereby the tongue is allowed to turn and give positive motion to the turning of the rear wheel, substantially as shown and described.

2. The combination, with the plow-frame *a*, of the front caster-wheel, *k*, and the rear caster-wheel, *m*, upon the swiveled standard *l*, adapted to be free or locked, and to carry the plow-frame without other support, substantially as shown and described.



3. The combination of frame *a*, adjustable caster-wheel *k*, caster-wheel *m*, swiveled standard *l n*, carrying rack *q*, adjustable lever *o*, connecting-bar *r*, and tongue *i*, substantially as shown and described.

300,808. MECHANICAL MOVEMENT. ALLEN L. SKINNER, Springfield, Mass. Filed Feb. 11, 1884. (No model.)

Claim.—The shaft having a ratchet-wheel fixed thereon, the pawl-case having an oscillating movement on the shaft, the pawl hung in the case adjacent to the ratchet-wheel, the tripping-pin located in the case over the rear end of the pawl, having one end projecting beyond the border of the case, and means, substantially as described, for giving an oscillating movement to the case, and for forcing the tripping-pin into the latter, combined and operating substantially as set forth.

300,809. ADDING-MACHINE. WILLIAM C. SMALTZ, Springfield, Mo. Filed Oct. 6, 1883. (No model.)

Claim.—1. In an adding-machine, a registering-cylinder mounted on an endwise-moving shaft, and having the numbers spirally and consecutively arranged upon it, in combination with suitable mechanism for rotating and moving the shaft lengthwise, substantially as specified.

2. In an adding-machine, the combination of the cylinder N, having the numbers spirally and consecutively arranged thereon, the shaft I, having the spiral thread or groove I', and suitable actuating mechanism, substantially as set forth.

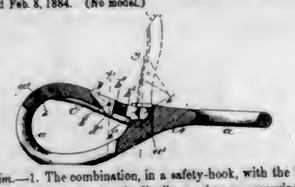
3. In an adding-machine, the combination of the cylinder N, having the numbers spirally and consecutively arranged thereon, the shaft I, having the spiral thread or groove I' and crank J, and suitable actuating mechanism, substantially as described.

4. In an adding-machine, the combination of the cylinder N, having the numbers spirally and consecutively arranged thereon, shaft I, having thread or groove I', bearings for said shaft, wheel M, feathered to said shaft, pawl O, and suitable actuating mechanism, substantially as shown and described.

5. In an adding-machine, the combination of the cylinder N, having the numbers spirally and consecutively arranged thereon, shaft I, having a thread or groove, I', bearings for said shaft, wheel M, feathered to said shaft, pawl O, suitable actuating mechanism, and detent R, substantially as set forth.

6. In an adding-machine, the combination of the cylinder N, having the numbers spirally and consecutively arrange thereon, shaft I, having a thread or groove, I', nut K, forming a bearing for said shaft, wheel M, feathered to said shaft, frame P, pivoted on said shaft, pawl O, pivoted in frame P, detent R, and suitable actuating mechanism, substantially as specified.

7. In an adding-machine, the combination of the cylinder N, shaft I, crank J, wheel M, frame P, pawl O, detent R, tripping-rod S, and suitable operating mechanism, substantially as shown and described.



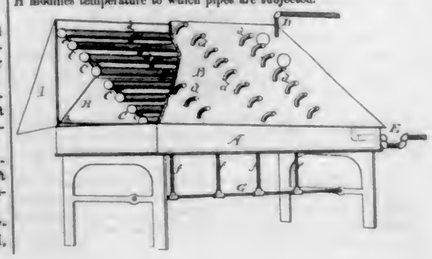
8. In an adding-machine, the combination of the registering-cylinder N, shaft I, crank J, wheel M, frame P, pawl O, detent R, tripping-rod S, connecting-rod T, operating-lever F, spring F^2, and operating-keys C, substantially as set forth.

9. In an adding-machine, the combination of the registering-cylinder N, shaft I, crank J, wheel M, frame P, pawl O, detent R, tripping-rod S, connecting-rod T, operating-lever F, spring F^2, and operating-keys C, having adjusting devices, substantially as specified.

10. In an adding-machine, the combination of the registering-cylinder N, shaft I, crank J, wheel M, frame P, pawl O, detent R, tripping-rod S, connecting-rod T, operating-lever F, spring F^2, and operating-keys C, having adjusting devices C^2 and springs C^3, substantially as set forth.

11. In an adding-machine, the combination of the registering-cylinder N, brake V, shaft I, crank J, wheel M, frame P, pawl O, detent R, tripping-rod S, connecting-rod T, operating-lever F, spring F^2, and operating-keys C, all combined and arranged to operate substantially in the manner described.

300,810. SAFETY-HOOK. EDWARD HENRY SMITH, Rutherford, Cal. Filed Feb. 8, 1884. (No model.)



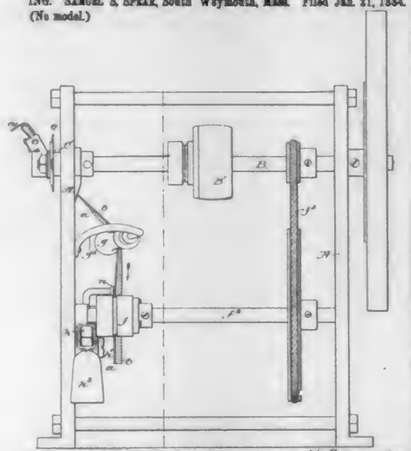
Claim.—1. The combination, in a safety-hook, with the loop forming the hook portion, of a longitudinally-moving arm carrying a spring-plate secured to the free front end of the said arm, and adapted to engage the loop portion with its rear end, substantially as set forth.

2. The combination, with a safety-hook comprising a loop formed of a hook portion and a longitudinally-moving arm, of a spring-plate secured to the inner edge of said arm, and a cam-lever fulcrumed to said arm and bearing upon the plate, substantially as and for the purpose set forth.

3. The combination of the shank of the hook provided with a longitudinally-disposed recess and with the loop extending therefrom, the longitudinally-moving arm having its head received by the recess in the shank, the spring-plate secured to the inner edge of the said arm at its free front end, and the cam-lever fulcrumed in the arm and bearing upon the rear end of the spring-plate, substantially as set forth.

300,811. APPARATUS FOR THE CONTINUOUS DISTILLATION OF OIL. HENRY C. SMITH, Cleveland, Ohio, assignor to Anthony S. De Vries, same place. Filed Sept. 10, 1883. (No model.)

Brief.—Fractional distillation of the oil which descends through a series of pipes arranged in an inclined plane in heated chamber. Apron H modifies temperature to which pipes are subjected.

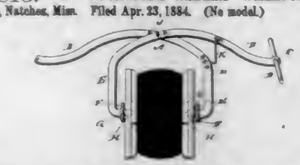


Claim.—1. In an apparatus for continuous distillation of oil, the pipes C C, arranged in a plane inclined to the horizon at about an angle of forty-five degrees—one above the other—and provided with vapor-outlets *d d*, and connected at alternate ends with the connections *c c*, and inclosed in a chamber, whereby said pipes operate for the distillation of the several gravities of oil products, as described.

2. The combination, in a chamber triangular in cross-section, of a series of pipes, C C, arranged in a diagonal line one above the other, and provided with the vapor-outlets *d d* and connections *c c*, and the vapor-burners F F, substantially as described.

3. The combination, in a triangular chamber having a series of pipes, C C, connected and provided with vapor-outlets, as described, and heated with vapor-burners, of the adjustable leaf H, for controlling or confining the heat about the said pipes, substantially as and for the purpose specified.

300,812. MACHINE FOR SNIPPING LEATHER PIPING OR BINDING. SAMUEL S. SPEAR, South Weymouth, Mass. Filed Jan. 21, 1884. (No model.)



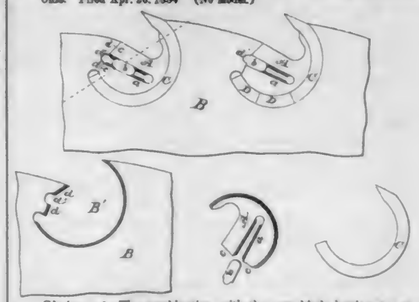
Claim.—1. In a machine for snipping piping or binding, a cutter and means to support the piping or binding while being acted upon by the cutter, substantially as described, whereby the piping or binding is presented to the cutter at an angle to the plane of its movement, to enable the cutter to pass diagonally through the edge of the piping or binding and form tongues having contiguous beveled edges, as set forth.

2. In a machine for snipping piping or binding, the block D, provided with the corner *d*, and roughened at d^3, combined with a cutter, to operate substantially as described.

3. A block to sustain the binding or piping opposite the cutter, and a cutter for snipping the said binding or piping, combined with feeding mechanism to move the said piping or binding, substantially as described.

4. The guide to receive the piping or binding, and the feeding mechanism to move the same, combined with the intermediate cutter, and the support for the piping or binding opposite that side of it acted upon by the cutter, the parts being located with relation to each other substantially as described, whereby the blade is made to cut through the edge of the piping or binding diagonally, substantially as set forth.

300,813. WIRE HOLDER AND CARRIER. WILLIAM PERCY STEWART, Natchez, Miss. Filed Apr. 23, 1884. (No model.)



Claim.—1. In a device for carrying or holding wire, the combination, with a drum or reel, of arms pivoted to each other and formed with bent lower ends adapted to engage with said reel, substantially as set forth.

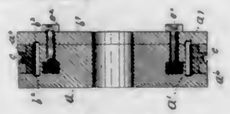
2. In a device for carrying or holding wire, the combination, with a drum or reel centrally provided on its sides with sockets, of bent arms pivoted together above the reel and formed with bent ends adapted to loosely fit in said sockets, said ends being provided with flanges or collars, substantially as set forth.

3. In a device for carrying or holding wire, the combination, with a drum or reel, of arms pivoted together and adapted to engage said reel, and a hook loosely secured to one of said arms, adapted to engage in perforations formed in the other of said arms, substantially as set forth.

4. In a device for carrying or holding wire, the combination, with a drum or reel centrally provided on its sides with recesses, of bent arms pivoted together above the reel, the lower ends of which are bent and provided with collars or flanges, and adapted to loosely engage in said sockets, and a hook loosely secured to one arm and adapted to engage in perforations on the other, substantially as set forth.

300,814. ADJUSTABLE SAW-TOOTH. GEO. W. STINZERING, Shreve, Ohio. Filed Apr. 26, 1884. (No model.)

Claim.—1. The combination, with the saw-blade having the recesses B′ and *d′*, of the tooth C, formed of the segment of a circle and adjustable in a circular path in the recess B′, the expansible fastener A, having a slot, *a*, and a key, *b*, adapted to move in the slot to expand the fastener and engage the recess *d′* in the blade, substantially as described.



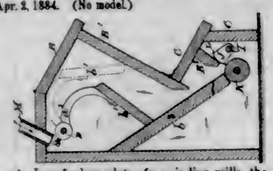
2. The combination, with the saw-blade having the recess B′ and projections *d*, of the segmental tooth C, adjustable in a circular path in the recess, and the expansible fastener A, having grooves *c* in its end, into which fit the projections on the blade, substantially as described.

3. The combination, with the saw-blade having the recesses B′ and *d′* and projections *d*, of the segmental saw-tooth C, adjustable in a circular path in the recess B′, the slotted expansion-fastener A, having the end grooves, *c*, into which latter fit the projections on the blade, and the key *b* in the slot for expanding the fastener, and adapted to enter the recess *d′* in the blade, substantially as described.

4. The combination, with the saw-blade B, having the recess B′, of the saw-tooth C, formed of the segment of a circle, and adjustable in a circular path in the recess, and the expansible fastener A, having a segmental edge bearing upon the segmental edge of the tooth, the expansion of the fastener serving to bind the tooth in place, substantially as described.

5. The combination, with the saw-blade B, having the recess B′, of the saw-tooth C, formed of the segment of a circle, and adjustable in a circular path in the recess, the slotted expansible fastener having a segmental edge bearing upon the segmental edge of the tooth and bearing against the saw-blade, and a key in the slot of the fastener for expanding the same to bind the tooth in place, substantially as described.

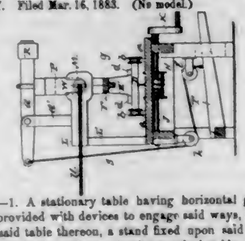
300,815. PISTON-PACKING. EDMUND SOCKOW, Buffalo, N. Y. Filed Feb. 16, 1884. (No model.)



Claim.—1. In a piston-packing, the rings or sections of rings a^2, having projections b^4, in combination with one or more valves, b^2, set in grooves a^3, opposite the inlet-openings for admitting steam to the interior of the piston, and from thence through the perforations b^4 to the peripheral space *c*, so as to act as a lubricant to the cylinder and to preserve an equal pressure within the piston, substantially as described.

2. A piston-packing consisting of the rings a^2 a^4, in combination with a piston and follower and connecting-bolts, the rings a^2 being provided with the wave-line springs, substantially as specified, and the grooves b^4, for the purposes described.

3. A piston provided with packing-rings, openings b^2, springs a^5, a spring or springs for forcing the rings apart when required, and openings for admitting steam or water to the space *c*, for the purposes described.



300,816. FEED-REGULATOR. WILLIAM G. THOMPSON, Wabash, Ind. Filed Apr. 2, 1884. (No model.)

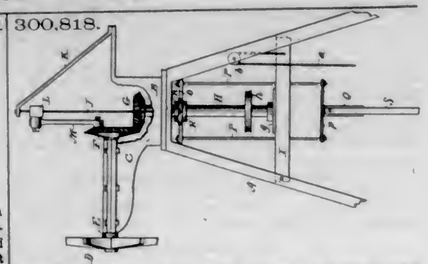
Claim.—1. In a feed-regulator for grinding-mills, the combination of an angular box having inclined surfaces, a shaft horizontally journaled in the upper portion of said box, an inclined valve secured to said shaft, an arm secured to the outer end of said shaft, a secondary shaft carrying a curved feed-gate and horizontally journaled in the lower front part of said box, a feed-roller working against the inner edge of said feed-gate, an arm secured to the outer end of said lower shaft, and means for connecting the arms on said shafts, substantially as and for the purpose set forth.

2. In a feed-regulator, the receptacle A, having covers B and C and the inclined stop-boards B′ and B^2, the shaft D, journaled as described and provided with arm F, the angular slide *a*, having pivot-pin *a′* and set-screw *b*, the connecting-rod G, the arm H, shaft I, and curved gate L, in combination with the inclined valve *b′*, curved arms a^2, the inclined back b^2, and inlet-spout M, all arranged and operated substantially as shown and specified.

300,817. TAILOR'S PRESSING-MACHINE. EDWARD WALKER, New York, N. Y. Filed Mar. 16, 1883. (No model.)

Claim.—1. A stationary table having horizontal guideways, an ironing-table provided with devices to engage said ways, and means for reciprocating said table thereon, a stand fixed upon said stationary table provided with horizontal arms having vertical guides, a smoothing-iron located between said guides, and a post fixed to the reciprocating table at one end and a groove along a portion of the other end, in combination with a press-board loosely pivoted on the fixed post, provided with a rib on its under side, and a post adjustable in said groove having a slot in its top shaped to receive the rib of the press-board, as described.

2. The combination, with a stationary table, an ironing-table mounted to reciprocate thereon, and a post provided with vertical guideways fixed to said table, of a two-faced hollow smoothing-iron having trunnions engaging said guideways, means for reciprocating said iron in said ways, a vertical slot or aperture through one of said trunnions to the hollow interior of said smoothing-iron, and a fixed pipe entering saidl ron through said aperture, substantially as described, whereby the smoothing-iron may be heated by a gas-jet from the pipe in its interior, the pipe and its burner may be permanent fixtures, and yet the smoothing-iron may be vertically reciprocated without disturbing or moving said pipe, as and for the purpose specified.



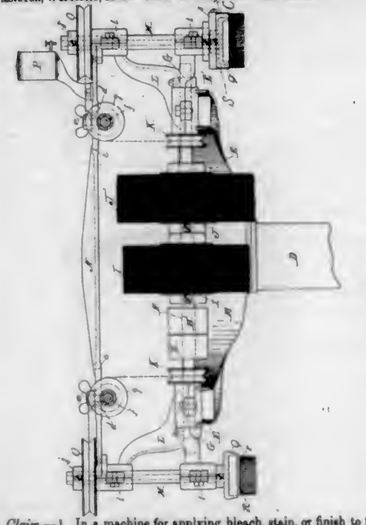
3. The combination, with the table D, the ironing-board F, and means for supporting and reciprocating the same, of the vertical post L′, fixed to the frame of the machine, the horizontal frame L, supported thereon, and having vertical recesses in its arms, the vertical post Q′, secured to frame L, the lever Q, pivoted in post Q′, and means, substantially as specified, for operating the same, the hanger-frame P, attached to lever Q, the smoothing-irons O, the bars N, connecting them, and the trunnions M on said bars journaled in the frame P and resting against the sides of said vertical recesses in frame L, as shown and described.

300,818. WINDMILL. JOHN WARWICK and WALTER C. WESTAWAY, Delavan, Wis. Filed July 25, 1883. (No model.)

Claim.—1. In a windmill, the combination, with the wheel-shaft E and gear F and the turn-table on which said parts are supported, of stationary rods erected on said turn-table, a cross-head sliding loosely at each end on said rods and connecting with the gear F, and rods N, carried by the cross-head and attached at their lower ends to rods P, which connect with the pump-pole S, substantially as set forth.

2. In a windmill, the combination, with the wheel-shaft E, gear F, and the turn-table on which said parts are supported, of stationary rods J, extending up from the pivot and provided with brace-rods K, a cross-head, L, sliding loosely on the rods J, and connecting with the gear F by means of a pitman, M, rods N, carried by the cross-head and connected at their lower ends by cross-bar *n*, and a cross-bar, O, attached

300,818.



to the bar *n*, and provided with rods P, the latter being suitably connected to the pump-pole S, as set forth.

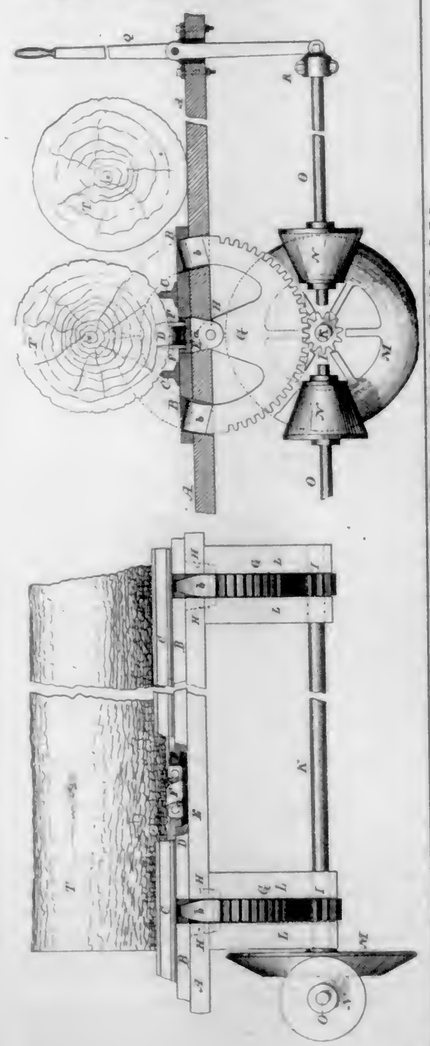
3. In a windmill, the combination, with the wheel-shaft E, gear F, turn-table C, shaft H, and gear-wheel G, of stationary rods J, extending up from the pivot and provided with brace-rods K, a cross-head, L, sliding loosely on the rods J, and connecting with the gear F by means of a pitman, M, rods N, carried by the cross-head and connected at their lower ends by a cross-bar, *n*, and a cross-bar, O, attached to the bar *n*, and provided with rods P, the latter connected at their lower ends by a cross-bar, *p*, provided with a downward extension, Q, to which the pump-pole is attached, the pumping mechanism operating outside of the shaft H, whereby said shaft can be used to transmit power to other mechanism, as herein set forth.

4. In a windmill, the combination, with the wheel-shaft E, gear F, and the turn-table on which said parts are supported, of stationary rods J, erected on said pivot, a cross-head working on said rods and connecting with the gear F, a shaft, H, working in its lower end in an adjustable cross-bar, I, and carrying a gear-wheel, G, meshing with the wheel F, and devices for connecting the cross-head with the pump-pole S, for the purpose set forth.

300,819. BLEACH AND STAIN BRUSHING MACHINE FOR THE BOTTOMS OF BOOTS AND SHOES. JUSTIN P. WHITE and DAVID HARRINGTON, Worcester, Mass. Filed Nov. 15, 1883. (No model.)

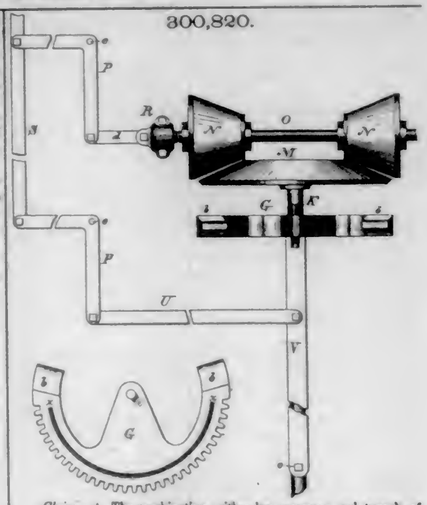
Claim.—1. In a machine for applying bleach, stain, or finish to the bottoms of boots or shoes, an adjustable stationary bonnet or protector having bristles or their equivalents on the lower edge thereof, in combination with the rotary bleach or stain brush and means for operating the same, substantially as shown, and for the purposes stated.

2. The combination, with a rotary brush having a perforated head for applying bleach or stain automatically, and means for operating the same, of an adjustable stationary bonnet or protector, substantially as shown, and for the purposes stated.



3. The combination, with the horizontal shaft provided with suitable wiping-brushes, and means for holding and operating said shaft, of the vertical hollow shafts provided with bleach or stain rotary brushes, and means for holding and operating said shafts, substantially as shown and described.

4. The combination, with the vertical hollow shaft M, of the rotary brush R, the head thereof being provided with two or more holes, *k*, and its holder Q, said rotary brush and holder being so arranged in relation to each other as to leave a narrow space or chamber, *x*, for the liquid or stain to run into previously to running through the holes *k* in the head of said brush, substantially as shown and described.



5. The combination, with a rotary brush for applying bleach or stain, having a perforated head with two or more holes, *k*, through it, of means, substantially as described, for holding and operating the same, substantially as shown and described.

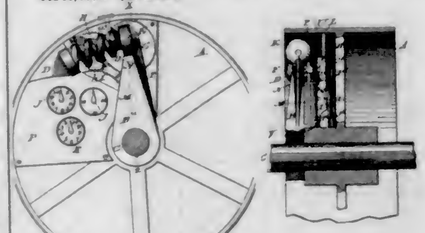
6. In a machine for applying bleach, stain, or finish to the bottoms of boots and shoes, a rotary bleach or stain brush having two or more holes through the head thereof, in combination with means, substantially as described, for operating the same.

300,820. MACHINE FOR ROLLING LOGS. GERSHON WIBORN, Manistee, Mich. Filed Sept. 4, 1883. (No model.)

300,820.

Claim.—1. The combination, with a log conveyer and trough, of a rocker, G, pivoted at its center underneath and transversely to said trough, and provided with free terminal arm or arms *b*, substantially as and for the purposes set forth.

2. The combination, with a log conveyer and trough, of the rockers G G, pivoted at their centers transversely underneath said trough, and provided with arms *b b*, and mechanism for rotating said rockers, whereby said arms are turned up on either side of said conveyer against the log, substantially as and for the purposes set forth.



3. The combination, with a log-conveyer, of the cog-toothed rockers G G, provided with the free arms *b b*, and pivoted in hangers H H underneath said trough, shaft K, and pinions I I, fixed upon said shaft K, and meshing with said segmental gears, together with mechanism for rotating said pinions, substantially as and for the purposes set forth.

4. The combination, with a log conveyer and trough, of the cog-toothed rockers G G, centrally pivoted underneath said trough, and provided with the terminal arms *b b*, adapted to be rotated about and over said trough, shaft K, pinions I I, keyed thereon, friction-wheel M, also keyed on said shaft K, small friction-wheels N N, mounted upon the transverse shaft O, and the actuating-lever Q, substantially as and for the purposes set forth.

5. The combination, with a log conveyer and trough, of a rocker, G, having terminal arms *b b*, and provided with the segmental groove *z z*, together with lever V, together with their connections, so arranged as to stop the rocker at certain points when turned in either direction, substantially as and for the purposes set forth.

6. The combination, with a log-conveyer, of the rocker G, having terminal arms *b b*, and provided with the segmental slot or groove *z z*, the lever V, elbows P P, friction-wheels N N and M, and their connections, all arranged to operate substantially as and for the purposes set forth.

300,821. DYNAMOMETER. ANDREW WILSON, New York, N. Y. Filed Oct. 15, 1883. (No model.)

Claim.—1. In a dynamometer, the rod M and arm R, adjusted so that oscillations of the arm R shall be controlled by the rod M, substantially as and for the purposes set forth.

2. In a dynamometer, a plate having a slot or slots adapted to regulate the position of the slide N relative to the rod M and arm R, substantially as and for the purposes set forth.

3. In a dynamometer, a plate having slots therein to regulate the position of the slide N relative to the rod M and arm R, and having a slot by which the slide N can be moved from one of said regulating-slots to another, substantially as set forth.

4. In a dynamometer, the combination of the rod M, slide N, and a plate having a slot or slots to regulate the position of the slide N, substantially as and for the purposes set forth.

5. In a dynamometer, the combination of the arm R, rod M, slide N, and a plate having a slot or slots adapted to regulate the position of the slide N, substantially as and for the purposes set forth.

6. In a dynamometer, the combination of the ratchet-wheel G, ratchet Q, arm R, slide N, a plate having a slot or slots, and rod M, substantially as and for the purposes set forth.

7. In a dynamometer, the combination of the rod M, adapted to stop the arm R in its oscillations, with the arm R, ratchet Q, and ratchet-wheel G, substantially as and for the purposes set forth.

8. In a dynamometer, the combination of the rod M, adapted to stop the arm R in its oscillations, with the arm R, ratchet Q and ratchet-wheel G, and intermediate gear-wheels adapted to transmit and indices adapted to record revolutions of said wheel G, substantially as and for the purposes set forth.

9. The combination of the button L, rod w, arm S, arm R, ratchet Q and ratchet-wheel G, spring O, slide N, regulated by the slot or its equivalent, rod M, arm B, and spring F, substantially as and for the purposes set forth.

10. The combination of the button L, rod w, arm S, arm R, ratchet Q, ratchet-wheel G, with gear-wheels and indices to record the revolutions of the wheel G, spring O, slide N, regulated by a slot or its equivalent, rod M, arm B, and spring F, combined and operating substantially as and for the purposes set forth.

11. The combination of a swinging arm, means for oscillating the same to mark revolutions of the dynamometer, ratchet-wheel G, with indices to record the length and number of the oscillations of such arm in a common unit, and mechanism adapted to lengthen or shorten the swing of such oscillating bar in the same ratio as the power transmitted by the dynamometer is increased or diminished, substantially as set forth.

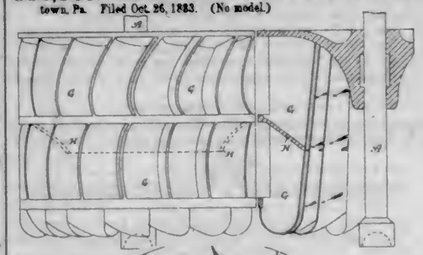
12. The combination of mechanism indicating revolutions or speed of a rotary dynamometer, with mechanism indicating resistance or power, by which such speed and power are reduced to a common unit of measurement, such mechanism being carried by the shaft from which the power to be measured is taken, and requiring no connection or contact with anything but such shaft and the belt or its equivalent taking power therefrom.

13. A swinging or pivoted arm, in combination with means for oscillating the same to mark revolutions of the dynamometer, and mechanism adapted to lengthen or shorten the swing of such arm in the same ratio as the power transmitted by the dynamometer is increased or diminished, substantially as set forth.

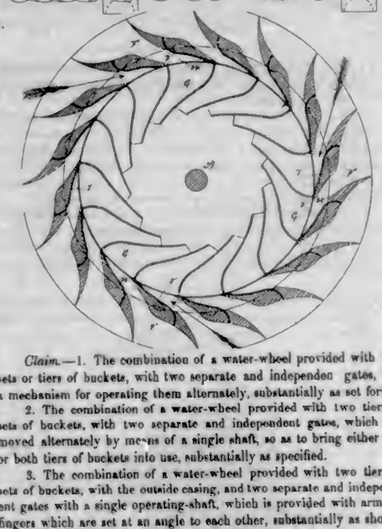
14. The rod M, adapted to indicate with uniformity varying degrees of resistance in the pulley A by its divergence from a radius of such pulley, in combination with mechanism for measuring and recording the extent of such divergence in a common unit with the revolutions of such dynamometer, for the purposes set forth.

300,822. FIRE-ESCAPE. JAMES B. WILTSHIRE, Cincinnati, Ohio. Filed Mar. 8, 1883. (No model.)

Brief.—The hanger to which the ladder is swiveled is formed with two flat bearing portions or hooks, which move upon the rails.



Claim.—1. The combination of the bar or ligaments B, supporting-brackets, hanger D, swivel or eye, and the ladder, rope, or pole suspended therefrom, substantially as and for the purposes specified.



2. The combination of the bars or ligaments B, a hanger consisting of portions E E, having hooks *b*, and a suspended ladder, substantially as and for the purpose set forth.

3. In combination with the bars or ligaments B, a hanger consisting of portions E E, having hooks *b*, and provided with an eye or swivel, and a suspended ladder, rope, or pole connected at or near its upper end to said eye or swivel, substantially as and for the purposes specified.

4. In combination with the suspensory bar or bars or ligament or ligaments, the braces M, having curved part *d*, rod *e*, and rod *f'* or *f*, and a hanger, and suitable means for connecting the upper portion of a ladder, rope, or pole to said bar or bars, ligament or ligaments, and suspending the same therefrom, and for enabling the same, in connection with said bar or bars, ligament or ligaments, to be moved laterally, substantially as and for the purposes specified.

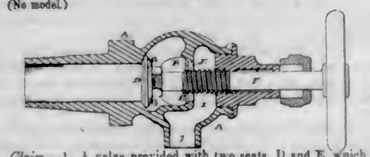
300,823. TURBINE WATER-WHEEL. ABRAHAM N. WOLF, Allentown, Pa. Filed Oct. 26, 1883. (No model.)

Claim.—1. The combination of a water-wheel provided with two sets or tiers of buckets, with two separate and independent gates, and a mechanism for operating them alternately, substantially as set forth.

2. The combination of a water-wheel provided with two tiers or sets of buckets, with two separate and independent gates, which are moved alternately by means of a single shaft, so as to bring either one or both tiers of buckets into use, substantially as specified.

3. The combination of a water-wheel provided with two tiers or sets of buckets, with the outside casing, and two separate and independent gates with a single operating-shaft, which is provided with arms or fingers which are set at an angle to each other, substantially as shown.

4. The combination of the outside casing provided with chambers or recesses S, a single shaft, P, provided with the fingers or arms Q, set at an angle to each other, the two gates I, provided with suitable recesses to receive the arms or fingers, and the water-wheel, substantially as set forth.



5. The combination of the outside casing with the shaft P, provided with the fingers Q and the cams U, with the two gates I, provided with suitable recesses, and the water-wheel, substantially as specified.

6. The combination of the upper gate suspended by means of the arms or braces J, with the lid C, the flange O, the outside casing, and the water-wheel, substantially as shown.

7. The combination of the outside casing with two independent gates, I, and the water-wheel, one of the gates being supported from below and the other from above, substantially as described.

8. The combination of a wheel having two sets or tiers of buckets with two gates and two outside casings, D, which are provided with separate and distinct sets or tiers of guides and chutes, the water-wheel being provided with two sets or tiers of buckets, which buckets are so arranged as to come just opposite each set of guides and chutes, whereby the gates, which are independent of each other, can be moved so as to admit the water to one or both tiers or sets of buckets upon the wheel, substantially as set forth.

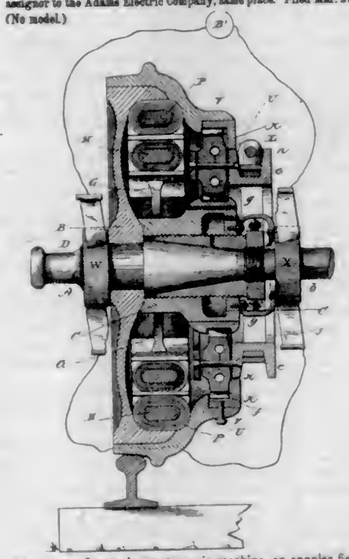
300,824. RELIEF-VALVE FOR THE FEED-PIPES OF STEAM-BOILERS. WILLIAM C. WOLFE, Hagerstown, Md. Filed Sept. 4, 1883. (No model.)

Claim.—1. A valve provided with two seats, D and E, which are in a line with each other, an overflow passage, I, which has its inner

end arranged over the seat E, in combination with a valve which will fit either one of the seats D E, and thus close either the entrance into the boiler or the overflow-passage, substantially as shown.

2. A valve having a passage-way connecting with a boiler, and a passage-way for connection with an injector, and a passage-way for connection with a feed-pump, an overflow-passage, an endwise-moving valve-stem, and a valve connected thereto by means of a pin, substantially as specified.

300,825. BELT-FASTENER. WILLIAM C. WOLFF and JOHN C. MANNDEG, Buffalo, N. Y. Filed Apr. 5, 1884. (No model.)



Claim.—As an improved article of manufacture, a belt-fastening device consisting of the U-shaped plate A, having inclined pointed pins B in the body thereof above the ends of the plate, adapted to receive the belting D D' by means of perforations C in the ends of said belting, as shown and described.

300,826. PROCESS OF PRODUCING STEEL FROM WROUGHT-IRON WITH PLUMBAGO. W. A. OTTO WUTH, Pittsburg, Pa. Filed July 14, 1883. (No specimens.)

Claim.—1. In making steel by the open-hearth process, charging the furnace with pieces of wrought-iron having a low percentage of phosphorus in layers, with a thin stratum of plumbago, preferably pulverized, interposed between the layers of iron, melting the charge of iron and plumbago in the open hearth, and finally adding to the melted metal spiegeleisen or ferro-manganese, substantially as described.

2. The production of steel by melting together in an open-hearth furnace pieces of substantially decarberized, desiliconized, and dephosphorized iron with plumbago in such proportions as to furnish the desired percentage of carbon to the resulting metal, substantially as described.

300,827. ELECTRIC MOTOR. WELLINGTON ADAMS, St. Louis, Mo., assignor to the Adams Electric Company, same place. Filed Mar. 27, 1883. (No model.)

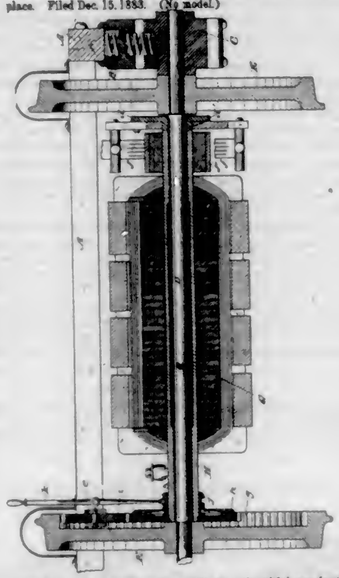
Claim.—1. In an electro-dynamic machine, an annular field-magnet and inclosing-casing therefor, adapted to constitute the tire-supporting portion of a car-wheel, as set forth.

2. The combination, with a car-wheel, of an electro-dynamic machine whose field-magnet and armature are incased by said wheel, substantially as and for the purposes hereinbefore set forth.

3. The combination, with a car-wheel, of an annular field-magnet carried by said wheel, an armature adapted to be rotated within said field-magnet, and a shaft supporting the armature and constituting an axle for the wheel, substantially as and for the purposes hereinbefore set forth.

4. The combination, with the rotating armature and the wheel to be driven thereby, of intermediate motion transmitting and controlling mechanism arranged and operating, substantially as hereinbefore set forth, to automatically throw the armature into gear with the wheel to be driven when its speed of rotation has reached a predetermined point, as and for the purposes specified.

5. In an electro-dynamic machine, an annular field-magnet rigidly attached to the supporting or main axle, and provided with a tire-supporting casing, in combination with an armature moving within the field-magnet, and having a hub mounted upon said axle, gearing connecting the periphery of said hub to the interior of the tire-supporting casing, automatic clutching devices supported by the connecting-pinions, and means, substantially as described, for varying the tension of the clutch-operating mechanism and the speed at which the same becomes operative, as set forth.



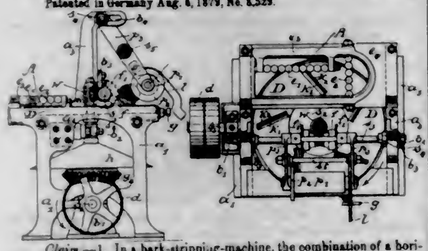
6. In combination with an annular field-magnet and an armature contained and rotating therein, the hub C, pinions K, ring J, provided with sections N, springs O, and adjusting-screws, the stationary adjustable band M, and shaft L, substantially as shown and described.

7. In an electro-dynamic machine, the combination of armature H, and hub C, having oil-chamber c, with adjustable bushing D, and suitable jam-nut, and the main axle A, substantially as set forth.

8. The centrifugal adjustable clutch and its controlling-shaft, in combination with the armature, the wheel, and the pinions carried by the clutch and engaging gearing carried by the armature and wheel, respectively, under the arrangement and for operation substantially as hereinbefore set forth.

9. The combination, with the axle or shaft to be driven, of an electric motor whose armature is mounted to revolve on said shaft, and intermediate transmitting-gearing for imparting movement from the armature to said shaft or axle, substantially as and for the purposes hereinbefore set forth.

300,828. ELECTRIC MOTOR FOR RAILWAY-CARS. A. WELLINGTON ADAMS, St. Louis, Mo., assignor to the Adams Electric Company, same place. Filed Dec. 15, 1883. (No model.)

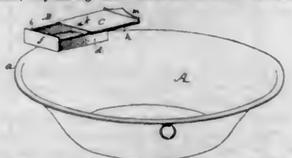


Claim.—1. The combination, with the axle which carries the driven wheels, the axle boxes or bearings, and a frame secured to or formed in one with said boxes or bearings, of an electric motor whose armature is mounted to revolve on said axle, and whose field is attached to and carried by said frame, substantially as and for the purposes hereinbefore set forth.

2. The combination, with the driven wheels, their axle and axle boxes or bearings, and a field-supporting frame secured to or formed in one with said boxes or bearings, of an electric motor whose armature and field are carried by said axle and frame, respectively, and intermediate motion-transmitting gearing, also carried by said frame, and meshing on the one hand with a gear on the driven wheels and on the other with a gear on the armature-hub.

3. The driven wheels, their axle and axle boxes or bearings, and the supporting-frame secured to or formed in one with said boxes or bearings, in combination with the armature mounted to revolve on said axle, and the field-magnets, commutator-brushes, and intermediate motion-transmitting gearing mounted in and carried by said supporting-frame, under the arrangement and for operation as hereinbefore set forth.

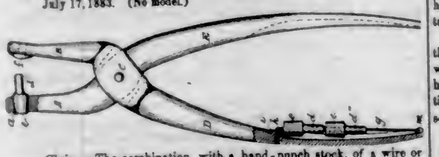
300,829. BARK-STRIPPING MACHINE. F. FERDINAND ANSERMAIR, Ravensburg, Würtemberg, Germany. Filed July 18, 1883. (No model.) Patented in Germany Aug. 6, 1879, No. 8,529.



Claim.—1. In a bark-stripping-machine, the combination of a horizontal rotary disk provided with obliquely-set knives or blades, the disk mounted on a vertical shaft having a worm rigidly fixed thereto, said worm engaging above said disk with a roller provided with ratchet-shaped wheels, a pair of hinged levers provided with handle and flanged smooth roller journaled between the levers, to operate as shown, and for the purpose set forth and described.

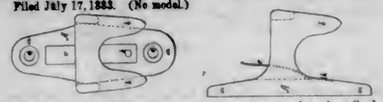
2. In a bark-stripping machine, the combination of the horizontal rotary disk D, provided with the obliquely-set knives k_1, disk D, mounted on the vertical shaft s_1, having the worm W rigidly fixed thereto, worm W, engaging above disk D with the roller f, provided with the ratchet-shaped wheels f, f_1, the hinged levers p_1 p_2, provided with the handle l, and the flanged smooth roller p_3, flange p_4, shaft s_1, substantially as shown, and for the purpose set forth and described.

3. In bark-stripping machines, the combination of a rotary disk provided with vertical shaft, an attachment provided on top and across the disk, the attachment rigidly fixed to the main frame of the machine, consisting of a frame with two rows of journaled balls, the rows set at right angles to each other, to operate as shown, and for the purpose set forth and described.



4. In a bark-stripping machine, the combination of the rotary disk D, provided with the knives k_1, and rigidly secured to the vertical shaft s_1, said shaft journaled in the bearings b_1 b_2, which are rigidly fast to the main frame a_1, the attachment A, bolted to the frame a_1, and placed closely over and across disk D, said attachment consisting of frame e_1, plate e_2, and supporting a set of journaled balls arranged in the two rows e_3 e_4, set at right angles to each other, to operate as set forth, and substantially as shown and described.

300,830. COMBINED WASH-BASIN AND SOAP-BOX. FRANKLIN E. ARNOLD, Waynesburg, Ohio. Filed Nov. 30, 1883. (No model.)

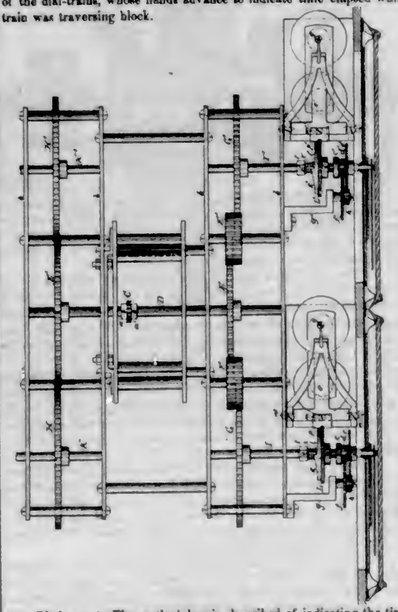


Claim.—In a combined wash-basin and soap-box, the basin or bowl, in combination with the soap-box provided on its under side with an inwardly-extending curved flange formed of spring metal, to fit or spring around the bottom edges of the rim of the basin, the bottom of the box resting on the top edges of the rim, arranged and operating for the purpose set forth.

300,831. HAND-PUNCH. JOHN E. ATWOOD, Stonington, Conn. Filed July 17, 1883. (No model.)

Claim.—The combination, with a hand-punch stock, of a wire or rod, g, pivoted at one end to one of its handles, and at the other end springing into a notch or between projections in or on said handle for the purpose of stringing punches not in use, substantially as herein described.

300,832. BROOM-HOLDER. CHARLES PERRY BALL, Orange, Mass. Filed July 17, 1883. (No model.)



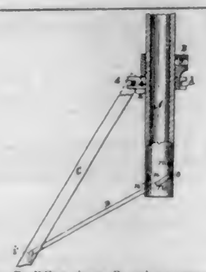
Claim.—1. The furcated broom-holder, constructed as described—viz., of the bracket having in it the single circular opening d, and also having the two ears a a and spring c arranged therewith—substantially as set forth.

2. In the described broom-holder, the bracket having the broom-handle circular receiving opening and the two prongs arranged therewith, as set forth.

300,833. AUTOMATIC TIME-INDICATOR AND BLOCK-SIGNAL. EDMUND F. BARD, Greenwich, Conn., and GUSTAVUS G. WAGNER, Mount Vernon, N. Y. Filed Oct. 17, 1883. (No model.)

Brief.—Train entering block closes circuit and releases dial-trains, which fly forward until stopped by pins on shafts rotated by the clock. When train leaves block, it closes a return-signal circuit, including one of the dial-trains, whose hands advance to indicate time elapsed while train was traversing block.

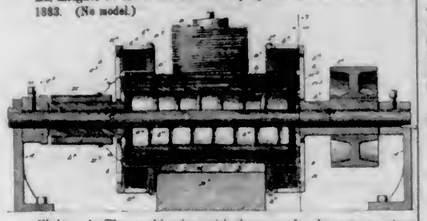
Claim.—1. The method herein described of indicating the time when a train enters and leaves a block, which consists in automatically moving the hands on two clock-dials by the passage of a train, so that one of said dials shall indicate the time when the train entered the block, and the other shall indicate the time when the train left the block, substantially as described.



2. The herein-described method of signaling, which consists of causing a passing train to automatically set the hands on two clock-dials so that both shall indicate the time of passing the point where the signal is located, and in further causing such train to automatically set the hands on one of the dials so that they shall indicate the time when the train passed the next succeeding signal-station, substantially as described.

3. The combination, with the hands of two clock-dials located at the commencement of a block, of mechanisms and electrical connections whereby the continued travel of a train will automatically set the said hands so that one set shall indicate the time of entry and the other the time of the departure of the train from said block, substantially as described.

300,834. MUSIC-STAND. ROBERT C. BARRIE, Philadelphia, Pa. Filed July 28, 1883. (No model.)



Claim.—In a folding music-stand, the braces D, passing transversely through the vertical rod at points equidistant apart and above and below each other, and being bent upon said rod, as shown, in combination with

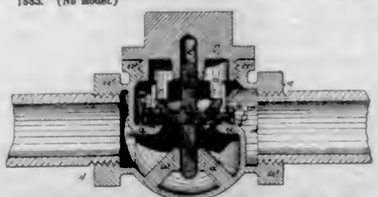
300,834.

the rod A, the legs C, sliding sleeve B, and a common thumb-screw at *a*, substantially as shown and described.

300,835. DYNAMO-ELECTRIC MACHINE. JOHN B. BLAIR, Chicago, Ill., assignor to the Blair Electric Company, same place. Filed June 30, 1883. (No model.)

Claim.—1. The combination, with the core of a dynamo-armature and induction-wires arranged in a hollow cylindrical body around the core, of annular supports exterior to the cylindric body of wires, constructed to sustain the wires around central open spaces at the ends of said cylindrical body of wires, substantially as described.

2. The combination, with the core of a dynamo-armature and induction-wires arranged in a hollow cylindrical body around the core, of an exterior cylinder surrounding said cylindrical body of wires, and means upon the ends of the cylinder constructed to support the wires exterior to central open spaces at the ends of the said cylindrical body of wires, substantially as described.



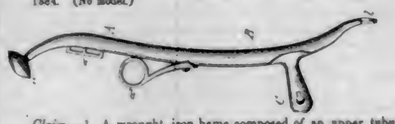
3. In a dynamo-armature, the combination of the cylinder B', flanges B^2, projections *b*, induction-wires trained within the cylinder and exterior to the projections *b*, as shown, an armature-core, and means (as B^2) for supporting the cylinder and wires clear of the axis, and constructed to afford a free passage for air through the armature, substantially as described.

4. In a dynamo-armature, the combination of the cylinder B', having flanges B^2, projections *b*, fixed to said flanges, induction-wires trained within the cylinder outside said projections, a core constructed to afford a longitudinal passage through the armature, and open heads B^2, provided with wires b^2, for supporting the cylindric armature from its axis, substantially as described.

5. The combination, with the induction-coil wires of a rotating armature arranged in a hollow cylindrical body, and means exterior to the inner surface of the body of wires constructed to support said wires around central open spaces at the end of the cylinder, of a spirally-constructed core within the cylindric body of wires, substantially as and for the purpose set forth.

6. In the armature described, the combination, with the exterior cylinder, B', provided with flanges B^2, of the several coils B^3, having their wires separated at the ends of the cylinder and trained in opposite directions on the vertical flanges B^2, substantially as described.

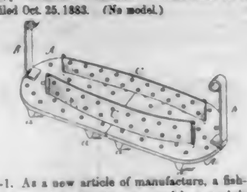
300,836. VALVE. JAMES H. BLESSING, Albany, N. Y. Filed Nov. 10, 1883. (No model.)



Claim.—The combination, with a valve-casing, A, having a partition, *a*, provided with an annular tongue, a^2, and removable valve-seat B, having an annular groove that fits over the annular tongue a^2, as herein described, of the bonnet C, having a cage, *c*, which forms an integral part of said bonnet, and is provided with openings *c'*, as herein set forth, the said cage being adapted to bear upon the upper face of the removable valve-seat B, so as to secure the latter rigidly in place, as herein specified.

300,837. COMBINED CHECK AND STOP VALVE. JAMES H. BLESSING, Albany, N. Y. Filed Dec. 7, 1883. (No model.)

Claim.—A combined check and stop valve of the character described, when composed of a valve-casing, A, provided with the valve-chambers *a* and *a'*, a vertically-operating check-valve, D, and an inclined screw stop-valve, G, the valve-chamber *a* being provided with a horizontal partition, B, and the valve-chamber *a'* being arranged in an inclined position and provided with a partition or seat, F, which is fixed at right angles to the central line of said valve-chamber, as herein specified.



300,838. HAME. ADOLF BOENING, New York, N. Y. Filed Apr. 29, 1884. (No model.)

Claim.—1. A wrought-iron hame composed of an upper tubular part and a lower solid part welded to the upper part, substantially as set forth.

2. A wrought-iron hame composed of an upper tubular part and a lower solid part welded to the upper part, and provided with a draft-eye welded to the lower part, substantially as described.

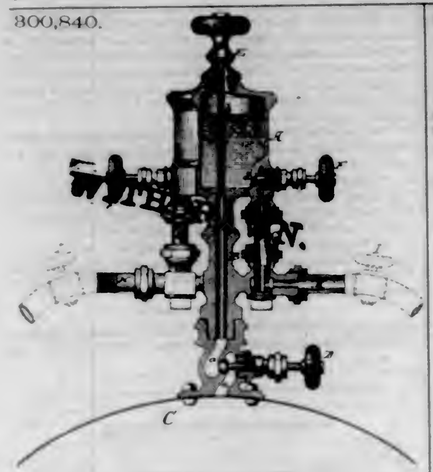
300,839. COOKING UTENSIL. CHRISTOPHER M. BONNEAU, Boston, Mass. Filed Oct. 25, 1883. (No model.)

Claim.—1. As a new article of manufacture, a fish-tray formed in detachable sections, adapted to be separated in a straight line, substantially as and for the purposes set forth.

2. A fish-tray formed in detachable sections, adapted to be separated in a straight line, and having suitable devices for holding the sections together to sustain the weight of the article to be cooked, but permitting their separation when it is desired to deposit it on the dish.

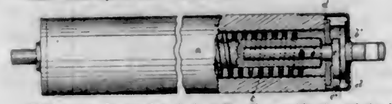
3. The combination, with a fish-tray composed of sections adapted to be separated in a straight line, of retaining devices for keeping the article to be cooked in the desired position.

4. The combination, with a perforated fish-tray, of retaining devices provided with projections adapted to be inserted in the perforations of the tray, and thereby hold the retaining devices in position, substantially as set forth.



5. The combination, with the separable and detachable two-part fish-tray A A, of the retaining devices C and suitable locking devices, D, substantially as set forth.

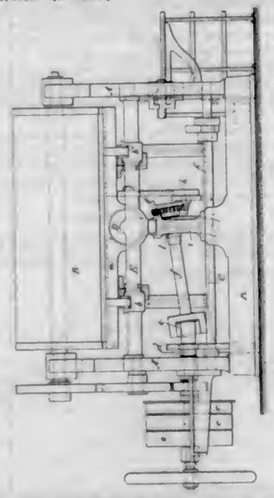
6. The divided fish-tray A A, composed of detachable bottom sections, and provided with the knockdown-handles B B, hinged thereto, so as to permit their being firmly packed upon the tray in packing, substantially as described.



300,840. LUBRICATOR. WILLIAM A. BOYDEN, Jersey City, N. J., assignor to the McNab & Harlin Manufacturing Company, New York, N. Y. Filed Mar. 13, 1884. (No model.)

Claim.—The oil-cup A, combined with the central hollow supporting-stem, B, internal upright steam-pipe, *b*, lower oil-discharge opening, *d*, valve F, downwardly-extending drip-pipe *f*, sight-tube G, and outwardly-extending separate oil-discharge pipe H, having independent valve I, substantially as herein shown and described.

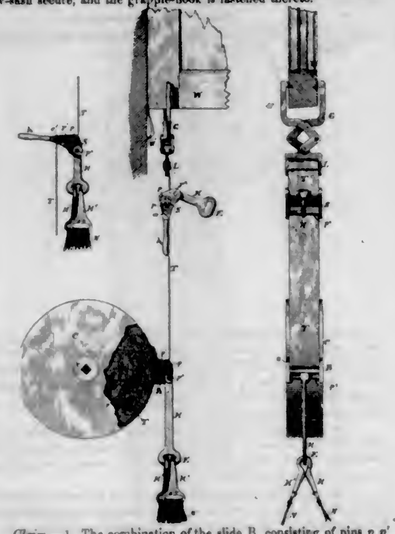
300,840.



300,841. SPRING SHADE-ROLLER. GEO. T. BRIGGS, Cambridgeport, Mass. Filed Apr. 30, 1884. (No model.)

Claim.—1. In a spring shade-roller, the combination of the inverted-V-shaped spindle *b b'*, the collar-pawl *e e'*, and the ratchet *d*, all arranged and operating substantially as shown and described.

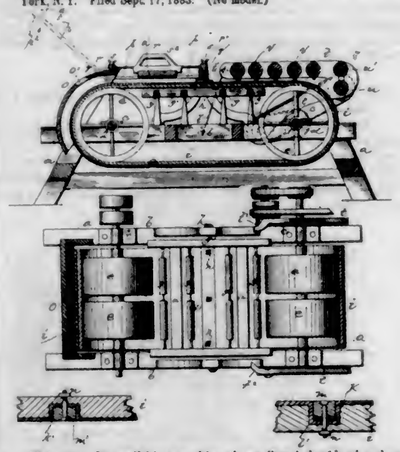
2. The collar *e*, formed with the V-shaped aperture and pawl *e'*, combined as shown and described, for the purpose set forth.



300,842. PRINTING-MACHINE. JOHN BROOKS, Plainfield, N. J. Filed Aug. 23, 1883. (No model.)

Claim.—The combination, with the impression-cylinder, type-bed, rack, driving-shaft, pinion, and pinion-shaft, of side supports below the type-bed, a longitudinal girder beneath the type-bed and supporting the same, the side frames, the cross-girt, and end frames to which the girder is fastened, said girder having a vertical slot through which the pinion-shaft passes, and in which the bearing-box of the same slides, substantially as set forth.

300,843. FIRE-ESCAPE. JAMES H. BURER, Los Angeles, Cal., assignor to Welcome A. Botkin, Eldridge W. Brannan, John J. O'Brien, Frank B. Hough, Salathiel C. Fancher, and William S. Brown, all of Kansas City, Mo. Filed Jan. 23, 1884. (No model.)

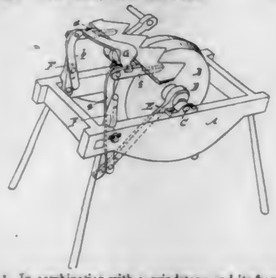


Brief.—An improvement on Patent No. 288,304, dated November 13, 1883. The rope is passed over friction-pins within the case, and so arranged that the weight of the case and reel acts as a counter-balance to the weight on the hanger and seat-strap. A wedge holds the window-sash secure, and the grapple-hook is fastened thereto.

Claim.—1. The combination of the slide B, consisting of pins *p p' p'*, and the hanger H, with the case C, so arranged that the weight of the case acts as a counter-balance to the weight suspended from the hanger and makes the friction of the tape against itself proportionate to the weight so suspended.

2. The combination of the grapple G and the wedge W' with a window-sash, for the purpose set forth.

300,844. WOOD-POLISHING MACHINE. JEREMIAH CASEY, New York, N. Y. Filed Sept. 17, 1883. (No model.)



Claim.—1. In a polishing-machine, the endless belt of leather, having channels cut transversely in its outer face, in combination with a single sheet of sand-paper covering the outer surface of the leather belt, and the transverse metal bars perforated near the ends and the middle, and the nut-bolts for securing them in place, and the four pulleys *e e e e* on the shafts *d d*, for driving the belt, substantially as specified.

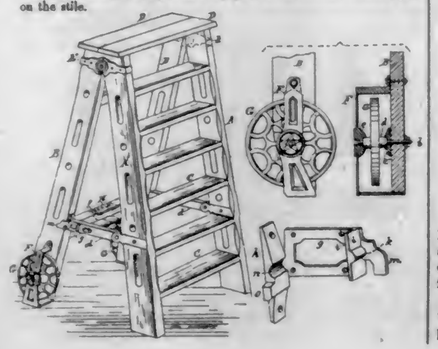
2. In a polishing-machine, the combination, with the grooved cap-piece and the supporting-bracket extending above the abrasive belt, of the hinged metal frame having its connecting cross-bar grooved longitudinally in its upper face, and the guide-holder having adjustable V-point castings at its ends, and elastic portions and an under friction-face between its ends, substantially as specified.

3. In a polishing-machine, the hinged frame carrying the feed-rollers and the adjustable pressure-rollers, in combination with the endless abrasive belt, substantially as specified.

300,845. ATTACHMENT FOR GRINDSTONES. WILLIAM CHALMERS, Detroit, Mich. Filed Nov. 3, 1883. (No model.)

Claim.—1. In combination with a grindstone and its frame, a tool-holder constructed to present the tool to the stone, an eccentric on the main shaft, and means, substantially as described, for connecting the tool-holder with said eccentric, whereby a combined rocking and reciprocating movement in the direction of the movement of the surface of the stone is given to the tool, as described.

2. In combination with a grindstone-frame the shaft of which is provided with an eccentric, a rod connecting such eccentric directly with a tool-holding frame pivotally secured to the main frame, substantially as and for the purposes specified.



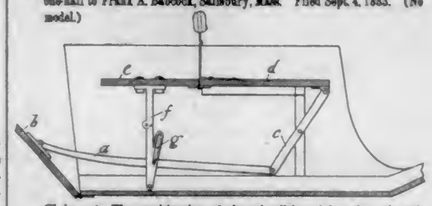
3. In combination with a grindstone-frame the stone-supporting shaft of which is provided with an eccentric and rod connecting said shaft with an oscillating tool-carrying frame, adjustable brackets by means of which the tool-holder-carrying frame is pivotally secured to the main frame, substantially as set forth.

4. In combination with a grindstone-frame the stone-supporting shaft of which is provided with an eccentric and rod connecting said shaft with an oscillating tool-holder-carrying frame, and brackets to which said tool-carrying frame is pivotally secured, a tool-holder pivotally secured thereto, substantially as described.

5. A grinding apparatus composed of a stone, shaft, and frame of any usual construction, an eccentric on said shaft, a rod connecting with said eccentric, an oscillating tool-holder-carrying frame, and a tool-holder pivotally secured to said tool-holder-carrying frame, the parts being constructed, combined, and operating substantially as and for the purposes specified.

300,846. STEP-LADDER. ORRIN CRATFIELD, Jr., Lockport, N. Y. Filed Aug. 23, 1883. (No model.)

Brief.—The stiles of a step-ladder are provided near their lower ends with wheels whose peripheries project beyond the sides but not beyond the ends of said stiles. In connection with a hinge having shouldered stops employs a pivoted brace having at one end a plate provided with a projection and lug which engage a shouldered and recessed plate on the stile.



Claim.—1. A step-ladder provided with wheels mounted in the stiles thereof at a short distance from the lower ends, the periphery of said wheels extending beyond the edges of said stiles, but not beyond their ends, so that said wheels are not in contact with the ground when the ladder is adjusted in an upright position, but may be brought to bear on the ground by turning the ladder toward a horizontal position, substantially as and for the purpose described.

2. A step-ladder having wheels within housings secured to the standards of the ladder, the hub of each wheel extending into fixed sockets *c* and *c'*, and rotating therein, substantially as shown and described.

3. In a step-ladder having front and rear standards, a locking device for said standards, having catch-fastenings, each of which consists of a plate, *g*, having recessed projection *m* and bulge *k*, and a plate, *h*, having a recess, *n*, and projection *o*, substantially as set forth.

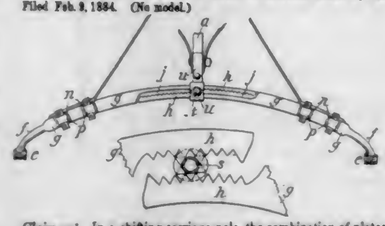
4. In a step-ladder having front and rear standards, the hinged locking device having plates *g* and *h*, in combination with a hinged coupling, E, provided with stops *c*, the parts being constructed substantially as shown, for the purposes set forth.

300,847. JUMP-SEAT. JOSEPH T. CLARKSON, Amesbury, assignor of one-half to Frank A. Babcock, Salisbury, Mass. Filed Sept. 4, 1883. (No model.)

Claim.—1. The combination of pivotal tail-board *b*, rod *a*, pivotal lever *c*, and sliding seat *d*, substantially as specified.

2. The combination of hinged tail-board *b*, rod *a*, pivotal lever *c*, sliding front seat, *d*, hinged seat *e*, and jointed standard *f*, all arranged to operate substantially as specified.

3. The combination of a sliding front seat and a rear turn-down seat, thereto hinged, with automatic devices arranged to simultaneously actuate said seats, substantially as specified.



4. The combination of sliding front seat, *d*, rear seat, *e*, hinged thereto, jointed standard *f*, arranged to actuate and support seat *e*, and rod *a*, connected with tail-board *b* and said standard, and arranged to thereby actuate said rear seat as the tail-board is opened and closed, substantially as specified.

5. The combination of a hinged tail-board, a sliding front seat, a rear turn-down seat hinged to such front seat, with devices connecting said tail-board and seats, whereby the opening and closing of said tail-board will actuate said seats in the manner described.

6. The combination of a sliding front seat and a rear seat hinged thereto and arranged to be vibrated upward and downward upon its hinges as the front seat is slid backward and forward, substantially as specified.

7. The combination of a sliding front seat, a rear seat thereto hinged, a jointed standard arranged to actuate and support said rear seat, a pivoted vibrating lever arranged to actuate and lock said front seat, and a rod connected with both said standard and lever, and arranged to thereby actuate both said seats, substantially as specified.

300,848. SHIFTING POLE FOR VEHICLES. JOSEPH T. CLARKSON, Amesbury, assignor of one-half to Frank A. Babcock, Salisbury, Mass. Filed Feb. 9, 1884. (No model.)

Claim.—1. In a shifting carriage-pole, the combination of plates *g*, having their outer ends formed to be secured to the carriage-shackles, and at their inner ends with racks *h*, and a toothed stud, *s*, arranged to engage said racks and lineally actuate said plates, substantially as specified.

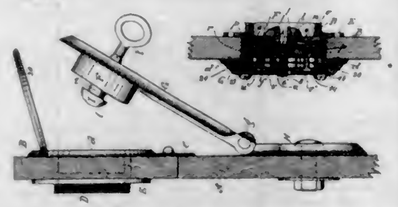
2. In a shifting carriage-pole, the combination of plates *g*, formed with racks *h*, toothed stud *s*, arranged to engage said racks, confining-plate *u*, and securing screw *t*, substantially as specified.

3. In a shifting carriage-pole, the combination of re-enforce plate *j*, secured to bar *b*, adjustable plates *g*, strap-bolts *k k'*, bars *m*, elastic blocks *n*, and yokes *p*, arranged to confine the same, and by means of the securing-nuts compress said blocks to the required degree, substantially as specified.

4. In a shifting carriage-pole, the shackle engaging plates *h*, formed at their inner ends with rack-like teeth, and a toothed stud or pinion arranged between said racks, to be rotated, and to thereby simultaneously move said racks inward or outward, as required, substantially as specified.

5. In a shifting carriage-pole, the shackle engaging plates *h*, adjustably secured upon bar *b*, and arranged and provided with means whereby they may be simultaneously moved to adjust their ends *e* at the required distance apart, substantially as specified.

6. In an adjustable carriage-pole, the combination, with bar *b* and its re-enforce plate *j*, of lineally-adjustable plates *g*, with devices to hold them in contact with plate *j* by an elastic pressure, substantially as specified.



300,849. WEATHER-STRIP. JACQUES COCTURIER, Lyons, France. Filed Aug. 20, 1883. (No model.) Patented in France Feb. 16, 1883, No. 153,854.

Brief.—A weather-strip consisting of a spring-pressed plate having attached an elastic strip, the plate being confined in a case which can be applied to the edges of a door as well as to the bottom of the same.

Claim.—The case A, having sides and back and a front with an opening in it, in combination with the plate B, that is retained within the case by the front plate of the case, an elastic strip, C, upon the outer face of the plate B and projecting through the opening in the front of the case, and a spring or springs, D, between the plate B and case, substantially as set forth.

300,850. TRUNK-LOCK. GEORGE CROUCH, New York, N. Y., and HERMANN AHREND, Newark, N. J., assignors to said Crouch. Filed Feb. 23, 1884. (Model.)

Claim.—1. The combination, with a hinged hasp and the lock-cup, of a lock-case upon the hasp and self-acting hooked spring-bolts to connect with the lock-cup when the hasp is pressed to place, substantially as set forth.

2. The combination, with a hinged hasp, of a lock-cup having a flange and a septum with a circular opening, a lock-case upon the hasp, self-acting spring-bolts with heads to pass into and hold the lock in the lock-cup, substantially as set forth.

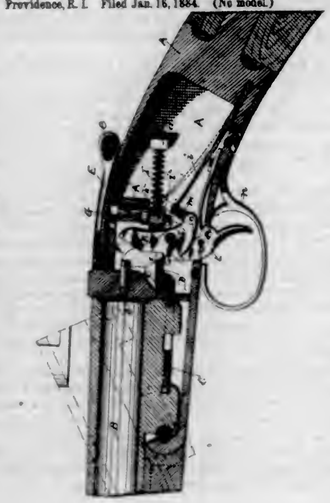
3. In combination with the hinged hasp, a lock-case having an opening at the back, spring-bolts with heads passing through that opening, a cam within the case to retract the spring-bolts, and tumblers within the lock-case to hold the cams, substantially as set forth.

4. The circular lock-case, in combination with the two-part spring-bolts projecting through an opening at the back, and a disk within the lock-case, having upon it the key-stud, and cams to actuate the bolts, and a stud on the disk and tumblers, substantially as set forth.

5. The combination, with the circular lock-case and hinged hasp carrying the same, of spring-bolts projecting at the back of the case, cams within the case actuated by the key for drawing the spring-bolts together, and tumblers to control the movement of the cams, substantially as set forth.

6. The combination, with the hinged hasp, circular lock, and lock-cup, of a ring introduced between the hasp and the flange of the cup, the parts being recessed for the reception of the ring, substantially as set forth.

7. The combination, with the circular lock-case, of spring-bolts, cams for acting on the same, segmental tumblers, a pivot for the same, and bow-springs confined between the tumblers and the notched inner surface of the case, substantially as set forth.

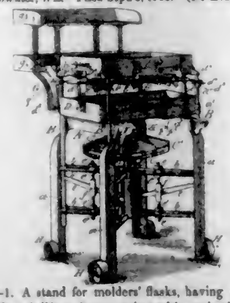


300,851. BREECH-LOADING FIRE-ARM. WILLIAM H. DAVENPORT, Providence, R. I. Filed Jan. 16, 1884. (No model.)

Claim.—1. In a breech-loading double fire-arm, the hammer-cocking device for each barrel herein described, consisting of the rod C, provided with the head C', rod C², and spring *d*, the latter engaging with said head C', in combination with the cam C⁴ at the rear of the forward strap, the whole being located in the frame beneath the barrel and connected, whereby the operation of opening the barrel cocks the hammer, substantially as shown and set forth.

2. In a breech-loading double fire-arm provided with hammer H, and fore-wood strap H', having a cam-shaped opening, C⁴, therein, the combination therewith of the herein-described cocking device, consisting of the rod C, coupling C' C², and spring *d*, the whole arranged and operated substantially as shown and specified.

300,852. BREECH-LOADING FIRE-ARM. WILLIAM H. DAVENPORT, Providence, R. I. Filed Jan. 16, 1884. (No model.)



Claim.—1. That improvement in breech-loading fire-arms which consists of a vertical crank-shaft mounted in the gun-frame back of the hammer, the upper end of said shaft provided with a toothed lever, which latter engages a lever secured to the top snap-lever, the lower or crank portion of the shaft connected by means of a link to the main locking-bolt, all combined and arranged substantially as shown, and for the purpose set forth.

2. In a breech-loading fire-arm, the combination, with the vertical crank-shaft and main locking-bolt, of two segment gears or levers having unequal radii, adapted to connect said shaft with the top snap-lever, whereby the angular motion of the latter in withdrawing the bolt is less than the angular movement of said shaft, substantially as shown and set forth.

3. In a top snap-lever breech-loading fire-arm, the crank-shaft H, connected by means of the crank-pin *h'* and link D with the main spring locking-bolt C, in combination with the toothed lever G, secured to the shaft, and lever F, secured to the top snap-lever, E, substantially as shown, and for the purpose set forth.

4. In a breech-loading fire-arm, the hammer K, link D, adapted to engage said hammer, and the main locking-bolt C, in combination with the crank-shaft H, toothed levers F G, and top snap-lever, E, arranged and adapted for use substantially as shown, and for the purpose set forth.

300,853. MOLDING APPARATUS FOR CASTINGS. JOHN R. DAVIES, Whitewater, Wis. Filed Sept. 3, 1883. (No model.)

Claim.—1. A stand for molders' flasks, having supports for the drag of the flask and lifters for engaging with projections on the cope of the flask, said lifters being operated by levers and a screw, as set forth.

2. The lower half or drag of flask having guide-pins, in combination with the match-plate having guiding-slot, with or without adjusting-latch, the upper half or cope of flask having guide-plates with adjusting-latch, each slotted to receive a guiding-pin, as set forth.

3. The guiding-pins having latches which are pivoted at one end and slotted near the other, in combination with a binding-screw for securing it in adjustment, whereby all horizontal play of the halves of flask and match-plate is avoided, as set forth.

4. The central lifting-screw, levers radiating from its housing, and a nut traveling on said screw, in combination with the lifting-pins, as set forth.

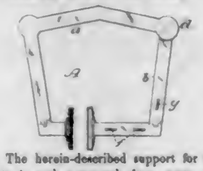
5. The perforated bottom plate having a bead and cleats, in combination with the flask and rails of frame, as set forth.

6. A molding apparatus for castings, consisting of frame A, having legs *a a a*, arms *b b b*, hub *c*, and rails *d d*, cast in one piece, and brackets G for shelves; of the lifting-screw C, having slotted nut d^2, tilting-levers *e e e e*, and adjustable fulcrum standards *f f f*; of the lifters B B B' B', with extensions *a'*, a^2, and a^4; of drag D of flask, having guide-pins *d' d'*, and of cope D' of flask, having guide-plate D^2, and of match-plate with opening for guide-pins *d' d'*, and adjustable brackets d^3, and perforated bottom plates F of flask, with head *f'* and cleats f^3, substantially as shown and described, and for the purpose set forth.

7. In a molding apparatus for castings, the combination of flasks, having guide-pins *d' d'* in its drag D, with match-plate E, having openings for said pins, and cope D', having female guide-plate D^2 and brackets d^3, substantially as shown and described, and for the purpose set forth.

8. In a molding apparatus for castings, the combination of drag D and cope D' of flask and match-plate E with lifters B B and B' B' and extensions *a'*, a^2, and a^4, substantially as shown and described, and for the purpose set forth.

9. In a molding apparatus for castings, the combination of the lifters B B and B' B', having slots *b' b'*, with the tilting-levers *e e e* and adjustable fulcrum-standards *f f*, substantially as shown and described, and for the purpose set forth.

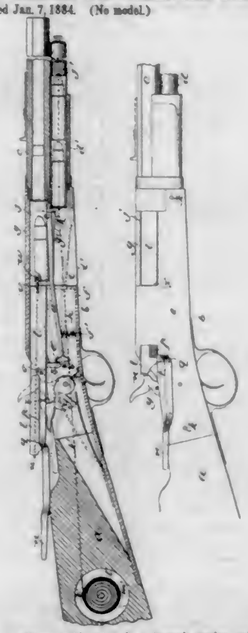


10. In a molding apparatus for castings, the combination of the tilting-levers *e e e* and adjustable fulcrum-standards *f f f f*, with slotted screw-nut d^3, lifting-screw C, and screw-wheel C', substantially as shown and described, and for the purpose set forth.

300,854. SOLE OR HEEL PLATE FOR BOOTS AND SHOES. JOHN M. DEXTER, Elmira, N. Y. Filed July 5, 1883. (No model.)

Claim.—As an article of manufacture, a thin metal plate having its lower surface covered with rubber or its equivalent, conforming to the sole or heel of a boot or shoe, and provided with suitable means whereby it may be cemented thereto to form an over-sole having an outer elastic facing, as set forth.

300,855. MOSQUITO-NET SUPPORT. ALFRED L. EDWARDS, New York, N. Y. Filed May 22, 1883. (No model.)

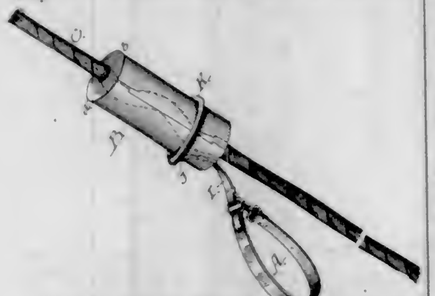


Claim.—1. The herein-described support for mosquito-nets, consisting of brackets A, each composed of two parts, *a* and *b*, jointed together and provided with a clamp at the joint, and the band C, attached to and supported by said brackets, substantially in the manner shown.

2. In combination with supporting-brackets, substantially as described and shown, a flexible band composed of separable sections alternately provided at their ends with slots or eyes and turn-buttons, substantially as and for the purpose set forth.

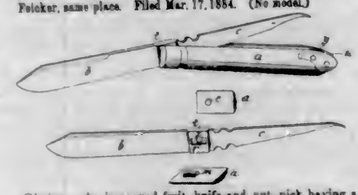
3. The herein-described bracket for mosquito canopies, consisting of the parts *a b*, united by a friction-joint and provided with turn-buttons *f* and *g*, as and for the purpose explained.

300,856. MAGAZINE-GUN. FRANKLIN JAMES EVANS, Iowa Falls, Iowa. Filed Jan. 7, 1884. (No model.)



Claim.—1. The combination, in a breech-loader, with a reciprocating breech-block, *l*, of the lever *n*, pivoted to said block, and the stop-bar *s*, arranged in the breech-cavity *h* in line with the arm *q* of the lever *n*, said lever *n* and the side plate, *e*, of the breech having notch *t*, substantially as described.

2. In a breech-loader, the combination, with the lifting-lever *a'*, pivoted at *b'* under the stop *s*, and provided with the stud *e'* and the stop-spring *g' h'*, of the spring *f'*, breech-block lever *n*, and magazine *d''*, substantially as shown and described.



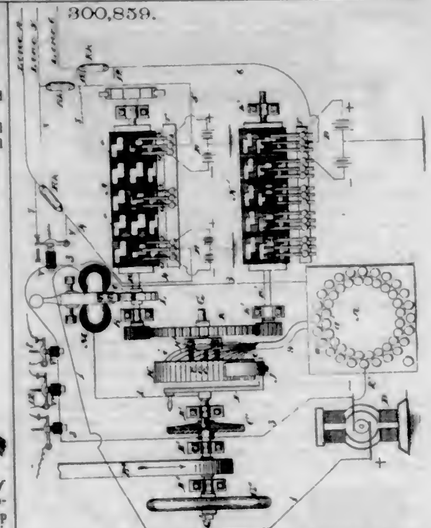
300,857. FIRE-ESCAPE. LEWIS J. EVANS, New York, N. Y. Filed May 16, 1883. (No model.)

Brief.—A fire-escape in which a split ring surrounding the closed clamp holds the trace which is passed through the slot in the grooved clamp.

Claim.—In a fire-escape, the clamp-sections *a b*, having grooves *f g*, respectively, and necks A, arranged as shown and described, in combination with the rope C, belt A, trace I, and split ring K, the clamp being provided with a slot, J, to receive the trace, substantially as specified.

300,858. COMBINED FRUIT-KNIFE AND NUT-PICK. FREDERICK C. FECKER, Jr., Northampton, Mass., assignor of one-half to Edward P. Fecker, same place. Filed Mar. 17, 1884. (No model.)

Claim.—An improved fruit-knife and nut-pick having a handle with separated sides, excepting at one end, where they are rigidly secured against a block interposed between them, one of said sides having thereon near its free end an inwardly-projecting pivot, and the second side having thereon opposite said pivot a cam projection running in the direction of the length of the handle, and a combined blade and nut-pick provided with a pivot-hole to receive the aforesaid pivot and a socket to receive said cam projection, adapted to swing between the free ends of the handle to bring either implement into convenient position for use, combined and operating substantially as set forth.



300,859. TRANSMITTER FOR PRINTING-TELEGRAPHS. STEPHEN D. FIELD, New York, N. Y., assignor to the Commercial Telegram Company, same place. Filed Aug. 6, 1883. (No model.)

Brief.—Controls a multiple of main lines.

Claim.—1. The combination, in a transmitter, of one or more cylinders, each provided with conducting spaces, fingers, or springs taking thereon, and circuit-connections for controlling one or more main lines, a prime motor therefor, a magnetically-operated stop controlling the motion of the cylinder or cylinders, and a key-board having circuit-connections, as set forth, and controlling the magnetic stop, substantially as set forth.

2. The combination, in a transmitter, of one or more cylinders revolved by a prime motor, and each controlling the pulsations on one or more main lines, and a key-board and local circuits, one for each character on the key-board, and controlling the movement of the cylinders, substantially as set forth.

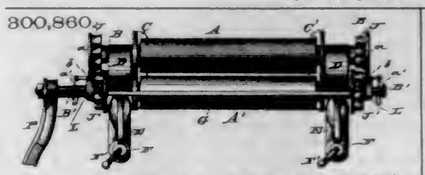
3. The combination, in a printing-telegraph transmitter, of a cylinder or cylinders provided with contact spaces, fingers, or springs, contacting therewith and controlling the pulsations on the main-line escapement-circuit, a magnetic detent controlling the rotation of the cylinders, a local circuit controlling the magnetic detent and having two breaks therein, a key closing one break, and a traveling circuit-closer and segmental disk closing the other break, substantially as set forth.

4. In a printing-telegraph transmitter, the combination of a cylinder or cylinders having conducting-spaces upon the periphery thereof, and sets of fingers or springs adapted to contact therewith and control the pulsations upon the main-line escapement-circuit, a local circuit, a magnetic detent, a disk formed of segments insulated from each other, and a circuit-closer traveling over such segments, whereby the rotation of the cylinder and the pulsations upon the escapement-circuit are controlled, substantially as set forth.

5. In a transmitter for printing-telegraphs, the combination, with the cylinder or cylinders having conducting-spaces upon the periphery thereof, and fingers or springs contacting therewith to control the pulsations upon the escapement-circuit, of a ratcheted wheel upon the shaft of one or more of the cylinders, and a key or spring operated thereby to automatically control the printing-circuit, substantially as set forth.

6. In a printing-telegraph transmitter, the combination of an insulated cylinder provided with the zigzag conducting-spaces, as set forth, a series of springs or fingers contacting therewith, each set of springs or fingers having one finger or spring connected to the line, while two others are respectively connected to opposite poles of the battery, a main-line and battery connections, each set of the series of fingers or springs controlling one main escapement-line, substantially as set forth.

7. The combination, in a transmitter, of a key-board having two concentric or parallel ranges of keys and a series of springs or fingers equal in number to the keys in either range and fixed upon an insulating-base, each spring being acted upon by two keys, one from each range, a disk composed of segments equal in number to the springs and circuit-connections, one for each spring to its corresponding segment, substantially as set forth.

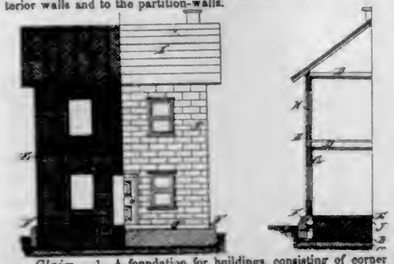


8. In a transmitter, the combination of a key-board having two ranges or sets of keys, two local circuits, one for each range of keys, a magnetic stop for the transmitter, controlled by both circuits, and a relay placed in one circuit and controlling a shunt to a resistance in the main circuit, substantially as set forth.

9. A printing-telegraph transmitter consisting of the combination of a cylinder or cylinders provided with conducting-spaces, a series of fingers or springs adapted to contact therewith, each set of the series of fingers or springs, in conjunction with a series of spaces, controlling a main escapement-circuit, a prime motor for the cylinder or cylinders, a clutch connecting them, a magnetic detent controlling the operation of the clutch thereon, local circuits, as set forth, a key-board, disk of insulated segments, and traveling circuit-closer controlling jointly the magnetic detent, substantially as set forth.

10. A transmitter embodying the following elements: a cylinder or cylinders and a series of fingers, as described, controlling the main circuit, a prime motor therefor, and a clutch connecting the motor and cylinder or cylinders, a magnetic stop controlling the movement of the cylinder or cylinders, local circuits controlling the stop, and a key-board controlling the local circuits, substantially as set forth.

300,860. CLOTHES-WRINGER. WASHINGTON I. FITCH, Bluffton, Ind., assignor to himself and William W. Weisell, same place. Filed May 13, 1883. (No model.)



300,860.

Claim.—The combination, in a clothes-wringer, of the wringing-rollers A A', mounted on the shafts B B', the guide-plates C C', which limit the movement of the rollers, the springs D, having bearings at their ends in which the roller-shafts are journaled, the flanged spur-wheels on the journals of said rollers, and the flanged collars L L, having beveled surfaces and teeth *b b*, the said collars being fitted on the shaft of the lower roller and connected with said shaft, as described, whereby they will operate to separate the two rollers, substantially as and for the purposes specified.

300,861. CONSTRUCTION OF BUILDINGS. EDWIN GILBERT, Georgetown, Conn., assignor of two-thirds to Henry L Hoyt, Norwalk, Conn., and Solomon J. Gordon, Springfield, Mass. Filed Dec. 26, 1883. (No model.)

Brief.—The foundation consists of corner and supporting posts, and wire-cloth, and concrete composed of cement and sand. The surface-finish is applied to wire-cloth as a base secured to the exterior of the frame of the building, mortar serving with the wire-cloth as a ground-work. Wire-cloth and mortar are also applied to the interior of the exterior walls and to the partition-walls.

Claim.—1. A foundation for buildings, consisting of corner and supporting posts, and wire-cloth and concrete, composed of cement and sand, substantially as set forth.

2. The combination, with the frame of a building, of metallic woven wire-cloth applied to the exterior thereof and serving as a ground or base for the surface-finishing material, as set forth.

3. The combination, with the frame of a building, of woven metallic wire-cloth applied upon the outside thereof, mortar adapted to serve as the ground or body work and the surface-finish, substantially as described.

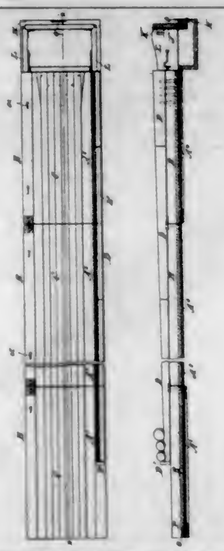
4. In combination with the woven wire-cloth, exterior wall of wire-cloth and mortar applied to the interior of the exterior walls and to the partition-walls.

300,862. PORTABLE FOLDING PARLOR BOWLING-ALLEY. WM. E. GOODNOUGH, Newark, N. J. Filed Mar. 3, 1884. (No model.)

Claim.—1. A bowling-alley constructed of a series of sections hinged or otherwise attached to each other at the ends, substantially as herein shown and described.

2. A bowling-alley constructed with a series of sections hinged or otherwise attached to each other at the ends, and provided with removable side gutters, substantially as herein shown and described.

3. A bowling-alley provided at one end with a hinged or otherwise attached folding box for receiving the balls that have been thrown at the pins, substantially as herein shown and described.



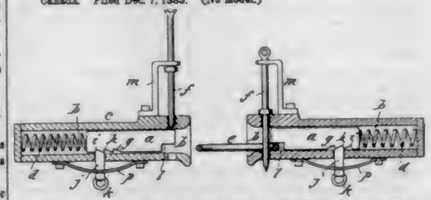
4. A bowling-alley formed of four sections hinged or otherwise attached to each other in such a manner that the rear sides of the middle sections are folded against each other and the end sections are folded over the middle sections, substantially as herein shown and described.

5. The combination, with a bowling-alley, of a hinged or otherwise attached end box for receiving the balls which have been thrown or rolled at the pins, and of a hinged board, J, provided with wings L in the said box, substantially as herein shown and described.

6. The combination, with a bowling-alley, of the hinged or otherwise attached box H, the hinged or otherwise attached board J, the wings L, hinged to the board J, the hooks L', and the eyes or staples M on the end of the alley, substantially as herein shown and described.

7. The combination, with a folding bowling-alley formed of hinged or otherwise attached sections, of a box, H, hinged or otherwise attached at one end, the hook Q, and the pin P, held in the slot O in front edge of the first section, substantially as herein shown and described.

300,862.



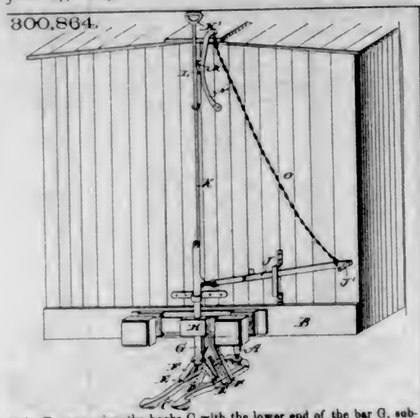
8. The combination, with a bowling-alley formed of a series of hinged or otherwise attached sections, of a box hinged or otherwise attached to one end, and a detachable plate adapted to cover the opposite ends of the sections when folded, substantially as herein shown and described.

9. In a bowling-alley, the combination, with sections having side strips, B, provided with end pins, S, of the board R, provided with notched plates R', substantially as herein shown and described.

10. In a bowling-alley, the combination, with a series of sections hinged or otherwise attached to each other, of strips secured at the sides of the sections, and provided in their upper surfaces with undercut grooves, and of grooved strips provided on their under sides with pins adapted to be passed into the undercut grooves in the upper surfaces of the strips at the sides of the sections, substantially as herein shown and described.

300,863. CAR-COUPLING. HUGH GRAHAM, Dartmouth, Nova Scotia, Canada. Filed Dec. 7, 1883. (No model.)

Claim.—1. In a car-coupling having the sliding block *a* and spring *d* for setting the link and pin, said block having a series of three notches, *g h i*, in combination with a stop-latch, *j*, and spring *p*, substantially as described.



2. The combination of cords *n* and guide-pulleys *o* with the coupling-pin *f*, having a block, *a*, for holding it up for self-coupling, and also having a stay, *m*, to hold it upright, said pulleys *o* being located above the coupling-pin, and the cords being extended to the lower corners of the car-body, substantially as described.

300,864. CAR-COUPLING. FRED'K E. GROTHAUS, Boerne, Tex. Filed Jan. 17, 1884. (No model.)

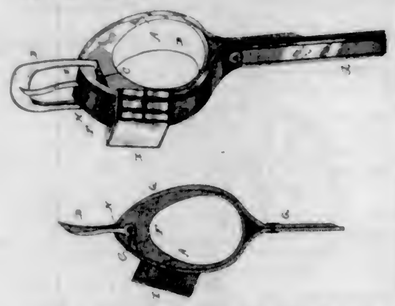
Claim.—1. In a car-coupling, the combination, with two levers pivoted on the bottom of the car, of a guide provided with an inverted-V-shaped slot, through which the hooks pass, and of means for swinging the hooks upward, whereby their outer ends will be moved toward each other, substantially as herein shown and described.

2. In a car-coupling, the combination, with two hooks pivoted to the bottom of the car, of a guide provided with an inverted-V-shaped slot, through which the hooks pass, a vertically-movable bar, G, and the

300,864.

links F, connecting the hooks C with the lower end of the bar G, substantially as herein shown and described.

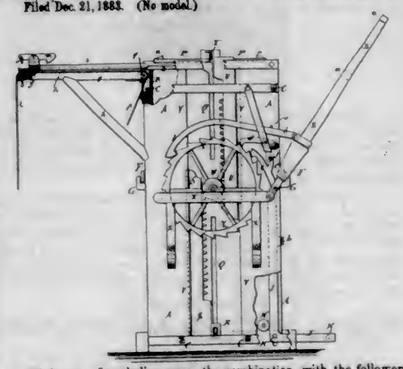
3. In a car-coupling, the combination, with the coupling-hooks C, pivoted to the bottom of the car, of the plate D, provided with an inverted-V-shaped guide-slot, through which the hooks pass, the vertically-movable bar G, connected by links F with the hooks C, and of the lever J for moving the bar G upward, substantially as herein shown and described.



4. In a car-coupling, the combination, with the hooks C, pivoted to the bottom of the car, of the plate D, provided with an inverted-V-shaped guide-slot, the vertically-movable bar G, connected with the hooks C, and of means for locking the bar G in place, substantially as herein shown and described.

5. In a car-coupling, the combination, with the coupling-hooks C, of the plate D, provided with an inverted-V-shaped guide-slot, D', the bar G, the links F, the rod K, provided with a tooth, L, and the spring N, provided with a tooth, M, substantially as herein shown and described.

6. In a car-coupling, the combination, with the coupling-hooks C, of the plate D, provided with an inverted-V-shaped guide-slot, D', the bar G, the links F, the rod K, provided with a tooth, L, the spring N, provided with a tooth, M, the pivoted lever J, connected with the bar G, and the chain O, connecting the lever J with the spring N, substantially as herein shown and described.



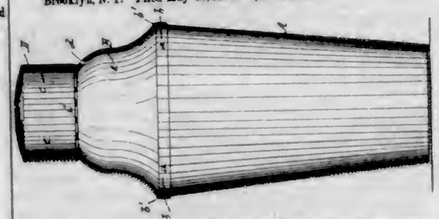
7. In a car-coupling, the coupling-box P, provided at its front with two uprights, P', beveled inward and toward each other, and provided with prongs or teeth Q, substantially as herein shown and described.

300,865. SHAFT-TUG. CHARLES W. HASS, Allentown, Pa. Filed Apr. 2, 1884. (No model.)

Claim.—A shaft having an inner metallic portion, B, having in its upper portion a central slot or hole to receive the buckle, and a transverse slot extending from said central hole outward, a buckle, D, and a plug or stop of a size corresponding with the size of the transverse slot and snugly fitting within the same for holding the buckle within the central hole and serving as a partial bearing for said buckle, and an attaching-strap forming at one end a cover for the metallic portion B, and having a slot at its apex through which the buckle-tongue passes, and being secured substantially as set forth.

300,866. BALING-PRESS. SIMON P. HARBAUGH, Cumberland, Md. Filed Dec. 21, 1883. (No model.)

Claim.—1. In a baling-press, the combination, with the followers O P, rack-bars S U, gear-wheels W, ratchet-wheels Y, and levers Z, of the long pawls *b*, the short pawls *c*, and the holding-pawls *d*, substantially as herein shown and described, whereby the followers can be moved with greater speed and less power when the material is loose, and with less speed and greater power when the material becomes more compact, as set forth.



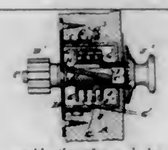
2. In a baling-press, the combination, with the short pawls *c*, having projecting arms *e*, of the pins *f*, substantially as herein shown and described, whereby the said short pawls will be raised from the ratchet-wheels by their own forward movement, and will also raise the holding-pawls, releasing the ratchet-wheels, as set forth.

3. In a baling-press, the combination, with the double-walled ends A of the press and the doors E, of the pins H, the right-angled bars I, having pins K and indexes L, and the springs J, substantially as herein shown and described, whereby the bale can be weighed as it comes from the press, as set forth.

4. In a baling-press, the combination, with the side B of the press and the follower P, having catch *n*, of the hinged frame *g* and its detachable braces *h*, the sliding frame *i*, the lever-hook *m*, having trip-hook *o*, and the cords *p r*, substantially as herein shown and described, whereby the said follower can be readily withdrawn and replaced, as set forth.

5. In a baling-press, the combination, with the rack-bars U and the follower P, of the keepers T, open upon one side, substantially as herein shown and described, whereby the said bars and follower can be disconnected and connected automatically, as set forth.

300,867. SHAKER FOR MIXING DRINKS. EDWARD J. HAUCK, Brooklyn, N. Y. Filed May 15, 1884. (No model.)

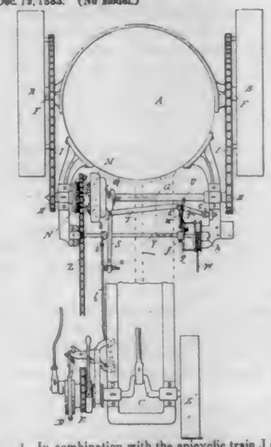


Claim.—1. The herein-described shaker for mixing drinks, consisting of the vessel A, the cup B, constructed to fit closely upon the vessel, the strainer C, secured in the upper portion of the cup, the cap D, fitting closely over the strainer, and the vent for the escape for the air from the interior of the shaker.

2. The combination, substantially as hereinbefore described, of the vessel A, with its cylindrical portion *a*, the cup B, with its cylindrical rim *b*, shoulder *b'*, and cylindrical flange *c*, the strainer C, the cap D, and the vent *d*.

3. The combination, substantially as hereinbefore described, of the vessel A, the cup B, constructed to fit closely upon the vessel, the strainer C, secured in the upper portion of the cup, the cap D, fitting closely over the strainer, the vent *d*, for the escape of the air from the interior of the shaker, and the bent pipe *e*.

300,868. PERMUTATION-LOCK. WILLIAM S. HILL, Cutler, Ill. Filed Jan. 28, 1884. (No model.)



300,868.

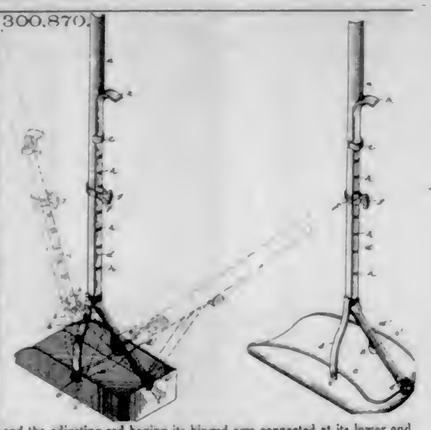
Claim.—1. The combination of a rack-bar, a spindle having a pinion to advance and retract the rack-bar, interlocking disks on said spindle, a sleeve having a flange provided with a pin to engage the adjacent disk, and a spring-plate to lock the disks to the spindle when the combination is set, as set forth.

2. The combination of the spindle having a longitudinal recess, a flat spring to occupy the recess, and a pinion to engage a rack-bar, interlocking disks, each having a notch to receive the flat spring when the latter is free, a sleeve to lock with the adjacent disk, and to slide inward with the disks and press the flat spring out of engagement with the disks, and a spring to force both the disks and sleeve outward when the latter are released.

300,869. TRACTION-ENGINE. HARRY H. HUDSON, Flint, Mich. Filed Dec. 19, 1883. (No model.)

Claim.—1. In combination with the epicyclic train J and the counter-shaft G, the friction-clutch M Q, the disk M of which forms a member of the epicyclic train and is loose upon the shaft, while the disk Q slides on a fast feather on the shaft, and admits of being forced in and out of contact with the former by suitable connections operated by a lever, substantially as and for the purposes described.

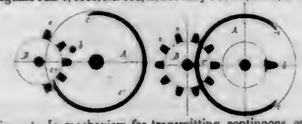
2. The combination, with the epicyclic train J, of the traction-gear and the friction-clutch M Q, the V-shaped annular contact R, toggle-levers T T', link w, and hand-lever U, all combined and operating substantially as described.



3. In a traction-engine, the traction-gear herein described, consisting of the combination of the counter-shaft G, bevel-gear K, secured upon said shaft, bevel-gear L, friction-disk M, sleeved loosely upon the shaft and forming an integral part with the bevel-gear L, sprocket-wheel N, sleeved loosely upon the shaft between the bevel-gears K and L, bevel-pinions O P, radially journaled upon the sprocket-wheel N, and friction-disk Q, slipped upon a spline on the shaft G, and actuated by a suitable lever for bringing it in and out of contact with the disk M, all combined, arranged, and operating substantially as and for the purposes described.

4. In a traction-engine, and as a means for controlling its movements, the combination of the traction-gear, consisting of the epicyclic train J and a friction-clutch, M Q, arranged upon the same counter-shaft, with a reversing-gear placed upon the crank-shaft of the engine, and the two levers U W, for controlling the traction-gear and the reversing-gear, all arranged and operating substantially as and for the purposes described.

300,870. DRAIN-CLEANER. GEORGE WASHINGTON IMMEL, Logansport, Ind. Filed Mar. 14, 1884. (No model.)

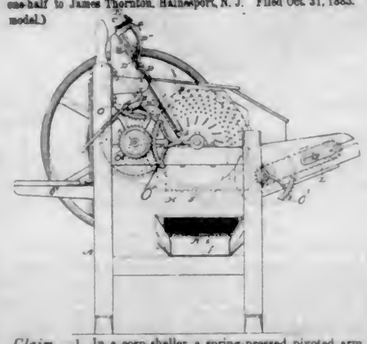


Claim.—In a drain-cleaner, the combination, with the handle having diverging metal straps at its lower end with eyes in their lower ends, the clip-guide, and the spring-clasp with the set-screw, of the dirt-pan having vertical sides and rear end hinged to the metal straps at its sides,

300,870.

and the adjusting-rod having its hinged arm connected at its lower end to the rear end of the pan by a pivot-connection, substantially as specified.

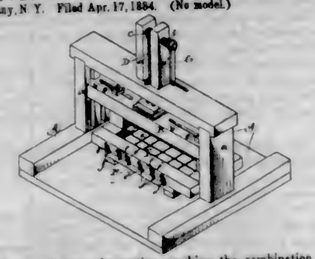
300,871. DEVICE FOR CONVERTING MOTION. ALEXANDER KAISER, Freiburg, Switzerland. Filed Nov. 8, 1883. (No model.) Patented in England Jan. 9, 1883, No. 131, and in Italy Feb. 15, 1883, No. 15,076–85.



Claim.—1. In mechanism for transmitting continuous or reciprocating rotary motion into intermittent rotary motion, the combination of a rotating driving-wheel having a segmental flange extending around a part of its circumference with a toothed driven wheel, said flange interlocking intermittently with the teeth of the driven wheel, substantially as set forth.

2. In mechanism for changing continuous rotary motion into intermittent rotary motion, the combination of a rotating driving-wheel, A, having a raised tooth, *b*, and a segmental flange, *c c' c²*, with a toothed driven wheel, B, said flange interlocking intermittently with the teeth of the driven wheel, substantially as shown and described.

3. In mechanism for changing continuous rotary motion into intermittent rotary motion, the combination of a rotating driving-wheel, A, having one or more raised teeth, *b*, and one or more segmental flanges, *c c' c²*, said flange or flanges having beveled ends with a driven wheel, B, having raised teeth *a a*, which latter interlock with the flange or flanges during the intervals of motion imparted to the driven wheel by the tooth or teeth of the driving-wheel, substantially as specified.



300,872. CORN-SHELLER. ALFRED KIBER, Dorstown, assignor of one-half to James Thornton, Hainesport, N. J. Filed Oct. 31, 1883. (No model.)

Claim.—1. In a corn-sheller, a spring-pressed pivoted arm constructed of a piece of wood, metal-clad on its inner face, as at D'', and a casting, D', having extension D''', in combination with the shelling-disks and operating mechanism, substantially as set forth.

2. In a corn-sheller, a pivoted pressure-arm constructed of a piece of wood, metal-clad on its inner face, as at D'', and a casting, D', having extension D''', in combination with means for its adjustment, consisting of a spring, bolt, and nut, substantially as and for the purpose set forth.

300,873. MACHINE FOR CUTTING CANDIES. JACOB KRESCHER, Albany, N. Y. Filed Apr. 17, 1884. (No model.)

Claim.—1. In a candy-cutting machine, the combination, with a reciprocating head, B, having a cutter-frame, E, attached thereto, the latter being provided with cutters *e'*, made of fine wires held in a tense condition, as herein described, of a bed-piece, F, provided with grooves *f*, which coincide with the cutters *e'*, as herein set forth, all being constructed and arranged to operate substantially as and for the purpose herein specified.

2. The bed-piece F for a candy-cutting machine, provided with grooves *f*, having in their lower parts the enlargements *f'*, as and for the purpose herein specified.

300,874. PRODUCTION OF COLORING-MATTER FROM DINITRO-PHENOL. FRITZ KRÖGER and GEORG TOBIAS, Fürstenberg-on-the-Oder, and EDUARD KEGEL, Leipsic, assignors to the Leipziger Anilin Fabrik, Beyer & Kegel, Lindenau, Germany. Filed July 30, 1883. (Specimens.)

Claim.—The herein-described process in the production of dinitro-phenol-sulpho-acid and its salts, by means of nitrating phenol-sulpho-acid or mononitro-phenol-sulpho-acid or their salts, substantially as set forth.

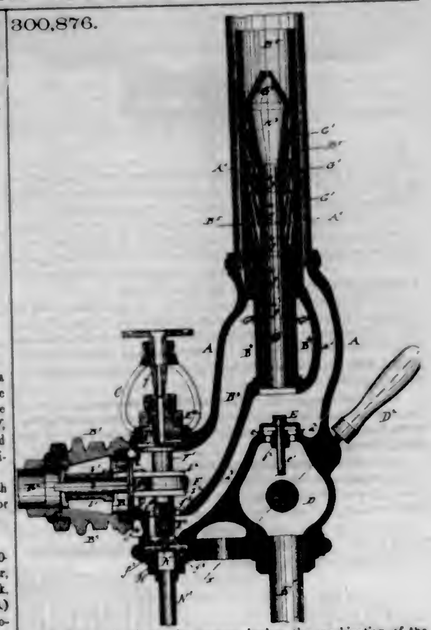
300,875. TOY SCALE. J. FRANKLIN LAWRENCE, Philadelphia, Pa., assignor to John Lawrence, same place. Filed Oct. 6, 1883. (No model.)

Claim.—A toy scale consisting of a beam, weight-plate, scoop-support, and pivot cast together, a base cast in one piece, and a scoop, substantially as and for the purpose set forth.

300,876. AIR-EJECTOR FOR VACUUM-BRAKES. LOUIS P. LAWRENCE, Passaic, N. J., assignor of one-fourth to Louis C. Raegener, Brooklyn, N. Y. Filed Feb. 27, 1884. (No model.)

Claim.—1. In an air-ejector for vacuum-brakes, the body A, having an upwardly-slanting steam-induction channel, B^2, an interior steam-expansion chamber, B^4, drip-channels a' a^3, and an enlarged air-chamber, D, all made integral in one casting, substantially as set forth.

2. In an air-ejector for vacuum-brakes, an ejector-body, A, having a slanting steam-induction channel, B^2, a steam-expansion chamber, B^4, drip-channels a' a^3, an air-chamber, D, and valve-seats *a*, *e*, and *f*, all cast integral in one piece, substantially as described.



3. In an air-ejector for vacuum-brakes, the combination of an ejector-body, A, having a slanting steam-induction channel, B^2, and a steam-expansion chamber, B^4, with an air-exhaust pipe, G, and a steam-pipe, B^5, secured to the expansion-chamber, and a steam-supply valve arranged at one end of the ejector-body and at some distance below the air-exhaust pipe, substantially as set forth.

4. In an air-ejector for vacuum-brakes, the combination of the ejector-body A, having an exhaust-pipe, A', and interior drip-channels, a' a^3, and a gutter, a^2, around the raised seat of the air-valve, with a drip-valve, N, and discharge-pipe N' at the lower part of the ejector-body, substantially as set forth.

5. In an air-ejector for vacuum-brakes, the combination of the ejector-body A, having a seat, *a*, a steam-supply valve, B, having a forked extension, b^2, and an anti-friction roller, b^3, and an eccentric, F, having an exterior lever, F^2, for opening or closing the steam-supply valve, substantially as described.

6. In an air-ejector for vacuum-brakes, the combination of an ejector-body, A, having a valve-seat, *a*, a steam-supply valve, B, having a forked extension, b^2, and an anti-friction roller, b^3, an eccentric, F, having a shank, F', guide-cylinder F^3, and lever F^2, yoke C, and set-screw I, substantially as set forth.

300,876.

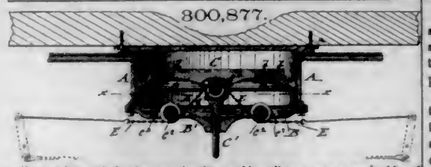
7. In an air-ejector for vacuum-brakes, the combination of the ejector-body A, having a steam-induction channel, B^2, steam-supply valve B, an eccentric, F, for actuating said valve, and a recessed valve-disk, f', secured to the shank of said eccentric and fitted to a recessed seat at the lower part of the induction-channel B^2, substantially as described.

8. In an air-ejector for vacuum-brakes, the combination of the ejector-body A, having a drip-channel, a^3, and a valve-seat, *f*, at the lower end of the same, a drip-valve, N, having a stem, f', guided in the lower end of the shank F', and discharge-pipe N', provided with a gland, H, having rests f^3, substantially as specified.

9. The combination of an ejector-body, A, having a steam-supply valve, B, a steam-induction channel, B^2, and a drip-channel, a^3, an eccentric, F, actuating the steam-valve B, a recessed drip-valve, f', secured to the shank of the eccentric, a drip-valve, N, guided by said shank, and a discharge-pipe, N', at the lower part of the ejector-body, substantially as specified.

10. In an air-ejector for vacuum-brakes, the combination of an ejector-body, A, having an enlarged air-chamber, D, with an equilibrium valve, D', having a lever, D^2, and a spring-actuating locking-lever, D^3, fulcrumed on the lever D^2, and pressing upon the center of the valve, substantially as set forth.

11. In an air-ejector for vacuum-brakes, the combination of an ejector-body, A, having a slanting steam-induction channel, B^2, and an annular steam-expansion chamber, B^4, a steam-supply valve, B, at the lower end of the induction-channel B^2, a steam-pipe, B^5, at the upper end of the expansion-chamber, an exhaust-pipe, A', at the upper end of the ejector-body, an air-exhaust pipe secured to the lower end of the expansion-chamber and passing through the same, and the steam-pipe, and an air-chamber, D, having an exhaust-valve, E, and an equilibrium-valve, D', substantially as set forth.



12. The combination of the ejector-body A, having a steam-induction channel, B^2, and an expansion-chamber, B^4, a steam-pipe, B^5, an air-exhaust pipe, G, having openings *g g*, a series of suction-cones, G', attached to the air-exhaust pipe, and a pipe, G^2, surrounding the lower part of the air-exhaust pipe, substantially as specified.

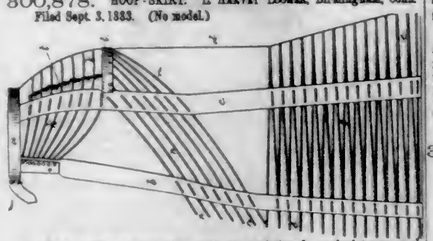
13. The combination of an ejector-body, A, having a steam-induction channel, B^2, and an expansion-chamber, B^4, a steam-pipe, B^5, and an air-exhaust pipe, G, the latter having openings *g g*, suction-cone G', and a conically enlarged and contracted end portion, G^2 G^3, substantially as described.

300,877. VACUUM-CYLINDER FOR RAILWAY-CAR BRAKES. LOUIS P. LAWRENCE, Passaic, N. J., assignor of one-fourth to Louis C. Raegener, Brooklyn, N. Y. Filed Feb. 27, 1884. (No model.)

Claim.—1. The combination of a vacuum-cylinder applied to the car-bottom, a vertically-guided piston having a recessed hub and a guide-

300,877.

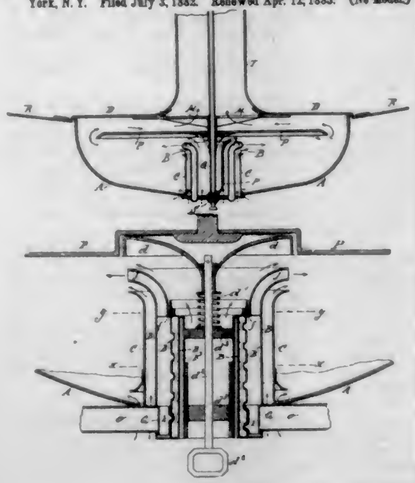
roller, and a cylinder-bottom having guide-rollers—one at each side of the guide-roller of the piston—for the passage of the chain connecting the brake-levers, substantially as and for the purpose set forth.



2. The combination of the vacuum-cylinder A, a vertically-guided piston, C, having a guide-stem, C', a packing-ring, D, applied to the recessed under side of the piston, and guide-rollers *e* and e^2 e^2, arranged in the hub of the piston and the bottom of the cylinder, and a brake-chain, E, passing over said rollers, substantially as set forth.

3. The combination of a vacuum-cylinder, A, a cylinder-bottom, B, having slots c^2 and guide-rollers e^2 e^2, a vertically-guided piston, C, having a recessed hub, a guide-roller, *e*, the slots of the cylinder-bottom being in line with the recess of the piston-hub, and a brake-chain, E, passing over the guide-rollers *e* and e^2 e^2, substantially as and for the purpose set forth.

4. The combination of a vacuum-cylinder, a piston having a flaring circumference and a circular recess or seat, and an elastic packing-ring having flanges at the inner edge, that are sprung into the recess of the piston, substantially as set forth.



5. A piston for vacuum-cylinders of railway-car brakes, having a circular recess or seat, and being provided with an elastic packing-ring having flanges at the inner edge that are sprung into the recess of the piston, substantially as described

300,878. HOOP-SKIRT. L. HARVEY LOOMER, Birmingham, Conn. Filed Sept. 3, 1883. (No model.)

Claim.—The combination, with the waistband, vertical tapes, and lower ranges of hoops, *o o*, of the bustle-hoops *k*, the lap or binder *l*, and the diagonal hoops *n*, the upper ends of which are secured in the binder *l* at the base of the bustle, for the purposes and substantially as set forth.

300,879. BURNER FOR GAS OR OIL. CHARLES M. LUNGREN, New York, N. Y. Filed July 3, 1882. Renewed Apr. 12, 1883. (No model.)

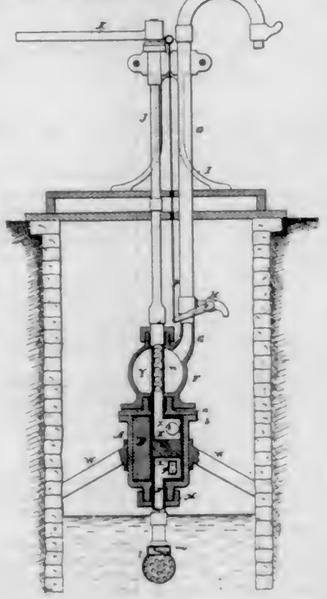
Claim.—1. The combination, with a burner, of a flame-plate, P, above the flame, of a diameter corresponding, or nearly so, to the flame, and having a reflecting-surface, air-supply passages for admitting air between the flame-plate and the flame, and means for admitting atmospheric air to the under side of the flame, substantially as specified.

2. The combination, with a burner, of air-supply passages through the burner, a flame-plate, P, of a diameter corresponding, or nearly so, to the flame, and having a reflecting-surface, a central air-supply passage, an exterior glass, and an ascending flue for the escape products of combustion, substantially as set forth.

3. The combination of an inverted gas-burner, an air-supply passage conveying air downwardly to the burner, a reflecting plate or surface of refractory material, over which the flame from the burner sweeps, and a passage through which the products of combustion escape upwardly.

4. The combination of an inverted burner, a concentric exterior flame plate or surface of refractory material, an air-passage delivering air through the burner to the outside of the flame, and a deflecting button or surface beneath the burner, as described.

5. The combination of an annular inverted burner, air-supply passages through the burner, a concentric reflecting flame-plate, an inclosing transparent globe beneath the burner and plate, and an ascending flue for the escape of the products of combustion passing upwardly around the edge of the flame-plate.



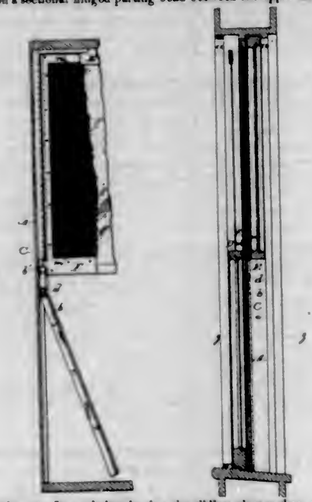
6. The combination of a downwardly-directed burner, a refractory reflecting flame-plate surrounding the burner-tips, and suitable air-passages for the escape of the products of combustion.

7. The combination of an inverted gas-burner, reflecting flame plate or surface, over which the flames are directed, a suitable passage for conveying the products of combustion upward, an air-supply passage conveying air downward to the burner, and an inclosing transparent globe beneath the burner.

8. The combination of an inverted burner, passages which deliver a current of air downward to the flame, and a reflecting button or surface beneath the flame for deflecting air to the under surface thereof.

9. In a gas-burner, the combination of a downwardly-directed Argand burner, suitable air-passages delivering air both sides of the flame, a flame-director surrounding the lower end of the burner, and a button or disk beneath the burner, by which the air and flame are directed outward and beneath the under surface of the flame-director, and suitable passages for the escape of the products of combustion.

300,880. PUMP. FRANK D. MALTBY, New York, N. Y., assignor to himself, De Borden Wilmot, and Wellesley W. Gage, same place. Filed May 9, 1883. (No model.) Patented in Belgium Sept. 18, 1883, No. 62,822, and in England Sept. 20, 1883, No. 4,498.



Claim.—1. The combination of the pump-cylinder A, and vibrating radial piston E, and an abutment, B, extending into and secured adjustably within the cylinder, substantially as set forth.

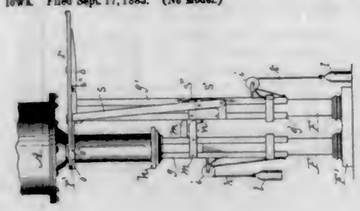
2. The abutment and piston having edge and end grooves, in combination with a strip of packing bent and fitted to said grooves, as set forth.

3. The combination of the cylinder A, adapted to be secured vertically in or above the body of water to be raised, the casing F, and outlet-pipe G, and the hollow perforated piston-rod carrying the chambered and valved piston E, extending through said chamber, and the rod J, connected to the piston-rod, and provided at the upper end with a lateral lever, substantially as set forth.

300,881. WINDOW-SCREEN. ROBERT E. MASTERS, Sacramento, Cal. Filed Dec. 26, 1883. (No model.)

Brief.—A window-screen consisting of a screen-frame adapted to slide upon a sectional hinged parting-bead between the upper and lower sashes.

Claim.—1. In a window having the sliding glass sashes, a screen-sash fitted to the window-frame between the glass sashes and adapted to slide up and down, substantially as herein described.



2. In a window, the glass sashes D E, in combination with the screen-sash F, fitted between the glass sashes on the parting-strip C, and adapted to slide up and down on said strip throughout the length of the window, substantially as herein described.

3. In a window, the casing A, having severed parting-strip C, the lower portions, *b*, of which are removable and jointed or hinged, as shown, in combination with a screen-sash, F, adapted to fit and slide on said parting-strips, substantially as herein described.

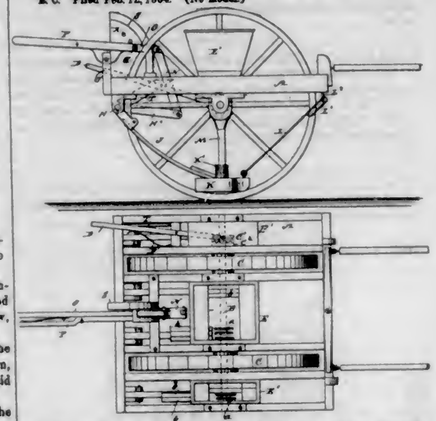
4. In a window, the casing A, having severed parting-strips C, the lower portions, *b*, of which are removable and jointed or hinged, as shown, and the glass sashes D E, fitted in the casing and adapted to slide up and down on each side of the parting-strip, in combination with the screen-sash F, fitted between the glass sashes and adapted to slide up and down on the parting-strip C, substantially as herein described.

5. In a window having glass sashes divided by parting-strips having tongues *c*, the grooved screen-sash F, formed of thin frames *m m'*, between which the screen material is clamped, said screen-sash being fitted between the glass sashes upon the parting strips, on which it is adapted to slide, substantially as herein described.

300,882. DRAIN-TILE MACHINE. CALVIN J. MERRILL, Des Moines, Iowa. Filed Sept. 17, 1883. (No model.)

Claim.—1. In a drain-tile machine, the combination of a detachable mold, B B', a detachable annular and tapering shield, C, and the end of a straight cylinder, to operate in the manner set forth, for the purposes specified.

2. The combination of a mold, B B', a shield, C, that extends inward from the mold to engage the wall of the cylinder, a rotating shaft, and a detachable former, D, and a detachable auger, D^2, to operate in the manner set forth, for the purposes specified.



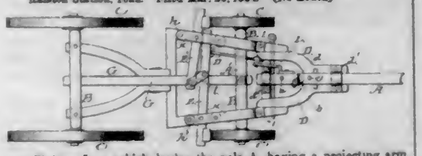
3. A cut-off and delivering device for drain-tile machines, composed of two sliding frames on parallel posts, a platform at the top of one of the sliding frames, adapted to receive and carry a tile in a vertical position, a horizontal frame at the top of the other sliding frame, adapted to support a horizontally-sliding frame having a wire stretched across its end, weights, cords, and pulleys to counterbalance the vertically-sliding frames, and levers and latches for connecting and co-operating the two vertically-sliding frames and the horizontal frame and cut-off, in the manner set forth, for the purposes specified.

4. The combination of a vertically-sliding frame, *g*, having projecting bars *m* at its opposite sides, and a platform, *h*, at its top, and the parallel sliding frame *g'*, having latches *n* and levers *s* on its opposite sides, with a horizontal frame and sliding cut-off at the top of the frame *g'*, for the purposes set forth.

5. In combination with a drain-tile machine, a vertically-moving device for measuring and delivering a tile, and a horizontally-sliding cut-off, substantially as shown and described, for the purposes specified.

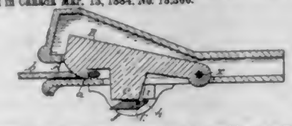
6. The cut-off and delivering device for drain-tile machines, composed of the following elements, to wit: two fixed parallel posts, a sliding frame, and platform *g h*, having fixed bars *m*, a sliding frame, *g'*, having a frame, *o o*, at its top and latches *n* at its sides, the sliding frame and cut-off *r r'*, the levers S, and suspended weights *l*, substantially as shown and described.

300,883. RICE-DRILL. ARTHUR DE LANCEY MIDDLETON, Charleston, S. C. Filed Feb. 12, 1884. (No model.)



Claim.—1. The combination, with the frame A and seed-boxes E E', of the rock-shaft H, carrying spring-arms J, shoes K, secured to the lower ends of the spring-arms J, and provided with the metallic tubes K', flexible tubes M, connecting the shoes with the seed-boxes, and rods L, secured to the front ends of the shoes and adapted to slide in keepers secured to the front cross-bar of the frame, substantially as shown and described.

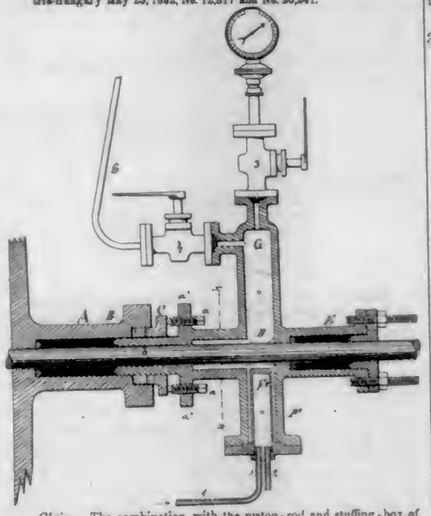
2. The combination, with the frame A, seed-boxes E E', and the seed-dropping disks G, of the rock-shaft H, spring-arms J, shoes K, connected by flexible tubes M to the seed-boxes, and provided with metallic tubes K', rods L, secured to the front ends of the shoes and sliding in keepers secured to the front cross-bar of the frame, wedge-shaped arm T on the shaft H, the spring-pressed lever D, the clutch-collar C' on the inner end of said lever, and a clutch, C^2, on the hub of one of the wheels, substantially as described.



3. In a seed-drill, the combination, with the frame A, of the seed-boxes E E', the shaft B, carrying the toothed disks G, the clutch-collar C', mounted to slide on and turn with the shaft, the clutch-collar C^2, formed on the hub of one of the wheels, the lever D, in the free end of which the clutch-collar is held, the spring D', the shaft H, having the rigid arm T, a lever for turning the shaft H, the spring-arms J, secured on the shaft H, the shoes K on the lower ends of the arms J, and flexible tubes connecting the seed-boxes with the shoes, substantially as here in shown and described.

300,884. VEHICLE-BRAKE. JAS. R. MILES and JAS. K. BALDRIDGE, Ralston Station, Tenn. Filed Mar. 26, 1884. (No model.)

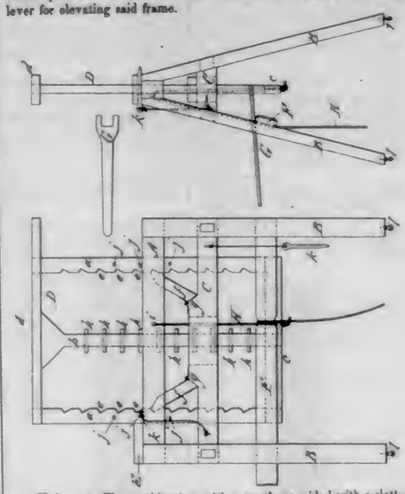
Claim.—In a vehicle-brake, the pole A, having a projecting arm, L, provided with a swiveled threaded nut secured to its side, adapted to engage the threaded end of a rod, D', in combination with the brake-levers E E', substantially as and for the purpose set forth.



300,885. CAR-COUPLING. JAMES MURRAY, Newcastle, New Brunswick, Canada, assignor of one-half to Allan Ritchie and John Robert Nicholson, both of same place. Filed Apr. 26, 1884. (No model.) Patented in Canada Mar. 13, 1884, No. 18,866.

Claim.—1. In a railway-car coupler, the rocking trip C, supported on its journals *d d* in the lugs *e e*, and provided with the lifting-arm *f*, the lifting-lever D, rod, rope, or chain *g*, and projecting toes *h h*, substantially as described.

2. In a railway-car coupler, the combination of the draw-head A, having the lugs *e e* and the stops *i i* fixed or formed thereon, with the rocking trip C, substantially as shown and described, and for the purpose set forth.

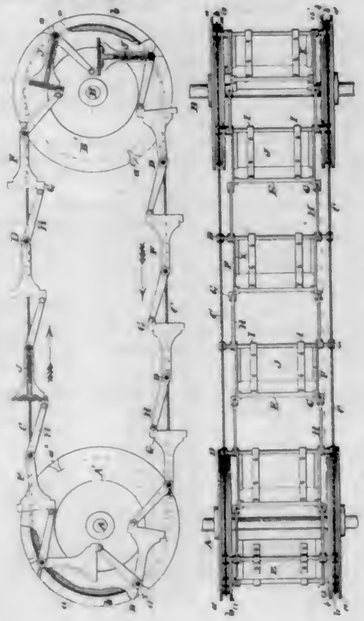


300,886. STUFFING-BOX FOR AMMONIA COMPRESSION-PUMPS. JOHANNES AUGUST OSENBRÜCK, Hemelingen, near Bremen, Germany. Filed June 29, 1883. (No model.) Patented in Germany Jan. 6, 1882, No. 17,373, Oct. 31, 1882, No. 21,378, and Jan. 5, 1883, No. 21,971; in England Feb. 27, 1882, No. 982; in France May 13, 1882, No. 147,683, and in Austria-Hungary May 25, 1882, No. 12,817 and No. 20,241.

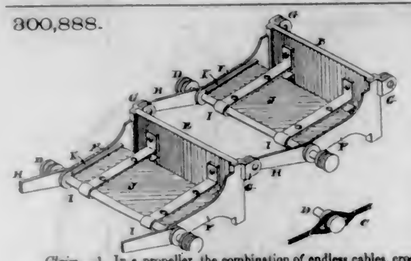
Claim.—The combination, with the piston-rod and stuffing-box of an ammonia compression-pump, of an oil-chamber arranged around the piston-rod, a heating device at the lower part of the oil-chamber for keeping the oil warm, a valved pipe connecting the upper part of the oil-chamber with the suction-pipe of the pump, and a second stuffing-box by which the escape of oil from the oil-chamber is prevented, substantially as set forth.

300,887. ADJUSTABLE TRESTLE. EDWARD OWEN, Jackson, Tenn. Filed Apr. 7, 1884. (No model.)

Brief.—A trestle supports an adjustable frame having notched side bars which are engaged by pawls hinged to a cross-beam, and a vertical bar provided with transverse pins adapted to be engaged by a forked lever for elevating said frame.



Claim.—1. The combination, with a trestle provided with a slotted top bar, A, and mortised beam C, formed with shoulders *g*, of a frame, D, having notched side bars, *a a*, and the pawls *f*, hinged to the beam C, and capable of engaging the notches of the bars *a a* at their free ends and bearing against the shoulders *g* at their hinged ends, as described.



2. The combination, with the frame D, having notched side bars, *a a*, of the bar *b*, provided with transverse pins *h*, adapted to receive a lever for elevating the frame D, as described.

3. The frame D, provided with a bar, *b*, having transverse pins *h*, a trestle adapted to support the frame D, and provided with a bar, F, and the forked lever G, in combination, as described.

300,888. PROPELLER FOR VESSELS. THOMAS PENNEYFEATHER, St. Louis, Mo. Filed Aug. 7, 1883. (No model.)

300,888.

Claim.—1. In a propeller, the combination of endless cables, cross-bars secured to the cables, and buckets each having arms hinged to one cross-bar, and links hinged to the bucket and to the next cross-bar, the buckets being supported independently of the cables by the cross-bars, as set forth.

2. In a propeller, the combination of endless cables, cross-bars secured to the cables, buckets independent of the cables, each having arms hinged to one cross-bar, and links hinged to the bucket and to the next cross-bar, and wheels to support the cables and cross-bars, the bending of the cables in passing over the wheels forcing the buckets inward by shortening the distance between the cross-bars, as set forth.

3. In a propeller, the combination of paired wheels at front and rear, each pair of wheels mounted on a single shaft to turn together, each wheel having two flanges forming a groove, the inner flange having openings, cables in the grooves, cross-bars received by the openings, and buckets between and hinged to the cross-bars, the buckets arranged to feather between the wheels in passing around the shafts, as set forth.

4. In a propeller, the combination, with a bucket, E, of the guide-bucket J, secured at right angles thereto, as set forth.

5. The combination of cross-bars D, bucket E, arms F, having ears G at their inner corners and hinged to one cross-bar, and links H, hinged to the ears and to the next cross-bar, as set forth.

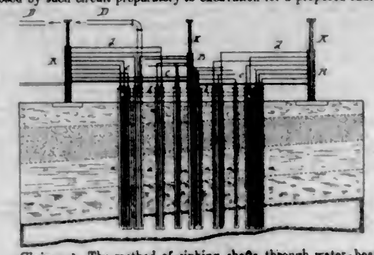
6. The combination of cross-bars D, buckets E, secured to one cross-bar by arms F, having ears G at their inner corners and cleats K on their inner sides, links H, hinged to the ears and to the next cross-bar, and guide-buckets J, secured between the cleats on the arms, as set forth.

7. The combination of cross-bars D, bucket E, arms F, securing the bucket to one cross-bar having ears G, links H, hinged to the ears and to the next cross-bar, guide-bucket J, and strap-plates I, bracing the buckets and guide-buckets to a cross-bar, as set forth.

300,889. TRUSS. DANIEL S. PETERS, Chicago, Ill. Filed July 11, 1883. (No model.)

Claim.—The combination, in a truss-pad, of the shell *a*, the bulb *a'*, the spring C, the screw D, the piece or block F, and the stud or pin B, the said spring and block being located within the shell, substantially as shown and described, and for the purposes set forth.

300,890. LIQUID CEMENT FOR GIVING A CHEAP AND DURABLE METAL COATING TO PAPIER-MACHÉ, PLASTER-OF-PARIS, CLAY, &c. FERDINAND PHILIPP, Romanshorn, assignor to Jacques De Planta, Tsenikon, near Aadorf, Switzerland. Filed Mar. 12, 1884. (No specimens.)



Claim.—1. The herein-described compound for treating materials to render them firm and water-proof, consisting of colophony, alcohol, (spirit of wine or pyroxylic spirit,) turpentine, petroleum spirit, and silicate of soda, in the proportions substantially as set forth.

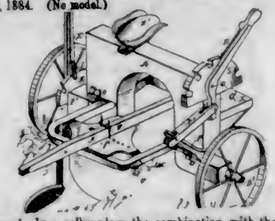
2. The herein-described compound for protecting the metallic color of bodies surfaced with metallic dust, consisting of bichromate of potash, distilled water, and Russian glue, in the proportions substantially as set forth.

3. The described method of metallizing the surface of bodies, consisting in first coating with the composition designated above as No. 1; then spreading metal dust upon it before the liquid is quite dry; and, lastly, laying upon such metal-dusted surface a light coating or varnish composed of the materials designated above as No. 2.

300,891. METHOD OF AND APPARATUS FOR SINKING SHAFTS THROUGH QUICKSAND. F. HERMANN POETSCH, Aschersleben, Prussia, Germany. Filed Feb. 15, 1884. (No model.)

Brief.—A circuit of vertical pipes closed below is sunk through water-bearing strata, and a freezing-mixture conducted from manifolds to pipes open below, set within the above pipes, and returned through the outer pipes effects by its circulation the congelation of the area inclosed by such circuit preparatory to excavation for a proposed shaft.

Claim.—1. The method of sinking shafts through water-bearing strata, which consists in freezing a portion of said shafts by artificial means and then proceeding with the mining operations through said frozen portion in the usual manner, substantially as set forth.



2. An apparatus for freezing water-bearing strata, consisting of a series of exterior pipes closed at the bottom and sunk through said strata, a series of interior pipes open at the bottom, means for supplying a freezing medium to the interior pipes, and means for returning it from the exterior pipes to the source of supply, substantially as and for the purpose specified.

3. The combination of a circuit of vertical refrigerating-pipes adapted to be sunk through water-bearing strata and arranged to surround the sides of a prospective shaft to be sunk therethrough, and means for circulating a freezing medium through said pipes, substantially as described.

4. The combination of a circuit of vertical exterior pipes closed at their lower ends, and adapted to be sunk through water-bearing strata, and arranged to surround the sides of a prospective shaft to be sunk therethrough, a series of vertical pipes open at their lower ends within said exterior pipes, means for supplying a freezing medium to the interior pipes, and means for returning said medium from the exterior pipes, substantially as described.

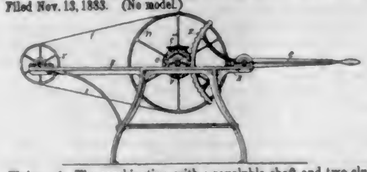
5. The combination of a circuit of vertical exterior pipes closed at their lower ends, and adapted to be sunk through water-bearing strata, and arranged to surround the sides of a prospective shaft to be sunk therethrough, a series of vertical pipes open at their lower ends within said exterior pipes, manifolds connected to said interior pipes, means for supplying a refrigerating medium to said manifolds, and means for returning said medium from said exterior pipes, substantially as described.

300,892. SULKY-PLOW. ROBERT A. RADFORD, Centralia, Mo. Filed Apr. 12, 1884. (No model.)

Claim.—1. In a sulky-plow, the combination, with the arched axle provided with the spindle D and the arc-rack K, of the crank-journal B, the lever E, connected thereto by the angle-arms G H, and fulcrumed on the spindle D between the sleeve C and the shoulder L, and the spring-pawl I, substantially as specified.

2. The combination, with the bail M and its operating-levers, of the pivoted perforated clevis-plate, the clevis, and plow-beam, substantially as specified.

300,893. WHIFFLETREE-HOOK. JOHN RANCKVAN, Cincinnati, Ohio, assignor to Elisha Robinson, New York, N. Y. Filed Jan. 23, 1884. (No model.)



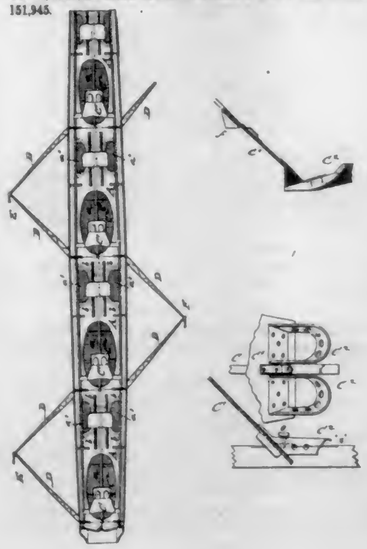
Claim.—1. In a trace-fastening, a locking-piece pivoted to a stem having a lug, and provided with a lip and a wing arranged at an angle, substantially as described, so that the lip may be brought to coincide with the lug to permit the trace to be put upon the stem with the wing in the eye, and so that as the trace is drawn to a horizontal position the lip will be carried from the lug across and outside of the eye of the trace, substantially as described.

2. A trace-fastening provided with a stem to receive the trace and a lateral lug in line with the eye of the horizontal trace, and a locking-piece pivoted at the end of the stem, having a lip which may be brought to coincide with the lug on the stem to permit the trace to be put on the latter, and a wing to fit the eye of the trace, arranged at about right angles to the lug on the locking-piece, substantially as described.

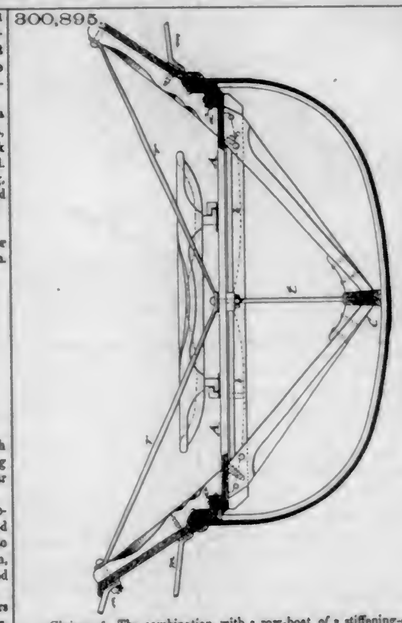
3. A trace-fastening consisting of a stem, *a*, having a lug, *d*, and a locking-piece, D, pivoted at the end of the stem *a*, and having a lip, A, and wing E, with stops to prevent the locking-piece from turning back after the lugs and lip are brought to coincide, substantially as described.

4. The stem *a*, terminating in a pin, *e*, having a conical bearing, and the locking-piece having a conical socket fitted to said bearing and provided with a leg, H, substantially as and for the purpose described.

300,894. MOTOR. FRANUS W. RANDALL, Tekonsha, Mich., assignor to William S. Lawrence and Lebeus C. Chapin, both of Kalamazoo, Mich. Filed Nov. 13, 1883. (No model.)



Claim.—1. The combination, with a revoluble shaft and two clutch devices, both having a bevel-gear connected by a fly-gear, and one having an operating-gear, of the operating-lever having a segmental gear adapted to engage the operating-gear, all substantially as set forth.



2. The combination, with a revoluble shaft provided with the eccentrics, clutch-disks provided with an operating-gear and connected bevel-gears, and the friction-roller, of the adjusting-collars adapted to rotate and move laterally at the same time, means for operating them, and means connecting said collars and rollers, substantially as specified and shown.

3. The combination, with the clutch devices, of the adjusting-collars adapted to operate as set forth, and the means for operating said collars, consisting of the swiveled connecting-bar, the pivoted lever provided with the spring, and the bars having the recess with central notch and widening end, substantially as described.

4. A clutch consisting of a recessed disk having a periphery wall, an eccentric, a friction-roller between said eccentric and wall, a revoluble disk forming one inclosure of the recessed disk, and an operating-shaft connecting with the friction-roller and located through a hole in the revoluble disk, substantially as described and shown.

300,895. ROW-BOAT. WILHELM AUGUST RETTIG, Berlin, Germany. Filed June 29, 1883. (No model.) Patented in England Nov. 4, 1882, No. 5,370; in Belgium Nov. 30, 1882, No. 59,627; in Austria-Hungary Jan. 12, 1883, No. 39,235 and No. 1,120, and in France Feb. 12, 1883, No. 151,945.

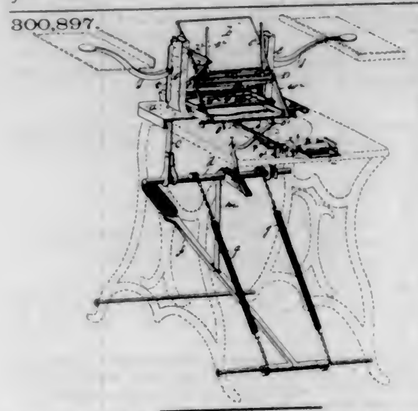
Claim.—1. The combination, with a row-boat, of a stiffening-deck secured to the gunwale, provided with a seat or seats on its upper side, with a longitudinal strip on its under side, and with transverse braces beneath the seat, and metallic uprights extending between the keel and said center strip, substantially as described.

2. The combination, with a row-boat, of a deck that extends transversely across the boat, and that is provided with central longitudinal openings for the legs of the oarsmen, and with openings at both sides of the seat for reducing the weight, substantially as set forth.

3. The combination of a row-boat, a deck extending transversely across the boat and having openings for the legs of the oarsmen, inclined foot-boards, and recessed heel-rests at the lower ends of the foot-boards, substantially as set forth.

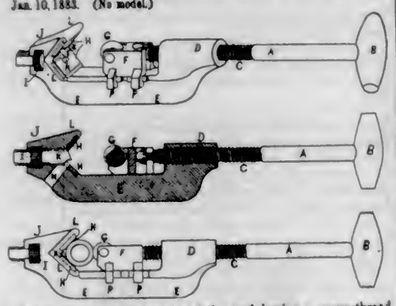
300,896. SLEIGH-BELL. DENISON A. REIN, East Hampton, Conn., assignor to the STARR BRO. BELL COMPANY, same place. Filed MAR. 22, 1884. (No model.)

Claim.—The combination of the strap *d*, carrying bells *e*, and fitted for attachment upon the under side of the sleigh-shaft, the two parts of the clasp A and B constructed to extend one up each side the shaft, each turned inward below the shaft, and so as to bear upon the strap, each part terminating in a downwardly-projecting lug, *a*, and a screw, *b*, passing freely through a hole in one lug and into a correspondingly screw-threaded hole in the other lug, and whereby the two parts are clamped upon the shaft and upon the bell-strap, substantially as described.



300,897. OSCILLATING PRINTING-PRESS. FRANCIS H. RICHARDS, Springfield, Mass., assignor to the Gilman Vertical Press Company, of New Hampshire. Filed May 2, 1882. (No model.)

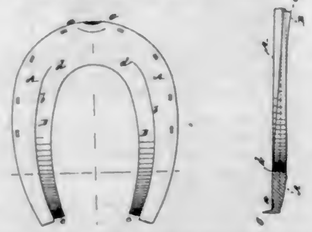
Claim.—1. The rock-shaft *d*, the oscillator w^2, hung on bed *a*, and the rod A, connecting said shaft and oscillator, the yoke *z*, pivoted to said oscillator and to one of posts *c* by rod z^2, and the inking-roller frame *w*, all combined and operating substantially as set forth.



2. The combination, with the yoke *z* and with the inking-roller frame *w*, of the spring-rod *x'*, substantially as set forth.

3. The yoke *z*, the tongue *j*, hung on said yoke, the tympan-finger bar D, hung on the platen *b*, and provided with the hook-arm *q*, the spring-rod *k*, and the platen *b*, all combined and operating substantially as set forth.

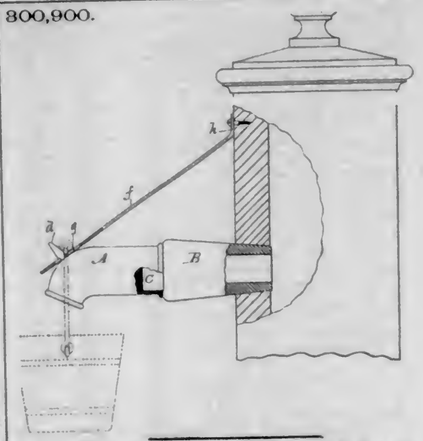
300,897.



300,898. PIPE-CUTTER. EDWIN A. ROBBINS, Boston, Mass. Filed Jan. 10, 1883. (No model.)

Claim.—The straight-bar chamfering-tool having a screw-thread, and provided with an adjusting-nut held within the hook end of the cutter against longitudinal movement thereof, substantially as described, as and for the purposes set forth.

300,899. SPRING-HORSESHOE. DAVID ROSENGR, Jr., New York, N.Y. Filed Aug. 30, 1883. (No model.)



Claim.—In a spring-horseshoe having a spring formed within its interior circumference, and partly below the plane of the lower face of the shoe, a spring, B, made tapering by a curved line from its point of junction *d* with the body A toward its rear end or heel, *c*, as and for the purpose set forth.

300,900. PUMP-SPOUT. STEPHEN A. SAUR, Kellogg, Iowa. Filed Mar. 13, 1884. (No model.)

Claim.—1. An improved pump-spout composed of a metal section having a curved front end or discharge-nozzle, and a straight wooden section having a tapering rear end, to operate in the manner set forth, for the purposes specified.

2. The metal spout-section A, having a stud, *d*, the wooden spout-section B, and the brace *d f g*, arranged and combined with a wooden pump-stock, substantially as shown and described, for the purposes specified.

300,900.

300,901. DIE-STOCK AND DIE. NELSON SAWYER, Hartford, Conn., assignor to Wallace A. Downs, Sing Sing, N. Y. Filed July 14, 1883. (No model.)

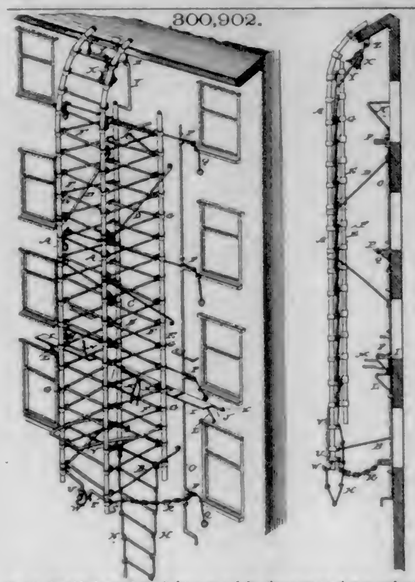
Claim.—1. The die-stock, the radially-adjustable jaws applied upon one side thereof, the annular cam-plate provided with spiral grooves for moving the jaws, the central extension upon the stock around which the cam-plate moves, and the holding-ring applied upon said extension and secured thereon, the several parts being combined and arranged for operation substantially as shown and described.

2. In combination with a die-stock, the herein-described removable collet or ring for holding the removable sectional dies, said collet being provided at one end with a narrow flange projecting over the dies, and made reversible in the socket provided for it in the stock, substantially as and for the purpose set forth.

3. In combination with the die-stock, the reversible collet or ring having a narrow flange at one end, and the sectional reversible dies located in the said ring, and provided with the conical recesses, and adjustably held in the ring by pointed screws bearing at their inner ends in the said conical recesses, the collet being reversible in the socket provided for it in the die-stock, substantially as shown and described.

4. In combination with the die-stock, the collet or ring reversible in the socket provided for it in the die-stock, and having the narrow flange at one end, and the adjustable sectional dies mounted in said collet and having their cutting-threads formed upon curved surfaces, said dies being arranged to be reversed within the ring and extending flush with one end of said ring, substantially as shown, and for the purposes set forth.

5. The combination of the die-stock, an adjustable steadying device applied thereon, a reversible collet carrying the dies, and a threaded handle for clamping the collet, the dies extending flush with one end of the collet, substantially as and for the purposes described.



300,902. FIRE-ESCAPE. JOHN G. SCHILLER, Youngstown, Ohio. Filed Apr. 3, 1884. (No model.)

Brief.—A rigid ladder is secured at some distance from the wall of the building, and a swinging ladder is hinged to the rigid ladder by rectangular round frames which form ladder-rungs on the four sides of the structure. A folding platform is pushed down by the swinging ladder as it falls, and an alarm is rung by the same means. The swinging ladder is closed by pulling down a bail secured to it, which is turned down and held by a fastening-hook, and is released by a turning-bar near the window.

Claim.—1. The combination, in a fire-escape, of the rigid ladder-bars having clips or bearings upon their inner sides, the swinging ladder-bars having clips or bearings upon their outwardly-facing sides, and the rectangular round frames hinged in the said clips upon the ladder-bars, as and for the purpose shown and set forth.

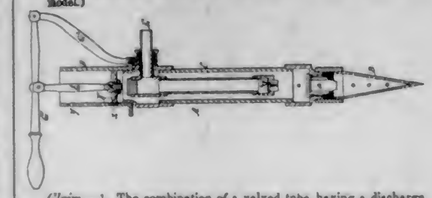
2. In a fire-escape, the combination of the rigid ladder supported from the wall of a building by brackets, with the central brackets extending upwardly and downwardly inclined from the wall of the build-

300,902.

ing to the side bars of the ladder, as and for the purpose shown and set forth.

3. In a fire-escape, the combination of the rigid ladder, the swinging ladder, hinged by means of the rectangular round frames to the inner side of the rigid ladder, the slightly-curved bail, hinged with its inner ends to one of the lower rounds of the swinging ladder, and the rocking rod turning in bearings at the lower end of the rigid ladder, forming a curved hook at its middle adapted to engage the outer doubled end of the bail, and having means for tilting it, as and for purpose shown and set forth.

4. In a fire-escape, the combination of the rigid ladder, the swinging ladder, hinged to swing inward from the rigid ladder, the slightly-curved bail, hinged with its ends near the lower end of the swinging ladder, the rocking rod, turning in bearings at the lower end of the rigid ladder, forming a hooked bail at its middle adapted to engage the outer doubled end of the curved bail, and having a projecting arm at one end, the vertical rod turning in bearings upon the wall, having projecting arms provided with chains for tilting it to either side, and the chain attached to an arm at the lower end of the vertical rod and to the arm upon the rocking rod, as and for the purpose shown and set forth.



5. In a fire-escape, the combination of a balcony or platform pivoted in horizontal bearings upon the wall of the building, having supporting-brackets, and having its inner edge rounded and eccentric to the pivots of the same, a flat spring secured at its upper end in the wall, and bearing with its lower outwardly-springing end against the edge of the platform, and means for tilting the platform outward, as and for the purpose shown and set forth.

6. In a fire-escape, the combination of a platform pivoted upon the wall of the building, adapted to swing outward, and having two curved and slightly-diverging arms projecting outward when the platform is folded up, means for forcing the platform up against the wall, and a ladder swinging toward the wall, and adapted to engage with one of its rounds between the arms upon the platform, forcing the latter down, as and for the purpose shown and set forth.

7. In a fire-escape, the combination of a rigid ladder secured at a distance from the wall of the building, a ladder hinged to the rigid ladder to swing in toward the wall of the building, and a bell suspended at the upper end of the ladders, and having an arm extending with its bent end between the ladders connected to the rocking-shaft of the bell, holding the bell still when the ladders are folded together, and releasing the bell and swinging it when the ladders are released, as and for the purpose shown and set forth.

8. In a fire-escape, the combination of a rigid ladder secured at a distance from the wall of the building a distance from the ground, a ladder hinged to the rigid ladder to swing in toward the wall of the building, a slightly-curved bail hinged at its ends to one of the lower rounds of the swinging ladder and bearing and sliding upon one of the lower rounds of the rigid ladder, a rod rocking in bearings at the lower end of the rigid ladder having means for tilting it, and forming a hooked bail at its middle adapted to engage the outer doubled end of the bail, a curved bail attached loosely to the hooked bail upon the rocking rod, and a flexible link-ladder attached to the lower end of the swinging ladder, and adapted to be suspended upon the curved loose bail, being released when said hooked bail and its rod are tilted, as and for the purpose shown and set forth.

300,903. PUMP. CHARLES W SCHREIBER, Dubuque, Iowa, assignor of one-half to Joseph S. Morgan, same place. Filed July 23, 1883. (No model.)

Claim.—1. The combination of a valved tube having a discharge, a piston for compressing the air on the water therein, and an escape for the compressed air brought automatically into operation at the end of the compressing-stroke of the piston.

2. The combination of a valved tube having a discharge, a piston for compressing air on the water therein, and a channel for the escape of the compressed air opened by the piston at the end of its compressing stroke.

3. The combination, with a piston for compressing air, of a valved tube provided with a communication, substantially as described, to permit the escape of the compressed air from one side of the piston to the other.

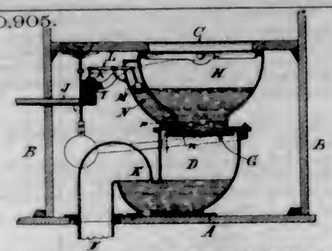
4. The combination of the valved tube, the internal discharge-pipe, the piston for compressing air, as described, and means for automatically discharging the compressed air at the end of the piston-stroke.

5. The combination of a valved tube having a discharge, a piston for compressing air on the water therein, and a channel opened by the piston at the end of its compressing-stroke, to permit the escape of the compressed air from one side of the pistoe to the other.

300,904. GRATE FOR STOVES AND FURNACES. HENRY SCHREINER, Sharon, Mass. Filed Feb. 11, 1884. (No model.)

Claim.—1. The combination, with a stove or furnace, of a grate pivoted at one end to the inner side of said stove or furnace, and springs located beneath said grate for retaining the same in position, substantially as set forth.

2. The combination, with a stove or furnace, of a pivoted grate and springs for retaining the same in position, said springs being mounted upon a bar secured in the sides of the stove at one end, and the other or free ends being adapted to engage or bear against the under side of the grate, substantially as set forth.



3. The combination, with a stove or furnace, of a pivoted grate, a bar secured in the sides of the stove or furnace directly below the said grate, and coil-springs secured upon said bar at one end and having their free ends bent upwardly to engage the grate-bars, substantially as set forth.

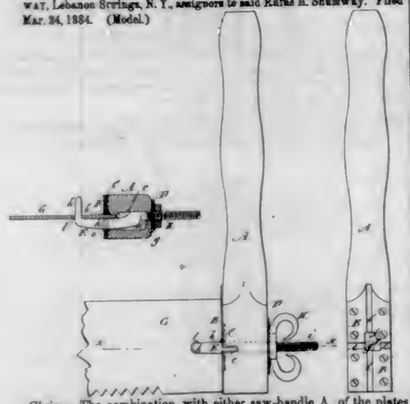
4. The combination, with a stove or furnace, of a pivoted grate having a finger-piece or extension at its forward end, a hook or catch pivoted to the side of the said stove or furnace to engage the same, a bar secured in the sides of the stove or furnace, and coil-springs secured upon said bar, the free ends of which are adapted to engage the under side of the grate, substantially as set forth.

300,905. WATER-CLOSET. JAMES SEMPLE, Cincinnati, Ohio. Filed June 18, 1883. (No model.)

Claim.—1. The combination of a bowl, H, float-chamber N, and auxiliary trap P P', the bowl communicating at or near its bottom with the lower end of the float-chamber, the lower end of the float-chamber communicating with the auxiliary trap, and the auxiliary trap being closed at top and constructed to discharge into the hopper, as set forth.

300,905.

2. The combination of a bowl, a float-chamber having a groove, *n'*, and an auxiliary trap, the float-chamber communicating at its lower end with the bowl and auxiliary trap, and its groove located in a position to indicate the height of the overflow of the auxiliary trap, as set forth.



300,906. COVER FOR JARS. WM. D. SHERWOOD, New Brighton, Pa., assignor to Sherwood Brothers, same place. Filed Jan. 16, 1884. (No model.)

Claim.—1. The combination of the lid *d*, having an inclined rib or ribs, *e*, a jar, *a*, having a rim, *b*, and slots *i*, and a wire or bar, *k*, adapted to engage with the slots *i* and rib *e*, substantially as and for the purpose specified.

2. An earthenware jar having a rim, *b*, in which are formed slots *i*, in combination with a lid, *d*, having an inclined rib or ribs, *e*, and an elastic wire or bar, *k*, adapted to engage with the slots *i* and rib *e*, substantially as and for the purpose specified.

300,907. SAW-HANDLE. RUFUS H. SHUMWAY and WILLIAM D. SHUMWAY, Lebanon Springs, N. Y., assignors to said Rufus H. Shumway. Filed Mar. 24, 1884. (Model.)

Claim.—The combination, with either saw-handle A, of the plates B C, constructed to form longitudinal grooves *b*, cross-grooves *c*, and locking-cavities *e f*, the saw-blade-holding hook E, constructed to engage with the walls of either of said cavities, and the nut H, essentially as shown and described.

300,908. MACHINE FOR THREADING THE TAPERING POINTS OF SCREWS. FREDERICK A. SMITH and ARNOLD DOLL, Jr., Cleveland Ohio, assignors to the Hotchkiss & Upson Company, same place. Filed May 8, 1883. (No model.)

Claim.—1 In a machine for threading the gimlet-points of screws, the combination, with a rotary and longitudinally-movable driving-shaft arranged to hold the threaded screw-blank, of a vertically-movable tool-holder carrying a thread-cutting tool, a tool-post, a thimble formed of two separable sections, one of which is plain and the other screw-threaded on its inner side, said thimble being designed to receive and feed the screw-blank during the operation of the cutting-tool, substantially as and for the purpose set forth.

2. The combination, with a rotary and longitudinally movable driving-shaft arranged to hold the threaded screw-blank, of a vertically-movable tool-holder carrying a thread-cutting tool, a tool-post, a plain half-thimble, and a slide mounted in said tool-post, carrying a threaded half-thimble, arranged to coact with the plain half-thimble for holding and feeding the screw-blank, substantially as and for the purposes described.

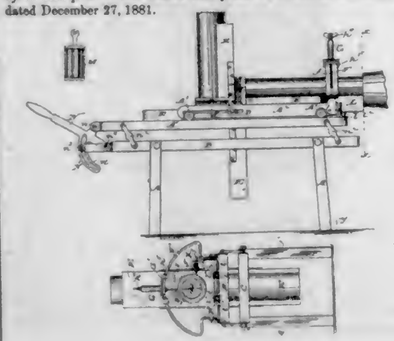
3. The combination, with the tool-holder provided with a channel, and carrying a thread-cutting tool, and a tool-post carrying a separable partially screw-threaded thimble, of the rotary and longitudinally movable driving-shaft arranged to carry the threaded blank, and the extension-bar carrying the inclines, and so connected with the driving-shaft as to partake of its longitudinal movements, substantially as herein described.

4. The tool-holder carrying a thread-cutting tool, and a tool-post carrying a separable partially-threaded thimble, and provided with a channel, in combination with the rotary and longitudinally movable shaft arranged to carry the threaded screw-blank, the extension-bar provided with the inclines, and so connected to the driving-shaft as to partake of its longitudinal movements, and the hand-connections, with the extension-bar and driving-shaft for controlling the longitudinal movements of said shaft and bar, substantially as and for the purposes set forth.

5. The rotary and longitudinally moving driving-shaft arranged to hold the threaded screw-blank, and a spring for throwing said shaft in a forward direction, in combination with the tool-holder, tool-post, and the separable partially-threaded thimble, and thread-cutting tool mounted in said post, substantially as described.

6. The standard A and trough A', in combination with the shaft B, having rotary and longitudinal movements, and arranged to carry a threaded screw-blank, the tool-post F, provided with the guide-block F', and the bar E, connected to the shaft B in such manner as to partake of its longitudinal movements, substantially as described.

7. The combination, with the standard A and trough A', of the shaft B, the bar E, and the tool-post F, carrying the guide-block F', and provided with the clamp F^2, substantially as set forth.



8. The combination, with the standard A, having arms *a* and stade *d*, the cross-head D, the stop D', the follower *d'*, and the spring d^2, for the shaft B, carrying the pulley B', and arranged to receive and hold in its forward end a threaded screw-blank, substantially as and for the purposes set forth.

9. The combination, with the rotary and longitudinally movable shaft B, and the tool-post F, provided with the guide-block F', of the bar E, the forked lever *b'*, connected with the shaft B, so as to partake of its longitudinal movements, the rock-arm b^2, and the hand-lever C, substantially as and for the purposes specified.

10. The combination, with the driving-shaft B, the tool-post F, guide-block F', and bar E, carrying an incline, of the tool-holder *f*, provided with a slot or channel, the slide *h*, pivoted lever H, and link H', substantially as set forth.

300,909. REVOLVING TABLE FOR TILE-MILLS. JOHN S. SMITH, Jackson, Mich., assignor to Michael Nolan, Rushville, Ind. Filed May 29, 1882. (No model.)

Brief.—Letters Patent No. 267,760, dated November 21, 1882, to the same inventor, is for subject-matter amended out of this application by division prior to interference with patent to M. Nolan, No. 251,376, dated December 27, 1881.

Claim.—1. The combination of a tile-mill, a frame, a revolving table mounted in said frame, and catches secured to said frame, and adapted to engage with and hold the wings of said table.

2. In a tile-mill, the combination of the revolving table consisting, essentially, of wings mounted on an axis, and a spring-catch, said wings being arranged to be consecutively caught and retained by said catch.

3. The combination, with the revolving table consisting of wings E, provided with wearing-plates *k*, of a catch for holding the table, said plates being arranged to come in contact with said catch as the table revolves.

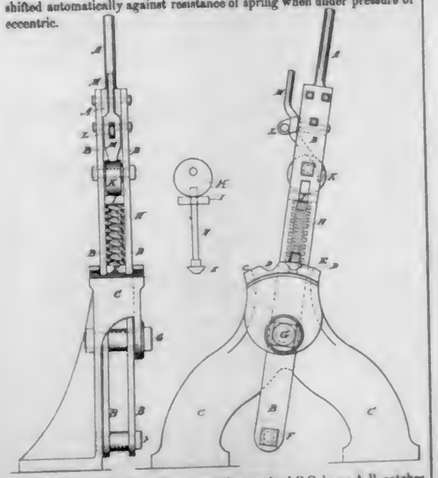
4. The combination, with a revolving table, of a catch consisting of a bracket, K, and spring-pins mounted therein, substantially as set forth.

5. The combination, with the wings of a revolving table for tile-mills, of a catch consisting, essentially, of two spring-mounted pins, J and J′, substantially as described, and for the purposes specified.

6. The combination, with a revolving table for tile-mills, consisting, essentially, of wings to receive the tile, coming together at a common center and mounted on a shaft, of means for catching and holding said wings consecutively, substantially as set forth.

7. In combination with a tile-mill, a revolving table, the surface of one side of the wings thereof being concave and the other flat.

300,910. LINK-BUTTON. THOMAS W. F. SMITTEN, Brooklyn, N. Y. Filed Apr. 17, 1884. (No model.)

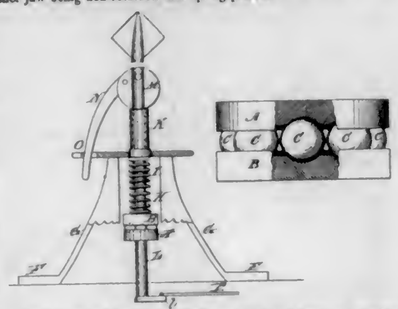


Claim.—1. The combination, with one of the heads of a link-button, of a loop or eye on the back of the said head, and a hooked link having a swelled or enlarged portion at or near the extremity of its hook, whereby it cannot be disconnected from the eye or loop only when brought into proper relative position with the same, substantially as and for the purpose herein described.

2. The combination, with one of the heads of a link-button, of an elongated eye or loop and a hooked link having at or near its extremity a swelling or enlargement the width of which is greater than the width of said elongated eye or loop, but not greater than the length thereof, and the thickness of which is less than the width of said eye or loop, substantially as herein described.

300,911. SWITCH-STAND. FRED. W. SNOW, Ramapo, N. Y. Filed Oct. 5, 1883. (No model.)

Brief.—The device embraces fixed and movable parts of a switch-stand, as the frame and vibrating lever, a beveled bolt or cam carried by one part engaging notches or catches on the other part, a spring tending to hold the bolt in engagement with a notch, but yielding automatically under pressure of the train to suffer the bolt and catch to be disengaged, and an eccentric for applying pressure to the spring to prevent hand operation, or removing such pressure to permit it. The stem of the bolt is projected into the path of the eccentric when the switch is not fully thrown, thus blocking it and notifying the operator of the position of the switch, a hole in the eccentric receiving the stem when the switch is shifted automatically against resistance of spring when under pressure of eccentric.



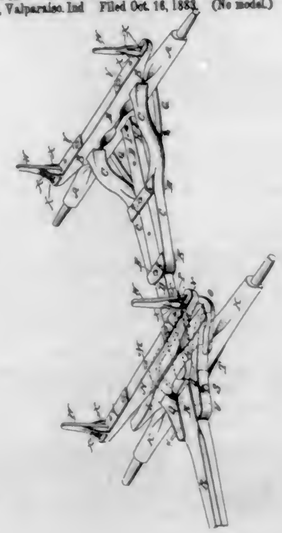
Claim.—1. The combination of the standard C C, lever A B, catches D, bolt E, spring H, and suitable device to release the bolt from spring-pressure, substantially as described.

2. The combination of the standard C C, lever A B, catches D, bolt E, spring H, plate I, and eccentric K, substantially as described.

3. In a switch of any description, the combination of the fixed and moving parts with a yielding bolt and catch, a spring or its equivalent, and a device for relieving the bolt from the pressure of the spring, substantially as described.

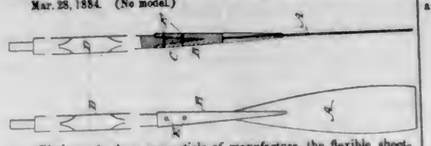
300,912. SWITCH-STAND. FRED. W. SNOW, Ramapo, N. Y. Filed Nov. 21, 1883. (No model.)

Brief.—Balls or other rolling pieces are placed between the opposing hollowed and rigid faces of the locking-clutch of a switch, one jaw of the clutch being rotatable with the crank-shaft of the stand and the other jaw being non-rotatable and spring-pressed.



Claim.—A yielding switch-lock consisting of a part, A, attached to or connected with the moving parts of the switch, and a part, B, connected with the standard or fixed part of the switch, the two parts being forced together by a spring or other yielding power, and separated by movable pieces C, substantially as and for the purpose described.

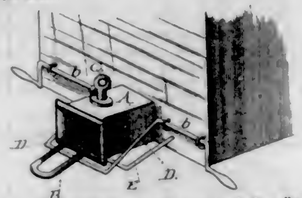
300,913. SELF-LUBRICATING WHEEL. WILLIAM T. SNYDER, Catasauqua, Pa., assignor of one-half to James W. Fuller, same place. Filed May 16, 1884. (No model.)



Claim.—In a wheel with a cast hub, A, for working loose on its axle or shaft, the combination of an oil or grease chamber, B, of irregular shape, with the diagonal opening D and break-walls G G, as shown, described, and for the purpose specified.

300,914. WAGON RUNNING-GEAR. JOHN HALL SPRY and THOMAS BARRY, Valparaiso, Ind. Filed Oct. 16, 1883. (No model.)

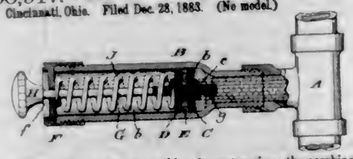
Claim.—In running-gears for vehicles, the combination, with the reach D, the rear axle, A, and the bolster B, said reach passing through said axle, of the rear hounds, C, clipped at their forward ends to the reach, and curved or extended at their rear ends upwardly and rearwardly above the plane of the upper surface of the reach, and secured between said bolster and axle, substantially as and for the purpose set forth.



300,915. OAR. GEORGE BARNEY STANTON, Long Lake, N. Y. Filed Mar. 28, 1884. (No model.)

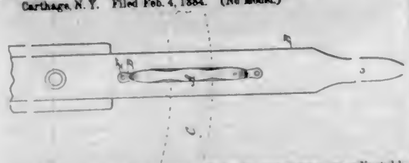
Claim.—1. As a new article of manufacture, the flexible sheet-metal blade A, formed with a socket, B, and made narrowest at its junction with the said socket, substantially as set forth.

2. An oar constructed as described, and consisting of the flexible sheet-metal blade A, provided with a socket, B, and made narrowest at its junction with the said socket, and stock D, secured within said socket by the rivets E, substantially as shown and described.



300,916. CAR-COUPLING. ARCHABLE E. STEARMAN, Vichy, Mo., assignor of one-half to Martin Glenn, Maries County, Mo. Filed May 2, 1884. (No model.)

Claim.—1. In combination with the draw-head of a railway-car, the herein-described link-adjusting device, consisting preferably of heavy wire provided with the bends *a*, *b*, and *c*, and the means described for supporting the said device, all arranged to operate substantially as herein set forth.

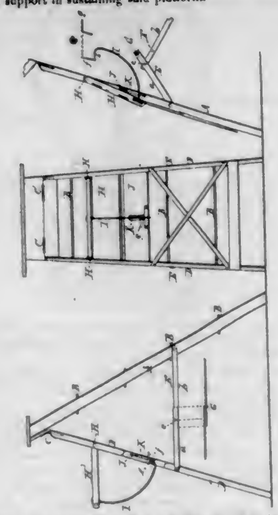


2. In combination with the draw-head of a railway-car, the herein-described adjusting device, composed of a single piece of heavy wire and the L-shaped stop E, all constructed of a single piece of heavy wire, all arranged to operate substantially as and for the purpose specified.

300,917. HYDRAULIC CUSHION FOR WATER-PIPES. JOHN STORY, Cincinnati, Ohio. Filed Dec. 28, 1883. (No model.)

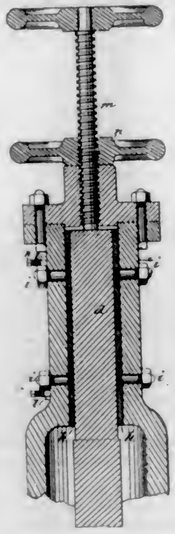
Claim.—In a hydraulic cushion for water-pipes, the combination of the cylindrical chamber B F, containing the helical spring J, and a piston-valve composed of the follower D, the wad E, and of a nut, C, that has screw-threaded attachment to a handle, G H, accessible to the attendant, in the manner and for the objects designated.

300,918. TRACE-BEARER FOR PAD-SKIRTS. SIMMONS D. TAYLOR, Carthage, N. Y. Filed Feb. 4, 1884. (No model.)



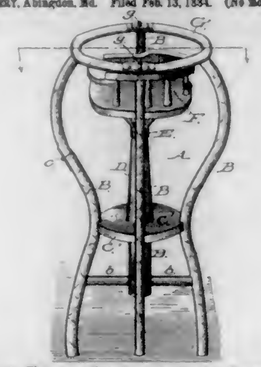
Claim.—1. As an improved article of manufacture, an adjustable trace-bearer consisting of the metallic loop A, formed with screw-threaded apertures in its ends, as described, whereby the screws may be introduced from the back of the pad-skirt, for securing said loop in any desired position.

2. The combination, with the pad-skirt, of the loop A, formed with screw-threaded apertures in its ends, and provided with screws F, for securing the loop in any desired position thereon, substantially as set forth.



300,919. STEP-LADDER. CHRISTOPHER WAGNER, Cleveland, Ohio. Filed Nov. 22, 1883. (No model.)

Brief.—Consists of a pivoted platform having a spring-brace constructed with a shoulder and support, and a slotted girt which serves as a guide and support in sustaining said platform.

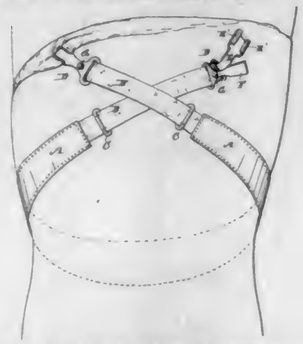


Claim.—In combination with step-ladders, the pivoted platform having a spring-brace, I, formed with a shoulder, *e*, and support *f*, and girt J, provided with a slot, K, to act as a guide and support for said brace in sustaining the said platform, substantially as and for the purpose set forth.

300,920. BEARING FOR THE SPINDLES OF AMALGAMATING-PANS. ANDREW WALLACE, Leadville, Colo. Filed Dec. 20, 1883. (No model.)

Claim.—The jacket *c*, having a plane-sided socket and the slots *j*, the stud-bolts *i*, the wedges *h*, and the adjusting-screws *k*, in combination with the driving-spindle *d*, having plane sides, substantially as described.

300,921. NURSERY-CHAIR. JOSEPH E. WALTER and WILLIAM B. MONTGOMERY, Abingdon, Md. Filed Feb. 13, 1884. (No model.)

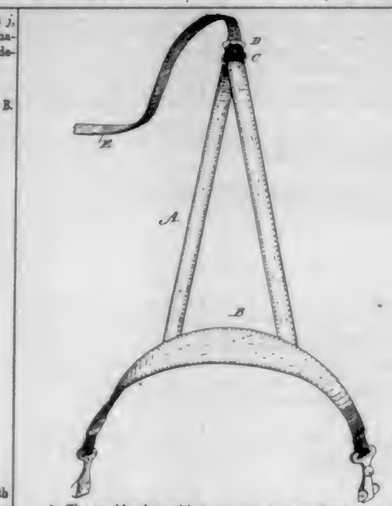


Claim.—1. The supporting-frame having legs B, provided with hoop G, in combination with standard D, and a seat pivoted thereon, substantially as and for the purpose set forth.

2. The supporting-frame having legs B, provided with hoop G, in combination with standard D having hub *d*, and seat F, provided with a sleeve, E, substantially as herein set forth.

3. The supporting-frame having legs B, one of which is provided with a pivoted portion, in combination with hoop G, divided and hinged together as shown, a seat supported within the upper part of legs B, and devices for locking the pivoted part of the leg and hinged part of the hoop together, substantially as and for the purpose set forth.

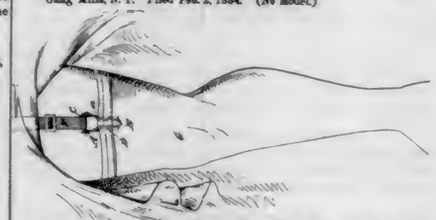
300,922. GARTER. CHARLES F. WALTERS and WILLIAM J. WALTERS, Gang Mills, N. Y. Filed Oct. 31, 1883. (No model.)



Claim.—1. A garter made substantially as herein shown and described, and consisting of a band having a concave and a convex edge, the elastic bands secured to the ends of the aforesaid band and to the clasps, as set forth.

2. In a garter, the combination, with a band, A, of elastic bands B, secured to the ends, and of clasps secured to the outer ends of the elastic bands, substantially as herein shown and described.

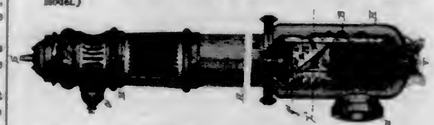
3. In a garter, the clasps each formed of a plate, E, having a slot and flanges, E', and of the plate F, having an enlarged or wedge-like end, a projection, G, and a bend or bevel, *f*, at or near the said projection, in combination with the band A, having the elastic extensions or bands B, conducted to said clasps, substantially as herein shown and described.



300,923. STOCKING-SUPPORTER AND GARTER. CHARLES F. WALTERS and WILLIAM J. WALTERS, Gang Mills, N. Y. Filed Jan. 17, 1884. (No model.)

Claim.—1. The combination, with a garter, of a strand of webbing or other suitable material secured thereto, and an elastic strap or band attached to the upper looped portion of said webbing, all substantially as set forth.

2. The combination, with a garter, of a piece of webbing, A, or a band having its ends secured to the garter, the buckle D, through which the band or piece of webbing A is passed, and the band E, on the lower end of which the buckle D is held, substantially as herein shown and described.



300,924. CLASP. CHARLES F. WALTERS and WILLIAM J. WALTERS, Gang Mills, N. Y. Filed Feb. 2, 1884. (No model.)

Claim.—1. In a clasp, the combination of the U-shaped frame, formed with upward-projecting arms on its sides, with the V-shaped frame pivoted to the upper ends of the U-shaped frame, and constructed to pass between the projections on the U-shaped frame, substantially as and for the purpose set forth.

2. A clasp formed of a U-shaped frame, A, having bends *a* and *b* at the middle and outer ends of the shanks, respectively, and of a V-shaped frame hinged to the inner free ends of the U-shaped frame, which V-shaped frame D is adapted to be pressed between the raised outer parts, A', of the shanks of the frame A, which raised parts are formed between the bends *a* and *b*, substantially as herein shown and described.

300,925. HYDRANT. JOHN WARD, Lansingburg, N. Y., assignor to the Ludlow Valve Manufacturing Company. Filed Dec. 17, 1883. (No model.)

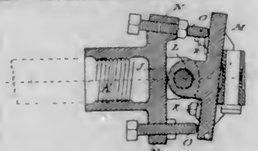
Claim.—1. In a hydrant, the combination of a stem-rod constructed to descend to open the entry-port gate, and to rise in closing it, a vent-opening arranged in the hydrant bottom or base, connecting directly with the interior of said hydrant, and a pivoted plug on the end of said stem-rod, with said parts constructed and arranged to operate substantially in the manner as and for the purposes set forth.

2. In a hydrant, the combination of the stem-rod S, the gate G, made with the transverse wedge-form recess R, and the vertically coincident stem-rod passages *a* above and below said recess, the threaded wedge-form nut N, adapted to loosely enter said recess and be therein

threaded to the stem-rod, and the stops D, with the said parts constructed and arranged to operate substantially in the manner as and for the purposes set forth.

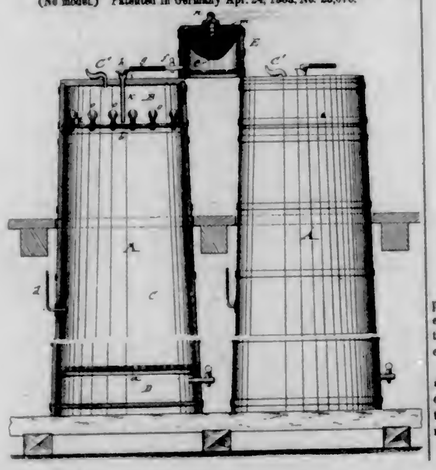
3. In a hydrant, the combination of the stem-rod S, the gate G, made with the wedge-form recess R in its back and the openings *a* at the top and bottom of said recess, the wedge-form nut N, constructed to loosely enter said recess and be therein threaded to the stem-rod, and the guide J, with said parts constructed and arranged to operate in the manner as and for the purposes set forth.

4. In a hydrant, the combination of the stem-rod S, the gate G, constructed with the wedge-form recess R on its inner face and the stem-rod passages *a* above and below said recess, the wedge-form nut N, adapted to loosely enter said recess and be therein threaded to the stem-rod, the guides I I, and the stops D D, with said parts arranged to operate substantially in the manner as and for the purposes set forth.



5. In combination with a hydrant, the entry-port gate G, made with the recesses *m* on its outer face inside of its closing rim-seat, as and for the purposes set forth.

300,926. DEVICE FOR SECURING BOX-COVERS. FILLMORE M. WATROUS, Ansonia, Conn., assignor of one-half to James Stuart, same place. Filed Jan. 21, 1884. (No model.)

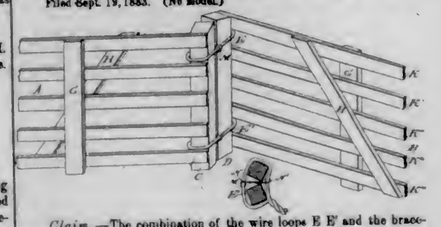


Claim.—The herein-described fastening for box-covers, consisting of the nail *a*, having its upper or head end screw-threaded, combined with the turn-button *b*, having its head end pierced and threaded corresponding to the screw-thread of the nail, the body of the turn-button projecting from one side of said head, the box-cover constructed with notches *c*, and the nail driven into the box at points corresponding to said notches, all substantially as described.

300,927. CHUCK FOR HOLDING GATE-VALVES. ADOLPH WEBER, Detroit, Mich. Filed Dec. 12, 1883. (No model.)

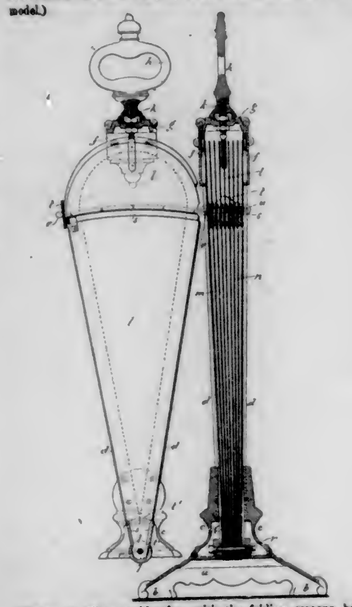
Claim.—A chuck for the purpose described, consisting of a body provided with the means, substantially as described, for securing said body to a lathe-head, an adjustable face-plate pivotally secured to said body, screws for adjusting the inclination of said face-plate, holding-points projecting through said face-plate, and the means, substantially as described, for radially adjusting said points, substantially as specified.

300,928. APPARATUS FOR THE MANUFACTURE OF VINEGAR. ADOLF WEBER, Heilbronn, Würtemberg, Germany. Filed Jan. 22, 1884. (No model.) Patented in Germany Apr. 24, 1883, No. 25,670.



Claim.—1. In an apparatus for making vinegar, the combination of a graduator with an elevated reservoir, provided with a filtering-net, and means for conducting the wash from the reservoir to the graduator, substantially as and for the purpose specified.

2. In an apparatus for making vinegar, the combination of an elevated reservoir having a filtering-net, a graduator, and a glass tube connected with the reservoir and provided with a downwardly-bent conical end extending into the conducting-funnel of the graduator, substantially as and for the purpose specified.



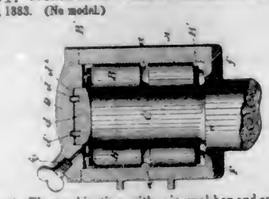
3. In an apparatus for making vinegar, a graduator having an upper perforated shelf, conducting-tubes having lateral openings, and bushings of elastic material inserted into the perforations of said shelf, for tightly retaining said tubes, substantially as and for the purpose specified.

300,929. PORTABLE FENCE. FRANKLIN P. WEBSTER, Cadiz, Ind. Filed Sept. 19, 1883. (No model.)

Claim.—The combination of the wire loops E E' and the brace-hooks M, having loops N N', with the panels of a portable fence, substantially as and for the purposes set forth.

300,930. FIRE-SCREEN. JAS. H. WHITE, New York, N. Y., assignor to the Manhattan Brass Company, same place. Filed May 16, 1883. (No model.)

Claim.—1. The combination, with the folding screens, base, and pedestals, of the separate frames of wrought metal received at their lower ends into recesses in the pedestals and secured thereto by screws, and the clip-piece attached to the tops of the frames and connecting them to each other, substantially as set forth.



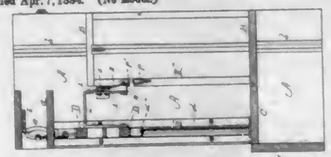
2. The combination, with the plates *l m n*, of the wrought-metal side frames, the base *a*, pedestals *c*, recessed to receive the lower ends of the side frames, the pendants *f*, and base *g*, uniting such side frames, the handle *h*, the split stud supporting the plate *l*, and the bolt that connects the lower ends of the plates to the base, substantially as set forth.

3. In combination with the folding screens, base, and pedestals, the

side frames formed of bent tubes secured to the pedestals at the lower ends, and the clip-piece uniting the side frames at the top, substantially as specified.

4. The combination, with the plates *l m n*, base, and bolt *r*, of the clip-plates *t'*, folded over at their edges to grasp the lower parts of such plates, and to thicken the circular portions of the clip-plates around the bolt, substantially as set forth.

300,931. JOURNAL-BOX. ELIJEN K. WILCOX, Cleveland, Ohio. Filed Nov. 30, 1883. (No model.)



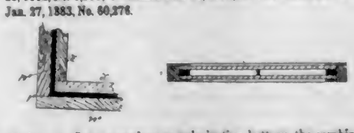
Claim.—1. The combination, with a journal-box and an axle, of the anti-friction rollers B, the rods or studs *b*, each being provided at opposite ends with a shoulder, *b'*, the binding-rings B', and nuts for securing the parts together.

2. The combination, with a journal-box provided with an annular rib and an axle, of the anti-friction rollers B, each provided with a peripheral groove, the rods or studs *b*, provided with the shoulders *b'*, the binding-rings B', and nuts for securing the parts together, substantially as set forth.

3. The combination, with an axle-box provided at one end with a recess and with holes for dowel-pins, and an axle, of the block *d*, situated within the recess, and provided with a convex face against which the end of the axle bears, and with dowel-pins to prevent it from turning, substantially as set forth.

300,932. ELEVATOR-GUARD. HENRY C. WILCOX, Boston, Mass. Filed Apr. 7, 1884. (No model.)

Claim.—1. The combination of the gate D, cord E, and pulleys *e* and vertical bar G, the weight F, provided with the spring H H', the projection I I', secured to the elevator, and the projection K, secured to one of the walls of the well, all constructed and arranged substantially as and for the purpose set forth.

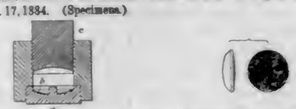


2. The combination of the bar G, the weight F, provided with a spring, H H', the projection K, secured to one of the walls of the elevator-well, and the rod J, provided with the head J' and spring J'', substantially as and for the purpose described.

3. The combination of the gate D, provided with the arm L L' and spring N N', the seat or projection P P', secured to the elevator, and the projection O, extending from one of the walls of the well, substantially as and for the purpose set forth.

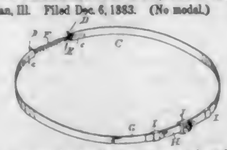
4. The combination of the gate D, provided with the arm L L' and spring N N', the seat or projection P P', secured to the elevator, the projection O, secured to one of the walls of the well, and spring S, secured to the frame *a*, substantially as and for the purpose described.

5. The combination of the gate D, hung from one side of its center, and the rod *d*, over which said gate fits, said rod being placed at the side or end of the gate nearest the point at which it is hung, substantially as and for the purpose set forth.



300,933. SECONDARY BATTERY. GEORGE L. WINCH, Madras, East Indies. Filed July 18, 1883. (No model.) Patented in England July 25, 1882, No. 3,532; in France Jan. 25, 1883, No. 153,313, and in Belgium Jan. 27, 1883, No. 60,276.

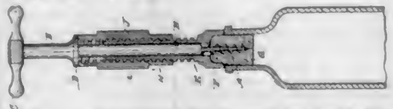
Claim.—1. In a secondary or polarization battery, the combination of metallic plates forming the electrodes, and sheets of cork or pith covering the faces of said plates, substantially as shown, and for the purpose set forth.



2. In a secondary or polarization battery, the combination of electrodes consisting of metallic plates immersed in an electrolytic fluid consisting of an aqueous solution of salts of aluminum with sulphate of copper, substantially for the purpose shown and described.

300,934. MANUFACTURE OF BUTTONS AND OTHER ARTICLES FROM PLASTIC MATERIALS. WILBUR C ABBOTT, Babylon, N. Y. Filed Mar. 17, 1884. (Specimens.)

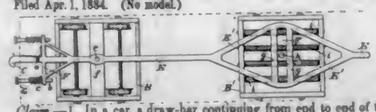
Claim.—The improved method of making molded articles from plastic materials with a face ornamented in relief or intaglio, which consists in placing in the die, together with the plastic material, and against the face of the die, a thin plate or disk having on its surface, in contact with said plastic material, a design in relief or intaglio, then subjecting the die to pressure, and finally separating the molded article from the die and from said plate, substantially as set forth, whereby the face of the article is impressed with the reverse of the design on said plate.



300,935. COVER-HOLDER FOR JARS, MILK-CANS, &c. MATHEW ALSTON, Adrian, Ill. Filed Dec. 6, 1883. (No model.)

Claim.—1. A cover-holder for jars, composed of the hoop C, the ends D of which are bent and perforated at E and at *c*, combined with a coiled spring, F, which is passed through said openings, and secured at pleasure in either opening *c*, whereby the tension of the hoop can be increased or diminished, as described.

2. The combination, in a cover-holder, of one hoop, C, made in two pieces, the ends of each having the angles D, and provided with openings E and *c*, and the coiled spring F, uniting the said ends, the other ends of said pieces overlapping each other and having keepers I, with set screw K, all as set out and explained.

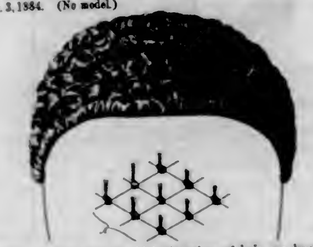


300,936. CORKSCREW. WILLIAM E. ALVORD, Appleton, Wis. Filed Dec. 1, 1883. (No model.)

Claim.—1. In a corkscrew, the combination, with a rod, B, having a corkscrew formed on its lower end, and provided with an annular ridge, forming a shoulder, of the externally-threaded tube E, having a socket, F, formed on its lower end, and of the internally-threaded tube H, surrounding the tube E, substantially as herein shown and described.

2. In a corkscrew, the combination, with a rod, B, having a corkscrew formed on its lower end, and provided with an annular ridge, forming a shoulder, of the externally-threaded tube E, having a socket, F, on its lower end, and the internally-threaded tube H, surrounding the tube E, and provided with ribs *a*, substantially as herein shown and described.

300,937. RAILWAY-CAR. JOSEPH F. RATCHELOR, Baltimore, Md. Filed Apr. 1, 1884. (No model.)

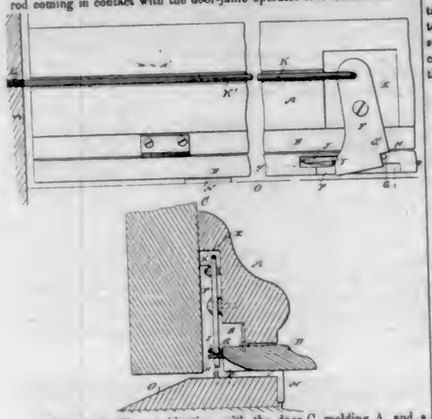


Claim.—1. In a car, a draw-bar continuing from end to end of the car, and having at the center two branches which spread apart, and provided with two cross-bars which connect the branches, as set forth.

2. The combination of a middle truck having an upward-projecting stud or bolt, A, and a draw-bar continuing from end to end of the car, and having cross-bars with a space, *g'*, between to allow lateral movement of the said stud or bolt, as set forth.

3. The combination of a car-body, a draw-bar continuing from end to end of the car, and two end trucks, and a truck between the end trucks provided on top with rollers adapted to allow it to move laterally, as set forth.

4. The combination of a middle truck having an upward-projecting stud or bolt, A, and provided on top with rollers, and a draw-bar continuing from end to end of the car, and having parallel cross-bars with a space between for said stud, as set forth.



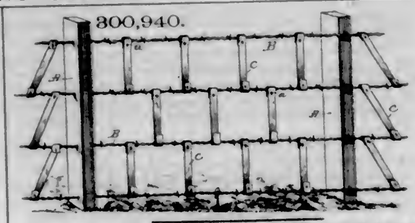
300,938. HAIR-FRONT. SOPHUS C. BECK, Philadelphia, Pa. Filed Mar. 3, 1884. (No model.)

Claim.—A hair-front in which the wisps of hair are knotted to a foundation consisting of a netted fabric of large mesh and of the same color as the hair, as set forth.

300,939. WEATHER-STRIP. WILLIAM D. BENNETT, Bedford, Iowa. Filed Feb. 26, 1884. (No model.)

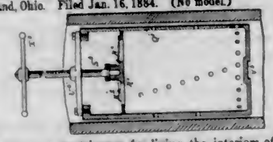
Brief.—Consisting of a pivoted spring-pressed latch-lever within the molding secured to the outer face of the door, operating to hold up as well as to press down the weather-strip upon the sill. An arm or rod coming in contact with the door-jamb operates said latch-lever.

Claim.—1. The combination, with the door C, molding A, and a pivoted spring-pressed latch-lever within said molding, of the strip D, pivoted to the molding, and having a projection on its inner face in the path of the pivoted lever, whereby when the door is opened the strip will be raised and its projection engaged by the said latch-lever, substantially as set forth.



2. The combination, with the door C and the molding A, of the strip D, hinged to the molding A, of the stud H, projecting from the inner edge of the strip, the latch-lever F, pivoted to the back of the molding, and provided with the notch G, and of a spring secured in the strip and pressing the latch F toward the stud H, substantially as herein shown and described.

3. The combination, with the door C and the molding A, of the strip D, hinged to the molding A, the stud H on the inner edge of the strip, the latch-lever F, pivoted on the back of the molding, and provided with a notch, G, the spring J, held in the strip and pressing the latch F toward the stud H, the rod K, extending from the upper end of the latch F to the inner side edge of the door, and of the screw L in the casing, substantially as herein shown and described.



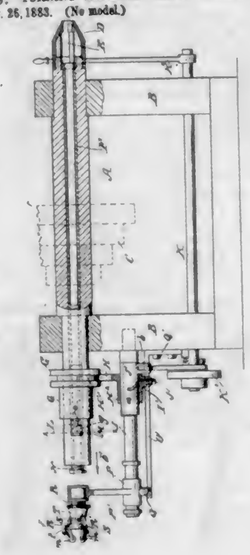
300,940. WIRE FENCE. CHAS. S. BENTLEY, Dubuque, Iowa. Filed Oct. 10, 1882. (No model.)

Claim.—A wire fence composed of posts A A and wire runners B B, slotted strips C, connecting adjacent runners, the ends of each strip being provided with a tongue, *a*, which enters the slot, and thereby locks the strip in place on the runners, and a spiral anchor secured directly to one of the runners of the fence and embedded in the ground, whereby the tension of all the runners of the fence may be regulated, all substantially as described.

300,940.

300,941. APPARATUS FOR LINING MOLDS. GEO. W. BILLINGS, Cleveland, Ohio. Filed Jan. 16, 1884. (No model.)

Claim.—1. A contrivance for lining the interiors of molds with plastic material, composed of the receptacle for holding the soft coating material, provided with perforations through which the soft material to be spread upon the inner wall of the mold may pass, and so sized and shaped exteriorly as to give to the interior of the lined or coated mold the desired size and shape, all substantially as set forth.



2. The combination, with a perforated receptacle adapted to contain the material to be applied to the interior of the mold, and designed to be moved back and forth within the mold to plaster over its interior surface, of a screw-follower or equivalent means for compressing the contents of said receptacle, and thus forcing the said contents out through the perforations, as set forth.

300,942. TUB AND BOX FASTENER. WILLIAM H. BLAKE, 2d, Swanton, Vt. Filed Apr. 10, 1882. Renewed Nov. 15, 1883. (No model.) Patented in Canada July 11, 1883, No. 17,206.

Claim.—The tub or box fastener herein shown and described, having its doubled ends *a a* soldered down upon the body A of the strip over the heads of the tacks B B, as an improved article of manufacture.

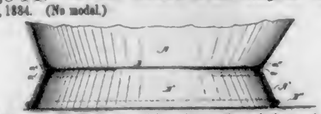
300,943. TURNING-MACHINE. ALBERT T. BOOTH, Meriden, Conn. Filed Nov. 26, 1883. (No model.)

Claim.—1. In a turning-machine, the combination, with a revolving tube, of a sliding tube held in the same, a chuck on the outer end of the tube, bevel projections on the inner end of the tube, a rotatable plug provided with projections adapted to act on the bevel projections on the inner end of the sliding tube, and of means for turning the rotatable plug to raise its projections to act on the bevel projections on the inner end of the sliding tube, substantially as herein shown and described.

2. In a turning-machine, the combination, with a revolving tube, of a sliding tube held in the same, and provided at its outer end with a spring-chuck, beveled projections on the inner end of the sliding tube, a rotatable plug provided with projections adapted to act on the bevel projections on the inner end of the sliding tube, a sliding sleeve mounted on the revolving outer tube, and of sliding beveled strips held in slots of the sliding tube, and connected with the sleeve on the outer revolving tube, substantially as herein shown and described.

3. In a turning-machine, the combination, with the revolving tube A, provided with a nipple, D, of the sliding tube F, held in the tube A, and provided with a spring-chuck, E, the bevel projections L on the inner end of the tube F, the tubular plug M, having projections *g*, the adjusting-screw N, and means for turning the plug M, substantially as shown and described.

4. In a turning-machine, the combination, with the revolving tube A, having a nipple, D, on its end, of the sliding tube F, provided with a chuck, the sliding sleeve G, the bevel projections L on the inner end of the tube F, the tubular plug M, having projections *g*, and the sliding strips O, held in grooves in the tube F, and having beveled ends, which strips are secured to the sleeve G, substantially as herein shown and described.

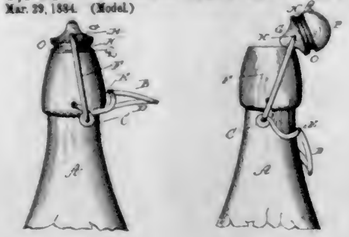


5. In a turning-machine, the combination, with the tubes A and F, of the sleeve G, adapted to slide on the tube A, and adapted to operate means for moving the sliding tube F in the direction of its length, the sleeve H^3, provided with a pin, J, and mounted to slide on a sleeve, J', mounted to turn on an arm, I, and provided with a helical slot for receiving the end of the pin J, and of means for turning the sleeve J', substantially as herein shown and described.

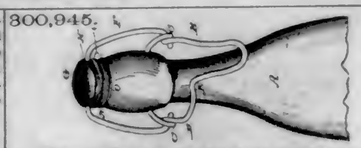
6. In a turning machine, the combination, with the tubes A and F, of the sleeve G, mechanism for moving the tube F longitudinally from the sleeve G, the sleeve H^3, having a forked arm, H, acting on the sleeve G, and provided with a pin, J, the sleeve J', having a helical groove, *a*, the connecting-rod *d*, the shaft K, and the lever K^3, substantially as shown and described.

7. In a turning-machine, the combination, with the tube-section R, of the levers S, pivoted to the same, the rollers *m*, pivoted in the outer ends of the levers, and the beveled ring T, held adjustably on the tube R, substantially as herein shown and described.

8. In a turning-machine, the combination, with the tube R, of the levers S, pivoted to the tube, the rollers *m*, pivoted on the outer ends of the levers S, the springs *t*, secured to the levers S, and acting on the rollers *m*, and of the adjustable beveled ring T, mounted on the tube R, substantially as herein shown and described.



300,944. COAL-HOD. GEORGE A. BOWERS, Chicago, Ill. Filed Mar. 22, 1884. (No model.)

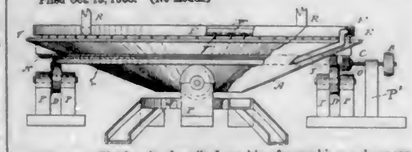


Claim.—1. The body A and base-hoop A', made integral and tapering toward each other, in combination with the bottom B, having flange B', applied on the interior of the base-hoop, and bent out at the top over the interior projection at *a a*, substantially as specified.

2. The body A and base-hoop A', made integral and tapering toward each other, in combination with the bottom B and flange B', applied within the base-hoop, and having the top bent out over the inner projection at *a a*, and the bottom edge bent out over the lower edge and back against the exterior of the base-hoop, substantially as specified.

300,945. BOTTLE-STOPPER. FRANK BURNS, Westfield, N. Y. Filed Mar. 29, 1884. (Model.)

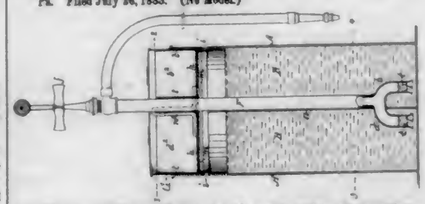
Claim.—1. The herein-described elastic stopper, having a central recess for the plug, and having a crease around its laterally-projecting shoulder forming two annular flanges, as and for the purpose shown and set forth.



2. In a bottle-stopper, the herein-described thumb-bail pivoted with its ends upon the side of the bottle, having eyes near its ends, and bent at its outer portion to form a shoulder, and an outwardly and laterally projecting lever-bail, as and for the purpose shown and set forth.

3. The combination, in a bottle-stopper, of the thumb-bail pivoted with its inner ends upon the sides of the neck of the bottle, and having its outer portion bent to form a shoulder at one side and a laterally-projecting lever-bail at the other side, the stopper-bail hinged with its ends in eyes upon the thumb-bail, the plug hinged upon the upper end of the stopper-bail, the said bail passing through a transverse perforation in the top of the same, and an elastic stopper having two annular flanges at its upper portion, as and for the purpose shown and set forth.

300,946. PULP-BOARD FOR ROOFING PURPOSES. PHILIP CAREY, Cincinnati, Ohio. Filed Feb. 4, 1884. (Specimens.)



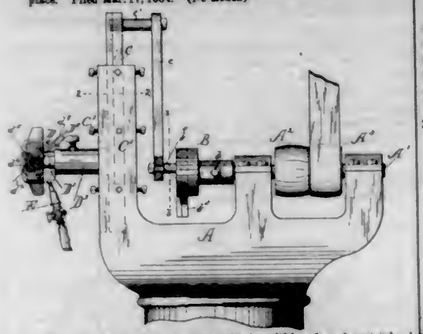
Claim.—As a new article of manufacture, a pulp-board composed of wood pulp, asbestus, or any other mineral fiber, and any suitable clay, mixed together while in a pulp state, then pressed or rolled into a sheet or board and dried, and afterward coated or saturated with asbestus, asphaltum, or any other fire or water proof paint, substantially as described.

300,947. SLIME-TABLE. THOMAS CARKEEK, Silver Plume, Colo. Filed Oct. 13, 1883. (No model.)

Claim.—The herein-described machine for washing and concentrating ores, comprising the conical frame A, having the rail I and the toothed rim N, the rollers D, the shaft C, having cog-wheel O and pulley B, the suspended trough E, the pipe F, provided with jets V, and pipes H, H', and H^2, the feeding-trough S, the perforated frame T, and the receptacle J, having compartments M K, the whole constructed and arranged to operate as shown and described.

300,948. FIRE-EXTINGUISHER. CHARLES W. CARYL, Philadelphia, Pa. Filed July 26, 1883. (No model.)

Claim.—1. The combination, in a fire-extinguisher, of a tank having two chambers, chemical charges for said chambers, and a single-barreled pump having suction branches communicating with both chambers, as set forth.



2. A fire-extinguisher tank having two chambers, B D, and charging-compartments located above said chambers and having glass bottoms, as set forth.

3. A fire-extinguisher tank having two chambers, B D, and charging-compartments located above said chambers and having glass bottoms, in combination with the break-bars, as set forth.

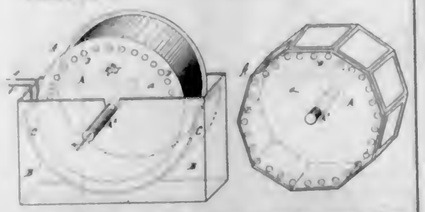
4. The combination of the tank having a vertical transverse partition, *a*, with a charging-vessel having two partitions at right angles to each other, so as to divide it into four compartments—two above each chamber of the tank—as set forth.

5. The combination of the tank with a charging-vessel having its compartments lined with lead or its equivalent, as described, to prevent caking of the charges therein, as set forth.

300,949. HEEL-BURNISHING MACHINE FOR BOOTS AND SHOES. GEORGE F. CASS, Chicago, Ill., assignor to himself and Hugh White, same place. Filed Mar. 17, 1884. (No model.)

Claim.—1. The tool D, provided with burnishing-face *d*, seat-wheel d', and top-lift-beading groove d^2 and guide-lip d^3, in combination with the reciprocating tool-holder C, guide-standard C', shaft A', wheel B, adjustable wrist-pin slide b^3, wrist-pin b^4, link *e*, and pin *c'*, substantially as specified.

2. The combination of the tool D, having a burnishing-face, a seat-wheel, and a guide-lip located between said burnishing-face and seat-wheel, with a reciprocating tool-holder slide, C, upon which said tool is mounted, and a spring for giving the tool an elastic pressure against the heel operated upon, substantially as specified.



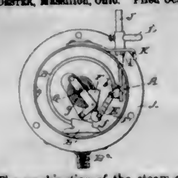
3. The combination, with the reciprocating tool-holder provided with a hollow sleeve, of the tool D, having a shank fitting in said hollow sleeve, a spring, and a guide-pin for holding the tool in a vertical position, substantially as specified.

4. The combination of the reciprocating tool-holder slide, the tool mounted therein, provided with a burnishing-face and a heel-seat wheel, the shaft A', and wrist-pin wheel provided with an adjustable wrist-pin for varying the length of stroke, and a link and pin connecting said wrist with said tool-holder slide, substantially as specified.

5. The vertically-reciprocating tool D, provided with the burnishing-face *d*, guide-lip d^3, and heel-seat wheel d', mounted on a pin rigidly secured to an adjustable plate, d^4, so that the heel-seat wheel may be set in or out, as may be desired, substantially as specified.

6. The combination of the reciprocating tool D, provided with a burnishing-face, heel-seat wheel, and guide-lip, with reciprocating slide C, on which said tool is mounted, and the guide-standard C', provided with adjustable box-plates, in which said tool-holder slide reciprocates, substantially as specified.

300,950. PROCESS OF AND APPARATUS FOR THE SEPARATION OF METALS FROM ORES AND ALLOYS. HENRY RENNIE CASSEL, New York, N. Y. Filed Jan. 2, 1884. (No model.) Patented in England Aug. 9, 1883, No. 3,573.



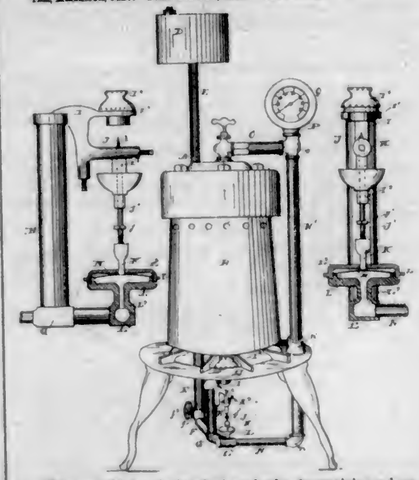
Claim.—1. The process of separating metals from ores or alloys, especially those of an auriferous character, which consists in charging the ore or alloy in a powdered condition into an anode-compartment, which is separated from the cathode-compartment by porous material, said anode-compartment containing a solution yielding nascent chlorine under the action of an electric current, and agitating said powdered material within said solution during the passage of the electric current, substantially as described.

2. The combination, in an apparatus for treating ores and metals by electrolysis, of a cathode-compartment, a negative pole therein, a rotary drum constituting the anode-compartment, provided with porous material separating it from the cathode-compartment, and with a series of carbon rods or plates arranged within the same, and suitable electric connections, substantially as described.

300,951. PROCESS OF CHLORIDIZING ORES BY ELECTROLYSIS. HENRY RENNIE CASSEL, New York, N. Y. Filed Jan. 2, 1884. (No specimens.) Patented in England Oct. 13, 1883, No. 4,879.

Claim.—In the process of extracting gold from rebellious or refractory gold ores, the steps which consist in subjecting the ore to the action of a solution yielding nascent chlorine under electrolytic decomposition, and adding lime or its equivalent, whereby acids formed by secondary action during said decomposition are neutralized, substantially as and for the purpose set forth.

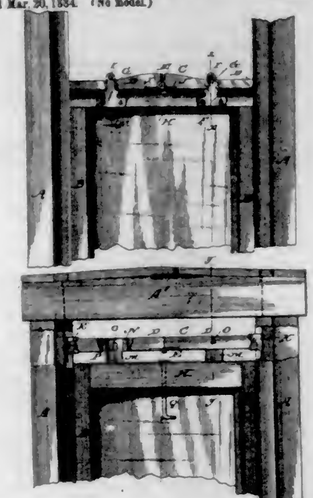
300,952. DEVICE FOR REGULATING HEAT IN VULCANIZERS. FRANK H. CHIDESTER, Massillon, Ohio. Filed Oct. 26, 1883. (No model.)



Claim.—1. The combination of the steam-gage, the valve-rod N, which passes through the side of the gage, the elbow or connecting-tube, the support K, secured to the gage and clamped to the said elbow or connecting-tube, the gas-tubes J and I_5, secured to the connecting-tube, and the valve within the connecting-tube, operated by the valve-rod N, substantially as set forth.

2. The combination of the gas-tube J, the gas-tube I_5, the elbow or connecting-tube, the support K, the vale within the connecting-tube, the valve-rod N, the slotted plate O, the threaded tube O', secured to said plate, and the devices within the steam-gage secured to said slotted plate O, substantially as set forth.

3. The combination of the gas-tube J, the gas-tube I_5, the elbow or connecting-tube, the support K, for said connecting-tube, the valve-rod N, having its outer end adapted to receive a key or adjusting device, the devices within the gage for moving the valve-rod, and the connecting-plate O, adjustably secured to the valve-rod, substantially as set forth.

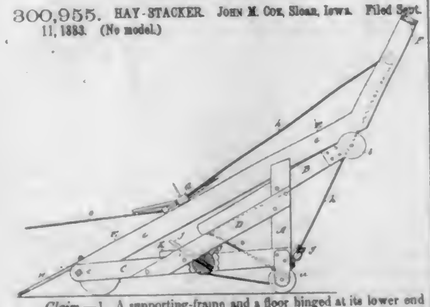


300,953. VULCANIZING-HEAT REGULATOR. FRANK H. CHIDESTER, Massillon, Ohio. Filed Mar. 11, 1884. (No model.)

Claim.—1. The herein-described mechanism for supplying and regulating the flow of gasoline or other hydrocarbon to a vulcanizer, it consisting in the combination of a reservoir, a vapor-burner below the vulcanizer, a duct between the reservoir and burner, a cut-off or valve, *f*, a supplemental valve, J, at the needle-orifice, a steam-chamber having a flexible wall, with which the needle-valve is adjustably connected, a steam-duct communicating both with said chamber and the interior of the vulcanizer, and a gage for indicating the pressure of the steam, substantially as set forth.

2. The combination, with the vulcanizer, of the vapor-burner having a jet-orifice, a needle-valve for closing said orifice, the parts $L' L^2$, secured together by screw-thread, the diaphragm M, adjustably connected with the needle-valve and secured to the aforesaid part L', the steam-duct, and the gage, substantially as set forth.

300,954. SASH-HOLDER. EDWIN B. CLEMENT, Marshalltown, Iowa. Filed Mar. 20, 1884. (No model.)



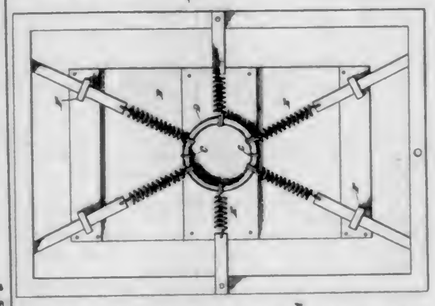
Claim.—1. The combination of a window-frame, a sash having a rabbeted top rail, hangers consisting of plates secured to the front side of the top rail, and having rearwardly-extending pins, and a fastener seated in the rabbet under the pins of the hangers, and consisting of a pair of bars connected by a hinge on their under side, substantially as set forth.

2. The combination of a sash having a rabbeted top rail, the hangers having rearward-extending pins, the fastener consisting of a pair of bars hinged together on their under side, and provided at their free ends with roughened or corrugated friction-shoes, and legs or handles extending forwardly from the leaves of the hinge, as and for the purpose set forth.

3. The combination, with a sash, of a fastener consisting of a pair of bars connected by a hinge on their under side, the same being loosely connected to the top rail of the sash, and an operating-rod sliding vertically through an opening in the said top rail, directly under the hinge, as and for the purpose set forth.

4. The combination, with a sash provided with a fastening device consisting of a pair of hinged bars suitably connected to the top rail of the said sash, of the window-frame provided with a recess in the lintel adapted to receive and accommodate the fastening device of the upper sash, as and for the purpose set forth.

300,955. HAY-STACKER. JOHN M. COX, Sloan, Iowa. Filed Sept. 11, 1883. (No model.)

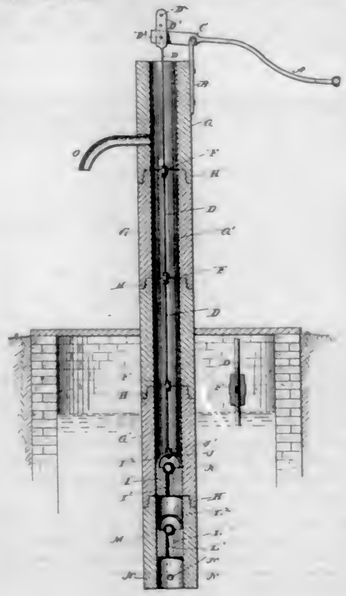


Claim.—1. A supporting-frame and a floor hinged at its lower end thereto, in combination with levers also pivoted thereto beneath said floor, and supporting the upper end of the floor on one end of each of said levers, ropes attached to their other ends, and a windlass journaled in the frame to wind said ropes, as described.

2. The combination, with a frame, of a floor hinged at its lower end thereto, supporting side beams therefor, the side beams of said floor extending beyond its upper end and rising above its plane, pulleys pivoted on the extended beams, and means for raising and lowering said floor and its side beams, substantially as specified.

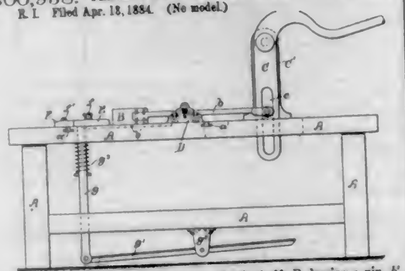
3. The combination, with the hinged floor, supporting-levers, and windlass described, of a beam crossing the frame practically parallel with said windlass, and one or more handspikes loosely fitting holes in the windlass-roller, and adapted to engage said beam when extended through the roller, as specified.

4. A supporting-frame and a floor or slideway hinged at its lower end thereto to swing vertically thereon, in combination with a leaf or gang-plank hinged at one edge thereto, and free at its other edge to swing vertically, substantially as described, whereby said gang-plank may remain resting one edge on the ground while the slideway is elevated without being broken off thereby, and whereby said plank may be folded over upon said slideway for transportation, as described.



300,956. VEHICLE-SPRING. ROBERT H. CORNETT, Emporia, Kans. Filed Jan. 31, 1884. (No model.)

Claim.—1. The combination, in a buggy or other vehicle, with the frame and body thereof, of the ring secured to the bottom of the body, the springs secured thereto, and the straps connecting the springs with the frame, substantially as specified.



2. The combination, in a buggy or other vehicle, of the supporting-frame, the bottom and centrally-secured ring, the spiral springs and straps connecting the body to the frame, and the loops through which the straps pass, all arranged substantially as described, for the purposes specified.

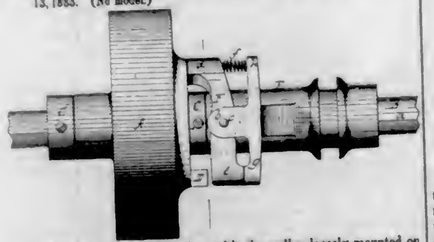
300,957. PUMP. THOMAS COURTNEY, Walthall, Miss. Filed Oct. 15, 1883. (No model.)

Claim.—The combination of the pump-stock made of the lap-jointed sections, fitted one over the other, with the adjustable rod D, having the threaded sections F jointed at each lap-joint of the pump-stock sections, substantially as described.

300,958. FENCE-PICKET MACHINE. THOMAS COYLE, Apponang, R. I. Filed Apr. 18, 1884. (No model.)

Claim.—1. The combination, with the knife B, having a pin, *b'*, and the gage E, of the table having the groove *a*, placed in the line of movement with the knife, and arranged to receive the pin *b'*, and the grooves *a'*, arranged in the line of movement of the gage, substantially as described.

2. The combination, with the lever C, the knife connected to said lever, and the gage E, of the table having the groove *a*, arranged to guide the knife, and the grooves *a' a'*, arranged to guide the gage, substantially as described.



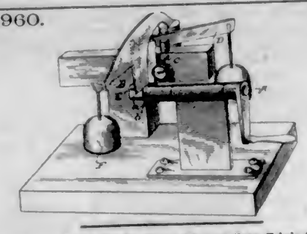
3. The combination, with the knife and the gage, of the groove *a*, arranged to guide the knife, and the grooves *a'*, arranged to guide the gage, the stop F to hold the end of the picket, and the stop J to limit the adjustment of the gage, substantially as described.

4. The combination, with the knife B and the gage E, of the table having the groove *a* to guide the knife, and the grooves *a'* to guide the gage, the stop F, the block G, and the foot-lever, with its connections to the block G, substantially as described.

5. The combination, with the knife B, having the pin *b'*, and the gage E, of the table having the groove *a* to guide the knife, and the grooves *a'* to guide the gage, the stop F, the block G, with its operating connections, and the removable block provided with a groove to guide the knife.

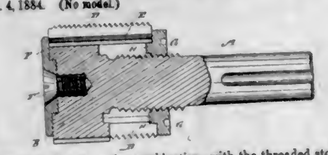
6. A machine for pointing pickets, consisting of a longitudinally-reciprocating knife, an adjustable gage to hold the picket, a pivoted stop and a movable block to hold the end of the picket, a removable grooved block to guide the knife, a lever for actuating the movable block, and a table having a groove to guide the knife and grooves to guide the gage, substantially as set forth.

300,959. CLUTCH. CHRISTIAN DANCKL, New York, N. Y. Filed Nov. 13, 1883. (No model.)



Claim.—1. The combination, with the pulley loosely mounted on the shaft and having on its face a series of projections, of the clutch-sleeve feathered on the shaft, and a lever pivoted between its ends to the sleeve to form two arms, which project in reverse directions from the pivot, substantially as described.

2. The combination, with the shaft and the loose pulley thereon having its face provided with lateral projections, of the clutch-sleeve feathered on the shaft to revolve therewith and move longitudinally thereon, a lever pivoted to and moving with the clutch-sleeve, and a spring acting on the lever to throw it into engagement with one of the projections on the pulley when the clutch-sleeve is moved on the shaft toward the pulley, substantially as described.

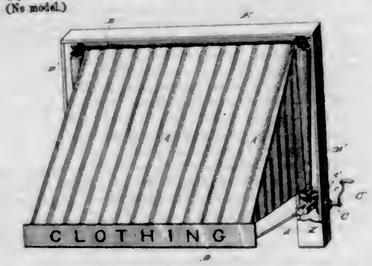


300,960. MACHINE FOR COILING WIRE. CHARLES W. H. DAY, Attleborough, Mass. Filed Oct. 25, 1883. (No model.)

Claim.—The combination of the arbor *a* and means for revolving the same, the clearer E, and a tension device, all substantially as shown.

300,960.

300,961. SCREW-TAP. HENRY WILLCOX EDDY, Toledo, Ohio. Filed Jan. 4, 1884. (No model.)

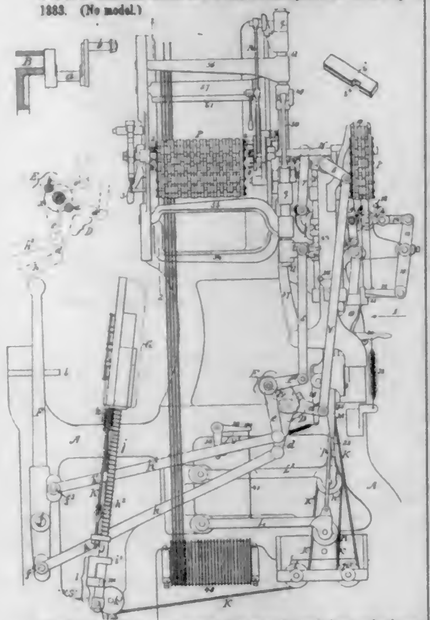


Claim.—1. In a tap, the combination, with the threaded stock A, having a head, B, longitudinally grooved in its periphery, of the cutters D, held to slide longitudinally in said grooves, but not vertically, the disk F, removably secured to the outer end of the head, and the nut G, for forcing the cutters outward when the disk F has been removed, substantially as set forth.

2. In a tap, the combination, with the threaded stock A, having a head, B, provided with longitudinal slots in its periphery, of the longitudinally-sliding cutters D, held in said slots, a removable plate on the outer end of the head for the cutters to rest against, and a nut, G, on the screw-threaded portion, for clamping the cutters in place and forcing them outward when the said plate is removed, an annular ring, H, being formed on the inner surface of the nut for the inner ends of the cutters to rest in, substantially as set forth.

3. In a tap, the combination, with the threaded stock A, having a head, B, provided with longitudinal grooves in the rim, of the cutters D, held in the said grooves, the locking wires or pins E, the disk F, held on the end of the head, and the nut G, provided with an annular ridge, H, on which the inner ends of the cutters D rest, substantially as herein shown and described.

300,962. AWNING. LOUIS FOX, Cleveland, Ohio. Filed Oct. 26, 1883. (No model.)



Claim.—1. The combination, with a horizontal roller and two vertical conical rollers situated under the opposite ends of the horizontal roller, of the awning A, adapted to roll on the horizontal roller, the side pieces adapted to roll on the conical rollers, and an end board, D, connecting the outer ends of the main and side awnings, substantially as set forth.

2. The combination, with a horizontal roller provided at opposite ends with bevel-pinions and two vertical conical rollers provided at their upper ends with bevel-pinions meshing with the pinions on the horizontal shaft, one of said conical rollers being provided at its lower end with a driving-pinion, of the awning A, side awnings, A', board or equivalent D, and side rods, *d*.

3. The combination, with the horizontal roller, two conical rollers, and the bearings or blocks *d'*, of the awning A, side awnings, A', board or equivalent D, and rods pivotally secured at their inner ends to the blocks *d'*, and at their outer ends to the board D, substantially as set forth.

4. The combination, with the horizontal roller and the inverted conical side rollers, the said rollers being geared so as to revolve simultaneously, of the main awning A, side awnings, A', board D, and rods *d*, all of the above parts being combined as described.

300,963. LOOM. MERRILL A. FURBUSH, Philadelphia, Pa., and CHARLES H. KNOWLTON and BENJAMIN F. MEYER, Camden, N. J., assignors to said Furbush and Charles A. Furbush, Philadelphia, Pa. Filed July 7, 1883. (No model.)

Claim.—1. The combination of the crank-shaft, its crank-pins *a* and *b*, levers D and E, rods A A', and hand-lever F, with the chain-shaft N, heddle-jacks, and drop-box jacks, and mechanism whereby the said shaft and jacks are operated from the said levers D and E, substantially as described.

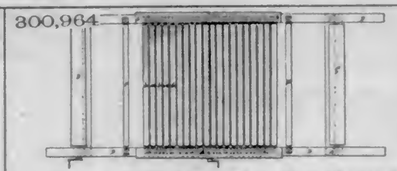
2. The combination of the chain-shaft and its disk provided with pins, the rocking frame R and its pawls, and mechanism for operating the said frame, with a lever, T, having rollers *x' x'*, adapted to the frame, and with mechanism for adjusting and retaining the said lever T, all substantially as specified.

3. The combination of the drop-box jacks M M', the pattern-chain P', the pivoted dog 8, the cross-head X', and mechanism for operating the said chain, dog, and cross-head, with the arms 19, fingers 11, mechanism for operating the same, and devices whereby the chain is made to control the fingers, all substantially as specified.

4. The combination of the arms 19, having notches at their lower ends, and mechanism for operating the said arms, with a retainer, 29, adapted to the said notches, and with mechanism for actuating the retainer, substantially as set forth.

5. The combination of the block 17, mechanism for reciprocating the same, and the arms 19, with the lever V', link 14, lever J', and fingers 11, substantially as set forth.

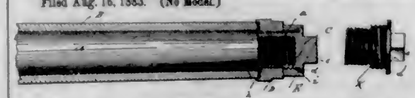
6. The combination of the block 17, and mechanism for operating the same, with the lever J' and its fingers 11, the link 14, and lever V' and its set-screw 18, substantially as specified.



7. The combination of the heddle-jacks, the drop-box jacks, the pattern-chains therefor, slide-rods Q Q^2 and means whereby they are caused to operate the heddle-jacks, slide-rods Y Y' and means whereby they are caused to operate the drop-box jacks, devices for operating the pattern-chains, and mechanism whereby the two sets of slide-rods are operated independently of each other, as set forth.

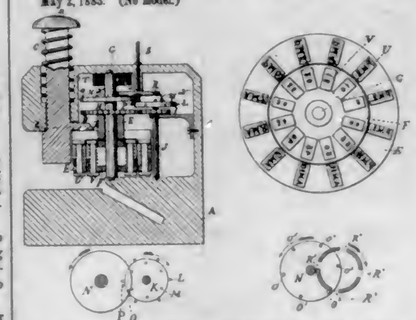
8. The combination of the shaft B, having two crank-pins, *a b*, the levers D and E, hung to the said pins, the rods A A', and hand-lever F, with the rod V, arm 6, and drop-box mechanism, rod 8, bar Q, and heddle mechanism, all substantially as set forth.

9. The combination of the jacks, the drop-box, and drop-box rod, mechanism for operating said jacks, the arm L, and the cord K and rollers therefor, with the brake-levers 26, lever U', springs 27, and rod 41, as set forth.



300,964. MACHINE FOR SOFTENING FABRICS. CLAUDE GARNIER, Lyons, France. Filed Mar. 5, 1883. (No model.) Patented in France Feb. 18, 1881, No. 141,209.

300,964



Claim.—In a machine for softening fabrics, the combination of one series of rollers arranged to revolve in a fixed plane, a second series of rollers arranged in a plane parallel to the first series and parallel to each other, but the position of each roll of the second series intermediate between the rollers of the first series, and mechanism, substantially such as described, whereby the second series is made movable toward and from the plane of the first series, and the rollers C D, substantially as and for the purpose described.

300,965. VEHICLE-AXLE NUT. HARMON B. GIBSON, Tiffin, Ohio. Filed Aug. 16, 1883. (No model.)

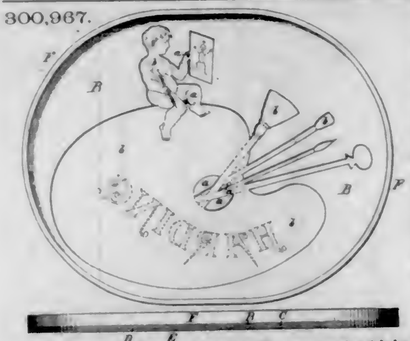
Claim.—In a hub-attaching device, the combination, with an axle-spindle having a screw-threaded end, *a*, of the cap *c*, formed with a squared head, *e*, an internal screw-threaded recess adapted to fit over the end *a*, and with external right and left screw-threaded portions, and the nuts D and E, having annular grooves at their ends and adapted to fit upon the respective right and left screw-threaded portions of the cap C, and the washers A *d*, all constructed and arranged to operate substantially in the manner specified.

300,966. TIME-STAMP. WM. H. GILLETTE, Hartford, Conn. Filed May 2, 1883. (No model.)

Claim.—1. An escapement consisting of the wheel N, provided with the series of studs O, and the wheel R, provided with its discontinuous flange, the two wheels operating together substantially as described.

2. An intermittent lock-motion consisting of the wheel N, provided with the stud P and the recess Q, and the wheel K, provided with the series of studs L and provided with the series of studs M.

3. The combination of the cylinder F, the wheel N, the wheel R, and the spring T, so arranged as that a continuous revolution of the wheel R will so control the action of the spring T as that the wheel N and the cylinder F will receive a quick intermittent motion at regular intervals of time.

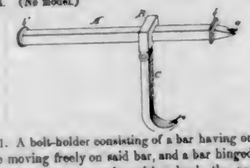


4. The combination of the cylinder F, the cylinder E, the wheels N, R, and K, the gears I and H, and the spring T, so arranged that the wheel R will so control the action of the spring T that the wheel N and the cylinder F will receive a quick intermittent motion at regular intervals of time, and that the wheel K and the cylinder E will receive a quick intermittent motion at other intervals of time.

300,967. MOLD FOR CASTING ORNAMENTAL PLAQUES, &c. JOHN H. HARDING, Milwaukee, Wis. Filed Dec. 6, 1883. (No model.)

Claim.—1. A mold composed of one or more stencils cemented together, and provided with a back, E, secured thereto, substantially as and for the purposes set forth.

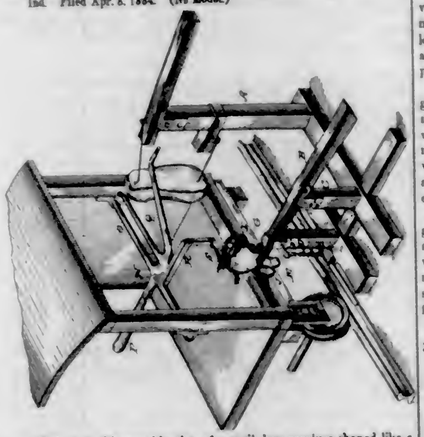
2. A mold composed of one or more stencils stuck together, and provided with a back, E, to which is applied an etched, engraved, or embossed pattern, substantially as and for the purposes set forth.



300,967.

3. The method herein described of casting ornamental and industrial designs by the use of molds composed of one or more stencils and a back, E, all cemented together, substantially as and for the purposes set forth.

4. A mold for casting designs in plaster or any like plastic material, composed of stencils cemented together, and provided with back E and wall F, substantially as and for the purposes set forth.

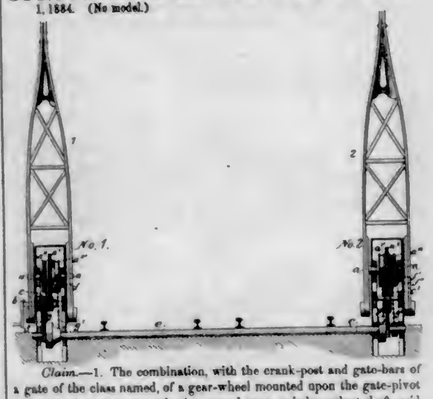


300,968. BOLT-HOLDER. MAHLON HATFIELD, Marshall, Mo. Filed Feb. 2, 1884. (No model.)

Claim.—1. A bolt-holder consisting of a bar having one end chisel-pointed, a slide moving freely on said bar, and a bar hinged to said slide and provided at its outer extremity with a hook, the parts being arranged to co-operate in the manner and for the purpose set forth.

2. In a bolt-holder, the combination of the bar A, having a bifurcated and chisel-shaped end, *a*, and stops *b* and *b'*, with a freely-moving slide, B, and bar C, provided with bifurcated hook *c*, all the parts being arranged and operating as specified

300,969. MAIL-BAG CATCHER. AUGUSTUS P. HAUSS, Sellersburg, Ind. Filed Apr. 8, 1884. (No model.)



Claim.—1. The combination of a mail-bag receiver shaped like a chair-seat, having a curved rear guard-rail and downwardly-inclined arms at its outer edge, and pivoted upon the end of a lever, with means for securing it upon the lever facing in opposite directions, as and for the purpose shown and set forth.

2. The combination of a lever pivoted to swing in a vertical plane, and having means for securing it resting in a horizontal position, a mail-bag receiver having a curved guard-rail and downwardly-inclined curved arms upon its forward edge, and pivoted to turn in a horizontal plane upon the end of the lever, and a pin fitting in either of two perforations in the outer rail of the bottom of the receiver and in a corresponding perforation in the lever, as and for the purpose shown and set forth.

3. The combination of a mail-bag catcher consisting of a rocking shaft, a handle, and two forwardly-pointing catcher-arms, with an outwardly-projecting and downwardly-bent arm having a double-jawed rearwardly-projecting clamp upon its lower end, secured upon the rocking shaft, as and for the purpose shown and set forth.

4. The combination of a mail-bag catcher consisting of a rocking shaft, an inwardly-projecting handle, and forwardly-projecting catcher-arms, with a deliverer-arm consisting of a sleeve having a set-screw and fitting upon the rock-shaft, and having an outwardly-projecting and downwardly-bent arm, provided at its lower end with a rearwardly-projecting double-jawed clamp, as and for the purpose shown and set forth.

300,970. RAILWAY-GATE. JOHN HEKET, Chicago, Ill. Filed Feb. 1, 1884. (No model.)

Claim.—1. The combination, with the crank-post and gate-bars of a gate of the class named, of a gear-wheel mounted upon the gate-pivot at the crank-post, a gear-wheel mounted upon an independent shaft, said wheel standing in different vertical planes, and a broad-faced pinion mounted upon a longitudinally-moving crank-shaft, said pinion being adapted to engage both of said gears or either, substantially as and for the purpose specified.

2. In a gate of the class named, the crank-post and gate-bars, a gear-wheel mounted upon the gate-pivot at the crank-post, a gear-wheel mounted upon an independent shaft, said wheels standing in different vertical planes, and a broad-faced pinion mounted upon a longitudinally-moving crank-shaft, combined with an independent shifter for giving longitudinal movement to the crank-shaft, the pinion on said shaft being adapted to engage both gears or either, substantially as and for the purposes specified.

3. In a gate of the class named, the crank-post and gate-bars, a gear-wheel mounted upon the gate-pivot at the crank-post, a gear-wheel mounted upon an independent shaft, said wheels standing in different vertical planes, and a broad-faced pinion mounted upon a longitudinally-moving crank-shaft and adapted to engage both or either of said gear-wheels, combined with pulley, chain, and rod connections, uniting and admitting of the joint operation of the four bars, or either pair independently of the other pair, substantially as set forth.

4. In a gate of the class named, the crank-post and gate-bars, a gear-wheel mounted upon the gate-pivot at the crank-post, a gear-wheel mounted upon an independent shaft, said wheels standing in different vertical planes, and a broad-faced pinion mounted upon a longitudinally-moving crank-shaft, combined with an independent shifter for moving said crank-shaft and a lock for engaging the shifter, substantially as and for the purposes specified.

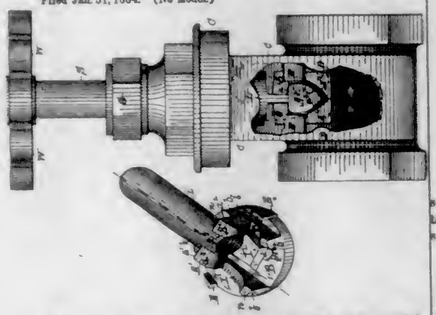
300,971. CARRIAGE-TOP. HENRY HIGGIN, Newport, Ky. Filed Apr. 3, 1884. (No model.)

Claim.—1. A metallic valance or molding formed from a metal blank, and having the arch *d*, teats and grooves *e i*, and corrugated flanges *e*, substantially as and for the purpose specified.

2. In combination with a buggy-top, the valance C, secured upon the seam of the covering-strips I A, substantially as specified.

3. A valance or molding-strip having the arched groove *d*, corrugated flanges *e*, and a series of imitation stitches, *i*, formed of a piece of metal, substantially as specified.

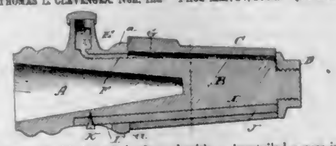
300,972. LIGHT-FRAME FOR CARRIAGES. HENRY HIGGIN, Newport, Ky. Filed Apr. 19, 1884. (No model.)



Claim.—1. A carriage window-frame composed, substantially, of a glass-frame, A, and two moldings, one being provided with hooks to secure the frame to the curtain and the other employed as a finish to cover the binding-hooks, substantially as specified.

2. The combination of the glass-frame A, the molding-frame E, having hooks *e*, engaging the glass-frame, and the molding-frame D, having tangs *d*, also engaging the glass-frame, substantially as described.

3. The glass-frame A of a carriage-window, provided with upturned edges *i*, adapted to receive the hooks *e* of the molding-frame E, substantially as specified.



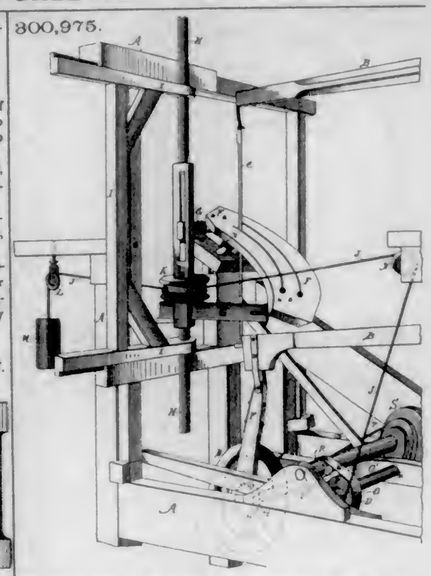
4. A glass-frame for a carriage-window, formed of metal and provided with the shoulders or gains *a*, adapted to receive the glass, leather C, and lining *c*, which are secured in position by means of the molding-frame D, having the tangs *d* bent over upon the frame A, substantially as specified.

300,973. STRAIGHT-WAY VALVE. TIMOTHY HOLLAND, Troy, N. Y. Filed Jan. 31, 1884. (No model.)

Claim.—In a straight-way valve, the combination of the parallel rib-form projections *b b* on the backs of the gates, the inclines I', made in the said projections, and said inclines constructed with the abrupt terminations *i* at the upper ends, the inclines I^2 between said rib-form projections, the cylindrical form spreader and lifter L, threaded to the stem, the arms A' A^2, projected oppositely and laterally from the lower end of said spreader and lifter, said arms having flat tops and wedge-form sides, the ears E on the gate-backs, and the stops P on the interior of the valve-case, with the said parts constructed and arranged to operate as shown and described.

300,974. SPINDLE FOR VEHICLE-WHEELS. WILLIAM HOLLOWAY and THOMAS L. CLEVENGER, Neff, Ind. Filed Mar. 26, 1884. (No model.)

Claim.—A thimble-skein formed with a dovetailed recess in its under side, and having a suitable lubricating attachment, and an annular flange, through which the said recess extends, in combination with a detachable steel wear-strip seated in the said recess and extending through the opening in the said flange, and retained in position by the latter and by a suitably-arranged fastening-screw, substantially as herein described, for the purpose shown and specified.



300,975. SAW-TABLE GAGE. HENRY I. HOPKINS, Cass, Mich., assignor of three-fourths to William J. Mallory, John Kelly, and Melzar M. Mallory, all of same place. Filed Apr. 25, 1884. (No model.)

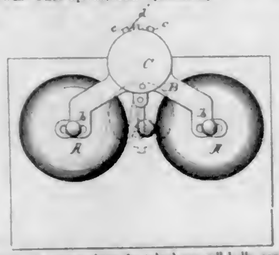
Claim.—1. The combination, with a scroll-sawing machine, of a parallel-wayed frame, a pair of ways therefor, to be secured to the sawing-machine in a vertical plane nearly at right angles to the plane of the saw, and a saw-table pivoted in said parallel frame, substantially as and for the purpose specified.

2. The combination, with a parallel-wayed frame and a pair of ways therefor, of a shaft journaled in said frame and a saw-table secured to said shaft, as and for the purpose specified.

3. The combination, with a parallel-wayed frame, a pair of ways therefor, and a shaft journaled therein, of a pair of arms secured in the

300,975.

said shaft at right angles to each other and one above the other, and a table secured upon the said arms, substantially as and for the purpose specified.



4. The combination, with a parallel-wayed frame, a pair of ways therefor, and a shaft journaled therein, of a pair of arms placed transversely in the said shaft, means for adjusting and fixing the said arms in the shaft, and a saw-table secured to the said arms, as shown and described.

5. The combination, with a parallel-wayed frame, a pair of ways therefor, and a shaft journaled therein, of a pair of arms placed transversely in the said shaft, means for adjusting one of said arms longitudinally to the shaft, and a table secured to the arms, substantially as and for the purpose specified.

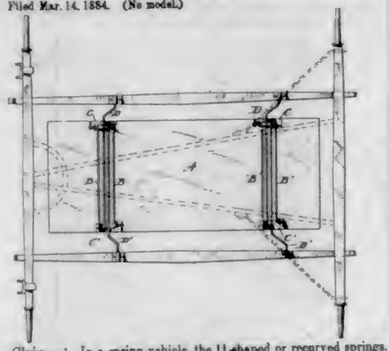
6. The combination, with a parallel-wayed frame, a pair of ways therefor, a shaft journaled therein, and a pair of arms adjustably fixed at right angles to each other, and one above the other, in the said shaft, of a table fixed inclined on the said arms, and a roller for the said table to ride upon, as and for the purpose specified.

7. The combination, with a transversely-adjustable frame, a shaft journaled therein, arms adjustable in said shaft, a saw-table fixed to said arms, a roller for the said table to ride on, and a sawing-machine, of a spool on the said shaft, a cord fixed thereto, a weight attached on the said cord, guiding-pulleys therefor, and means for winding the said cord on the sawing-machine, substantially as shown and described.

300,976. TELEPHONE-CALL ANNUNCIATOR. CHAS. W HOWARD, Neenah, Wis. Filed Apr. 25, 1884. (No model.)

Claim.—1. An annunciator for telephone-call bells, consisting of a frame having arms by which it is adjusted on the bells, in combination with a disk pivoted to it, and a lever, one end of which engages with the disk and the other with the clapper of the bell, as set forth.

2. In annunciators for telephone-bells, the frame B, having slotted arms and lugs, in combination with a pivoted disk, C, and lever D, as set forth.



300,977. WELL-BUCKET FIXTURE. FRANK LINCOLN HOWELL, Neligh, Nebr. Filed Sept. 7, 1883. (No model.)

Claim.—1. The improved bottom for a well-bucket, consisting of the disk *h*, of larger diameter than the body, and having flange *i* and valve pivot-studs *k*, and being constructed with a central opening, *j*, and riveted in the body of the bucket, substantially as described.

2. The valve having pivots *l* formed on and at a right angle to the arms *n*, and one of said pivots having an elbow, *o*, in combination with the slotted stud-posts *k*, substantially as described.

300,978. SPRING-VEHICLE. MOSES G. HUBBARD, Norristown, Pa. Filed Mar. 14, 1884. (No model.)

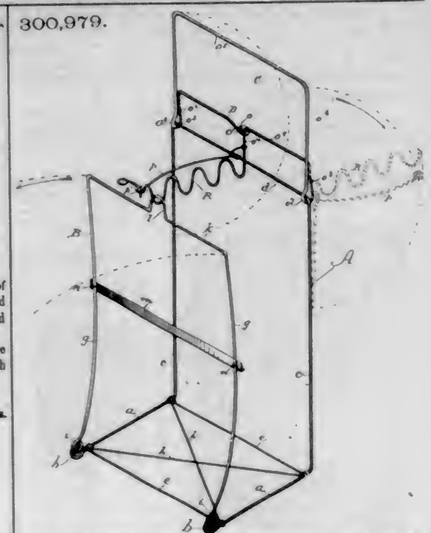
Claim.—1. In a spring-vehicle, the U-shaped or recurved springs, in combination with short crank-arms on said springs, adapted to swing to their dead-centers, and thereby to cushion the movements of the load and limit the strain on the springs, substantially as described.

2. In a spring-vehicle, the recurved springs, having their fixed ends rigidly secured to the boxes in which their crank ends are journaled, substantially as specified.

3. In a spring-vehicle, the U-shaped or recurved springs, arranged in pairs and extending back and forth across the body of the vehicle, with all of the loop ends of each pair of springs journaled in a pair of journal-boxes, to which their rigid ends are secured, thereby forming a connected pair of springs, substantially as described and shown.

4. In a spring-vehicle, the U-shaped or recurved springs provided with crank-arms inclined backward from their center of motion, for the purpose and substantially as set forth.

300,979. PACKAGE AND BOOK HOLDER. CHAS. HUFF, St. Louis, Mo. Filed Apr. 7, 1884. (No model.)

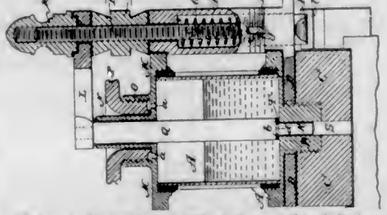


Claim.—1. The combination of the right-angular frame A, spring-frame B, pivoted thereto, handle C, hinged to the upper cross-piece of the frame A, and provided with the rack R, and means adapted to hold the rack in engagement with the frame B, substantially as shown and described.

2. The combination, with the right-angular frame A, made of a single piece of wire, of the spring-frame B, made of a single piece of wire, hinged at its lower end to the frame A, and provided at its upper end with the loop *l*, handle C, and rack R, both made of one piece of wire and pivoted to the upper end of the main frame A, and spring *p*, provided at its outer end with the loop *p'*, substantially as shown and described.

3. In a package and book holder, the combination, with the right-angular frame A, made of a single piece of wire, of the handle C and rack R, both made of a single piece of wire and pivoted to the upper end of the right-angular frame A, substantially as shown and described.

4. The combination, with the right-angular frame A, made of a single piece of wire, and provided with loops *b*, of the pivoted spring-frame B, made of a single piece of wire, and having hooks *i i* at its lower ends, which engage with loops *b*, and its longitudinal sides *g* curved in-



300,979.

wardly, and beveled cross-piece *m*, adjustably secured to the longitudinal wires *g g*, substantially as shown and described.

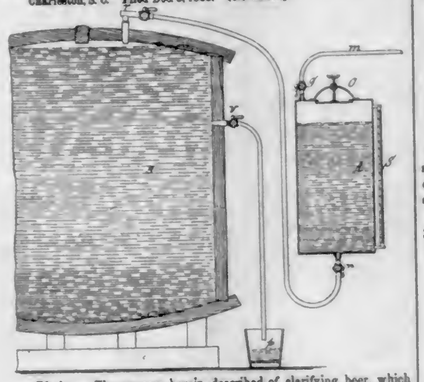
5. In a package and book holder, the handle C and rack R, both made of a single piece of wire, constructed substantially as shown and described.

300,980. OIL-CUP. JOHN J. IRVINE, Chattanooga, Tenn., assignor to himself and Lindsy L. Irvine, same place. Filed Mar. 14, 1884. (No model.)

Claim.—1. The combination, with an oil-cup, of the spindle Q, closing the outlet of the cup, the tubular standard E, formed on the separate plate D, the spindle F in the same, the spring G, acting on the spindle F, and the arm L, connecting the spindles Q and F, substantially as herein shown and described.

2. The combination, with an oil-cup, of the spindle Q in the same, the tubular standard E, formed on the plate D and extending up to the top of the oil-cup, the screw-spindle F in the standard, the spring G, the arm L, connecting the spindles F and Q, and the nut L^2 on the spindle F, between the top of the standard E and arm L, substantially as herein shown and described.

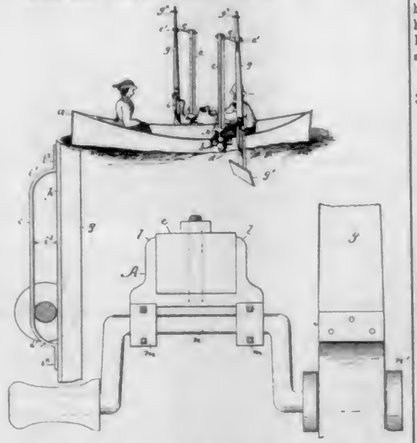
3. The combination, with an oil-cup, of the spindle Q in the same, the plate D, provided with the large central opening and small opening *f*, and formed with the tubular standard E, the spindle F, held in the standard and provided at its lower end with a beveled projection, F', extending below the bottom of the tubular standard E, and the arm L, connecting the spindles Q and F, substantially as herein shown and described.



4. The combination, with an oil-cup, of the spindle Q, the tubular standard E, having slots J, the screw-threaded spindle F, the cross-pin H in the same, the arm L, the nuts L^2 and M', and the spring G, substantially as herein shown and described.

5. The combination, with an oil-cup, of the spindle Q, the spindle F, adapted to be moved vertically by the moving parts of machinery, the arm L, secured on the upper end of the spindle Q, and provided at its opposite end with a socket, and a slit, L', for receiving the spindle F, and of the nut M', the lower end of which fits into said socket for holding the arm L in place on the spindle F, substantially as herein shown and described.

6. The combination, with an oil-cup, of the vertically-movable spindle Q, having a pin, R, of less diameter than said spindle, to form a shoulder, *b*, on its lower end, and an annular groove, *d*, at the upper end of the pin R, adjacent to shoulder *b*, and of a washer, T, resting against said shoulder, and having its inner edge in the groove *d*, substantially as herein shown and described



7. The combination with an oil-cup, of the cover M, the necks N and O, apertures in said cover between said necks, and the funnel P, held between the necks, substantially as herein shown and described.

300,981. PROCESS FOR CLARIFYING BEER. EMIL KEUSTEN, Charleston, S. C. Filed Dec. 5, 1883. (No model.)

Claim.—The process herein described of clarifying beer, which consists in transferring the beer directly from the fermenting-casks into the shavings-casks, closing the shavings-casks to retain within the same the carbonic-acid gas produced by the second fermentation, and forcibly injecting into the beer thus under pressure a clarifying material, while at the same time a certain amount of the beer is drawn off, substantially as set forth.

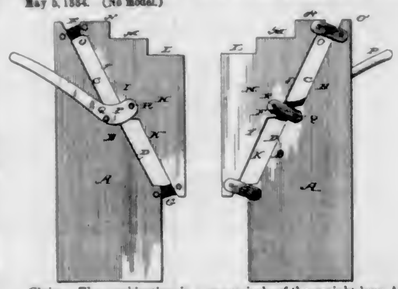
300,982. PROPELLER FOR SMALL BOATS. JOHN B. KIBLER, Minneapolis, Minn. Filed Mar. 27, 1884. (No model.)

Claim.—1. The combination, with a bottomless socket secured to the side of a boat, of an upright post adjustably secured in said socket, and provided with a guide for the paddle-bar at its upper end, and a crank-shaft for operating the paddle-bar journaled in the upright post, substantially as shown and described.

2. The combination, with bottomless socket *b*, secured to the side of a boat, and a removable post, *c*, adapted to be vertically adjusted in said socket, and provided with an arm, *e*, having a loop, *e'*, at its outer end, of the slotted paddle-bar *g*, block A, and crank-shaft *n*, substantially as shown and described.

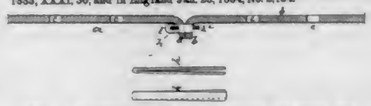
3. The combination, with the paddle-bar *g*, provided with a plate, *h*, of the removable plate *i*, provided with shoulders *i'*, having flanges *i²*, substantially as shown and described.

4. The combination, with the paddle-bar *g*, provided with the plate *h*, of the removable plate *i*, provided with shoulders *i'*, having flanges *i²*, and crank-shaft *n*, having projection *n'*, substantially as shown and described.



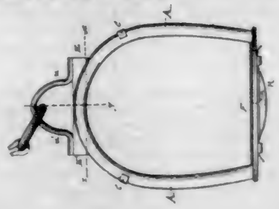
5. The combination, with the adjustable and removable post *c*, of the block A, provided with flanges *l l*, embracing the post, bearings *m m*, and crank-shaft *n*, substantially as shown and described.

300,983. SINK. JAMES KILBOURNE, Columbus, Ohio. Filed July 5, 1883. (No model.)



Claim.—The herein-described sink having its body and neck of substantially the shape shown, formed in one piece from a single sheet of wrought steel or iron, without joint or seam, as and for the purposes set forth.

300,984. WAGON-JACK. DAVID B. KENN, Rochester, N. Y. Filed May 5, 1884. (No model.)

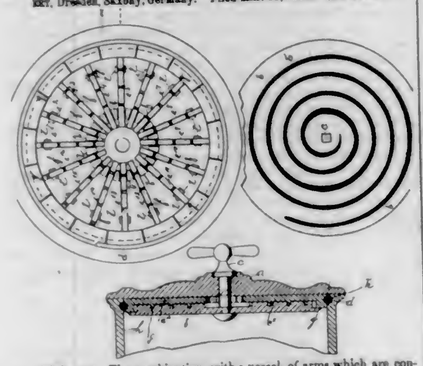


Claim.—The combination, in a wagon-jack, of the upright base A, having incline B, and steps or offsets C, D, and O', movable part H, having steps or offsets J, K, L, M, and N, hinge-links E, F, and G, lever P, and bolts Q and R, the whole constructed and combined to operate substantially in the manner and for the purpose shown and set forth.

300,985. BELT-FASTENER. ALEXANDRE DAMIENS LAGRELLE, Paris, France. Filed Feb. 28, 1884. (No model.) Patented in France Jan. 12, 1882, No. 146,814; in Belgium May 23, 1882, No. 58,002; in Italy June 5, 1883, XXXI, 30, and in England Jan. 25, 1884, No. 2,134.

Claim.—The combination of the belt having perforated ends with the bar *h*, provided with loops *l* and spring-fastener *h'*, which is adapted to be passed through said loops, substantially as herein shown and described.

300,986. STIRRUP. FRITZ LEHMANN, Tangerhütte, near Magdeburg, Prussia, Germany. Filed Nov. 6, 1883. (No model.) Patented in Belgium Sept. 30, 1882, No. 58,985; in France Nov. 27, 1882, No. 150,937, and in Germany Feb. 21, 1883, No. 21,106.



Claim.—1. The combination of a stirrup, a spring-cushioned face-frame connected thereto, means, substantially as described, by which the stirrup is detachably connected to its strap, and means whereby the strap is released by the action of the face-frame and the stirrup dropped, substantially as set forth.

2. The combination of a stirrup having horizontal side stops, a spring-cushioned face-frame connected thereto, means whereby the stirrup is detachably connected to its strap, and means, substantially as described, secured to the face-frame, whereby the stirrup is disconnected from the strap when the face-frame is pushed toward the stirrup, substantially as specified.

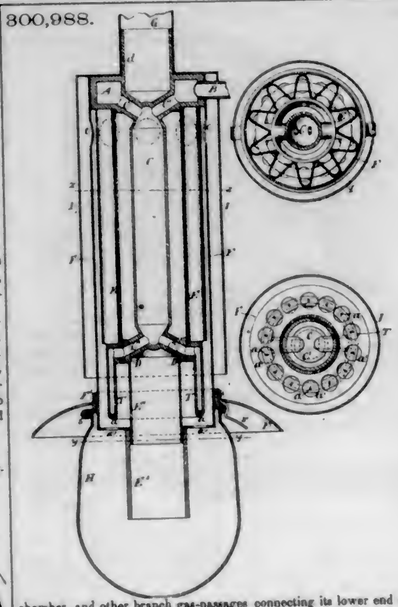
3. The combination of the stirrup-sections D D', hinged together at their base and overlapping at the top, a strap-eye formed of overlapping parts *n n'* at the spring-cushioned top of the stirrup, a spring-cushioned face-frame, A, connected to the base-plate of the stirrup and retained by side stops, *c c*, of the stirrup, a locking-pin, *d'*, passing through the overlapping top parts of the stirrup-sections, and a releasing-pin, *e*, at the upper end of the face-frame A, substantially as and for the purpose set forth.

4. The combination of the hinged and spring-actuated stirrup-sections D D', having fixed side stops, *c c*, and overlapping top parts, E E', having overlapping parts *n n'*, forming the strap-eye, a spring-cushioned face-frame, A, having a releasing-pin, *e*, at its upper part, a locking-pin, *d'*, applied to a transverse spring, *i*, of the overlapping part E', said locking-pin being in line with the releasing-pin of the face-frame, so as to unlock the overlapping parts E E' whenever the face-frame A is pressed back, substantially as described.

300,987. APPARATUS FOR CLOSING VESSELS, &c. EMIL LENNERT, Dresden, Saxony, Germany. Filed Mar. 11, 1884. (No model.)

Claim.—1. The combination, with a vessel, of arms which are constructed with heads on their outer ends, and radially movable between guides *l*, the upper plate, *a*, the lower plate, *b*, constructed with a convolute thread engaging with teeth on said radial arms, the bolt *c*, fixed to the lower plate, *b*, and a packing, all constructed and adapted to operate substantially as described.

2. The combination, with the cover of a vessel, of radially-movable arms, guided as described, and having grooved heads, a packing fitted into the outer ends of these heads and into a groove formed inside of the vessel, a bottom plate provided with a convolute thread on its upper side engaging with teeth on said arms, and a turning-bolt, *c*, rigidly connected to said plate, substantially as described.



3. The combination of radially-movable headed and toothed arms interposed between the cover *a* of a vessel, and a circularly-movable bottom plate having a convolute thread engaging with the teeth of said arms, a packing between the outer ends of the arms and the vessel, and means for connecting the cover and bottom plate and turning the latter, substantially as described.

300,988. GAS-BURNER. ANDREW B. LIPSKY, West Hoboken, N. J., assignor to William Bell, New York, N. Y. Filed June 6, 1883. (No model.)

Claim.—1. In a gas-burner, the combination of a downwardly-extending burner tip or tips, a flue or passage for conducting air thereto, and a flue or passage for conveying away the waste products of combustion, the exterior wall of the waste flue or passage and the inner wall of the air flue or passage being formed by a corrugated shell, substantially as specified.

2. In a gas-burner, the combination of a downwardly-extending burner tip or tips, an annular gas-chamber, a gas-passage, branch gas-passages connecting the upper end of said passage with said annular

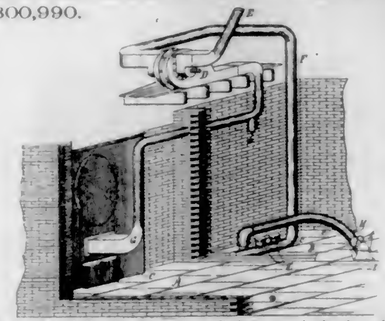
300,988.

chamber, and other branch gas-passages connecting its lower end with said burner tip or tips, and a flue or passage for conveying away the waste products of combustion, surrounding the main gas-passage from its upper to its lower end, substantially as specified.

3. In a gas-burner, the combination of a burner tip or tips, an air flue or passage surrounding the same, so that both air and gas will be caused to flow in the same direction, and a diaphragm extending across the air flue or passage beyond the burner tip or tips, and having perforations opposite the holes or apertures whence the gas issues from the burner tip or tips, substantially as specified.

300,989. APPARATUS FOR EMBALMING. ARTHUR S. LOVETT, Erie, assignor of one-half to Porter S. Ensworth, Waterford, Pa. Filed Oct. 23, 1883. (No model.)

Claim.—1. The combination, in a case for inclosing and embalming dead bodies, of a gas-tight bottom, B, with a flexible gas-tight cover, A, provided with a frame, B', secured to the lower edge thereof, adapted to be clamped to the bottom B or removed therefrom, the packing A' and clamps *b b'*, &c., all operating together, substantially as and for the purpose set forth.

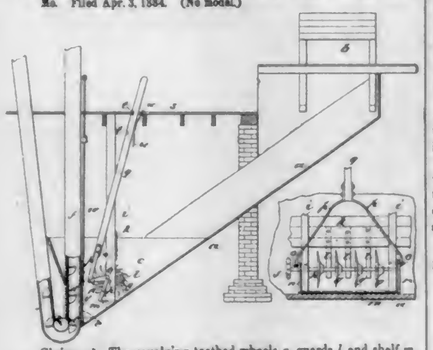


2. The combination, in a case for treating dead bodies, of the following elements: a bottom, B, mounted upon folding legs D D, a flexible gas-tight cover, A, arranged to be clamped to the bottom B, and means for supplying gas to and expelling the same from said case, all arranged and operating substantially as and for the purpose set forth.

3. The combination, with a gas-tight case for treating dead bodies, of the flexible cover A, the gas-tight bottom B, the packing A', the bellows J, the escape-cock *g'*, and escape-pipe G', all constructed and operating substantially as and for the purpose set forth.

300,990. APPARATUS FOR FEEDING SHAVINGS TO FURNACES. JAMES B. MAHAFFEY, Baltimore, Md. Filed Nov. 21, 1883. (No model.)

Claim.—1. An apparatus for feeding shavings to boiler-furnaces, which consists of a suction and forcing fan, a delivery-pipe leading from

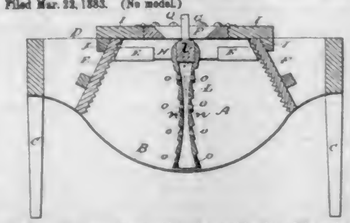


300,990.

the fan to the boiler-furnace, having a discharge-nozzle therein, and a main and supplemental supply-pipe for the fan, the said supplemental pipe having a scoop or shovel, substantially as and for the purpose specified.

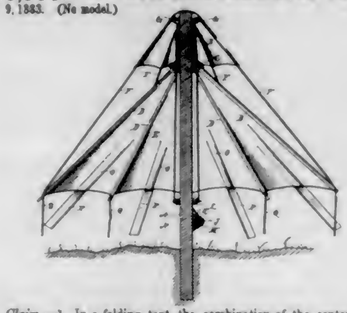
2. In a fuel-feeding device, the flexible supply-pipe H, having its central portion formed of metallic conical sections, placed one within the other and connected by an exterior sleeve of canvas, substantially as specified.

300,991. EAR-CORN FEED-REGULATOR. SAML. E. MARSH, Tarkio, Mo. Filed Apr. 3, 1884. (No model.)



Claim.—1. The revolving toothed wheels *g*, guards *l*, and shelf *m*, in combination with the chute *a* and the elevator *d f*, substantially as described.

2. The revolving toothed wheels *g*, guards *l*, bulk-head *k*, and the shelf *m*, in combination with the chute *a* and elevator *d f*, substantially as described.

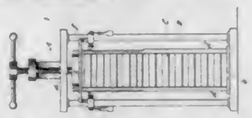


3. The shelf *m*, combined with the chute *a*, wheels *g*, and elevator *d f*, connected to the adjusting-bar *q*, with bell-cranks *n*, substantially as described.

300,992. WASHING-MACHINE. CHRISTIAN MARTIN, Goshen, Ind. Filed Mar. 22, 1883. (No model.)

Claim.—In a washing-machine, the combination of the suds-box A, provided with lugs E, the corrugated boards F, pivoted near the ends of the same, whereby they may rest against said lugs, the cover G, having cleats H, resting upon the lugs, the oscillating beater pivoted between the cleats H, the lids I, hinged to the ends of the cover, and having cleats J, adapted to confine and hold the pivoted board against the lugs, cleats K at the sides of the lids, and hooks R, as set forth.

300,993. TENT. STEPHEN MARVIN, Burnettsville, Ind. Filed Nov. 9, 1883. (No model.)



Claim.—1. In a folding tent, the combination of the center-pole, a ferrule at the upper end of the same, provided with an annular flange, ribs hinged to said flange, a cover secured to the said ribs, a sleeve or collar sliding vertically upon the center-pole, and ropes or cords attached to said sleeve or collar, passing through guide-openings in the flange of the ferrule and over pulleys at the upper end of the center-pole, and having their ends attached to the lower or outer ends of the ribs, substantially as set forth.

2. The combination of the center-pole, the hinged ribs, the cover secured to the said ribs, a sleeve or collar sliding vertically upon the center-pole, ropes connecting said collar with the lower outer ends of the ribs, said ropes passing over pulleys at the top of the center-pole, a shaft or reel journaled transversely on the center-pole below the sliding collar, and equipped with a crank or handle, ropes connecting said shaft with the said collar, and means for retaining the said shaft at any position to which it may be turned, substantially as set forth.

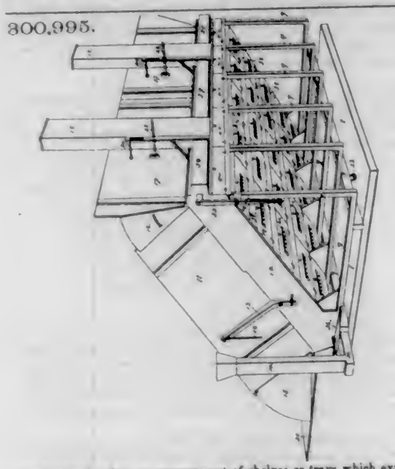
3. The combination of the center-pole, the hinged ribs provided with elevating mechanism, substantially as described, the cover secured to the said ribs, and provided with radial pockets, and brace-rods seated in the said pockets, substantially as and for the purpose set forth.

4. The combination of the center-pole, the hinged ribs provided with elevating mechanism, substantially as described, the cover secured to the said ribs, and a flexible cap or deflector secured to the top of the center-pole, and covering the joint between the latter and the cover, substantially as and for the purpose set forth.

300,994. CIGAR-PRESS. GEORGE MASSER, New York, N. Y. Filed May 6, 1884. (No model.)

Claim.—1. The mold-frame B, having ratchet-teeth formed on the outer edges of its upright bars *d d*, and provided with a follower, *f*, having downwardly-extending projections A, formed at its ends, which carry catches *i*, adapted, as described, to engage with said ratchet-teeth, as set forth.

2. In combination with the press A and mold-frame B, the follower *f*, perforated, as described, to receive the upper ends of the ratchet-toothed bars *d d*, and provided at each of its ends with a downwardly-extending ear, A, carrying a spring-actuated catch, *i*, having a handle, *l*, pivoted to the rear end thereof, the whole constructed as described, to operate in the manner set forth.



300,995. FRUIT-DRIER. WILLIAM A. MEEKER, San Francisco, Cal. Filed Jan. 9, 1883. (No model.)

Claim.—1. In a sun-drying apparatus, an inclined drying-chamber having a glass front, a reflector or system of reflectors arranged around it, and a series of trays inclosed within it, and drip-openings in the bottom of said drying-chamber, with regulating slides or gates for controlling them, substantially as described.

2. In a sun-drying apparatus, an inclined drying-chamber having a glass front, a reflector or system of reflectors arranged around it, and a series of trays inclosed within it, arranged so that each succeeding tier is higher and farther back than its predecessor, inlet and outlet flues and valves for regulating the circulation of air in said chamber, and drip-openings and slides or gates for controlling them, substantially as described.

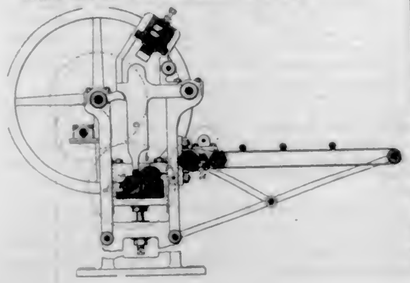
3. A sun-drying apparatus having combined in it a glass-covered chamber, a system of reflectors for concentrating the heat of the sun in

300,995.

the drying-chamber, an arrangement of shelves or trays which exposes all of the fruit to the rays of the sun, and a system of devices for creating and regulating a draft through the drying-chamber, all combined and operating substantially as described.

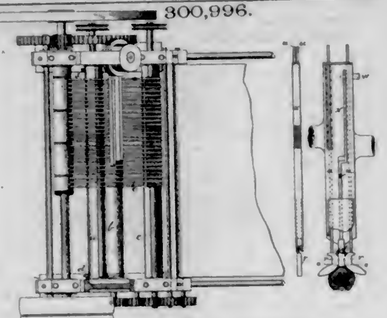
4. In a sun-drying apparatus, the combination of an inclosed glass-covered drying-chamber, the system of reflectors, and the flues provided with perforated slides for regulating the inlet and outlet of air, substantially as described.

5. In a sun-drying apparatus, the combination of an inclosed glass-covered drying-chamber, a system of reflectors, a system of devices for controlling and regulating a draft through the drying-chamber, and the arrangement of trays by which each succeeding tier of trays is placed farther back than its predecessor, whereby the material supported by all the trays is subjected to uniform heat, substantially as described.



6. The combination, in a sun-drying apparatus, of a system of reflectors, a system of devices for creating and regulating a draft through the drying-chamber, and an inclosed glass-covered drying-chamber colored black on the bottom and sides, all constructed, combined, and operating substantially as described.

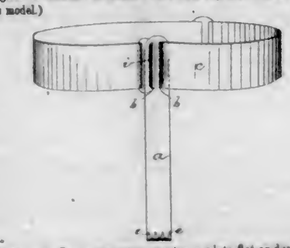
7. In a sun-drying apparatus, the combination of an inclosed glass-covered drying-chamber with a system of reflectors, a system of devices for creating and regulating a draft through the drying-chamber, and adjustable drip-openings in the lower part of the chamber, all combined and operating together, substantially as herein described and set forth.



8. In a sun-drying apparatus, the combination of an inclosed glass-covered drying-chamber with a system of reflectors, a system of devices for creating and regulating a draft through the drying-chamber, adjustable drip-openings in the lower part of the drying-chamber, and the auxiliary heating-chamber 30, all combined and operating substantially as herein described.

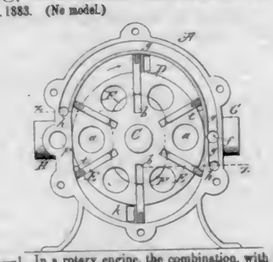
9. In a sun-drying apparatus, the combination of a glass-covered drying-chamber with a system of reflectors, a system of devices for creating and regulating a draft through the drying-chamber, adjustable drip-openings in the lower part of the drying-chamber, and a stove and heating-pipe, all combined and operating substantially as herein described.

300,996. BARK-PEELING MACHINE. FRANZ MERDIGER, Trier, Prussia, Germany. Filed Nov. 3, 1882. (No model.)



300,996.

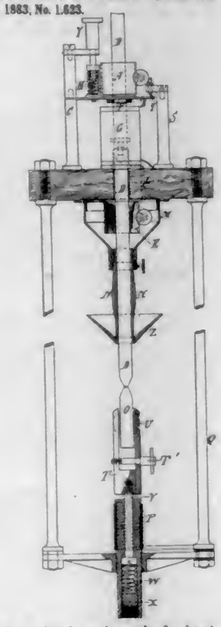
Claim.—In a bark-peeling machine, the combination of the rollers *a b c*, supported in suitable frame-work, and driven by suitable power, mechanism, substantially as described, for delivering the logs to the roller *c*, the projection on said roller adapted to throw the log to the rollers *a* and *b*, mechanism for operating on the bark of the log while being rotated by the revolution of the rollers *a b*, and the projection on the roller *a*, for removing the log when peeled, substantially as described.



300,997. GARMENT-SUPPORTER. ESENS METHOT, Boston, Mass., assignor of one-half to Homer Methot, same place. Filed Apr. 12, 1884. (No model.)

Claim.—1. In a garment-supporter, a plate flat or devoid of projections on its back side, and provided at one end with teeth or points which are bent upwardly and extend substantially parallel with the front of the plate, whereby the plate is adapted to be placed between the stocking and the limb of the wearer with the teeth engaged with the stocking, and provided with means for attaching a strap, substantially as described.

2. A garment-supporter composed of the elongated plate *a*, having longitudinal slots *b b* at one end, adapted to receive a garter, and teeth *c c* at its other end, bent upwardly and standing substantially parallel with the body of the plate, as set forth.

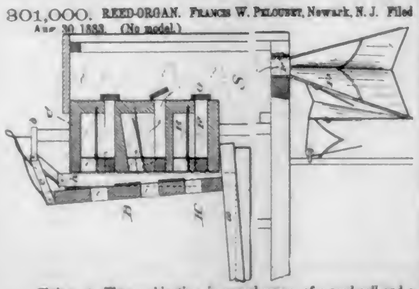


300,998. ROTARY ENGINE. JOHN MOFFET, New York, N. Y. Filed Sept. 27, 1883. (No model.)

Claim.—1. In a rotary engine, the combination, with a vertically-elongated shell or casing having steam inlet and exhaust passages formed in the ends and sides, of stationary cams secured to the inner sides of the casing-heads, a shaft passed through the center of said cams and journaled in the casing-heads, a slotted cylinder secured to said shaft, and sliding piston-blades supported in said cylinder with their ends bearing against the cams, substantially as described.

2. In a rotary engine, the combination of the shell A, having steam-inlet passages G *f g h i* and exhaust-passages *k k m m t t p* H, the stationary cams F F, shaft C, cylinder D, and sliding piston-blades E E, substantially as described.

300,999. ARC LAMP. FRANCIS MURRAY NEWTON, Belfast, County of Antrim, Ireland. Filed Nov. 28, 1883. (No model.) Patented in England Mar. 31, 1883, No. 1,623.



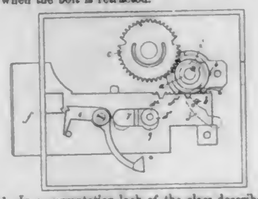
Claim.—1. In an electric-arc lamp, the fixed carbon-holder E, provided with fingers, feelers, or wires set in a foundation of metal, leather, or india-rubber, or other suitable material, and a suitable adjusting device, such as shown, whereby the hold upon the carbon is increased or diminished, substantially as described.

2. In an electric-arc lamp, the combination of an electro-magnet or solenoid whose circuit is closed or short-circuited whenever the device makes its stroke, with the vibrating or reciprocating device A, formed of elastic fingers, as described, and the fixed braking carbon-holder of the same kind, substantially as described.

3. In an electric-arc lamp, the combination of the spring H, provided with an adjusting-screw, Y, carbon-holder A, pivoted arm B, contact-piece I, column S, electro-magnet G, fixed carbon-holder E, casing M, contact-springs N N, and dust-cap Z, substantially as described.

4. In an electric-arc lamp, the spring H, pivoted arm B, vibrating carbon-holder A, electro-magnet G, and stationary carbon-holder E, substantially as described.

301,000. REED-ORGAN. FRANCIS W. PELOUBET, Newark, N. J. Filed Aug. 20, 1883. (No model.)



Claim.—1. The combination, in a reed-organ, of a reed-cell and a palette actuated by the key, and provided with an opening, through which the reed may be drawn, all substantially as herein set forth and shown.

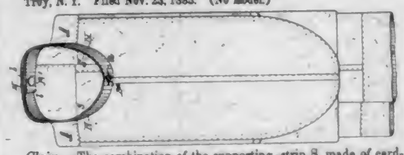
2. The combination, in an organ, of a series of reed-cells arranged in a line with a palette connected to the key or pieces A' at one end, and to a stationary piece or part at the other, said palette having an oblique movement, all substantially as and for the purposes set forth and shown.

3. The combination, with a series of cells and reeds, of a palette having an oblique movement to and from said series of reeds, and having a series of openings, through which the reeds may be drawn when the palette is open, substantially as herein set forth and shown.

301,001. PERMUTATION-LOCK. OLIVER E. PILLARD, Cambridge, Mass. Filed Sept. 2, 1882. (Model.)

Brief.—The spindle is locked, so that the key cannot be removed from the lock when the bolt is retracted.

Claim.—1. In a permutation-lock of the class described, the combination, with the key, key-spindle, and bolt, of a pivoted locking-dog to engage the said key-spindle, and means, substantially as described, on the bolt, whereby, when the bolt is moved, the said locking-dog is operated to be engaged with or disengaged from the key-spindle, as set forth.



2. In a permutation-lock, the gears operated by the key-spindle, and bolt-controlling gears meshing therewith, combined with the disengaging device for the said gears, consisting of the notched disk engaging the spindle of the said gears, and adapted to be rotated by a wrench or key, substantially as described.

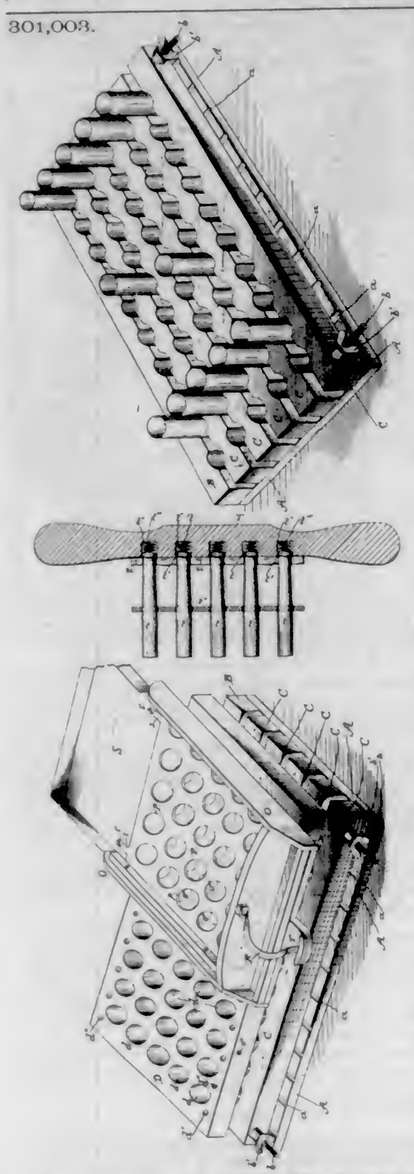
3. The key-spindle and locking-dog *j* therefor, combined with the lock-bolt provided with a stud, whereby the said locking-dog is disengaged from the key-spindle in the forward movement of the said bolt, substantially as described.

4. The key-spindle, gears actuated thereby, and bolt, combined with the locking-dog *j*, for the said spindle, operated by the movement of the bolt, and a disengaging-disk for the said gears independent of the bolt, substantially as described.

5. The combination, in a lock of the class described, of the gears operated by the spindle and the bolt-controlling gears, with the disengaging-disk *m*, notched to receive the spindle of the said bolt-controlling gears, and the holding device for the said disk, whereby the said gears are retained in either the connected or disconnected position until positively moved therefrom, substantially as described.

301,002. SUPPORT FOR SHIRT-NECKBANDS. GEORGE W. PINE, Troy, N. Y. Filed Nov. 23, 1883. (No model.)

Claim.—The combination of the supporting-strip S, made of cardboard or bonnet-board, and bent to have the lapping ends *l l*, when inserted within the neck-opening of the shirt, the openings O^2 O^3, made through said lapping ends, the opening O', made in the front of the bent strip, and the stud-buttons B' and B^3, adapted to connect said strip with the neckband at the front and back, in the manner and for the purposes herein set forth.



301,003. CARTRIDGE-LOADING MACHINE. ROBERT POOLE, New Providence, Tenn. Filed Jan. 7, 1884. (No model.)

Claim.—1. In cartridge-loaders, the combination of the base-board A, having straight parallel grooves *a* in its upper surface, the slat B, fixed to the top and edge of said base-board, and having screw-bolts *b* projecting therefrom, and thumb-nuts *b'* at the ends of such bolts, and the movable slats C, threaded and sliding upon the aforesaid screw-bolts, all substantially as and for the purposes described.

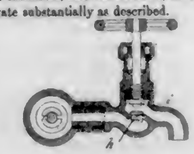
2. The wad-starting plate herein described, having the orifices *d* flared at the under side to fit readily upon the edges *c'* the cartridge-shells, and flared toward the upper side of the plate, as shown, the said wad-starting plate having also the annular seat *d'* near the middle circumference of each orifice, for the better reception and guidance of the charges of powder and shot, all as herein set forth, for the purposes described.

3. The wad-rammer herein described, having ramming-posts *l*, provided with caps *l'*, which fit loosely into sockets *l''*, and bear against spiral springs *l'''* in the heads of said sockets, said posts being held in the sockets by the yokes *u*, and made rigid by the collar *v*, all substantially as herein described.

301,003.

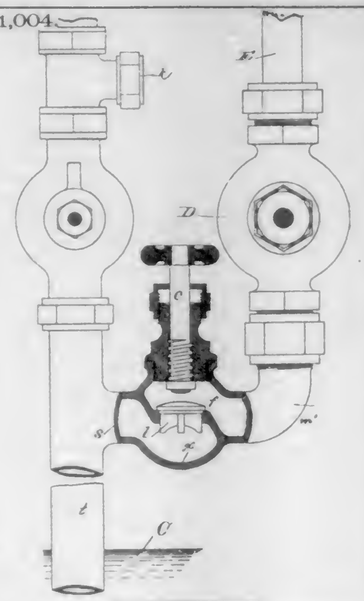
4. In cartridge-loaders, the combination of the wad-tray O, having the strip *o*, orifices *o''''*, and the lip *r*, the cut-off P, having flared orifices *p*, co-operating with the orifices *o''''*, the bow-spring R, bearing against the lip of the wad-tray and the lug *r'* of the cut-off, and the trough S at the lower end of the wad-tray, provided with notches *s*, to fit upon the buttons *s'* to hold the trough in place upon the tray, all substantially as and for the purposes described.

5. In cartridge-loaders, the combination of the hopper herein described, divided by the partition-wall *e*, supported by flanges *e'*, and discharging its contents through orifices *e''*; the cut-offs G beneath the hopper, provided with orifices *g* to discharge the powder and shot from the hopper, flanges *g'* to aid in the longitudinal movement of said cut-offs, and eyes *l* for the entrance of the thumb-screws hereinafter mentioned, and carrying brackets *h'* to form bearings for the cut-off springs of the hopper; the corrugated rubber plate I between the hopper and the cut-offs, having orifices *i*; the slats K beneath the cut-offs, to increase the charges, provided with orifices *k* to discharge the loads into the shells, and eyes *k'* for the reception of the herein-mentioned thumb-screws; the thumb-screws L, working through the flanges of the cut-offs, to unite the cut-offs and perforated slats when deeper charges are required; the thumb-screws M, working upward through the platform-floor hereinafter mentioned, to hold in place the slats not united to the cut-offs; the platform F, bearing the walls *f*, which support the hopper and inclose the cut-offs, the partition *y*, which keeps the two cut-offs a proper distance longitudinally apart, and the clamps *h*, which receive and support the cut-off springs, said platform having orifices *f''* to discharge the loads passing from the hopper to the shells, and eyes *m* for the reception of the thumb-screw M, hereinbefore mentioned, and being further provided with guide-strips *f'''* on the under side; the orificed step N upon the said platform, to compensate for the greater depth of the cut-off used for measuring powder as compared with that used for measuring shot; and the spiral springs H, to restore the orifices of the cut-offs to a correspondence with those of the hopper as soon as a charge has been cut off and passed on to the cartridge-shells, all substantially as and for the purposes described.



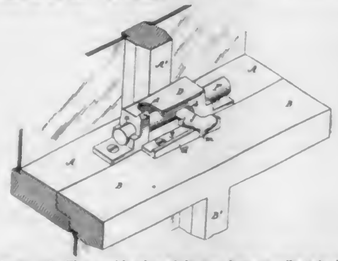
6. The combination, in a cartridge-loading machine, of the base-board A, having surface grooves *a*, and bearing the fixed slat B, provided with screw-bolts *b*, upon which are movable slats C, held in adjustment by the thumb-nuts *b'*; the wad-plate D, having orifices *d* flared at the upper and under sides of the plate, and provided with an annular seat, *b'*, near the middle circumference of each orifice; the hopper E, divided lengthwise by the partition *e*, supported by flanges *e'*, and having flared discharge-holes *e''*; the cut-offs G, co-operating with the hopper to measure and discharge the loads, having discharge-holes *g*, flanges *g'* to assist in moving the cut-offs and to connect them to adjustable false bottoms designed to increase their capacity; eyes *l* for the reception of the bolts securing the false bottoms, and brackets *h'* for the springs which restore correspondence between the discharge-holes of hopper and cut-offs; the corrugated rubber plate I, interposed between the contact-surfaces of hopper and cut-offs to lessen friction of the powder and avoid jamming the shot during the cut off of a charge, and having orifices *i* corresponding to those of hopper and cut-offs; the slats or false bottoms K, to increase the depth of the cut-offs, provided with discharge-holes *k* and eyes *k'* for the reception of the screw-bolts attaching said slats to the cut-offs; the thumb-screws L and M, to attach and detach the false bottoms to and from the cut-offs; the platform F, bearing the hopper-walls *f*, the guide wall or partition *y* between the cut-offs, and the clamps *h*, which hold the cut-off springs, and having eyes *m* for the reception of the screw-bolts which hold the false bottoms to the platform when not attached to the cut-offs, discharge-holes *f''* and guide-strips *f'''* on the under side; the step F, erected upon the platform, and having orifices corresponding to those of platform and cut-offs; and the spiral springs H, which restore the cut-offs to their place beneath the hopper when a charge has been measured and discharged, all substantially as and for the purposes described.

301,004. INJECTOR. JOSEPH REICHMANN, Chicago, Ill. Filed Mar. 1, 1884. (Model.)



Claim.—1. The combination, with an injector, of an ejector communicating directly with the overflow and water-supply passages of the said injector, whereby the air is drawn from the overflow-chamber through the combining-tube, and also from the water-supply pipe, substantially as described, and for the purpose set forth.

2. The combination, with an ejector, of an injector, with the overflow and water-supply passages of which the said ejector has direct communication, to draw the air from the overflow-chamber through the combining-tube, and also from the water-supply pipe, said injector being constructed to effect the sealing of the communication between the overflow-chamber of the said injector and the said ejector by the passage of a jet of steam from the receiving tube or nozzle of the said injector through the combining-tube of the same, substantially as described.



3. The combination, with an injector, of an ejector communicating with the overflow and water-supply passages of the said injector, and comprising, in combination, the following elements, viz: a casing having a steam-chamber, *p*, and vacuum-chamber *g*, steam-pipe E, connecting the ejector with the boiler, nozzle *o*, pipe *i*, to afford communication between the injector and feed-water supply, T-branch *s*, for connecting the ejector to the injector, chambers *x* and *f* within the T-branch *s*, valve *l*, between the said chambers, and valve-stem *c*, all being constructed and arranged to operate substantially as described.

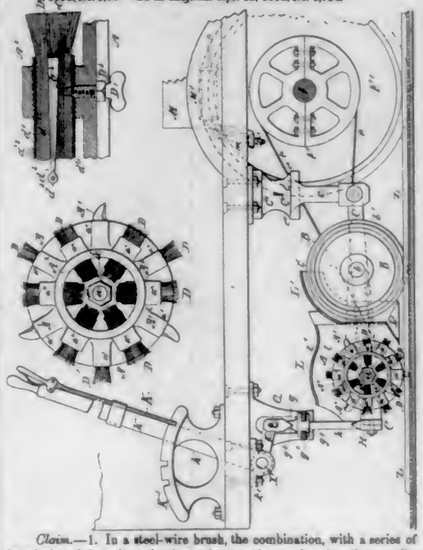
301,004.

301,005. SASH-FASTENER. JACOB D. REIFF, Skippackville, Pa. Filed Feb. 20, 1884. (No model.)

Claim.—1. The combination of the two bars or rails to be locked, with a casing, D, secured to one rail, and having recesses *b* and *d*, and with the bolt F, guided in the casing parallel with the edge of the rail, and having a projection, *f*, adapted to overlap and lock the other rail, as set forth.

2. The combination of a casing, D, having recesses *b* and *d*, with a longitudinally-inclined flange, G, and the bolt F, guided in the casing, and having a projection, *f*, overlapping the rail B, and having a lug, *m*, for engagement with the flange G, as set forth.

3. The combination of the rail A, having a casing, D, with recesses *b* and *d*, the rail B, having a flange, G, with inclined upper edge, and the bolt F, guided in the casing D, and having a projection, *f*, overlapping the rail B and its flange, as set forth.



4. The combination of the rails A B, the casing D, secured to the rail A, and having recesses *b* and *d* and lug *n*, and the bolt F, guided in the casing, and having a projection, *f*, with a lug, *i*, adapted to engage with the lug *n*, as set forth.

301,006. ART OF MANUFACTURING FERMENTING MATERIALS. FRIEDRICH ADOLF RIEHLEN, Stuttgart, Würtemberg, Germany. Filed Oct. 24, 1883. (Specimens.)

Claim.—1. As a new article of manufacture, a ferment composed of a foundation of a vegetable fiber and of a deposit of fungoid growths formed on said foundation.

2. The within-described process for producing fermentation fibers by covering a vegetable foundation with a portion of the liquid for which the fermentation fiber is to be used, and then exposing such covered fiber to the atmosphere, substantially as set forth.

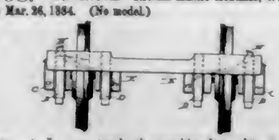
301,007. MACHINE FOR CLEANING TRAM-RAILS. JOHN REMFRY, Calcutta, India. Filed Dec. 4, 1882. (No model.) Patented in India Dec. 1, 1881, No. 1,008, and in England Apr. 12, 1882, No. 1,734.

Claim.—1. In a steel-wire brush, the combination, with a series of bunched and bound steel wires, of a tapering wedge forced centrally through said bunch of bound wires, and having its upper end bent over the bound end of the brush.

2. In a steel-wire brush, the combination, with a series of bunched and bound wires, of the wedge made tapering longitudinally, and of triangular form in cross-section, adapted to be forced centrally through the tied part of the wires and its projecting end bent over, as and for the purpose specified.

3. In a steel-wire brush, the combination, with a series of bunched and bound wires, of a wedge made tapering longitudinally, and terminating at its taper end in a loop or eye, as and for the purpose specified.

4. The wheel A, having an annular flange or boss, A^3, provided with a series of peripheral openings, and the brushes D, in combination with the pointed set-screws D′, substantially as and for the purpose specified.

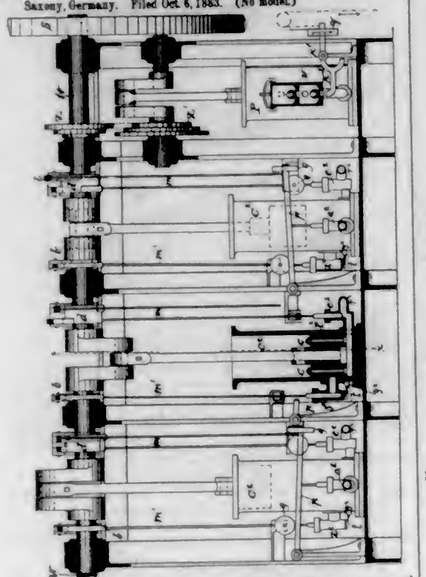


5. The wheel A, having an annular flange, A^3, provided with a series of peripheral openings, and the brushes D, in combination with the pointed set-screws D′ and the check-nuts D^2, arranged for co-operation substantially as and for the purpose specified.

6. The wheel having a series of peripheral openings, and an annular flange, A^3, provided with like openings, the scrapers or cutters A′, and the brushes D, of the set-screws D′, and the check-nuts D^2, all arranged for co-operation on a grooved track or tramway, as described.

7. The combination, with the scraper and brush-wheel and the trailing or guide wheel, of a casing, L L′, constructed substantially as described, and adapted for vertical and lateral movement with the said wheel, as and for the purpose specified.

8. The combination, with the scraper and brush-wheel, of a casing composed of a semi-cylindrical portion, L, a deflector, and covering-plate L′, having foot-piece L^2 and slanting sides, substantially as and for the purpose specified.



301,008. CAR-TRUCK. THOMAS HENRY ROBERTS, Wilmington, Del. Filed Mar. 26, 1884. (No model.)

Claim.—1. In a car-truck, the combination, with the truck-frame provided with the longitudinal beams B, having the pedestals C, equalizing-bars F, coil-springs G, and extra boxes E, of the divided axles having journals A, and the inner boxes, E, having the oil-receptacle H on the outside of the truck-frame, connected to the inner box by a feed-tube, substantially as specified.

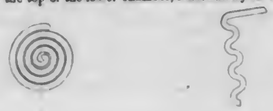
2. In a car-truck, the combination, with the inner extra boxes, E, of the oil-receptacle H on the outside of the truck-frame, connected to said inner box by a feed-tube, substantially as specified.

301,009. GAS-ENGINE. FRIEDRICH WILHELM RACHEOLS, Dresden, Saxony, Germany. Filed Oct. 6, 1883. (No model.)

Claim.—1. In gas-motors, the combination, with an air-pump and one or more engines, constructed substantially as described, of the hot-water tank G, the reservoirs G′ G^2, the gas-holder pipes forming communications between the same, the pipes communicating with the engine, their automatic valves, and a gas-pipe communicating with the reservoir G^2, and terminating in a burner near the inlet-valve r^2 to the piston-cylinder C^2, substantially as described.

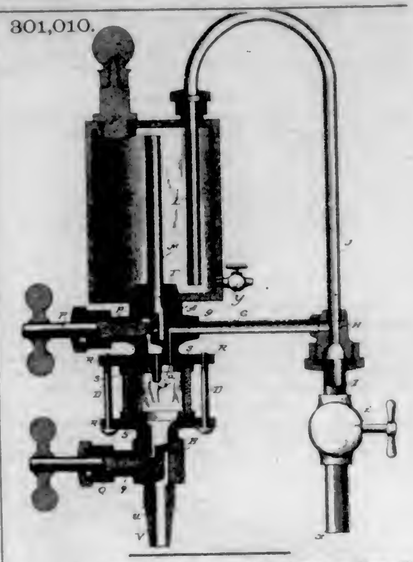
2. In combination, gas-generators and a gas-holder, and a hot-water tank, G, therefor, the pipes O *r y*, provided with valves, one or more engines, and an air-pump, all constructed and adapted to operate substantially as and for the purposes described.

3. The combination, with the air-pump valve *v*, of the forked lever K′, the counterbalancing-weight *q* on one arm of this lever, the chain and pulleys, the weight Q, and the vertically-movable hood of the gas-holder, all constructed and adapted to operate substantially in the manner and for the purposes described.



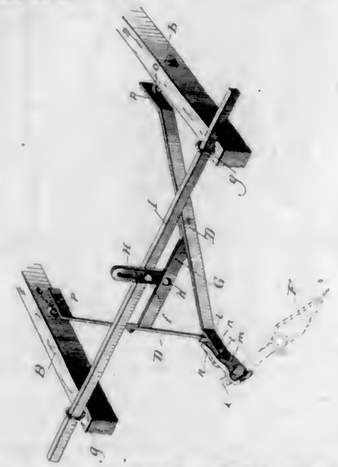
4. The combination of one or more engines, pipes r r^2 u^2 *u*, communicating with these engines, and an explosive-gas-making apparatus in a warm-water tank, automatic-working valves applied to these pipes, and a gas-jet pipe communicating with the reservoir G^2, substantially as described.

5. The combination, with the gas-motors, the gas-generators, and the communicating pipes, of the air-engine, the crank-shaft thereof, the crank-shaft W, and the stepped-cone pulleys Z Z′, all constructed and arranged substantially as described.



301,010. LUBRICATOR. PHILIP L. SCHMITT, Quincy, Ill. Filed Apr. 12, 1884. (No model.)

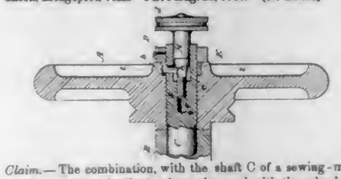
Claim.—1. The oil cup or reservoir having an induction-pipe for the steam and the escape-pipe for the overflow of oil, in combination with the lower chamber, having the glass-wall passages, as described, leading thereto with proper valves, and leading also to the steam-pipes, and the live-steam pipe G, all substantially as described.



2. The upper fitting, A, having an extension, T, for connection with the reservoir, an extension, *p*, for the valve, and one for the pipe G, and a lower part formed with grooves S, and the ears R, whereby it is adapted to form the top of the lower chamber, substantially as described.

301,010.

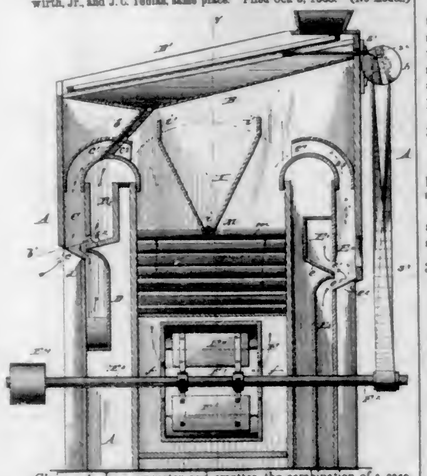
301,011. CULTIVATOR. CHRISTOPHER L. SCHOENSTEDT, Monee, Ill. Filed Feb. 14, 1884. (No model.)



Claim.—1. A central share for attachment to a cultivator, to extend behind the side shares, in combination with mechanism, substantially as described, for connecting the said share flexibly to the said cultivator, whereby the central and side shares may be raised and lowered together by the simultaneous operation of both levers of the side beams, but whereby the independent vertical movements of the share-carrying side beams shall not be prevented, as set forth.

2. The combination, with the share-carrying side beams of a cultivator, of a central share extending behind the side shares, and mechanism for connecting the said central share flexibly to the said side beams, whereby the central and side shares may be raised and lowered together by the simultaneous operation of both levers of the side beams, but whereby the independent vertical movements of the said side beams shall not be prevented, substantially as described.

3. A central share, F, for attachment to the share-carrying side beams of a cultivator, and to extend behind the side shares, in combination with the frame D, bolder *m*, secured to the said frame, and provided with an opening to receive the central share, F, brace G, slotted upright bar H, secured to the said brace, transverse bar I, adjustably secured to



the slotted upright bar H, mechanism upon each side beam, B, of the cultivator, to receive the bar I and permit a longitudinal sliding movement of the same, and mechanism for flexibly securing the frame D to the side beams, B, all being constructed and arranged to operate substantially as described.

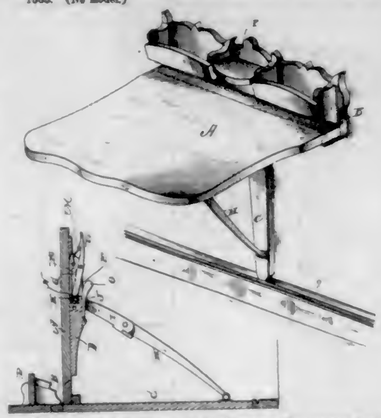
301,012. CLUTCH FOR SEWING-MACHINE WHEELS. JEROME B. SIGOR, Bridgeport, Conn. Filed Aug. 22, 1883. (No model.)

Claim.—The combination, with the shaft C of a sewing-machine, having a threaded longitudinal end opening, and with the wheel A, confined to turn on the shaft without sliding, of a split ring, E, arranged between the shaft and wheel, a wedge-ended pin, *i*, extending through a radial opening in the shaft and between the ends of the ring, and a screw-pin, H, having a tapering portion, *h*, all substantially as set forth.

301,013. SEPARATOR AND SMUTTER. WILLIAM N. SHARPNACK and MICHAEL MCMAHON, Bucyrus, Ohio, assignors of one-half to G. Donnenwirth, Jr., and J. C. Tobias, same place. Filed Oct. 3, 1883. (No model.)

Claim.—1. In a separator and smutter, the combination of a case, A, having separating-chambers opening into the case, an equalizing-valve pivoted in said case between the openings of the separating-chambers, and a suction device, substantially as described.

2. In a separator and smutter, the combination of a case, A, having separating-chambers opening into the case, shelves or plates placed below the openings of the separating-chambers, a fan, and a fan-case immediately below or under said shelves or plates, having openings at each end, substantially as described.



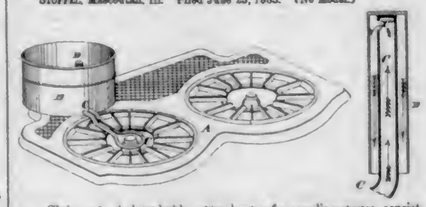
3. In a separator and smutter, the combination of a case, A, having separating-chambers opening into the case, shelves or plates below the openings, a fan, and a fan-case extending longitudinally below and parallel with the shelves, and open at each end, substantially as described.

4. In a separator and smutter, the combination of a case, A, having separating-chambers opening into the case, a wedge-shaped equalizing valve pivoted between the separating-chambers, and a suction device, substantially as described.

5. In a separator and smutter, the combination of a case, A, having separating-chambers opening into the case, a wedge-shaped equalizing-valve having its ends bent, substantially as shown, and a suction device, substantially as described.

6. In a separator and smutter, the combination of a case, A, having separating-chambers opening into the case, shelves or plates placed below the openings of the separating-chambers, a fan and a fan-case immediately below or under said shelves or plates, and having suitable openings for sucking and expelling the air, substantially as and for the purpose described.

301,014. DESK. DAVID SHULER, New Dover, Ohio. Filed Oct. 23, 1883. (No model.)



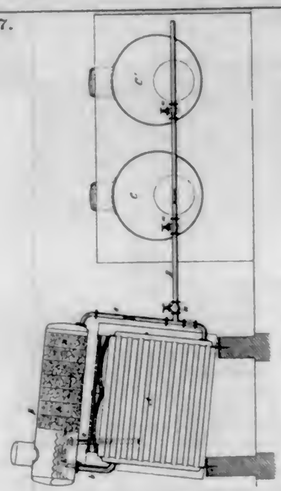
Claim.—As an improvement in leaf-supports, the combination, with the wall-bracket, of the hinged drop-leaf, a support for the same constructed of two hinged sections, a rail, D, under the drop-leaf, provided with a recess, E, a pin extending laterally from the upper supporting-section, I, into the recess, a spring-latch, L, engaging with the said pin, and a hinged latch, O, engaging the upper supporting-section, so as to prevent the support from folding, as set forth.

301,015. FILTERING COMPOSITION. RICHARD M. SOMMERS, Philadelphia, Pa. Filed Aug. 27, 1883. (No specimens.)

Claim.—1. A filtering composition in which are combined phosphate of lime and animal charcoal, substantially as and for the purposes specified.

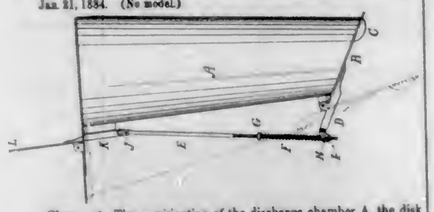
2. A filtering composition consisting of gravel, white bar-sand, animal charcoal, and phosphate of lime, in or about the proportions specified.

301,016. WATER-HEATER FOR GASOLINE-STOVES. JULIUS W. STOFFEL, Mascoutah, Ill. Filed June 23, 1883. (No model.)



Claim.—1. A detachable water-heater for gasoline-stoves, consisting of a vessel to rest on or off the stove, a pipe extending from the side of the vessel, down beneath the surface of the stove, to, around, and from the burner, and back, upward, and then through the side of the vessel, and finally upward to form a straight vertical portion closed at top, having a perforation in its side, the whole constructed and arranged substantially as shown and described, as and for the purpose set forth.

2. A water-heater for gasoline-stoves, consisting of a vessel to rest on or off the stove, a pipe extending from the side of the vessel to, around, and from the burner, having upturned discharge end, and a tube having closed upper end, and placed over the discharge end to conduct the discharge to the lower part of the vessel, as set forth.



301,017. HEATING AND FEEDING WATER TO STEAM-BOILERS. HEINRICH STOLLWERCK, Cologne-on-the-Rhine, Prussia, Germany, assignor to Gebr. Stollwerck, same place. Filed Feb. 13, 1884. (No model.)

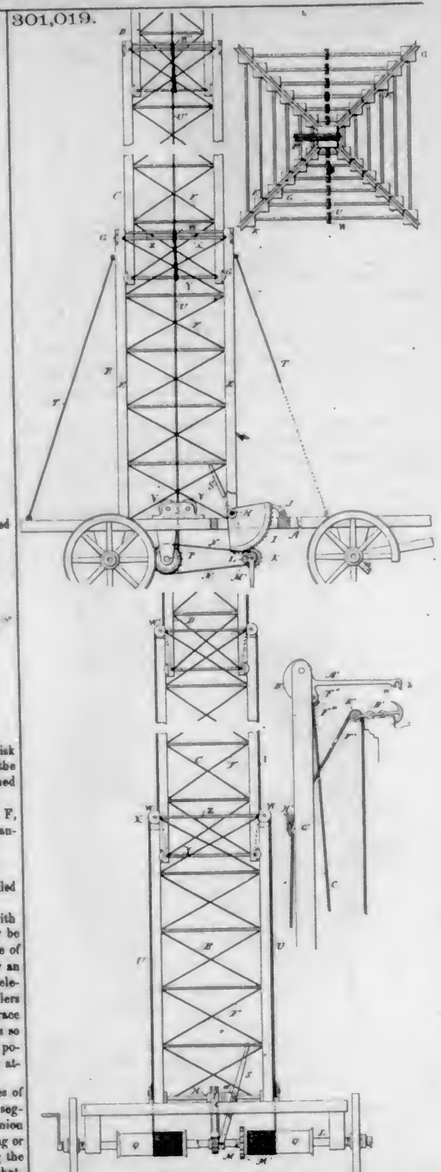
Claim.—The combination, substantially as herein described, of the high-pressure boiler A, and the low-pressure boiler or boilers connected with the lower part of the former, with the filtering-chamber B, for receiving the feed-water, a connection, *c*, between one end of the filtering-chamber and the lower part of the high-pressure boiler, and a connection, *b*, between the upper part of the latter and other end of the filtering-chamber, for the passage of steam and hot water into the filtering-chamber to force the feed-water through the latter to the high-pressure boiler, the combination being to feed the low-pressure boiler or boilers from the high-pressure boiler with feed-water free from incrustation, substantially as described.

301,017.

301,018. DRY CLOSET. FREDERICK F. STREET, Hartford, Conn. Filed Jan. 21, 1884. (No model.)

Claim.—1. The combination of the discharge-chamber A, the disk B, the lever D, the rest H, the spring F, the rod E, furnished with the nuts G and I, and the seat-lid L, furnished with the arm K, all combined and operating together substantially as described.

2. The combination of the rod E, the nuts G and I, the spring F, the rest H, and the lever D, and means for operating the same, substantially as described.

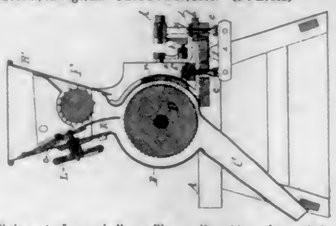


301,019. FIRE-ESCAPE. B. FRANK TEAL, Philadelphia, Pa. Filed Apr. 3, 1883. (No model.)

Brief.—A segmental gear secured to the lower section gears with a pinion on one shaft provided with a clutch mechanism that may be either connected to the said pinion and segment, to adjust the angle of inclination of the structure, or with a sprocket-wheel connected by an endless chain to another sprocket-wheel on the shaft carrying the elevating-rope drums, by which the sections are extended. Guide-rollers are so set into the ends of the posts of the sections as to directly embrace the edges of the posts of the next inner section. A swinging lever is so pivoted to the top of the structure as to be swung from its hanging position on one side over to the other side, carrying and securing an attaching-hook and rope-pulley.

Claim.—1. The combination of the supporting-truck, the series of telescopic sections, the lowest section being hinged to the truck, the segmental gear connected with the lowest section, the shaft carrying a pinion to mesh with the gear, and a sprocket-wheel, the ropes for elevating or projecting the sections, the shaft provided with a drum for carrying the ropes, and with a sprocket-wheel, a chain connecting the two sprocket-wheels, and the clutch for connecting with the pinion and sprocket-wheel on the same shaft, substantially as and for the purposes set forth.

2. The combination of the series of sliding sections, means for elevating the sections, a swinging lever pivoted to the top section, and adapted to hang perpendicularly on one side, and to be swung to the other side of the section, and means for swinging the lever, substantially as and for the purpose set forth.

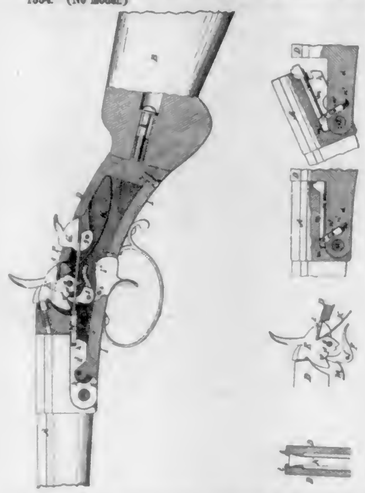


3. The combination of the series of sliding sections, means for elevating or projecting the sections, a lever hinged to the top section, having a curved arm at one end and a hook at the other end of the form described, having the barb *b*, and means for swinging the lever, substantially as and for the purpose set forth.

4. The combination of the series of telescopic sections, means for elevating or projecting the sections, a lever hinged to the top section, having a curved arm at one end and hook of the form described at the other end, a grappling-hook and its rope suspended from the hook end of the lever and from a hook on the top section, and means for swinging the lever, substantially as and for the purpose set forth.

5. The combination of the series of telescopic sections, means for elevating or projecting the sections, and the grooved guide-rollers set into the ends of the posts composing one section, so as to embrace the edges of the posts composing another section, substantially as and for the purpose set forth.

301,020. PORTABLE GRINDING-MILL. REINHOLD WAAK and CARL JAEGER, Chicago, Ill. Filed Nov. 27, 1883. (No model.)



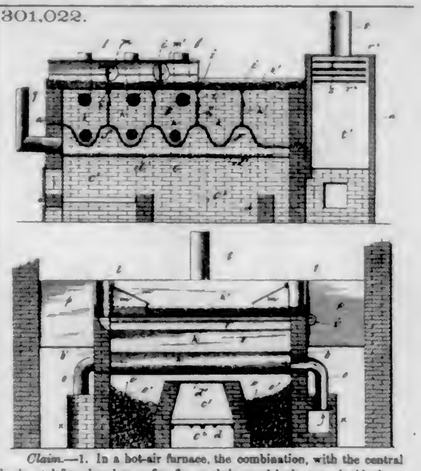
Claim.—1. In a grinding-mill, an adjustable casing and feed-hopper, the former provided on its inner surface with a toothed section, in combination with feed and grinding rolls, and means for revolving said rolls for regulating the feed and for adjusting the casing with respect to the grinding-roll, as and for the purpose described.

2. The casing B, provided with toothed section *n*, and hopper B', provided with plate K, in combination with rolls D F, means for adjusting casing B with respect to roll D, means for adjusting plate K with respect to roll F, and means for revolving said rolls, as described and shown.

3. The casing B, provided with toothed section *n*, in combination with bracket *g*, hand-wheel *i*, shaft *h*, rod *k*, cranks *l j*, screws *m*, and suitable bearings on the casing and roller boxes, as and for the purpose set forth.

301,021. BREECH-LOADING FIRE-ARM. THOMAS M. WALLER, Philadelphia, Pa., assignor to William Wurflein, same place. Filed Mar. 17, 1884. (No model.)

Claim.—1. The combination of the frame D, the barrel A, pivoted thereto, and having a notched block, *h*, the sliding bolt H, the pivoted lever G, and the connecting-link P, adapted to a slot in the lever, as set forth.

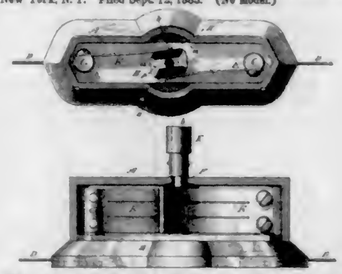


2. The combination of the sliding locking-bolt H and trigger-lever F with the spring M, common to both, as specified.

3. The combination of the pivoted barrel A, having a sliding ejector-rod, *m*, with the fixed frame D, having a yielding push-pin, *n*, located as described in respect to the ejector-rod and the pivot of the barrel, whereby as said barrel is opened the ejector will first be thrust outward by, and will then pass from under the control of, the push-pin, as set forth.

4. The combination of the hammer and hammer-spring acting directly thereon, with the frame D, having shoulders *t*, which by contact with the upper end of the spring arrest the same before the hammer reaches the limit of its downward movement, as specified.

301,022. WARM-AIR FURNACE. JOHN WALSH, Newton, Iowa. Filed Oct. 20, 1883. (No model.)



301,022.

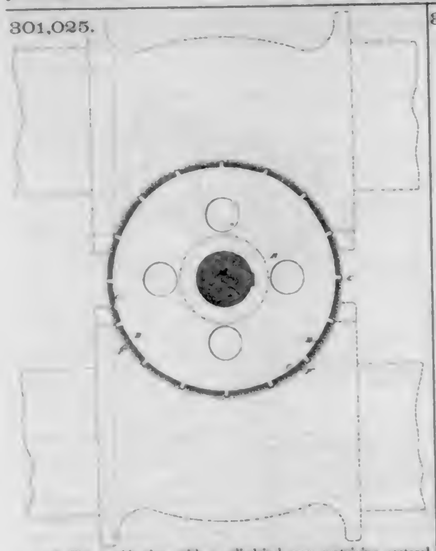
Claim.—1. In a hot-air furnace, the combination, with the central horizontal fire-chamber or fire-flue, and the sand-beds on each side, having return-flues above them, of the heating-chamber having a corrugated floor, and smoke-pipes leading to the chimney, substantially as specified.

2. In a hot-air furnace, substantially as described, the combination, with the central horizontal fire-chamber, of the cold-air compartments *z*, pipes *o*, hot-air chamber *k*, having a corrugated floor, partition-strips *k'*, and valves *i*, all adapted to operate substantially as specified.

301,023. ELECTRICAL-CIRCUIT BREAKER. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Sept. 12, 1883. (No model.)

Claim.—1. In an electrical-circuit breaker, the combination, with a rounded or oval block having flattened insulating and conducting faces, and means for rotating the same, of one or more contact-springs impinging upon said block, and arranged for operation in substantially the manner herein shown.

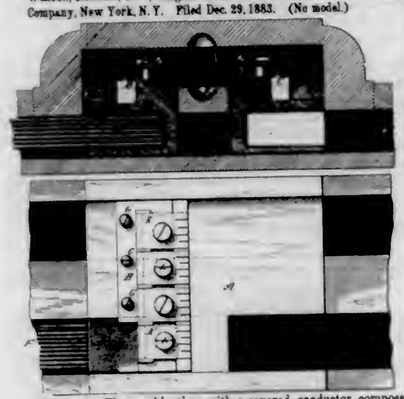
2. The combination, with the rounded or oval block composed of a metal plate, and insulating-pieces attached thereto, and arranged to present the flattened conducting and insulating faces *a a b b*, of the contact-springs impinging on said faces, as described.



301,024. MANUFACTURE OF CARBON CONDUCTORS. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Nov. 23, 1883. (No specimens.)

Claim.—The improvement in the manufacture of carbon conductors from amorphous or non-fibrous cellulose, which consists in mixing with collodion or homogeneous pyroxyline an oil or equivaleet subetance, rolling or forming the compound into the desired shape, then removing the oil or other substance by solvents, then converting the compound into cellulose by reducing agents, and forming the carbons from the same, all as set forth.

301,025. DYNAMO-ELECTRIC MACHINE. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Dec. 29, 1883. (No model.)

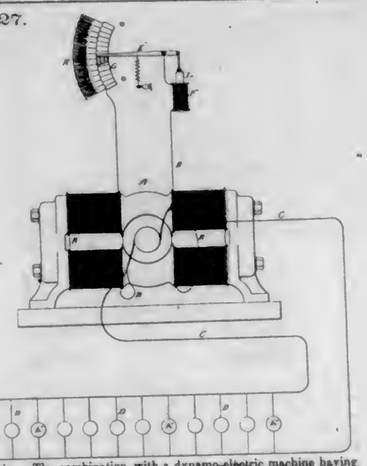


Claim.—1. The combination, with an armature-core of the kind described, of coils wound thereon, the layers of which are composed of conductors of a diameter proportional to their distance from the center of the core, as set forth.

301,025.

2. The combination, with a cylindrical core containing sectoral grooves or recesses, of coils wound in the grooves, the layers of which are composed of conductors of a diameter proportional to their distance from the center of the core, as set forth.

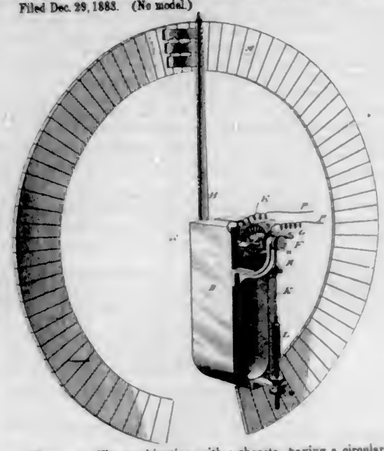
301,026. CONNECTOR FOR ELECTRIC CONDUCTORS. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Dec. 29, 1883. (No model.)



Claim.—1. The combination, with a severed conductor composed of an assemblage of uninsulated wires or strands, of metallic plates or blocks, means for connecting the same, and sockets or receptacles attached to or forming a part of the plates or blocks, and secured by solder to the ends of the conductors inserted into them, as set forth.

2. The combination, with a severed conductor composed of an assemblage of wires or strands, of plates or blocks, safety-strips connecting the plates, and sockets or receptacles attached to or forming part of the same, and secured by solder to the ends of the conductors inserted into them, as set forth.

3. The combination, with a grooved slat or holder and conductors composed of an assemblage of wires or strands contained therein, of a block, A, plates B C, safety-strips H, sockets D E, containing the ends of the conductors, and masses of solder filling the spaces between the wires in the sockets, as and for the purpose specified.



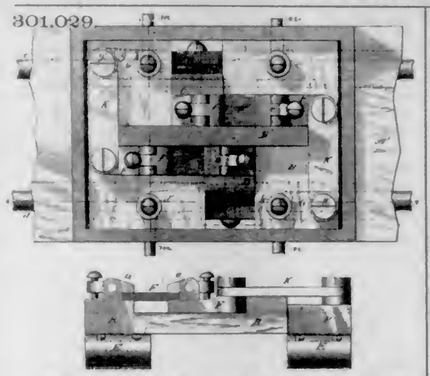
301,027. DYNAMO-ELECTRIC MACHINE. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Dec. 29, 1883. (No model.)

301,027.

Claim.—The combination, with a dynamo-electric machine having a field-circuit derived from the main or armature circuit, of a variable resistance and electro-magnet for operating the same, both included in the field-circuit, as and for the purpose specified.

301,028. ELECTRIC REGULATOR. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Dec. 29, 1883. (No model.)

Claim.—1. The combination, with a rheostat having a circular series of contact-plates, of a magnet, a rotary armature, a spring for opposing its movement, and a contact-arm connected with and operated by the armature, as set forth.



2. The combination, with a rheostat having a series of contact-plates, of a magnet or magnets, a cylindrical armature mounted between the poles of the same, a spring opposing the movement of the armature, and a contact-arm connected with and operated by the said armature, as set forth.

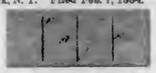
3. The combination, with a rheostat having a circular series of contact-plates, a permanent magnet or magnets, a rotary armature wound with coils, as described, and mounted between the poles of the magnet, a spring for opposing its movement, and a contact-arm connected with and operated by the armature, as set forth.

301,029. JUNCTION DEVICE FOR ELECTRIC CIRCUITS. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Jan. 12, 1884. (No model.)

Claim.—1. The combination, with a grooved slat or holder and conductors contained therein, of junction or connection devices consisting of plates, blocks, or castings provided with clamps or means for entering the grooves and connecting with the conductors therein, and constructed for connection with other conductors, as and for the purpose set forth.

301,029.

2. The combination, with a grooved slat and conductors contained therein, of metal plates, blocks, or castings adapted to be applied or attached to the slat, clamps or similar means projecting from the plates into the grooves of the slats and making contact with the conductors therein, and means for connecting the plates with each other, or with other conductors, as set forth.

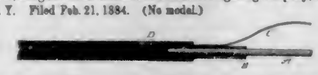


3. The combination, with a grooved slat or molding and conductors contained therein, of metal plates, blocks, or castings adapted to be applied or attached to the slat, clamps or similar means projecting from the plates into the grooves and making contact with the conductors therein, and safety-strips connecting the plates together or with other conductors, as set forth.

4. The combination, with a grooved slat or molding and conductors contained therein, of metal plates, blocks, or castings adapted to be applied or attached to the face of the slat or molding, clamps or similar means projecting from the plates into the grooves, and making contact with the conductors therein, safety-strips, and switch-keys connecting the plates together or with other conductors, as set forth.

5. The combination, with a grooved slat or molding and conductors contained therein, of an insulating block or plate, metal castings having clamps projecting therefrom and attached to the insulating-block, a metal plate or plates secured to the insulating-block, safety-strips, and switch-keys for connecting the plates with each other and to the other conductors, as set forth.

6. The combination, with the grooved slat or molding and conductors contained therein, of the insulating plate or block B, the castings C D, and clamps E, projecting into the grooves and connected to the conductors therein, and devices for connecting the castings, as described.

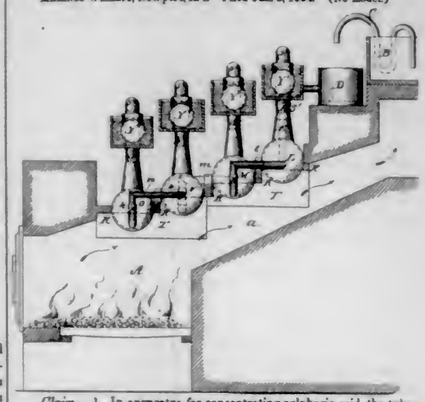


301,030. SAFETY-STRIP FOR ELECTRIC CIRCUITS. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Feb. 1, 1884. (No model.)

Claim.—1. A safety strip or plate of fusible metal, containing slots or insulating divisions, as herein set forth.

2. The safety strip or plate A, composed of a fusible metal or alloy, and containing the parallel slots E, as herein set forth.

301,031. ELECTRICAL CONDUCTOR. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed Feb. 21, 1884. (No model.)



Claim.—1. The combination, with an electrical conductor and insulating jackets or coverings for the same, of one or more finer wires laid substantially parallel to the main wire and between the insulating-jackets, as and for the purpose specified.

2. The combination, with the central wire, A, and jackets or coatings B D, of the fine wire C between the jackets B and D, substantially parallel to the central wire, as set forth.

301,032. WELDING COMPOUND. JOHN S. WILKINS, Cincinnati, Ohio. Filed Aug. 24, 1883. (No specimens.)

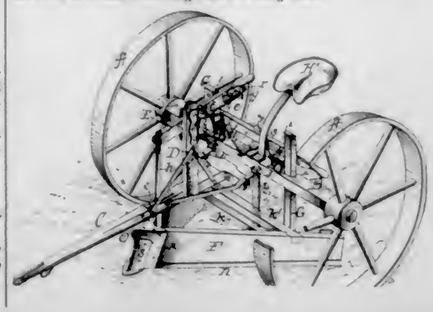
Claim.—The herein-described composition for welding iron or steel, consisting of borax, white-marble dust, steel filings, charcoal, saltpeter, and pulverized prussiate of potash, in the proportions specified.

301,033. APPARATUS FOR CONCENTRATING SULPHURIC ACID. MARINUS WILLETT, Newport, R. I. Filed Jan. 2, 1884. (No model.)

Claim.—1. In apparatus for concentrating sulphuric acid, the tube-retort L, in combination with the gas-escape pipe S', the supply-pipe E', and discharge-pipe *l*, substantially as described.

2. In apparatus for concentrating sulphuric acid, the descending series of two or more platinum boilers connected together by platinum pipes, each having the slip-joint A, substantially as described.

3. In an apparatus for concentrating sulphuric acid, a group of boilers arranged over a furnace in a descending series, in combination with a series of plates, as R, between the boilers, having the lower portion of one plate in contact with the lowest boiler of a pair of the series at the level of the liquid, and its highest part in contact with the highest boiler of the two at the level of the liquid, substantially as described.



4. In apparatus for concentrating sulphuric acid, the connected series of two or more platinum tubes, L M N O, supported and protected at the top of the furnace A by the plates T and R, substantially as described.

5. In apparatus for concentrating sulphuric acid, the descending series of two or more tubular boilers, L M N O, having the acid-level higher in each lower boiler of the series than in the one preceding by means of the relative position of the connecting-pipes and discharge-pipe F, substantially as described.

6. In an apparatus for concentrating sulphuric acid, in combination with a descending series of horizontal tubular boilers, as L M N O, connected substantially as described, whereby a fixed fluid-level is maintained in each, a plate, as R, arranged between each pair of boilers in the series, the lower end of said plate being joined to the lower boiler at its fluid-level, while its upper end is joined to the upper boiler at its fluid-level, substantially as and for the purposes specified.

301,034. DITCHING-MACHINE. THEODORE WILLSEA, Brockport, N. Y. Filed Oct. 31, 1883. (No model.)

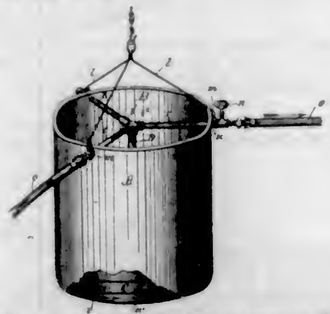
Brief.—A plow with double mold-boards inclined in at the top and joined at the point by a shield, over which fits a point with a V-stem, and its lower edges turned up and out flat, is supported by standards (faced with perforated plates) on rear connecting-bars passing through slots in the carriage-axle and locked by spring-bolts controlled by a lever, and by a rod connected to the draft-bolt and passing up through a slot in the pivoted tongue to a lever pivoted to an arc-carrying standard on such tongue. For raising the plow at the rear a rod passes up from the above-mentioned connecting-rods to a lifting-lever.

Claim.—1. In combination with the carriage-axle formed with slots, and the tongue pivotally secured thereto and formed with a slot, and having an upright standard carrying an adjustable lever and suspension-rod, the ditching-plow, the point whereof is secured to the suspension-rod, and the rear portion having fixed upright standards passed through the slots in the axle and adjustably secured therein, substantially as described.

2. The ditching-plow herein described, formed with mold-boards or wings outwardly inclined from top to bottom, and joined at the point by a shield adapted to have fixed to it the plow-point, and at the rear secured by cross-bars, one of which is provided with two fixed standards formed with a plurality of holes, and the front end provided with a draft-bolt adapted to be connected to a suspension means, substantially as described.

3. The ditching-plow point herein described, consisting of the stem formed with diverging side plates set at an angle from the point to fit the angle-point of a double-mold-board plow, and the point and lower side edges thereof turned forward and out flat at about right angles to the direction of the stem, substantially as and for the purpose set forth.

4. In combination with a double-mold-board ditching-plow, a plow-point the stem of which is formed with diverging side plates set at an angle from the point to fit the angle-point of the double mold-board, and the point and lower side edges thereof turned out flat at about right angles to the stem, substantially as described.

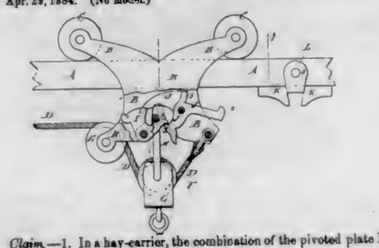


5. The tongue pivotally secured to the axle of a carriage of a ditching-plow, and having fixed thereto a standard carrying a segment-gear, a lever pivoted to the standard and having a stop-bar engaging the segmental gear, and provided with a suspension-bar depending through a slot in the tongue and adapted to be connected to the forward end of the plow, substantially as described.

6. The plow adjustably suspended at the point, and provided with fixed upright standards, and carriage-axle provided with slots to receive the standards of the plow, in combination with the lifting-lever running parallel with the axle and fulcrumed thereto, with central sustaining-rod connected to the cross-bar of the plow, substantially as described.

7. The plow adjustably suspended at the point, and provided with fixed upright standards having secured to their inner edges perforated plates, and the carriage-axle slotted to receive the standards of the plow, in combination with the spring-bolts 6, operatively fixed to the axle, and the lifting-lever 3, substantially as described, and for the purpose set forth.

8. The organized ditching-plow herein described, consisting, essentially, of the wheels A, axle B, having slots *a*, tongue C, pivotally secured to the axle, and having the standard D, with the segmental gear *d*, the lever E, with the stop-bar *e* and suspension-rod A, the plow F, with standards G, lifting-lever 3, spring-bolts 6, shield *x*, and cutting-point S, the whole arranged and combined substantially as and for the purpose set forth.

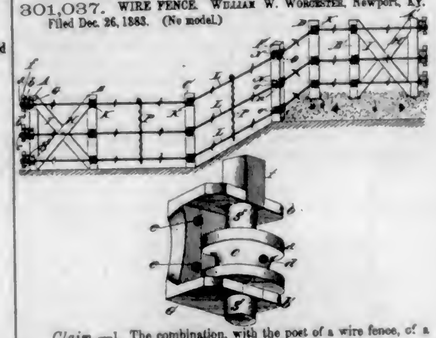


301,035. LIQUID-COOLER. FREDERICK W. WOLF, Chicago, Ill. Filed Apr. 30, 1883. (No model.)

Claim.—1. A liquid-cooler comprising two concentric hollow cylinders joined together at the top and bottom to produce a single hollow cylinder, and to provide an inclosed annular space between them, and having a helical partition within the said annular space to form a helical passage, C, leading to a discharge-opening, *u*, formed in the side of the outer cylinder, a vertical pipe, D, secured in position within the inner of the said concentric cylinders and having an opening in its side toward the upper end connected with a lateral opening through the said concentric shells to admit water into the said pipe, and an opening in its side toward the lower end leading into the said helical passage to conduct the water into the said passage, whence it passes around the helical passage C to the opening *u*, where it discharges, for the purpose set forth.

2. A liquid-cooler comprising in combination the following elements, viz: hollow cylinders A and B, joined together at the top and bottom to produce a single hollow cylinder, and to provide an inclosed annular space between them, a helical partition within the said annular space to form a helical passage, C, leading to a discharge-opening, *u*, formed in the side of the cylinder A, a vertical pipe, D, secured in position within the cylinder B, and having an opening in its side toward the upper end, connected with a lateral opening through both shells A and B, to admit water into the pipe D, and an opening in its side toward the lower end leading into the said helical passage, and means, substantially as described, for supporting the device and lowering it into the liquid to be cooled and raising it therefrom.

301,036. HAY-CARRIER. EDWIN WOODWARD, Stryker, Ohio. Filed Apr. 29, 1884. (No model.)

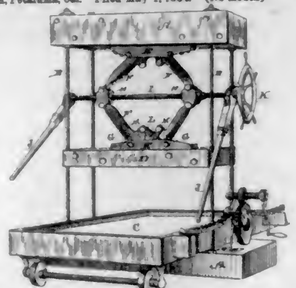


Claim.—1. In a hay-carrier, the combination of the pivoted plate I, formed with the hooks 1 2 at its opposite ends, with the pivoted plate J, formed with a curved trip-arm having shoulder 5 and hook-arm 4 on its upper end, and with the depending arm having a hook, 3, for engaging the hooks 1 2 of plate I, all arranged substantially as and for the purpose set forth.

2. The combination, with the frames-plates B, slotted on their lower edges, as shown, and the block and bail H, of the pivoted plate I, having hooks 1 2, and the plate J, pivoted above and on the opposite side of the slot from the plate I, and formed with a trip-arm projecting across the slots in the path of the bail H, shoulder 5, hook-arm 4, projecting out of the frame-plates, as shown, and the depending hook-arm 3, all constructed and arranged substantially as set forth.

3. The catch K, formed with a dovetailed recess in the center of its lower side, and with the lower sides of its end parts concaved, as shown, and the upward-projecting perforated lugs 6 on its opposite sides to overlap the sides of the track, substantially as set forth.

301,037. WIRE FENCE. WILLIAM W. WORCESTER, Newport, Ky. Filed Dec. 26, 1883. (No model.)



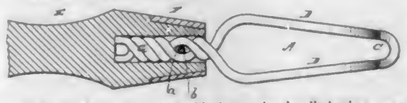
Claim.—1. The combination, with the post of a wire fence, of a pillow-block, G, attached to the post, and having an angular mortise, the vertical angular post *f*, having the cylindrical gudgeons *g* and the attached drum, which rotates with the post, said gudgeons permitting the post and attached drum to rotate together in the pillow-block when the post is moved vertically in one direction, and the angular mortise and angular part of the post locking the post and drum against rotation when the former is moved vertically in the opposite direction, substantially as described.

2. The combination, with the post of a wire fence, of the pillow-block G, having top and bottom flanges, *b b'*, provided with angular mortises, and the vertically-movable angular post *f*, provided with the drum *a*, and gudgeons *g g*, for permitting the post and drum to revolve, and also locking it against rotation, substantially as described.

3. The combination, with the post of a wire fence, of the saddle N, having integrally formed therewith the arch-shaped groove and flanges *n n*, substantially as described.

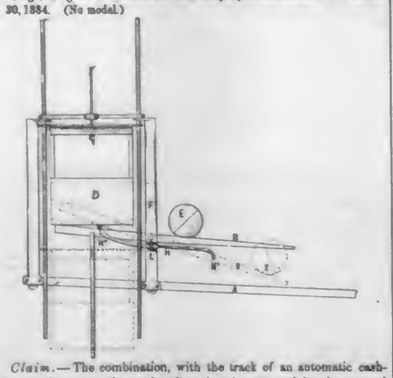
4. The combination, with the post of a wire fence, of the saddle N, having integrally formed therewith the rounded groove and side flanges, *n n*, and of the staple O, passing transversely across the flanges, for securing the saddle to the post, and loosely confining the wire strand between the flanges, substantially as described.

301,038. SCREW AND TOGGLE-LEVER PRESS. WILLIAM HENRY WORTH, Petaluma, Cal. Filed May 1, 1884. (No model.)



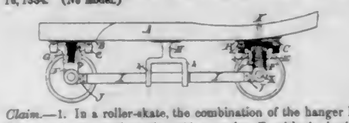
Claim.—1. In a screw and toggle-lever press, means for producing an equal and parallel movement of the parts, consisting of lugs projecting inwardly from the outer ends of the levers and united by links, which cross each other so as to connect the upper lug of one lever with the lower lug of the other, substantially as herein described.

2. The toggle levers F, having the lugs M and N, with the crossed links L, uniting the links of one with those of the other, substantially as herein described.



3. The toggle-levers F, pivoted at G, having their outer ends united to the nuts by which they are caused to approach or recede upon the horizontal screw, and lugs N, perforated at points inside of the line forming the axis of the levers, the lugs M at right angles with them, and the connecting-links L, substantially as herein described.

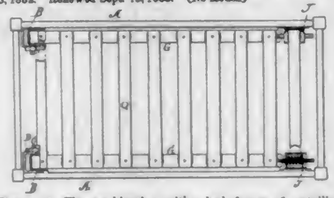
301,039. COMBINATION-TOOL. GEORGE H. ZIPH, St. Joseph, Mo. Filed Aug. 16, 1883. (No model.)



Claim.—The combination, with the wooden handle having a central longitudinal recess in its forward end, of the wire having its free ends spirally twisted with the opening *a* for the passage of the pin *b*, whereby the said shank is secured in the handle, the outer portion of the wire looped, as shown, and bent upwardly and forwardly at its outer end, substantially as specified.

301,040. AUTOMATIC CASH-CARRIER. FRANK A. ALLEN, Cambridge, assignor to the Oriental Tea Company, Boston, Mass. Filed Apr. 30, 1884. (No model.)

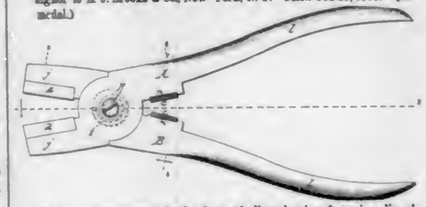
Claim.—The combination, with the track of an automatic cash-carrier, of the automatic catch, adapted to be actuated by the upward movement of the elevator, so as to retain the same at the track and released by the movement of the cash-ball, as and for the purposes set forth.



301,041. ROLLER-SKATE. FRED A. BAILEY, Oakland, Ma. Filed Apr. 16, 1884. (No model.)

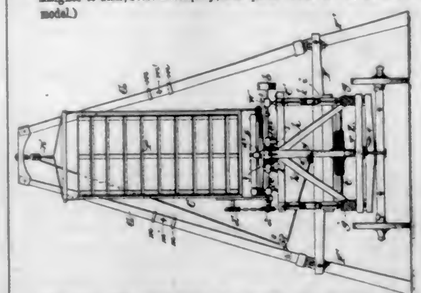
Claim.—1. In a roller-skate, the combination of the hanger D and hub F, having between them the rubber washer E, with the horizontal overlapping springs I I and the bifurcated standard H, substantially as shown and described.

2. In a roller-skate, the combination of the standard H, springs I, hub F, and hanger D, with the regulating-screws K K, substantially as shown and described.



301,042. BED-BOTTOM. DANIEL BENNETT, Logan, Ohio. Filed Nov. 13, 1882. Renewed Sept. 15, 1883. (No model.)

Claim.—1. The combination, with a bed-frame, of metallic longitudinal strips or chords G, provided with slats, brackets having each a roller provided with ratchet and pawl attached to one end of the frame, and brackets each provided with a spring connected to the said chords or strips at the other end of the frame, substantially as described.



2. The combination, with a bedstead-frame, of the brackets B, the arbors C, the ratchet-wheels D, the pawls E, the brackets J, the housings K, the springs N, the strips or chords G, and the rods H, provided with a head, I, substantially as described.

301,043. SEAL-PRESS. EDWARD J. BROOKS, East Orange, N. J., assignor to E. J. Brooks & Co., New York, N. Y. Filed Oct. 25, 1883. (No model.)

Claim.—A seal-press in the form of pliers, having fastening-dies *d*, shackle-cutters *c*, releasing-notches *n*, and holding-surfaces *h*, substantially as herein specified, the two main parts in rough being adapted to be made of one and the same pattern, for the purposes set forth.

301,044. STRAW-STACKER. HOWARD CAMPBELL, Richmond, Ind., assignor to Gaar, Scott & Company, same place. Filed Mar. 6, 1884. (No model.)

Claim.—1. The combination, in a stacker, of a wheeled frame, a vertical standard, a circular support adjustable around on the standard, a cross-beam on the support, a sustaining-axis for the support and cross-beam, a brake for holding the support in its adjusted position, and a swinging straw-elevator, substantially as described.

2. The combination, in a stacker, of a wheeled frame, a vertical beam detachably held on the frame, and provided at its upper end with a loop-bracket, a circular support held by and adjustable around within the bracket, pivot-bearings at the ends of the circular support, and a swinging elevator detachably pivoted on the pivot-bearings, substantially as described.

3. The combination, in a straw-stacker, of a wheeled frame, a vertical beam detachably supported by the frame and provided at its upper end with a loop-bracket, a circular support held by and adjustable around within the bracket, a spring-brake acting on the circular support, a set-screw for adjusting the tension of the brake, pivot-bearings at the ends of the circular support, and an elevator having brackets at its lower end detachably pivoted on the pivot-bearings, substantially as described.

4. The combination, with a wheeled frame, of the vertical beam *g*, having the threaded extension at its lower end, the braces n^4, the cross-beam Z, the lever *o*, the circular support W, adjustable around on the vertical beam, and provided at it its ends with pivot-bearings, and the elevator detachably pivoted on the pivot-bearings, substantially as described.

5. The combination, with a wheeled frame, of the vertical beam *y*, having a threaded extension at its lower end, the braces n^4, the cross-beam Z, the lever *o*, the loop-bracket *w* on the upper end of the vertical beam, the circular support adjustable around in the loop-bracket, the pivots *p* on the said support, the elevator detachably pivoted on the pivots, the set-screw w', and the spring w^3, substantially as described.

6. The combination, with a wheeled frame and a straw-elevator having brackets K, provided with open bearings k^2, of the frame C', hinged to the wheeled frame, cross-beam L, horizontal shafts s s^2, journaled on the hinged frame and the cross-beam, respectively, and pivot-pin *b'*, substantially as described.

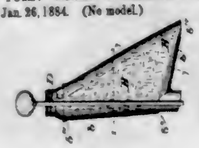
7. The combination, with a wheeled frame and a pivoted straw-elevator, of a swinging frame, C', on the wheeled frame, a cross-beam, L, geared shafts carried by the hinged frame and the cross-beam, respectively, for transmitting motion to the apron of the elevator, braces *k*, bearing against the swinging and the wheeled frames, and rods *i i*, adjustable lengthwise for sustaining the swinging frame in its upright position, substantially as described.

8. The combination, in a straw-stacker, of a wheeled frame, a cross-bar, F, thereon, a folding derrick-frame, G, pivoted to the cross-bar, and the supports H, hinged to the wheeled frame at its rear end, substantially as described.

9. The combination, in a straw-stacker, of a wheeled frame, a cross-bar, F, thereon at the front end, a sectional folding derrick-frame, G, supported by the wheeled frame, and supports H, pivoted to the rear of the wheeled frame, and provided with forked ends *h'*, substantially as described.

10. The combination, in a straw-stacker, of a wheeled frame, a cross-bar, F, thereon, a derrick-frame pivoted to the cross-bar, detachable legs F', connected with the cross-bar, and the carrier B, substantially as described.

11. The combination of a truck-frame, an elevator, a frame hinged to the truck-frame, a circular support, a standard detachably connected with the truck-frame for sustaining the circular support, and pivot-bearings for the elevator, substantially as described.

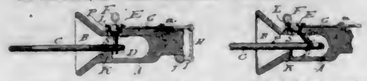


12. The combination of a truck-frame, a frame hinged thereto, a standard detachably connected with the frame, a circular support connected with the upper ends of the hinged frame and standard, and a pivoted straw-elevator, substantially as described.

13. The combination of a truck-frame, a frame hinged thereto, a vertical shaft on the hinged frame, a circular support, a standard sustaining the latter, a cross-beam, a supporting-connection between the beam and the shaft, and horizontal shafts geared to the vertical shaft on the hinged frame, substantially as described.

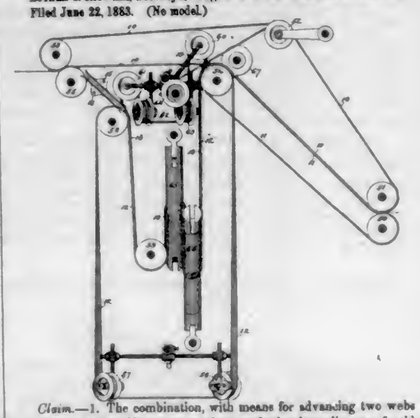
14. The combination of a truck-frame, a frame hinged thereto, a vertical shaft on the hinged frame, a standard sustained by the truck-frame, a support at the upper end of the standard, a cross-beam on the support, a connection between the cross-beam and the vertical shaft, and a pivoted straw-elevator, substantially as described.

15. The combination of a truck-frame, a frame hinged thereto, a vertical shaft on the hinged frame, a standard sustained by the truck-frame, a circular support adjustable in a circular path on the standard, a cross-beam on the circular support, a supporting-connection between the beam and the vertical shaft, a swinging straw-elevator, and pivot-bearings therefor, substantially as described.



301,045. PUMP. WILLIAM H. CLARK and WILLIAM J. CLARK, Salem, Ohio. Filed Jan. 26, 1884. (No model.)

Claim.—1. A blank for forming a pump-head, having edges *b b b' b'*, and recesses between the edges to form orifices *b'' b''' b''*, as set forth.

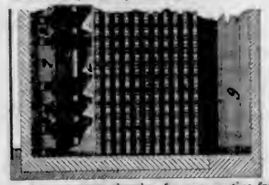


2. A sheet-metal pump-head of triangular profile, having barrel-orifice *b''*, cap-orifice *b'''*, and spout-orifice *b''*, as set forth.

301,046. CAR-COUPLING. ROSCOE COON and DAVID DEANE HARN, San Francisco, Cal. Filed Oct. 18, 1883. (No model.)

Claim.—In car-couplings, the pin D, with ball E, in combination with the lever G, connecting-rods H, lever I, crank M, and rod J, constructed and operated substantially as and for the purposes set forth.

301,047. DELIVERY MECHANISM FOR WEB-PRINTING PRESSES. LUTHER C. CROWELL, Brooklyn, assignor to R. Hoe & Co., New York, N. Y. Filed June 22, 1883. (No model.)

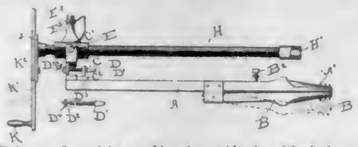


Claim.—1. The combination, with means for advancing two webs or sections side by side, of means for transferring laterally one of said webs or sections to associate it with the other, and means for automatically conducting the leading end of said transferred web through the transferring mechanism, all substantially as described.

2. The combination, with means for advancing two webs or sections side by side, of turning-bars arranged to transfer laterally one of said webs or sections to associate it with the other, and tapes, or a tape and cord, as 12 13, arranged to conduct the leading end of said transferred web or section around said bars, all substantially as described.

3. The combination, with means for advancing two webs or sections side by side, of turning-bars arranged to transfer laterally one of said webs or sections to associate it with the other, said bars being provided with grooves, as 8 9, and tapes, or a tape and cord, as 12 13, for conducting the leading end of said transferred web or section around said bars, all substantially as described.

301,048. REGENERATIVE FURNACE. ANDREW CUTHBERT, Pittsburg, Pa. Filed Feb. 11, 1884. (No model.)

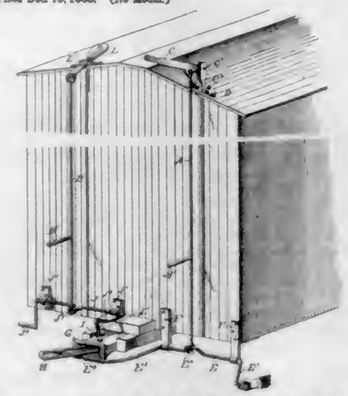


Claim.—1. A regenerator-chamber for regenerative furnaces, having top arches formed of bricks or tiles, which are inwardly beveled or inclined on their ends, substantially as and for the purpose set forth.

2. A regenerator-chamber for regenerative furnaces, having in its top a series of gas-passages of increasing transverse sectional area from their upper to their lower sides, substantially as and for the purpose set forth.

3. The combination of a regenerator-chamber having upper gas-passages of increasing transverse sectional area from their upper to their lower sides, and a regenerator composed of bricks, which are inwardly curved or inclined on their sides from their middle portions to their upper and lower surfaces, substantially as set forth.

301,049. HAND ROCK AND COAL BORING MACHINE. BENJAMIN B. DAVIS, Williamstown, Pa., assignor of one-half to Thomas D. Davis, same place. Filed Mar. 27, 1884. (No model.)

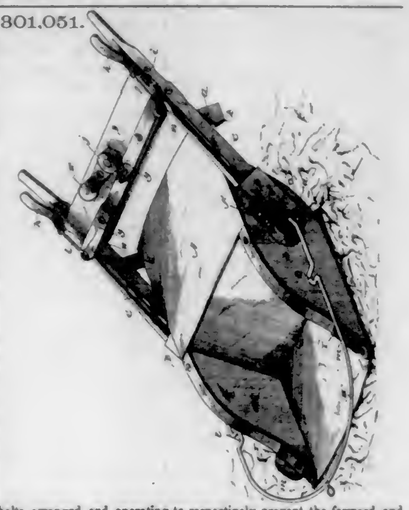


Claim.—1. In a mining-machine, the combination of the feed-screw, the threaded barrel or boxing pivotally supported in suitable bearings, and provided with a depending lug or bracket, and a set-bolt turning through a threaded support, and adapted to engage said lug or bracket and adjust the boxing on the journals or bearings thereof and secure the said boxing in any desired position, substantially as set forth.

2. The combination, in a mining-machine, of the base-plate provided with bearing-jaws C, and bracket D, the feed-screw, the threaded barrel composed of section E', having lug F', provided with slot F^3, and section E^2, having lug F^2, pivoted to lug F', the said sections having upwardly-projected bars E^2, the collar E^3, adapted to embrace bars E^2, and the set-bolt D', turned through bracket D, and having a contracted portion, D^2, on its rear end inserted through slot F^3, and the nut D^4, all constructed and adapted to operate substantially as set forth.

3. The mining-machine, substantially as herein described and shown, composed of a supporting-beam, the bearing-jaws connected by base-plate C^2, journaled on the supporting-beam and provided with the bracket D, the sectional boxing provided with depending lug F', having slot F^3, the set-bolt D', the feed-screw turning through the boxing and provided at its rear end with bar J, having loops or keepers J', the crank-bar K', passed through said loops or keepers, and the clamping-screw K^2, all as and for the purposes specified.

301,050. CAR-COUPLING. JONATHAN H. DUSTMAN, Clarks, Nebr. Filed Dec. 15, 1883. (No model.)



Claim.—1. The hangers F, rod E, right-angled projection E'; crank projection E^3, projection E^2, and link-lifter E^4, in combination with the rod A, provided with a handle, A', and the lever C, pivoted to the standard C^2, substantially as described and set forth.

2. The rod J, secured to the end of the car by straps J', said rod being provided with handle J^2, crank projection J^3, and arm J^4, the link I', jointed to the top of the pin, and the outer end of the arm J^4, in combination with the rod B, having the handle B', and the foot-lever L, substantially as described, and for the purposes set forth.

301,051. ROAD-SCRAPER. WILLIAM ELLIS, Jr., North Lawrence, Kans. Filed Feb. 14, 1884. (No model.)

Brief.—A reversible scraper having projecting cutting-plates secured on its edges has side disks, each having peripheral cam-shoulders in parallel planes, respectively engaging an automatic spring-bolt, and a bolt operated by pivoted handles and having devices to lock it out of engagement. The scraper is pivoted in side bars, forming a frame, and having end casings inclosing the bolts, with extensions through which pass the scoop-pivots. The bail has extensions inward to limit the forward play of the frame.

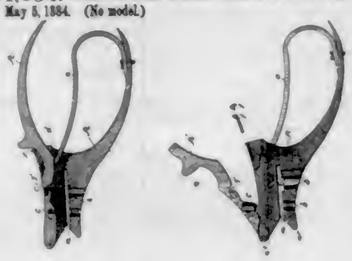
Claim.—1. The combination, in a road-scraper, of a scraper proper pivoted in a suitable frame by journals, and provided with a disk having reverse shoulders located in parallel peripheral planes, as described, and

bolts arranged and operating to respectively prevent the forward and rearward rotation of said disk, substantially as set forth.

2. The combination, in a road-scraper, of a scraper proper pivoted in a suitable frame by journals, and provided with a disk having reverse shoulders, and two bolts arranged on the frame supporting the scraper proper, one operated by hand-lever connections secured on the frame and the other automatically yielding, substantially as described.

3. The combination, in a road-scraper, of a scraper proper having journals located at its sides, a notched disk secured to said scraper, a case secured on one side at the forward part of the supporting-frame, and provided with an extension perforated to receive one of the journals, a bolt playing through said case, and devices for operating the same, substantially as described.

4. The combination, in a road-scraper pivoted in a suitable frame by journals, and provided with a disk having reverse shoulders located in parallel peripheral planes, as described, of bolts arranged to respectively prevent the forward and rearward rotation of said disk, and handles pivoted at each side of the upper end of the frame and connected with said bolt devices, substantially as set forth.



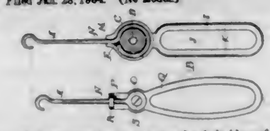
5. The combination, in a road-scraper, of a scraper proper pivoted in a frame, bolt devices for locking it in its pivoted position, mechanism for disengaging said bolt devices, and means for locking said devices in their disengaged position, substantially as set forth.

6. The combination, in a road-scraper pivoted in a suitable frame by journals, and provided with cutter-brackets bolted to the sides of the same, of a disk having reverse shoulders located in parallel peripheral planes, as described, and bolts arranged to respectively prevent the forward and rearward rotation of said disk, substantially as set forth.

7. The combination, in a road-scraper, of a suitable frame provided with depending plates G, bent and arranged for the purpose set forth, a scraper proper pivoted in said frame, and provided with a disk having reverse shoulders located in parallel peripheral planes, as described, and bolts arranged to respectively prevent the forward and rearward rotation of said disk, substantially as set forth.

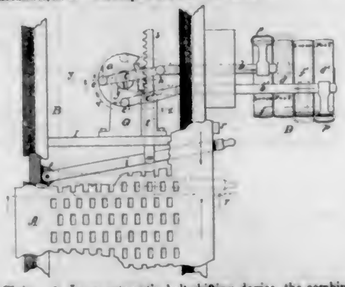
8. The combination, with a road-scraper constructed and operating substantially as herein described, of a draft-bail provided with extensions *l*, for the purpose specified.

301,052. TICKET-PUNCH. WILLIAM COWAN FIRK, Toledo, Ohio. Filed May 5, 1884. (No model.)



Claim.—1. In a fare-ticket punch, the punch having the exchangeable dies, substantially as set forth.

2. In a punch, the designating and numbering dies, each slotted, and having a projection projecting into an approximately right-angled slot in the pivoted jaw or lever, substantially as and for the purpose set forth.

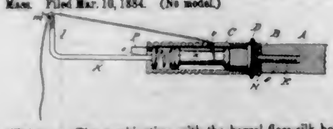


3. In a punch, the combination, with the vertically-slotted fixed jaw, of the pivoted jaw or lever and the slide or stop fitted into the slot of the fixed jaw to retain the lever in its normal position, substantially as and for the purpose set forth.

301,053. BUTTON-HOOK HOLDER. JOHN FYE, THEODORE H. FYE, and CHARLES A. FYE, Zanesville, Ohio, assignors to John Fye & Sons, same place. Filed Jan. 28, 1884. (No model.)

Claim.—The combination, in a button-hook holder, of a handle, one end slotted through the center, the sides somewhat flattened and arranged for placing advertising matter thereon, the other end provided with a circular groove and cap having a corresponding groove, and secured in position by means of a screw, with a button-hook, one end formed with a curved part and arranged to fit in the circular groove of the handle, substantially as herein set forth.

301,054. BELT-SHIFTER FOR IRON-PLANERS. WM. GLEASON, Rochester, N. Y. Filed Apr. 28, 1884. (No model.)

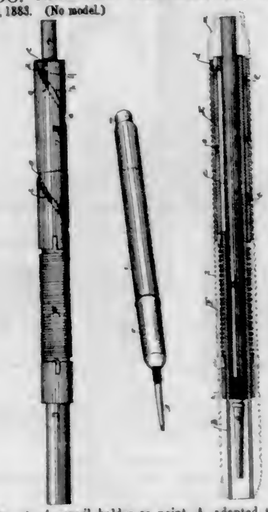


Claim.—1. In an automatic belt-shifting device, the combination, with the fast and loose pulleys *d* and *f*, of the shifters *b b'* and automatic intermittent reciprocating disk *a*, to operate the shifters simultaneously, with connecting-rods *c c'*, for the respective shifters and disk, said connecting-rods respectively being attached to the disk at the points *e e'*, ninety degrees apart, where, when the disk commences to turn, the motions given the respective shifters will be in opposite directions, substantially as and for the purpose set forth

2. The combination of the shifters *b b'* of a belt-shifting device, the driving-disk *a*, provided with pins *e e'*, connections *c c'* for the respective shifters *b b'*, and stud *g* for the disk, a pinion, *h*, secured to the disk, and rack *k*, to engage the pinion, with means, substantially as described, to give the rack intermittent reciprocating longitudinal motion, substantially as and for the purpose set forth.

3. In combination with the fast and loose pulleys of a belt-shifting device, the shifters *b b'* and reciprocating driver *n* for the shifters, with connections *c c'* for the driver and shifters, said shifters being connected to the driver, so that when the latter commences to turn one shifter will start to move at a high rate and retard as it progresses, and the other shifter start to move at a low rate and accelerate as it progresses, substantially as set forth.

301,055. DENTAL-FLOSS HOLDER. GEORGE E. GREENE, Gardner, Mass. Filed Mar. 10, 1884. (No model.)



Claim.—1. The combination, with the barrel floss-silk holder having a screw-stem, of the threaded cap and a tooth-brush having one end of its handle provided with a threaded aperture to receive the stem of the holder, substantially as specified.

2. The floss-silk-holding attachment for tooth-brushes, consisting of the perforated barrel and cap, the screw-stem and washer, the outwardly-turned bow-arm having a cleft end, and the spool, substantially as specified.

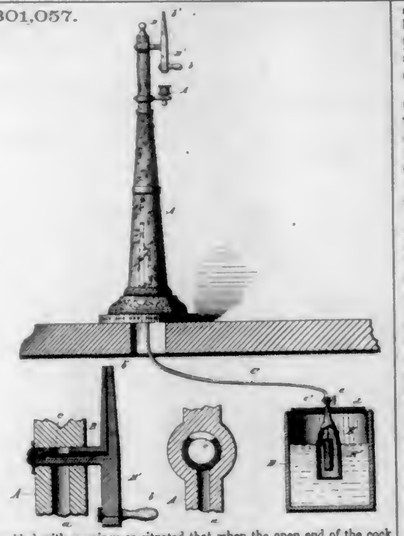
3. The floss-silk-holding attachment for tooth-brushes, consisting of the barrel, its cap and inclosed spool, the bow-arm, and cutter turned toward the bow-arm, substantially as specified.

301,056. PENCIL-CASE. JOHN C. HARDING, Jersey City, N. J. Filed July 3, 1883. (No model.)

Claim.—1. A pencil holder or point, A, adapted to move in its case longitudinally for the purpose of protruding or retracting it, a stud, *d*, attached to said pencil holder or point, a sleeve, E, provided with a spiral groove wherein said stud *d* may travel, combined with a spiral spring, F, which acts in a direction transverse to the axis of said pencil, whereby said sleeve may be rotated in one direction by the fingers, and in the opposite direction automatically by said spring and a detent-surface, *i*, substantially as shown, and for the purpose set forth.

2. A pencil-case tube, B, and a pencil-holder, A *a*, fitted to slide therein to protrude or retreat, as set forth, combined with a part having a spiral groove, *c*, a stud, *d*, projecting from said pencil-holder and traveling in said groove, a spiral spring, F, coiled around said pencil-case, and adapted to rotate said case in relation to the part containing the spiral groove *c*, whereby said stud may be caused to traverse said groove, and a detent to hold said pencil-carrier when drawn into the case, adapted to be released by an endwise posh of the upper end of the pencil-holder in the direction of the axis of the pencil.

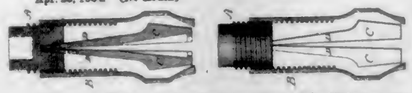
3. The pencil-holder A, fitted to slide within the case B, which is provided with a longitudinal slot, *c*, the sleeve E, provided with the spiral slot *e*, the pin *d*, projecting from said pencil-holder into and through the slots *c e*, the spiral spring coiled about the case A and adapted to rotate the sleeve E by its recoil, substantially as set forth, the detent *i*, and the inclosing ornamental shell in three parts, *k l m*, substantially as set forth.



301,057. HYDROGEN-LIGHTER. MATHIAS J. HINDEN, Cleveland Ohio, assignor to the Hydrogen Lighter Company, same place. Filed Nov 7, 1883. (No model.)

Claim.—1. The combination, with a gas-generator and a standard, of a combined handle and cock journaled to the standard, and a cup for holding platinum secured to the standard below the cock, the handle end of the said cock being heavier than the opposite end thereof, for the purpose of automatically cutting off the flow of gas, substantially as set forth.

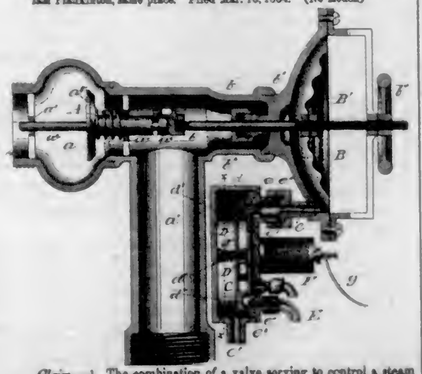
2. In a hydrogen-lighter, the combination of the combined cock and handle, a standard supporting the same and made cylindrical at its upper end, and a cup supported from this part of the standard and adjustable vertically to bring it in proper relation to the gas when discharged downwardly from the cock, substantially as set forth.



3. In a hydrogen-lighter, the combination of the combined cock and handle, a standard supporting the same and made cylindrical at its upper end, and a cup supported from the part of the standard and adjustable vertically to bring it in proper relation to the gas when discharged downwardly from the cock, the said cock and standard being

301,057.

provided with openings so situated that when the open end of the cock points toward the cup the cock will be open and remain open until it has been turned around one-quarter of a circle and remain closed in all other positions, substantially as set forth.



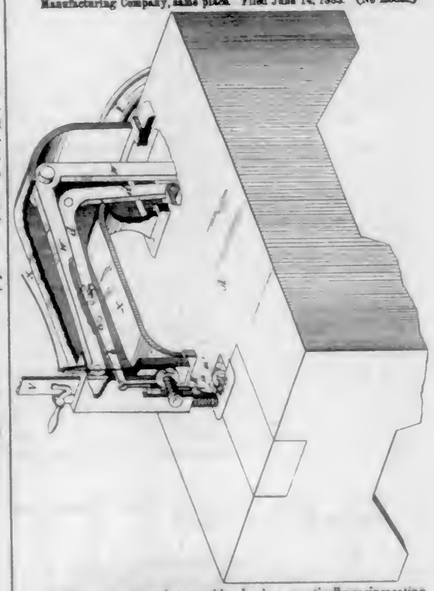
301,058. BIT-BRACE. WILLIAM A. IVES, New Haven, Conn. Filed Apr. 23, 1884. (No model.)

Claim.—1. The herein-described improvement in bit-braces, consisting of the solid cylindrical body A, screw-threaded upon its cylindrical surface, and the jaws C C, with their elastic tails D D united to said body in the process of manufacture, whereby said jaws become substantially an integral part of the body, combined with a surrounding sleeve, B, internally screw-threaded, corresponding to the screw-thread on the body, substantially as described.

2. The jaws C, forged with their tails D D, and with the body A cast thereon, so as to unite with the tail ends of the jaws, substantially as described.

301,059. ELECTRIC VALVE FOR REGULATING TEMPERATURE, &c. WARREN S. JOHNSON, Milwaukee, Wis., assignor of one-half to William Plankinton, same place. Filed Mar. 10, 1884. (No model.)

Claim.—1. The combination of a valve serving to control a steam or other passage, an expansible chamber whose movable wall operates said valve when steam, gas, or water is admitted to said expansible chamber, and an electric valve adapted to admit steam, gas, or water, under pressure, into the expansible chamber, whereby the main valve is operated whenever the electric circuit is closed or opened, substantially as set forth.



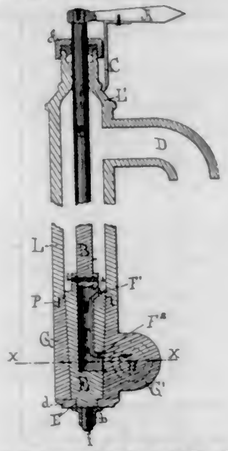
2. The combination of a steam-generator, an electric valve used to control a passage in said generator, a suitable electric generator, and two circuit-closing devices in circuit with said electric generator and electric valve, one of said circuit-closing devices being a thermostat situated in the apartment which the steam-generator warms, and the other circuit-closing device consisting of an expansible chamber adapted when expanded to complete the circuit, and when contracted to keep the circuit broken, substantially as set forth.

3. The combination of an expansible chamber and a main valve connected thereto, the former having an inlet and outlet port controlled by an electric valve, with the armature of an electro-magnet, and the bar or lever of an electric valve, whereby when the electro-magnet operates the bar or lever of said valve the inlet-port is adapted to be opened at the same time that the outlet-port is closed, substantially as set forth.

4. The combination of a valve serving to control a steam or other passage, and adapted to close against and open with the pressure, an expansible chamber whose movable wall operates said valve when steam, gas, or water is admitted to said expansible chamber, and an electric valve adapted to admit steam, gas, or water under pressure into the expansible chamber, whereby the main valve is operated whenever the electric circuit is closed or opened, substantially as set forth.

5. The combination of a valve serving to control a steam or other passage, an expansible chamber whose movable wall operates said valve when steam, gas, or water is admitted to said chamber, and an electric valve consisting of an electro-magnet, its armature, and valves operated by the movement of said armature, whereby a movement of the armature in one direction admits the steam, gas, or water to said expansible chamber and prevents its exit therefrom, and operates the main valve in one direction, while a movement of said armature in the opposite direction prevents the admission of steam, gas, or water to said expansible chamber, but permits its escape therefrom, whereby the main valve is operated in the opposite direction, substantially as set forth.

301,060. SEWING-MACHINE. EDWARD KOEHLER, San Francisco, Cal., assignor, by direct and mesne assignments, to the Kohler Sewing Machine Manufacturing Company, same place. Filed June 14, 1883. (No model.)

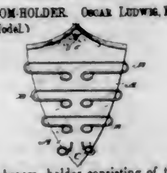


Claim.—1. A sewing-machine having a vertically-reciprocating needle carrying a single thread, a two-part threadless hook mounted upon a horizontal rock-shaft below the table, and a reciprocating rack-bar, O, engaging a pinion upon the rock-shaft, and having an incline or cam, T, at its outer end, in combination with a bar, Q, with an arm, R, which engages one part of the hook, and a pin or roller, S, upon which the cam T acts to separate the hook, substantially as herein described.

2. The two-part threadless hook mounted upon a rock-shaft beneath the table, the reciprocating rack-bar O, engaging a pinion upon the rock-shaft, and having an incline or cam, T, at its outer end, in combination with the bar Q, with the pin or roller S, which is engaged by the cam T, the arm R, engaging one part of the hook to retract it, and the returning-spring U, substantially as herein described.

3. In a sewing-machine, the combination of a reciprocating needle, a double threadless hook oscillated by shaft G and its connections, an oscillating shaft, J, carrying a guide, I, for the purpose specified, and a plate, L, having a curved slot which engages with a pin on the shaft J, and means for moving the same, substantially as described.

301,061. HOT AND COLD WATER FAUCET. JAMES C. LOUCKS, Grand Rapids, Mich., assignor of one-half to Edwin S. Pierce, same place. Filed June 18, 1883. (No model.)



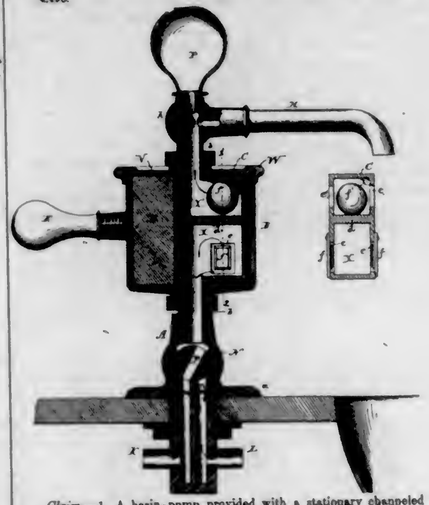
Claim.—1. The casing L, having spout D, and the casing G, in combination with the plug E, having openings F' F² and chamber F, the rod B, and the pipe G', having diaphragm H and port-openings *e e*, substantially as described, and for the purpose set forth.

2. The casing L, having spout D, and the casing G, in combination with the plug E, having openings F' F² and chamber F, pipe G', having diaphragm H and openings *e e*, and the rod B, having handle A and indicator C, substantially as described, and for the purposes set forth.

3. The casings L and G, the casing L having a spout, the casing G tapering from the top downward, in combination with the tapering plug E, having chamber F and openings F' F², the rod B, handle A, and pipe G', having diaphragm H and ports *e e*, substantially as described and set forth.

4. The casing L, having spout D, the chamber G, having tapering chambers therein, and pipe G', having diaphragm H and openings *e e*, in combination with the tapering plug E, having openings F' F² and chamber F, the rod B, handle A, and indicator C, substantially as described, and for the purposes set forth.

301,062. BROOM-HOLDER. OSCAR LUDWIG, Evanston, Wyo. Filed Feb. 26, 1884. (Model.)



Claim.—1. The broom-holder consisting of the back A, provided with the two series of independent spring-arms B B, adapted to receive and partially inclose the brush portion of a broom, and the arms C C, adapted to support the broom end at or near the point of its attachment to the handle, substantially as and for the purpose described.

2. The broom-holder consisting of the back A, provided with the two series of independent arms for holding the brush portion of a broom, adapted to be turned down toward or against the face of the back A, substantially as and for the purpose described.

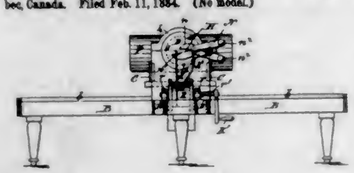
3. The broom-holder consisting of the back A, provided with the two series of independent spring-arms B B, adapted to receive the brush portion of a broom, attached to the back by the insertion of a portion of each arm in a groove therein, and the arms C C, adapted to receive and support the smaller and upper end of the brush portion at or near the point at which it joins the handle, substantially as and for the purpose described.

301,063. PUMP. FRANK D. MALTBY, Washington, D. C., and DE BOSDEN WILSOT, New York, N. Y., assignors to themselves and Wellesley W. Gage, New York, N. Y. Filed May 10, 1883. (No model.) Patented in Belgium Sept. 18, 1883, No. 62,622, and in England Sept. 20, 1883, No. 4,498.

Claim.—1. A basin-pump provided with a stationary channeled portion, a pipe having a chambered projection at one side and inlet and outlet valves, and with an outlet-pipe and discharge-spout affixed to the pipe, and a movable cylinder rocking upon said pipe, inclosing the said projection, and provided with a radial piston, substantially as set forth.

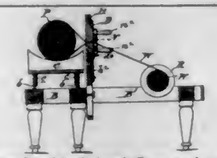
2. The combination, in a basin-pump, of the central channeled supporting portion, a pipe extending from the same and having a chambered projection, the cylinder rocking on the pipe and provided with a piston, a spout connected to the pipe, and a valve for controlling the flow of water through the spout, substantially as set forth.

3. The combination, in a pump, of the central channeled supporting portion, a pipe connected therewith carrying a chambered projection having a port, *i*, the cylinder rocking thereon and provided with a piston, and the spout fitted to the end of the pipe and turning thereon, substantially as set forth.



4. The combination, in a basin-pump, of a stationary portion having two independent supply-channels, a valve whereby the flow of fluids through both channels is controlled, a faucet, and a pump arranged between the valve and the faucet, substantially as described.

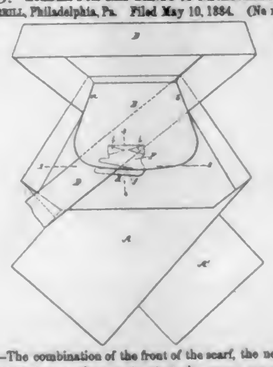
5. The combination, in a basin-pump, of the fixed channeled portion A, provided with the delivery-spout, the movable portion B, provided with a radial piston, channels in the fixed portion leading to different supply-pipes, and a cock controlling the communication between the pump and the said channels, substantially as set forth.



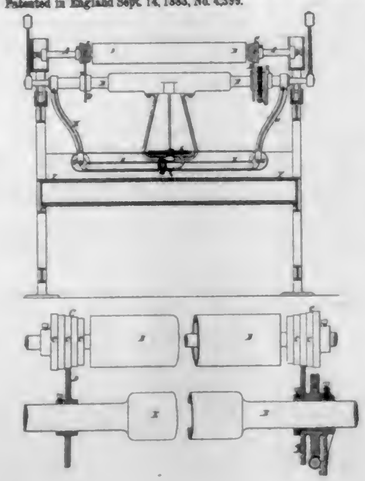
6. The combination of pump-case B and piston D, and pipe *b*, provided with the projection C, side valves, *f f'*, and springs *g g*, each attached to one of the valves *f'* and bearing on one of the valves *f*, substantially as set forth.

7. The combination, in a pump, of the fixed portion, the pipe *b*, having a chambered and valved projection, C, and the cylinder B and piston D, loose cap V, and ring W, substantially as set forth.

301,064. BUNDLING-MACHINE. HENRY MEREWEATHER, Hull, Quebec, Canada. Filed Feb. 11, 1884. (No model.)



301,064.

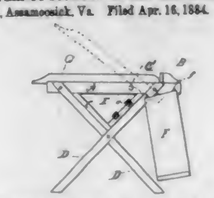


Claim.—The combination of a bench, B, supporting a stool or cradle, C, holding a package to be tied, a laterally-extending portion, B', having journaled upon it a wire-reel, R, provided with crank, and a head-stock, H, having a disk or chuck bodily journaled therein, said chuck having two perforations—one at each side of the center—for the wire to pass through, and having eccentrically pivoted upon its face the nippers N, provided with nipping-jaw and cutting-edge sweeping said perforations, and serving as a crank to turn the said chuck in one direction for twisting the wire and to cut off the same when turned in the opposite direction, the chuck being held stationary by a catch, k^2, engaging a suitable notch, all substantially as shown and described, and for the purpose set forth.

301,065. HOLDER FOR THE BANDS OF NECKSCARFS. WILLIAM E. T. MERRILL, Philadelphia, Pa. Filed May 10, 1884. (No model.)

Claim.—The combination of the front of the scarf, the neckband D, and the shield B, having the opening *b* at the upper corner, with the holder F applied to the lower portion of the shield, and having a bent wing forming a tapering opening, *f*, into which the edge of the neck-band is drawn after the end of the band has been tucked through the opening *b*, as set forth.

301,066. PANTOGRAPH ENGRAVING-MACHINE. JOHN MOWAT, Barrhead, County of Renfrew, Scotland. Filed Jan. 10, 1884. (No model.) Patented in England Sept. 14, 1883, No. 4,399.



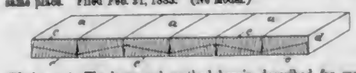
Claim.—1. The combination of the mandrel A of a pantograph engraving-machine with stepped or beveled disks C thereon, and actuating devices whereby varying degrees of diminution in the designs may be obtained, substantially as set forth.

2. The combination of the mandrel A of a pantograph engraving-machine with stepped or beveled disks C, secured adjustably on said mandrel, as and for the purpose described.

3. In pantograph engraving-machines of the cradle class, the combination of a stepped or beveled disk, C, on each end of the roller-shaft or mandrel, with the ordinary actuating-disks on the rocking shaft of the machine, as and for the purpose set forth.

4. In pantograph engraving-machines of the cradle class, the combination, with the roller-shaft or mandrel, of movable and interchangeable disks fitted thereon, and actuated by the usual disks on the rocking shaft of the machine, as and for the purpose set forth.

301,067. PEANUT SEPARATING AND ASSORTING TABLE. CHAS. W. NICHOLSON, Assamoosick, Va. Filed Apr. 16, 1884. (No model.)



Claim.—1. The combination of a suitable top frame, a back board, and a riddle pivoted in the top frame, and having its rear end abutted against and movable to and from the under side of the said back board, the latter being projected above the plane of the riddle when said riddle is in its normal position, substantially as set forth.

2. The combination of the top frame, the supporting-legs, the back board mounted on the top frame near the rear edge of same, the trough arranged below the top frame and in advance of the back board, and the riddle pivoted in the top frame and adapted to be tilted and deliver the screened articles between the back board and the trough, substantially as set forth.

3. The herein-described assorting-table, composed of the top frame, the back board mounted on the rear end of same, the trough supported below the top frame, and having one of its ends removable, as described, and the riddle pivoted in the top frame, and adapted to be tilted and deliver the screened articles between the trough and the back board, substantially as set forth.

301,068. PIANO SOUNDING-BOARD. HENRY S. PARMELEE, New Haven, Conn., assignor to the Mathushek Piano Manufacturing Company, same place. Filed Feb. 21, 1883. (No model.)

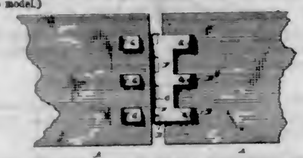
Claim.—1. The improved method herein described for making sounding-boards, consisting in first cutting the stock from the log in lines parallel with the diameter of said log, then uniting the pieces of stock thus cut side by side with glue, and then cutting said stock transversely to the lines of union, whereby a sounding-board is produced the sections of which are of uniform density, and in which the annular wood-grain extends approximately through the thickness of the sections, while the radial wood-grain extends approximately through the width of said sections, for the purposes described.

2. An improved sounding-board for musical instruments, formed of a number of sections cut, as described, so as to be each of uniform density, and united by glue, the said sections having the annular wood-grain extending approximately through the thickness of the sections, and the radial grain extending approximately through the width of said sections, substantially as set forth.

3. An improved sounding-board composed of a number of sections cut, as described, so as to be each of uniform density, and united by glue, and having the radial and annular wood-grains extending, respectively, approximately through their widths and thicknesses, the part of each section which was near the heart of the log being placed contiguous to the part of the next section which was near the bark, as and for the purpose described.

301,069. TREATMENT OF VEGETABLE FIBROUS MATERIAL. AUGUST PEINS, Meissen, Saxony, assignor to Emil Quellmalz, Dresden, Germany. Filed Apr. 5, 1884. (No specimens.) Patented in Luxemburg Apr. 2, 1884, No. 377, and in Italy Apr. 18, 1884, XXXIII, 135, XVIII, 166-72.

Claim.—1. The herein-described process of treating vegetable fibers or products therefrom (spun or woven) by maceration in an attenuated cold solution of chloride of lime.



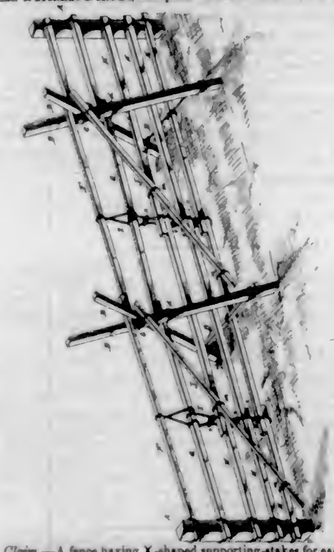
2. The herein-described process of treating vegetable fibers or products therefrom (spun or woven) by maceration in an attenuated cold solution of chloride of lime, and by subsequent treatment with alkali lyes.

3. The herein-described process of treating vegetable fibers or products therefrom (spun or woven) by maceration in an attenuated cold solution of chloride of lime, and by subsequent boiling under pressure in an alkaline solution.

4. The herein-described process of treating vegetable fibers or products therefrom (spun or woven) by treatment in an alkaline lye with which is combined a hydrocarbon or sulphuret of carbon.

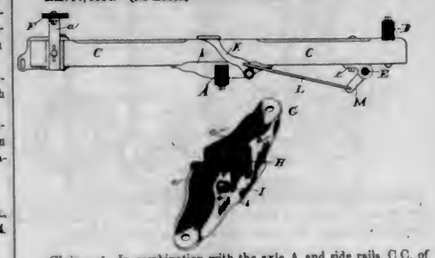
5. The herein-described process of treating vegetable fibers of products therefrom (spun or woven) by maceration in an attenuated solution of chloride of lime, and by subsequent boiling under pressure in an alkaline lye, combined with a hydrocarbon or a sulphuret of carbon.

301,070. BELT-FASTENER. JOHN W. PUGH, Grand Rapids, Mich., assignor of one-half to Allen P. Collar, same place. Filed Apr. 11, 1884. (No model.)



Claim.—1. A belt-fastener consisting of two pieces of metal, each slotted, so as to form on one side of it a series of tongues adapted to be bent into U-loops, the two parts being hinged together so that the free ends of the loops will project in opposite directions from the sides of the fastener, substantially as and for the purpose specified.

2. A hinged belt-fastener consisting of two series of U-loops formed integral with and connected by cross-pieces, the series of loops on one of the two pieces forming the fastener being bent in a direction opposite to that on the other, substantially as and for the purpose specified.

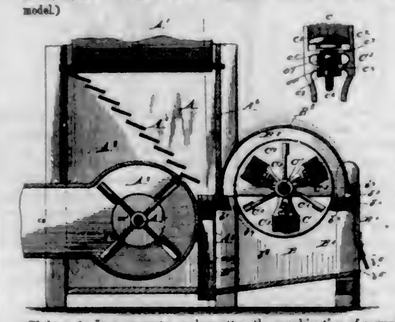


3. A belt-fastener consisting of two parts, each part being a piece of metal having on it tongues projecting in opposite directions, one series adapted to be bent into loops for the reception of a hinge-bolt, and the other into U-loops adapted to pass through and embrace the ends of the belt, substantially as and in the manner specified.

301,071. FENCE. JOHN R. PUTT, Middlebury, Ind., assignor of one-half to Schlarks S. Martin, same place. Filed Nov. 12, 1883. (No model.)

Claim.—A fence having X-shaped supporting-stakes for each panel, a rider supported in the crotches of the same, a series of rails extending from one stake to another and overlapping at each stake, one or more series of rails extending through the stakes and overlapping at the centers of the panels, and a diagonal rail extending through the length of each panel, the several parts being combined and bound together by wire, substantially as described.

301,072. CORN-PLANTER. ANDREW RUNSTETLER, Dayton, Ohio, assignor to the Farmers Friend Manufacturing Company, same place. Filed Mar. 17, 1884. (No model.)



Claim.—1. In combination with the axle A and side rails, C C, of the main frame of a corn-planter, the coupling-braces G, shaped to fit the rails C, and recessed to receive and hold the axle A, substantially as specified.

2. In combination with the rails C of a corn-planter frame, and the axle A, the coupling-braces G, secured to the rails C by bolts *d*, with a through-bolt, N, securing the axle to the frame, and coupling-braces, substantially as specified.

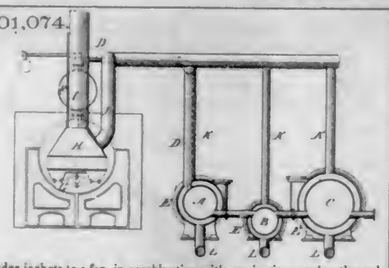
3. In combination with one of the coupling-braces G, the boss I, and through-bolt J, and foot-lever K, journaled thereon, substantially as specified.

301,073. SEPARATOR AND SMUTTER. WILLIAM N. SHARPNACK and MICHAEL MCMAHON, Bucyrus, Ohio, assignors of one-half to G. Donnenwirth, Jr., and J. C. Tobias, both of same place. Filed Feb. 27, 1884. (No model.)

Claim.—1. In a separator and smutter, the combination of a smutting-case having cross-piece b^2, and openings above and below said cross-piece, a smutting-cylinder within said case, and forming with said case the passages B^3 b^3 and b^1, and resting close to the cross-piece b^2, and an exhaust-fan located behind the cylinder, substantially as described.

2. In a separator and smutter, the combination of a smutting-case having a cover provided with means for regulating the size of the opening between the top of the case and cover, a suction device, and a smutting device interposed between the suction device and front of the case, substantially as described.

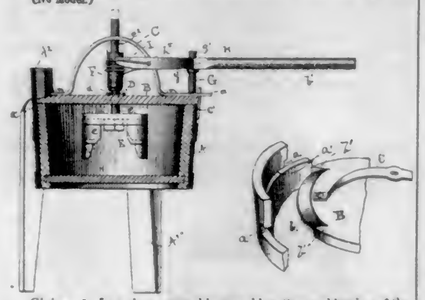
3. In a separator and smutter, the combination of a smutting-case, a smutting-cylinder in said case, a cover over said case and cylinder, forming passage B^3 and opening b^3, and provided with adjusting set-screws for regulating the height of opening b^3, and a suction device, substantially as described.



4. In a smutter, the combination of a brush having screw-threaded stem c^4 and nuts c^5 and c^6, and a spider-arm having arms c^3 and bridges c^7 c^7, provided with openings c^8, substantially as described.

301,074. SUPERHEATER FOR ENGINES. JOHN OR HENRY STUT, San Francisco, Cal. Filed Sept. 7, 1883. (No model.)

Claim.—1. A steam cylinder or cylinders having a supply-pipe connecting them with the steam dome or boiler, jackets E surrounding the cylinders, a secondary pipe or jacket, J, opening into the uptake or flue, surrounding the steam-pipe and connected with the cylinder-jackets by branches, as shown, in combination with pipes leading from the cylinder-jackets and connected with a fan, substantially as and for the purpose herein described.



2. A steam cylinder or cylinders having a supply-pipe connecting them with the steam dome or boiler, jackets surrounding the cylinders and steam-pipe and connected by branches, and pipes leading from the

301,074.

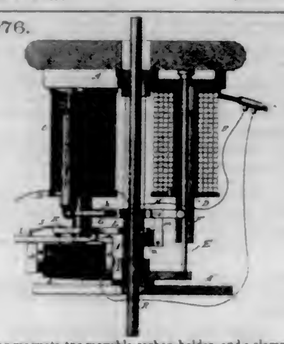
cylinder-jackets to a fan, in combination with an air-pipe passing through the furnace, breeching, or smoke-stack, and connected with the jacket of the steam-pipe near the boiler, substantially as herein described.

301,075. WASHING-MACHINE. JOHN TOMBOW, Massillon, Ohio, assignor of one-half to Victor Kern, same place. Filed June 30, 1883. (No model.)

Claim.—1. In a churn or washing-machine, the combination of the body or reservoir A, having a vertical projecting arm, A^2, extended above the rim thereof and provided with a groove or chine, *a'*, cut on its inner face in line with the said rim, and transverse notches *a*, cut from the ends of the chine *a'* outward across the ends of the arm A^2, to the outer side thereof, the lid B, having its rim or periphery extended over the upper edge and flush with the outer side of the body A, and having a portion of one side cut away, whereby the edge or bead *b* and shoulders *b'* are formed, and adapted to fit snugly into the chine *a'* and transverse notches *a*, and a retaining hook or clasp arranged on the side of the lid or box opposite to the arm A, substantially as and for the purposes set forth.

2. The combination, in a washing-machine, of the tub A, having upward extension A^2, formed with inner groove, *a'*, and notches or slots *a*, the lid B, having a central bearing for the agitator-shaft, and cut away on one side, providing the bead *b*, fitted to groove *a'*, and notches *a*, the hook *c'*, pivoted at one end to the tub on the side opposite the extension A^2, bar C, secured on the lid in a diametrical line drawn through center of bead *b*, and having its end *c* opposite said bead projected in position to be engaged by hook *c'*, the agitator-shaft journaled in bearings formed in the lid and the bar C, and means for operating the said shaft, substantially as specified.

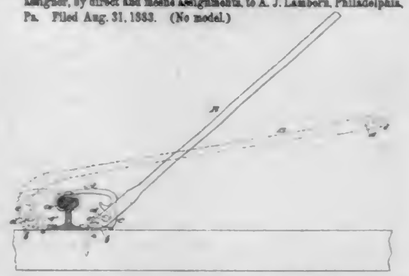
3. The combination of the box or body, the agitator-shaft, the pivoted operating-lever having its arms h^1 h^2 made of spring material, and provided on their outer sides near their ends with grooves h^4, and the cord I, wrapped around the agitator-shaft and having its ends secured to the arms h^2 h^3 at a point back from the ends thereof, and sprang into the grooves h^4, substantially as set forth.



301,076. ELECTRIC-ARC LAMP. EDWARD WESTON, Newark, N. J., assignor to the United States Electric Lighting Company, New York, N. Y. Filed July 16, 1883. (No model.)

Claim.—1. In an electric lamp, the combination, with the movable carbon-holder and a clamp or clutch, of means for raising and lowering the clamp, and thereby adjusting the carbons, a stop or detent, and means for imparting a vibratory movement to the same when in contact with the clamp, as set forth.

2. In an electric lamp, the combination, with the movable carbon-holder, a clamp or clutch, and electro-magnets for controlling the position of the same, of a magnet in a normally-open shunt or derived circuit from the main circuit, and an armature connected with the circuit of the said magnet, and arranged to be thrown into vibration on the contact therewith of the clamp, as and for the purpose specified.



3. In an electric lamp, the combination, with the feed controlling

301,076.

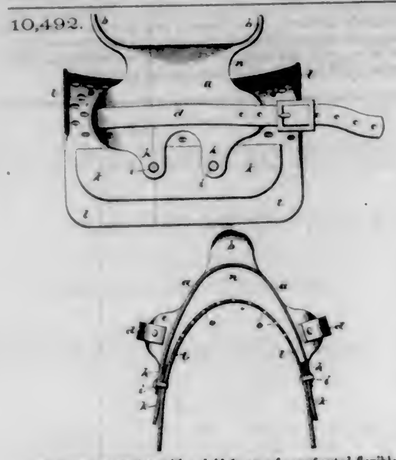
and adjusting magnets, the movable carbon-holder, and a clamp or clutch, of an independent electro-magnet and armature for imparting a vibratory movement to the clutch, for the purpose specified.

301,077. SPIKE-EXTRACTOR. WILLIAM A. WRIGHT, Centreton, N. J., assignor, by direct and mesne assignments, to A. J. Lambert, Philadelphia, Pa. Filed Aug. 31, 1883. (No model.)

Claim.—1. In a spike-extractor, a yoke provided with teeth, in combination with a lever formed with a claw, *c*, a finger, *c'*, and a fulcrum-bar, *d*, said claw and finger having between them a space to receive the head of the spike, the claw being longer than the finger and located below the same, substantially as and for the purpose set forth.

2. A spike-extractor consisting of a yoke having a rack the teeth of which are located perpendicularly one above the other, and a lever formed with a fulcrum-bar, a claw, and a finger, a space existing between the claw and finger, the finger being above, whereby when the lever is shifted to the higher tooth of the rack its finger forms a bearing on the head of the spike, and when the fulcrum-bar of the lever rests in said tooth the claw is approximately the same distance from the under side of the head of the spike as when said bar rested in the lower tooth, substantially as stated.

REISSUES.



10,491. METHOD OF PRESERVING MILK. EDUARD SCHERPF, Wendisch Buchholz, Prussia, Germany. Filed May 17, 1884. Original No. 277,352, dated May 8, 1883. Patented in Germany Feb. 20, 1880, No. 15,341; in France Apr. 7, 1881, No. 142,133, and in England Feb. 14, 1882, No. 717.

Claim.—The process of preserving milk which consists in subjecting such milk in a tightly-corked receptacle to a steam and air bath of about 100° centigrade, then lowering the temperature in the boiler by admitting cold water into the serpentine tube or coil, thus forcing the milk through the pores of the cork, where butter is deposited and albumen precipitated by means of the tannin in the cork, removing the milk-bottles from the apparatus to cool, whereby a vacuum is produced in the bottle and air permitted to enter, such air being filtered by passing through the cork disk and the cork which closes the bottle, removing the cork disk containing the germs or sporules, and then coating the cork with paraffine, substantially as and for the purpose set forth.

10,492. HORSE-COLLAR PAD. FREDERICK FRANK KANNE, Waterville, Minn. Filed Nov. 7, 1883. Original No. 251,600, dated Dec. 27, 1881.

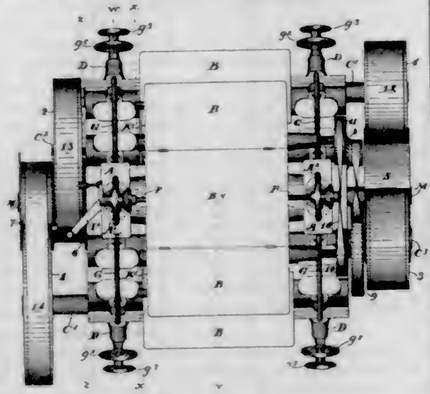
Claim.—1. The combination, with an arched metallic frame, of a perforated pad secured to the inner face of the frame, with an intermediate space, and adapted to hold said frame above and out of contact with the animal's neck, substantially as set forth.

10,492.

2. The combination, with a rigid frame, of a perforated flexible pad secured to the lower edges of the inner face of said frame and forming an extended rest therefor, the said pad and frame being separated to permit of a free passage of air, substantially as set forth.

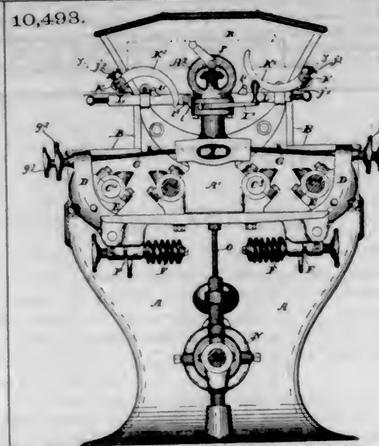
3. The combination, with an arched metallic frame, of a perforated flexible pad secured to opposite sides of said frame and forming an air-space between them, substantially as set forth.

4. The combination, with a horse-collar, of the metallic frame provided with the curved projections and straps, substantially as set forth.



5. The combination, with the arched metallic frame having the curved projections and lugs, of the perforated pad, and pieces of leather *i*, both secured to the lugs of the frame, with an air-space between the frame and pad, substantially as set forth.

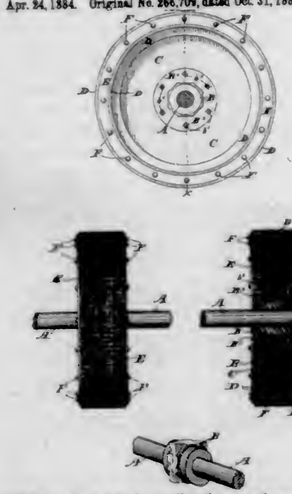
10,493. ROLLER-MILL. DANIEL W. MARMON and JESSE WARRINGTON, Indianapolis, Ind., assignors to Nordyke & Marmon Company, same place. Filed Jan. 26, 1883. Original No. 265,927, dated Oct. 10, 1882.



Claim.—1. The combination of the arm-operating mechanism, the feed-gate-operating mechanism, and the device I, having a cam, *i*, to operate one mechanism, and a handle, I', having a projecting end, to operate the other, whereby both mechanisms can be operated simultaneously, and the rolls thus thrown apart from each other and the feed-gates closed at one operation, substantially as set forth.

2. The combination of the feed-gate-operating mechanism, the bar L, provided with pivoted catches *l l*, and the handle I, said bar being adapted by means of said pivoted catches to be operated by the inwardly-projecting end of said handle, or to be operated without moving said handle, substantially as set forth.

3. The combination of the feed-gates, their operating-shafts, the arms K' K' on said shafts, the bar L, having lugs *l' l'*, which operate said arms, and the pivoted catches *l l*, and the handle I', whereby said



10,493.

bar can be operated by the inwardly-projecting end of said handle I' or is permitted to be operated independently of said handle, substantially as set forth.

10,494. PULLEY. ELIJAH B. MARTINDALE, Indianapolis, Ind. Filed Apr. 24, 1884. Original No. 266,709, dated Oct. 31, 1882.

Claim.—1. A wheel or pulley the operating surface or face of which is composed of the edges of the sheets or rings of paper pasted, pressed, and secured together, which form its body or rim, substantially as described.

2. A wheel or pulley composed of sheets of paper or pasteboard pasted, pressed, and secured together, extending to the surface, said surface being thus composed of the edges of said sheets, substantially as described.

3. A wheel or pulley the rim whereof is composed of sheets of paper or pasteboard pasted, pressed, and secured into one solid mass, said sheets being cut into rings and built up so that the edges thereof form the surface or face of the rim, substantially as described.

4. A wheel or pulley having a disk or web composed of sheets of paper or pasteboard pasted, pressed, and secured together into one solid mass and extending from the hub to the periphery of the wheel, the edges of the sheets thus forming the face or a part of the face or periphery of the wheel, substantially as described.

5. The combination, in a wheel or pulley, of a hub, a web or body, and a rim composed of sheets of paper or pasteboard pasted, pressed, and secured together diametrically of the wheel, the edges whereof form the operative surface or face thereof, substantially as described.

6. The combination of the hub B, web C, and rim D, said rim and said web being composed of layers of paper or pasteboard arranged as specified, metal rings E, and bolts or rivets F, all substantially as set forth.

7. The combination, in a pulley, of the hub B, the central portion of which is shouldered, and of a form to hold the pulley from turning thereon, and flanges B' B', which come against the shoulders on said hub, and are secured to said wheel by bolts b', thus also holding said pulley fixedly on said hub, substantially as shown and specified.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court—Northern District of Illinois.

CURRAN *et al. v.* BURDSALL.

Decided July 16, 1883.

1. Where a patentee after selling all his rights under the patent and subsequently purchases an older patent to defeat his assignee's rights, *Held* that such proceeding is manifestly unjust and inequitable, even if the older patent clearly anticipates the patent for the device sold.

2. Where a patentee has sold all his right, title, and interest in, to, and under his patents and subsequently purchases an older patent, *Held* that by such subsequent purchase an assignee cannot be dispossessed of the full benefit of what has been acquired from the patentee.

3. Where others are associated with the patentee in the purchase of a prior patent subsequent to a sale by the patentee of all his right, title, and interest in, to, and under his own patents, *Held* that the prior sale operates as a license as against all of the purchasers.

4. If others join with the seller in the purchase of the prior patent, such owners must look to the original seller for their compensation.

Mr. G. L. Chapin and *Mr. E. Hanecy* for the complainants.

Messrs. West & Bond for the defendant.

BLODGETT, *J.*:

This is a bill to restrain the alleged infringement by defendant of Letters Patent No. 76,661, dated July 7, 1868, issued to Richard P. Johnson and Eli J. Sumner, for an improvement in lumber-driers, which it is claimed has been assigned to complainants. The bill also charges the infringement of three other patents, claimed to be owned by complainants, but as no proof in regard to them has been put into the record no further notice will be taken of them. No question is made as to complainant's title to the Johnson and Sumner patent.

The main matter of defense relied upon by defendant is that two patents, one numbered 161,490, dated March 30, 1875, which is reissued as No. 8,846, and the other numbered 189,432, dated April 10, 1877, which is reissued as No. 8,840, were duly issued to complainant John J. Curran for improvements in lumber-driers, and that the right, title, and interest in and to said patents in and for the State of Wisconsin has been duly assigned and transferred to and vested in defendant, and that all the lumber-driers built by defendant in the State of Wisconsin have been constructed in accordance with said two letters patent so as aforesaid issued to complainant Curran.

Defendant further insists that all of complainants' interest in the patents set out in the bill of complaint has been acquired since the issue of said two patents to Curran, and since Curran assigned his interest in his said two patents in and for the State of Wisconsin, and that defendant acquired and holds his title to said two patents under assignments from complainant Curran and one Wilcox, who was interested with Curran as owner thereof.

One element of the Johnson and Sumner patent, No. 79,661, was a series of curtains suspended from the stanchions of the car on which the lumber was held in the drying-room, the function of these curtains being to arrest and turn down the flow of the hot-air current, so as to compel the passage of the hot air upon and about the lumber on the cars, while it passes through from the rear to the front of the kiln; and the second claim is:

2. The providing the cars with curtains or like device, in the manner and for the purposes set forth.

The Curran patent, No. 189,432, being Reissue No. 8,840, the right of which for Wisconsin is held by defendant, contains as one of its elements or features provision for curtains to be suspended from the ceiling of the drying-room, the description of which in the specification is as follows:

I also place curtains *h h*, of canvas or equivalent material, at intervals along the ceiling of the drying-chamber, to hang loosely down about eighteen inches, to rest upon the top of the cars of lumber, thus preventing the hot air from rushing along the ceiling, and forcing it downward to pass through the lumber and under the same.

The curtain or sliding door N, at the front end of the kiln, and extending down, as described, to form the lower draft, causes the air in its passage through the kiln to move along the floor and through the lower courses of the lumber. To further facilitate this movement, the smaller curtains *h* are also hung from the ceiling at intervals of about twelve feet, extending about eighteen inches down to and resting upon the cars of lumber, thus preventing the hot air from rushing along the ceiling and out the chimney, and forcing it by a lower draft to pass through and underneath the lumber.

Nearly over the inner edge of the opening *e*, by which the hot air is admitted to the kiln, the longer curtain *h'* is suspended, hanging free from but near the adjacent lumber-pile, as shown in the drawings. This curtain receives the hot air and directs it horizontally against the lower portion of the nearest lumber-pile. Once given a horizontal direction, and finding egress only beneath the lowered curtain or door *N*, with the strong draft that usually prevails through the kiln, the air has much less tendency to rise to the ceiling in its passage to the chimney. Such tendency being, however, still sufficient for the purpose of the distribution of the air and its action upon the lumber, is essentially uniform throughout the height and breadth of the drying-chamber.

And this feature is covered by claim No. 7, which is in these words:

7. The combination, with the drying-chamber A, curtain N, forming a downward extension of the chimney, and the opening *e*, for the admission of the hot air from below, of the curtain *h'*, depending from the ceiling at a point nearly over the inner edge of the opening *e*, and reaching from side to side of the kiln, substantially as and for the purpose set forth.

The only lumber-driers built by defendant were so built in the State of Wisconsin, and are provided, as the proof shows, with curtains suspended from the roof in the manner called for by the Curran patent.

The proof shows that the Johnson and Sumner patent was acquired by complainants after the issues of

the Curran patents and after Curran had assigned his interest therein for the State of Wisconsin.

Complainant Curran, having set forth in his patent, No. 189,432, the curtains suspended from the ceiling, is now estopped from defeating the right of defendant to construct lumber-driers in accordance with the terms of the patent by the purchase of the older patent of Johnson and Sumner. Curran has held himself out to the world as the inventor of this peculiar curtain device, and it would be grossly unjust and inequitable to allow him to defeat his assignees' rights to the full enjoyment of this patent by acquiring the ownership of this older patent, even if the older patent clearly anticipated the Curran device. By becoming the owner of this Curran patent defendant is clothed with the right as against Curran to make driers as directed in that patent, although the patent may be void for want of novelty, against the rest of the world. It is true two other persons are associated with Curran in the ownership of the Johnson and Sumner patent, but it seems to me the estoppel upon Curran must operate as a license from Curran to defendant to use the Johnson and Sumner patent in the State of Wisconsin, and Curran's co-owners must look to him for an accounting as to this territory. It would hardly seem necessary to cite authorities in support of this palpable equity of defendant against Curran and his co-complainants, but reference to a few cases where questions analogous to this have arisen may not be out of place. In *Faulks et al.* v. *Kamp et al.* (3 Fed. Rep., 898) the court said:

It is argued for the defendants that as the conveyances were of the right, title, and interest of the grantors, the warranty would only extend to whatever right they might have, which did pass, and that the warranty was kept, but the conveyances were made to carry out the sale in the manner required by law for passing the title, and the warranty grew out of the sale and not out of the form of the conveyance. And the patent subsequently purchased by the defendants may be better than this for covering this invention, but if it is it cannot help the defendants as against the orators. It is a familiar law, and has been for a long time, that a warranty of title or right to it draws to it any after acquired right or title of the warrantor, and carries it to the benefit of the person to whom the warranty runs. So, whatever right, if any, the defendants acquired to the invention covered by this patent inured to the benefit of the orators. It is also urged that the purchasers knew of the defects, and were not deceived, and that therefore the defendants are not estopped. But the rights of the orators do not rest on estoppel merely; they rest upon the purchase, which must operate so that the orators may have what they brought, and so that the defendants shall not both sell and keep the same thing.

In *Gottfried* v. *Miller* (104 U. S., 521) the court says:

It remains to consider whether the sale by Stromberg to the defendant Miller of one of the pitching-machines containing the improvement described in the patent protects him from liability for its use in this suit. By the contract of sale Stromberg warranted not only the title to the machine itself, but of the right to use it. If at the time of the sale he had been the owner of the patent, the sale would have constituted a license to Miller to use the machine as long as it lasted; but Stromberg did not acquire any interest in the patent until long after the date of his sale to Miller. If he had subsequently become the sole owner of the patent, his previous sale to Miller of a machine embodying his patented invention would have estopped him from prosecuting Miller for an infringement of the patent by the use of the machine.

The rule deducible from these authorities is, that a patentee cannot sell his rights to another and then buy or obtain control of an older patent and through such older patent dispossess his assign of the full benefit of what he purchased. Therefore, without discussing the question whether by the suspension of the curtains from the ceiling of the drying-room defendant infringes the second claim of the Johnson and Sumner patent, which specifically provides for suspending the curtains from the stanchions of the car, I am of opinion that complainants cannot enforce the Johnson and Sumner patent against defendant, because defendant as owner of the Curran patent has the right to use the Curran curtains in the State of Wisconsin.

The bill is therefore dismissed for want of equity.

64

U. S. Circuit Court—Northern District of Illinois.

BURDSALL v. CURRAN *et al.*

Decided July 16, 1883.

1. The answer admitting the validity of the patents sued on, and one of the defendants being the original patentee, their validity cannot be disputed on a suit for infringement brought by an assignee of the patents.
2. The entire title for the State of Wisconsin being in complainant for Reissue Patents Nos. 8,840 and 8,846, defendants are estopped from denying their validity.
3. *Held*, that defendants infringed the first, second, third, fifth, sixth, and seventh claims of Reissue No. 8,840, and the first, second, fifth, sixth, and seventh claims of Reissue No. 8,846, in the construction of lumber-driers built by them in the State of Wisconsin.
4. Slight mechanical deviations from the specific directions given in both of these patents, Reissues Nos. 8,840 and 8,846, when the main features are incorporated, will not avoid the charge of infringement.

Messrs. West & Bond for the complainant.

Mr. G. L. Chapin and *Mr. E. Hanecy* for the defendants.

BLODGETT, *J.*:

This suit is brought for infringement of Letters Patent No. 161,490, dated March 30, 1875, issued to John J. Curran and Carlos Wilcox, which was reissued August 12, 1879, to John J. Curran and Carlos Wilcox, being Reissue No. 8,846, and of Letters Patent No. 189,432, dated April 10, 1877, issued to John J. Curran and Carlos Wilcox, assignor, and reissued August 12, 1879, to the same parties, Reissue No. 8,840. Both of these patents are for devices applicable to lumber-driers. Complainant claims ownership of all the rights, title, and interst in and to these patents, by mesne assignments from Curran and Wilcox to himself, for the State of Wisconsin and other States; but the infringement claimed in this suit is only for the State of Wisconsin. The validity of the patents and of the reissue is admitted by the defendants' answer, although it would probably not lie in the mouth of Curran, the defendant, who was the original patentee, to whom the original patents and reissues were issued, to deny their validity. The only issues in the case, therefore, are as to the complainant's title and the question of infringement. The complainant's title, as shown by the proof, comes through a series of mesne assignments, and seems to me clearly to clothe the complainant with the entire title for the State of Wisconsin. I have not deemed it necessary for the purposes of this suit to examine the chain of title as to the other States claimed by complainant.

Complainant claims an infringement of the first, second, fifth, sixth, and seventh claims of Reissue No. 8,846, and of the first, second, third, fifth, sixth, and seventh claims of Reissue No. 8,840. The proof upon the question of infringement consists in the production of a model, which the proof shows correctly represents three lumber-driers built by defendants—two at Oshkosh and one at Neenah, Wisconsin.

The first claim of Reissue No. 8,846 is—

1. In a kiln for drying lumber, the inclined floor B, extending beyond the ends of the kiln to form the loading and unloading platform, and provided with openings *e*, and sheet-metal part *f*, substantially as and for the purpose herein set forth.

An inspection of the model certainly exhibits the inclined floor B, as described in the original and reissued Curran patent, with the extensions beyond the end of the kiln, so as to form a loading and unloading platform, with the opening *e* and sheet-metal part *f*.

As to the second and third claims, which refer to the flexible self-adjusting car for lumber-driers, particularly described in the specifications, the infringement of these claims is not specifically alleged in the bill, nor does the model produced show the form of car used by the defendant; but I find in the proofs, as I read them, evidence showing that the defendants have used substantially the same car which is described in the complainant's patent.

The fifth claim of the patent is as follows:

5. In a hot-air lumber-drier, the combination, with the inclined car-track, and heating-pipes located beneath the track, of a partition, *a'*, placed below the track-bed, and proximate to the heating-pipes, for the purpose of confining the passing air close to the pipes, substantially as set forth.

The model in evidence certainly shows this partition *a'* almost in precisely the locality and performing necessarily the function that is provided for in the fifth claim.

The sixth claim is as follows:

6. In a hot-air lumber-drier, the combination, with the drying-chamber, located above the floor B, and the heating-chambers, located below said floor, of the dead-air chamber I, substantially as shown and described.

This dead-air chamber is the space between the track-floor and the partition *a'*, and is found in the model in evidence before me, there performing the function of the dead-air chamber in the patent.

The seventh claim is—

7. In a hot-air lumber-drier, the combination, with inclined bottom B and steam-pipes E E, of the horizontal partition *a'*, and the vertical partitions *w*, arranged alternately above and below the pipes, substantially as and for the purpose herein set forth.

The pipes shown in the drawings of the complainant's patent are arranged longitudinally, while the defendants, in the construction of their driers, as shown by their model in evidence, set their pipes transversely across the heating-chamber, so that they form gates or obstructions to the passage of the air, thereby compelling the air to pass around and between each bank of pipes, so that in its passage from its point of entrance to the exit from the heating-chamber the air comes in contact with all the pipes, and therefore becomes thoroughly heated. In the arrangement shown in the patent, the pipes running lengthwise of the heating-chamber, it was deemed necessary to force the air into contact with the pipes by means of these partitions. I do not construe this patent as requiring the heating-pipes to run lengthwise of the heating-chamber; but they may be arranged in the heating-chamber in any way so as to secure the largest amount of radiation upon the air, which it is designed to heat, in its passage through the chamber from its point of introduction to its exit, and, undoubtedly, the defendant, by the transverse coils of pipes, has avoided the necessity for the partitions *w*. They have used all the other parts of the combination described in this seventh claim; but there being no necessity for the specific use of the partitions *w*, they have used in place thereof the transverse coils of pipes, which perform the same function in the organization, and therefore, in my opinion, do infringe this claim, so that they practically use the entire combination.

The claims in Reissue No. 8,840 which it is insisted that the defendants infringe are as follows:

1. In a kiln for drying lumber, the steam-pipes C, arranged upon the inclined ground-floor B, and underneath the inclined floor O of the drying-chamber on which the cars run, as and for the purpose herein set forth.
2. The steam-pipes C, set up in gate form across the kiln, with free expansion-joints and headers running across and lengthwise of the kiln, substantially as and for the purpose herein set forth.
3. The broad chimney M, extending entirely across the kiln, and provided with the two chimneys M' M', separated by inclined deflecting-boards, as set forth.
5. In combination with a drying-chamber and a chimney which opens therefrom at the top and at one end of said chamber, the curtain or sliding door N, located as shown, and extending across the chamber to form a downward extension of the chimney of the full width of the drying-chamber, substantially as and for the purpose set forth.
6. In combination with the broad chimney M, kiln A, and heating-chamber underneath, the sliding door or curtain N, arranged in the mouth of the chimney, and leaving an opening at the bottom, whereby the hot air is compelled to descend to the floor of the kiln before passing out through the chimney, as set forth.
7. The combination, with the drying-chamber A, curtain N, forming a downward extension of the chimney, and the opening *e*, for the admission of the hot air from below, of the curtain *h'*, depending from the ceiling at a point nearly over the inner edge of the opening *e*, and reaching from side to side of the kiln, substantially as and for the purpose set forth.

The model shows certainly the steam-pipes C, arranged upon the inclined ground-floor B, and underneath the inclined floor O of the drying chamber, in every essential particular, as called for by the first claim. It also shows the steam-pipe C, set up in gate form, and with expansion joints and headers, substantially as provided in the second claim, although specific technical expansion-joints may not be used, the return bends of the pipes answering, perhaps, as a substitute for the technical expansion-joint; but all the practical purposes in the heating device shown and described in the second claim are necessarily involved, it seems to me, in the form of construction shown in the model in the proof. So, too, the model shows the broad chimney M, with the two small chimneys, separated by inclined deflecting-boards, substantially as described in the third claim of the letters patent. There is proof in the record tending to show that defendants have not in all cases used the broad chimney with the double flues and two small chimneys, but have used only one large chimney with a single flue; but I deem this a mere colorable evasion. One broad chimney with a single flue may do all or substantially all that the double-flued chimney does, and I think Mr. Curran cannot be permitted to violate his own patent by so slight a variation in the structure.

I also find in this model the curtain or sliding door N, described in the fifth claim, and which is claimed in combination with the other parts of the machine. It is true there is no special sliding door, but in place of it there is a suspended curtain; but it seems to me to perform just the function which the claim provides shall be performed by the sliding door N—that is, it forms a downward extension of the chimney of the full width of the drying-chamber, and is evidently for the purpose of forcing the air down to the bottom of the chamber before it escapes through the chimney, thereby compelling it to pass along and among the lumber to be dried.

What I have said in regard to the fifth claim applies with equal force to the sixth claim, which covers substantially the same curtain or sliding door N, arranged in the mouth of the chimney. The seventh claim covers the curtain depending from the top of the drying-chamber, and whose function is to deflect the air from the top of the drying-chamber onto the lumber in the drying-room, and it only needs an inspection of the model to see that this feature of the device is most palpably infringed.

There may be and probably are some slight mechanical deviations from the specific directions given in both of these patents for the construction of the lumber-driers therein described; but it is evident that the main

65

features of both these devices are involved in the construction of the defendants' drier. They have copied substantially all that is covered by the patents, and have made a drier which is, in principle, the same as the patents were intended to describe and protect.

The finding of the court therefore is that the defendants infringe the first, second, fifth, sixth, and seventh claims of the Reissue Patent No. 8,846, and the first, second, third, fifth, sixth, and seventh claims of the Reissue No. 8,840. There will be a decree enjoining defendants from the further use of these patents, and a reference to ascertain and report damages.

U. S. Circuit Court—Southern District of New York.

THE ATLANTIC MILLING COMPANY v. ROBINSON.

Decided May 6, 1884.

1. The right to the exclusive use of a word or symbol as a trade-mark is inseparable from the right to make and sell the commodity to which it has been appropriated to designate the article as the production or article of the proprietor, and would seem to be an incident to the business of the place or establishment to which it owes its origin, and without which it can have no independent existence. It should be deemed to pass with a transfer of the business, because such an implication is consistent with the character of the transaction and the presumable intention of the parties.
2. The complainant's damages are measured by the extent to which the unlawful use of the word "Champion" has interfered with the sale of its flour.
3. The right to an injunction is not affected because the appropriation of their trade-mark has been a limited one.
4. It is not incumbent upon the complainants to show that their trade-mark has been copied in every particular. It is sufficient if it has been imitated to an extent calculated to mislead purchasers and cause the article to which it has been applied to pass as their article.

Messrs. Briesen & Steele for the plaintiff.

Mr. L. H. Arnold, Jr., for the defendant.

WALLACE, J.:

The proofs show that in 1861 the firm of Alex. H. Smith & Co., then the proprietors of the Atlantic Mills, at St. Louis, Missouri, adopted the word "Champion," and employed it to distinguish a particular quality of flour made and sold by them. From that time until the present it has been used as a trade-mark either by that firm or the several firms and corporations that became the proprietors of the property and business of the Atlantic Mills. The flour to which it was applied was particularly adapted for the southern export trade, and became generally known and recognized as the production of the Atlantic Mills by the word which was thus used to designate it. The complainant has not made proof of any formal transfer by Alex. H. Smith & Co. to any of the succeeding proprietors of the Atlantic Mills of the right to use the trade-mark, and if complainant has acquired that right it is because it passed upon the purchase of the mill property and business as an accessory thereof to each purchaser who became the proprietor of the premises, including the complainant, without any agreement respecting the trade-mark.

The right to the exclusive use of a word or symbol as a trade-mark is inseparable from the right to make and sell the commodity which it has been appropriated to designate as the production or article of the proprietor. It may be abandoned if the business of the proprietor is abandoned. It may become identified with the place or establishment where the article is manufactured or sold to which it has been applied, so as to designate and characterize the article as the production of that place or establishment rather than of the proprietor. A trade-mark of this description is of no value to the original proprietor, because he could not use it without deception, and therefore would not be protected in its exclusive enjoyment. Such a trade-mark would seem to be an incident to the business of the place or establishment to which it owes its origin, and without which it can have no independent existence. It should be deemed to pass with a transfer of the business, because such an implication is consistent with the character of the transaction and the presumable intention of the parties. (*Dixon Crucible Co.* v. *Guggenheim*, 3 Am. Law Times, 228; *Hudson* v. *Osborne*, 39 L. J. N. S. Ch., 79; *Skipwright* v. *Clements*, 19 W. R., 599.)

The defendant controverts the right of the complainant to the exclusive use of the word "Champion" as a trade-mark by the testimony of two witnesses to the effect that they use it or saw it used as a brand upon flour before it was adopted by Alex. H. Smith & Co. The testimony of the witness Potter fails to show the use of the word in the instances to which he refers prior to 1867, and is therefore valueless. The witness Reamey testifies that he used it for branding the flour of nine different firms as long ago as 1857. None of the persons for whom it was so used have been produced, although many of them were accessible. If Reamey's statement is correct, it could have been readily corroborated. The failure to do so is significant. His statement is not supported by any extrinsic evidence, and is not deemed sufficiently reliable to defeat the complainant's right. Upon the accounting to ascertain damages the fact is not to be overlooked that in the instances in which the trade-mark has been used by the defendant in connection with the names of other manufacturers than the complainant's, the complainant's damages are measured by the extent to which the unlawful use of the word "Champion" has interfered with the sale of their flour. Their right to an injunction is not affected because the appropriation of their trade-mark has been a limited one, and it is not incumbent on them to show that it has been copied in every particular. It is sufficient if his trade-mark has been copied to an extent calculated to mislead purchasers and cause the article to which it has been applied to pass as their article. The cases *Gillott* v. *Esterbrook*, (48 N. Y., 374;) *Newman* v. *Alvord*, (51 N. Y., 189;) *Hier* v. *Abrahams*, (82 N. Y., 519,) and *Walton* v. *Crowley*, (3 Blatchf., 440,) are instructive upon this point.

A decree is ordered for the complainant.

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, &c.

OFFICIAL GAZETTE—April—June, 1884.

DIGEST OF DECISIONS.

[Decisions of U. S. court cases are designated by an asterisk, (*,) of the Secretary of the Interior by a dagger, (†,) and of State courts by a double dagger, (‡.)]

ABANDONMENT.

(See Invention Described but not Claimed, 3.)

ADMINISTRATOR.

(See Assignments, 1.)

ANALOGOUS DEVICES.

(See Infringement, 1, 2, 3, 7, 9, 10.)

APPEALS.

(See Jurisdiction.)

APPEALS FROM THE COMMISSIONER OF PATENTS.

1. When the Commissioner of Patents stands in this court upon the ground that his decision in favor of an applicant's right to a patent is permanent, a legal duty to proceed to the next step consequent upon such permanent decision must arise, and a failure or refusal to so proceed presents the very evil which the writ of mandamus is designed to cure.
[*U. S., *ex rel.* R. Hoe & Co. and George C. Gill v. Benjamin Butterworth, Commissioner of Patents, 519.

2. When it appears by the Commissioner's return that he refused to prepare a patent out of deference to the action of the Secretary of the Interior in entertaining an appeal from and reversing his decision, that act of deference does not constitute an exercise by him of discretion as to his own executive functions in such a sense as would cause the writ of mandamus to be an interference with executive discretion.
[*Id.

3. In this proceeding for mandamus the inquiry is, whether the title of the petitioner has been so adjudicated already that he is entitled to the fruit of that adjudication by the performance of a merely ministerial duty. The remedy provided by Section 4915 R. S. is not an adequate remedy in such case.
[*Id.

4. The provisions of the statute giving the Secretary power of directing is general, and the provisions relating to the duties and powers of the Commissioner are specific. It is the latter which must control. When the sections of the statutes are considered together, it must be held that the Commissioner must perform his duties under the direction of the Secretary, except when he is already directed by the superior directory power of the legislature.
[*Id.

5. Applying the above rule of construction to the Commissioner's decisions in cases of interference, *Held* that they are not subject to the directory power of the Secretary, either by contemporaneous dictation or by appeal and reversal described as direction.
[*Id.

6. It appearing that what was intended to be a complete system of remedies by appeal from the decisions of the Commissioner has been provided by the same statute which provides for the directory power of the Secretary, *Held* that in the absence of any express provision for appeal to the Secretary an inferential right of appeal is excluded.
[*Id.

7. Upon the above considerations it is furthermore *held* that the appellate proceedings and reversal by the Secretary in the case at hand were unauthorized, and therefore a nullity; and that consequently the Commissioner of Patents, having finally adjudicated that the relators are entitled to a patent, improperly refuses to issue the same, and *ordered* that the writ of peremptory mandamus shall issue.
[*Id.

APPEAL FROM THE PRIMARY EXAMINER.

The question whether an appeal from the decision of the Primary Examiner, requiring a division of an application, should be heard by the Examiners-in-Chief or by the Commissioner, is a matter of administrative discrimination, and is not within the control or supervision of the Court, but belongs to the administrative part of the Government.
[*Gorton v. Butterworth, Commissioner of Patents, 717.

APPEALS TO THE SECRETARY OF THE INTERIOR.

(See Appeals from the Commissioner of Patents.)

APPEALS TO THE SUPREME COURT OF THE DISTRICT OF COLUMBIA.

(See Appeals from the Commissioner of Patents.)

ASSIGNMENTS.

(See Trade-Marks, 12.)

1. An assignment of a patent by an administrator is valid under the act of July 8, 1870. The decision in the case of *The Shaw Relief Valve Company* v. *The City of New Bedford* approved on this point.
[*Bradley *et al.* v. Dull *et al.*, 625.

2. Where a patentee after selling all his rights under the patent subsequently purchases an older patent to defeat his assignee's rights, *Held* that such proceeding is manifestly unjust and inequitable, even if the older patent clearly anticipates the patent for the device sold.
[*Curran *et al.* v. Burdsall, 1319.

3. Where a patentee has sold all his right, title, and interest in, to, and under his patents and subsequently purchases an older patent, *Held* that by such subsequent purchase an assignee cannot be dispossessed of the full benefit of what has been acquired from the patentee.
[*Id.

4. Where others are associated with the patentee in the purchase of a prior patent subsequent to a sale by the patentee of all his right, title, and interest in, to, and under his own patents, *Held* that the prior sale operates as a license as against all of the purchasers.
[*Id.

5. If others join with the seller in the purchase of the prior patent, such owners must look to the original seller for their compensation.
[*Id.

6. The answer admitting the validity of the patents sued on, and one of the defendants being the original patentee, their validity cannot be disputed on a suit for infringement brought by an assignee of the patents.
[*Burdsall v. Curran *et al.*, 1320.

7. The entire title for the State of Wisconsin being in complainant for Reissue Patents Nos. 8,840 and 8,846, defendants are estopped from denying their validity.
[*Id.

1. NEW USE—OLD PROCESS.
The application of an old process or machine to a similar or analogous subject, with no change in the manner of applying it, and no result substantially distinct in its nature, will not sustain a patent, even if the new form of result has not before been contemplated.
[*Pennsylvania Railroad Company v. Locomotive Engine Safety Truck Company, 207.

2. It is immaterial whether or not a certain construction might have been covered by the language of the specification, since the claims are to be dealt with and nothing else.
[*Turner & Seymour Manufacturing Company v. Dover Stamping Company, 1131.

3. Where an inventor is the first to enter a particular field of invention the claim of his patent should be construed, broadly, to cover any similar apparatus which effects the same result in substantially the same manner.
[*Worswick Manufacturing Company *et al.* v. City of Buffalo *et al.*, 1239.

CONSTRUCTION OF STATUTES.

(See Appeals from the Commissioner of Patents, 3, 4, 6; Assignments, 1; Copyright; Invention Described but not Claimed, 1; Jurisdiction, 1, 2, 3; Subsequent Patents, 1, 2.)

COPYRIGHT.

1. The object of section 4962 R. S. is to give notice of the copyright to the public by placing upon each copy in some visible shape the name of the author, the existence of the claim of exclusive right, and the date at which this right was obtained. This notice is sufficiently given by the words "Copyright, 1882, by N. Sarony," found on each copy of the photograph under consideration.
[*The Burrow-Giles Lithographic Company v. Sarony, 413.

2. The construction placed upon the Constitution by the first act of 1790 and the act of 1802 by the men who were contemporary with its formation, many of whom were members of the convention which framed it, is of itself entitled to very great weight; and when it is remembered that the rights thus established have not been disputed during a period of nearly a century, it is almost conclusive.
[*Id.

3. An author in the sense in which the term is used in the Constitution is "he to whom anything owes its origin; originator; maker; one who completes a work of science or literature." So, also, by "writings" in this clause of the Constitution is meant the "literary productions" of those authors, and Congress has very properly declared these to include all forms of writing, printing, engraving, etching, &c., by which the ideas in the mind of the author are given visible expression.
[*Id.

4. No doubt entertained that the Constitution is broad enough to cover an act authorizing copyright of photographs so far as they are representatives of original intellectual conceptions of the author, and the facts being that the photograph in question was made entirely from the plaintiff's original mental conception, to which he gave visible form by posing the subject in front of the camera, selecting and arranging the costume, draperies, &c., arranging and disposing the light and shade, suggesting and evoking the desired expression, *Held* that the photograph in question is an original work of art, of which the plaintiff is the author, and of a class of inventions for which the Constitution intended that Congress should secure to him the exclusive right to use, publish, and sell, as it has done by section 4952 R. S.
[*Id.

COURTS OF EQUITY.

(See Trade-Marks, 7.)

DAMAGES AND PROFITS.

(See Trade-Marks, 4, 7, 9, 11, 13.)

1. It does not always follow that, because a party may have made an improvement and obtained a patent for it, another using the improvement will be mulcted in more than nominal damages for the infringement. If other methods in common use produce the same result with equal facility and cost, the use of the patented invention cannot add to the gains of the infringer or impair the just rewards of the inventor. The inventor may, indeed, prohibit the use or exact a license-fee for it, and if such license-fee has been generally paid its amount may be taken as the criterion of damages to him when his rights are infringed. In the absence of such criterion the damages must necessarily be nominal.
[*Black *et al.* v. Thorne *et al.*, 415.

2. When a patent is for an improvement, and not for an entirely new machine, the patentee, in order to entitle him to more than nominal damages, must give evidence tending to separate or apportion the defendant's profits and the patentee's between the patented feature and the unpatented features, and such evidence must be reliable or tangible, and not conjectural or speculative; or he must show by equally reliable and satisfactory evidence that the profits and damages are to be calculated on the whole machine, for the reason that the entire value of the whole machine as a marketable article is properly and legally attributable to the patented feature.
[*Garretson v. Clark *et al.*, 524.

3. In an account before a master, evidence of payments for past infringement, for the purpose of ascertaining the amount which should be paid by the defendant, is incompetent. To admit it is contrary to the maxim "*Inter alios acta*," &c.
[*Westcott *et al.* v. Rude *et al.*, 719.

4. When the sale of licenses by the patentee has been sufficient to establish a price for such licenses, that price should be the measure of his damages against an infringer; but a royalty or license-fee, to be binding on a stranger to the licenses which established it, must be uniform.
[*Id.

5. Proof of a single license is not sufficient to establish a market-price.
[*Id.

6. In respect to two or more claims in a patent, each of value, and distinct from the other, one cannot equal all in value any more than in mathematics a part can equal the whole. A licensee may, if he choose, bind himself to pay the same price whether he use the entire invention or a part only, but at the same time he acquires the right to use all, and so his agreement may not be unreasonable; but if as against an infringer such a license can have any force, reasonably it must be in the way only of establishing a royalty for the entire invention.
[*Id.

DECISION OF COMMISSIONER CONCLUSIVE.

(See Appeals from the Commissioner of Patents, 7; Reissues, 1.)

DECREE.

(See Practice in the Courts, 2.)

DEDICATION TO THE PUBLIC.

INFRINGEMENT.

(See Assignments, 6, 7; Damages and Profits, 3, 6; Particular Patents, 7; Trade-Marks, 4, 7, 10, 11.)

1. When a patent is for a combination, one element of which is a gear-wheel with a cone supported in a peculiar manner, and the defendant uses the gear-wheel with the cone, but the latter is supported differently, though the elements employed by the defendant are the equivalents of those of the complainant in the patented combination, *Held* that the defendant takes the complainant's combination and infringes his patent.
[*Mundy v. Lidgerwood Manufacturing Company, 718.

2. The claim in Reissue Letters Patent No. 4,321, granted to Charles Graebe and Charles Liebermann, April 4, 1871, is: "Artificial alizarine produced from anthracene or its derivatives by either of the methods herein described, or by any other method which will produce a like result." Unless it is shown that the method described in this patent was followed to produce the defendant's article, or unless it is shown that that article could not be produced by any other process, the defendant's article does not infringe the patent.
[*Cochrane *et al.* v. Badische Anilin and Soda Fabrik, 814.

3. Every patent for a product or composition of matter must identify it so that it can be recognized aside from the description of the process for making it, or else nothing can be held to infringe the patent which is not made by that process.
[*Id.

4. The scope of a patented invention may be so narrowed by the prior state of the art that infringement cannot be adjudged to exist unless there has been an appropriation in substantial form of construction of the identical elements which the inventor had a right to claim as new in his patent.
[*Saladee v. Racine Wagon and Carriage Company *et al.*, 1133.

5. To constitute infringement, it must appear that all the elements of a patented combination, or their equivalents, have been appropriated.
[*Id.

6. The bill dismissed upon the ground of non-infringement, without deciding the validity of the reissue patent.
[*Id.

7. The defendants are held to infringe the patented invention, notwithstanding they have introduced some improvements, have employed a well-known mechanical equivalent, and made certain minor differences, the two mechanisms being in all essential particulars alike.
[*Worwick Manufacturing Company *et al.* v. City of Buffalo *et al.*, 1239.

8. The burden of proof is upon the defendant to show that the complainant is not the first inventor, and a mere preponderance of the evidence in that direction is not enough. The proof must be of such a convincing character as to satisfy the court beyond a reasonable doubt.
[*Id.

9. *Held*, that defendants infringed the first, second, third, fifth, sixth, and seventh claims of Reissue No. 8,840, and the first, second, fifth, sixth, and seventh claims of Reissue No. 8,846, in the construction of lumber-driers built by them in the State of Wisconsin.
[*Burdsall v. Curran *et al.*, 1320.

10. Slight mechanical deviations from the specific directions given in both of these patents, Reissues Nos. 8,840 and 8,846, when the main features are incorporated, will not avoid the charge of infringement.
[*Id.

INJUNCTION.

(See Trade-Marks, 4, 11, 14.)

INJUNCTION—NOT TO ISSUE WHEN IT WOULD WORK INJUSTICE.
An injunction should not issue when it would work great harm to one party without corresponding benefit to the other,

at least where adequate protection can be afforded by other means.

[*Swift *v.* Jenks *et al.*, 621.

INOPERATIVE PATENTS.

If a patent is inoperative so far as not to cover all that the party is entitled to claim, it is inoperative within the meaning of the provisions of the statute relating to reissues.

[*Giant Powder Company *v.* Safety Nitro Powder Company, *et al.*, 99.

INTERFERENCE.

(See Appeals from the Commissioner of Patents.)

1. Paragraph 1 of Rule 93 and the Beginning of Rule 94 Construed—Conflict in Claims Defined.

The spirit of the rule of interference is not that claims must conflict in terms in order to constitute an interference, but that the subject-matter claimed must conflict.

It is not essential that the claims should be so alike that the claim in any one case will apply just to the matter or device of the other or others.

If the claim of one party will include that of another, there is an interference in fact.

It should be settled in the Patent Office who is entitled to the broad claim, and this should appear as the result of an interference proceeding.

[*Ex parte* Upton, 99.

2. Subsequent Patents with Broader Claims.

Neither the spirit of the law nor public policy sanctions the granting of patents with specific claims while applications with generic claims are still pending, the objection being that, whether the application with the generic claim belongs to the same party who has a specific claim under the genus, or is an application of a different party, a patent covering by a generic claim, if a subsequent patent, improperly extends the monopoly.

[Id.

3. No interference can lie except as between claimants of the same invention. If an applicant claims that which is shown in a previous patent, the patentee should be notified of it and an opportunity first offered to him to lay claim to the invention.

[*Marvin *v.* Lillie, 299.

INVENTION.

(See Construction of Specifications and Patents, 1; Interference, 3; Non-Invention.)

When an inventor merely brings an old element into his machine, he makes no invention; but where he does more—dispenses with certain parts, duplicates others, rearranges, and simplifies the machine—he must be held to have made an invention.

[*Mundy *v.* Lidgerwood Manufacturing Company, 718.

INVENTION DESCRIBED BUT NOT CLAIMED.

1. The case of *Campbell* v. *James* must be construed to forbid the patenting of an invention by a party who has already patented the same invention, and not merely described it in a patent. The statute does not make prior description in a patent a bar, but being patented. (Sections 4886, 4887, and 4920.)

[*Vermont Farm Machine Company *et al. v.* Marble, Commissioner of Patents, 621.

2. Where four claims of an applicant have been rejected solely on the ground of their subject-matter being described in a patent granted to the same party before the date of filing of the application, *Held* that the rejection is erroneous, and the applicant is entitled to a patent embracing such claims.

[*Id.

3. Non-Claim of Apparent Device—Abandonment.

The omission by an inventor to claim a combination or device apparent upon the face of his patent amounts to a dedication of the neglected contrivance to the uses of the public.

[*Swift *v.* Jenks *et al.*, 621.

4. A part which under certain conditions may be a serviceable addition to the machine, but is not indispensable, and is not mentioned in the claim, held not to be an element of the patented combination.

[*Bradley *et al.* v. Dull *et al.*, 625.

INVENTION SHOWN BUT NOT CLAIMED.

(See Subsequent Patents, 1, 2, 3.)

JOINDER OF INVENTION.

(See Division of Application.)

JUDGMENT BY DEFAULT.

(See Practice in the Courts, 2.)

JURISDICTION.

(See Appeal from the Primary Examiner; Reissues, 1.)

1. Where a bill in equity is brought to obtain a patent (under section 4915 R. S.) in the district of Vermont, and the Commissioner of Patents accepts service, *Held* that by such acceptance the Commissioner consented to be found in said district, and his act in this respect is binding upon his successor.

[*Vermont Farm Machine Company *et al. v.* Marble, Commissioner of Patents, 622.

2. When the sections of the statute are construed together, it is held that when there are two interfering patents the circuit court of the district whereof the defendant is an inhabitant or where he may be found is the court "having cognizance," and where an original application for a patent has been refused and a remedy is sought in equity, and the process is to be served on the Commissioner of Patents, then the Circuit Court of the District of Columbia is the proper tribunal to entertain the suit.

[*Prentiss *v.* Ellsworth, the Late Commissioner of Patents, 623.

3. An objection to the jurisdiction of the circuit court in Pennsylvania is that it has no mode of enforcing obedience to its decree, since the circuit courts outside of the District of Columbia have no authority to issue a writ of mandamus to an officer of the United States commanding him to do a ministerial act.

[*Id.

LICENSES.

(See Assignments, 4, 5; Damages and Profits, 1, 4, 5, 6.)

During the existence of a partnership between two persons one of them invented a machine upon which a patent was granted to him. The firm paid the fees and costs of procuring the patent and the expenses of an experimental trial of the invention, and also paid the expenses of some litigation which ensued. It appeared, however, that all the outlay by the firm was more than repaid by the benefits arising from the use of the invention in the partnership business. *Held*, that upon these facts no implied license arises to the member of the firm not the inventor to make, vend, and use the patented machine after the dissolution of the partnership.

[*Keller *et al. v.* Stolzenbach *et al.*, 209.

NEW PROCESS.

(See Patentability.)

NEW RESULT.

(See Construction of Specifications and Patents, 1.)

NEW USE.

(See Construction of Specifications and Patents, 1; Non-Invention.)

NOMINAL DAMAGES.

(See Damages and Profits, 1, 2.)

NON-INVENTION.

Non-Invention.

In trucks already in use on railroad-cars the king-bolt which held the car to each truck passed through a bolster supporting the weight of the car, and through an elongated opening in the plate below, so as to allow the swiveling of the truck upon the bolt and lateral motion in the truck, and the bolster was suspended by divergent pendent links from brackets on the frame, whereby the weight of the car tended to counteract any tendency to depart from the line of the track: *Held*, that a patent for employing such a truck as the forward truck of a locomotive-engine with fixed driving-wheels was void for want of novelty.

[*Pennsylvania Railroad Company *v.* Locomotive Engine Safety Truck Company, 207.

NON-PATENTABILITY.

(See Division of Application; Invention Described but not Claimed, 3.)

NOVELTY.

(See Non-Invention.)

OLD ELEMENTS.

(See Construction of Specifications and Patents, 1.)

OLD PROCESS.

(See Construction of Specifications and Patents, 1.)

PARTIAL USE.

(See Infringement, 5.)

PARTICULAR PATENTS.

1. Barker—Soldering Devices.

The Reissue Patent No. 6,781, granted July 1, 1879, to Edward M. Lang, for an improvement in soldering devices, as assignee of Abel Barker, construed and held to be invalid as to the first three claims and not to be infringed as to the remaining claims.

[*McMurray *et al. v.* Mallory *et al.*, 915.

2. Bauman—Apparatus for Drying Sand and Gravel.

Patent No. 121,746, granted December 12, 1871, to Allen H. Bauman, for an apparatus for drying sand and gravel, construed, sustained, and held to be infringed.

[*Bradley *et al. v.* Dull *et al.*, 625.

3. Bostwick—Soldering-Irons.

Reissue Letters Patent No. 6,466, granted October 29, 1878, to E. M. Lang & Co., as assignee of Jabez A. Bostwick, for an improvement in soldering devices, held to be invalid as to the first claim and not to be infringed as to the other claim.

[*McMurray *et al. v.* Mallory *et al.*, 915.

4. Doyle—Molds for Making Combined Ingots of Steel and Iron.

(See Illingworth.)

5. Eagleton—Japanned Furniture-Springs.

Letters Patent No. 122,001, granted to the Eagleton Manufacturing Company, December 19, 1871, for an improvement in japanned furniture-springs, as the alleged invention of J. J. Eagleton, *held* to be invalid, and the following points ruled:

(*a.*) The patent is for steel furniture-springs protected by japan, and tempered by the heat used in baking on the japan;

(*b.*) Such springs, so protected and tempered, were known and used by various persons named in the answer, before the date of the patent;

(*c.*) The specification which accompanied the original application by Eagleton, July 6, 1868, did not set forth the discovery that moderate heat, such as may be applied in japanning, will impart temper to the springs, but set forth merely the protection of the springs by japan;

(*d.*) Not only does the evidence fail to show that Eagleton, who died in February, 1870, in fact made and used, prior to such other persons, the invention covered by the patent as issued, but it shows that he did not, and that, probably, it never came to his knowledge while he lived;

(*e.*) Japanning by itself was not patentable, and Eagleton, in the specification which he signed and swore to, did not describe any mode of japanning which would temper or strengthen the steel, and did not even mention that the japan was to be applied with heat, and it now appears that the temper and strength are produced by the heat altogether, and not at all by the japan;

(*f.*) The only invention to which the application and oath of Eagleton were referable was that of merely japanning steel furniture-springs; the authority given to his attorneys was only to amend that application, and ended at his death; the amendments made were not mere amplifications of what had been in the application before; the patent was granted upon them without any new oath by the administratrix, and this defense is not required by statute to be specifically set forth in the answer, and can be availed of under the issues raised by the pleadings, as showing that the plaintiff has no valid patent.

[*Eagleton Manufacturing Company *v.* West, Bradley & Cary Manufacturing Company *et al.*, 1237.

6. Earle—Egg-Beaters.

Reissue Letters Patent No. 6,542, granted July 13, 1875, to Timothy Earle, for an improvement in egg-beaters, eleven years after the grant of the original patent, and with a broader claim than the latter, held to be invalid.

[*Turner & Seymour Manufacturing Company *v.* Dover Stamping Company, 1131.

7. Illingworth—Molds for Ingots.

Letters Patent No. 166,700, granted August 17, 1875, to John Illingworth, and No. 99,299, granted February 1, 1870, to Patrick Doyle, for molds for ingots, construed, sustained, and held to be infringed by machines used under Letters Patent No. 240,727, granted April 26, 1881, to Spaulding *et al.*, as assignees of Alfred E. Jones.

[*Doyle *v.* Spaulding *et al.*, 300.

8. Lloyd—Puddling-Furnaces.

Letters Patent No. 135,650, granted February 11, 1873, to E. Lloyd, for an improvement in puddling-furnaces, construed and sustained, but held not to be infringed by the defendants.

[*Lloyd *v.* Miller *et al.*, 101.

9. Mundy—Friction-Drum.

Reissue Letters Patent No. 9,289, granted July 13, 1880, to Joseph S. Mundy, for an improvement in friction-drums, construed and held to cover a novel and patentable invention.

[*Mundy *v.* Lidgerwood Manufacturing Company, 718.

10. Nobel—Explosive Compound.

Reissued Letters Patent No. 10,267, issued January 9, 1883, upon the application of Alfred Nobel, to the Giant Powder Company as assignee, for an improvement in explosive compounds, examined and sustained.

[*The Giant Powder Company *v.* The Safety Nitro Powder Company *et al.*, 99.

11. Smith—Trucks for Locomotives.

Letters Patent No. 34,377, granted to Alba F. Smith, February 11, 1862, for an improvement in trucks for locomotives, declared void.

[*The Pennsylvania Railroad Company, Appellant, *v.* The Locomotive Engine Safety Truck Company, 207.

12. Sullivan—Harness for Fire-Engines, &c.

Letters Patent No. 171,190, granted December 14, 1875, to Edward O. Sullivan, for an improvement in harnesses for fire-engines, sustained.

[*Worswick Manufacturing Company *et al. v.* City of Buffalo *et al.*, 1239.

PARTNERSHIP.

(See Licenses.)

PATENTABILITY.

(See Construction of Specifications and Patents, 1; Invention; Invention Described but not Claimed, 2; Non-Invention.)

While a new process for producing the old article (alizarine) was patentable, the product itself could not be patented, even though it was a product made artificially for the first time, in contradistinction to being eliminated from the madder-root. Calling it "artificial alizarine" did not make it a new composition of matter, and patentable as such by reason of its having been prepared artificially for the first time from anthracene, if it was set forth as alizarine—a well-known substance.

[*Cochrane *et al. v.* Badische Anilin and Soda Fabrik, 614.

PLEA.

(See Practice in the Courts, 1.)

PRACTICE IN THE COURTS.

(See Appeals from the Commissioner of Patents, 1, 2, 3; Assignments, 6, 7; Damages and Profits, 2, 3; Infringement, 8; Injunction; Reissues, 1; Trade-Marks, 7, 10.)

1. The object of a plea, where there is some certain single issue requiring but little evidence that will dispose of the whole case, if sustained, is to try that issue without putting the parties to the expense of the trial of the case at large, and pleas are lim-

ited to a single defense or issue, unless by permission of the court the defendants are allowed to plead double. *Held* that the plea in this case does not conform to this rule, and besides comes too late.

[*Giant Powder Company v. Safety Nitro Powder Company *et al.*, 99.

2. A decree rendered against a plaintiff because of his failure to reply to a plea or set it down for argument is not conclusive, since all the authorities agree that in order to constitute the former judgment or decree a bar it must appear that the point in issue was judicially determined after a hearing and upon consideration of the merits.

[*Keller *et al.* v. Stolzenbach *et al.*, 209.

PRACTICE WITH PATENT OFFICE.

(See Appeal from the Primary Examiner; Interference.)

PRIOR DESCRIPTION.

(See Invention Described but not Claimed, 1, 2.)

PRIORITY OF INVENTION.

(See Construction of Specifications and Patents, 3; Infringement, 8; Public Use.)

PROCESS AND PRODUCT.

(See Division of Application; Infringement, 2, 3; Patentability; Reissues, 3.)

PROPERTY RIGHTS.

(See Trade-Marks, 7.)

PUBLIC USE.

(See Subsequent Patents, 3.)

The use or knowledge of the use of an invention in a foreign country by persons residing in this country will not defeat a patent which has here been granted to a *bona fide* patentee, who at the time was ignorant of the invention or its use abroad.

[*Doyle v. Spaulding;
[*Illingworth v. Spaulding, 300.

REISSUE OF A REISSUE.

(See Reissues, 6.)

REISSUES.

(See Inoperative Patents; Particular Patents, 1, 3, 6, 9, 10.)

1. The question whether there is a fraud in the surrender and application for a reissue is for the officers of the Patent Office alone to decide, and their determination is conclusive in a collateral proceeding. The court can only examine and pass upon what appears upon the face of the patent, and see whether there is anything to indicate its invalidity or render it void upon its face. All questions of fact behind the patent are to be examined, heard, and conclusively determined by the Commissioner of Patents.

[*Giant Powder Company v. Safety Nitro Powder Company *et al.*, 99.

2. Where an original patent is valid, but the reissue based thereon is invalid, there is no good reason why a second reissue embracing the valid claim alone of the original patent would not be valid.

[*Id.

3. The reissue patent certainly is for a different invention from that described in the original patent, unless the product claimed in the reissue is precisely that product, and no other, which the process described in the original patent produces.

[*Cochrane *et al.* v. Badische Anilin and Soda Fabrik, 813.

4. The specification and drawings of the reissue upon which the suit is brought being substantially the same as those of the original patent, it follows that the reissue was not for the purpose of making the original specification more full, accurate, or intelligible, or for the purpose of eliminating from it what the inventor had not the right to claim as new.

[*McMurry *et al.* v. Mallory *et al.*, 915.

5. A claim to a combination of parts which specifies that such parts are constructed in a particular way for a special purpose cannot be expanded by reissue so as to include combinations of those parts, expressed so as to cover them broadly and without limitation as to their construction or advantages.

[*Id.

6. It is not competent for the patentee or his assignees by merely disclaiming all the changes made in a reissue patent to revive and restore the original patent. This could be done only, if it could be done at all, by surrender of the reissued patent and the grant of another reissue.

[*Id.

7. An expansion of claims by reissue nearly five years after the issuance of the original patent is not warranted according to the recent decisions upon this subject.

[*Simon v. Neumann *et al.*, 918.

SPECIFIC CLAIMS.

(See Interference, 2.)

STATE OF THE ART.

(See Infringement, 4.)

SUBSEQUENT PATENTS.

(See Invention Described but not Claimed, 1, 2, 3.)

1. It is against the spirit and letter of the law to grant an independent patent to an applicant for an invention shown and described, though not claimed, in a prior patent issued to the same person.

[*Marvin v. Lillie, 299.

2. The pretext that no claim was made to the invention in the original patent will not avail, since the law provides for the amending of patents by enlargement or restriction, or even by division of the subject-matter.

[*Id.

3. Combination of Separate Devices—Sub-Combination. The fact that a device comprising several patentable elements has been patented as a whole will not prevent the patentee from afterward securing a patent for a combination of any number of the elements less than the whole, provided he applies for it before the lesser combination has been two years in public use.

[*Cahn v. Wong Town On.

TITLE TO PATENT.

(See Assignments, 2, 3, 4, 5, 6, 7; Licenses.)

TRADE-MARKS.

1. A trade-mark is a sign or symbol primarily confined, exclusively, to the indication of the origin or ownership of the goods to which it is attached, and it may be composed of any name, device, line, figure, mark, word, letter, numeral, or combination or arrangement of any or all of these, which will serve the sole purpose of a trade-mark, and which no other person can adopt or use with equal truth.

[‡Avery & Sons v. Meikle & Co., 1027.

2. Terms which designate merely the name, quality, kind, size, number, or elements of an article, or have become its proper appellation, or that merely describe it or direct the mode of its use, or purely generic or geographical terms, and the necessary and common uses in which the English language and Arabic numerals are employed by the people to express the truth, their ideas and feelings, are common property which all may use, but which none can appropriate exclusively to himself as a trade-mark.

[‡Id.

3. A trade-mark becomes the exclusive property of one only when he has, prior to any one else, appropriated and used it to indicate the origin, ownership, and quality of an article to which it is attached. Its value rests on reputation and on its implied guaranty that the article is of a certain quality. Its object is to prevent one person from selling his goods as those of another of established reputation to the injury of that other.

[‡Id.

4. When plaintiff shows that he has adopted a legal trade-mark, that it has been infringed, and that actual, probable, or possible damages have or may result from its infringement, he is entitled to relief usually in the form of an injunction and an account of profits.

[‡Id.

5. Where no patent is held by the owner of plows, any one may make plows in exact similitude, may brand the name of the manufacturer and the place of the manufacture on such part of the plow as he pleases, taking care so to use the brand as not to deceive the public into the belief that the plow is the manufacture of another.

[‡Id.

6. Although certain letters and numerals may have come to indicate to the public the origin or ownership of appellant's plows, as they did not appropriate them by adoption, use, or claim as a part of their trade-mark, they cannot be treated as a part of it simply because they appear capable of serving the same purpose.

[‡Id.

7. Courts of equity afford a remedy against the infringement of a trade-mark or of the trade reputation of its owners, on the principle of protecting property, of promoting fair dealing, and of protecting the public. Where a trade-mark itself has been infringed, neither fraud nor the inferior quality of defendant's article need be proved. But where a property right not amounting to a trade-mark has been infringed, it is essential to show fraudulent intent. But courts of law require proof of deceit, fraudulent intent, or special damage (unless damage is presumed) in both cases.

[‡Id.

8. Where the action is brought to restrain the fraudulent usurpation of plaintiff's trade reputation, plaintiff need not make out a legal title to an exclusive trade-mark, by the usurpation of which defendant has done the wrong. It is enough that defendant sells his goods as those of plaintiff, either by the use of plaintiff's trade-mark or any other means, that such fraudulent sales result or are likely to result in damage to plaintiff. It is the purpose or design of the act that constitutes the wrong, and though a man may use any letters and figures (which are common property) to indicate the size, quality, and description of his goods, yet he cannot do this in such way as to mislead others into the belief that goods made by himself were made by another.

[‡Id.

9. If one, with a bad motive, exercises his rights in a lawful and proper way, and injury results, there is damage without legal injury; but if with a bad motive he exercises his rights in an unlawful manner, there is both damage and legal injury.

[‡Id.

10. As to what facts constitute infringement of a trade-mark or trade reputation, no rule can be formulated that will embrace every act of infringement, and the original and alleged imitation are of primary importance. The resemblances need not be such as would mislead an expert or could not be easily detected, if each case must depend mainly on itself. But resemblances and differences between the original and the spurious were seen together. It is enough if such resemblances exist as would lead an ordinary purchaser to suppose he was buying the genuine article, and not an imitation. If the differences are only colorable, and there is no reason for the resemblances, except the purpose of deceiving the purchaser of one article into the belief of its being the manufacture of another, the court will presume a fraud was intended.

[‡Id.

11. Though the particular combinations of letters and figures used by appellees were not entitled to protection as part of appellants' trade-mark, yet it appearing that appellees copied those combinations, not for the purpose of indicating the size and quality of their plows, but for the purpose of misleading the public into the belief that appellees' plows were of a kind made by appellants, having an established reputation and large sale, *Held*, appellees are liable to appellants for damages resulting from loss of trade in consequence of such copying and to an injunction restraining the further sale of such plows.

[‡Id.

12. The right to the exclusive use of a word or symbol as a trade-mark is inseparable from the right to make and sell the commodity to which it has been appropriated to designate the article as the production or article of the proprietor, and would seem to be an incident to the business of the place or establishment to which it owes its origin, and without which it can have no independent existence. It should be deemed to pass with a transfer of the business, because such an implication is consistent with the character of the transaction and the presumable intention of the parties.

[*The Atlantic Milling Company v. Robinson, 1322.

13. The complainant's damages are measured by the extent to which the unlawful use of the word "Champion" has interfered with the sale of its flour.

[*Id.

14. The right to an injunction is not affected because the appropriation of their trade-mark has been a limited one.

[*Id.

15. It is not incumbent upon the complainants to show that their trade-mark has been copied in every particular. It is sufficient if it has been imitated to an extent calculated to mislead purchasers and cause the article to which it has been applied to pass as their article.

[*Id.

Beardslee, William F., Boston, Mass. Trimming attachment for sewing-machines	295,897	Apr. 1	6	2	27	4
Beasley, Maria E., Philadelphia, Pa., and E. M. Hugentobler, New York, N. Y.; said Hugentobler assignor to said Beasley. Barrel-making machine	300,193	June 10	887	238 239	27	1095
Beasley Maria E., Philadelphia, Pa., and E. M. Hugentobler, New York, N. Y.; said Hugentobler assignor to said Beasley. Barrel-stave-shaping machine	300,194	June 10	891	239 240	27	1096
Beatley, William H., Humansville, Mo. Adding-machine	297,342	Apr. 22	1853	498 499	27	302
Beaudrean, Frank. (See Travias, Henry H., assignor.)						
Beaulieu, Joseph, assignor of one-half to L. Beaulieu, Worcester, Mass. Lasting-jack	297,557	Apr. 29	2118	578	27	421
Beaulieu, Levi. (See Beaulieu, Joseph, assignor.)						
Beck, Mahlon, and A. McKorey, Excelsior Springs, Mo. Drag-saw frame	297,558	Apr. 29	2119	578	27	422
Beck, Robert M., Chambersburg, Pa. Circular-saw mill	299,194	May 27	1549	444 445	27	844
Beck, Sophus C., Philadelphia, Pa. Hair-front	300,938	June 24	1847	506	27	1285
Becker, August J., and J. B. Young, Mount Carmel, Pa. Safety-catch for elevators	296,311	Apr. 8	781	215	27	155
Becker, Francis L., New York, N. Y., assignor of one-fourth to G. Becker. Repetition-action for pianos	297,908	Apr. 29	2546	698	27	504
Becker, Gustav. (See Becker, Francis L., assignor.)						
Becker, Henry H., Chicago, Ill. Polishing compound	296,112	Apr. 1	203	.....	27	53
Becker, Theodore, assignor to Hocking Valley Manufacturing Company, Lancaster, Ohio. Grain-drill	297,488	Apr. 22	2010	549	27	396
Beckwith Auto-Pneumatic Railway Signal Company. (See Beckwith, Walter C., assignor.)						
Beckwith, Walter C., Allegheny, assignor to Beckwith Auto-Pneumatic Railway Signal Company, Pittsburg, Pa. Railway-signal	299,101	May 27	1435	410	27	823
Beckwith, Walter C., Allegheny City, assignor to Beckwith Auto-Pneumatic Railway Signal Company, Pittsburg, Pa. Railway-signal	299,102	May 27	1438	411	27	824
Beebe, Lyman C., Villisca, assignor of one-half to R. Truman, Afton, Iowa. Gas-generator	298,057	May 6	120	30	27	550
Beebe, Lyman C., Villisca, assignor of one-half to R. Truman, Afton, Iowa. Carburetor	298,058	May 6	121	31	27	550
Beehler, William H., Newport, R. I. Electric automatic recording apparatus for weighing machines	299,328	May 27	1707	490 491	27	875
Beekman, Isaac K., Dubuque, Iowa. Elevator-gate attachment	300,677	June 17	1528	420	27	1222
Beers, John H., *et al.* (See Ridge, Joseph, assignor.)						
Beerwkes, Henry, Jr., Paterson, N. J. Self-adjusting match-box holder	299,508	June 3	8	3	27	922
Behlen, Charles A., Cincinnati, Ohio. Vehicle-spring	296,113	Apr. 1	264	76	27	53
Behn, Henry A., Union, N. J. Machine for cutting button-holes	299,329	May 27	1715	492	27	876
Behnsen, Henry F., Victoria, British Columbia, Canada. Cigar-bundling machine	297,220	Apr. 22	1680	458	27	333
Beidler, Jacob H., Mount Pa'aski, Ill. Car-coupling	296,114	Apr. 1	266	76	27	53
Beiermeister, Fredrick, Jr., Troy, N. Y. Collar	298,722	May 20	961	268	27	724
Beiersdorf, Jacob. (See Bunker, William L., assignor.)						
Bellman, William E., Buffalo, N. Y. Stove-pipe damper	300,559	June 17	1362	375	27	1191
Belcher, George E., Stoughton, Mass. Last-block fastener	300,195	June 10	894	240	27	1096
Belcher, John B., Charlotte, Mich. Overshoe or arctic	296,115	Apr. 1	266	76	27	53
Belding, Charles E., Malvern, Ohio. Nut-lock	296,383	Apr. 8	627	173	27	124
Belknop Manufacturing Company. (See Ellis, David T., assignor.)						
Bell, Albert H. (See Bell, Mathias R. and A. H.)						
Bell, Alexander H., and A. Fuller, New York, N. Y. Marine-engine governor	297,343	Apr. 22	1845	499	27	303
Bell, John E., assignor to J. W. Cole and E. L. Armistead, Nashville, Tenn. Vehicle-wheel	296,307	Apr. 8	527	148	27	105
Bell, Mathias R. and A. H., Springfield, Ohio. Quilting attachment for sewing-machines	300,678	June 17	1529	420	27	1222
Bell, Vernon. (See Nixon, Jane, assignor.)						
Bell, William. (See Linsey, Andrew B., assignor.)						
Bell, William G., and W. P. Gay, Boston, Mass., assignors to said Bell. Clutch mechanism	297,489	Apr. 22	2011	549	27	396
Bellows, Stephen H., Athol, Mass. Calipers	299,722	June 3	297	74	27	976
Bellows, Stephen H., assignor to Standard Tool Company, Athol, Mass. Caliper-rule	297,056	Apr. 15	1456	403	27	288
Beltz, Albert, Wausau, Wis. Boot	299,509	June 3	8	3	27	922
Beltz, Samuel, Wilmington, Del. Fire-escape	298,723	May 20	962	268	27	724
Bemis, Sumner A., Springfield, Mass. Car-truck	299,510	June 3	9	3, 4	27	922
Bender, Edwin, Philadelphia, Pa. Frying-utensil	298,339	May 13	500	136	27	630
Bendit, William. (See Hutchinson, Charles, assignor.)						
Benedict, Arthur L., Ocean Beach, N. J. Clothes drier	300,755	June 24	1028	446	27	1244
Benedict, John G. (See Bradford and Benedict.)						
Bening, Hermann, assignor to himself and C. A. Weller, New York, N. Y. Compound for the manufacture of artificial stone	300,560	June 17	1362	.....	27	1191

Dolsen, Isaac, Beemerville, N. J. Road-cart	300,231	June 10	936	253	27	1104
Domestic Electrical Manufacturing Company. (See Clarke, Charles L., assignor.)						
Donaldson, David H., Buffalo, N. Y. Hasp-lock	297,117	Apr. 22	1544	426	27	309
Donkin, Edwin B., Bermondsey, England. Rotary pump	298,952	May 20	1245	{352 / 353}	27	777
Donley, Levi, assignor of one-half to H. B. Sortor, Kalamazoo, Mich. Two-wheeled vehicle	297,358	Apr. 22	1852	503	27	365
Donnell, Edward P., Chicago, Ill. Ink-reservoir for paper-ruling machines	298,735	May 20	984	273	27	727
Donnelly, James L., New York, N. Y., assignor of one-third to J. L. Townsley, Vincennes, Ind. Coin holder and deliverer	298,674	May 13	898	250	27	704
Donnenwirth, G., Jr., *et al.* (See Sharpnack and McMahon, assignors.)						
Donovan, William R. (See Michaels, Joseph P., assignor.)						
Doolittle, D. Edward. (See Doolittle, William E. and D. E.)						
Doolittle, Thomas B., Bridgeport, Conn. Telephone-line	297,683	Apr. 29	2289	621	27	454
Doolittle, Thomas B., Bridgeport, Conn. Telephone-exchange apparatus	298,559	May 13	746	{210 / 211}	27	676
Doolittle, William E. and D. E., New Britain, Conn. Shutter-fastener	297,118	Apr. 22	1543	426	27	309
Dopp, Frederick J. W., and G. Wolff, St. Louis, Mo. Velocipede attachment	297,239	Apr. 22	1701	462	27	337
Doremus, Willard D., assignor to F. Hodges, Washington, D. C. Mail-bag fastener	297,071	Apr. 15	1473	407	27	292
Doremus, Willard D., assignor to F. Hodges and A. L. Pitney, Washington, D. C. Mail-bag fastener and tag-holder	297,509	Apr. 22	2045	558	27	401
Doremus, Willard D., assignor to E. W. Woodruff, Washington, D. C. Paper-file	297,577	Apr. 29	2150	587	27	427
Doremus, Willard D., Washington, D. C., assignor to himself, S. R. and J. T. Stratton, Strattonville, Pa. Oil-can	300,450	June 17	1226	335	27	1166
Doren, Henry E., Grand Rapids, Mich. Head-rest	300,232	June 10	936	253	27	1104
Dorrell, Lucian P. (See Borgelt and Dorrell.)						
Dorsett, Daniel H., Chicago, Ill. Insulating material	298,072	May 6	140	.....	27	533
Dorsey, John D., Greenville, Ill. Vehicle-spring	297,974	May 6	14	5	27	530
Doty, John C., assignor to F. L. Bean, W. L. Vance, and T. Seymour, Mount Vernon, Ohio. Curtain-fixture	299,359	May 27	1750	504	27	883
Doty, Riley, Leopardsburg, Ohio. Bench-dog	298,560	May 13	751	211	27	677
Doty, William M., assignor of one-half to A. M. Ward, Chicago, Ill. Guard-gate for swing-bridges	297,930	Apr. 29	2567	704	27	508
Dougherty, James H., Whistler, Ala. Lock for sliding doors	297,239	Apr. 22	1702	463	27	337
Dougherty, Tiberias, Philadelphia, Pa. Chalk-holder for billiard and other game tables	297,684	Apr. 29	2290	623	27	454
Douglas, Charles, Detroit, Mich. Broom	299,059	May 20	1378	392	27	802
Dougine, James T., Chicago, Ill. Fifth-wheel for wagons	297,685	Apr. 29	2291	624	27	454
Douglas Axe Manufacturing Company. (See Bowers, John W., assignor.)						
Dow, Alonzo, and L. H. Gorgas, Wooster, Ohio. Cupboard	297,240	Apr. 22	1703	463	27	337
Dow, William H., Burlington, Vt. Graining compound	300,350	June 17	1103	.....	27	1145
Dowler, Joseph W. (See Knpferle and Dowler.)						
Dowling, James, and J. Connolly, London, England. Button-hole sewing-machine	299,118	May 27	1459	{417 / 418 / 419}	27	898
Dowling, Thomas W., Detroit, Mich. Window-screen	298,675	May 13	900	250	27	704
Downes, Henry. (See Clark, George W., assignor.)						
Downham, William, assignor of one half to P. K. Perrin, St. John's, Mich. Carriage-curtain attachment	300,451	June 17	1227	335	27	1166
Downs, Wallace A. (See Sawyer, Nelson, assignor.)						
Downward, Henry C. (See Shew, Jacob, assignor.)						
Doyle, Charles W. (See Zaehringer, William, assignor.)	298,294	May 6	433	116	27	608
Doyle, James, assignor to himself and P. McNamara, New York, N. Y. Pipe-wrench						
Doyle, John, Hoboken, N. J., assignor to himself and C. C. Dusenbury, White Plains, N. Y. Rheostat	298,073	May 6	141	35	27	553
Doyle, John M. (See Magner, William, assignor.)						
Drake, Cuningham, Philadelphia, Pa. Oyster-clamp	299,756	June 3	335	85	27	984
Drake, Cuningham, Philadelphia, Pa. Drag-saw	300,582	June 17	1385	382	27	1196
Drake, David E., Newark, N. J., assignor to United States Electric Lighting Company, New York, N. Y. Electric-circuit connection	299,467	May 27	1881	541	27	906
Drake, John T. H., Emporia, Mo. Drag-saw	300,233	June 10	937	253	27	1104
Drakeley, Julia E., Madison, Wis. Bed-pan	297,119	Apr. 22	1546	427	27	309
Draper, James O., Pawtucket, R. I. Steam-boiler	300,767	June 24	1647	451	27	1247
Draper, Oscar M., North Attleborough, Mass. Watch-chain tip	296,542	Apr. 8	820	226	27	164
Draper & Sons, George. (See Getchell, Seth S., assignor.)						
Draper & Sons, George. (See Gray, James R., assignor.)						
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	297,578	Apr. 29	2151	587	27	428
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	297,579	Apr. 29	2154	588	27	428
Drawbaugh, Daniel, Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	298,676	May 13	901	251	27	704
Drawbaugh, George W., Eberly's Mill, Pa., assignor to People's Telephone Company, of New York. Telephone-transmitter	298,677	May 13	903	251	27	705
Dresser, Lauriston J., assignor of one-half to C. S. Weston, Uxbridge, Mass. Thill-coupling	299,917	June 3	510	135	27	1019
Drew, Henry P., New York, N. Y. Gas and lamp bracket	300,583	June 17	1386	383	27	1196
Drew, Henry P., New York, N. Y. Gas and lamp bracket	300,584	June 17	1387	383	27	1196
Dreyfus, Bernhard, New York, N. Y. Pendant	300,699	June 17	1560	428	27	1228
Driscoll, Daniel P., Pittsburg, Pa. Coupling device	296,394	Apr. 8	640	176	27	126

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Driver, John M. (See Kanthack, Alexander, assignor.)						
Driven Screw Post and Pile Company. (See Burton, Aaron B., assignor.)						
Dronet, Peter E., New Orleans, La. Grain header and harvester	297,510	Apr. 22	2046	559	27	401
Drummond, James T. (See Parker and Drummond.)						
Drummond, Thomas, assignor to J. C. Wintermeyer, Chicago, Ill. Box for carrying bottles	299,060	May 20	1379	393	27	802
Du Brul, Napoleon, Cincinnati, Ohio. Weighing-scale	299,757	June 3	336	85	27	984
Du Brul, Napoleon, Cincinnati, Ohio. Weighing-scale	299,758	June 3	337	86	27	984
Du Brul, Napoleon, Cincinnati, Ohio. Weighing-scale	299,759	June 3	338	86	27	984
Du Brul, Napoleon, Cincinnati, Ohio. Weighing-scale	299,760	June 3	339	86	27	984
Du Brul, Napoleon, Cincinnati, Ohio. Weighing-scale	299,761	June 3	340	86	27	985
Du Brul, Napoleon, Cincinnati, Ohio. Platform-scale	299,762	June 3	341	87	27	985
Du Brul, Napoleon, Cincinnati, Ohio. Weighing-scale	296,825	Apr. 15	1171	329	27	236
Du Puy, Charles M., Philadelphia, Pa. Molding plastic material	296,942	Apr. 15	1319	366	27	263
Du Shane, James, South Bend, Ind. Wrench						
Dubbs, William E. (See Allen and Dubbs.)						
Dubreuil, George A. (See Gornall, Richard, assignor.)						
Duchscher, Andre and P., and M. G. Spoo, Luxemburg, Luxemburg, Germany. Differential-lever press	298,188	May 6	285	73, 74	27	580
Duchscher, Pierre. (See Duchscher and Spoo.)						
Dudgeon, Richard. (See Dudgeon, Richard H., assignor.)						
Dudgeon, Richard H., assignor to R. Dudgeon, New York, N. Y. Hydraulic jack	297,975	May 6	15	5	27	530
Dudley Electric Manufacturing Company. (See Dudley, Walter J., assignor.)						
Dudley, George D. (See Sherwood and Dudley.)						
Dudley, Walter J., Everett, Mass., assignor to Dudley Electric Manufacturing Company, Concord, N. H. Telephone signaling apparatus	295,913	Apr. 1	22	7	27	7
Dueber, John C., Newport, Ky. Watch-case center	297,076	May 6	16	5	27	530
Dueber, John C., Newport, Ky. Manufacture of watch-case centers	299,119	May 27	1462	419	27	828
Duffy, Thomas W., assignor to D. C. Hall, Medford, Mass. Car-brake	299,526	June 3	29	8	27	926
Dugnid, John B., Toledo, Ohio. Trunk	298,453	May 13	627	179	27	653
Dumke, August C. and A. F., Manitowoc, Wis. Valve and gear for steam-engines	296,543	Apr. 8	821	226	27	164
Dumke, August F. (See Dumke, August C. and A. F.)						
Dunbar, Warren, Minneapolis, Minn. Track-clearer	298,295	May 6	434	117	27	609
Dunbar, Warren, Minneapolis, Minn., and J. R. Kinley, Chicago, Ill. Hand-car	298,736	May 20	984	{273 / 274}	27	727
Duncklebarg, Isaac M., assignor to C. K. Judson, Rochester, N. Y. Punch	299,210	May 27	1568	451	27	849
Dundon, Patrick F., San Francisco, Cal. Steam-boiler	298,561	May 13	751	212	27	677
Dungan, Andrew M., and M. Lacrone, said Dungan assignor to A. K. Hahn, Springfield, Ohio. Mechanism for driving harvester-cutters	296,150	Apr. 1	306	88	27	59
Dungan, Robert H., *et al.* (See Jervis, Abner M., assignor.)						
Dunham, Joseph M., Holyoke, Mass. Card-stripper	299,018	June 3	511	136	27	1049
Dunham, Joseph T., Brooklyn, N. Y. Combined tag and envelope. (Reissue)	10,488	June 10	1079	294	27	1130
Dunlap, James. (See Brower and Dunlap.)						
Dunlop, William, Chicago, Ill. Heater for soldering-irons	300,768	June 24	1648	451	27	1247
Dunn, Temple H. (See Dunn, William R. and T. H.)						
Dunn, Thaddeus C. (See Mackay and Dunn.)						
Dunn, William R., Alton, and T. H. Dunn, Crawfordsville, Ind. Belt-fastener	296,682	Apr. 8	995	278	27	198
Dunnell, Frederick W., Tompkinsville, N. Y. End-cap for paper rolls	298,562	May 13	753	212	27	677
Dunnell, James A. and A. Smith, Boston, Mass. Carpet-stretcher	299,074	May 6	142	36	27	553
Dupas, Octave, assignor of one-half to J. Shaver, San Rafael, Cal. Horse-detacher	300,056	June 10	698	190	27	1062
Dupan, Henri. (See Lego and Dupan.)						
Dupee, John C., and C. P. Dunsmun, Decatur, assignors to L. E. Waterman, Mason City, Ill. Keel for check-row corn-planters	298,678	May 13	904	251	27	705
Dupree, George W., Portland, Oreg. Apparatus for distributing electrical currents	297,072	Apr. 15	1474	408	27	292
Durell, Frank H. (See Durell, Henry and F. H.)						
Durell, Henry, West Morrisania, N. Y., and F. H. Durell, Bay City, Mich.; said Henry Durell assignor to said F. H. Durell. Breech-loading ordnance	296,281	Apr. 1	487	136	27	92
Durfee, William F., Bridgeport, Conn., and T. Egleston, New York, N. Y. Metallurgical gas-furnace	295,988	Apr. 1	117	35	27	24
Duryea, Hiram, New York, N. Y. Manufacturing starch	300,700	June 17	1560	.....	27	1228
Dusenbury, C. Coles. (See Doyle, John, assignor.)						
Dustman, Jonathan H., Clarks, Nebr. Car-coupling	301,050	June 24	1984	548	27	1310
Duthil, Edward, and F. Rosenstein, Chicago, Ill. Clothes-wringer	300,313	June 10	1047	{283 / 284}	27	1124
Duvall, W. C. (See Kirkbride, Frederick L., assignor.)						
Duwelius, Augustus L., Cincinnati, Ohio. Electro-magnetic-brake system	296,319	Apr. 8	540	151	27	108
Dwight, George, Jr. (See Johnson, Alonzo, assignor.)						
Dwight, William M. (See Roberts, James A., assignor.)						
Dyblie, Julius A., Cummings, Ill. Barrow	299,527	June 3	30	9	27	926
Dyer, Derrick O. (See Hoyt and Twiggs, assignors.)						
Dyer, Isaac T., assignor of one-half to J. T. Pieper and H. C. Pfeiffer, Quincy, Ill. Refrigerator	300,351	June 17	1104	{299 / 300}	27	1145
Eady, Thomas J. (See Newman, John L., assignor.)						
Eagle Lock Company. (See Herold, Frank L., assignor.)						
Eagle Lock Company. (See Judson, Charles W., assignor.)						
Earhart, Herbert, Santa Maria, assignor of two-thirds to H. D. Livingston and J. Kaiser, San Francisco, Cal. Dry separator and amalgamator	299,211	May 27	1569	451	27	849
Earl, Abel E., St. Louis, Mo. Trunk	296,395	Apr. 8	641	176	27	127
Earl, Gordon, Pierson, Mich. Shingle-sawing machine	298,737	May 20	986	274	27	728
Earley, Edward S., Philadelphia, Pa. Burial-casket	298,953	May 20	1247	353	27	777
Earnest, Robert R., assignor of one-half to T. M. Bates, Mechanicsburg, Ohio. Thill-coupling	300,057	June 10	699	190	27	1062
Eastman, Henry W., Baltimore, Md. Ventilating-door	295,989	Apr. 1	118	35	27	24
Eaton, George S., and J. W. Lyon, Brooklyn, N. Y., assignors to said Eaton. Type-rubbing machine	300,452	June 17	1228	336	27	1166
Eaton & Parker. (See Pratt, Samuel B., assignor.)						
Eaton, William C. (See Partrick, Alfred W., assignor.)						
Eau Claire Chilled Plow Company. (See McIntyre, James P., assignor.)						
Ebel, Julius, Jamestown, N. Y. Piano	298,837	May 20	1104	309	27	749
Eberhart, Lloyd, and I. D. Stevens, Joliet, Ill. Check-row attachment for seed-planters	296,151	Apr. 1	306	88	27	60
Ebert, John, Frederick, Md. Mail-bag	297,359	Apr. 22	1853	504	27	366
Eckert, John G. (See Saltzer, Isaac J., assignor.)						
Eddy, Charles H., assignor to himself and G. S. Baker, Auburn, N. Y. Vise attachment	297,360	Apr. 22	1854	504	27	366
Eddy, Henry W., Toledo, Ohio. Screw-tap	300,961	June 24	1869	513	27	1289
Eddy, Samuel S., Rochester, N. Y. Tanning process	300,352	June 17	1106	.....	27	1146

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Edelen, Albert. (See Hickey, Edmund P., assignor.)						
Edenborn, William, St. Louis, Mo. Barb for wire fences	299,763	June 3	342	87	27	985
Edge, William C., Newark, N. J. Producing ornaments from metals, &c	298,358	May 13	923	142	27	633
Edgerly, Samuel H., Jackson, Mich. Ash-pan for locomotives	299,360	May 27	1751	504	27	883
Edison Electric Light Company. (See Edison, Thomas A., assignor.)						
Edison, Thomas A., Menlo Park, N. J. Type-writer	295,990	Apr. 1	118	35	27	25
Edison, Thomas A., Menlo Park, N. J. Dynamo-electric machine	297,582	Apr. 29	2158	589	27	429
Edison, Thomas A., Menlo Park, N. J. Dynamo-electric machine	297,583	Apr. 29	2158	589	27	429
Edison, Thomas A., Menlo Park, N. J. Dynamo-electric machine	297,584	Apr. 29	2160	589	27	430
Edison, Thomas A., Menlo Park, N. J. Incandescing conductor for electric lamps	297,585	Apr. 29	2161	590	27	470
Edison, Thomas A., Menlo Park, N. J. Electrical conductor	297,586	Apr. 29	2162	590	27	470
Edison, Thomas A., Menlo Park, N. J. Dynamo-electric machine	297,587	Apr. 29	2162	590	27	470
Edison, Thomas A., Menlo Park, N. J. Dynamo-electric machine	298,954	May 20	1248	353	27	777
Edison, Thomas A., Menlo Park, N. J. Dynamo-electric machine	298,955	May 20	1249	354	27	777
Edison, Thomas A., Menlo Park, N. J. Operating dynamo-electric machines	298,956	May 20	1250	354	27	777
Edison, Thomas A., Menlo Park, N. J., assignor to Edison Electric Light Company, New York, N. Y. Electric-arc light	297,580	Apr. 29	2156	588	27	429
Edison, Thomas A., Menlo Park, N. J., assignor to Edison Electric Light Company, New York, N. Y. Incandescent electric lamp	297,581	Apr. 29	2157	588	27	429
Edison, Thomas A., Menlo Park, N. J., assignor to Edison Electric Light Company, New York, N. Y. Treating carbons for electric lights	298,679	May 13	905	251	27	705
Edmonds, George, Brooklyn, assignor to himself and W. J. McGinn, New York, N. Y. Adjustable nut-bearing	298,563	May 13	753	212	27	677
Edson, Albert F., *et al.*, trustees. (See Crowell, David, Jr., assignor.)						
Edson, Jarvis B. (See Kipper and Edson.)						
Edson, Jarvis B., Adams, Mass. Finishing and glossing the surfaces of fabrics having a coating of some pyroxyline compound	297,770	Apr. 29	2297	.....	27	474
Edwards, Alfred L., New York, N. Y. Musquito-net support	300,855	June 24	1750	477	27	1266
Edwards, Charles R., Buffalo, N. Y. Tension device for sewing-machines	299,629	June 3	164	41	27	950
Edwards, Edmund, 40 Southampton Buildings, county of Middlesex, England. Gas-engine	300,453	June 17	1240	337	27	1167
Edwards, James D., and L. F. Haubtman, New Orleans, La. Sugar-dumping wagon	296,544	Apr. 8	823	227	27	164
Edwin, Lewis P., Springdale, Wis. Buckle	299,212	May 27	1570	451	27	849
Egan, Edward D., *et al.* (See Harkins, George C., assignor.)						
Egan, James Y., Toronto, Ontario, Canada assignor to T. Y. Kayne, Ann Arbor, Mich. Truss	300,454	June 17	1239	337	27	1167
Egge, Frederick, assignor to Smith & Egge Manufacturing Company, Bridgeport, Conn. Clamp for ropes, cords, &c	297,241	Apr. 22	1705	461	27	338
Egge, Frederick, assignor to Smith & Egge Manufacturing Company, Bridgeport, Conn. Button-hole sewing-machine	298,957	May 20	1251	354 / 355 / 356	27	778
Egge, Frederick, assignor to Smith & Egge Manufacturing Company, Bridgeport, Conn. Button-sewing machine	298,958	May 20	1257	356	27	779
Egge, Frederick, assignor to Smith & Egge Manufacturing Company, Bridgeport, Conn. Machine for sewing on buttons	298,959	May 20	1258	356 / 357 / 358	27	779
Eggers, Henry J., *et al.* (See Mohany, Henry W., assignor.)						
Egleston, Thomas. (See Durfee and Egleston.)						
Eichling, Henry, New York, N. Y. Canopy-holder for vehicles	299,630	June 3	165	42	27	950
Eichling, Henry, New York, N. Y. Canopy-holder for childrens' carriages	299,631	June 3	166	42	27	950
Eickemeyer, Rudolf, Yonkers, N. Y. Hat-binding ring	296,282	Apr. 1	488	136	27	92
Elker, Thaddeus B., Baltimore, Md. Head-rest	299,361	May 27	1752	504 / 505	27	883
Elafoldt, William. (See Seiler, Philipp, assignor.)						
Ehlin, Erich, San Francisco, Cal. Machine for manufacturing mouth-pieces for cigars	296,683	Apr. 8	996	279	27	102
Eldred, Samuel D., Minonk, Ill. Check-list for registering railway-passengers	297,588	Apr. 29	2161	590	27	470
Eldred, William E., Brooklyn, N. Y. Folding table	300,234	June 10	938	253	27	1104
Eldredge, Alonzo W., Big Rapids, Mich. Shingle-planing machine	298,451	May 13	628	179	27	654
Eldredge, John W. (See Masterson, Bartholomew, assignor.)						
Electric Appliance Company. (See White, Le Roy S., assignor.)						
Electric Patrol Indicator Company. (See Spengler, Christian G., assignor.)						
Electric Tube Company. (See Kruesi, John, assignor.)						
Electrical Accumulator Company. (See Shaw, William A., assignor.)						
Electrical Supply Company. (See Wallace, John B., assignor.)						
Elkins, Orion N. (See Reiter, Austin N., assignor.)						
Ellington, Edward B., Chester, county of Chester, England. Hydraulic elevator	298,680	May 13	907	252	27	705
Ellinwood, Augustus E., assignor of two-thirds to L. Miller and H. Young, Akron, Ohio. Chuck	299,362	May 27	1753	505	27	884
Elliott, George E., Calais, Me. Steam-actuated valve	298,681	May 13	908	252	27	706
Elliott, George W., Liverpool, county of Lancaster, England. Pick	296,736	Apr. 15	1060	299	27	217
Elliott, Gilbert R., Boston, Mass., assignor to Continental Cash Car Company of Baltimore, Baltimore, Md. Cash and parcel carrier	297,686	Apr. 29	2293	624	27	455
Elliott, James, Philadelphia, Pa. Paint-brush	298,359	May 13	523	142	27	634
Ellis, A. D. (Walter, James F., assignor.)						
Ellis, David T., assignor one-half to Belknap Manufacturing Company, Bridgeport, Conn. Valve mechanism	298,738	May 20	986	274	27	728
Ellis, George A., assignor to H. and G. Heywood, A. M. Greenwood, and A. Morrill, Gardner, Mass. Carriage-body	296,943	Apr. 15	1319	366	27	263
Ellis, George B. (See Ellis, John, assignor.)						
Ellis, George W. B. (See Aiken, Newhall, and Ellis.)						
Ellis, Hiram. (See Hoffman, Ellis, and Schwenk.)						
Ellis, James H., M. Wilson, and F. Tanner, Walkerville, Ontario, Canada. Fire-escape	299,764	June 3	343	87	27	985
Ellis, James W., Cameron, Tex. Mechanical power	298,739	May 20	987	274	27	728
Ellis, Joel A. H., Beaver Falls, Pa. Knockdown crate	296,737	Apr. 15	1061	299	27	217
Ellis, John, assignor to G. B. Ellis, Pottstown, Pa. Horse-power	299,061	May 20	1380	393 / 394	27	802
Ellis, John D. (See Garrett and Ellis.)						
Ellis, Robert H. P., Baltimore, Md. Thill-coupling	299,062	May 20	1381	394	27	802
Ellis, Seth C., Jersey City, N. J. Blind-slat-tenoning machine	300,314	June 10	1048	284	27	1124
Ellis, William, Jr., North Lawrence, Kans. Road-scraper	301,051	June 24	1985	549	27	1310
Ellsworth, Lyndes E., Wilton, N. Y. Reversible binding attachment for sewing-machines	296,396	Apr. 8	642	177	27	127
Ellwood & Co., I. L. (See Stover, Daniel C., assignor.)						
Ellwood, Isaac L., *et al.* (See Hill, Peter P., assignor.)						
Ellwood Manufacturing Company, R. (See Ellwood and Staugaard, assignors.)						
Ellwood, Reuben, and H. H. Stangaard, assignors to R. Ellwood Manufacturing Company, Sycamore, Ill. Wheel	299,120	May 27	1463	419	27	829

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Elm City Suspender Co. (See Bray, Morris P., assignor.)						
Elmenhorst, Walter R. (See Bohrer, William, assignor.)						
Elsey, George, Springfield, Mass. Eraser	296,397	Apr. 8	643	177	27	127
Emack, John D., Baldwin, N. Y. Muffler for slates and slate-frames	298,740	May 20	988	275	27	728
Emerson, Fisher Company. (See Bremerman, Fredrick, assignor.)						
Emerson, James E., Beaver Falls, Pa. Tab-plate for saws	297,242	Apr. 22	1706	461	27	338
Emerson, James E., Beaver Falls, Pa. Saw-tab	297,243	Apr. 22	1707	464	27	338
Emery, Charles E., Brooklyn, and A. H. Geutner, New York, N. Y., assignors to said Emery. Method of and apparatus for corrugating tubes	297,244	Apr. 22	1708	464	27	338
Emery, Cyrus. (See Smith, Walton D., assignor.)						
Emery, George H. (See Pelissier, Charles, assignor.)						
Emery, John G., Jr. (See Sage, Aldis E., assignor.)						
Emery, Philip A., Chicago, Ill. Sofa-bed	299,528	June 3	31	9	27	926
Empire Drill Company. (See Preston, George H., assignor.)						
Engren, William L., Franklin, Mass. Fastener for gloves, shoes, &c	295,914	Apr. 1	25	7	27	7
Engel, William, *et al.* (See Grant, Willis C., assignor.)						
Enghofer, Gottlieb, Attleborough, Mass. Locomotive driving-gear	297,921	Apr. 29	2562	704	27	508
England, Henry J., Falls Church, Va. Lifting-jack	300,529	June 3	32	9	27	927
Englehart, George, and C. Weidner, Attica, Ohio. Shifting buggy-top	297,771	Apr. 29	2299	654	27	474
English, Analdo M. (See Lord and English.)						
English, Peter, London, Ontario, Canada. Gas-generator	299,919	June 3	513	136	27	1019
Enhlish, Robert, Austin, Tex. Oil-can	297,977	May 6	17	5	27	530
Enke, Carl, Nuremberg, Bavaria, assignor to V. H. Von Swaine, Wiesbaden, Germany. Rotary engine	297,589	Apr. 29	2164	591	27	431
Enoch, Benjamin F., Philadelphia, Pa. Gas-burner for heating and lighting rooms	296,320	Apr. 8	543	152	27	108
Ensminger, John F., Toledo, Ohio. Combined seam-strengthener, gusset, and fly	298,360	May 13	524	142	27	634
Ensworth, Porter S. (See Lovett, Arthur S., assignor.)						
Erche, L. Reinhold. (See Liersch and Erche.)						
Ericsson, John, New York, N. Y. Submarine projectile	298,455	May 13	629	179	27	654
Erling, Peter K., Chicago, Ill. Animal-trap	298,361	May 13	525	142	27	634
Esplin, Charles, Minneapolis, Minn. Circular-saw mill	295,991	Apr. 1	119	36	27	25
Essig, Oda A., Canton, Ohio. Mold-board	298,189	May 6	986	74	27	580
Estes, Job, Sterling, Mich. Potato-digger	297,361	Apr. 22	1855	504	27	366
Estes, John W., Keytesville, Mo. Ditching and grading attachment for plows	298,741	May 20	989	275 / 276	27	728
Etheridge, Carroll L. (See Whitlock and Etheridge.)						
Etheridge, Martin V. B., Boston, assignor of one-half to H. E. Waite, Newton, Mass. Mail-bag fastening	297,245	Apr. 22	1710	464	27	339
Etheridge, Martin V. B., assignor, by mesne assignments, to J. E. Wheeler, trustee, Lynn, Mass. Machine for manufacturing bottle-wires	298,362	May 13	526	143 / 144	27	634
Eureka Fire Hose Company. (See Schenck and Stowe, assignors.)						
Evans, Austin C., Springfield, Ohio. Cable railway	300,058	June 10	700	190 / 191	27	1062
Evans, Franklin J., Iowa Falls, Iowa. Magazine-gun	300,856	June 24	1751	478	27	1266
Evans, John, assignor of one-half to G. A. Chalfant, Etna, Pa. Brick nozzle for gas-furnace pipes	296,398	Apr. 8	644	177	27	127
Evans, John, assignor of one-half to G. A. Chalfant, Etna, Pa. Heating-furnace	296,399	Apr. 8	644	158	27	127
Evans, Lemuel E., East Orange, N. J., assignor to C. G. Patterson, New York, N. Y. Wire bale-tie	299,063	May 20	1382	394	27	802
Evans, Lemuel E., East Orange, N. J., assignor to C. G. Patterson, New York, N. Y. Wire bale-tie	299,064	May 20	1383	394	27	803
Evans, Lewis J., New York, N. Y. Fire-escape	300,857	June 24	1752	478	27	1267
Evans, Richard K., Washington, D. C. Bait-fish can	299,765	June 3	344	87	27	986
Evans, Richard K., Washington, D. C., assignor to Cable Railway Company, San Francisco, Cal. Gripping device for cable-ways	295,915	Apr. 1	25	8	27	8
Evans, Thomas R., Philadelphia, Pa. Shoe	298,363	May 13	599	144 / 145	27	634
Evans, W. D., *et al.* (See Barger, Nathaniel S., assignor.)						
Evenden, James W., Rome, N. Y. Ice-hook	296,321	Apr. 8	544	152	27	109
Everding. John. (See Hyatt, Pool, Everding, Stevens, and Wood.)						
Everding, John. (See Hyatt, Stevens, Wood, and Everding.)						
Everett, Willard S., Hyde Park, Mass. Vehicle-spring	299,363	May 27	1755	505	27	884
Everhart, Logan W., Parsons, Kans. Automatic fan	299,364	May 27	1756	505	27	884
Ewart Manufacturing Company. (See Ewart, William D., assignor.)						
Ewart, William D., assignor to Ewart Manufacturing Company, Chicago, Ill. Drive-chain	297,302	Apr. 22	1856	505	27	366
Ewer, Ella L. (See Ewer, Roland G., assignor.)						
Ewer, Roland G., assignor to E. L. Ewer, Brooklyn, N. Y. Feed-water heater	297,246	Apr. 22	1711	465	27	339
Ewing, William T., Chicago, Ill. Injector	297,511	Apr. 22	2048	559	27	401
Excelsior Life Saving Car Coupling Company. (See Johnstone, Henry L., assignor.) (Reissue.)						
Excelsior Self-Leveling Berth and Automatic Ladder Company. (See Milligan and Killion assignors.)	299,940	June 3	514	136	27	1019
Eyre, Thomas T., Decatur, Colo. Ore-sampling machine	300,315	June 10	1049	284	27	1125
Eyster, Ben, assignor of one-half to A. G. Van Schaick, Chicago, Ill. Railway freight-car door	299,969	June 10	586	157	27	1042
Faber du Faur, Adolf. (See Jaeger and Faber du Faur.)						
Fahy, William, Berlin, Wis. Axle-nut	296,152	Apr. 1	368	98	27	60
Fahys Watch Case Company. (See Lamont, James, assignor.)						
Fair, Armor J., *et al.* (See Mefford, David M., assignor.)	300,235	June 10	939	254	27	1105
Fair, Perry W., De Kalb, Ind. Drum and cymbal clamp	300,236	June 10	940	254	27	1105
Fairchild, Charles B., New York, N. Y. Cable railway						
Fairchild, Charles B., New York, N. Y. Cable railway						
Fairchild, Le Roy W. (See Collard, Richard M., assignor.)						
Fairchild, Le Roy W., New York, N. Y. Case for pencils	298,364	May 13	529	145	27	635
Fairfield, Hadley P. (See Shead and Fairfield.)						
Fairfield, Hadley P., West Medford, Mass., and L. A. Shead, Alameda, Cal., assignors to G. McKay, trustee. Ore-separator	295,992	Apr. 1	121	36	27	25
Fairfield, Hadley P., West Medford, Mass., and L. A. Shead, Alameda, Cal., assignors to G. McKay, trustee. Ore-separator	295,993	Apr. 1	124	37	27	26
Fairfield, Joseph F., Alma, Nebr. Car-coupling	298,260	May 20	1302	359	27	780
Fales, Amos, Denver, Colo. Variable bench-plane	295,916	Apr. 1	26	8, 9	27	8
Fallesen, Christian, Brooklyn, N. Y. Wagon-spring	298,456	May 13	630	180	27	654
Fancher, Sabathiel C., *et al.* (See Burks, Jesse H., assignor.)						
Fanning, William H., Lapeer, Mich. Wagon running-gear	298,564	May 13	754	212	27	677

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Farmer, George P. (See Jenkins, Joel, assignor.)						
Farmer, James, Salford, county of Lancaster, England. Apparatus for drying and pulverizing blood, &c., for fertilizers	299,766	June 3	345	88	27	986
Farmers Friend Manufacturing Company. (See Runstetler, Andrew, assignor.)						
Farnsworth, Enoch, Smith's Mills, Pa. Automatic car-brake	300,585	June 17	1398	383	27	1197
Farquhar, Arthur B. (See Broomell, Albert P., assignor.)						
Farquhar, John F. C., and W. Oldham, London, England; said Oldham assignor to said Farquhar. Filtering apparatus	297,363	Apr. 22	1857	505	27	367
Farquhar, John F. C., and W. Oldham, London, England. Apparatus for filtering liquids.	297,364	Apr. 22	1860	506	27	367
Farr, Eugene M., North Muskegon, Mich. Horse-cleaner	297,365	Apr. 22	1863	506	27	367
Farr, Hiram G., Boston, Mass. Pessary	300,769	June 24	1648	451	27	1247
Farr, Hiram G., Boston, Mass. Menstrual receptacle	300,770	June 24	1649	451	27	1247
Farrar, John N., and C. W. Morse, New York, N. Y. Telegraphic transmitter for unskilled operators	300,333	June 17	1107	300	27	1146
Farrel, John, New York, N. Y. Safe-deposit box	296,153	Apr. 1	309	89	27	60
Farrel, John, New York, N. Y. Metallic alloy for safes	298,365	May 13	531	.....	27	635
Farwell, Fannie M. (See Farwell, Willard B., assignor.)						
Farwell, Fay O., assignor of one-half to G. C. Benta, Cresco, Iowa. Vapor-stove	297,120	Apr. 22	1546	427	27	309
Farwell, Willard B., assignor, by mesne assignments, to F. M. Farwell, San Francisco, Cal.) Wet ore concentrator	300,701	June 17	1502	428 / 429	27	1228
Fastenrath, Friedrich, New York, N. Y. Floor-mat	298,565	May 13	755	213	27	678
Fanck, Albert, Kleczany, Galicia, Austria-Hungary. Boring-tool or detent-terrier for oil-wells, &c	299,632	June 3	167	42	27	951
Fangère, Jean, Montignac de Lauzun, France. Machine for setting and sharpening scythes	299,767	June 3	346	88	27	986
Faught, Nelson, Pittsborough, assignor of one-half to R. R. Miles, Indianapolis, Ind. Fence	300,435	June 17	1233	337	27	1167
Fawkes, Joseph W., Oak Park, Ill. Spring-motor	296,738	Apr. 15	1063	299 / 300	27	217
Fay, W. Lamartine. (See Beal, Samuel, assignor.)						
Fearenside, John, Jr. (See Baynes and Fearenside.)						
Feicker, Edward P. (See Feicker, Fredrick C., Jr., assignor.)						
Feicker, Fredrick C., Jr., assignor of one-half to E. P. Feicker, Northampton, Mass. Combined fruit-knife and nut-pick	300,858	June 24	1753	478	27	1267
Felbel, Jacob, New York, N. Y. Pool-rack	299,365	May 27	1756	506	27	884
Fell, Thomas M., Brooklyn, N. Y. Stove and heater	297,772	Apr. 29	2399	655	27	474
Felthousen, Barrent W., assignor to Wadhams, Magie & Co., Milwaukee, Wis. Automatic lubricating-cup	299,762	June 3	347	88	27	986
Fenerty, Edward L., Halifax, Nova Scotia, Canada. Shovel	299,530	June 3	33	9	27	927
Fenner, Charles A., Mystic River, Conn. Handsaw	297,366	Apr. 22	1864	507	27	367
Fenner, Herbert N. (See Harrington, Frank S., assignor.)						
Fenner, Herbert N., Providence, R. I. Automatic fire-alarm	299,970	June 10	587	157	27	1042
Fenton, John H., Chicago, Ill. Latch-clasp for driving-reins	300,354	June 17	1109	300	27	1146
Ferny, Edward P. (See Stoetzel, Joseph J., assignor.)						
Ferguson, William J., assignor of two-thirds to J. O. and I. T. Norris, Baltimore, Md. Gas-pump	297,773	Apr. 29	2402	655	27	475
Ferrall, Thomas R., Boston, Mass. Snatch-block	299,531	June 3	33	10	27	927
Ferrell, Frank J., New York, N. Y. Clothes-drier	299,760	June 3	348	89	27	986
Ferrill, Cicero C., Shubuta, Miss. Device for attaching and detaching horses	297,367	Apr. 22	1865	507	27	368
Ferris, Benjamin L., Kansas City, Mo. Safety-bridge for railway-cars	298,075	May 6	143	36	27	553
Ferry, Thomas, Wilmington, Del. Rag and scrap duster	299,366	May 27	1758	506	27	884
Fesca, Albert, Berlin, Germany. Method of and apparatus for mashing sugar and sugar masses	297,978	May 6	12	6	27	531
Fichtenberg, Werner, New York, N. Y., assignor to W. H. Hart, Jr., Philadelphia, Pa. Neck-wear tip	298,190	May 6	287	74	27	580
Field, Benjamin, Dailey, Mich. Balanced steam-engine	296,944	Apr. 15	1320	366	27	263
Field, Henry, Jr., New Bedford, Mass. Foot-power	298,566	May 13	757	213	27	678
Field, Martin S., assignor to Johnson & Field, Racine, Wis. Fanning-mill	300,456	June 17	1234	338	27	1167
Field, Stephen D., assignor to Commercial Telegram Company, New York, N. Y. Transmitter for printing-telegraphs	300,859	June 24	1754	478 / 479	27	1267
Fiero, John C., Milo Centre, N. Y. Fence-post	300,586	June 17	1399	384	27	1197
Fifield, Charles S. (See Woodman, Charles, assignor.)						
Fifield, John W. D., North Brookfield, Mass. Boot-tree	299,971	June 10	587	158	27	1043
Fifield, John W. D., North Brookfield, assignor to A. H. Batcheller, Boston, Mass. Last or holder for lasting boots or shoes	296,154	Apr. 1	309	89	27	60
Fildes, Samuel, La Porte, Ind. Carpet-stretcher	300,237	June 10	942	254	27	1105
Filler, George E., and A. H. Neff, assignors of one-third to H. C. Lone, Sheldon, Iowa. Door	297,774	Apr. 29	2402	655	27	475
Finch, Dwight H., Aurelia, Iowa. Weather-board gage	298,692	May 13	909	252	27	706
Finger, Louis, Melrose, Mass., assignor, by mesne assignments, to Hanlon Electric Signal Company, Portland, Me. Electric railway-signal	300,238	June 10	943	254 / 255	27	1106
Fink, Nickolas, Edmore, Mich. Combined king-bolt and circle for vehicles	299,367	May 27	1759	506	27	885
Firoy, Samuel M., Clear Spring, Md. Double-tree	297,512	Apr. 22	2048	559	27	402
Firm, Joseph L., Jersey City, N. J. Reel and rod for winding paper and protecting the same in the roll	297,775	Apr. 29	2402	656	27	475
Firman, Henry S., New York, N. Y., assignor to Universal Concentrating Company, Camden, N. J. Incinerating-furnace	296,322	Apr. 8	545	152	27	109
Fischbeck, Detmer, Milwaukee, Wis. Fly-net for horses	297,121	Apr. 22	1548	427	27	310
Fischer, Emil, Calliope, Iowa. Fence	299,770	June 3	349	89	27	987
Fischer, Louis, Pittsburg, Pa. Glass-press	297,500	Apr. 29	2405	591	27	431
Fish, Daniel E., Worthington, Minn. Plow	300,457	June 17	1235	338	27	1167
Fish, Frederick P., trustee. (See Roper, Sylvester H. and C. F., assignors.)						
Fish, George M. (See Hill, Christian C., assignor.)						
Fish, George W., Pecatonica, Ill. Button-fastening	296,155	Apr. 1	310	89	27	61
Fish, John R., Grand Rapids, Mich. Car-truck	296,545	Apr. 8	824	227	27	164
Fisher, Alfred A., and A. Hart, assignors to Pacific Tucking and Manufacturing Company, San Francisco, Cal. Sewing-machine	299,368	May 27	1760	507	27	885
Fisher, Charles H., Wheeling, W. Va. Grate	300,050	June 10	702	191	27	1063
Fisher, Clark, Trenton, N. J. Anvil	298,567	May 13	758	213	27	678
Fisher, Clark, Trenton, N. J. Lifting-jack	298,568	May 13	759	214	27	678
Fisher, Daniel H. (See Hicks, James N., assignor.)						
Fisher, Hiram H., Allentown, Pa. Pipe mold and flask	300,279	June 10	946	255 / 256	27	1106
Fisher, John, Riley, Ind. Tongue-rest	297,368	Apr. 22	1865	507	27	368
Fisher, John R., and L. T., Knobnoster, Mo. Pump	300,702	June 17	1504	429	27	1228
Fisher, Leander T. (See Fisher, John R. and L. T.)						
Fisher, Lewis H., Walpole, Mass. Self-oiling axle for vehicles	296,323	Apr. 8	546	153	27	109

Name, residence, and invention	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Fisher, Marion O., Allen's Hill, N. Y. Fire and water proof paint	296,324	Apr. 8	548	.....	27	110
Fisk, William C., Toledo, Ohio. Ticket-punch	301,052	June 24	1986	549	27	1310
Fiske, Asa B., Lyndonville, assignor of one-half to J. D. Warren, Medina, N. Y. Car-coupling	298,191	May 6	288	74	27	580
Fitch, Eugene L., Des Moines, Iowa. Siphon-starter	299,532	June 3	35	10	27	927
Fitch, Ezra C., Newton, assignor to Robbins & Appleton, Boston, Mass. Watch-case bezel	299,369	May 27	1761	507	27	885
Fitch, James E. (See Taylor, Thomas, assignor.)						
Fitch, Thaddeus S. (See Bennett and Fitch.)						
Fitch, Washington L., assignor to himself and W. W. Weisell, Bluffton, Ind. Clothes-wringer	300,860	June 24	1758	479	27	1267
Fitch, William L., Chicago, Ill. Smoke-consumer	297,122	Apr. 22	1549	427	27	310
Fitch, Benaiah, assignor to Union Water Meter Company, Worcester, Mass. Water-meter	299,213	May 27	1570	451	27	849
Fitts, Jacob, Hanover, Pa. Slide-rest	296,156	Apr. 1	311	89	27	61
Fitz Gerald, Walter H., and G. C. Smith, Chicago, Ill. Watch-case spring	297,123	Apr. 22	1550	428	27	310
Fitzgerald, Daniel H. (See Broughton, John, assignor.)						
Fitzsimmons, Andrew M. R., *et al.* (See Abbott, John D., assignor.)						
Flack, Albert L. (See Yingling, Flack, and Heller.)						
Flad, Henry, St. Louis, Mo. Electro-magnetic air-brake	296,546	Apr. 8	824	227 / 228 / 229	27	165
Flad, Henry, St. Louis, Mo. Electrical connector in pipe-couplings for air-brakes	296,547	Apr. 8	829	229 / 230	27	165
Flad, Henry, St. Louis, Mo. Air-filter	296,548	Apr. 8	831	230	27	166
Flad, Henry, St. Louis, Mo. Electro-magnetic valve and connection	296,549	Apr. 8	832	230 / 231	27	166
Flad, Henry, and F. Höppner, St. Louis, Mo. Car-brake	299,121	May 27	1464	419 / 420	27	829
Flad, Henry, and F. Höppner, assignors to Mallinckrodt Brake Company, St. Louis, Mo. Car-brake	299,122	May 27	1466	420	27	829
Fladvad, Halvor O. (See Williamson and Fladvad.)						
Flagg, Charles E., Boston, Mass. Roller-skate	298,838	May 20	1175	309	27	749

Gray, James R., Ayer, assignor to G. Draper & Sons, Hopedale, Mass. Spindle-bolster	300,402	June 17	1244	340	27	1169
Gray, Thomas J. (See Day, Charles T., assignor.)						
Gray, William, assignor of one-half to E. Cady, Hartford, Conn. Base-ball bat	300,360	June 17	1115	302	27	1147
Gray, William S., May, Tex. Mechanical power	297,595	Apr. 29	2170	593	27	432
Greely, David S., Foster's Crossing, Ohio. Millstone-dressing machine	298,461	May 13	636	181, 182	27	655
Green, Alonzo H., Clear Lake, Iowa. Grapple for hose	297,788	Apr. 29	2416	660	27	478
Green, Charles. (See Wilson, William, Jr., assignor.)						
Green, Frank M., *et al.* (See Dodd, James F., assignor.)						
Green, George M. Streator, Ill. Coupling for ropes or cables	297,671	Apr. 15	1475	408	27	292
Green, John A., Waltham, Mass. Thill-coupling	300,597	June 17	1403	386	27	1199
Green, Jonathan, Leisenring, Pa. Coke oven	300,463	June 17	1245	340	27	1169
Green, Joshua J., Jackson, Miss. Removing fiber from cotton-seed	299,378	May 27	1770	...	27	887
Green, William R. (See Holleman and Green.)						
Greene, Elias M., New York, N. Y. Protector for telegraph and telephone instruments	297,385	Apr. 22	1883	512	27	371
Greene, George E., Gardiner, Mass. Dental-floss holder	301,035	June 24	1970	550	27	1311
Greene, Henry, Philadelphia, Pa. Fire-escape	300,248	June 10	959	250	27	1108
Greene, John J., *et al.* (See Adams, Archibald D., assignor.)						
Greene Knitting Company. (See Terwilleger, John, assignor.)						
Greene, Will B., Washington, D. C. Automatic fan	297,386	Apr. 22	1885	512	27	372
Greenebaum, Moses S., *et al.* (See Chamberlain and Harris, assignors.)						
Greenlee, R. S. & R. L. (See Hermance, Joseph H., assignor.) (Reissue.)						
Greenwood, Alvin M., *et al.* (See Ellis, George A., assignor.)						
Greenwood, Jeremiah, Fitchburg, Mass. Can-opener	299,379	May 27	1771	510	27	887
Greenwood, John H., Columbus, Ohio. Marble-projector	296,405	Apr. 8	651	180	27	128
Gregg, William L., Philadelphia, Pa. Brick-machine	299,067	May 20	1386	395, 396	27	804
Gregory, James W., Ames, Iowa. Bird-cage	300,249	June 10	959	250	27	1108
Grellier, Henry, Brixton, county of Surrey, England. Sewing-machine	300,598	June 17	1404	386, 387	27	1199
Gresham, Job A., Waynesborough, Ga. Bale-tie	296,686	Apr. 8	1000	280	27	199
Grier, William W., Hulton, Pa. Vehicle running-gear	296,409	Apr. 8	652	181	27	129
Griest, John M., assignor to Chicago Attachment Company, Chicago, Ill. Holder for sewing-machine attachments	297,596	Apr. 29	2171	593	27	432
Griest, John M., assignor to Chicago Attachment Company, Chicago, Ill. Binding attachment for sewing-machines	297,597	Apr. 29	2173	593	27	432
Griffen, John, and J. Hall, Jr., assignors to Phœnix Iron Company, Phœnixville, Pa. Rotary puddling-furnace	300,250	June 10	961	280, 281	27	1109
Griffin, George L., W. A. Shoup, and J. R. Cade, Harrisburg, Tex. Rotary engine	297,254	Apr. 22	1723	467	27	341
Griffin, James K., Brooklyn, N. Y. Process of and furnace for smelting and reducing ores	299,637	June 3	174	44	27	952
Griffin, John, Philadelphia, Pa. Lightning-arrester for telegraph and telephone lines	296,407	Apr. 8	654	181	27	129
Griffin, Joseph A. (See Beal, Mart A., assignor.)						
Griffith, Charles E., Storm Lake, Iowa. Bit for inserting screw-eyes	300,317	June 10	1052	285	27	1125
Griffith, Evan T., Brooklyn, N. Y. Marine propeller	299,921	June 3	516	137	27	1019
Griffiths, Thomas. (See Clapp and Griffiths.) (Reissue.)						
Grimm, Gustave H., Hudson, Ohio. Sugar-evaporator	296,743	Apr. 15	1009	301	27	218
Grimm, Paul H., assignor to Glen Cove Manufacturing Company, Glen Cove, N. Y. Apparatus for separating solid and liquid portions of starch refuse, &c	296,600	Apr. 1	135	39	27	88
Grimmell, Julius C., Brooklyn, N. Y. Watch-protector attachment	297,516	Apr. 22	2051	560	27	402
Grinnell, Frederick (See Grinnell, Richard W. and F.)						
Grinnell, Richard W. and F., Providence, R. I. Automatic fire-extinguisher	299,360	May 27	1772	510	27	887
Griscom, Frederic, Dolington, Pa. Mail-bag	297,789	Apr. 29	2416	660	27	478
Griscom, William M., Reading, Pa. Apple parer, corer, and slicer	298,745	May 20	1394	397	27	799
Grisel, George, Oakland, Cal. Carpet-sewing machine	296,744	Apr. 15	1071	302	27	218
Grisel, George, Oakland, Cal. Carriage for garden-hose	300,772	June 24	1651	452	27	1248
Griswold, Horace P., Providence, R. I. Fire-escape ladder	297,790	Apr. 29	2417	660	27	478
Griswold, John A., San Francisco, Cal. Oil can	299,068	May 20	1389	396	27	804
Griswold, Lewis F. (See Parker and Griswold.)						
Groebl, H. William, assignor of one-half to J. A. Plummer, Vincennes, Ind. Table-leg fastening	297,931	Apr. 29	2582	708	27	544
Gröndahl, Wilhelm A., Portland, Oreg. Self-adjusting pulley	299,470	May 27	1884	542	27	907
Grose, Henry J. (See Burck, John H., assignor.)						
Gross, Alfred S. (See Spicer, Andrew J., assignor.)						
Grossiord, Samuel, Les Moussières, France. Producing artificial precious stones	297,508	Apr. 29	2173	...	27	432
Grothaus, Frederick E., Boerne, Tex. Car-coupling	300,664	June 24	1703	400	27	1268
Grove, J. Ross, York, Pa. Safe	299,321	May 27	1773	510	27	888
Groves, John W., and V. Minich, assignors of one-half to M. B. Clemenger, South Oil City, Pa. Cultivating fruits and vegetables	297,932	Apr. 29	2582	708	27	544
Groves, Leroy S., assignor to J. F. Bishop, Afton, and J. H. Patt, Creston, Iowa. Apparatus for generating and carbureting hydrogen-gas	298,462	May 13	640	182	27	655
Groves, William F., Marietta, Ga. Cotton-gin house	296,687	Apr. 8	1001	280	27	199
Grunbagen, Henry, assignor of one-third to W. Pfaender, Jr., St. Paul, Minn. Machine for cutting cigar-wrappers	300,669	June 10	717	194	27	1065
Grupe, William H. (See Bonnard and Grupe.)						
Grunson, Hermann, Buckau, near Magdeburg, Prussia, Germany. Mortar and globular shield for the same	299,218	May 27	1576	453	27	850
Gue, Albert F., Denver, Colo. Folding bed	296,102	Apr. 1	319	91	27	62
Guedle, Alfred, Canal Dover, Ohio. Roofing-bracket	298,463	May 13	642	182	27	656

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Guelph Carriage Goods Company. (See Armstrong, John B., assignor.)						
Guilbert, John C. N., and W. M. Andrus, New York, N. Y. Adjustable shelf for holding fire-hose	298,372	May 13	537	147	27	636
Guild, Walter B., Boston, Mass. Card-grinding roller	299,131	May 27	1477	424	27	892
Guilleaume, Franz C., Cologne, Prussia, Germany. Telephone-cable	297,688	Apr. 29	2290	624	27	456
Guinzburg, Fernando M., New York, N. Y. Combined cigar-cutter and match-box	300,707	June 17	1571	431	27	1229
Guirey, Mary E., San Francisco, Cal. Figure, map, and chart for educational purposes	298,746	May 20	995	278	27	730
Gumpel, Charles G., Leicester Square, county of Middlesex, England. Portable electric battery and lamp	296,331	Apr. 8	556	155	27	111
Gurney, Nathan G., assignor of one-half to F. Clark, Baltimore, Md. Process apparatus	296,285	Apr. 1	492	137	27	92
Gutenkunst, Charles A., Milwaukee, Wis. Hay-carrier	296,745	Apr. 15	1074	303	27	219
Gutenkunst, William, Milwaukee, Wis. Adjustable stop for hay-carriers	296,746	Apr. 15	1075	303	27	219
Gutmann, Emil, *et al.* (See Martinez, Rafael, assignor.)						
Gwinner, Robert, J. Kantsky, C. Deugg, and F. Roth, Vienna, Austria-Hungary. Hydraulic theater appliance	296,286	Apr 1	494	138, 139	27	93
Gwynn, James, Detroit, Mich. Lock	300,773	June 24	1652	452	27	1248
Haas, Charles W., Allentown, Pa. Shaft-tug	300,805	June 24	1764	481	27	1260
Haas, James M., assignor of two-thirds to L. H. Fongeres and G. W. Blair, Wabash, Ind. Anti-rattler for thill-couplings	300,251	June 10	964	261	27	1109
Haas, Levi, Chester, Pa. Concrete compound for paving streets, walks, &c	297,791	Apr. 29	2418	.....	27	478
Haas, Levi, Chester, Pa. Compound material for the manufacture of sheets, boards, blocks, artificial wood, &c	300,464	June 17	1246	.....	27	1169
Haas, Levi, and D. Howarth, Chester, Pa. Felt roofing	296,163	Apr. 1	320	91	27	62
Habenicht, Charles R. H. M., New York, N. Y. Process of and apparatus for crystallizing tin	300,590	June 17	1407	387	27	1200
Haberman, Fredrick, New York, N. Y. Sheet-metal vessel	299,779	June 3	358	91	27	988
Habltizel, Samuel F. (See Jackman, Neighbor, Stick, and Habltizel.)						
Haege, Jacob, Garfield, Kans. Fire-escape	299,132	May 27	1478	424	27	892
Haegen, Johanna, New York, N. Y. Hat or bonnet	296,557	Apr. 8	845	235	27	168
Haff, Edward P., New York, N. Y. Key-ring	298,747	May 20	996	278	27	730
Hagany, William S., *et al.*, executors. (See Waring, John B., assignor.)						
Hagee, Albert, *et al.* (See Gibbons, David, assignor.)						
Hagerty, John, assignor to Cooke & Eddy, Providence, R. I. Machine for attaching the backs and fronts of articles of jewelry	299,069	May 20	1390	396	27	804
Hagey, John E. (See Qvarnstrom, Erick J., assignor.)						
Hagstrom, August W. (See Larson and Hagstrom.)						
Hague, Edmund H., assignor of one-third to W. Johnson, Jackson, Mich. Paint	297,074	Apr. 15	1476	.....	27	292
Hagne, Walter E. (See Miller, John F., assignor.)						
Hahn, Albert K. (See Dungan and Lacrone, assignors.)						
Hahn, David D. (See Coon and Hahn.)						
Haid, Alfred, Rahway, assignor to Haid's Electrical Storage Company, Newark, N. J. Secondary battery	296,164	Apr. 1	321	91	27	62
Haid's Electrical Storage Company. (See Haid, Alfred, assignor.)						
Haigh, George, *et al.* (See Manuel, David, assignor.)						
Haight, James R., Adrian, Mich. Fountain-pen	299,519	May 27	1578	454	27	851
Haines, David S., New York, and S. D. Lake, Brooklyn, N. Y. Bracket for insulating supports for electrical conductors	296,558	Apr. 8	846	235	27	168
Haines, David S., New York, and S. D. Lake, Brooklyn, N. Y. Insulating-support for electric conductors	296,688	Apr. 8	1001	280	27	199
Hainsworth, William, Pittsburg, Pa. Manufacturing eye-bars	298,748	May 20	997	278	27	730
Halbert, John B., Maitland, assignor of one-half to E. R. Trofford, Sanford, Fla. Lifting-jack	297,255	Apr 22	1724	468	27	341
Haldane, Robert, Glasgow, county of Lanark, Scotland. Apparatus for the distillation of wood	297,517	Apr. 22	2053	560, 561	27	403
Hale, Elam B., *et al.* (See Kealen, Wyley M., assignor.)						
Hale, Henry S., Philadelphia, Pa. Folding berth	297,256	Apr. 22	1725	468, 469	27	342
Hale, Henry S., Philadelphia, Pa. Fabric for walls of apartments	299,382	May 27	1774	511	27	888
Hale, Henry S., Philadelphia, Pa. Book-case	300,361	June 17	1115	303	27	1147
Hale, Napoleon B., San Bernardino, Cal. Button	298,082	May 6	150	38	27	595
Hale, Thomas, Claydon, county of Suffolk, England. Fire-escape	300,465	June 17	1246	341	27	1169
Halkyard, William, Providence, R. I. Button-fastener	298,464	May 13	643	182	27	656
Halkyard, William, Providence, R. I. Attaching buttons to shoes, &c	299,133	May 27	1478	425	27	892
Hall, Albert B., Indianapolis, Ind. Capsule-machine	297,792	Apr. 29	2419	661	27	478
Hall, David, Middletown, Conn. Overshoe	300,774	June 24	1653	452	27	1248
Hall, Dudley C. (See Duffy, Thomas W., assignor.)						
Hall, Emil J., Alexandria, Va., assignor of one-half to W. W. Granger, Washington, D. C. Type-writing machine	298,576	May 13	771	216	27	680
Hall, Frank E., Boston, Mass., assignor to Hall Rubber Mills, Portland, Me. Manufacturing gossamer water-proof cloth	299,638	June 3	176	44	27	953
Hall, George W., assignor of one-half to E. J. Morgan, Bridgeport, Conn. Check-rein hook	297,387	Apr. 22	1886	512	27	372
Hall, James B. (See Hall, Tomas P. and J. B.)						
Hall, Jesse, Jr. (See Griffen and Hall.)						
Hall, John, Boston, Mass. Signal-torch	296,952	Apr. 15	1328	368	27	265
Hall, Nicoll & Granberry. (See Shepard, George E., assignor.)						
Hall, Osborn B. (See Walworth and Hall.)						
Hall, Osborn B., Malden, Mass. Cash-carrier	298,373	May 13	536	147	27	636
Hall Rubber Mills. (See Hall, Frank E., assignor.)						
Hall, Theodore F., assignor part to A. J. Richards, W. E. Conner, and G. W. Lovell, Marietta, Ohio. Drive-chain	297,793	Apr. 29	2420	661	27	479
Hall, Tomas P., Toronto, and J. B. Hall, Georgetown, Ontario, Canada. Roller-skate	297,388	Apr. 22	1887	513	27	372
Hall, Truman. (See Tansey, Vurlin G., assignor.)						
Hall, Willard L., Fremont, Nebr. Lifting-jack	298,374	May 13	540	148	27	637
Hall, William B., Duquoin, Ill. Joint-lever	298,749	May 20	998	279	27	730
Hall, William F., Providence, R. I. Comb for flax, wool, &c	297,794	Apr. 29	2421	661	27	479
Hall, William H., Tiffin, Ohio. Corn-sheller	299,134	May 27	1479	425	27	892
Halliwell, Jane, *et al.* (See Lavigne, Joseph P., assignor.)						
Hallowell, Albert, Lowell, Mass. Hydraulic cock or filtering-faucet	298,550	May 20	999	279	27	730
Halsey, Louis M., Brooklyn, N. Y. Dental rubber dam	300,600	June 17	1408	387	27	1200
Ham, Benjamin A., Boston, Mass. Spring bed-bottom	296,953	Apr. 15	1328	368	27	265
Ham, Charles T., Rochester, N. Y. Oil-stove	300,601	June 17	1409	388	27	1200
Ham, Daniel, Iowa City, Iowa. Flooring	298,300	May 6	440	118, 119	27	610

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Hamer, Samuel. (See McCracken and Hamer.)						
Hamilton, Charles S., Milwaukee, Wis. Oil-press mat	298,848	May 20	1116	{313 314}	27	751
Hamilton, Edward, Boston, Mass. Refrigerating car and chamber	298,063	May 6	151	39	27	555
Hamilton, John, St. John, New Brunswick, Canada. Machine for dressing ships' sides	299,639	June 3	177	45	27	953
Hamilton, John F., Medfield, Mass. Mechanism for simultaneously sewing to a hat its band and lining	299,780	June 3	358	91, 92	27	989
Hamilton, Miles E., Auburn, N. Y. Whiffletree-hook	300,252	June 10	964	261	27	1110
Hamlin, Mahlon, Catawissa, Pa. Car-wheel	296,964	Apr. 15	1329	369	27	265
Hammarlund, Oscar. (See Larson and Hammarlund.)						
Hammond, Andrew H., Worcester, Mass. Mechanical musical instrument	296,165	Apr. 1	322	92	27	63
Hammond, John F., Omaha, Nebr. Nail-plate feeder	296,747	Apr. 15	1076	{303 304}	27	219
Hammond, Orlin W., Belmont, N. Y. Pump	296,001	Apr. 1	137	40	27	28
Hance, William A. (See Weaver, Francis M., assignor.)						
Hancock Inspirator Company. (See Park, William R., assignor.)						
Hand, John S., San Francisco, Cal. Tailor's measuring device	299,383	May 27	1776	{311 312}	27	888
Haneline, Martin, Joplin, Mo. Ironing-machine	300,708	June 17	1572	431	27	1229
Hanika, Christian, *et al.* (See Gifford, Franklin, assignor.)						
Hanlon Electric Signal Company. (See Finger, Louis, assignor.)						
Hanlon, John, New York, N. Y. Water-cooled valve	300,602	June 17	1411	{388 389}	27	1200
Hanlon, John, New York, N. Y., assignor to United Coal and Oil Gas Company, of New York. Process of and apparatus for manufacturing gas	300,466	June 17	1247	{341 342}	27	1170
Hanlon, Michael F., Brooklyn, N. Y. Roller-skate	296,833	Apr. 15	1183	332	27	238
Hanmore, Hiram M., White Plains, N. Y. Non-heat-conducting vessel	296,935	Apr. 15	1330	369	27	265
Hannan, William H., Palermo, N. Y. Bottle-opener	297,389	Apr. 22	1888	513	27	372
Haunon, Arthur T. (See Worswick, James E., assignor.)						
Hanson, Charles, assignor of one-half to F. Applequist, Rock Island, Ill. Street-car coupling	299,781	June 3	350	92	27	989
Hapgood Plow Company. (See Lane, John, assignor.)						
Hapgood Plow Company. (See Pates, Thomas, assignor.)						
Hapgood Plow Company. (See Pates, William S., assignor.)						
Harbaugh, Simon P., Cumberland, Md. Baling-press	300,866	June 24	1765	481	27	1269
Harden Crystal Bearing Company. (See Harden, John J., assignor.)						
Harden, John J., Chicago, Ill. Hand-grenade fire-extinguisher	297,075	Apr. 15	1477	408	27	293
Harden, John J., assignor to Harden Crystal Bearing Company, Chicago, Ill. Anti-friction glass bearing	300,467	June 17	1252	342	27	1170
Hardenbergh, Peter R. L. (See Brownson, Ralph, assignor.)						
Hardie, Robert, Hoboken, N. J., assignor of one-half to J. A. Walsh, New York, N. Y. Pump	297,076	Apr. 15	1478	408	27	293
Hardin, Charles B., assignor of two-thirds to J. W. and J. W. Clements, Independence, Mo. Surgical aspirator	297,989	May 6	38	9	27	534
Hardin, William A., Leavenworth, Kans. Tongs for lifting spools of fence-wire	296,559	Apr. 8	847	235	27	168
Harding, Edwin A., Harbor Springs, Mich. Bob-sleigh	298,849	May 20	1118	314	27	752
Harding, John H., Milwaukee, Wis. Mold for casting ornamental plaques, &c.	300,967	June 24	1881	{516 517}	27	1290
Hardy, Hippolyte, Paris, France. Advertising musical instrument	296,956	Apr. 15	1331	369	27	266
Hardy, William A., Fitchburg, Mass. Car-axle box	300,302	June 17	1117	303	27	1147
Hargrave, James, Burley Leeds, county of York, England. Machine for cleaning and blacking boots or shoes	297,390	Apr. 22	1889	513	27	373
Haring, John C., Jersey City, N. J. Pencil-case	301,056	June 24	1991	550	27	1311
Haring, John C., and C. H. Court, Jersey City, N. J. Stylographic fountain-pen	298,084	May 6	192	39, 40	27	555
Harkins, George C., Salt Lake City, Utah Ter., assignor of three-fourths to M. L. Causey, E. D. Egan, and L. Kalgh. Skating-rink floor	299,924	June 3	519	138	27	1020
Harley, Elizabeth G., Philadelphia, Pa. Safety attachment	296,002	Apr. 1	137	40	27	28
Harlow, Cushing C., Brockton, Mass. Lubricator	295,919	Apr. 1	30	9	27	8
Harlow, Ivory W., Plymouth, Mass. Tea-kettle	298,465	May 13	644	183	27	656
Harlow, Joseph W., Portsmouth, N. H. Box-fastener	298,689	May 13	919	{254 255}	27	708
Harman, C. Wesley, and H. G. Skidmore, Cincinnati, Ohio. Watch-case	298,197	May 6	296	76	27	582
Harman, Stephen S., assignor to himself and M. T. Lynch, New York, N. Y. Mucilage cup or holder	297,391	Apr. 22	1891	513	27	373
Harmer, Henry, Southampton, assignor to F. Broughton, Hamilton, Ontario, Canada. Safety-switch guard. (Reissue)	10,478	May 13	951	264	27	715

Higgin, Henry, Newport, Ky. Strap-fastening loop for carriage-curtains	298,969	May 20	1268	361	27	781
Higgin, Henry, Newport, Ky. Carriage-top	300,971	June 24	1885	518	27	1291
Higgin, Henry, Newport, Ky. Light-frame for carriages	300,972	June 24	1886	519	27	1292
Higgins, Charles L., Montreal, Quebec, Canada, assignor to J. E. Wheeler, trustee, Lynn, Mass. Device for expanding articles of flexible material	300,365	June 17	1120	304	27	1148
Higgins, Charles S. (See Valentine, Benjamin E., assignor.)						
Higgins, Peter H., Merced, Cal. Necktie-fastener	298,752	May 20	1000	279	27	731
Higley, Asa L., assignor of one-half to J. Mathews, Troy, N. Y. Potato-digging machine	296,168	Apr. 1	227	93	27	63
Hildebrand, Emil O., Chicago, Ill. Conduit for underground telegraph-wires	297,397	Apr. 22	1896	515	27	374
Hildrup, William T., Jr., Harrisburg, Pa. Boiler-setting	298,380	May 13	548	150	27	638
Hill, Charles H., Lombardville, Ill., and J. T. Ryan, Manning, Iowa. Adjustable seat-lift cultivator	297,933	Apr. 29	2584	709	27	511
Hill, Christian C., Chicago, assignor to G. M. Fish, Oak Park, Ill. Barbed-wire twisting and spooling machine	299,542	June 3	49	13	27	929
Hill, Edwin F., assignor of one-half to J. G. Jacobs, Springfield, Ohio. Locking device for coffins	299,140	May 27	1487	427	27	833
Hill, Harry W., Montgomery, Ala. Friction-clutch pulley	299,787	June 3	360	94	27	990
Hill, John C., New Guatemala, Guatemala, Central America. Stencil or perforating-pen	298,853	May 20	1122	316	27	753
Hill, John D., *et al.* (See Dimon, Frank S., assignor.)						
Hill, Lorenzo D., *et al.* (See Ormsby, William H., assignor.)						
Hill, Peter P., Lee, Ill., assignor to Washburn & Moen Manufacturing Company, Worcester, Mass., and I. L. Ellwood, De Kalb, Ill. Wire-barbing machine	298,204	May 6	308	80 / 81 / 82	27	584
Hill, Samuel C., and S. D. Webb, Washington, D. C. Mail-bag fastener	296,169	Apr. 1	328	93	27	64
Hill, Thomas, *et al.* (See Little, James R., assignor.)						
Hill, William S., Cutler, Ill. Permutation-lock	300,868	June 24	1768	482	27	1269
Hilles, Samuel E., Cincinnati, Ohio. Plane	299,927	June 3	522	139	27	1020
Hillis, Levi H., Kokomo, Ind. Breast-collar for harness	299,141	May 27	1488	427	27	834
Hilton, James, Newark, N. J. Segment-saw	299,142	May 27	1489	427	27	834
Hilton, Rowland. (See McNiece, Andrew, assignor.)						
Himmer, Ida C. (See Himmer, Vitalis, assignor.)						
Himmer, Ida C., and W. F. Weisgerber, New York, N. Y., assignors to said I. C. Himmer. Secondary electric clock	298,205	May 6	314	82	27	585
Himmer, Vitalis, assignor to I. C. Himmer, New York, N. Y. Circuit-closer for electric clocks	298,301	May 6	441	119	27	610
Hinden, Mathias J., assignor of one-half to P. Dannhauer, Cleveland, Ohio. Hand-grip tester	300,473	June 17	1257	344	27	1172
Hinden, Mathias J., assignor to Hydrogen Lighter Company, Cleveland, Ohio. Hydrogen-lighter	301,057	June 24	1993	550	27	1311
Hine, Charles M., St. Louis, Mo., assignor to Wilcox & Gibbs Sewing Machine Company, New York, N. Y. Machine for sewing bags and other articles	296,565	Apr. 8	856	237 / 238	27	170
Hiner, Martin M., Harrisburg, Pa. Car-brake	298,467	May 13	646	183	27	656
Hines, Byron. (See Amiro, Ambrose, assignor.)						
Hiney, Charles F., Pottsville, Pa. Adjustable curtain-fixture	299,143	May 27	1490	427	27	834
Hinkle, George W. (See Knauss and Hinkle.)						
Hinkley, Philander, Charleston, Ill. Check-rowing attachment for seed-planters	299,981	June 10	603	162	27	1045
Hinklin, Orren E., assignor of two-thirds to A. B. Roots, Milford Centre, Ohio, and W. Allen, Washington, D. C. Watch-winding mechanism	296,170	Apr. 1	329	93	27	64
Hinsdale, Charles C., Cleveland, Ohio. Insulated telegraph tie-wire	298,753	May 20	1001	280	27	731
Hipolito, Espiridion, San José, assignor of one-half to J. D. Campbell, Los Angeles, Cal. Miter-gage	295,920	Apr. 1	34	10	27	9
Hipple, Louis C. (See Graff and Hipple.)						
Hirsch, Adolph, New York, N. Y. Dress trimming	298,691	May 13	921	255	27	708
Hirsch, Peter B., assignor of one-half to T. Flynn, Denver, Colo. Saddle-seat	297,398	Apr. 22	1897	515	27	374
Hitter, J. Alfred, assignor to M. B. Hitter, St. Martinsville, La. Process of and apparatus for treating fibrous plants	300,778	June 24	1657	454	27	1249
Hitter, Marie B. (See Hitter, J. Alfred, assignor.)						
Hixson, Leland, assignor of two-thirds to R. A. Tucker and H. L. Strang, Washington, D. C. Hatchway-gate for elevators	299,473	May 27	1889	544	27	907
Hoag, George M., Evansville, Ind. Skeleton arch for the support of electric wires	298,692	May 13	922	255	27	708
Hoagland, John, assignor to Pearce & Hoagland, Providence, R. I. Watch-chain bar	299,071	May 20	1395	397	27	805
Hoare, John, Corning, N. Y. Manufacture of glass baskets	296,691	Apr. 8	1005	281	27	200
Hobbs, Horatio. (See Gordon, Edward F., assignor.)						
Hobbs, Horatio. (See Gordon and Hobbs.)						
Hoben, Martin W., Cohoes, N. Y. Elevator	300,258	June 10	973	263	27	1111
Hochstetler, Charles E., Kansas City, Mo. Envelope-opener and paper-cutter	298,581	May 13	778	218	27	682
Hocking, James, and C. R. Jones, Denton, Nebr. Wagon-brake	296,171	Apr. 1	330	94	27	64
Hocking Valley Manufacturing Company. (See Becker, Theodore, assignor.)						
Hodel, Joseph A., Cumberland, Md. Car-replacer	296,566	Apr. 8	858	238	27	170
Hodge, George E. (See Weber, August, assignor.)						
Hodges, Frank, *et al.* (See Doremus, Willard D., assignor.)						
Hodges, John, Westfield, N. J. Automatic safety appliance for elevators	299,222	May 27	1580	454 / 455	27	851
Hodges, Pliny F., Chicago, Ill. Platform self-binder	299,643	June 3	182	46	27	954
Hodgson, John G. (See Norton and Hodgson.)						
Hodgson, John G., assignor to E. and O. W. Norton, Chicago, Ill. Sheet-metal-cutting machine	299,982	June 10	604	162	27	1045

Maxim, Hiram S., Brooklyn, N. Y. Electrical igniting device for gas-engines	296,341	Apr. 8	571	159	27	114
Maxim, Hiram S., Brooklyn, N. Y. Mechanism for operating gun-locks by recoil	297,278	Apr. 22	1747	475	27	346
Maxim, Sammel, assignor to N. K. and E. L. Lincoln, Wayne, Me. Bosom-board	296,424	Apr. 8	671	185	27	132
Maxim, Samuel, Wayne Me., assignor to E. M. Smith, Pittsfield, Mass. Driving mechanism for sewing and other machines	296,425	Apr. 8	671	186	27	132
Maxon, Thomas, assignor of one-half to J. W. Carpenter, Dayton, Ohio. Lifting-jack	298,306	May 6	447	120	27	611
Maxon, Thomas, assignor of one-half to J. W. Carpenter, Dayton, Ohio. Lifting-jack	298,307	May 6	448	121	27	612
Maxson, Stephen W., Dassel, Minn. Table	298,601	May 13	800	224	27	685
Maxwell, Dwight M. (See Otis and Maxwell.)						
Maxwell, James A. (See Silliman and Maxwell.)						
Maxwell, James R., Cincinnati, assignor to Gordon & Maxwell Company, Hamilton, Ohio. Pump	299,487	May 27	1906	549	27	911
Maxwell, Samuel F., Clifton, W. Va. Machine for crozing staves	296,199	Apr. 1	367	104, 105	27	70
May, Catharine, Cleveland, Ohio, assignor to W. L. Judd, Brooklyn, N. Y. Bottle-capper	298,872	May 20	1144	321	27	757
May, S. Elwood. (See Rodgers, William H., assignor.)						
Maycock, Mark M., Buffalo, N. Y. Churn-cover fastener	296,985	Apr. 15	1372	379	27	272
Mayer, John B., Philadelphia, Pa. Truss	296,342	Apr. 8	573	159	27	114
Mayes, Thomas A., Phillipsburg, Pa. Apparatus for agitating the liquor in tan-vats	296,986	Apr. 15	1373	379	27	272
Mayfield, Mary L. (See Mayfield, Samuel B., assignor.)						
Mayfield, Samuel B., assignor to M. L. Mayfield, Palestine, Tex. Car-coupling	298,010	May 6	62	16	27	539
Maynz, Edward, Boston, Mass. Belt-fastener	297,146	Apr. 22	1579	434	27	315
Mayrhofer, Charles A., assignor to R. I. Langstaff-Haviland, Vienna, Austria-Hungary, Mechanism for automatically casting and recording ballots actuated by the pressure or expansion of fluid	299,663	June 3	213	55, 56	27	960
McAdam, Alexander J. and N. L., San Francisco, Cal. Collar	298,489	May 13	672	189	27	661
McAdam, Neil L. (See McAdam, Alexander J. and N. L.)						
McAdams, James. (See McMillen and McAdams.)						
McAfee, Jacob C., Dallas, W. Va. Nut-lock	297,824	Apr. 29	2451	671	27	485
McAleer, Philip, assignor of one-half to E. H. Bradford, Washington, D. C. Door-spring	299,080	May 20	1408	401	27	807
McAllister, James E. A., Albany, N. Y. Toy	300,097	June 10	754	203	27	1072
McAlvay, Charles B., and C. H. Christopher, Jackson, Mich. Lubricator for steam-engines	300,619	June 17	1437	396	27	1205
McArdle, William, *et al.* (See Sutton, Thomas, assignor.)						
McCabe, Frank, Providence, R. I. Faucet	299,564	June 3	79	19	27	935
McCabe, Robert, Meadville, Pa. Sash-fastener	298,106	May 6	177	46	27	560
McCain, Patrick. (See Sanford, George W., assignor.)						
McCann, Marion W., Posey, Ind. Cultivator	296,860	Apr. 15	1214	340	27	244
McCarley, Pink W. (See Tucker, Robert D., assignor.)						
McCarney, John T., Columbus Junction, Iowa. Horse-power	297,825	Apr. 29	2451	671	27	485
McCartin, William J., St. Louis, Mo. Coat-pattern	296,426	Apr. 8	673	186	27	133
McCarty, William F. M., St. Petersburg, Russia, assignor of one-half to H. Levis, Philadelphia, Pa. Manufacturing hydrocarbon gas	296,200	Apr. 1	370	105, 106	27	71
McCarty, William F. M., St. Petersburg, Russia, assignor of one-half to H. Levis, Philadelphia, Pa. Apparatus for the manufacture hydrocarbon gas	296,201	Apr. 1	372	106	27	71
McCarty, William F. M., St. Petersburg, Russia, assignor to J. F. Pierce, trustee, New York, N. Y. Multiple-circuit closer	300,098	June 10	754	203	27	1072

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
McCauley, Patrick H., Des Moines, Iowa. Apparatus for hoisting and conveying ground, minerals, &c	296,343	Apr. 8	574	160	27	114
McCausland, William J., assignor to W. W. Kurtz, Philadelphia, Pa. Printing-telegraph	299,664	June 3	228	56, 57	27	963
McCausland, William J., *et al.* (See Smith, Benjamin, assignor.)						
McCay, Spencer, Topeka, Kans. Tire-tightener	296,987	Apr. 15	1374	379	27	273
McChesney, Oscar S. (See Bonsteel, Alexander O., assignor.)						
McClaskey, John S., Grsham, Mo. Sliding gate	296,595	Apr. 8	892	247	27	177
McCleery, William, *et al.* (See Campbell, Duncan H., assignor.)						
McClen, John J., Bushnell, Ill. Tongueless cultivator	299,081	May 20	1408	401	27	907
McClinchie, Uriah, New York, and J. F. Butler, Williamsburg, N. Y. Top for children's carriages	299,240	May 27	1603	466	27	856
McClintock, Alexander, *et al.* (See Boals, James A., assignor.)						
McClorey, Francis. (See Murphy, Hugh, assignor.)						
McCloskey, William T., Westport, Pa. Wood-splitting machine	300,099	June 10	757	204	27	1073
McClure, James H., and G. F. Murdock, Wellsville, Ohio. Car-truck	296,988	Apr. 15	1375	379	27	273
McClure, William H., assignor to J. L. Plimpton, New York, N. Y. Wardrobe-bed	298,873	May 20	1145	322	27	757
McColl, Alexander D. (See Skinner, John, assignor.)						
McCollum, John A. (See Topliff, Cross, Cox, and McCollum.)						
McCollum, Orlando J., and C. O. Stran, Aurora, Ill. Road-cart	296,032	Apr. 1	167	48, 49	27	34
McComas, William G., Colerain, Ohio. Hay-stacker	296,596	Apr. 8	893	247	27	177
McCord, Hercules, St. Louis, Mo. Banjo	299,153	May 27	1500	431	27	836
McCourt, Peter, assignor of one-half to J. H. Simpson, Appleton, Wis. Planer-knife	298,394	May 13	563	155	27	641
McCracken, George B., Willimantic, Conn. Cock and faucet						
McCracken, George B., and S. Hamer, Willimantic, Conn. Spindle-bearing for spinning-frames	300,785	June 24	1666	456	27	1250
McCullough, Samuel, assignor to T. Kennedy, Jr., H. C. Fortier, and W. H. Best, Toronto, Ontario, Canada. Wooden-soled boot	299,994	June 10	619	167	27	1048
McCurry, Henry, assignor of one-half to J. Stuart, Fulton, Ill. Carriage-top	297,147	Apr. 22	1560	434	27	315
McCutcheon, Robert H. (See Otto, Gustav, assignor.)						
McDonald, Angus, Ausable, Mich. Canal-boat	297,279	Apr. 22	1748	475	27	346
McDonald, I. Heylin, *et al.* (See Smith, John W. and J. D., assignors.)						
McDougall, Isaac S., Manchester, county of Lancaster, England. Boiler or vessel employed in the treatment of fibrous materials for the manufacture of paper-pulp and for other purposes	298,602	May 13	801	225	27	686

McElroy, William, Brooklyn, N. Y. Lifting feed-water injector	297,826	Apr. 29	2452	671, 673	27	485
McEwen, John, Wellsville, N. Y. Mechanical movement	299,089	May 20	1410	402	27	808
McFall, Edwin H., Memphis, Tenn. Telephone call and switch box	297,148	Apr. 22	1580	435	27	315
McFeeley, George, Steubenville, Ohio, assignor to W. J. Sherriff, Pittsburg, Pa. Steam-pump. (Reissue)	10,475	May 6	491	133	27	619
McGaffey, Henry H., *et al.* (See Witty, John B., assignor.)						
McGann, Owen J., assignor of one-half to J. L. Vandermark, Pullman, Ill. Stop and waste cock	300,386	June 17	1140	315	27	1152
McGill, George W., New York, N. Y. Tag and tag-fastener	296,766	Apr. 15	1097	309	27	223
McGill, George W., New York, N. Y. Tag-fastener	299,154	May 27	1500	431	27	836
McGill, George W., New York, N. Y. Ring-suspending device for papers	299,155	May 27	1501	431	27	836
McGill, George W., New York, N. Y. Suspending device	300,100	June 10	758	204	27	1073
McGill, George W., Riverdale, N. Y. Suspending device	298,220	May 6	396	87, 88	27	589
McGilvray, Luther, Greenville, Pa. Machine for making chain-link blanks	297,496	Apr. 22	1934	527	27	381
McGinley, James, Chicago, Ill. Faucet						
McGinn, William J. (See Edmonds, George, assignor.)						
McGivern, Patrick, and W. E. Frye, Crestline, Ohio. Feed-water heater	296,427	Apr. 8	674	186	27	133
McGovern, Ralph W., San Francisco, Cal. Cable-grip	300,492	June 17	1281	352	27	1177
McGowan. Theodore J., Cincinnati, Ohio. Machine for hulling cotton-seed	299,931	June 3	327	140	27	1022
McGown, George Q., Golden City, Mo. Hydraulic elevator	299,930	June 3	327	140	27	1021
McGrath, John, New York, N. Y. Folding table	299,241	May 27	1605	466	27	856
McGrath, John, New York, N. Y. Corpse head-rest	299,665	June 3	230	57	27	964
McGregor, Bradford, Covington, Ky. Air medicator and injector	297,427	Apr. 22	1935	528	27	381
McGregor, Thomas W., Rushford, Minn. Barrel-trussing machine	296,344	Apr. 8	576	160, 161	27	115
McGuire, James, Benson, Vt. Harness-girth	299,995	June 10	620	167	27	1048
McGuire, William, assignor to himself and F. Jager, Chicago, Ill. Grain-car door	299,222	June 3	404	104	27	998
McGwin, James, Fulton, Mo. Double-acting pump	299,666	June 3	231	57	27	964
McIlhone, John, St. Louis, Mo. Spring bed-bottom	297,827	Apr. 29	2456	672	27	486
McIntire, Oliver K., Springfield, Ohio. Lifting-jack	298,700	May 13	930	258	27	710
McIntosh, Peter E., Rochester, N. Y. Book-case	296,767	Apr. 15	1098	309	27	223
McIntyre, James P., assignor to Eau Claire Chilled Plow Company, Eau Claire, Wis. Plow-standard	296,861	Apr. 15	1215	340	27	244
McKay, Gordon, *et al.*, trustees. (See Crosby, Joseph B., assignor.) (Reissue.)						
McKay, Gordon, trustee. (See Fairfield and Shead, assignors.)						
McKay, Gordon, trustee. (See Shead and Fairfield, assignors.)						
McKay, Joseph L., Neoga, Ill. Churn-motor	300,620	June 17	1438	396, 397	27	1205
McKeen, Thomas L., Easton, Pa. Car-coupling	296,597	Apr. 8	895	247, 248	27	177
McKeen, Thomas L., Easton, Pa. Car-coupling	297,428	Apr. 22	1936	528	27	381
McKenna, Charles F. (See Rosenzi, Enrico, assignor.)						
McKernan, Dennis D., Chicago, Ill. Drive-chain	297,149	Apr. 22	1582	435	27	316
McKinney, Mac N., Jackson, Miss. Churn	296,202	Apr. 1	374	106, 107	27	72
McKinnon, Cameron, Midway, Ala. Pen-rest	298,603	May 13	802	225	27	686
McKnight, John W., Washington, D. C. Billiard-table top	299,565	June 3	86	19	27	935
McKnight, John W., Washington, D. C. Composition and mold for the manufacture of articles from artificial slate	299,566	June 3	86	20	27	935
McLane, Albert L. (See Chisholm, William R., assignor.)						
McLane, Edwin P., Mount Carmel, Conn. Attachment for pen-holders	299,242	May 27	1605	460	27	857
McLean, William. (See Ryan, Thomas, assignor.)						
McLeod, John S., Boston, Mass. Railway-rail and rail-joint	297,708	Apr. 29	2321	631	27	460
McLoughlin, Edmund, *et al.* (See Campbell, Andrew, assignor.)						
McLoughlin, John, *et al.* (See Campbell, Andrew, assignor.)						
McMahan, Matthias F., Trappe, assignor of one-half to M. Merrick, Kirkham, Md. Tricycle	298,994	May 20	1291	368	27	786
McMahon, Michael. (See Sharpnack and McMahon.)						
McMeen, Robert M., Mount Vernon, Ill. Stump-extractor	300,786	June 24	1667	456	27	1251

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Robertson, James D., Salisbury, Mass. Two-wheeled vehicle	297,451	Apr. 22	1965	537	27	387
Robin, Simon, Cambridgeport, Mass. Revolving book-rest	296,356	Apr. 8	588	163	27	117
Robinius, Francis, Indianapolis, Ind. Combined sawing and chair	295,946	Apr. 1	63	18	27	15
Robinson, Albert S., assignor of one-half to A. Schell, Albany, N. Y. Baling press	300,642	June 17	1469	405 406 407	27	1211
Robinson, Cyrus R., Concord, N. H. Halter	297,850	Apr. 29	2479	679	27	491
Robinson, Elisha. (See Rancevan, John, assignor.)						
Robinson, Francis W., Richmond, Ind. Traction-engine	300,397	June 17	1102	318	27	1154
Robinson, Frank J., assignor of one-half to D. M. Bone, Petersburg, Ill. Bed-bottom	296,708	Apr. 8	1022	287	27	904
Robinson, Harold C., and L. J. Lallement, St. Louis, Mo. Separable button	298,236	May 6	359	95	27	594
Robinson, Joseph M., Brooklyn, N. Y. Barrel-shaping machine	297,010	Apr. 15	1399	386	27	278
Robinson, Mallen F., Litchfield Corners, Me. Liquid-measuring vessel	298,504	May 13	689	195	27	665
Robinson, Merritt F. (See Kuhlmann, Robinson, and Irvin.)						
Robinson, Squire, Southington, Conn. Wrench	299,165	May 27	1515	435	27	838
Robinson, Stillman W., assignor of one-half to O. E. Lewis, Columbus, Ohio. Machine for uniting the uppers and soles of boots or shoes	297,718	Apr. 29	2330	634	27	402
Robinson, William M., New Franklin Mo. Car-coupling	299,268	May 27	1633	469	27	861
Roche, Thomas C., Brooklyn, assignor to E. & H. T. Anthony & Co., New York, N. Y. Enlarging-camera	297,851	Apr. 29	2479	679	27	491
Rochester Machine Tool Works. (See Bryant, Edwin R., assignor.)						
Rock, Daniel B., Fairfield, Pa. Elbow for spouting	296,786	Apr. 15	1121	315 316	27	228
Rockey, Richard M., Nora, Ill. Combined milk-cooler and refrigerator	299,166	May 27	1516	435	27	838
Rockwell, Lucius A. (See Fowler and Rockwell.)						
Rockwell, Rollin D. (See Willson, William H., assignor.)						
Rockwood, William E. (See Newcomb, Horatio C., assignor.)						
Rockwood, William E., assignor of one-half to H. C. Newcomb, Indianapolis, Ind. Paper pulley	300,012	June 10	648	177	27	1053
Rockwood, William E., assignor of one-half to H. C. Newcomb, Indianapolis, Ind. Paper friction-wheel	300,013	June 10	649	177	27	1053
Rockwood, William E., assignor of one-half to H. C. Newcomb, Indianapolis, Ind. Paper wheel	300,014	June 10	649	177	27	1053
Rodgers, William C., assignor of one-half to F. P. Lybrand, Owlet Green, Tex. Portable saw-mill	296,220	Apr. 1	395	112	27	76
Rodgers, William H., Brooklyn, assignor to S. E. May, New York, N. Y. Clock-work mechanism	300,015	June 10	650	177	27	1053
Roeper, Hermann, Philadelphia, Pa. Motor	297,537	Apr. 22	2081	567	27	409
Rogers, Augustus J., assignor of two-thirds to H. Mann and J. Koebig, Milwaukee, Wis. Process of and apparatus for reducing metals by electrolysis	296,357	Apr. 8	589	164	27	117
Rogers, Charles B., St. Peter, Minn. Gage-cock	300,643	June 17	1480	407	27	1213
Rogers, Charles W., Baltimore, Md. Harness-pad	297,011	Apr. 15	1400	386	27	278
Rogers, Ebenezer H., Jr., New York, N. Y. Combined liquid measure and register for bottles	298,778	May 20	1029	287	27	735
Rogers Fence Company. (See Rogers, Timothy, assignor.)						
Rogers, James H., New York, N. Y. Telephone	297,166	Apr. 22	1601	440	27	319
Rogers, James H., New York, N. Y. Telephone	297,167	Apr. 22	1602	440	27	319
Rogers, James H., New York, N. Y. Telephone	297,168	Apr. 22	1603	441	27	319
Rogers, Samuel C., and J. T. Barnard, Hamilton, Ontario, Canada. Machine for gumming and sharpening saws	299,583	June 3	105	26	27	939
Rogers, Timothy, assignor to Rogers Fence Company, Springfield, Ohio. Adjustable cresting for buildings	296,458	Apr. 8	709	196	27	140
Rogers, Timothy, assignor to Rogers Fence Company, Springfield, Ohio. Iron fence	297,295	Apr. 22	1769	480	27	350
Rohrer, Jacob B. (See Bennett, Charles H., assignor.)						
Rohrer, William H. (See Choate, Rohrer, and Ragan.)						
Roll, John E. (See Bates, Edwin M., assignor.)						
Roller Coaster Company of America. (See Stevens, Philo M., assignor.)						
Rollins, Walter A., Wyattville, county of Surrey, England. Transmitting motion	298,893	May 20	1174	328	27	763
Romans, John B., Nashville, Tenn. Turning-lathe	297,635	Apr. 29	2224	605	27	441
Romean, Auguste. (See Montgomery, Harry C., assignor.)						
Römer, Paul H. E., and M. P. Meissner, assignors to C. H. Weisbach, Chemnitz, Saxony, Germany. Machine for folding fabrics and inserting pressing-boards between the folds thereof	296,067	Apr. 1	208	60	27	42
Romig, John, Mifflinburg, Pa. Door-latch	296,221	Apr. 1	396	112	27	76
Ronninger, George S., assignor to American Buttonhole, Overseaming and Sewing Machine Company, Philadelphia, Pa. Button-hole sewing-machine	296,626	Apr. 8	929	259 260	27	185
Rood, Albert O., assignor to V. P. Travers, New York, N. Y. Selvage for hammocks	296,459	Apr. 8	710	196	27	140
Rood, Albert O., assignor to V. P. Travers, New York, N. Y. Making hammocks	296,460	Apr. 8	710	196 197	27	141
Rood, Albert O., assignor to V. P. Travers, New York, N. Y. Making hammocks	296,027	Apr. 8	930	260	27	185
Root, Albert, Hamden, Conn. Combined level and boring-guide	297,719	Apr. 29	2334	634 635	27	463
Root, Corydon A., assignor of one-half to J. L. Applegate, Andover, Ohio. Ladder	297,088	Apr. 15	1491	413	27	295
Root, Henry, and F. A. Tucker, San Francisco, Cal. Pawl for cable-grip levers	297,452	Apr. 22	1965	537	27	387
Roots, Albert B., *et al.* (See Hinklin, Orren E., assignor.)						
Roper, Charles F. (See Roper, Sylvester H. and C. F.)						
Roper, Sylvester H., Boston, and C. F. Roper, Hopedale, assignors to F. P. Fish, trustee, Cambridge, Mass. Metal-screw machine	300,736	June 17	1600	439	27	1234
Ropp, Jerome W., Elyria, Ohio. Strap-fastener	298,408	May 13	579	162	27	644
Rorick, William J., Winfield, Kans. Water-elevator	299,014	May 20	1317	376	27	791
Rose, Carl L. F., New York, N. Y. Tobacco-soap	299,584	June 3	107	.....	27	940
Rose, Levi P. (See Salisbury, Silas C., assignor.)						
Rose, William H., Baltimore, Md. Eyelet	298,707	May 13	936	259	27	711
Rosensteel, William, assignor to Oliver Brothers & Phillips, Pittsburg, Pa. Coal-tipple	299,585	June 3	108	27	27	940
Rosenstein, Fritz. (See Duthil and Rosenstein.)						
Rosenstiehl, Daniel A. (See Poirrier and Rosenstiehl.)						
Rosenstiehl, Daniel A. (See Ronssin and Rosenstiehl.)						
Rosenthal, Louis, Frankfort-on-the-Main, Germany. Making artificial blocks, stones, &c	298,505	May 13	690	.....	27	665
Rosenzi, Enrico, assignor of one-fourth to C. F. McKenna, Pittsburg, Pa. Preserve-jar fastening	296,876	Apr. 15	1238	346	27	248
Ross, Barney, Sterling, Ohio. Wrench	296,877	Apr. 15	1238	346	27	248
Ross, Charles T., New York, N. Y. Automatic electric-circuit-closing device	298,121	May 6	197	52	27	564
Ross, Elmore W., Fulton, N. Y. Straw-cutter	295,947	Apr. 1	64	19	27	15

Alphabetical list of patentees, April to June, inclusive—Continued.

Steltzmann, Henry; Leech Lake, Minn. Traveling brick-machine	296,082	Apr. 1	225	65, 66	27	46
Stenger, John V., Frohnleiten, Styria, Austria-Hungary, assignor to Maschinenbauanstalt Golzern, (vormals Gottschald & Nötzli,) Golzern, Germany. Paper-making machine	296,083	Apr. 1	227	66	27	46
Stephens, Clinton, Brooklyn, N. Y. Necktie and collar clasp	300,028	June 10	664	181	27	1056
Stephenson, John, New York, N. Y. Car-axle box	296,479	Apr. 8	739	204	27	146
Stephenson, John, New York, N. Y. Car-axle box	296,480	Apr. 8	741	204 / 205	27	146
Stephenson, John, New York, N. Y. Car-axle box	300,029	June 10	665	181	27	1056
Stephenson, John, New York, N. Y. Oiling-pad for journal-boxes	298,909	May 20	1193	335 / 336	27	767
Stephenson, John J., Canton, Mo. Hay-stacker	300,655	June 17	1495	412	27	1216
Steppacher, Walter M., Philadelphia, Pa. Shirt	298,251	May 6	377	100	27	597
Sterling, Charles A., New York, N. Y. Pipe-casing for submarine rock-drills	298,252	May 6	379	100	27	598
Sternberg, William, Cicero, N. Y. Tobacco-transporting rack	299,871	June 3	458	120	27	1009
Sternberger, Herman S., Piqua, Ohio. Crate for mattresses and bedding						
Sterne Brothers & Co. (See Prahl, Charles, assignor.)						
Sternheimer, Friedman, New York, N. Y. Fan	297,869	Apr. 29	2500	685	27	495
Stetson, Warren C., Minneapolis, Minn. Apparatus for sorting lumber	299,694	June 3	266	66	27	970
Stetson, Warren C., Minneapolis, Minn. Log loader and turner	300,405	June 17	1471	321	27	1155
Stevens, Amos, Philadelphia, Pa. Ribbon-holder	296,887	Apr. 15	1248	349	27	250
Stevens, Charles A., New Haven, Conn. Combined elastic corset busk and clasp	296,888	Apr. 15	1249	349	27	250
Stevens, Daniel L., Lyons, Iowa. Saw-shifting mechanism for gang-edgers	296,360	Apr. 8	593	164	27	118
Stevens, Elisha, Middletown, Conn. Wire-cutter	299,033	May 20	1345	384	27	796
Stevens, Elisha, Middletown, Conn. Cutting-pliers	299,872	June 3	459	120	27	1010
Stevens, Francis B., Hoboken, N. J. Railway-rail	299,287	May 27	1658	476	27	865
Stevens, Frank M. (See Ober and Stevens.)						
Stevens, Fred C. (See Sproul, Andrew, assignor.)						
Stevens, Frederick M., Waterbury, Conn. Thill-coupling	296,794	Apr. 15	1129	318	27	230
Stevens, Frederick W., (See Abbott, Levi, assignor.)						
Stevens, H. P., *et al.* (See Abbott, Levi, assignor.)						
Stevens, Harry R., Los Angeles, Cal. Tank for windmills	297,468	Apr. 22	1086	542	27	391
Stevens, Harry R., Los Angeles, Cal. Tank for windmills	298,793	May 20	1050	294	27	739
Stevens, Harry R., Los Angeles, Cal. Tank for windmills	300,157	June 10	835	226	27	1087
Stevens, Henry S., Keene, N. H. Calendar						
Stevens, Irving D. (See Eberhart and Stevens.)						
Stevens, John H. (See Hyatt, Pool, Everding, Stevens, and Wood.)						
Stevens, John H. (See Hyatt, Stevens, and Wood.)						
Stevens, John H. (See Hyatt, Stevens, Wood, and Everding.)						
Stevens, John H. (See Hyatt, Wood, and Stevens.)						
Stevens, John H. (See Wood and Stevens.)						
Stevens, John H., Newark, N. J., assignor to Celluloid Manufacturing Company, New York, N. Y. Manufacture of material to imitate ivory from pyroxylline compounds	300,158	June 10	836	.....	27	1087
Stevens, Lucina O., assignor of one-half to G. H. Lane, Burlington, Iowa. Link for chain-conveyers	299,592	June 3	120	29	27	941
Stevens, Philo M., assignor, by mesne assignments, to Roller Coaster Company of America, Chicago, Ill. Roller coasting device	298,710	May 13	938	260 / 261	27	712
Stevens, Willis A., Wallingford, Conn. Polishing-brush	299,873	June 3	460	120	27	1010
Stevenson, John W. L., assignor to himself and J. F. Gordon, Rochester, N.Y. Belt-stretcher	298,916	May 20	1194	336	27	767
Stevenson, Robert, Muskegon, Mich. Fire-escape	296,243	Apr. 1	429	120	27	82
Stevenson, Samuel J., Philadelphia, Pa. Car wheel and axle	296,244	Apr. 1	429	121	27	82
Stewart, David P., Buffalo, N. Y. Feed-water heater	297,644	Apr. 29	2233	607 / 608	27	443
Stewart, George W., assignor to himself and J. F. Wenman, New York, N. Y. Car-axle box	298,920	May 6	408	126	27	615
Stewart, John L., Philadelphia, Pa. Process of and apparatus for manufacturing gas	300,330	June 10	1065	289 / 290 / 291	27	1127
Stewart, John L., Philadelphia, Pa. Process of and apparatus for manufacturing gas	300,331	June 10	1069	291	27	1128
Stewart, John L., Philadelphia, Pa. Process of and apparatus for manufacturing gas	299,288	May 27	1660	476	27	865
Stewart, John N., Cleveland, Ohio. Holder for telephone-receivers	298,634	May 13	837	234	27	692
Stewart, Thomas, Philadelphia, Pa. Paper-machine	300,813	June 24	1697	464	27	1276
Stewart, William P., Natchez, Miss. Wire holder and carrier						
Stick, John R. (See Jackman, Neighbor, Stick, and Habltzel.)						
Stickel, Conrad, Ditzingen, Würtemberg, assignor to F. Schumacher, Aachen, Germany. Hand apparatus for forming stitches	296,084	Apr. 1	229	66	27	46
Stiekman, John H. (See Chase, Moses C., assignor.)						
Stickney, John H., Boston, Mass. Shoe	297,469	Apr. 22	1087	542	27	392
Stiff, Charles W., Foxborough, and N. C. Bousley, Salem, Mass. Photographic camera	299,289	May 27	1661	476	27	866
Stiles, Luther R., Chicago, Ill. Stock-car	296,245	Apr. 1	430	121	27	82
Stiles, Norman C., Middletown, Conn. Punching machine	297,090	Apr. 15	1493	413	27	295
Stiles, Norman C., Middletown, Conn. Press for holding and cutting sheet metal	299,290	May 27	1664	477	27	866
Stiles, Norman C., Middletown, Conn. Press for holding and cutting sheet metal						
Stiles, Thomas O. (See Baldwin and Stiles.)						
Stillman, John M. (See Stillman, Oscar B. and J. M.)						
Stillman, Oscar B., Natick, and J. M. Stillman, Watertown, Mass. Method of and apparatus for bleaching sugar	297,029	Apr. 15	1426	392	27	282
Stilwell, Stephen W., Dayton, Ohio. Table-leaf support	299,874	June 3	461	120	27	1010
Stimson, David S., Concord, N. H. Car-axle box	298,253	May 6	380	100 / 101	27	598
Stinebring, George W., Shreve, Ohio. Adjustable saw-tooth	299,291	May 27	1667	477	27	867
Stinebring, George W., Shreve, Ohio. Adjustable saw-tooth	300,814	June 24	1698	464	27	1256
Stinebring, George W., Shreve, Ohio. Adjustable saw-tooth	296,481	Apr. 8	743	205	27	147
Stinebring, John D., assignor to O. L. Noble, Boston, Mass. Cutter-head						
Stirckler, John D., assignor to O. L. Noble, Boston, Mass. Cutter-head						
Stitzel, Frederick, assignor of one half to A. Rentlinger, Louisville, Ky. Rotary steam-engine	297,091	Apr. 15	1497	414	27	296
Stitzel, Frederick, assignor of one-half to A. Rentlinger, Louisville, Ky. Rotary water-meter	297,092	Apr. 15	1499	414	27	296
St. John, Garland B., Cedar Rapids, Iowa. Plow	296,246	Apr. 1	432	122	27	83
St. John, John C., assignor of one-half to F. M. Clarke, New York, N. Y. Tag	298,711	May 13	939	261	27	712
St. John Sewing Machine Company. (See Turnbull, Alonzo E., assignor.)						
Stock, Charles F., Peoria, Ill. Ball-trap	296,247	Apr. 1	434	122	27	83

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.

Weyer, August, Long Island City, N. Y. Ornamenting glass articles	298,145	May 6	230	60	27	570
Wheat, Corydon, Geneva, N. Y. Steam-radiator	297,325	Apr. 22	1802	489	27	356
Wheatley, John R., Detroit, Mich., assignor of one-half to A. Heine, Silver Creek, N. Y. Manufacturing flour	298,259	May 6	387	102	27	500
Wheaton, Frank, assignor to G. W. Carter, New York, N. Y. Mail-bag	297,326	Apr. 22	1803	490	27	356
Whedon, James P. (See Neumiller, Whedon, and Perhacs.)						
Wheeler, Benjamin S., Orange, N. J. Game	296,900	Apr. 15	1270	353	27	254
Wheeler, Brayton, Saginaw, Mich. Clamp for holding well-poles	299,887	June 3	475	125	27	1012
Wheeler, Elijah H., Corpus Christi, Tex. Lock-stitch ripper	296,492	Apr. 8	757	208	27	149
Wheeler, Frederick G., New York, N. Y. Steam-generator for street-car or other locomotive engines	299,607	June 3	137	34	27	945
Wheeler, Henry M., Grand Forks, Dak. Ter. Thill-coupling	296,805	Apr. 15	1142	322	27	232
Wheeler, John E., trustee. (See Eldridge, Martin Y. B., assignor.)						
Wheeler, John E., trustee. (See Higgins, Charles L., assignor.)						
Wheeler, Seth, Albany, N. Y. Toilet and wrapping paper holder	297,043	Apr. 15	1442	398	27	286
Wheeler, Seth, Albany, N. Y. Toilet-paper fixture	297,044	Apr. 15	1443	398	27	286
Wheeler, Seth, Albany, N. Y. Wrapping or toilet paper fixture	297,045	Apr. 15	1443	398	27	286
Wheeler & Wilson Manufacturing Company. (See Campbell, Andrew C., assignor.)						
Wheeler & Wilson Manufacturing Company. (See Dimond and Dial, assignors.)						
Wheelhouse, Marshall. (See Alexander and Wheelhouse.)						
Wheelock, Jerome, Worcester, Mass. Metallic ring packing	297,891	Apr. 29	2527	602	27	500
Whelpley, James A., Greenwich, New Brunswick, Canada. Skate	296,714	Apr. 8	1028	288	27	205
Whipple, Mathew T. (See Holley, William H., assignor.)						
Whistler, Franklin P., Cadiz, Ind. Portable fence	300,929	June 24	1837	503	27	1283
Whitacre, John B., Canton, Ohio. Lubricator	296,493	Apr. 8	757	208	27	149
Whitaker, Edwin V., Gloversville, N. Y. Window-shade	297,892	Apr. 29	2528	602	27	501
Whitaker, Elijah J. B. (See Ladd and Whitaker.)						
Whitaker, Elijah J. B., New York, N. Y., assignor to G. W. and W. T. Whitaker, Baltimore, Md. Trundling toy horse. (Reissue)	10,480	May 13	953	265	27	715
Whitaker, George W., *et al.* (See Whitaker, Elijah J. B., assignor.) (Reissue.)						
Whitaker, William T., *et al.* (See Whitaker, Elijah J. B., assignor.) (Reissue.)						
Whitall, James, *et al.* (See Herckner, Emil, assignor.)						
Whitcomb, Daniel F., *et al.* (See Witty, John B., assignor.)						
Whitcomb, James, San José, Cal. Whiffletree	297,734	Apr. 29	2353	640	27	466
White, Addison, Lynnville, Iowa. Lifting-jack	297,892	Apr. 29	2529	602	27	501
White, Charles, Jr., and J. Anderson, Versailles, Ind. Condition-powder	298,433	May 13	605	.....	27	649
White Dental Manufacturing Company, S. S. (See Browne, Arthur W., assignor.)						
White Dental Manufacturing Company, S. S. (See Starr, Eli T., assignor.)						
White, Eliza A. (See Ryder, Martin H., assignor.)						
White, George J. (See Peckinpugh and White.)	298,644	May 13	849	237	27	694
White, George W., Belle Mina, Ala. Combined seeder and fertilizer-distributer						
White, Hugh. (See Cass, George F., assignor.)						
White, J. Clarence, *et al.*, executors. (See Waring, John B., assignor.)						
White, James H., assignor to Manhattan Brass Company, New York, N. Y. Fire-screen	300,930	June 24	1838	503	27	1283
White, John S., Portland, Me. Window-brush	299,188	May 27	1542	442	27	843
White, Joseph, Coventry, England. Ball-bearing for velocipedes	300,544	June 17	1343	370	27	1188
White, Joseph, assignor to Tyler Bale Tie Company, Cleveland, Ohio. Bale-tie	297,208	Apr. 22	1664	453	27	390
White, Joseph, assignor to Tyler Bale Tie Company, Cleveland, Ohio. Bale-tie	298,645	May 13	851	238	27	694
White, Justin P., and D. Harrington, Worcester, Mass. Bleach and stain brushing machine for the bottoms of boots and shoes	300,819	June 24	1704	465 / 466	27	1257
White, Le Roy S., assignor to Electric Appliance Company, Waterbury, Conn. Apparatus for lighting gas by electricity	298,531	May 13	715	202 / 203	27	671
White, Lucy N. (See Brown, Louis, assignor.)						
White, Merritt, North Adams, Mass. Nautical signal-light	297,046	Apr. 15	1444	399	27	286
White, Nelson S., Canton, Mass. Rubber-surfaced fabric and composition therefor	296,256	Apr. 1	454	.....	27	86
White, Peter, St. Louis, Mo. Water-closet valve	299,888	June 3	476	125	27	1013
White, Samuel S., Jr., *et al.*, executors. (See Waring, John B., assignor.)						
White Sewing Machine Company. (See Baker, George W., assignor.)						
White Sewing Machine Company. (See Baker, George W., assignor.) (Reissue.)						
White, Thomas F., Salem, Kans. Wrench	297,209	Apr. 22	1665	453	27	390
White, William A., assignor of one-half to D. A. Newton, Athol, Mass. Calipers	296,259	Apr. 1	456	128	27	86
Whited, Alvinzo, assignor to Holmes & Ide, Troy, N. Y. Collar	297,653	Apr. 20	2244	611	27	446
Whiteley, Fassler & Kelley. (See Whiteley, William N., assignor.)						
Whiteley, William N., Springfield, Ohio. Grain-wheel for harvesters	297,544	Apr. 22	2090	569	27	411
Whiteley, William N., assignor to Whiteley, Fassler & Kelley, Springfield, Ohio. Harvester	297,545	Apr. 22	2091	570	27	411
Whitely, William, Housatonic, Mass. Rag-engine for paper-making	299,307	May 27	1688	484	27	871
Whiting, Davis J. (See Lockwood, Samuel T., assignor.)						
Whiting, William M., Elizabeth, N. J. Vise	299,889	June 3	477	125	27	1013

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Whittier, Reuben S., Boston, Mass. Apparatus for operating window-shades	296,494	Apr. 8	758	209	27	150
Wiborn, Gershom, Manistee, Mich. Machine for rolling logs	300,820	June 24	1707	466	27	1258
Wick, John P., Cleveland, Ohio. Candy-machine	296,901	Apr. 15	1272	353, 354	27	255
Wickenden, William F., San Luis Obispo, Cal. Animal-shears	297,327	Apr. 22	1603	490	27	356
Wiegand, S. Lloyd, Philadelphia, Pa. Car-coupling	297,328	Apr. 22	1604	490	27	356
Wiegand, S. Lloyd, Philadelphia, Pa. Gas-engine	297,329	Apr. 22	1606	491	27	356
Wiegand, S. Lloyd, Philadelphia, Pa. Centrifugal drainer	300,545	June 17	1345	370	27	1189
Wigg, Charles, Liverpool, county of Lancaster, England. Apparatus for the manufacture of bicarbonate of soda	296,260	Apr. 1	457	129	27	86
Wigmore, William H. (See Doerr, John H., assignor.)						
Wilbur, Henry A., West Somerville, assignor of one-half to F. W. Lowe, Boston, Mass. Roller-skate	300,745	June 17	1614	442	27	1236
Wilcox, Crittenden & Co. (See Mitchell, Benjamin F., assignor.)						
Wilcox, Edward M., Whitewater, Wis., and W. E. Botsford, Omaha, Nebr. Shelling and grinding machine	298,260	May 6	389	102	27	600
Wilcox, Eljen K., Cleveland, Ohio. Journal-box	300,931	June 24	1839	503, 504	27	1284
Wilcox, Henry C., Boston, Mass. Elevator-guard	300,932	June 24	1840	504	27	1284
Wilcox, Stephen, Brooklyn, N. Y. Hot-air engine. (Reissue)	10,486	June 3	580	146, 147	27	1026
Wilcox, Stephen C., assignor to L. D. Randall, Dubuque, Iowa. Salt-cellar	299,445	May 27	1855	533	27	902
Wilcox, William R., St. Joseph, Mich. Car-step	300,608	June 17	1513	417	27	1220
Wilcoxson, Quinn D. (See Smoot and Wilcoxson.)						
Wild, Warren W., Lee, Mass. Tool for splitting stone	300,423	June 17	1195	327	27	1160
Wild, William E., Loveland, Colo. Machine for separating, sorting, and grading grain	299,446	May 27	1856	533, 534	27	902
Wilder, Aretus A., assignor of one-half to C. B. Palmer, Detroit, Mich. Nut-lock	297,894	Apr. 29	2530	693	27	501
Wilder, Edmund R. (See Porter and Wilder.)						
Wildermuth, La Fayette, Columbus, Ohio. Wire-coiling machine	296,806	Apr. 15	1143	322	27	232
Wildermuth, La Fayette, Columbus, Ohio. Spring bed-bottom	298,927	May 20	1213	342	27	771
Wildt, William, Richmond, Va. Engraver's tool	297,213	Apr. 22	1670	454	27	331
Wiley & Rossell Manufacturing Company. (See Smart, Albert J., assignor.)						
Wilhelm, Artemas, Wilmington, Del. Toy	299,608	June 3	139	34	27	946
Wilhelm, Solon H. (See Tower, Fred E., assignor.)						
Wilkes, Peter, Trenton, N. J. Blunger for mixing clay for potters' use	297,047	Apr. 15	1445	399	27	286
Wilkins, Alexander G., assignor to Wilkins Shoe-Button Fastener Company, Meadville, Pa. Apparatus for securing buttons to fabrics	297,895	Apr. 29	2531	693	27	501
Wilkins, John S., Cincinnati, Ohio. Welding compound	301,039	June 24	1961	.....	27	1306
Wilkins Shoe-Button Fastener Company. (See Wilkins, Alexander G., assignor.)						
Wilkins, Sylvester B. (See Mutimer, Frederick, assignor.)						
Wilks, John W., Carmel, S. C. Rotary engine	298,434	May 13	695	171	27	649
Willard, John P., West Depere, Wis. Bow-facing rowing mechanism	299,042	May 20	1304	388	27	799
Willcox & Gibbs Sewing Machine Company. (See Hine, Charles M., assignor.)						
Willcox & Gibbs Sewing Machine Company *et al.* (See Ryder, Martin H., assignor.)						
Willcutt, Andrew J., Boston, Mass. Car-platform gate	299,709	June 3	984	70	27	974
Willett, Marinus, Newport, R. I. Apparatus for concentrating sulphuric acid	301,033	June 24	1961	542	27	1306
Willey, Danford, Concord, N. H. Saw-sharpening machine	298,928	May 20	1215	343	27	771
Williams, Alexander R., Washington, D. C. File-holder	300,546	June 17	1346	371	27	1189
Williams, Benjamin R., Lawrenceville, Pa. Locking nuts to bolts	299,447	May 27	1858	534	27	902
Williams, Charles A., Lawsonham, Pa. Nut-lock	299,308	May 27	1689	484	27	871
Williams, Charles J., assignor of one-half to J. C. Iverson, Milwaukee, Wis. Machine for double-seaming elevator-buckets	297,048	Apr. 15	1446	400	27	286
Williams, Charles L., South Whitley, Ind. Vegetable-cutter	296,261	Apr. 1	459	129	27	87
Williams, Clarence A., Webster City, Iowa. Carpenter's work-bench	300,178	June 10	867	234	27	1092
Williams, Daniel R., Dallas, Tex. Reflector-holder for lamps	297,481	Apr. 22	2001	547	27	394
Williams, Francis S., Boston, Mass. Shirt-bosom	297,596	Apr. 29	2532	693	27	502
Williams, Frank T., and J. C. Howell, Llanelly, county of Carmarthen, England. Manufacture of spongy lead	296,262	Apr. 1	460	130	27	87

Williams, Isaac F., Bristol, R. I. Waterproofed textile fabrics	296,263	Apr. 1	461	130	27	87
Williams, Isaac F., Bristol, R. I. Rubber boot	296,264	Apr. 1	463	130	27	87
Williams, Isaac S., Philadelphia, Pa. Combined commode and bidet	299,891	June 3	479	126	27	1013
Williams, James B., Glastonbury, Conn. Whiffletree-hook	296,265	Apr. 1	464	130	27	87
Williams, James N., Mobile, Ala. Draw-bridge signal	298,647	May 13	854	230	27	695
Williams, James T. (See Williams, Julius M., assignor.)						
Williams, John N., St. Paul, Minn. Check-punching machine	298,648	May 13	855	239, 240	27	695
Williams, John R., Newark, N. J. Cigar-wrapper-cutting machine	297,597	Apr. 29	2533	694	27	502
Williams, John R., Newark, N. J. Cigar-wrapper cutter	297,598	Apr. 29	2535	694	27	502
Williams, John R., Newark, N. J. Combined pneumatic holder and cutter	298,715	May 13	947	263	27	714
Williams, John S. (See Burns, Robert, assignor.)						
Williams, John S., Chicago, Ill. Bellows	298,261	May 6	389	103	27	600
Williams, Julius M., assignor of one-half to J. T. Williams, Dutch Mills, Ark. Water-elevator and carrier	298,043	May 20	1303	388	27	799
Williams, Lewis, Johnstown, Pa., assignor to Cambria Iron Company, of Pennsylvania. Apparatus for coating wire with metal	296,094	Apr. 1	240	70	27	49

Alphabetical list of patentees, April to June, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Williams, Pliny B., *et al.* (See Little, James R., assignor.)						
Williams, Richard S., New York, N. Y. Wrinkling gold dental foil	298,716	May 13	948	263	27	714
Williams, Richard S., New York, N. Y. Dental-foil condenser	298,717	May 13	950	264	27	714
Williams, Robert, Jr. (See Michael and Williams.)						
Williams, Samuel T., Red Bank, N. J. Wheel	300,293	June 10	1026	276	27	1120
Williams, Sterling M. (See O'Connor and Williams.)						
Williams, Sylvester C., East Liverpool, Ohio. Machine for cutting barrel-heads	300,424	June 17	1196	327	27	1160
Williams, Warren, Lumberton, N. C. Saw-guide	295,964	Apr. 1	83	25	27	19
Williams, William I. (See Berry, James, assignor.)						
Williamson Brothers. (See Williamson and Fladvad, assignors.)						
Williamson, George, Cambridge, assignor to J. O. Hayden, Somerville, Mass. Apparatus for sawing printers' blocks	296,372	Apr. 8	605	167	27	120
Williamson, John J., Boston, Mass. Combining of steels	295,965	Apr. 1	83	26	27	19
Williamson, John J., Boston, Mass. Manufacture of compound electric wire	295,966	Apr. 1	86	26	27	19
Williamson, John J., Boston, Mass. Rubber boot	296,495	Apr. 8	759	209	27	150
Williamson, John J., Boston, Mass. Manufacture of electric conductors	300,179	June 10	860	234	27	1092
Williamson, John J., Boston, Mass. Electrical conductor	300,669	June 17	1514	417	27	1220
Williamson, James F. (See Hebert, Peter, assignor.)						
Williamson, William C., and H. O. Fladvad, assignors to Williamson Brothers, Philadelphia, Pa. Steam steering mechanism	300,180	June 10	871	234, 235	27	1093
Willsea, Theodore, Brockport, N. Y. Ditching-machine	301,034	June 24	1964	543	27	1306
Wilson, Henry, Chicago, Ill. Card or ticket holder	298,048	May 6	109	28	27	548
Wilson, Theodore B., Whitewater, Wis. Cuff fastener and adjuster	298,533	May 13	719	203	27	671
Wilson, William H., assignor of one-half to R. D. Rockwell, Westfield, N. Y. Valved trap	300,746	June 17	1615	443	27	1236
Wilmington Malleable Iron Company. (See Davis, Levis H., assignor.)						
Wilmot, De Borden, *et al.* (See Maltby, Frank D., assignor.)						
Wilmot, De Borden. (See Maltby and Wilmot.)	299,044	May 20	1364	388	27	799
Wilson, Allen F., assignor to J. M. Moore, Clayton, N. J. Fruit-jar cover						
Wilson, Andrew. (See Thompson, George F., assignor.)	300,821	June 24	1708	467	27	1258
Wilson, Andrew, New York, N. Y. Dynamometer	299,045	May 20	1364	388	27	799
Wilson, Charles B., Bridgeport, Conn. Metallic heel-plate	299,892	June 3	479	126	27	1013
Wilson, Charles C., Mansfield, Pa. Vehicle platform-gear	299,309	May 27	1690	484	27	871
Wilson, David R., Fenton, Mich. Pillow-sham and holder	298,146	May 6	231	69	27	570
Wilson, Erdwin, Brooklyn, N. Y. Trunk						
Wilson, Elizabeth, *et al.* (See Wilson, Silas H., assignor.)	296,496	Apr. 8	760	209, 210	27	150
Wilson, Fitzland L., West Bay City, Mich. Hoop pointing and lapping machine	298,147	May 6	232	60	27	571
Wilson, George A., Liverpool, county of Lancaster, England. Inking mechanism for printing-machines	296,371	Apr. 8	606	168	27	121
Wilson, James G., assignor to F. Forbes, New York, N. Y. Corrugated metal rolling-shutter	298,929	May 20	1216	343	27	772
Wilson, James N., assignor to himself and J. H. Campbell, Higginsville, Mo. Pulley-belter	297,899	Apr. 29	2536	694	27	502
Wilson, John, Chicago, Ill. Car-starter	300,670	June 17	1517	417	27	1220
Wilson, John T., Toronto Ontario, Canada. Ash-box	297,462	Apr. 22	2002	547	27	395
Wilson, Jonathan B., Zanesville, Ohio. Churn						
Wilson, Myers. (See Ellis, Wilson, and Tanner.)						
Wilson, Needham M. (See Wright, Wilber S., assignor.)						
Wilson, Odell, Cleveland, Ohio. Furnace	298,534	May 13	719	203, 204	27	671
Wilson, Selden L., Waynesborough, Pa. Gang-plow	300,671	June 17	1518	418	27	1220
Wilson, Silas H., assignor to R. H. Thompson, E. Wilson, Brooklyn, and H. D. Norris, New York, N. Y. Machine for rolling axles	297,546	Apr. 22	2092	570, 571	27	411
Wilson, Sullivan S., Litchfield, Mich. Hay-fork	297,900	Apr. 29	2537	694	27	502
Wilson, Thomas J., Auburn, N. Y. Metallurgic furnace	300,181	June 10	873	235	27	1093
Wilson, William, Jr., assignor of one-half to C. Green, Greenville, Del. Attachment for receiving and collecting looped and cut wire	300,547	June 17	1347	371, 372	27	1189
Wilson, William, Jr., assignor of one-half to C. Green, Greenville, Del. Making sheet-metal cans	300,548	June 17	1349	372	27	1189
Wilson, William, Jr., assignor of one-half to C. Green, Greenville, Del. Sheet-metal can	300,549	June 17	1350	372	27	1189
Wilson, William, Jr., assignor of one-half to C. Green, Greenville, Del. Machine for making looped wire	300,550	June 17	1352	373	27	1190
Wilson, William N., Shippensville, Pa. Back-strap check-hook for harness	298,535	May 13	720	204	27	671
Wiltshire, James B., Cincinnati, Ohio. Fire-escape	300,822	June 24	1711	467	27	1259
Winch, George L., Madras, East Indies. Secondary battery	300,933	June 24	1841	505	27	1284
Winchell, Benjamin H., Chicago, Ill. Tag-holder	300,182	June 10	874	235	27	1093
Winchell, James F., Springfield, Ohio. Detachable lever for forges	296,966	Apr. 1	466	131	27	88
Winchell, James F., Springfield, Ohio. Grinding-mill	297,049	Apr. 15	1447	400	27	287
Winchell, James F., Springfield, Ohio. Hood for forges	297,901	Apr. 29	2538	695	27	502
Winchell, James F., Springfield, Ohio. Forge	298,718	May 13	950	264	27	714
Winchell, James F., Springfield, Ohio. Forge	299,448	May 27	1859	534	27	902
Windhurst, Lewis, Springfield, Ohio. Valve gear	300,036	June 10	673	183	27	1057
Windle, John E., Worcester, Mass. Cloth-folding machine	296,374	Apr. 8	607	168	27	121
Winfree, William A., Elizabethton, Tenn., assignor of one-half to P. F. Cogan, Jersey City, N. J. Heating-stove	297,902	Apr. 29	2539	695	27	503
Winne, William H., Meridian, N. Y. Sleigh	298,536	May 13	721	204	27	672
Winsor, Harrey D., *et al.* (See Mefford, David M., assignor.)						
Winstead, Emerson E., Dresden, Tenn. Hame	296,497	Apr. 8	764	210	27	151
Winter, Thomas Y., Philadelphia, Pa., assignor of one-half to A. Whitney, Camden, N. J. Device for oiling shaft-bearings	299,096	May 20	1424	406	27	811
Winterbotham, Joseph, Joliet, Ill. Barrel-trussing machine	296,498	Apr. 8	765	210	27	151
Wintermeyer, Julius C. (See Drummond, Thomas, assignor.)						
Winther, Charles A. G., Boston, Mass. Soldering implement	300,672	June 17	1520	418	27	1221
Wirz, August H., Philadelphia, Pa. Collapsing cup	296,902	Apr. 15	1273	354	27	255
Wirz, August H., Philadelphia, Pa. Machine for forming pills	298,148	May 6	233	61	27	571
Wirz, August H., and A. V. W. Ranach, Philadelphia, Pa.; said Ranach assignor to said Wirz. Machine for making pills, tablets, &c	298,328	May 6	477	128, 129	27	617
Wise, David, Cottondale, Tex. Mechanical power	300,425	June 17	1197	327, 328	27	1160
Wise, Joseph, assignor to J. Wise & Son, Watertown, N. Y. Drawer-lock	296,807	Apr. 15	1144	322	27	232
Wise & Son, J. (See Wise, Joseph, assignor.)						
Wiskocil, Ferdenand, Prairie du Sac, Wis. Corn-planter	297,903	Apr. 29	2539	695, 696	27	503
Wisloh, Charles F., New York, N. Y. Water-cooler	296,095	Apr. 1	241	71	27	49
Wisniewski, Anton, New York, N. Y. Protective head-covering or hood	296,499	Apr. 8	766	210	27	152
Wiswell, Jacob C., Medford, Mass. Ore-crusher	296,096	Apr. 1	241	71	27	49

Wood, Hiram, Rochester, N. Y. "Rochester's Excelsior," (for Cigars)	4,050	Apr. 8	27	104
Woodman, Milton S., Lebanon, N. H. "Blood's Improved Gout and Rheumatic Pills"	4,138	June 3	27	930

DISCLAIMERS.

Name, residence, and invention.	No.	Filed.	Official Gazette. Vol.	Page.
Barker, Abel, assignor to Edward M. Lang, Wyoming, Pa.: disclaimer filed by present assignees, McMurray, Lang & Burnham. Soldering devices. (Reissue)	8,781	May 14, 1884	27	722
Jennings, Warren P., assignor of one-half to Abraham G. Jennings, Brooklyn, N. Y.; disclaimer filed by present owners, Abraham G., Warren P., and Oliver T. Jennings. Mitt-shaping machine	234,286	May 21, 1884	27	822
McLean, William, Los Angeles, Cal.; disclaimer filed by patentee. Laying pavements	289,295	June 12, 1883	27	1140

ALPHABETICAL LIST OF INVENTIONS.

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
Abrading-machine	F. W. Coy	296,535	Apr. 8	811	224	27	161
Abrasive belt	F. W. Coy	299,747	June 3	325	83	27	981
Acid. Apparatus for concentrating sulphuric	M. Willett	301,033	June 24	1961	542	27	1306
Acid from the residues of ammonia-soda manufacture. Obtaining hydrochloric	L. Mond	299,830	June 3	414	.....	27	1000
Adding-machine	W. H. Beatley	297,342	Apr. 22	1833	408, 409	27	362
Adding-machine	W. C. Smalstig	300,809	June 24	1692	462, 463	27	1255
Addressing-machine	H. Parker and J. T. Drummond	296,773	Apr. 15	1105	312	27	225
Adjustable chair	A. W. Browne	299,458	May 27	1872	538	27	904
Advertising bird-cage	H. Bishop	296,912	Apr. 15	1284	357	27	257
Advertising-card	B. D. Baldwin	296,718	Apr. 15	1041	293	27	213
Advertising musical instrument	H. Hardy	296,956	Apr. 15	1331	369	27	266
Aerated waters. Apparatus for dispensing	J. H. Shepherd	300,288	June 10	1019	275	27	1119
Aging whisky. Process of and apparatus for	P. E. Jay	296,836	Apr. 15	1185	332	27	238
Agricultural boiler	G. Patton	299,003	May 20	1302	371	27	788
Air and dust separator	J. P. Anderson	295,960	Apr. 1	89	27	27	20
Air. Apparatus for preparing oxygenated	A. Stamm	300,027	June 10	661	180, 181	27	1055
Air as a motive power. Utilizing compressed	C. E. Buell	300,443	June 17	1219	333	27	1165
Air-brake. Automatic	C. A. T. Sjögren	300,401	June 17	1165	319	27	1155
Air-brake. Electro-magnetic	H. Flad	296,546	Apr. 8	824	227, 228, 229	27	165
Air-brakes. Electrical connector in pipe-couplings for	H. Flad	296,547	Apr. 8	829	229, 230	27	165
Air-compressor	J. F. Allen	299,314	May 27	1693	486	27	872
Air-cooling device	W. V. Wallace	297,476	Apr. 22	1995	545	27	393
Air-cooling machine	W. V. Wallace	297,039	Apr. 15	1437	396, 397	27	285
Air-filter	H. Flad	296,548	Apr. 8	831	230	27	160
Air medicator and injector	B. McGregor	297,427	Apr. 22	1935	528	27	381
Alarm: *See* Burglar-alarm. Fire-alarm. Clock-alarm. Steam-alarm. Electric alarm.							
Alarm apparatus. Electrical	M. D. Porter and E. R. Wilder	296,875	Apr. 15	1236	345, 346	27	247
Alarm-lock	R. G. Vassar	298,136	May 6	215	57	27	568
Album. Autograph	W. C. Grant	296,404	Apr. 8	650	180	27	128
Album-clasp	T. M. Haas	300,070	June 10	719	195	27	1066
Alloy for coating metals	C. E. Manby	300,324	June 10	1059	.....	27	1126
Alloy for safes. Metallic	J. Farrel	298,365	May 13	531	.....	27	635
Alloys. Manufacturing metal	G. Selve	296,884	Apr. 15	1244	348	27	249
Amalgamating apparatus	M. T. Van Derveer and J. Hegeman	299,700	June 3	272	68	27	971
Amalgamating-pan	G. H. Malter	299,409	May 27	1817	522	27	895
Amalgamating-pans. Bearing for the spindles of	A. Wallace	300,920	June 24	1-98	500	27	1281
Amalgamator	H. Moon	300,106	June 10	765	206	27	1074
Amalgamator	E. Pike	299,259	May 27	1692	466	27	859
Ammonia from bone-black retorts. Apparatus for taking off	F. Osmer	297,948	Apr. 29	2001	713	27	514
Amplifier	G. F. Schild	300,804	June 24	1687	461	27	1254
Anchor	W. Lewis	298,867	May 20	1139	320	27	756
Animal-shears	E. E. Stone	299,034	May 20	1346	384	27	796
Animal-shears	W. F. Winckenden	297,327	Apr. 22	1803	490	27	356
Animal-trap	P. R. Erling	298,361	May 13	525	142	27	634
Animal-trap	H. B. Swartz	296,085	Apr. 1	230	67	27	47
Animals. Safety attachment for horned	G. W. Ritchie	296,625	Apr. 8	928	250	27	184
Annunciator	R. J. Hewitt	300,607	June 17	1419	391	27	1202
Annunciator and circuit. Electric	T. N. Vail	300,168	June 10	849	229, 230	27	1089
Annunciator. Electric	P. Seiler	298,242	May 6	366	97	27	595
Annunciator. Telephone-call	C. W. Howard	300,976	June 24	1800	520	27	1292
Annunciators. Derived circuit for clearing-out	C. E. Scribner	300,144	June 10	821	222	27	1084
Anti-friction composition	J. Smalley	300,023	June 10	658	170	27	1035
Anti-friction roller	C. Nau	300,110	June 10	771	207	27	1075
Anvil	C. Fisher	298,567	May 13	758	213	27	678
Anvil attachment	M. A. Ladd	296,870	Apr. 15	1201	336	27	242
Anvil, vise, and drill. Combined	J. Weathers	296,658	Apr. 8	968	271	27	193
Aquarium	A. Ledig	298,253	Apr. 15	1206	338	27	243
Asbestus compound and articles made therefrom	C. F. Brigham	298,281	May 6	418	112	27	605
Ash-box	J. T. Wilson	300,670	June 17	1517	417	27	1220
Ash-pan. Steam-emptying	J. Desmond	297,507	Apr. 22	2044	558	27	401
Ashes, garbage, &c. Conductor for	J. Berry	299,903	June 3	493	130	27	1015
Aspirator. Surgical	C. B. Hardin	297,989	May 6	38	9	27	534
Auger	H. L. Shaler	298,786	May 20	1041	291	27	738
Auger. Earth-boring	C. De Mézerville	300,053	June 10	694	189	27	1061

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Auger-handle	D. M. Parry	296,873	Apr. 15	1233	345	27	247
Auger. Sand-	J. Sickler	297,642	Apr. 29	2231	607	27	443
Automatic brake	W. W. Smoot and Q. D. Wilcoxson	299,031	May 20	1343	383, 384	27	795
Automatic switch	H. W. Howell, Jr	298,756	May 20	1005	281	27	731
Awning	L. Fox	300,902	June 24	1870	513	27	1289
Awning-attaching device	H. Butterworth	300,304	June 10	1037	280	27	1122
Ax-polls, &c. Machine for making	J. W. Bowers	296,817	Apr. 15	1156	326	27	235
Axle-bevel	F. W. Flynn	299,771	June 3	350	89	27	987
Axle box. Car-	W. S. G. Baker	299,320	May 27	1699	488	27	873
Axle box. Car-	R. Brewer	296,517	Apr. 8	788	217	27	156
Axle box. Car-	M. R. Carey	298,552	May 13	739	209	27	675
Axle box. Car-	J. W. Carr	298,171	May 6	961	68	27	576
Axle box. Car-	N. M. George	299,129	May 27	1475	424	27	831
Axle box. Car-	W. A. Hardy	300,362	June 17	1117	303	27	1147

Bale-tie. Wire	L. E. Evans	299,064	May 20	1393	394	27	803
Baling-press	S. P. Harbaugh	300,866	June 24	1765	481	27	1269
Baling-press	A. Johnson	296,014	Apr. 1	151	44	27	31
Baling-press	A. S. Robinson	300,642	June 17	1469	405, 406, 407	27	1211
Baling-press	H. V. and C. F. Scattergood	297,299	Apr. 22	1773	491	27	350
Baling-press tramping attachment	G. P. Thompson	300,163	June 10	843	227	27	1088
Ball:							
See Base-ball.							
Ball-joint. Universal	A. W. Von Schmidt	300,332	June 10	1073	292	27	1129
Ball-trap	C. F. Stock	296,247	Apr. 1	434	122	27	83
Ball-trap	A. Van Allen	300,415	June 17	1184	324	27	1158
Ballot-box	A. L. Ringo and A. Pettibone	300,512	June 17	1303	357	27	1181
Ballots actuated by the pressure or expansion of fluid. Mechanism for automatically casting and recording	C. A. Mayrhofer	299,663	June 3	213	55, 56	27	960
Band cutter and feeder	M. H. Joslyn	296,695	Apr. 8	1010	283	27	201
Band-tucker	W. M. Keelen	298,389	May 13	559	154	27	640
Banjo	H. McCord	296,506	Apr. 8	893	247	27	177
Barbers' shears. Guard for	E. Bateman	297,964	May 6	5	2	27	528
Bark-mill grinding-wheel	L. B. Clark	300,048	June 10	690	187, 188	27	1060
Bark-peeling machine	F. Merziger	300,906	June 24	1913	526	27	1297
Bark-stripping machine	F. F. Angermair	300,829	June 24	1721	470	27	1261

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Barrel-heads. Machine for cutting	S. C. Williams	300,424	June 17	1196	327	27	1160
Barrel-hoop. Metallic	E. Ford	298,962	May 20	1264	359	27	780
Barrel lifter and carrier	W. H. Ibelle	296,010	Apr. 1	146	42	27	30
Barrel-making machine	M. E. Beasley and E. M. Hugentobler.	300,193	June 10	887	238, 239	27	1095
Barrel-making machine	S. Wright	299,896	June 3	484	127, 128	27	1014
Barrel-shaping machine	J. M. Robinson	297,010	Apr. 15	1399	386	27	278
Barrel-trussing machine	T. W. McGregor	296,344	Apr. 8	576	160, 161	27	115
Barrel-trussing machine	J. Reid. (Reissue)	10,479	May 13	952	264	27	715
Barrel-trussing machine	J. Winterbotham	296,498	Apr. 8	765	210	27	151
Barrels. Apparatus for plugging and tapping	N. W. Payne	297,440	Apr. 22	1954	534	27	385
Barrels, casks, &c. Head for	P. Moran	296,038	Apr. 1	174	51	27	36
Barrels. Manufacture of	C. B. Washburn	296,991	Apr. 1	237	60	27	48
Barrow	J. A. Dyblie	299,927	June 3	30	9	27	926
Barrow. Coal-	J. Rongban	300,513	June 17	1304	358	27	1181
Base-ball	T. P. Taylor	298,041	May 6	102	26	27	546
Basin and soap-box. Combined wash-	F. E. Arnold	300,830	June 24	1723	470	27	1261
Basin. Enameled iron wash-	J. S. Richardson	298,287	May 6	425	114	27	607
Basin or bowl	W. Gray	299,266	May 27	1631	468	27	861
Bat. Base-ball	E. Bloomfield	299,454	May 27	1867	536	27	903
Bath-tray	C. Bowsky	300,442	June 17	1218	332	27	1164
Bath-tubs. Device for controlling the inlet and outlet pipes of	M. Goldberg	300,246	June 10	956	258	27	1108
Baths. Apparatus for administering medicated	G. Koons	297,081	Apr. 15	1483	410	27	294
Bathing apparatus	R. A. Horning	298,585	May 13	782	219, 220	27	682
Battery:							
See Carbon-battery. Galvanic battery. Electric battery. Secondary battery.							
Bearing. Anti-friction glass	J. J. Harden	300,467	June 17	1232	342	27	1170
Bearing for machinery. Anti-friction	P. Brownley	300,340	June 17	1090	297	27	1143
Bearing for shafts, spindles, &c	S. J. Howell	298,207	May 6	317	83	27	586
Bearings. Manufacture of anti-friction	J. Smalley	300,024	June 10	639	180	27	1055
Bearings. Manufacture of anti-friction	J. Smalley	300,025	June 10	639	180	27	1055
Bed-bottom	D. Bennett	301,042	June 24	1974	545	27	1308
Bed-bottom	F. J. Robinson	296,708	Apr. 8	1022	287	27	204
Bed-bottom. Spring	S. S. Burr	296,672	Apr. 8	981	275	27	196
Bed-bottom. Spring	B. A. Ham	296,953	Apr. 15	1328	368	27	265
Bed-bottom. Spring	J. McIlhone	297,827	Apr. 29	2456	672	27	486
Bed-bottom. Spring	D. F. Stambaugh	297,868	Apr. 29	2499	684	27	495
Bed-bottom. Spring	L. Wildermuth	298,927	May 20	1213	342	27	771
Bed-bottom. Spring	A. F. Gue	296,162	Apr. 1	310	91	27	62
Bed. Folding	C. P. Nash	299,670	June 3	236	58, 59	27	965
Bed, litter, and chair. Combined cot	J. E. Drakeley	297,119	Apr. 22	1546	427	27	309
Bed-pan	W. H. Moore	299,832	June 3	415	107	27	1001
Bed-slats. Machine for making	H. L. Albee	299,501	June 3	2	1	27	921
Bed. Sofa-	P. A. Emery	299,528	June 3	31	9	27	926
Bed. Sofa-	W. G. Holden	296,007	Apr. 1	142	41	27	29
Bed. Spring-bottom camp-	W. H. McClure	298,873	May 20	1145	322	27	757
Bed. Wardrobe-	J. Moran	298,877	May 20	1150	323	27	758
Bedstead. Wardrobe-	E. Nash	298,112	May 6	184	49	27	562
Bedstead. Wardrobe-	C. E. Haynes	298,578	May 13	773	217	27	681
Beer and other alcoholic liquors. Apparatus for preserving	B. Rice	295,944	Apr. 1	62	18	27	14
Beer-chip	E. Kersten	300,981	June 24	1896	521	27	1294
Beer. Clarifying	H. E. Deckebach	298,071	May 6	139	35	27	553
Beer-cooling apparatus	M. M. Bowers	296,515	Apr. 8	786	217	27	156
Bell	E. L. Brainard	299,724	June 3	300	74	27	976
Bell	J. D. Gilchrist	298,060	May 6	147	37	27	554
Bell and annunciator. Electric	D. Rousseau	300,134	June 10	808	218	27	1092
Bell and annunciator. Electric	J. Butcher	300,568	June 17	1369	377, 378	27	1193
Bell. Bicycle-	E. W. Hazazer	300,253	June 10	965	262	27	1110
Bell. Electric	G. P. Conant	296,729	Apr. 15	1053	297	27	215
Bell. Electric call-	S. N. Blake	296,612	Apr. 15	1151	324	27	234
Bell pull. Electric door-	A. Cooke	296,139	Apr. 1	294	84, 85	27	57
Bell-ringer. Steam-	R. P. Garsed	296,928	Apr. 15	1176	330	27	237
Bell-ringing apparatus. Pneumatic	R. P. Garsed	299,636	June 3	172	43	27	952
Bell-ringing apparatus. Pneumatic	D. A. Rich	300,896	June 24	1801	492	27	1276
Bell. Sleigh-	J. S. Williams	298,261	May 6	389	103	27	600
Bellows	A. E. Kingsley	299,403	May 27	1810	520	27	894
Belt-cleaner	W. R. and T. H. Dunn	296,682	Apr. 8	995	278	27	198
Belt-fastener	A. D. Lagrelle	300,925	June 24	1899	522	27	1294
Belt-fastener	E. Mayns	297,146	Apr. 22	1579	434	27	315
Belt-fastener	J. B. Norton	300,793	June 24	1675	458	27	1252
Belt-fastener	J. W. Pugh	301,070	June 24	2008	554	27	1315
Belt-fastener	J. A. Roberts	298,120	May 6	196	52	27	564
Belt-fastener	W. Smith	300,026	June 10	661	180	27	1055
Belt-fastener	W. C. Wolff and J. C. Manning	300,825	June 24	1715	468	27	1260
Belt-gearing for machinery	J. H. Cromie	298,291	May 6	428	115	27	607
Belt-guide	J. J. Moore and J. A. Ball	295,972	Apr. 1	47	13	27	11
Belt holder. Machine-	W. R. Santley	298,238	May 6	361	96	27	594
Belt-shifter for iron-planers	W. Gleason	301,054	June 24	1994	550	27	1311
Belt-shifting device	W. Diebel	300,579	June 17	1362	381	27	1195
Belt-stretcher	G. H. Jones and J. M. Chilcote	299,795	June 3	374	96	27	992
Belt-stretcher	J. W. I. Stevenson	298,910	May 20	1194	336	27	767
Belt. Traveler's treasure-	A. H. Kepley	297,268	Apr. 22	1738	472	27	344
Belter. Pulley-	J. N. Wilson	298,929	May 20	1216	343	27	772
Bench:							
See Wash-bench. Work-bench.							
Bench-dog	R. Doty	298,560	May 13	751	211	27	677
Bench-dog	C. C. Johnson	300,780	June 24	1660	455	27	1249

Bicycle-brake lock	G. S. and C. S. Hull	300,261	June 10	978	264	27	1112
Bicycle-handle	G. S. Kelsey	296,973	Apr. 15	1351	274	27	960
Bicycle saddle-bags	J. B. Wood	299,609	June 3	139	35	27	946
Bicycle-step	G. F. Harwood	297,991	May 6	40	10	27	535
Bicycle-wheel	W. S. Wright	299,897	June 3	487	128	27	1015
Bill and poster holder	W. H. Lighty	300,274	June 10	992	268	27	1114
Bill-of-fare indicator	E. S. Sutton	297,094	Apr. 15	1503	415	27	297
Billiard and other game-tables. Chalk-holder for	T. Dougherty	297,684	Apr. 29	2290	623	27	454
Billiard and pool bridge	G. Borst	298,342	May 13	505	137	27	631
Billiard and pool table	G. A. Chasley	296,677	Apr. 8	969	277	27	197
Billiard-cue and walking-cane. Combined	W. G. Morse	298,111	May 6	192	48	27	561
Billiard-cue tip	D. Dessauer	297,508	Apr. 22	2045	558	27	401
Billiard-cue tip	W. H. Thomas and C. B. Core	296,087	Apr. 1	233	67	27	47
Billiard-cushion	M. Delaney	295,910	Apr. 1	20	6	27	7
Billiard-marking. Apparatus for	R. Bateman	298,815	May 20	1078	302	27	744
Billiard-table time-register	E. B. Pope	298,402	May 13	573	158	27	643
Billiard-table top	J. W. McKnight	299,565	June 3	80	19	27	935
Binder. Platform self-	P. F. Hodges	299,643	June 3	182	46	27	954
Binder. Temporary	H. L. Pratt	299,579	June 3	98	25	27	938
Binder. Temporary	W. Trantwine	300,662	June 17	1508	415	27	1219
Binding-post	T. R. Abernethy	297,655	Apr. 29	2246	611	27	446
Bird-cage	J. W. Gregory	300,249	June 10	959	259	27	1108
Bird-cage	J. S. Musgrave	297,621	Apr. 29	2197	599	27	437
Bit: *See* Bridle-bit. Extension-bit.							
Bit-brace	C. H. Amidon	298,542	May 13	727	206	27	673
Bit-brace	W. A. Ives	301,058	June 24	1994	551	27	1312
Bit for inserting screw-eyes	C. E. Griffith	300,317	June 10	1052	285	27	1125
Bit-stock	J. S. Fray	300,771	June 24	1670	452	27	1246
Black-leading machine	G. E. Lloyd	298,595	May 13	792	222	27	684
Blacking-case	G. T. Martin	296,198	Apr. 1	366	104	27	70
Blanks. Manufacture of split	W. Garrett	297,593	Apr. 29	2468	502	27	432
Blast-furnace	H. Schulze-Berge	296,225	Apr. 1	404	114	27	77
Blast-furnace apparatus	J. F. Bennett	297,663	Apr. 29	2258	614 / 615	27	448
Blast-furnace bell and hopper mechanism	F. W. Gordon	298,370	May 13	535	146 / 147	27	635
Blast-furnaces. Hoisting-tower for	P. L. Weimer	300,175	June 10	861	229 / 233	27	1091
Bleaching raw cotton	J. C. Vanlohe	297,319	Apr. 22	1794	.....	27	354
Blind. House-	H. B. Davis	296,144	Apr. 1	299	86	27	58
Blind-slat lock and operator	I. Van Kersen	297,204	Apr. 22	1661	452	27	330
Blind-slat operator	W. H. Keeran	298,860	May 20	1130	318	27	754
Blind-slat-tenoning machine	S. C. Ellis	300,314	June 10	1048	284	27	1124
Blind-stop	T. Massey	297,145	Apr. 22	1578	434	27	315
Blind. Window-	H. Brotherton	298,170	May 6	263	68	27	576

Blocks, stones, &c. Making artificial	L. Rosenthal	298,505	May 13	690	.....	27	665
Blotter	A. N. Sill	296,235	Apr. 1	420	118	27	80
Blotting-pad	C. J. Bailey	299,716	June 3	291	72	27	975
Blotting-pad	E. A. Scribner	298,124	May 6	200	53	27	565
Blotting-pad and ruler	J. Weis	300,421	June 17	1193	326	27	1159
Blower. Fan-	F. C. Anderton	299,098	May 27	1432	410	27	823
Blower. Fan-	J. E. Studley	297,310	Apr. 22	1785	484 / 485	27	353
Blower. Rotary	R. E. Harris	297,392	Apr. 22	1891	514	27	373
Blower. Rotary	J. L. Newman	298,492	May 13	675	190	27	602
Blowers. Driving mechanism for fan-	J. R. Rowlands	300,283	June 10	1009	272	27	1117
Board: *See* Bosom-board. Ironing-board. Cutting-board. Lap-board. Game-board. Vehicle dash-board.							
Boat: *See* Canal-boat. Row-boat. Dumping-boat.							
Boat-detaching apparatus	H. Bruns	300,566	June 17	1367	377	27	1192
Boat-detaching apparatus	A. D. Post	300,126	June 10	792	213	27	1079
Bobbin-winder	G. W. Clapp	298,554	May 13	742	209	27	675
Bobbin-winder	E. Parkinson	299,845	June 3	429	111	27	1003
Boiler: *See* Agricultural boiler. Steam-boiler. Mash-boiler.							
Boiler	J. Dahmer	300,578	June 17	1381	381	27	1195
Boiler furnace. Steam-	G. T. Woods	299,894	June 3	482	127	27	1014
Boiler or vessel employed in the treatment of fibrous materials for the manufacture of paper-pulp and for other purposes.	I. S. McDougall	298,602	May 13	601	225	27	686
Boiler-setting	W. T. Hildrup, Jr.	298,380	May 13	548	150	27	638
Boiling sap or cane-juice. Apparatus for	O. H. Jones	297,810	Apr. 29	2436	666	27	422
Bolster-plates. Die for making	H. James	298,586	May 13	783	209	27	682
Bolt: *See* Flour-bolt. Lock-bolt. King-bolt.							
Bolt-heading machine	C. S. Seaton	296,073	Apr. 1	215	62	27	44

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bolt-heads and nuts. Machine for finishing	H. Reynolds	300,641	June 17	1468	405	27	1211
Bolt-holder	M. Hatfield	300,968	June 24	1892	517	27	1291
Bolt-holder	W. F. Walker	299,299	May 27	1679	481	27	869
Bolt-threading device	J. L. Carter	300,569	June 17	1371	378	27	1193
Bond. Car-coupon-bearing	D. Sheplie	299,024	May 20	1334	380	27	794
Bonnet	H. S. Hale	300,361	June 17	1115	303	27	1147
Book-case	P. E. McIntosh	296,767	Apr. 15	1098	309	27	223
Book-fold	C. T. Ward	299,602	June 3	132	32	27	944
Book-rack	J. Mönch	297,431	Apr. 22	1938	529	27	382
Book-rasp. Extensible	J. A. Crane	299,914	June 3	507	134	27	1018
Book-sewer	E. S. Getchell	295,996	Apr. 1	131	38	27	27
Book-sewer	J. A. Crane	299,913	June 3	506	134	27	1018
Book-covers. Paper back for	J. Swartz	298,039	May 6	99	26	27	546
Book-rack	S. Robin	296,356	Apr. 8	588	163	27	117
Book-rest. Revolving	D. D. Bowman	300,203	June 10	907	243	27	1099
Book-stand. Revolving	W. M. Brinkerhoff	296,122	Apr. 1	275	78	27	54
Books. Receipt, check, draft, and similar	E. Prensse	298,117	May 6	191	50, 51	27	563
Books with wire staples. Machine for stitching	E. Banga	298,545	May 13	731	207	27	674
Boom and gaff for vessels	A. Beltz	299,509	June 3	8	3	27	929
Boot	G. Vallant	298,638	May 13	842	235	27	693
Boot and shoe bottoms. Bleach and stain brushing machine for	J. P. White and D. Harrington	300,819	June 24	1704	465 / 466	27	1257
Boot and shoe cleaning implement	A. M. Carlson	296,674	Apr. 8	985	276	27	196
Boot and shoe exhibitor	A. Rapp	299,678	June 3	249	61	27	967
Boot and shoe heel blanks. Machine for concaving	W. Y. Ober	298,113	May 6	186	49	27	562
Boot and shoe heel burnishing machine	G. F. Cass	300,949	June 24	1857	509	27	1287
Boot and shoe heel burnishing machine	G. Vallant	298,637	May 13	841	235	27	693
Boot and shoe seam	J. M. Dexter	300,954	June 24	1749	477	27	1266
Boot and shoe sole or heel plate	M. V. Breanahan	300,039	June 10	679	184	27	1058
Boot and shoe sole shaping machine	G. H. P. Flagg and J. W. Maloy	299,123	May 27	1467	421	27	830
Boot and shoe soles. Belt-support for machines for buffing	S. D. Tripp	296,486	Apr. 8	747	206 / 207	27	148
Boot and shoe soles. Machine for leveling	C. M. Bolles and M. E. Byron	296,513	Apr. 8	783	216	27	155
Boot and shoe stamping-machine	J. C. Kupferle and J. W. Dowler	297,135	Apr. 22	1565	431	27	313
Boot-cleaner	F. M. Bratton	298,167	May 6	259	67	27	575
Boot-crimp	G. C. Buch	298,346	May 13	510	139	27	631
Boot or shoe	H. T. Marshall	298,569	May 13	799	224	27	685
Boot or shoe	L. F. Norman	299,840	June 3	424	110	27	1002
Boot or shoe	L. F. Norman	300,001	June 10	627	170 / 171	27	1050
Boot or shoe	F. Packard	297,156	Apr. 22	1589	437	27	317
Boot or shoe	W. H. Wetmore	297,207	Apr. 22	1663	452	27	330
Boot or shoe bottom	C. F. Glanville	298,844	May 20	1110	311	27	750
Boot or shoe coasting-guard	W. Lawrence	297,422	Apr. 22	1928	526	27	380
Boot or shoe heel plate	S. D. Mehew	297,150	Apr. 22	1583	435	27	316
Boot or shoe heel stiffener	G. A. Fullerton	299,125	May 27	1470	422	27	830
Boot or shoe heels. Machine for compressing	J. H. Parker	300,280	June 10	1004	271 / 272	27	1117
Boot or shoe insole	T. Bolton	298,278	May 6	415	111	27	605
Boot or shoe sole	A. J. Mott	298,610	May 13	811	228	27	687
Boot or shoe sole protecting plate	J. Borrett	299,455	May 27	1868	537	27	904
Boot or shoe soles. Machine for setting or molding the edges of	E. B. Kelsey	299,145	May 27	1492	428 / 429	27	834
Boot. Rubber	J. Banigan	298,546	May 13	732	207	27	674
Boot. Rubber	A. O. Bourn	296,119	Apr. 1	270	77	27	53
Boot. Rubber	M. W. Whitney	299,890	June 3	478	125	27	1013
Boot. Rubber	I. F. Williams	296,264	Apr. 1	463	130	27	67
Boot. Rubber	J. J. Williamson	296,495	Apr. 8	759	209	27	150
Boot. Rubber	J. W. D. Fifield	299,971	June 10	587	158	27	1042
Boot-tree	S. McCullough	299,994	June 10	619	167	27	1048
Boot. Wooden-soled	A. A. Brooks	296,519	Apr. 8	790	218	27	157
Boots and shoes. Outer sole for	H. D. Smith	296,685	Apr. 15	1246	348	27	249
Boots and shoes. Toe-tip-indicating apparatus for	J. W. D. Fifield	296,154	Apr. 1	309	89	27	60
Boots or shoes. Last or holder for lasting	J. Hargrave	297,300	Apr. 22	1889	513	27	373
Boots or shoes. Machine for cleaning and blacking	S. W. Robinson	297,718	Apr. 29	2330	634	27	402
Boots or shoes. Machine for uniting the uppers and soles of	A. A. Brown	300,205	June 10	909	244	27	1099
Boots or shoes. Manufacture of	E. Woodward, R. Ashe, and E. F. Grandy	296,715	Apr. 8	1029	289	27	205
Boots or shoes. Tacking-machine for lasting	D. F. Messer	297,280	Apr. 22	1749	475	27	346
Boots, shoes, &c. Forming felt	J. Richards	299,406	May 27	1913	551	27	913
Boring and slotting machine. Metal	Z. C. Phillips	296,053	Apr. 1	193	56	27	40
Boring-machine	M. Rothschild	297,013	Apr. 15	1402	397	27	278
Boring square holes. Tool for	A. Fauck	299,632	June 3	167	42	27	951
Boring-tool or detent-terrier for oil-wells, &c	S. Maxim	296,424	Apr. 8	671	185	27	132
Bosom-board	T. L. Seymour	297,174	Apr. 22	1609	442	27	321
Bottle	C. May	298,872	May 20	1144	321	27	757
Bottle-capper	T. Drummond	299,660	May 20	1379	393	27	802
Bottle-carrying box	T. R. Lowerre	297,943	Apr. 29	2506	712	27	513
Bottle-corking machine	E. R. Richards	298,233	May 6	357	95	27	594
Bottle-holder	E. D. Newton	299,253	May 27	1617	461	27	858
Bottle. Multichambered	W. H. Hannan	297,389	Apr. 22	1898	513	27	372
Bottle-opener	F. Burns	300,945	June 24	1853	508	27	1286
Bottle-stopper	M. Joo	300,320	June 10	1055	286	27	1126
Bottle-stopper	J. E. Keenan	300,265	June 10	983	265	27	1113
Bottle-stopper	E. W. P. Natter	296,995	Apr. 15	1381	381	27	274
Bottle-stopper	M. Rubin	297,952	Apr. 29	2606	714	27	515
Bottle-stopper	M. Rubin	299,269	May 27	1634	469	27	862
Bottle-stopper	J. T. Walker	296,655	Apr. 8	963	270	27	192
Bottle-stopper	C. H. Bennett	298,273	May 6	406	108	27	603
Bottle-stopper attachment	E. Bacher	299,714	June 3	289	72	27	975
Bottle-stopper. Internal	A. Von Schade	299,185	May 27	1538	441	27	842
Bottle-washer	J. M. Novy and P. Henry	296,705	Apr. 8	1019	285	27	203
Bottle-wrapper							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bottles. Material for packing	O. Long	300,323	June 10	1059	267	27	1126
Bottles for aerated or gaseous liquids. Stoppering	R. J. Sankey	297,298	Apr. 22	1772	481	27	350
Bottling and shipping can. Combined	C. R. Peaslee	298,023	May 6	80	21, 22	27	542
Bottling-machine	J. C. Blair	298,060	May 6	124	31	27	550
Bowl. Fruit-	D. C. Ripley	296,457	Apr. 8	708	196	27	140
Bowl. Hanging water-	E. W. Frost	300,704	June 17	1568	430	27	1229
Bowling-alley. Portable folding parlor	W. E. Goodenough	300,862	June 24	1760	480	27	1268
Box: *See* Axle-box. Ballot-box. Bottle-carrying box. Cash-box. Cuff-box. Folding box. Jug-packing box. Letter-box. Match-box. Miter-box. Packing-box. Packing and show box. Paper box. Post-office box. Safe-deposit box. Sheet-metal box. Show-box. Snuff and match box. Wooden box.							
Box	G. Borst	300,441	June 17	1217	332	27	1164
Box covering and trimming machine	G. Munro	298,879	May 20	1153	324	27	759
Box-covers. Device for securing	F. M. Watrous	300,926	June 24	1834	502	27	1287
Box-covers. Securing	H. A. Shaw and E. D. Chidley	299,276	May 27	1641	471	27	963
Box-fastener	J. W. Harlow	298,689	May 13	919	{254, 255}	27	708
Box-fastener	T. Humphreys	297,262	Apr. 22	1732	470	27	343
Box for cans of oils, paints, &c.	J. Graves	299,778	June 3	356	91	27	988
Box-making machine	J. S. Gibbs	297,925	Apr. 29	2574	706	27	509
Box-nailing machine	F. Myers	299,570	June 3	86	22	27	936
Box strap or band	W. Morrison, Jr	298,999	May 20	1297	369	27	787
Box-trimming machine. Packing-	F. Myers	295,933	Apr. 1	47	14	27	12
Boxes. Machine for labeling or covering the tops of	H. Inman	299,225	May 27	1584	455	27	852
Brace: *See* Bit-brace. Machine-brace. Rail-brace. Shoulder-brace.							
Bracelet	H. A. Church	296,133	Apr. 1	287	82	27	56
Bracelet	H. Liebel	299,658	June 3	307	53	27	959
Bracelet	C. W. Lord and A. M. English	299,558	June 3	68	17	27	933
Bracelet	H. T. Salisbury	300,286	June 10	1017	274	27	1118
Bracelet and ornamenting wire therefor	E. A. Thiéry	297,874	Apr. 29	2505	686	27	496
Bracelet-clasp	H. C. Lindol	299,816	June 3	398	102	27	997
Bracket: *See* Gas and lamp bracket. Lamp-bracket. Pulley-bracket. Roofing-bracket.							
Brake: *See* Air-brake. Automatic brake. Car-brake. Locomotive-brake. Vehicle-brake. Wagon-brake.							
Brake-cylinders. Apparatus for relieving pressure in	G. Westinghouse, Jr	300,543	June 17	1342	370	27	1188
Brake-shoe	C. F. Brigham	298,283	May 6	419	112	27	606
Brake-shoe	G. Chanler	299,621	June 3	155	38	27	949
Brake-shoe	G. N. Sceets	298,297	May 20	1178	329	27	764
Bran-packer	D. J. Davis	299,749	June 3	327	83	27	982
Breast and skirt supporter and shoulder-brace. Combined	M. Clarke	298,067	May 6	135	34	27	552
Breeching-supporter	R. S. Boulter	297,013	Apr. 29	2353	700	27	506
Brick and tile machine	J. G. Stadler	299,591	June 3	116	29	27	941
Brick-drier	J. Blum	296,814	Apr. 15	1153	325	27	234
Brick-kiln	W. H. De Valin	300,054	June 10	695	189	27	1061
Brick-kiln	J. S. Lester	297,423	Apr. 22	1920	527	27	380
Brick-kiln front or furnace	J. Blum	296,813	Apr. 15	1152	325	27	234
Brick-machine	W. Andrus	297,051	Apr. 15	1450	{401, 402}	27	287
Brick-machine	W. Andrus	297,218	Apr. 22	1677	457	27	333
Brick-machine	J. Baillie	296,305	Apr. 8	594	147	27	165
Brick-machine	H. C. Barker	300,556	June 17	1359	374	27	1191
Brick-machine	C. Chambers, Jr	297,671	Apr. 29	2267	617	27	450
Brick-machine	C. Chambers, Jr	297,917	Apr. 29	2358	{701, 702, 703}	27	507
Brick-machine	F. M. Comstock	296,276	Apr. 1	479	134	27	90
Brick-machine	W. L. Gregg	299,067	May 20	1386	{395, 396}	27	804
Brick-machine	H. Martin	300,096	June 10	752	{209, 303}	27	1072
Brick-machine	F. W. Shelley	297,641	Apr. 29	2229	{606, 607}	27	443
Brick-machine	W. S. Smith	298,905	May 20	1186	334	27	766
Brick-machine. Traveling	H. Stelzmann	296,082	Apr. 1	225	65, 66	27	46
Brick-machines. Clay tempering and expressing device for	C. Chambers, Jr	297,675	Apr. 29	2276	619	27	452
Brick-machines. Cut-off-regulating device for	C. Chambers, Jr	297,674	Apr. 29	2275	618	27	452
Brick. Manufacture of enameled	C. Newton	299,571	June 3	86	22	27	936
Brick weather-boarding for frame houses. Imitation-	P. Toglio	296,647	Apr. 8	952	{267, 268}	27	189
Bricks, tiles, &c. Press for making	T. Whittaker	298,646	May 13	852	{238, 239}	27	694
Bridge gate. Turn-	J. Ostertag, Jr	300,326	June 10	1062	{287, 288}	27	1127
Bridge signal. Draw-	J. N. Williams	298,647	May 13	854	239	27	695
Bridge. Suspension-	G. Wegner	297,479	Apr. 22	1999	546	27	394
Bridges. Guard-gate for swing-	W. M. Doty	297,920	Apr. 29	2567	704	27	508
Bridle-bit	J. B. Blyholder and P. Hughes	296,815	Apr. 15	1154	325	27	234

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bridle-bit	J. Murphy	297,944	Apr. 29	2598	712	27	514
Bridle. Harness-	L. J. Knauss and G. W. Hinkle	300,806	June 3	388	99	27	995
Brooches. Device for fastening removable pins to	G. E. Butin	300,769	June 24	1641	499	27	1240
Broom	C. Douglas	299,059	May 20	1378	392	27	802
Broom balance-tip	W. A. Scollay	296,879	Apr. 15	1240	347	27	248
Broom-holder	C. P. Ball	300,632	June 24	1724	470	27	1261
Broom-holder	O. Ludwig	301,062	June 24	1999	552	27	1313
Brush-bodies, &c., from pyroxyline compounds. Manufacture of	E. Kipper and J. B. Edson	299,804	June 3	386	.....	27	994
Brush. Boot-	C. Boeckh	299,196	May 27	1551	445	27	845
Brush-bridle	A. S. Miles	297,617	Apr. 29	2193	598	27	436
Brush. Fountain-	T. Hunthatch	299,144	May 27	1491	428	27	834
Brush-hook and ax. Combined	E. H. Sublett	299,576	June 3	462	121	27	1010
Brush. Paint-	J. F. Bowditch	298,166	May 6	258	66	27	575
Brush. Paint-	J. Elliott	298,339	May 13	523	142	27	634
Brush. Polishing-	W. A. Stevens	299,873	June 3	460	120	27	1010
Brush. Scrubbing-	J. S. White	297,555	Apr. 29	2117	578	27	421
Brush. Window-	H. F. Baker	299,188	May 27	1542	442	27	843
Brushes. Fountain attachment for marking-	P. C. Forrester	296,945	Apr. 15	1321	366	27	263
Brushes. Manufacture of	F. J. Kaldenberg	299,988	June 10	612	165	27	1047
Bucket and stool. Combined milk	G. C. Bovey	296,386	Apr. 8	631	174	27	125
Bucket fixture. Well-	F. L. Howell	300,977	June 24	1891	520	27	1293
Bucket. Well-	R. H. Foat	300,240	June 10	947	256	27	1106
Buckets. Combined bottom and valve for well-	G. F. Skinner	300,147	June 10	834	223	27	1085
Buckle	E. F. Butler	300,303	June 10	1036	280	27	1122
Buckle	L. P. Edwin	299,212	May 27	1570	451	27	849
Buckle	W. A. Keys and J. Lockwood	296,182	Apr. 1	341	97	27	66
Buckle	R. W. Owen	300,727	June 17	1590	436	27	1232
Buckle	D. L. Smith	299,028	May 20	1340	382	27	795
Buckle	J. W. Smith	298,511	May 13	696	197	27	666
Buckle	W. B. Woodman	296,662	Apr. 8	972	272	27	194
Buckle	J. B. Sayre	299,271	May 27	1636	470	27	862
Buckle and ring. Combined	B. F. Archer	300,430	June 17	1204	329	27	1161
Buckle. Back-band	R. D. Tucker	299,941	June 3	543	145	27	1025
Buckle. Back-band	C. H. and M. M. Freer	299,533	June 3	36	10	27	927
Buckle. Double	H. C. Colton	298,351	May 13	514	140	27	632
Buckle. Harness-	H. A. Fonteine	299,065	May 20	1384	395	27	803
Buckle. Harness-	J. A. Gavitt	299,775	June 3	353	90	27	988
Buckle. Harness-	E. Hoxie	297,892	Apr. 29	2430	664	27	481
Buckle. Rope-halter	J. Gibbons	296,328	Apr. 8	553	{153, 154}	27	110
Buckle. Rope-halter	J. Gibbons	296,329	Apr. 8	554	154	27	110
Buckle. Suspender-	C. C. Shelby	299,587	June 3	110	27	27	940
Buckle. Suspender-	C. S. Wells	296,803	Apr. 15	1139	321	27	232
Buckle. Trace-	C. C. Bauder	298,934	May 20	1224	{346, 347}	27	773
Buckle. Trace-	M. C. Chase	300,215	June 10	917	247	27	1100
Buckle. Trace-	F. Conway	299,624	June 3	159	39	27	949
Buckle. Trace-	P. Hayes	300,605	June 17	1416	390	27	1201
Buckle. Trace-	J. Lally	296,583	Apr. 8	876	243	27	174
Buckle. Trace-	W. Lerchen	297,818	Apr. 29	2444	668	27	484
Buckle. Trace-	R. G. Wood	300,295	June 10	1028	278	27	1120
Buggy-seat shifting-rail	A. M. Cochran	300,575	June 17	1377	380	27	1194
Buggy-top	J. C. Oliver	296,045	Apr. 1	182	53	27	38
Buggy-top	G. Engelhart and C. Weidner	297,771	Apr. 29	2399	654	27	474
Buggy-top. Shifting	T. L. Jowett	296,971	Apr. 15	1349	373	27	269
Building-block	W. Stranders	297,308	Apr. 22	1782	484	27	352
Building-block	B. E. Valentine	298,522	May 13	704	200	27	668
Building. Cold and fire proof storage	W. H. Dolman	300,581	June 17	1384	382	27	1196
Building. Fire-proof	G. W. Rader	297,449	Apr. 22	1963	536	27	387
Building. Fire-proof	J. S. and R. M. Simmons	298,790	May 20	1046	{292, 293}	27	738
Building. Portable	T. Rogers	296,458	Apr. 8	709	196	27	140
Buildings. Adjustable creating for	E. Gilbert	300,861	June 24	1750	479	27	1½ 8
Buildings. Construction of	H. Merweather	301,064	June 24	2002	553	27	1313
Bundling-machine	A. G. Anderson	298,395	May 6	396	104	27	601
Bung	G. A. Stanger	298,908	May 20	1192	335	27	767
Bung-borer	W. H. Reiff	297,632	Apr. 29	2221	604	27	441
Burglar-alarm	H. R. Taber	297,311	Apr. 22	1787	485	27	353
Burglar-alarm	G. W. Tallman	296,646	Apr. 8	951	267	27	189
Burglar-alarm	R. G. Vassar	298,137	May 6	217	57	27	568
Burglar-alarm. Combined firing and bell-ringing	C. L. Morehouse	300,107	June 10	766	206	27	1074
Burglar-alarm for safes	W. Y. Cruikshank	300,309	June 10	1043	282	27	1123
Burglar-alarm for safes	W. Y. Cruikshank	300,310	June 10	1044	282	27	1124
Burial-casket	E. S. Earley	298,953	May 20	1247	353	27	777
Burial-windlass	C. M. Chamblin and T. Waltz	300,344	June 17	1096	298	27	1144
Burner: *See* Gas-burner. Gas or oil burner. Illuminating-burner. Vapor-burner.							
Burner	A. B. Lipsey	296,587	Apr. 8	880	244	27	175
Bushing. Metallic	C. Hemje	296,564	Apr. 8	855	237	27	170
Bustle	C. E. Brown	300,565	June 17	1366	377	27	1192
Butter-package	J. C. Brown	296,821	Apr. 15	1165	327	27	236
Butter-pail	J. Meserole	296,034	Apr. 1	171	50	27	35
Button	J. F. Atwood	297,740	Apr. 29	2359	642	27	467
Button	J. F. Atwood	296,154	May 6	241	62	27	572
Button	J. Bird	297,344	Apr. 22	1836	499	27	363
Button	W. W. Covell	299,464	May 27	1878	540	27	905
Button	N. B. Hale	298,082	May 6	150	38	27	555
Button	J. Harrington	296,408	Apr. 8	654	181	27	129
Button	I. G. Platt	296,216	Apr. 1	390	110	27	75
Button	G. W. Prentice	298,403	May 13	575	159	27	643
Button	E. A. Thiery	296,891	Apr. 15	1253	350	27	251
Button	G. T. Woglom	300,673	June 17	1521	419	27	1221

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Button and cuff-holder. Combined	C. H. Lowell	298,993	May 20	1290	368	27	786
Button-attaching implement	J. F. Thayer	295,954	Apr. 1	71	21	27	16
Button-attaching instrument	J. F. Thayer	296,890	Apr. 15	1252	350	27	251
Button. Collar-	G. Krements	298,303	May 6	444	119	27	611
Button. Cuff-	J. Bulova	299,517	June 3	17	6	27	924
Button. Detachable	B. J. Angell	299,009	May 27	1433	410	27	823
Button-fastener	H. Brossel	299,110	May 27	1448	413	27	896
Button-fastener	W. H. Dodge	296,735	Apr. 15	1060	299	27	217
Button-fastener	J. H. Goodfellow	297,795	Apr. 29	2412	650	27	477
Button-fastener	W. Halkyard	298,464	May 13	643	192	27	656
Button-fastener	R. Sanford	298,316	May 6	463	125	27	614
Button-fastener	R. Sanford	298,506	May 13	691	195	27	665
Button-fastener	F. A. Smith, Jr	295,951	Apr. 1	67	20	27	16
Button-fastener	F. A. Smith, Jr.	298,423	May 13	592	167	27	647
Button-fastener	J. F. Thayer	296,798	Apr. 15	1131	319	27	230
Button-fastener	J. F. Thayer	297,314	Apr. 22	1790	486	27	354
Button-fastener	J. F. Thayer	298,796	May 20	1053	295	27	740
Button-fastening	G. W. Fish	296,155	Apr. 1	310	89	27	61
Button-feeding apparatus	L. D. Hawkins and E. Woodward	298,201	May 6	305	79	27	583
Button-hole	E. G. Harris	298,198	May 6	297	77	27	582
Button-hole-cutting machine	H. A. Behn	299,329	May 27	1705	492	27	876
Button-hook holder	J., T. H., and C. A. Fye	301,053	June 24	1968	549	27	1311
Button-lap and staying-piece for garments. Combined	G. Boxley	297,746	Apr. 29	2367	644 / 645	27	468
Button. Link-	T. W. F. Smitten	300,910	June 24	1819	497	27	1280
Button-machine	D. H. Campbell	297,496	Apr. 22	2023	552 / 553	27	398
Button or stud	G. E. Adams	300,551	June 17	1354	373	27	1190
Button. Separable	H. C. Robinson and L. J. Lallement	298,236	May 6	359	95	27	595
Button-setting implement	J. F. Thayer	297,315	Apr. 22	1791	486	27	354
Button-setting instrument	J. F. Atwood	298,185	May 6	242	62	27	578
Button-setting instrument	J. F. Atwood	298,332	May 13	495	135	27	629
Button-setting instrument	E. Kempshall	298,984	May 20	1282	365	27	784
Button-setting instrument	J. F. Thayer	296,366	Apr. 8	599	166	27	119
Button-setting machine	L. D. Hawkins and E. Woodward	298,200	May 6	299	77 / 78 / 79	27	582
Button. Sleeve-	J. B. Van Houten	297,731	Apr. 29	2351	639	27	466
Buttons by electricity. Machine for carding	L. Gillon	296,401	Apr. 8	646	178 / 179	27	128
Buttons, &c., from plastic materials. Manufacture of	W. C. Abbott	300,934	June 24	1843	505	27	1284
Buttons. Machine for making	D. H. Campbell	297,495	Apr. 22	2017	551 / 552	27	398
Buttons to fabrics. Apparatus for securing	A. G. Wilkins	297,895	Apr. 29	2331	693	27	501
Buttons to shoes, &c. Attaching	W. Halkyard	299,133	May 27	1478	425	27	832
Cabinet for holding and adjusting bill-heads, &c	H. A. Clow	299,403	May 27	1577	540	27	905
Cable-grip	R. W. McGovern	300,492	June 17	1281	359	27	1177
Cable-grip levers. Pawl for	H. Root and F. A. Tucker	297,452	Apr. 22	1965	537	27	387
Cable-road slots. Machine to protect	M. Ohlson	296,870	Apr. 15	1230	344	27	246
Cable tramway	S. H. Jenkins	299,393	May 27	1792	515 / 516	27	890
Cable tramway	S. H. Jenkins	299,394	May 27	1795	516	27	891
Cable-way gripping device	R. K. Evans	295,915	Apr. 1	25	8	27	8
Cables. Gripping and crossing	R. Ramsden	298,312	May 6	455	123	27	613
Cables. Laying anbterranean	S. F. Shelbourne	297,179	Apr. 22	1616	444	27	322
Cables. System of propelling cars by means of	J. L. Boone	296,916	Apr. 15	1289	358	27	258
Caissons. Building and setting molding-	P. A. Kewley	299,554	June 3	65	16	27	932
Calcimeter	L. M. Campi	299,461	May 27	1875	539	27	905
Calcimining and frescoing walls, &c. Compound for	J. Quinn, Jr	299,262	May 27	1626	.....	27	860
Calculator. Interest-	A. Davidson	297,573	Apr. 29	2142	584 / 585	27	426
Calendar	J. Cussons	296,934	Apr. 15	1310	363 / 364	27	261
Calendar	H. S. Stevens	300,157	June 10	835	226	27	1087
Calendar	J. F. Tannatt	297,871	Apr. 29	2501	685	27	495
Calender and paper-weight. Combined	L. Keller	296,179	Apr. 1	338	96	27	66
Calipers	S. H. Bellows	299,722	June 3	297	74	27	976
Calipers	C. Bovensiep	297,402	Apr. 22	2015	550	27	397
Calipers	W. A. White	296,250	Apr. 1	456	128	27	86
Calk sharpener. Shoe-	J. H. Cunningham	296,392	Apr. 8	638	176	27	126
Camera: *See* Enlarging-camera. Photographic camera.							
Camp-chair and cot	W. H. Bakewell	295,971	Apr. 1	93	28	27	20
Can: *See* Coffee-can. Paint-can. Creaming-can. Sardine-can. Fruit can. Sheet-metal can. Oil-can. Shipping-can.							
Can	W. Harris	297,990	May 6	39	10	27	535
Can and case	J. M. Bean	298,338	May 13	499	136	27	630
Can-filling machine	G. Ackermann and J. Wagner	297,549	Apr. 29	2103	575	27	419
Can-heading machine	C. R. Merriam	299,895	June 3	408	104 / 105	27	999
Can-opener	J. Greenwood	299,379	May 27	1771	510	27	887
Can-top	H. R. Allen	297,738	Apr. 29	2357	641	27	467
Cans clean while being filled. Device for keeping fish, meat, fruit, and other preserving	T. Levi	296,923	Apr. 1	160	46	27	33
Canal boat	A. McDonald	297,279	Apr. 22	1748	475	27	346
Candy-cutting machine	J. Kreischer	300,873	June 24	1773	483	27	1271
Candy-machine	J. P. Wick	299,901	Apr. 15	1272	353 / 354	27	255
Cane-juice. Apparatus for extracting	G. B. Boomer	298,165	May 6	257	66	27	575
Cane-juice. Process of and apparatus for defecating	W. A. Riggs, Sr	297,848	Apr. 29	2477	678	27	490
Canister and mill. Combined coffee	E. Norton	298,017	May 6	71	18	27	541

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Canoe. Hammock	E. H. Brown	299,951	June 10	567	152	27	1039
Canopy-standard	G. H. Graham and J. D. Lloyd	298,846	May 20	1113	313	27	751
Canopy-top	T. Zanger	300,428	June 17	1201	322	27	1161
Canopy-top clamp	T. Zanger	300,427	June 17	1200	328	27	1161
Cant-hook and lifting jack. Combined	O. H. Mitchell	298,765	May 20	1014	283	27	733
Cant-hook or dog	A. Kennard	298,759	May 20	1008	281	27	732
Capstan. Power-	J. P. Manton	300,382	June 17	1143	312	27	1151
Capsule	L. A. Anderson	298,720	May 20	959	268	27	723
Capsule-cutter	W. A. Tucker	299,182	May 27	1536	440	27	841
Capsule-drying rack	J. Krebbiel	296,846	Apr. 15	1197	335	27	241
Capsule for bottles, &c	C. Chesewright	300,047	June 10	689	187	27	1060
Capsule-machine	J. H. Glover	297,380	Apr. 22	1877	510	27	370
Capsule-machine	A. B. Hall	297,792	Apr. 29	2419	661	27	478
Capsule-machine	J. Krebbiel	296,844	Apr. 15	1195	335	27	240
Capsule-machine	J. Krebbiel	296,845	Apr. 15	1196	335	27	240
Capsule-machine	J. Krebbiel	296,847	Apr. 15	1198	336	27	241
Capsule-machine	J. Krebbiel	296,848	Apr. 15	1199	336	27	241
Capsule-machine	G. Otto	299,936	June 3	537	142 / 143	27	1024
Capsule-stripping machine	W. A. Tucker	296,895	Apr. 15	1265	352	27	253
Capsules. Machine for molding gelatine	W. A. Tucker	297,318	Apr. 22	1793	487	27	354
Car-braces. Gage for cutting	C. Mattice	298,600	May 17	800	224	27	685
Car-brake	J. P. Centner	296,274	Apr. 1	478	133	27	90
Car-brake	L. S. Colburn	299,741	June 3	319	81	27	960
Car-brake	T. W. Duffy	299,526	June 3	29	8	27	926
Car-brake	H. Flad and F. Höppner	299,121	May 27	1464	419 / 420	27	829
Car-brake	H. Flad and F. Höppner	299,122	May 27	1466	420	27	829
Car-brake	M. M. Hiner	298,467	May 13	646	183	27	656
Car-brake	A. Hoffmann	299,474	May 27	1491	544	27	907
Car brake	J. Stroecker, Jr	297,192	Apr. 22	1632	447 / 448	27	325
Car-brake	F. J. Underwood	296,896	Apr. 15	1266	352	27	253
Car brake	F. Tomnkins	299,296	May 27	1674	480	27	868
Car brake and starter	E. M. Holcomb and F. E. Miller	297,130	Apr. 22	1580	430	27	312
Car-brake attachment	E. Farnsworth	300,585	June 17	1388	383	27	1197
Car-brake. Automatic	D. J. Macpherson. (Reissue)	10,473	Apr. 29	2615	716	27	517
Car-brake. Automatic	G. H. Poor	300,122	June 10	786	211	27	1078
Car-brake. Automatic	G. H. Poor and C. J. Schiller	300,123	June 10	787	211	27	1078
Car-brake. Electro-magnetic	H. S. Park	296,211	Apr. 1	384	109	27	73
Car-brake. Electro-magnetic	H. S. Park	296,212	Apr. 1	385	109	27	74
Car-brake. Electro-magnetic	H. S. Park	296,349	Apr. 8	581	162	27	116
Car-brake-locking mechanism	S. W. McMann, C. J. Schiller, and E. B. Leigh.	300,101	June 10	758	204	27	1073
Car brakes. Vacuum-cylinder for railway	L. P. Lawrence	300,877	June 24	1779	484	27	1271
Car. Cattle-	W. Klaeser and F. Sell	296,842	Apr. 15	1191	334	27	239
Car-check for preventing cars on side tracks from being blown therefrom.	J. M. De Witt	300,448	June 17	1225	335	27	1166
Car-coupling	F. Baldt	297,072	Apr. 15	1452	402	27	287
Car-coupling	C. O. Barnes	297,053	Apr. 15	1453	402	27	288
Car-coupling	E. M. Bates	298,272	May 6	405	107	27	603
Car-coupling	H. T. Beam	298,817	May 20	1080	302	27	745
Car-coupling	H. T. Beam	300,299	June 10	1032	279	27	1121
Car-coupling	J. H. Beidler	296,114	Apr. 1	206	76	27	53
Car-coupling	T. Blandin	299,723	June 3	299	74	27	976
Car-coupling	G. Blythe	296,665	Apr. 8	975	273	27	194
Car-coupling	D. Brewer and J. Dunlap	297,226	Apr. 22	1690	459	27	335
Car-coupling	T. E. Buckman	298,445	May 13	617	175	27	651
Car-coupling	A. J. Chapel	297,765	Apr. 29	2391	652	27	473
Car-coupling	E. S. Clark	299,201	May 27	1539	448	27	847
Car-coupling	H. C. Comegys, A. B. Holmes, and D. Boucher.	299,623	June 3	157	39	27	949

Car-coupling	H. M. Sturgis	300,030	June 10	666	181	27	1056
Car-coupling	I. H. Trabue	295,956	Apr. 1	75	22	27	17
Car-coupling	I. H. Trabue	299,509	June 3	128	32	27	943
Car-coupling	C. Uehlinger	298,918	May 20	1204	330	27	769
Car-coupling	G. Ulsomer	297,877	Apr. 29	2598	697	27	497
Car-coupling	J. A. Vogler	298,523	May 13	706	200	27	668
Car-coupling	F. F. Von Ahbach and A. Hauger	297,957	Apr. 29	2611	715	27	516
Car-coupling	J. Ward	300,292	June 10	1025	276	27	1120
Car-coupling	A. L. Washburn and A. L. Journeay	298,526	May 13	709	201	27	669
Car-coupling	S. L. Wiegand	297,328	Apr. 22	1804	490	27	356
Car-coupling	W. Zachringer	300,186	June 10	879	236	27	1094
Car-coupling	S. B. Zimmerman	298,264	May 6	395	103	27	601
Car-coupling link	D. Hayes	298,690	May 13	920	255	27	708
Car coupling. Street-	C. Hanson	299,781	June 3	359	92	27	989
Car cover. Railway-	R. H. Wyman	296,909	Apr. 15	1146	323	27	243
Car door. Grain-	W. McGuire	299,822	June 3	404	104	27	998
Car-door guard. Freight-	S. Irvin	299,794	June 3	374	96	27	992
Car-door lock	S. C. Norton	300,325	June 10	1060	287	27	1126
Car door. Railway freight-	B. Eyster	300,315	June 10	1049	284	27	1125
Car. Dumping-	T. Reynolds	299,263	May 27	1026	467	27	860
Car. Dumping-	R. Stone	298,912	May 20	1198	337	27	768
Car. Dumping-	M. Van Wormer	296,088	Apr. 1	233	68, 69	27	47
Car-dumping apparatus	J. L. Mitchell	300,719	June 17	1581	434	27	1231
Car. Hand-	W. Dunbar and J. R. Kinley	298,736	May 20	984	{273 / 274}	27	727
Car. Railway-	R. H. Wyman	296,810	Apr. 15	1148	{323 / 324}	27	233
Car-replacer	J. A. Hodel	296,566	Apr. 8	858	238	27	170
Car-platform gate	A. J. Willcutt	299,709	June 3	284	70	27	974
Car. Railway-	J. F. Batchelor	300,937	June 24	1846	506	27	1244
Car-roof	H. S. Tipton	299,596	June 3	124	30	27	942
Car-roof	H. S. Tipton	299,597	June 3	125	31	27	942
Car safety-guard	F. P. H. Loftus	299,234	May 27	1597	458	27	855
Car-seat. Safety-brace	W. R. Lampton	296,975	Apr. 15	1359	375	27	270
Car. Sleeping-	J. H. Doerr	298,951	May 20	1243	359	27	776
Car stall. Stock-	W. Holden	300,259	June 10	975	264	27	1112
Car-starter	W. J. Caldwell	299,342	May 27	1729	496	27	879
Car-starter	F. Dawson and J. Holleyhead	300,698	June 17	1558	428	27	1227
Car-starter	S. Henry	299,539	June 3	44	12	27	929
Car-starter	J. Wilson	297,899	Apr. 29	2536	694	27	502
Car starter and brake	B. F. Shakespeare	299,023	May 20	1332	380	27	793
Car starter and brake	J. W. and G. R. Strickle	297,309	Apr. 22	1783	484	27	352
Car-step	J. H. Carver	299,959	June 10	575	154	27	1040
Car-step	W. R. Wilcox	300,668	June 17	1513	417	27	1220
Car. Stock-	G. D. Burton	298,666	May 13	688	247	27	702
Car. Stock-	H. Hess	298,968	May 20	1268	361	27	781
Car. Stock-	L. R. Stiles	296,245	Apr. 1	430	121	27	82
Car-wheel	M. Hamlin	296,954	Apr. 15	1329	369	27	265
Car-wheel	J. N. Kaufholz	296,840	Apr. 15	1189	333	27	239
Car-wheel	G. P. King	300,321	June 10	1056	286	27	1126
Car wheel and axle	M. Jordan	296,017	Apr. 1	155	45	27	31
Car wheel and axle	S. J. Stevenson	296,244	Apr. 1	429	121	27	82
Car-wheel hub	J. V. Hawkey	296,004	Apr. 1	139	40	27	29
Car-wheel lubricator	J. P. Silliman and J. A. Maxwell	297,021	Apr. 15	1413	389	27	280
Cars by cable. Grip device for the propulsion of	Z. P. Boyer	299,197	May 27	1592	{445 / 446}	27	845
Cars. Detachable compartment for	E. S. Henry	298,086	May 6	155	40	27	556
Cars. Electric motor for railway-	A. W. Adams	300,828	June 24	1719	469	27	1260
Cars. Grain-door for freight-	A. W. Alexander	296,907	Apr. 15	1278	356	27	256
Cars. Machine for driving endless ropes for the propulsion of street-	G. Poole	296,057	Apr. 1	197	57	27	40
Cars. Safety-bridge for railway-	B. L. Ferris	298,075	May 6	143	36	27	553
Cars. Sash adjuster for railway-	A. K. Mansfield	296,594	Apr. 8	891	247	27	177
Cars. Track-rail attachment for replacing derailed	M. C. Woods	298,437	May 13	608	172	27	649
Cars. Ventilating railway-	J. M. Palmer	297,835	Apr. 29	2463	675	27	487
Cars with cables. Device for coupling	J. C. Dolan	298,073	May 13	897	250	27	704

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Carbon-battery	J. B. Wallace	300,537	June 17	1333	366	27	1187
Carbon conductors. Manufacture of	E. Weston	301,024	June 24	1953	.....	27	1304
Carbonizing liquids. Agitator device for	R. F. Scannell	300,019	June 10	654	178	27	1054
Carburetor	L. C. Beebe	298,058	May 6	121	31	27	550
Card-grinding roller	W. B. Guild	299,131	May 27	1477	424	27	832
Card holder and exhibitor	S. L. Davis	298,354	May 13	518	141	27	633
Card or ticket holder	H. Willson	298,048	May 6	109	28	27	548
Card. Playing-	E. J. Levey	298,994	May 20	1288	367	27	785
Card-stripper	J. M. Dunham	299,918	June 3	511	136	27	1019
Card. Wood-exhibiting	H. Brooks and W. E. Reed	299,052	May 20	1372	391	27	890
Carding engine. Wool-	C. Rüdiger	300,284	June 10	1012	273	27	1118
Carding-machine	J. Shinn	299,240	May 27	1649	473	27	864
Carpenter's gage	G. S. Forrest	299,635	June 3	171	43	27	951
Carpet-fastener	J. Denton	299,376	May 27	1748	503	27	883
Carpet-fastener	E. and E. Hohneck	300,366	June 17	1121	304	27	1148
Carpet-fastener	H. A. Schreibe	297,453	Apr. 22	1966	537	27	388
Carpet-fastener	W. M. Shopbell	300,289	June 10	1021	275	27	1119
Carpet-fastener	Z. A. Van Deventer	300,416	June 17	1184	325	27	1158
Carpet fastener. Stair-	J. L. Barrett	300,754	June 24	1627	446	27	1244
Carpet-stretcher	J. H. Bruso	296,669	Apr. 8	979	274	27	195
Carpet-stretcher	F. W. Burns	300,342	June 17	1004	297	27	1143
Carpet-stretcher	J. A. Dunnell and A. Smith	298,074	May 6	142	36	27	553
Carpet-stretcher	S. Fildes	300,237	June 10	942	254	27	1105
Carpet-stretcher	F. J. Hubbard	298,850	May 20	1125	316	27	753
Carpet-stretcher	E. P. Poindexter	299,576	June 3	92	24	27	937
Carpet-stretcher	H. M. Pressly	300,396	June 17	1160	318	27	1154
Carpet-stretcher	W. K. Smith	299,087	May 20	1414	403	27	809
Carpet-stretcher	J. W. Thompson	299,691	June 3	263	65	27	970
Carpet-stretcher	R. F. Truslow	298,519	May 13	703	199	27	667
Carpet-stretcher	E. B. Clarke	298,521	May 13	704	199	27	668
Carpet-sweeper	A. C. Holden	298,349	May 13	513	139	27	632
Carriage-apron	G. A. Ellis	298,381	May 13	549	154	27	638
Carriage-body	F. A. Wittich	296,943	Apr. 15	1319	366	27	263
Carriage-bow	C. Bailey	298,808	May 20	1069	300	27	742
Carriage. Child's-	B. V. B. Dixon	296,379	Apr. 8	621	{171 / 172}	27	123
Carriage. Child's-	H. C. Seely	296,149	Apr. 1	305	88	27	59
Carriage. Child's-	H. C. Seely	298,784	May 20	1038	291	27	737
Carriage. Child's-	H. H. Frick	298,785	May 20	1041	291	27	737
Carriage-cover	W. Downham	297,780	Apr. 29	2406	657	27	476
Carriage-curtain attachment	H. Higgin	300,451	June 17	1227	335	27	1166
Carriage-curtain strap-fastening loop	F. P. Stone	298,969	May 20	1268	361	27	781
Carriage-door. Sliding	C. W. Trow	298,794	May 20	1051	294	27	739
Carriage. Infant's-	D. E. Gale	298,799	May 20	1059	296	27	741
Carriage. Jump-seat	W. H. Cooper	296,400	Apr. 8	645	178	27	127
Carriage-perch iron	H. Buchholz and W. Morris	296,534	Apr. 8	810	223	27	161
Carriage-top	H. Higgin	297,968	May 6	8	3	27	529
Carriage-top	H. McCurry	300,971	June 24	1885	518	27	1291
Carriage-top	R. H. Pfaff	297,147	Apr. 22	1580	434	27	315
Carriage-top	C. L. Pritchard	298,774	May 20	1024	286	27	735
Carriage-top	U. McClinchie and J. F. Butler	299,937	June 3	540	{143 / 144}	27	1024
Carriage top. Child's-	J. J. Travis	299,240	May 27	1603	460	27	856
Carriage-top fastener	J. Stanley	297,044	Apr. 15	1431	{393 / 394}	27	283
Carriage-top-prop block	A. S. Parker	296,240	Apr. 1	426	120	27	81
Carriage window-frames to curtains. Securing	H. Eichling	298,021	May 6	79	21	27	542
Carriages. Canopy-holder for children's	H. Higgin	299,631	June 3	166	42	27	950
Carriages. Light-frame for	E. W. Harral	300,972	June 24	1886	519	27	1292
Carriages. Material for covering	J. and J. Mills	297,257	Apr. 22	1728	469	27	342
Carrier: *See* Cash-carrier. Hay-carrier. Cash and parcel carrier. Straw-carrier. Trace-carrier.	R. Clark	297,830	Apr. 29	2459	673	27	486
Cart	W. S. Shoemaker	298,653	May 13	862	{241 / 242}	27	696
Cart, cotton and corn planter, and manure-distributer. Combined riding-	D. Argerbright	300,572	June 17	1375	{379 / 380}	27	1194
Cart. Dump-	I. Dolsen	297,539	Apr. 22	2084	568	27	409
Cart. Dumping coal-	O. J. McCollum and C. O. Stran	298,652	May 13	860	241	27	696
Cart. Road-	C. W. Saladee	300,231	June 10	936	253	27	1104
Cart. Road-	C. H. Straight	296,764	May 20	1013	283	27	733

Copy-holder	E. Nunan	296,868	Apr. 15	1228	343	27	246
Copying and engraving machine. Automatic electric	A. Schmid	298,030	May 6	90	24	27	544
Copying. Device for manifold	H. G. and J. B. Barlow	297,556	Apr. 29	2115	578	27	421
Copying-presses. Upper plate of	H. N. Hubbard	299,223	May 27	1582	475	27	851
Cord-clamp	C. J. A. Sjoberg	297,103	Apr. 22	1778	492	27	351
Cores. Machine for making green-sand	J. Scull	297,172	Apr. 22	1607	442	27	320
Cores. Machine for making green-sand	J. Scull	298,002	May 20	1184	332	27	765
Cores. Manufacture of green-sand	J. Scull	296,880	Apr. 15	1241	347	27	248
Cores. Pin for venting	J. Kinzer	300,480	June 17	1265	347	27	1174
Corkscrew	W. E. Alvord	300,036	June 24	1845	506	27	1284
Corkscrew	J. Barnes	299,100	May 27	1434	410	27	823
Corkscrew	C. Chinnock	299,758	June 3	316	80	27	980
Corkscrew	T. Curley	297,232	Apr. 22	1696	461	27	336
Corkscrew	J. K. P. Nourse	300,391	June 17	1154	316	27	1153
Corkscrew	J. A. Smith	299,664	June 3	453	118	27	1008
Corkscrew	A. J. Walter	295,962	Apr. 1	92	25	27	18
Corkscrew and key-ring. Combined	W. B. Woodman	296,661	Apr. 8	972	272	27	194
Corn-cutting machine. Green	G. W. Roberts	296,666	Apr. 1	207	60	27	42
Corn feed-regulator. Ear	S. E. Marsh	300,991	June 24	1906	524	27	1296
Corn husking, silking, and cutting machine	G. E. D. Baldwin	297,742	Apr. 29	2360	642 643	27	467
Corn package. Pop	V. D. Urso	296,897	Apr. 15	1267	372	27	254
Corn-sheller	W. H. Hall	299,174	May 27	1479	425	27	832
Corn-sheller	J. M. Hawley	299,196	May 27	1453	421	27	833
Corn-sheller	A. Kiger	300,872	June 24	1772	473	27	1270
Corn-sheller	H. Packer	297,288	Apr. 22	1758	478	27	348
Corn-shelling machine. Hand	L. Blue	298,937	May 20	1226	347	27	773
Cornstalk-cutter	J. W. Atkinson and B. Phelps	298,655	May 13	864	242 243	27	696
Cornet	C. G. Conn	295,981	Apr. 1	109	33	27	23
Cornet	F. F. Franceschini	300,590	June 17	1394	385	27	1198
Cornice	W. H. Dodge	296,734	Apr. 15	1058	293	27	216
Cornices, &c. Machine for making ornaments for gilt	J. Redeligx	300,128	June 10	704	213	27	1078
Corpse head-rest	J. McGrath	299,665	June 3	230	57	27	964
Corset busk and clasp. Combined elastic	C. A. Stevens	296,878	Apr. 15	1249	349	27	250
Corset-stay	H. Reily	296,063	Apr. 1	203	59	27	41
Corset-steel fastening	T. C. Bates	299,326	May 27	1705	489	27	875
Corsets. Clasp-fastening for elastic stays in	T. H. Ball	298,544	May 13	770	206	27	673
Cotton-chopper	H. D. Layman	296,700	Apr. 8	1015	284	27	202
Cotton chopper and scraper	S. A. Myers and J. J. Kelly	299,242	May 27	1612	461	27	858
Cotton-gin	S. D. Webb	296,659	Apr. 8	969	271	27	193
Cotton-gin gearing	C. C. Warren	298,734	May 6	473	127	27	616
Cotton-gin house	W. F. Groves	296,687	Apr. 8	1001	280	27	199
Cotton ginning and cleaning apparatus	M. Covel	296,924	Apr. 15	1169	328 329	27	236
Cotton-press	W. H. Burgess	297,915	Apr. 29	2555	700 701	27	506
Cotton-press	C. D. Heflin	299,139	May 27	1486	426	27	833
Cotton-press	J. D. O'Daniel	298,220	May 6	347	91, 92	27	592
Cotton scraper and chopper. Combined	C. J. Morrison	298,491	May 13	674	190	27	662
Counter-seat	A. E. Francis	297,062	May 6	23	7	27	531
Counter-shaft	D. C. Cumings	299,915	June 3	508	135	27	1018
Counter-stiffeners. Machine for forming	G. T. Shepley	298,420	May 13	590	166	27	647
Coupling: *See* Car-coupling. Pipe-coupling. Fence-wire coupling. Rope or cable coupling. Hose-coupling. Shaft-coupling. Lightning-rod coupling. Spring-coupling. Thill-coupling. Perch-coupling.							
Coupling	C. E. Mark	296,927	Apr. 1	164	47	27	33
Coupling device	D. P. Driscoll	296,394	Apr. 8	640	176	27	126
Coupling-pin	J. C. Murray	299,663	May 20	1410	402	27	808
Cover-holder for jars, milk-cans, &c.	M. Alston	300,935	June 24	1844	506	27	1284
Cracker-machine	C. S. Fowler and L. A. Rockwell	300,316	June 10	1051	295	27	1125
Crane. Traveling	H. M. Barnhart and E. Huber. (Reissue.)	10,470	Apr. 22	2098	573 574	27	412
Crane. Traveling	E. Huber and H. M. Barnhart	296,965	Apr. 15	1341	372	27	268
Crank	J. H. Burks	296,979	Apr. 1	474	132	27	89
Crank-disk	H. Tabor	297,343	Apr. 22	1789	485	27	354
Crank, Tedder	F. Trump	296,368	Apr. 8	601	166	27	120
Crate for mattresses and bedding	H. S. Sternberger	299,871	June 3	458	120	27	1009
Crate, Knockdown	J. A. H. Ellis	296,737	Apr. 15	1061	299	27	217
Crayon-holder	A. T. Cross	296,537	Apr. 8	814	225	27	102
Crayon-holder	A. T. Cross	296,538	Apr. 8	815	225	27	102
Crayon-holder	A. T. Cross	296,539	Apr. 8	817	225	27	163

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Creaming-can	J. A. Kendall	296,416	Apr. 8	663	183	27	170
Crocheting-fork	J. Vetter	297,881	Apr. 29	2516	688	27	498
Cross-head	G. H. Corliss	298,068	May 6	136	34	27	552
Crupper	H. H. Hedrick	297,601	Apr. 29	2176	594	27	433
Cruppers. Machine for forming	J. Shaffer	300,021	June 10	656	179	27	1054
Crusher: *See* Clod-crusher. Quartz-crusher. Ore-crusher. Stone-crusher.							
Crushing-mill	G. W. Morrow	297,083	Apr. 15	1484	411	27	294
Cuff	T. R. Boone	297,312	Apr. 29	2353	699	27	506
Cuff-box	I. P. Turner	295,958	Apr. 1	77	23	27	18
Cuff-fastener and adjuster	T. B. Willson	298,503	May 13	719	203	27	671
Cuff-holder	H. D. Bishop	297,744	Apr. 29	2265	644	27	468
Cuff-holder	F. W. Stafford and G. A. Henderson	298,035	May 6	93	25	27	545
Cultivating fruits and vegetables	J. W. Groves and V. Mutch	297,932	Apr. 29	2542	702	27	511
Cultivator	D. Archer	297,657	Apr. 29	2240	612	27	447
Cultivator	H. Borgelt, Jr., and L. P. Borrell	300,503	June 17	1364	376	27	1192
Cultivator	T. J. Bowen and J. F. Barnes	300,686	June 17	1337	423	27	1224
Cultivator	D. W. Branch	296,121	Apr. 1	274	28	27	54
Cultivator	G. W. Brown	298,123	May 20	1057	305	27	746
Cultivator	E. Cracraft	299,626	June 3	420	40	27	950
Cultivator	T. J. Craft	297,069	Apr. 15	1471	407	27	291
Cultivator	B. J. Curry	299,627	June 3	402	41	27	950
Cultivator	J. C. Doane	300,075	June 10	697	189	27	1062
Cultivator	D. N. Luse	297,983	Apr. 15	1369	378	27	272
Cultivator	A. J. Marberry	296,025	Apr. 1	102	47	27	33
Cultivator	M. W. McCann	296,860	Apr. 15	1214	340	27	244
Cultivator	G. Moore	298,409	May 13	800	227	27	687
Cultivator	R. B. Norment	299,025	June 3	534	142	27	1023
Cultivator	W. S. Pates	295,977	Apr. 1	53	15	27	13
Cultivator	C. M. Pinckney	296,615	Apr. 8	917	256	27	182
Cultivator	H. H. Sater	297,647	Apr. 29	2226	605	27	442
Cultivator	C. L. Schoenstedt	301,041	June 24	1938	535	27	1301
Cultivator	M. A. Travis	297,035	Apr. 15	1432	394	27	283
Cultivator	N. Trowbridge	296,800	Apr. 15	1143	319	27	211
Cultivator	C. H. Hill and J. T. Ryan	297,933	Apr. 29	2564	708	27	511
Cultivator. Adjustable seat-lift	J. Sherman	300,649	June 17	1487	409 410	27	1214
Cultivator and cotton-chopper	J. Sherman	300,650	June 17	1489	410	27	1215
Cultivator and cotton-chopper	B. C. Bradley	297,914	Apr. 29	2354	700	27	506
Cultivator-beams. Drag-bar for	T. H. Baird	298,334	May 13	496	135	27	629
Cultivator. Cotton and corn	C. La Dow	297,524	Apr. 22	2063	563 564	27	405
Cultivator or harrow. Wheel	H. L. Miller	299,415	May 27	1823	524	27	896
Cultivator. Scraper	J. J. McClen	299,681	May 20	1408	401	27	807
Cultivator. Tongueless	A. Lindgren	296,760	Apr. 15	1091	307	27	224
Cultivator. Wheel	J. B. Neff	299,157	May 27	1506	432	27	836
Cultivators. Foot-lift for riding	A. Dow and L. H. Gorgas	297,240	Apr. 22	1703	464	27	337
Cup: *See* Collapsing cup.							
Cupboard	W. J. Clapp and T. Griffiths. (Reissue.)	10,481	May 20	1426	400 407	27	811
Cupola-furnace	J. S. Woodward	299,449	May 27	1860	535	27	902
Curbstone and telegraph-wire conduit. Combined	I. B. Tripp	296,649	Apr. 8	955	268	27	190
Curtain bar. Window	J. C. Doty	299,370	May 27	1750	504	27	883
Curtain-fixture	W. B. Noyes	297,709	Apr. 29	2322	632	27	461
Curtain-fixture	L. Page and L. Weber	297,127	Apr. 29	2236	601	27	448
Curtain-fixture	T. J. Parkinson	296,048	Apr. 1	185	54	27	38
Curtain-fixture	T. L. Quigley	297,163	Apr. 22	1767	479	27	318
Curtain-fixture	F. G. Robbins	298,407	May 13	578	161	27	644
Curtain-fixture	G. E. Swan	300,293	Apr. 1	514	143	27	97
Curtain-fixture	A. Sweetland	296,712	Apr. 8	1025	288	27	204
Curtain-fixture	C. F. Viney	299,143	May 27	1490	427	27	834
Curtain-fixture. Adjustable	C. T. Unangst	300,107	June 10	848	220	27	1089
Curtain fixtures. Window	B. F. Burnett	296,127	Apr. 1	292	80	27	55
Curtain-loop	J. Day. (Reissue)	10,464	Apr. 1	522	145	27	98
Curtain-pin	J. Moore	299,231	June 3	414	106	27	1000
Curtain-pole	J. Berbecker	295,972	Apr. 1	94	29	27	20
Curtain-pole ring	J. Kroder	300,495	May 13	809	232	27	683
Curtain-pole tip	F. L. Lathrop	300,528	June 17	1272	349	27	1175
Curtain-ring	J. Sumner	298,824	May 20	1068	305	27	746
Curtain-ring	H. H. Bryant	296,003	Apr. 1	138	40	27	28
Curtain-roller	J. Harris	299,256	May 27	1649	465	27	850
Curtain-roller fixture	W. B. Noyes	300,311	June 10	1045	293	27	1124
Curtain-roller. Spring	J. Denver	299,573	June 3	66	16	27	933
Curtain-shade fixtnre	C. F. Larsen and B. A. S. Nielsen	300,267	June 10	994	266	27	1113
Cuspidor	J. Kelly	299,734	June 3	342	78 79	27	979
Cut-off and governor. Combined	C. Callahan	299,063	June 10	579	155	27	1041
Cut-off for valves	H. Cook	296,403	Apr. 8	648	179 180	27	128
Cut-off governor	W. F. Goodman	296,172	Apr. 1	331	94	27	64
Cut-off mechanism	C. T. Holloway						
Cut-off nozzle							
Cutter: *See* Capsule-cutter. Sole-edge cutter. Cigar-cutter. Stalk-cutter. Cornstalk-cutter. Straw-cutter. Oatmeal-cutter. Tobacco-cutter. Paper-cutter. Vegetable-cutter. Peg-cutter. Washer-cutter. Pipe-cutter. Wire-cutter.							
Cutter-head	U. D. Byron	300,305	June 10	1039	281	27	1123
Cutter-head	M. S. O'Neil	297,534	Apr. 22	2079	567	27	408
Cutter-head	J. D. Stricklor	296,481	Apr. 8	743	205	27	147

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cutter-head guard	T. Harps	300,363	June 17	1118	303	27	1147
Cutting-board	G. W. Cody	297,351	Apr. 22	1846	301	27	364
Cyclometer	R. Burns	299,733	June 3	310	78	27	979
Cylinder engine. Multiple	P. Brotherhood	299,731	June 3	308	77, 78	27	978
Damper	J. W. Shaw	299,179	May 27	1594	437	27	839
Damper-regulator	F. Thompson	299,635	May 13	830	234	27	692
Damper regulator. Steam-	J. L. Hornig	296,568	Apr. 8	860	239	27	171
Damper. Stove-pipe	W. E. Beilman	300,559	June 17	1362	375	27	1191
Dead-centers and for converting motion. Device for overcoming	I. L. Hawkins	298,199	May 6	298	77	27	582
Demijohn or bottle safe	I. B. Wollard	296,903	Apr. 15	1274	354	27	255
Dental-drill hand-piece	J. H. Siddall	296,078	Apr. 1	219	64	27	45
Dental-engine angle attachment	A. Weber	299,040	May 20	1366	387	27	798
Dental-floss holder	G. E. Greene	301,055	June 24	1990	550	27	1311
Dental-foil condenser	R. S. Williams	298,717	May 13	950	264	27	714
Dental foil. Wrinkling gold	R. S. Williams	298,716	May 13	948	263	27	714
Dental hand-piece	H. Laurence	298,483	May 13	665	188	27	660
Dental mold	J. W. Hayford	296,690	Apr. 8	1004	281	27	200
Dental rubber dam	L. M. Hulsey	300,690	June 17	1408	387	27	1200
Dental-rubber-dam holder	R. H. Moffitt	296,992	Apr. 15	1379	381	27	274
Dental vulcanizer	F. W. Seabury	299,861	June 3	447	115	27	1007
Dentist's chair	J. B. Waring	300,538	June 17	1334	{366 / 367}	27	1187
Deodorizing and antiseptic water-closet cover	F. H. Hubbard	298,091	May 6	160	41	27	557
Derrick	C. T. Day	298,184	May 6	279	72	27	572
Derrick	A. Reitz	298,405	May 13	576	{160 / 161}	27	644
Derrick. Hoisting-	A. B. Morrison	297,831	Apr. 29	2459	674	27	486
Derrick. Portable	H. Austin and I. Scoville	299,504	June 3	5	2	27	921
Desk	J. Klar	297,940	Apr. 29	2593	711	27	513
Desk	D. Shuler	301,014	June 24	1942	537	27	1302
Desk and seat. School	C. A. Merrill	299,826	June 3	409	105	27	999
Detector: *See* Time-detector.							
Diamonds in tools. Fastening	T. W. Collins	299,055	May 20	1374	391	27	801
Dictionary-stand	E. D. Swain	297,541	Apr. 22	2088	569	27	410
Die-stock	W. C. Hartmann	300,604	June 17	1414	{389 / 390}	27	1201
Die-stock and die	N. Sawyer	300,901	June 24	1806	494	27	1277
Digger: *See* Potato-digger.							
Dipper	G. T. Peters	296,051	Apr. 1	190	54	27	39
Dish. Butter-	J. D Lucas	296,293	Apr. 1	506	141	27	93
Dishcloth-holder	J. T. Foster	296,550	Apr. 8	835	232	27	166
Dish-washing apparatus	C. L. Rudd	300,398	June 17	1162	318	27	1154
Disinfecting and cleansing water-closets	C. F. Pike	300,636	June 17	1462	403	27	1210
Disinfecting sewers	E. Z. Collings and C. F. Pike	297,229	Apr. 22	1693	460	27	335
Disintegrating and separating machine	J. M. Case	297,763	Apr. 29	2389	{651 / 652}	27	473
Distillation. Apparatus for vacuum	H. T. Yarvan	300,185	June 10	877	236	27	1094
Distillation of oil. Apparatus for the continuous	H. C. Smith	300,811	June 24	1695	463	27	1255
Distillation of wood	J. A. Mathieu	300,384	June 17	1147	314	27	1152
Distillation of wood. Apparatus for the	R. Haldane	297,517	Apr. 22	2053	{560 / 561}	27	403
Distilling petroleum. Apparatus for	E. Kells	298,210	May 6	322	84	27	586
Distilling wood. Apparatus for	J. A. Mathieu	300,383	June 17	1144	{313 / 314}	27	1151
Ditching-machine	D. Hershberger	300,318	June 10	1053	{285 / 286}	27	1125
Ditching-machine	M. Milner	298,223	May 6	340	89	27	560
Ditching-machine	R. H. Nogar	296,599	Apr. 8	897	248	27	178
Ditching-machine	A. J. Osborne	296,872	Apr. 15	1232	344	27	247
Ditching-machine	F. Plumb	298,887	May 20	1167	326	27	761
Ditching-machine	E. H. Smith	297,861	Apr. 29	2490	682	27	493
Ditching-machine	T. Willsea	301,034	June 24	1964	543	27	1306
Ditching-machine. Tile-drain	W. P. B. Decker	295,909	Apr. 1	19	5	27	7
Dividers	R. Folger	297,979	May 6	30	6	27	531
Door	G. E. Filer and A. H. Neff	297,774	Apr. 29	2402	655	27	475
Door and panel work	W. N. Miller	296,035	Apr. 1	172	50	27	35
Door-check	J. J. Lamb	298,989	May 20	1257	367	27	785
Door-check	L., G., and E. Rall	297,005	Apr. 15	1392	384	27	276
Door-check	F. M. Sears	296,229	Apr. 1	412	115	27	78
Door-check	O. P. Vandeburgh	300,169	June 10	852	230	27	1090
Door-check. Pneumatic	W. C. Clark	296,727	Apr. 15	1049	{295 / 296}	27	215
Door-check. Pneumatic	J. A. Sherman	298,787	May 20	1042	292	27	738
Door-check. Pneumatic	J. A. Sherman	298,788	May 20	1044	292	27	738
Door-hanger	W. Ide	300,474	June 17	1258	344	27	1172
Door-hanger	W. J. Lane	296,584	Apr. 8	877	243	27	175
Door-hanger	W. J. Lane	299,149	May 27	1496	430	27	835
Door-hanger	E. Y. Moore	299,156	May 27	1502	432	27	836
Door hangers. Track for barn-	J. H. Lawrence	299,811	June 3	389	100	27	995
Door-keeper. Electric	A. C. Woehrle	297,096	Apr. 15	1505	415	27	297
Door-lock. Electric	C. Wiest	300,304	June 10	1075	293	27	1129
Door lock. Sliding	J. H. Dougherty	297,239	Apr. 22	1702	463	27	337
Door-opener. Electric	J. H. Bunnell	297,751	Apr. 29	2372	646	27	469
Door-plate	A. T. Abbott	296,109	May 27	1543	442	27	843
Door-securer, &c	E. P. Conner	299,742	June 3	320	81	27	981
Door-securer	C. Franke and A. Peters	298,964	May 20	1265	360	27	789
Door-securer	W. Starrett	297,465	Apr. 22	1984	541	27	391
Door-spring	P. McAleer	299,048	May 20	1408	401	27	807
Door. Ventilating-	H. W. Eastman	293,989	Apr. 1	118	35	27	24
Doors. Guiding and supporting device for	A. Sanders and R. S. Henderson	296,629	Apr. 8	933	261	27	185

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Doors. Stay-roller for sliding	S. Ide	297,805	Apr. 29	2432	664	27	481
Doors. Stay-roller for sliding	L. Terry	298,914	May 20	1200	338	27	769
Doors, windows, gates, &c. Fastener for	A. G. Simpson	296,468	Apr. 8	724	200	27	143
Double gage	J. Hellriegel	300,255	June 10	968	262	27	1110
Double-headed gage	G. S. Forrest	297,371	Apr. 22	1868	508	27	360
Double-tree	S. M. Firey	297,512	Apr. 22	2048	559	27	402
Doubling and winding yarn or thread upon bobbins. Machine for	J. and J. Horrocks	297,690	Apr. 29	2397	{625 / 626}	27	456
Dough-mixer	F. F. Hussey	297,518	Apr. 22	2055	561	27	403
Draft-equalizer	W. Crozier	296,930	Apr. 15	1366	362	27	260
Draft-equalizer	C. Olson	297,286	Apr. 22	1735	477	27	348
Draft-equalizer	T. Pates	298,773	May 20	1023	286	27	734
Draft-equalizer	S. Ray	298,622	May 13	826	231	27	690
Draft-equalizer	J. W. Collins	300,764	June 24	1643	450	27	1246
Drag. Adjustable marine	J. N. Key	297,811	Apr. 29	2437	666	27	482
Drag-rod	G. W. Immel	300,870	June 24	1771	482	27	1270
Drain-cleaner	S. L. Wiegand	300,545	June 17	1345	370	27	1189
Drainer. Centrifugal	W. B. Turner and J. J. Mann	296,801	Apr. 15	1137	320	27	231
Draw-bar and buffer	E. G. Gery	298,460	May 13	634	181	27	655
Drawer-lock	J. Wise	296,807	Apr. 15	1144	322	27	232
Drawer-lock	O. F. Garvey	299,374	May 27	1767	509	27	886
Drawer-pull	J. M. Cox	298,181	May 6	275	71	27	576
Drawers	J. C. Tracey	298,322	May 6	471	127	27	615
Drawers	J. A. Ball	299,945	June 10	558	149	27	1037
Dredge	H. B. Angell	296,503	Apr. 8	770	212	27	152
Dredger	D. J. Gilchrist	298,573	May 13	768	215	27	680
Dredger	A. W. Von Schmidt	299,882	June 3	470	123	27	1011
Dredger-discharge pipes. Device for connecting and supporting the sections of	F. Brotherhood	298,443	May 13	614	{173 / 174}	27	651
Dredging, crushing, and washing phosphate-rock. Apparatus for	A. W. Von Schmidt	300,333	June 10	1074	{292 / 293}	27	1129
Dredging-machine							
Drier: *See* Brick-drier. Fruit-drier. Clothes-drier.							
Drier	G. H. Immendorf	296,572	Apr. 8	865	240	27	172
Drier for fruit, &c	F. M. Travis	298,916	May 20	1202	339	27	769
Drill: *See* Grain-drill. Rice-drill. Hand-drill. Rock-drill. Mining-drill. Seed-drill. Ratchet-drill.							
Drill and countersink. Combined	A. J. Smart	298,248	May 6	374	99	27	597
Drill and countersink. Combined	A. J. Smart	299,429	May 27	1836	528	27	898
Drills. Machinery for grinding or sharpening	W. F. Smith and A. Coventry	299,433	May 27	1840	{529 / 530}	27	899
Drills. Manufacture of	C. Van Haagen	296,254	Apr. 1	444	{125 / 126}	27	84
Drilling machine. Coal-	L. P. Moran	298,766	May 20	1015	284	27	733
Drilling-machine. Suspended	E. F. Gordon and H. Hobbs	297,383	Apr. 22	1880	511	27	371
Drilling-machines. Index-gage for	A. B. Bean	300,638	June 10	678	184	27	1058
Drum and cymbal clamp	P. W. Fair	296,192	Apr. 1	308	88	27	60
Dry-closet	T. W. Jackson	299,226	May 27	1585	456	27	852
Dry closet	F. F. Street	301,018	June 24	1945	538	27	1303
Dry-plate holder	E. L. Bergstresser	300,438	June 17	1214	331	27	1164
Dry separator and amalgamator	H. Earhart	299,211	May 27	1569	451	27	849
Drying-machine for grain, &c	E. H. Sawin	299,683	June 3	275	63	27	968
Dumping-boat	M. S. Coleman	299,664	May 13	890	248	27	702
Duplicating-engine	M. B. Kellogg	299,553	June 3	63	16	27	932
Dust-arrester	O. Kntsche	296,758	Apr. 15	1090	307	27	292
Dust-arresting machine	J. S. Brandstaetter	297,223	Apr. 22	1684	{458 / 459}	27	334
Dust-collector	B. F. Ortman and H. R. Taylor	297,436	Apr. 22	1945	530	27	383
Dust-collector	W. Richardson	299,852	June 3	447	113	27	1005
Dust-pan	F. W. Carpenter	298,447	May 13	619	176	27	652
Dust-pan	S. C. Sweetson	299,294	May 27	1670	478	27	867
Dyes from the aromatic diamines. Obtaining brown	P. Monnet	299,994	May 20	1296	.....	27	787
Dynamometer	A. Wilson	300,821	June 24	1768	467	27	1258
Ear-ornament fastener	G. Krementz	298,987	May 20	1265	366	27	784
Ear-ring	H. G. Mackinney	299,762	May 20	1011	282	27	732
Ear-rings, &c. Suspension-hook for	E. A. Lehmann	300,468	June 17	1274	370	27	1176
Earth-remover	S. A. Miller	296,990	Apr 15	1376	380	27	273
Easel	D. M. Ireland	299,391	May 27	1790	545	27	890
Easel	T. C. Vail	298,257	May 6	295	101	27	599
Eaves-trough hanger	H. J. Hoepfner	298,970	May 20	1270	362	27	781
Eaves-trough hanger	M. B. Lee	299,407	May 27	1815	522	27	895
Eccentric. Variable	A. O. Frick	299,215	May 27	1574	472	27	850
Edgers. Presser-roll for gang-	P. P. Lane and J. B. Stanwood	299,653	June 3	260	51	27	957
Educational appliance	A. H. Kennedy	296,048	Apr. 1	156	45	27	32
Educational purposes. Figure, map, and chart for	M. E. Guirey	298,746	May 20	995	278	27	730
Egg and cake beater	A. C. Rex	298,503	May 13	699	195	27	665
Egg and sugar beater	C. Deis	297,115	Apr. 22	1542	426	27	309
Egg-beater	J. E. Welling	299,884	June 3	471	124	27	1012
Egg beater and dish. Combined	W. B. Henderson	298,375	May 13	511	148	27	677
Egg-case. Folding	W. G. Ruge	298,237	May 6	360	96	27	594
Egg-case. Folding	W. G. Ruge	300,514	June 17	1304	358	27	1183
Egg-preserving device	G. Conant	297,676	Apr. 29	2277	640	27	459
Ejector	J. M. Marty	297,615	Apr. 29	2491	698	27	436
Electric alarm applied to cots, &c	W. F. and W. H. Keep	299,640	June 3	196	49, 50	27	956
Electric-arc light	T. A. Edison	297,580	Apr. 29	2456	688	27	429
Electric battery	O. Millard	298,997	May 20	1293	369	27	787
Electric battery	J. C. Vetter and S. G. Putnam	300,666	June 17	1511	416	27	1220
Electric battery and lamp. Portable	C. G. Gumpel	296,331	Apr. 8	556	155	27	111

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Electric battery. Secondary	E. T. Starr	299,434	May 27	1842	530	27	900
Electric cable	W. H. Sawyer	297,855	Apr. 29	2484	680	27	492
Electric cable	S. F. Shelbourne	297,177	Apr. 22	1613	443, 444	27	321
Electric call apparatus. Individual	A. P. Howes	298,393	May 13	550	151, 152	27	639
Electric-circuit-closing device. Automatic	C. T. Ross	298,121	May 6	197	52	27	564
Electric-circuit connection	D. E. Drake	299,467	May 27	1881	541	27	906
Electric-circuit connector	E. Weston	298,326	May 6	475	128	27	616
Electric circuits. Junction-box for	A. P. Wright	297,547	Apr. 22	2094	571	27	411
Electric circuits. Junction device for	E. Weston	301,029	June 24	1958	541	27	1305
Electric circuits. Safety-strip for	E. Weston	301,030	June 24	1960	541	27	1306
Electric conductor	A. C. Tichenor	300,410	June 17	1178	323	27	1157
Electric conductor. Anti-induction	S. F. Shelbourne	297,176	Apr. 22	1611	443	27	321
Electric conductors. Binding-post for	A. G. Goodbody	296,160	Apr. 1	317	90	27	92
Electric conductors. Conduit and attachment for	S. F. Shelbourne	297,183	Apr. 22	1622	445	27	323
Electric conductors. Connector for	E. Weston	301,026	June 24	1955	540	27	1305
Electric conductors from induction. Protecting	S. F. Shelbourne	297,184	Apr. 22	1623	445	27	323
Electric conductors. Manufacture of	J. J. Williamson	300,179	June 10	660	234	27	1092
Electric conductors. Underground conduit for	A. Campbell	300,210	June 10	913	246	27	1160
Electric currents. Apparatus for the production and utilization of secondary	L. Ganlard and J. D. Gibbs	297,924	Apr. 29	2571	705	27	509
Electric cut-off	C. H. Goebel	297,928	Apr. 29	2579	707	27	510
Electric helix and winding the same	F. Bain	296,380	Apr. 8	623	172	27	124
Electric-light and telegraph post. Combined	S. F. Shelbourne	297,182	Apr. 22	1620	445	27	322
Electric-light fixture	P. H. Klein, Jr	297,269	Apr. 22	1739	472	27	344
Electric-light tower	J. S. Adams	297,332	Apr 22	1813	492, 493	27	358
Electric lights. Treating carbons for	T. A. Edison	298,679	May 13	905	231	27	705
Electric machine. Dynamo-	J. B. Blair	300,835	June 24	1728	472	27	1262
Electric machine. Dynamo-	T. A. Edison	297,582	Apr. 29	2158	589	27	429
Electric machine. Dynamo-	T. A. Edison	297,583	Apr. 29	2158	589	27	429
Electric machine. Dynamo-	T. A. Edison	297,584	Apr. 29	2160	589	27	430
Electric machine. Dynamo-	T. A. Edison	297,587	Apr. 29	2162	590	27	430
Electric machine. Dynamo-	T. A. Edison	298,954	May 20	1248	353	27	777
Electric machine. Dynamo-	T. A. Edison	298,955	May 20	1249	354	27	777
Electric machine. Dynamo-	E. J. Houston and E. Thomson	296,509	Apr. 8	562	239	27	171
Electric machine. Dynamo-	J. A. Lannert	300,615	June 17	1431	304	27	1204
Electric machine. Dynamo-	A. E. G. Lubke	296,857	Apr. 15	1216	330	27	243
Electric machine. Dynamo-	E. Thomson	296,709	Apr. 15	1132	310	27	230
Electric machine. Dynamo-	C. J. Van Depoele	297,878	Apr. 29	2749	687	27	497
Electric machine. Dynamo-	C. J. Van Depoele	300,535	June 17	1329	305	27	1186
Electric machine. Dynamo-	E. Weston	301,025	June 24	1954	540	27	1304
Electric machine. Dynamo-	E. Weston	301,027	June 24	1956	540	27	1305
Electric machine. Dynamo-	J. E. Watson	300,420	June 17	1190	326	27	1159
Electric machine regulator. Dynamo-	F. Diehl	299,117	May 27	1459	417	27	898
Electric machines. Construction of	T. A. Edison	298,956	May 20	1250	354	27	777
Electric machines. Operating dynamo-	W. Adams	300,827	June 24	1717	469	27	1260
Electric motor	H. B. Sheridan and H. A. Gorn	300,648	June 17	1486	409	27	1214
Electric motor	L. W. Stockwell	298,130	May 6	206	55	27	566
Electric motor	E. T. Starr	300,154	June 10	830	225	27	1086
Electric-motor regulator	C. G. Burke	298,550	May 13	736	208	27	674
Electric motors and dynamo-electric machines. Armature for	J. C. Vetter and S. G. Putnam	298,922	May 20	1208	341	27	770
Electric motors and generstors. Commutator and brush for	E. A. Sperry	297,867	Apr. 29	2497	684	27	494
Electric multiple-switch-board system	T. N. Vail	299,039	May 20	1354	386, 387	27	797
Electric regulator	E. A. Sperry	297,866	Apr. 29	2495	684	27	494
Electric regulator	E. Weston	301,028	June 24	1957	541	27	1305
Electric switch-board	T. N. Vail	296,253	Apr. 1	440	124	27	84
Electric-wire conduit	C. H. Goebel	297,927	Apr. 29	2578	707	27	510
Electric-wire conduit	M. P. Halhaway	300,470	June 17	1254	343	27	1171
Electric wire. Manufacture of compound	J. J. Williamson	295,966	Apr. 1	86	26	27	19
Electric wires and pneumatic tube combined. Underground conduit for	C. H. Goebel	297,920	Apr. 29	2579	707	27	510
Electric wires. Laying underground	J. H. Page	298,020	May 6	76	20	27	542
Electric wires. Skeleton arch for the support of	G. M. Hoag	299,692	May 13	922	255	27	708
Electric wires. Underground conduit for	C. H. Goebel	297,926	Apr. 29	2576	707	27	510
Electrical circuit-breaker	E. Weston	298,144	May 6	229	60	27	570
Electrical circuit-breaker	E. Weston	301,021	June 24	1952	540	27	1304
Electrical conductor	T. A. Edison	297,586	Apr. 29	2162	590	27	430
Electrical conductor	E. Weston	301,031	June 24	1960	542	27	1306
Electrical conductor	J. J. Williamson	300,669	June 17	1514	417	27	1220
Electrical conductor and connecting device therefor	J. Kruesi	296,185	Apr 1	345	98	27	67
Electrical-conductor covering	F. S. Harrington	298,751	May 20	1000	279	27	730
Electrical conductors. Manufacture of	T. Shaw	296,674	Apr. 1	216	63	27	44
Electrical currents. Apparatus for distributing	G. W. Durbrow	297,672	Apr. 15	1474	408	27	292
Electrical cut-out. Automatic	W. M. Thomas	300,532	June 17	1326	304	27	1185
Electrical purposes. Indestructible compound for coating wires for	J. H. Page	297,626	Apr. 29	2595	.....	27	438
Electrical wires. Supporting and insulating	J. W. Tringham	296,485	Apr. 8	747	206	27	148
Electricity. Apparatus for distributing	A. I. Gravier	300,068	June 10	711	193, 194	27	1065
Electro-magnetic-brake system	A. L. Drwelius	296,319	Apr. 8	540	151	27	108
Electro-magnetic indicator	W. S. Johnson	299,592	June 3	62	16	27	930
Electro-magnetic motor	C. A. Saxe	298,507	May 13	692	196	27	665
Electro-magnetic valve and connection	H. Flad	296,549	Apr. 8	832	230, 231	27	166
Electroplating apparatus	C. F. Brush	297,669	Apr. 29	2364	616	27	449
Electrotype or stereotype plates. Mortised wooden block for	F. A. Ringler and E. I. Alfeld	299,042	May 20	1315	376	27	790
Elevating apparatus	T. Keith	297,606	Apr. 29	2306	627	27	457

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Elevator: *See* Excavating-elevator. Lumber-elevator. Ore-elevator. Hay-elevator. Passenger or other elevator. Hay and grain elevator. Skid-elevator. Hydraulic elevator. Water-elevator.							
Elevator	H. Chandler	296,315	Apr. 8	535	150	27	107
Elevator	W. J. M. Dobson	298,187	May 6	283	73	27	579
Elevator	M. W. Hoben	300,258	June 10	973	263	27	1111
Elevator	M. N. Hutchinson	299,645	June 3	190	47	27	935
Elevator	M. N. Hutchinson	299,646	June 3	191	48	27	935
Elevator	C. A. Youngman	298,331	May 6	482	130	27	618
Elevator	J. A. Holmes	296,008	Apr. 1	143	42	27	29
Elevator-bucket	J. A. Holmes	297,924	Apr. 29	2585	709	27	511
Elevator-bucket	J. A. Lesmid and J. Lotan	299,656	June 3	204	52, 53	27	958
Elevator for coal, &c	S. W. Bartholomew	296,509	Apr. 8	779	215	27	154
Elevator for seed-cotton and other materials	I. K. Beekman	300,677	June 17	1528	420	27	1222
Elevator-gate attachment	S. J. Laughlin	298,492	May 13	664	187	27	660
Elevator-gate, Self-acting	H. C. Wilcox	300,932	June 24	1840	501	27	1284
Elevator-guard	C. A. Hoffnagle	299,544	June 3	52	13, 14	27	930
Elevator safeguard	R. Seiffert	296,681	Apr. 15	1241	348	27	240
Elevator safety attachment	A. J. Becker and J. B. Young	296,511	Apr. 8	781	215	27	155
Elevator safety-catch	F. A. Weeks	300,541	June 17	1240	369	27	1188
Elevator safety-catch	J. W. Simmons	297,459	Apr. 22	1973	530	27	389
Elevator safety-clutch	L. D. Shaw	299,173	May 27	1525	437	27	899
Elevators. Automatic-brake mechanism for hand-power	J. Hodges	299,222	May 27	1580	454, 455	27	851
Elevators. Automatic safety appliance for	C. A. Hoffnagle	299,543	June 3	51	13	27	930
Elevators. Automatic safety-brake for	A. Abbott	296,100	Apr. 1	246	72	27	50
Ellipsograph	A. S. Lovett	300,969	June 24	1903	524	27	1295
Embalming apparatus	R. Freitag	295,917	Apr. 1	28	9	27	8
Embroidering-machine	M. H. Pulaski	297,448	Apr. 22	1961	536	27	387
Embroidery	M. H. Pulaski	298,025	May 6	84	22	27	543
Embroidery	E. Sturzenegger	300,160	June 10	839	227	27	1087
Embroidery	J. B. West	299,943	June 3	545	145	27	1025
Embroidery-holder	E. Bally and J. Hartmann	298,053	May 6	114	29	27	549
Embroidery, Velvet and plush	H. C. Milligan	296,206	Apr. 1	378	..	27	72
Enameling iron ware	N. A. Buble	299,054	May 20	1373	391	27	801
Enameling metal for jewelry, &c	O. R. Ingersoll	300,711	June 17	1575	442	27	1230
Enameling metallic surfaces	A. Sproul	299,284	May 27	1655	475	27	865
End-gate lock. Wagon	J. Jensen	300,062	June 10	731	198	27	1068
End-gate rod for vehicles	I. Cruzan	299,907	June 3	493	132	27	1017
End-gate. Vehicle	S. E. Chamberlain	298,831	May 20	1099	307	27	748
End gate. Wagon	G. W. Hurd	298,857	May 20	1126	316	27	753
End-gate. Wagon	D. B. Keagy	300,086	June 10	737	199	27	1069
End-gate. Wagon	H. H. Perkins	298,400	May 13	571	157	27	642
Engine: *See* Carding-engine. Pumping-engine. Cylinder-engine. Reel-engine. Duplicating-engine. Rose-engine. Gas-engine. Rotary engine. Hot air engine. Rotary steam-engine. Portable engine. Steam-engine. Portable and traction engine. Traction-engine. Wind engine.							
Engine	I. De Graff	297,500	Apr. 22	2043	558	27	401
Engine. Combined straw and coal or wood burning	M. Rumely	297,170	Apr. 22	1605	441	27	320
Engine-register	C. Chambers, Jr	297,670	Apr. 29	2360	617	27	449
Engine-register	F. W. Tattersall	297,872	Apr 29	2502	685	27	495
Engine-reversing and cut-off gear	A. F. Johnson	296,013	Apr. 1	150	43	27	31
Engine reversing-gear	W. A. Clarke	298,826	May 20	1092	306	27	747
Engines. Utilizing the exhaust of	D. Renshaw	298,119	May 6	195	52	27	564
Engines. Utilizing the exhaust of	D. Renshaw	300,504	June 17	1294	355	27	1179
Engines. Utilizing the exhaust of	D. Renshaw	300,505	June 17	1295	355, 356	27	1180
Engraver's bangle-clamp	H. Carpenter	296,521	Apr. 8	793	218	27	157
Engraver's tool	W. Wildt	297,213	Apr. 22	1670	454	27	341
Engraving-machine. Pentagraph	J. Mowat	301,066	June 24	2003	554	27	1314
Engraving-machines. Ring and watch-case attachment for	A. E. Francis	297,981	May 6	22	6	27	531
Enlarging-camera	T. C. Roche	297,851	Apr. 29	2479	679	27	491
Envelope, &c. Machine for packing	L. McMurray	296,861	Apr. 15	1229	341, 342	27	245
Envelope	J. F. Dodd	299,358	May 27	1759	501	27	833
Envelope and letter sheet. Combined	A. Cox	299,212	May 27	1750	448	27	847
Envelope-folding mechanism	F. H. Richards	296,353	Apr. 8	583	161	27	116
Envelope for currency, checks, &c	C. A. Ball	299,323	May 27	1702	489	27	871
Envelope-machine	D. M. Lester	299,814	June 3	395	101	27	996
Envelope opener	C. S. Watson	299,442	May 27	1652	532	27	901
Envelope opener	C. E. Hochstetler	298,581	May 13	778	214	27	692
Envelope-opener and paper-cutter	G. Elsey	296,397	Apr. 8	641	177	27	127
Eraser	L. Krob	296,096	May 6	105	43	27	558
Eraser-case	J. D. Cottrell	296,927	Apr. 15	1302	362	27	260
Escapement, Variable							
Evaporator: *See* Fruit-evaporator.							
Evaporator-furnace	T. and J. M. Scantlin	296,072	Apr. 1	213	62	27	43
Excavating-elevator	G. H. Kanmacher	297,410	Apr 22	1914	523, 524	27	377
Excavator and dredge	R. R. Osgood	297,287	Apr. 22	1755	477	27	348
Excelsior-machine cutter-knife	C. L. Knight	298,211	May 6	323	84	27	587
Exercising apparatus	J. M. Latlin	298,392	May 13	561	155	27	641
Exercising. Striking-bag for	A. R. Rumsey	299,091	May 20	1418	405	27	810

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Expanding articles of flexible material. Device for	C. L. Higgins	300,365	June 17	1120	304	27	1148
Explosive compound	W. R. Quinan	300,281	June 10	1006	.....	27	1117
Extension-bit	W. Steers	296,242	Apr. 1	428	120	27	82
Extension-key	J. Broughton	299,456	May 27	1872	537	27	904
Extension suspensory-rod	C. La Dow	297,136	Apr. 22	1566	431	27	313
Extension-table	G. Muller	296,434	Apr. 8	682	188	27	135
Extractor: *See* Nail-extractor. Stump-extractor. Spike-extractor.							
Eye-bars. Constructing	J. Nuegeley, Jr.	299,401	May 27	1909	550	27	912
Eye-bars. Manufacturing	W. Halnsworth	298,748	May 20	997	278	27	730
Eye-protector	R. Choate, W. H. Rohrer, and A. H. Ragan.	296,388	Apr. 8	635	175	27	125
Eye-rods and hook-and-eye hinges. Machine for making	C. Lanz	296,852	Apr. 15	1203	337	27	242
Eye-shade. Electric	L. K. Oppenheimer	298,397	May 13	567	156	27	642
Eyeglass-holder	H. G. Chase	296,527	Apr. 8	892	221	27	159
Eyeglasses	I. Fox	296,226	Apr. 15	1174	330	27	247
Eyeglasses	E. Goldbacher	298,744	May 20	993	277	27	729
Eyeglasses	J. P. Michaels	298,490	May 13	673	189	27	662
Eyeglasses	C. F. Spencer	296,886	Apr 15	1247	348	27	250
Eyeglasses	W. H. Rose	298,707	May 13	936	259	27	711
Eyelet	G. O. Schneller	299,019	May 20	1322	372	27	792
Eyeleting-machine	G. O. Schneller	299,273	May 27	1638	470	27	862
Eyeleting-machine punch and die	H. S. Hale	299,382	May 27	1774	511	27	889
Fabric for wall of apartments	C. Garnier	300,964	June 24	1870	515	27	1290
Fabrics. Machine for softening	A. Freschi	296,223	Apr. 1	489	137	27	92
Fabrics to a background. Application of	F. Sternheimer	297,869	Apr. 29	2500	685	27	495
Fan	A. H. Moore	296,340	Apr. 8	578	161	27	115
Fan attachment	L. W. Everhart	299,364	May 27	1756	505	27	884
Fan. Automatic	W. B. Greene	297,386	Apr. 22	1885	512	27	372
Fan. Automatic	M. S. Field	300,456	June 17	1234	338	27	1167
Fanning-mill	W. H. Kelly	297,411	Apr. 22	1915	524	27	378
Fanning-mill	A. W. Kendrick and C. A. Van Duzee	299,077	May 20	1402	399 / 400	27	806
Fanning-mill and seed-cleaner. Combined	N. M. Bowen	296,309	Apr. 8	598	148	27	106
Fare-box. Street-car	G. S. De Blanc	299,207	May 27	1565	450	27	848
Fare-registering device	G. S. Foss	299,214	May 27	1571	452	27	849
Farm-gate	C. W. Mann	299,237	May 27	1601	459	27	856
Farm-gate	F. A. Peebles	298,620	May 13	824	230	27	690
Farm-gate	L. and M. Taylor	299,180	May 27	1533	439	27	841
Fastening. Metallic	H. Harris	296,166	Apr 1	325	92	27	63
Fastening. Metallic	F. A. Smith, Jr.	296,079	Apr. 1	220	64	27	45
Fancet	H. Mattullath	296,031	Apr. 1	167	48	27	34
Fancet	F. McCabe	292,564	June 3	79	19	27	935
Fancet	J. McGinley	297,426	Apr. 22	1934	527	27	381
Fancet	J. Moloney	296,434	Apr. 17	1436	396	27	1295
Fancet	J. Moloney	297,945	Apr 29	2508	712	27	514
Fancet	E. Myers	297,000	Apr. 15	1365	383	27	275
Fancet	J. Paulus	299,669	June 3	235	58	27	904
Fancet. Automatic ball safety	H. C. Montgomery	298,948	May 20	1238	350	27	775
Fancet for bottles. Vent-	G. W. Clark	298,686	May 13	913	253	27	707
Fancet for drawing beer and other liquors	P. Gardner	301,061	June 24	1998	552	27	1313
Fancet. Hot and cold water	J. C. Loucka	300,071	June 10	720	195	27	1066
Feathers. Machine for scraping the quills of ostrich and other	J. Hawlowetz						
Feed-bag	J. W. Gedney	296,553	Apr. 8	841	233	27	167
Feed-bag for horses	W. H. Pack	299,674	June 3	242	60	27	966
Feed-cutting machine	J. Welchhart	298,527	May 13	710	201	27	669
Feed-regulator	J. Lucas	296,024	Apr. 1	161	46	27	31
Feed-regulator	W. G. Thompson	300,816	June 24	1700	465	27	1257
Feed-water heater	R. G. Ewer	297,246	Apr. 22	1711	465	27	339
Feed-water heater	C. H. Magoon	298,006	May 6	57	15	27	538
Feed-water heater	T. Marshall	298,105	May 6	176	46	27	560
Feed-water heater	P. McGivern and W. E. Frye	296,427	Apr. 8	674	186	27	133
Feed-water heater	D. P. Stewart	297,644	Apr. 29	2273	607 / 608	27	443
Feed-water purifier	J. T. Mead	296,303	Apr. 1	375	107	27	72
Feeder. Boiler	W. Cunningham	297,572	Apr. 29	2140	584	27	426
Felting machine	C. H. Merritt	299,412	May 27	1821	523	27	896
Fence	N. Fanght	300,455	June 17	1233	337	27	1167
Fence	E. Fischer	299,770	June 3	349	89	27	987
Fence	B. F. Ford	298,961	May 20	1263	359	27	760
Fence	H. F. Magio	300,276	June 10	994	268	27	1115
Fence	J. R. Pitt	301,071	June 24	2009	555	27	1315
Fence	A. C. Decker	299,916	June 3	509	135	27	1018
Fence. Barb-	W. Edenborn	299,763	June 3	342	87	27	985
Fence barb. Wire-	J. E. Kelly	296,753	Apr 15	1085	305	27	221
Fence. Barbed	H. M. Underwood	297,203	Apr. 22	1660	452	27	330
Fence. Barbed	E. A. Cooper	299,911	June 3	504	133	27	1018
Fence fastening device. Wire-	J. Snider	297,188	Apr 22	1629	446	27	324
Fence. Flood-	M. Hegbom	299,940	June 10	602	161	27	1045
Fence. Iron	T. Rogers	297,295	Apr. 22	1769	480	27	350
Fence. Iron							
Fence machine. Barb-	J. D. Curtis	297,679	Apr. 29	2281	620 / 621	27	453
Fence-making machine	A. G. Lyne	300,994	June 10	746	202	27	1071
Fence-making machine	G. H. Shellaberger	300,517	June 17	1308	359	27	1192
Fence-making machine. Upright wire-	J. M. Fultz	298,368	May 13	533	145 / 146	27	635
Fence. Metallic	D. A. Roach	298,235	May 6	359	95	27	594
Fence. Picket-	A. G. Lyne	300,093	June 10	745	201	27	1071
Fence-picket machine	T. Coyle	300,958	June 24	1896	512	27	1289
Fence. Portable	W. Cokayne	300,221	June 10	924	249	27	1102
Fence. Portable	F. P. Whistler	300,929	June 24	1837	503	27	1283
Fence-post	J. C. Fiero	300,586	June 17	1360	384	27	1197

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fence-post	A. C. Harrison	300,364	June 17	1119	303	27	1147
Fence-post	G. Moll and F. Hottes	296,037	Apr. 1	173	51	27	36
Fence-post	E. N. Obert	300,115	June 10	778	209	27	1076
Fence-post	E. Rutz	296,069	Apr. 1	211	61	27	43
Fence-post	E. Rutz	296,070	Apr. 1	212	61	27	43
Fence-post	L. Scott	296,632	Apr. 8	937	261	27	186
Fence-post	F. S. Smith. (Reissue)	10,471	Apr. 22	2100	574	27	412
Fence-post	T. J. Smith	296,237	Apr. 1	422	118	27	80
Fence-post	Z. T. Sweeney and J. I. Irwin	296,796	Apr. 15	1130	318	27	240
Fence-post	J. G. German	299,922	June 3	516	137	27	1019
Fence-post. Wrought-iron	W. G. Howell	299,072	May 20	1396	397	27	805
Fence-rod	C. S. Bentley	300,940	June 24	1848	507	27	1285
Fence. Wire	A. G. Hulbert	296,835	Apr. 15	1184	332	27	238
Fence. Wire	W. W. Worcester	301,037	June 24	1969	544	27	1307
Fence. Wire	E. S. Lenox	300,783	June 24	1664	455	27	1250
Fence-wire. Barbed	W. M. Clow	298,827	May 20	1094	306	27	747
Fence-wire coupling	H. Smith	297,461	Apr. 22	1976	539 / 540	27	389
Fences. Machine for making wire	G. H. Shellaberger	298,032	May 6	92	24	27	544
Fences. Machine for manufacturing	L. Goddu	295,918	Apr. 1	29	9	27	8
Fences. Metal post for wire	C. H. Bacon	297,487	Apr. 22	2008	548	27	396
Fences. Warning device for barbed	R. Sergeant	299,169	May 27	1721	436	27	839
Fences. Warning device for wire	S. Forrester	298,193	May 6	291	75	27	581
Fences. Warning-plate for wire	O. P. Briggs	298,280	May 6	416	112	27	605
Fencing, &c. Twister and spooler for the manufacture of wire	A. Potts	296,060	Apr. 1	201	58	27	41
Fencing. Barbed metallic	T. B. Harrison and J. W. Martin	299,471	May 27	1685	542 / 543	27	907
Fencing. Machine for making wire and picket	D. C. Stover	297,726	Apr. 29	2345	637	27	464
Fencing. Machine for twisting and spooling barbed-wire							
Fender: *See* Fire-place fender.							
Fermentation. Apparatus for preparing vegetable substances for	C. Unger	296,651	Apr. 8	957	269	27	191
Fermenting materials. Manufacturing	F. A. Rethlen	301,006	June 24	1998	.....	27	1300
Fertilizer	B. C. Briggs	298,939	May 20	1298	.....	27	774
Fertilizer-distributer	B. F. Archer	298,270	May 6	404	107	27	602
Fertilizer-distributer	J. W. Spangler	296,239	Apr. 1	424	119	27	81
Fertilizer-distributer	S. C. Meddick	297,828	Apr. 29	2457	673	27	486
Fertilizer-distributing attachment for rollers	C. F. Dinkle	298,186	May 6	282	73	27	579
Fertilizer pulverizer and distributer	W. Wright	299,898	June 3	488	128	27	1015
Fertilizers. Apparatus for drying	J. Farmer	299,766	June 3	345	88	27	986
Fertilizers. Apparatus for drying and pulverizing blood, &c., for	M. E. Burlingame	298,551	May 13	738	208	27	675
Fetter for animals	J. H. Riley	300,010	June 10	645	176	27	1052
Fiber from woolen fabrics. Apparatus for separating vegetable	J. H. Hayden and J. R. Sleeper	298,851	May 20	1120	315	27	752
Fiber. Machine for converting wood into	H. C. Perham and A. Clarke	295,938	Apr. 1	54	15	27	13
Fibers. Machine for opening, cleaning, and condensing textile	A. Prinz	301,069	June 24	2007	.....	27	1314
Fibrous material. Treatment of vegetable	J. E. Van Winkle	299,297	May 27	1676	480 / 481	27	868
Fibrous materials. Opener and cleaner for	J. A. Hitter	300,778	June 24	1657	451	27	1249
Fibrous plants. Process of and apparatus for treating	W. M. Appleman	300,674	June 17	1522	419	27	1221
Fifth-wheel	H. H. E. Bery	300,196	June 10	895	240	27	1097
Fifth-wheel	J. W. Leete	296,255	Apr. 15	1209	339	27	243
Fifth-wheel. Vehicle	J. T. Dongine	297,685	Apr. 29	2291	624	27	454
Fifth-wheel. Wagon	A. L. Colton	298,450	May 13	623	177 / 178	27	652
File and cabinet. Letter-	J. H. Louder	296,702	Apr. 15	1094	308	27	223
File. Bill-	W. T. Nicholson	296,439	Apr. 8	687	189	27	136
File-blanks. Machine for forming teeth upon	W. T. Nicholson	300,114	June 10	776	208	27	1076
File-blanks. Machine for forming the teeth upon	G. V. Nauerth	300,724	June 17	1587	435	27	1293
File. Check and bill	C. Vogel	298,714	May 13	944	262 / 263	27	713
File-cutting machine	T. E. Baden	300,432	June 17	1206	330	27	1162
File-holder	A. R. Williams	300,546	June 17	1346	371	27	1189
File-holder and case	E. T. Pearson	296,611	Apr. 8	913	254 / 255	27	181
File. Letter-	W. H. Gilman	300,594	June 17	1398	385	27	1198
File. Letter-	G. Mason	299,819	June 3	402	103	27	998
File. Letter and bill	G. W. Plummer	295,940	Apr. 1	57	17	27	14
File. Newspaper-	G. V. Nauerth	299,249	May 27	1613	463	27	858
File. Paper-	W. D. Doremus	297,577	Apr. 29	2450	587	27	427
File. Paper-	E. W. Woodruff	297,905	Apr. 29	2342	696	27	503
Filing papers. Device for	J. C. Lang	297,999	May 6	50	13	27	537
Filter	A. B. Denton	296,939	Apr. 15	1316	365	27	262
Filter	B. Holland, Jr.	300,367	June 17	1122	304	27	1148
Filter	R. L. Kester	300,612	June 17	1425	393	27	1203
Filter	J. M. Learned	295,926	Apr. 1	41	12	27	11
Filter	F. E. Cady	296,673	Apr. 8	984	276	27	196
Filter and cooler. Combined water	G. W. Shawk and A. S. Wetmore	299,275	May 27	1649	471	27	863
Filter. Hydrant-	S. H. Johnson	298,758	May 20	1007	281	27	732
Filter-press	H. Warden	297,042	Apr. 15	1441	397	27	295
Filter-press	E. Karst	296,972	Apr. 15	1351	373	27	269
Filter. Water-	J. F. C. Farquhar and W. Oldham	297,363	Apr. 22	1857	505	27	367
Filtering apparatus	J. F. C. Farquhar and W. Oldham	297,364	Apr. 22	1860	506	27	367
Filtering apparatus. Liquid-	R. M. Sommers	301,015	June 24	1943	.....	27	1302
Filtering composition	R. Brettner	299,051	May 20	1371	390	27	800
Finger-ring	J. Bulova	296,342	Apr. 8	532	149	27	106
Finger-ring	C. Prahl	297,446	Apr. 22	1960	536	27	386
Finger-ring	J. G. Measemer	299,413	May 27	1822	523	27	896
Finger-rings, ferrules, &c. Device for expanding	C. H. Judson	298,981	May 20	1279	365	27	783
Fire-alarm							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fire-alarm apparatus. Electric	M. D. Porter	296,874	Apr. 15	1234	345	27	247
Fire-alarm. Automatic	H. N. Fenner	299,970	June 10	587	157	27	1042
Fire-alarm. Electric	G. E. and E. R. Hovenden	299,546	June 3	53	14	27	920
Fire and water proof compound	O. F. Parsons	300,729	June 17	1593	.....	27	1233
Fire and water proof material for roofing, &c	C. F. Brigham	298,282	May 6	419	112	27	106
Fire-arm barrel	W. Hebler	296,958	Apr. 15	1332	370	27	266
Fire-arm. Breech-loading	W. Anson and J. Deeley	297,907	Apr. 29	2545	{697 698	27	504
Fire-arm. Breech-loading	W. H. Davenport	300,851	June 24	1745	476	27	1265
Fire-arm. Breech-loading	W. H. Davenport	300,852	June 24	1746	476	27	1265
Fire-arm. Breech-loading	J. E. Gage	296,325	Apr. 8	548	153	27	110
Fire-arm. Breech-loading	P. T. Godsal	297,784	Apr. 29	2410	{658 659	27	477
Fire-arm. Breech-loading	P. and C. Kaul	298,982	May 20	1250	365	27	783
Fire-arm. Breech-loading	T. M. Wallis	301,021	June 24	1949	539	27	1304
Fire-arm lock	J. Victor	300,743	June 17	1611	442	27	1235
Fire-arm. Magazine	J. M. Marlin	297,494	Apr. 22	1930	527	27	380
Fire-arm. Magazine	R. Rhodes	299,264	May 27	1627	{467 468	27	800
Fire-arm sight	E. L. Berthoud	298,650	May 13	869	244	27	697
Fire-arm sight	W. Lyman	298,305	May 6	446	120	27	611
Fire-arms. Shell-extractor for	N. O. Waymire	299,302	May 27	1602	442	27	870
Fire-engine attachment	M. R. Vandervoort	300,695	June 17	1511	416	27	1219
Fire-engines. Automatic relief-valve for steam	J. E. Prunty	297,087	Apr. 15	1490	412	27	295
Fire-escape	C. B. Anderson	296,502	Apr. 8	769	211	27	152
Fire-escape	C. B. Anderson	298,266	May 6	397	104	27	601
Fire-escape	S. Beltz	298,723	May 20	962	268	27	724
Fire-escape	L. Blessing	299,511	June 3	10	4	27	923
Fire-escape	J. H. Bowley	298,725	May 20	964	269	27	724
Fire-escape	J. H. Burks	300,843	June 24	1736	474	27	1263
Fire-escape	M. C. Corrigan	300,347	June 17	1099	299	27	1145
Fire-escape	J. A. Crandall	300,368	June 10	1041	{291 292	27	1123
Fire-escape	C. R. S. Curtis	298,292	May 6	429	{115 116	27	608
Fire-escape	O. F. Davis	299,967	June 10	584	157	27	1042
Fire-escape	J. H. Ellis, M. Wilson, and F. Tanner.	299,764	June 3	343	87	27	985
Fire-escape	L. J. Evans	300,857	June 24	1752	478	27	1267
Fire-escape	H. Greene	300,248	June 10	959	259	27	1108
Fire-escape	J. Haege	299,132	May 27	1478	424	27	832
Fire-escape	T. Hale	300,465	June 17	1246	341	27	1169
Fire-escape	J. Larson and A. W. Hagstrom	300,090	June 10	740	200	27	1070
Fire-escape	W. Lawrence	300,091	June 10	742	200	27	1070
Fire-escape	T. Macdonough	295,929	Apr. 1	44	13	27	11
Fire-escape	G. W. Mickle	300,622	June 17	1442	397	27	1206
Fire-escape	J. L. Mott, Jr	299,853	June 3	417	106	27	1001
Fire-escape	R. E. Nelson, Sr	300,112	June 10	773	208	27	1075
Fire-escape	M. C. O'Connor	297,710	Apr. 29	2323	632	27	461
Fire-escape	H. Paddock and H. W. Miller	300,498	June 17	1287	354	27	1178
Fire-escape	F. D. Parmelee	297,837	Apr. 29	2466	675	27	488
Fire-escape	C. I. Pittman	297,843	Apr. 29	2472	677	27	489
Fire-escape	J. E. Post	300,797	June 24	1678	459	27	1252
Fire-escape	H. Rensch	299,850	June 3	435	113	27	1004
Fire-escape	R. C. Rutherford	297,089	Apr. 15	1492	413	27	295
Fire-escape	J. G. Schiller	300,902	June 24	1808	{494 495	27	1277
Fire-escape	E. F. Sherman	298,208	Apr. 1	512	143	27	96
Fire-escape	G. Sinfield	297,857	Apr. 29	2486	681	27	492
Fire-escape	R. Stevenson	296,243	Apr. 1	429	120	27	82
Fire-escape	J. Taylor	299,595	June 3	121	30	27	942
Fire-escape	B. F. Teal	301,019	June 24	1916	528	27	1303
Fire-escape	A. Turnbull	296,650	Apr. 8	955	{268 269	27	150
Fire-escape	D. Ware and C. W. Richman	297,883	Apr. 29	2517	688	27	498
Fire-escape	J. B. Wiltshire	300,922	June 24	1711	467	27	1250
Fire-escape and water-conductor	V. W. Blanchard	298,183	Mar. 6	274	65, 66	27	574
Fire-escape. Automatic	G. W. and F. P. Murphey	297,620	Apr. 29	2106	599	27	437
Fire-escape ladder	W. Brannan	296,020	Apr. 15	1293	359	27	258
Fire-escape ladder	S. E. Davis	296,145	Apr. 1	300	86	27	58
Fire-escape ladder	H. P. Griswold	297,790	Apr. 29	2417	660	27	478
Fire-escape. Portable	F. I. Freeman	297,126	Apr. 22	1574	428	27	311
Fire-escape sling	B. Miller and G. H. Hume	296,709	Apr. 15	1101	310	27	224
Fire-extinguisher	C. W. Caryl	300,948	June 24	1656	509	27	1296
Fire-extinguisher	G. W. Taylor, A. R. Cox, W. C. Brown, and J. N. Sutherland.	299,036	May 20	1348	385	27	796
Fire-extinguisher. Automatic	R. W. and F. Grinnell	299,380	May 27	1772	510	27	887
Fire-extinguisher. Automatic	W. Nercher	297,432	Apr. 22	1939	529	27	382
Fire-extinguisher. Hand-grenade	J. J. Harden	297,075	Apr. 15	1477	408	27	293
Fire-extinguishers. Supporting and operating chemical	J. E. Gillespie	297,687	Apr. 29	2294	624	27	455
Fire-extinguishing apparatus. Automatic	C. C. Walworth and O. B. Hall	296,490	Apr. 8	754	208	27	140
Fire-extinguishing compound	N. G. Bartlett	300,190	June 10	863	.....	27	1094
Fire-place fender. Folding	I. W. Shoemaker	300,519	June 17	1309	359	27	1193
Fire-place frames and fender-bars. Sind for	F. G. Janusch	300,081	June 10	732	198	27	1068
Fire-plug and hydrant	H. Schneider	299,858	June 3	444	{114 115	27	1007
Fire-proof fabric	H. W. Johns	298,757	May 20	1006	281	27	731
Fire-screen	J. H. White	300,930	June 24	1838	503	27	1283
Fires on ships. Apparatus for extinguishing	W. H. Thompson	300,164	June 10	844	228	27	1088
Fireman's tower	E. B. Magnus	296,419	Apr. 8	666	184	27	131
Fish. Apparatus for catching star	J. F. and F. L. Homan	297,079	Apr. 15	1481	409	27	293
Fish can. Bait	R. K. Evans	299,765	June 3	344	87	27	986
Fish. Treating the waste of salt	R. Brooks	299,515	June 3	14	5	27	934

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fishing-bait kettle	W. H. Sherwood	299,690	June 3	263	65	27	969
Flanging-machine	M. R. Moore	299,997	June 10	622	{168 169	27	1049
Flanging-machine	T. R. Morgan, Sr	298,224	May 6	343	{89 90 91	27	591
Flask: *See* Mold-flask. Molder's flask.	H. Liautier	297,140	Apr. 22	1571	432	27	313
Flier for twisting silk	J. McMillen and J. McAdams	296,428	Apr. 8	675	187	27	133
Flocking paper and other fabrics, and machine therefor	J. M. Metcalf	300,102	June 10	760	205	27	1073
Flood-gate	J. O'Friel	298,227	May 6	348	92	27	592
Floor and ceiling for buildings. Fire-proof	H. E. Hatch	299,220	May 27	1579	454	27	851
Floor-clamp	F. Fastenrath	298,565	May 13	755	213	27	678
Floor-mat	D. Ham	298,300	May 6	440	{118 119	27	610
Flooring	J. M. Case	297,757	Apr. 29	2380	648	27	471
Flour. Apparatus for manufacturing	N. W. Holt	299,790	June 3	369	95	27	991
Flour-bolt	A. Heine	299,784	June 3	362	93	27	989
Flour-bolt. Centrifugal	J. M. Case	297,758	Apr. 29	2382	649	27	471
Flour-bolts. Atmospheric elevator for	G. C. F. P. Janssen	299,647	June 3	194	48	27	935
Flour-bolting machine	A. Hunter	300,371	June 17	1131	308	27	1149
Flour-dressing machine	W. Cochrane	300,219	June 10	922	248	27	1102
Flour from barrels into bags. Portable table for transferring	J. M. Case	297,760	Apr. 29	2385	650	27	472
Flour. Gradual-reduction machine for manufacturing	L. J. F. W. Scharbau	299,684	June 3	256	63	27	968
Flour, &c. Machine for bolting	J. B. Wheatley	298,259	May 6	387	102	27	599
Flour. Manufacturing	I. Morgan	299,245	May 27	1609	462	27	857
Flour-refiner	D. O. Martin	296,028	Apr. 1	165	47	27	34
Flower-pot	H. L. Day	297,972	May 6	12	4	27	529
Flue cap. Ventilating	W. G. Chapin	299,737	June 3	314	80	27	980
Fluid-meter	H. C. Weeden	298,805	May 20	1065	299	27	742
Flushing apparatus for closets and urinals	H. S. and L. Crooke	297,986	Apr. 1	115	34	27	24
Foil. Manufacture of ornamental metallic	H. Krog, Sr	296,020	Apr. 1	158	45	27	32
Folding box	L. Bush, Jr	298,065	May 6	130	33	27	551
Folding chair	J. S. MacKaye	300,617	June 17	1434	395	27	1204
Folding chair	P. H. E. Römer and M. P. Meissner	296,067	Apr. 1	208	60	27	42
Folding fabrics and inserting pressing-boards between the folds thereof. Machine for	I. L. Stone	299,875	June 3	461	121	27	1010
Folding seat for school-furniture	W. E. Eldred	300,234	June 10	938	253	27	1104
Folding table	J. McGrath	299,241	May 27	1605	460	27	856
Folding table	O. A. Thayer	296,430	May 13	601	170	27	648
Folding table	J. J. Brennan	297,966	May 6	6	3	27	528
Font and poor-box. Combined holy-water	E. L. O'Connor	299,158	May 27	1506	{432 433	27	836
Foot and shoe. Artificial	W. Carter	296,314	Apr. 8	534	149	27	107
Foot-covering	H. Field, Jr	298,566	May 13	757	213	27	678
Foot-power	F. H. Plummer	296,778	Apr. 15	1112	313	27	226
Foot-rest	J. F. Winchell	296,718	May 13	950	264	27	714
Forge	J. F. Winchell	299,448	May 27	1859	534	27	902
Forge	J. F. Winchell	297,901	Apr. 29	2538	695	27	502
Forge-hood	J. F. Winchell	296,366	Apr. 1	466	131	27	88
Forge-lever. Detachable	T. H. Bullock	297,494	Apr. 22	2016	551	27	397
Forge. Portable	R. H. Beach	298,055	May 6	116	30	27	549
Forging-machine	L. Chapman	300,445	June 17	1222	334	27	1165
Forgings. Manufacture of wrench	G. Pickhardt	298,232	May 6	356	94	27	594
Fork: *See* Hay-fork.							
Frame: *See* Net-frame. Screen-frame. Parasol-frame. Spectacle-frame. Printing and vignetting frame. Stacking-frame. Saw-frame. Umbrella and parasol frame.	M. F. Sacks	299,586	June 3	109	27	27	940
Frame for displaying goods	C. Brothers	300,761	June 24	1640	449	27	1246
Frames. Base for looking-glass	A. Watson	297,887	Apr. 29	2502	690	27	499
Freezer and refrigerator. Combined cream	H. Sells	296,633	Apr. 8	937	262	27	186
Friction-clamp	A. H. Palmerton	298,619	May 13	824	230	27	689
Frog. Wrecking	E. Cogswell	295,907	Apr. 1	18	5	27	6
Fruit-can	W. A. Meeker	300,995	June 24	1900	{525 526	27	1296
Fruit-drier	J. B. Sweetland	298,713	May 13	942	262	27	713
Fruit-drier	J. N. Parker	300,118	June 10	781	{209 210	27	1077
Fruit-drier. Portable	R. F. Petree	300,121	June 10	785	210	27	1078
Fruit-drier. Portable	A. M. Jervis	299,986	June 10	609	{164 165	27	1046
Fruit-evaporator	A. Hibbe	300,608	June 17	1421	391	27	1202
Fruit-harvesting device	P. Lyon and J. H. Bossard	297,082	Apr. 15	1483	410	27	294
Fruit-jar	A. F. Wilson	299,044	May 20	1364	388	27	799
Fruit-jar cover	P. Lyon and J. H. Bossard	296,701	Apr. 8	1015	284	27	202
Fruit-jar-cover fastening	E. F. Poland	299,676	June 3	246	61	27	966
Fruit-jar stopper	F. C. Felcker, Jr	300,858	June 24	1753	478	27	1267
Fruit-knife and nut-pick. Combined	J. A. Bottomley	296,514	Apr. 8	785	216	27	156
Fruit-picker	J. S. Spraker	300,152	June 10	898	224	27	1085
Fruit-picker	H. H. Stone	298,644	Apr. 8	949	267	27	189
Fruit-picker	D. Lille	299,615	June 3	397	{101 102	27	996
Fruit-press	E. Bender	298,339	May 13	500	136	27	630
Frying-utensil	C. B. Shafer	299,170	May 27	1521	436	27	839
Funnel	J. W. Bolton	299,513	June 3	12	5	27	923
Funnel. Liquor							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Furnace: *See* Blast-furnace. Metallurgical gas-furnace. Boiler-furnace. Portable furnace. Cupola-furnace. Puddling-furnace. Evaporator-furnace. Puddling and heating furnace. Glass-furnace. Regenerative furnace. Glass-melting furnace. Regenerator-furnace. Heating-furnace. Skelp-heating furnace. Hot-air furnace. Smelting-furnace. Hot-air and steam generating furnace. Smoke-preventing furnace. Incinerating-furnace. Steel-melting furnace. Locomotive-furnace. Superheating-furnace. Metallurgic furnace. Warm-air furnace.							
Furnace	J. P. Cotiart	297,708	Apr. 29	2395	653 654	27	474
Furnace	M. A. Foster	300,703	June 17	1566	429 430	27	1228
Furnace	L. P. French	299,974	June 10	590	158	27	1042
Furnace	H. W. Peaslee	300,635	June 17	1461	403	27	1210
Furnace	J. A. Topliff, E. S. Cross, W. S. Cox, and J. A. McCollum.	299,881	June 3	470	123	27	1011
Furnace	O. Wilson	298,534	May 13	719	203 204	27	671
Furnace-door	L. F. Johnson	297,808	Apr. 29	2434	665	27	482
Furnace for the manufacture of metals direct from the ore.	J. A. Stearns	298,426	May 13	596	168	27	648
Furnace-grate	E. Breslauer	299,616	June 3	149	36	27	947
Furnace-grate	O. H. Jewell and W. M. Mathisen	298,093	May 6	163	42	27	558
Furnace-grate	T. Kirkwood	299,146	May 27	1494	429	27	835
Furnace-grate bar	J. Cairns	300,209	June 10	913	245	27	1100
Furnaces. Apparatus for feeding fuel to and in	T., Sr., J., Sr., T., Jr., and J. Vicars, Jr.	296,301	Apr. 1	516	143 144	27	97
Furnaces. Apparatus for feeding shavings to	J. B. Mahaffey	300,990	June 24	1905	524	27	1295
Furnaces. Feeding air to	S. Smith	300,150	June 10	826	224	27	1065
Furnaces. Feeding air to locomotive	J. N. Weaver	299,705	June 3	280	69	27	973
Furnaces. Smoke-burning attachment for	W. A. Porter and W. Heston	297,845	Apr. 29	2474	677	27	490
Furniture	P. L. Shepler	299,588	June 3	111	27, 28	27	940
Furniture. Knockdown	J. B. Brolaski	298,821	May 20	1084	303 304	27	745
Gage: *See* Carpenter's gage. Railway-track gage. Compressible gage. Saw-table gage. Double-headed gage. Weather-board gage. Miter-gage.							
Gage	C. B. Osborn	299,843	June 3	427	110	27	1003
Galvanic battery	C. L. Clarke	298,175	May 6	268	69	27	577
Galvanic battery	H. Thame	296,365	Apr. 8	598	.....	27	119
Galvanic element	W. Wenzel	300,176	June 10	863	233	27	1092
Game	R. B. B. Foote	298,192	May 6	299	75	27	580
Game	A. C. Rex	296,352	Apr. 8	583	162	27	116
Game	B. S. Wheeler	296,900	Apr. 15	1270	353	27	254
Game-board	J. M. Lewis	298,992	May 20	1259	367	27	785
Game-board	L. P. Vallignet	297,475	Apr. 22	1994	545	27	393
Game-board, dice-box, &c	A. A. Jackson	296,012	Apr. 1	149	43	27	31
Game-board for producing magic squares, playing checkers, &c.	J. D. Van Bibber	300,534	June 17	1398	364	27	1186
Game-counter	F. Dayton	298,835	May 20	1102	308	27	749
Game-table	F. R. De Foy	296,280	Apr. 1	486	136	27	92
Gangway for ships	T. I. Knight	298,212	May 6	324	84, 85	27	587
Garbage-receptacle	V. Borst	300,685	June 17	1536	423	27	1224
Garment-clasp	M. P. Bray	299,725	June 3	301	74	27	977
Garment-clasp	M. P. Bray	299,726	June 3	302	75	27	977
Garment-clasp	J. C. Hyde	297,803	Apr. 29	2431	664	27	481
Garment-clasp	J. C. Hyde	297,804	Apr. 29	2432	664	27	481
Garment-clasp	C. C. Shelby	298,031	May 6	91	24	27	544
Garment-supporter	E. Methot	300,997	June 24	1914	527	27	1227
Garter	C. F. and W. J. Walters	300,922	June 24	1830	501	27	1282
Garter-clasp	P. Kalish	297,080	Apr. 15	1482	410	27	203
Gas and lamp bracket	H. P. Drew	300,583	June 17	1386	382 383	27	1196
Gas and lamp bracket	H. P. Drew	300,584	June 17	1387	383	27	1196
Gas apparatus	J. M. Bois	300,757	June 24	1629	447	27	1245
Gas. Apparatus for generating and carbureting hydrogen	L. S. Groves	298,462	May 13	640	182	27	655
Gas. Apparatus for manufacturing illuminating	A. O. Granger	297,968	May 6	30	9	27	588
Gas. Apparatus for the manufacture of	H. M. Pierson	297,444	Apr. 22	1957	535	27	386
Gas. Apparatus for the manufacture of hydrocarbon	W. F. M. McCarty	296,201	Apr. 1	372	106	27	71
Gas as a fuel. Method of using natural	A. Schaefer	297,638	Apr. 29	2227	605 606	27	442
Gas-burner	A. B. Lipsey	298,215	May 6	328	86	27	588
Gas-burner	A. B. Lipsey	298,868	May 20	1139	320	27	756
Gas-burner	A. B. Lipsey	299,660	June 3	208	54	27	959
Gas-burner	A. B. Lipsey	300,988	June 24	1901	523	27	1295
Gas-burner. Cut-off	A. C. Austin	298,032	May 6	113	29	27	548
Gas-burner for heating and lighting rooms	B. F. Enoch	296,320	Apr. 8	543	152	27	108
Gas by electricity. Apparatus for lighting	L. S. White	298,531	May 13	715	202 203	27	671
Gas-engine	E. Edwards	300,453	June 17	1230	337	27	1167
Gas-engine	H. S. Maxim	296,340	Apr. 8	568	158 159	27	113

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gas-engine	F. W. Rachbols	301,009	June 24	1935	534 535	27	1301
Gas-engine	S. L. Wiegand	297,399	Apr. 22	1806	491	27	356
Gas-engine	J. S. Wood	300,294	June 10	1026	277	27	1120
Gas-engine	H. S. Maxim	296,341	Apr. 8	571	159	27	114
Gas-engines. Electrical igniting device for	J. Evans	296,398	Apr. 8	644	177	27	127
Gas-furnace pipes. Brick nozzle for	G. Jones	296,289	Apr. 1	499	140	27	94
Gas. Generating	H. Pratt and J. J. Ryan	297,162	Apr. 22	1598	439	27	318
Gas. Generating	L. C. Beebe	298,057	May 6	120	30	27	550
Gas-generator	P. English	299,919	June 3	513	136	27	1019
Gas-generator	G. Jones	296,290	Apr. 1	502	140	27	94
Gas-generator	L. W. Puffer	300,008	June 10	639	174	27	1051
Gas generator. Carbonic-acid	J. S. Connelly	297,113	Apr. 22	1539	425	27	308
Gas-governor	J. D. Averell	296,664	Apr. 8	974	273	27	194
Gas-governor. Mercury	A. P. Southwick. (Reissue)	10,490	June 17	1619	444	27	1236
Gas. Manufacture of illuminating	W. F. M. McCarty	296,200	Apr. 1	370	105 106	27	71
Gas. Manufacturing hydrocarbon	W. C. Parkinson	299,418	May 27	1826	525	27	897
Gas-meters and low-pressure water-meters. Revolving drum for	N. H. Thompson and H. C. Swan	300,661	June 17	1500	414 415	27	1217
Gas-motor engine	C. M. Lungren	300,879	June 24	1780	485	27	1272
Gas or oil burner	A. I. Ambler	300,734	June 24	1622	455 456	27	1243
Gas or vapor from liquid hydrocarbons. Apparatus for generating	G. A., Sr., and G. A. Hyde, Jr	297,692	Apr. 29	2301	626	27	456
Gas-pressure regulator	J. Hanlon	300,466	June 17	1247	341 342	27	1170
Gas. Process of and apparatus for manufacturing	J. L. Stewart	300,330	June 10	1065	289 290 291	27	1127
Gas. Process of and apparatus for manufacturing	J. L. Stewart	300,331	June 10	1069	291	27	1128
Gas. Process of and apparatus for manufacturing illuminating	S. C. Salisbury	300,802	June 24	1683	460	27	1253
Gas. Process of and apparatus for manufacturing illuminating	S. C. Salisbury	300,803	June 24	1685	461	27	1254
Gas. Process of and apparatus for producing heating	H. Haug	299,385	May 27	1779	512	27	888
Gas-purifier and method of revivifying iron sponge	O. H. Shiras	299,589	June 3	113	28	27	940
Gas-regulator	D. Chambers	299,620	June 3	153	38	27	948
Gas-regulator	C. S. King	299,801	June 3	381	97	27	994
Gas-tube connection	S. Barr	299,720	June 3	294	73	27	975
Gasometer for washing carbonic-acid gas	R. F. Scannell	300,018	June 10	652	178	27	1054
Gate: *See* Bridge-gate. Flood-gate. Elevator-gate. Railway-gate. End-gate. Sliding gate. Farm-gate.							
Gate	J. Austin and R. Chamberlain	299,451	May 27	1862	535	27	903
Gate	R. F. Baughn	297,055	Apr. 15	1455	403	27	288
Gate	J. G. Calhoun	300,444	June 17	1221	334	27	1165
Gate	M. W. Foster	298,676	May 6	143	36	27	554
Gate	B. F. Harrell	300,603	June 17	1413	389	27	1201
Gate	A. D. Mack	298,103	May 6	174	45	27	560
Gate	A. F. Purefoy	299,581	June 3	100	25, 26	27	938
Gate	A. H. Staring	298,037	May 6	98	25	27	545
Gate	E. E. Tope	296,648	Apr. 8	953	268	27	190
Gate	J. H. Brafford	296,516	Apr. 8	787	217	27	156
Gate hanging and operating apparatus	A. W. Chilcott	296,528	Apr. 8	803	221	27	159
Gate opening and closing apparatus	P. Giovannini	295,998	Apr. 1	173	39	27	27
Gate or valve	J. B. West	296,491	Apr. 8	756	208	27	149
Gear. Differential	F. Jenkin	297,407	Apr. 22	1907	518 519 520 521 522	27	377
Gear. Driving	E. T. Robb and A. W. Schleicher	299,013	May 20	1316	376	27	791
Gearing	J. J. Rymal	300,801	June 24	1681	460	27	1253
Gearing. Arron	G. N. Clapp	295,906	Apr. 1	17	5	27	6
Gearing. Differential	R. Lavery	298,697	May 13	926	257	27	709
Gem-setting	D. F. Adams	299,500	June 3	1	1	27	921
Gem-setting	J. H. Shoemaker	296,234	Apr. 1	420	117	27	80
Gem-settings. Machine for making	C. I. Loveren	297,611	Apr. 29	2186	596	27	435
Generator: *See* Gas-generator. Steam-generator.							
Girth. Harness	J. McGuire	299,995	June 10	620	167	27	1048
Glass. Apparatus for applying powdered substances to surfaces of	H. Schulze-Berge	296,228	Apr. 1	410	113	27	78
Glass articles. Ornamenting	A. Weyer	298,145	May 6	230	60	27	570
Glass baskets. Manufacture of	J. Hoare	296,601	Apr. 8	1005	281	27	200
Glass bottles and vessels for containing fire-extinguishing compounds. Manufacture of	T. B. Atterbury	299,318	May 27	1697	487	27	873
Glass bricks. Manufacture of	F. H. Shaw	298,418	May 13	589	166	27	646
Glass. Flatting and annealing oven for	T. A. Zellers	298,332	May 6	483	131 132	27	618
Glass funnel and mold therefor. Ribbed	J. K. Brown	300,691	June 17	1549	425	27	1226
Glass-furnace	J. Dalzell	297,114	Apr. 22	1541	425	27	308
Glass in imitation of frosting. Ornamentation of	D. F. Brown	299,516	June 3	10	.....	27	924
Glass jewels. Manufacture of	H. C. Luther	300,381	June 17	1142	312	27	1151
Glass lamps and lamp-founts. Mold for the manufacture of	J. F. Miller	297,430	Apr. 22	1937	528	27	382
Glass-melting furnace	H. Schulze-Berge	296,227	Apr. 1	407	114	27	78
Glass-mold	E. Herckner	297,077	Apr. 15	1479	409	27	293
Glass-mold	E. Herckner	297,078	Apr. 15	1480	409	27	293
Glass-mold and the product thereof	W. H. Brunt	297,062	Apr. 15	1462	404	27	289
Glass-pot	W. T. Otto and J. H. Fox	296,772	May 20	1022	286	27	734

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Glass-press	L. Fischer	297,500	Apr. 29	2165	501	27	431
Glass signs and labels. Gilding	C. E. Koken	299,148	May 27	1495	430	27	835
Glassware. Machinery for decorating	H. Schulze-Berge	296,224	Apr. 1	400	113	27	77
Glove-fastener	G. W. Prentice	297,950	Apr. 29	2604	714	27	515
Glove-fastener	W. S. Richardson	300,510	June 17	1301	357	27	1181
Glove-fastening	W. F. Foster	297,980	May 6	21	6	27	531
Glove-fastening	W. S. Richardson	300,508	June 17	1298	356	27	1180
Gloves, &c. Fastening for	W. S. Richardson	300,509	June 17	1300	357	27	1181
Gloves, shoes, &c. Fastener for	W. L. Enegren	295,914	Apr. 1	25	7	27	7
Glucose. Manufacture of	L. Barbier	299,900	June 3	490	129	27	1015
Gold and silver from their ores. Process of and apparatus for extracting	C. P. Bonnett	298,663	May 13	877	245, 246	27	699
Gold, silver, and copper ores. Roasting and disintegrating	D. W. Birmingham	296,116	Apr. 1	267	.....	27	53
Governor	R. W. and J. W. Gardner	300,705	June 17	1569	430	27	1229
Governor for steam-engines. Electrical	E. H. Amet	300,338	June 17	1085	296	27	1142
Governor. Marine-engine	A. H. Bell and A. Fuller	297,343	Apr. 22	1835	499	27	363
Grain-binder	J. F. Appleby	295,970	Apr. 1	89	27, 28	27	20
Grain-binder cord-holder	R. W. Masko	297,144	Apr. 22	1577	433, 434	27	315
Grain-binder knot-tying mechanism	C. M. Richardson and J. S. Gibbs	300,009	June 10	642	174, 175, 176	27	1051
Grain-binders. Bundle-carrier for	W. Collins	298,449	May 13	621	176, 177	27	652
Grain brushing and scouring machine	L. Gathmann	297,782	Apr. 29	2408	658	27	476
Grain crusher and disintegrator	J. A. Jones	296,838	Apr. 15	1187	333	27	239
Grain-drill	J. L. Ashurst	297,961	May 6	2	1	27	527
Grain-drill	T. Becker	297,498	Apr. 22	2010	549	27	396
Grain-drill	C. F. Kulp	299,405	May 27	1812	521	27	994
Grain-drill	A. L. Reese	300,129	June 10	795	214	27	1060
Grain-drill force-feed	J. H. Keedy	298,390	May 13	560	154	27	640
Grain-drying machine	B. S. Cullen	299,204	May 27	1502	449	27	848
Grain header and harvester	P. E. Dronet	297,510	Apr. 22	2046	559	27	401
Grain-meter. Automatic	G. Marsh and V. Arnold	297,614	Apr. 29	2190	597	27	435
Grain-mixing machine	J. L. Sheppard	298,904	May 20	1185	333, 334	27	766
Grain. Reducing lobated	L. Gathmann	299,375	May 27	1767	.....	27	886
Grain reduction and separating machine	J. M. Case	297,761	Apr. 29	2396	651	27	472
Grain-scourer	G. A. Dawson	297,353	Apr. 22	1847	502	27	365
Grain separating, sorting, and grading machine	W. E. Wild	299,446	May 27	1856	533, 534	27	902
Grain-separator	E. Huber and F. Strobel	298,302	May 6	443	119	27	611
Grain-separator	C. E. McNeal	300,021	June 17	1440	397	27	1206
Graining compound	W. H. Dow	300,350	June 17	1103	.....	27	1145
Grapple	F. Bowden	296,666	Apr. 8	976	273	27	194
Grate	L. Bannister	297,340	Apr. 22	1830	497, 498	27	362
Grate	C. H. Fisher	300,059	June 10	702	191	27	1003
Grate	T. Kirkwood	299,147	May 27	1404	429	27	835
Grate	J. T. Snyder	300,522	June 17	1311	360	27	1183
Grate-bar	S. Smith	298,494	May 13	593	167	27	647
Grate. Fire	G. Alexis-Godillot	297,548	Apr. 22	2096	572, 573	27	412
Grate for burning sawdust	M. J. Lyons	299,485	May 27	1904	548	27	911
Griddle. Cake	J. V. Taylor	300,409	June 17	1477	422	27	1157
Grinding and polishing machine	E. R. Ware	296,656	Apr. 8	964	270	27	192
Grinding chisels or tools of various kinds. Machinery for	J. Birkenhead	295,900	Apr. 1	9	3	27	5
Grinding cutter-knives. Machine for	L. Bush, Jr	297,565	Apr. 29	2128	581, 582	27	424
Grinding diamonds, &c. Machine for dressing the faces of wheels for	I. Hermann	299,642	June 3	181	45	27	954
Grinding-mill	C. C. Barner	299,340	May 27	1727	495	27	878
Grinding-mill	J. M. Case	297,756	Apr. 29	2378	648	27	471
Grinding-mill	G. K. Smith	297,024	Apr. 15	1419	390, 391	27	281
Grinding-mill	A. L. Teetor	300,530	June 17	1321	363	27	1185
Grinding-mill	J. F. Winchell	297,049	Apr. 15	1447	400	27	287
Grinding-mill. Portable	R. Waak and C. Jagusch	301,020	June 24	1948	538	27	1301
Grindstone attachment	W. Chalmers	300,845	June 24	1738	475	27	1264
Grindstone-hangings	F. M. Stearns	299,870	June 3	457	119	27	1009
Grindstone-shaft	A. F. Weaver	298,046	May 6	107	28	27	547
Grindstones. Knockdown frame for	F. M. Stearns	297,466	Apr. 22	1984	542	27	391
Gripper mechanism for bronzing-machines, &c.	A. T. Anderson	297,739	Apr. 29	2358	641	27	467
Guard: *See* Car-door guard. Railway foot-guard. Cutter-head guard. Saw-guard. Elevator-guard. Switch-guard. Hatchway-guard. Window-guard.							
Guitar	J. C. Cooke	295,984	Apr. 1	111	34	27	23
Gun-locks by recoil. Mechanism for operating	H. S. Maxim	297,278	Apr. 22	1747	475	27	346
Gun. Machine	T. Nordenfelt	298,493	May 13	676	191, 192	27	602
Gun. Machine	C. R. Scott	299,696	June 3	258	64	27	968
Gun. Magazine	F. J. Evans	300,856	June 24	1751	478	27	1266
Gun. Magazine	L. L. Hepburn	298,377	May 13	542	148, 149	27	637
Gun. Magazine	C. M. Spencer and R. Rhodes	299,282	May 27	1650	474	27	864
Guns. Rifling	A. Schneider	300,515	June 17	1306	358	27	1182
Gynecological and surgeon's operating-table	J. D. Alexander	300,337	June 17	1084	295	27	1141
Gynecological chair	M. M. Copp	299,520	June 3	20	6	27	924
Hair-crimper	G. H. Blakesley	297,911	Apr. 29	2552	609	27	505
Hair-front	S. C. Beck	300,938	June 24	1847	506	27	1285

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Halter	E. Barnard	297,963	May 6	4	2	27	528
Halter	C. R. Robinson	297,850	Apr. 29	2479	679	27	491
Halter-fastener	M. C. Hayes	297,259	Apr. 22	1730	469	27	343
Halter or tie for animals	M. Sweet	299,179	May 27	1532	439	27	841
Halter-strap fastening	J. Gibbons	297,983	May 6	24	7	27	532
Halter-trimming	J. Gibbons	300,461	June 17	1244	340	27	1169
Hame	A. Boening	300,838	June 24	1732	473	27	1262
Hame	L. E. Jones	300,712	June 17	1576	432	27	1230
Hame	J. F. Knorr	295,924	Apr. 1	40	11	27	10
Hame	J. P. Quinette	297,846	Apr. 29	2475	678	27	490
Hame	E. E. Winstead	296,497	Apr. 8	764	210	27	151
Hame	O. P. Letchworth	296,193	Apr. 1	359	103	27	69
Hame attachment	E. D. Cole	296,530	Apr. 8	805	222	27	160
Hame-clip	C. W. Massenheimer	297,277	Apr. 22	1746	474	27	345
Hame-clip	O. E. Baker	298,814	May 20	1077	302	27	744
Hame-fastener	M. A. R. Wycough	297,958	Apr. 29	2613	716	27	517
Hame for harness. Adjustable	J. Toerper and F. Krein	299,880	June 3	469	123	27	1011
Hame-staple	J. H. Baker	297,659	Apr. 29	2251	613	27	447
Hammer. Forge	G. S. Yingling, A. L. Flack, and H. T. Heller.	298,649	May 13	858	240	27	695
Hammer. Tack	G. S. Yingling, A. L. Flack, and H. T. Heller.	298,650	May 13	858	241	27	696
Hammers. Nail-heading attachment for	G. F. Barber	299,717	June 3	291	72	27	975
Hammock selvage	A. O. Rood	296,459	Apr. 8	710	196	27	140
Hammock-support	G. E. Sutphen	298,515	May 13	699	198	27	666
Hammocks. Making	A. O. Rood	296,460	Apr. 8	710	196, 197	27	141
Hammocks. Making	A. O. Rood	296,627	Apr. 8	930	260	27	185
Hand and foot power	O. E. Jones	300,084	June 10	735	199	27	1069
Hand-drill	I. M. Furbish	298,457	May 13	631	180	27	654
Hand-grip tester	M. J. Hinden	300,473	June 17	1257	344	27	1172
Handle: *See* Anger-handle. Saw-handle. Bicycle-handle. Tool-handle. Pocket-knife handle. Traveling-bag handle. Pump-handle.							
Handle-attaching device for tools	J. R. Hood	295,922	Apr. 1	37	11	27	10
Hanger: *See* Clothes-hanger. Shade-hanger. Door-hanger. Shade-roller hanger. Eaves-trough hanger. Shaft-hanger.							
Harness	C. Allen and W. E. Dubbs	300,751	June 24	1623	445	27	1243
Harness	J. B. Gathright	300,358	June 17	1113	302	27	1147
Harness	C. Kifer	298,500	May 13	787	221	27	683
Harness	J. M. Porter	297,003	Apr. 15	1389	384	27	276
Harness. Breast-collar for	L. H. Hillis	299,141	May 27	1488	427	27	834
Harness checking device	T. B. Floyd and H. L. Barton	297,369	Apr. 22	1866	507	27	368
Harness-crupper	F. J. Ingrish	299,793	June 3	373	95	27	909
Harness-fitting	J. C. Covert	299,354	May 27	1746	503	27	882
Harness. Hip-strap loop for	A. Karras	298,589	May 13	787	221	27	683
Harness-loop machine	P. Landfrit	299,406	May 27	1813	521	27	894
Harness-loop stick	H. H. Baker, Jr	300,298	June 10	2031	278	27	1121
Harness-pad	H. C. Babcock	297,486	Apr. 22	2008	548	27	396
Harness-pad	J. C. Harpham	296,748	Apr. 15	1078	304	27	220
Harness-pad	C. W. Rogers	297,011	Apr. 15	1400	396	27	278
Harness-pad	T. A. Simmons	298,246	May 6	372	98	27	506
Harness-pad	E. A. Cooper	296,140	Apr. 1	295	85	27	58
Harness-pad tree	R. W. Jones	296,178	Apr. 1	337	96	27	66
Harness-rosette	K. Mackay and T. C. Dunn	298,104	May 6	175	46	27	560
Harness. Swiveling loop-iron for	J. F. Muns and C. Molno	297,084	Apr. 15	1486	411	27	294
Harrow	H. H. Sater	300,017	June 10	651	178	27	1053
Harrow	H. M. Sherwood	295,950	Apr. 1	66	20	27	16
Harrow	J. Underwood	300,291	June 10	1023	276	27	1120
Harrow and cultivator	G. H. Johnson	298,858	May 20	1126	317	27	753
Harrow and scraper. Cultivating	W. R. Craig	296,732	Apr. 15	1057	298	27	216
Harrow. Disk	F. Bramer	297,666	Apr. 29	2361	615	27	448
Harrow. Disk	G. G. Crowley	299,057	May 20	1375	392	27	801
Harrow. Disk	G. G. Crowley	300,697	June 17	1556	427	27	1227
Harrow. Rotary	D. Manuel	298,008	May 6	59	15	27	539
Harrow. Rotary sulky	W. H. Southward	300,151	June 10	827	224	27	1085
Harrow. Wheel	E. F. Stoddard	298,911	May 20	1194	336, 337	27	768
Harvester	R. V. Boice	299,106	May 27	1444	412	27	825
Harvester	D. W. Bovee	296,120	Apr. 1	271	77, 78	27	54
Harvester	W. Dingman	297,357	Apr. 22	1850	503	27	365
Harvester	H. A. Howe	298,854	May 20	1123	316	27	753
Harvester	L. Miller	299,244	May 27	1607	461, 462	27	857
Harvester	J. R. Severance	296,231	Apr. 1	414	116	27	79
Harvester	W. N. Whiteley	297,545	Apr. 22	2091	570	27	411
Harvester chain rake	H. Kettering	300,067	June 10	737	199	27	1070
Harvester. Corn	S. C. Kenaga	299,401	May 27	1804	519, 520	27	893
Harvester. Corn	S. F. Mouck	300,000	June 10	625	170	27	1049
Harvester. Corn	S. F. Weaver	299,303	May 27	1683	483	27	870
Harvester. Cotton	W. J. Powell	296,449	Apr. 8	701	192, 193	27	139
Harvester. Cotton	B. O. Savage	300,739	June 17	1604	440	27	1234
Harvester-cutters. Mechanism for driving	A. M. Dungan and M. Lacrone	296,150	Apr. 1	306	88	27	59
Harvester gavel-deliverer	A. Miller	299,667	June 3	232	57, 58	27	964
Harvester grain-conveyer	J. F. Gordon	300,247	June 10	957	258	27	1108
Harvester grain-wheel	W. N. Whiteley	297,544	Apr. 22	2090	569	27	411
Harvester-knives. Machine for grinding	J. J. Wood, Sr., and F. Christen	300,183	June 10	875	235	27	1093
Harvester pitman-coupling	J. Waggonner	297,882	Apr. 29	2516	688	27	498

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Harvester-reel	G. T. and D. Murray	299,247	May 27	1611	463	27	857
Harvesters and binders. Grain-conveyer for	J. D. Nix	298,614	May 13	816	229	27	668
Harvesters. Grain-delivering apparatus for	J. R. Severance	297,723	Apr. 29	2330	636	27	464
Harvesting machine. Grain-	E. Barnhard and A. F. Thomas	298,054	May 6	115	29	27	549
Harvesting machine. Grain-	J. Knoop	296,843	Apr. 15	1199	334 and 335	27	240
Hasp-lock	G. Crouch	295,967	Apr. 1	116	34	27	24
Hasp-lock	T. S. E. Dixon	295,912	Apr. 1	21	6	27	7
Hasp-lock	D. H. Donaldson	297,117	Apr. 22	1544	426	27	309
Hasp-lock	W. Fry	298,965	May 20	1265	300	27	780
Hat and coat hook	F. Seliger	297,173	Apr. 22	1608	442	27	321
Hat-binding ring	R. Eickemeyer	296,282	Apr. 1	488	136	27	92
Hat-bodies. Method of and machine for scalding and felting	J. S. Taylor	297,471	Apr. 22	1989	543	27	302
Hat-body-rounding machine	A. T. Sturdevant	296,795	May 20	1052	294 and 295	27	739
Hat-brim-shaping apparatus	L. H. Hoyt	299,644	June 3	187	47	27	954
Hat-brims. Wire frame for	G. B. Sherman and J. Nutt	299,279	May 27	1648	473	27	864
Hat or bonnet	J. Haegen	296,357	Apr. 8	845	225	27	168
Hat-roll-pressing machine	C. W. Gilman and R. Welker	297,984	May 6	25	7	27	532
Hat-rounding machine	J. Wenstrom	298,643	May 13	847	236 and 237	27	694
Hat-sweat	G. S. Bracher	296,918	Apr. 15	1291	358	27	258
Hat-sweat reed	G. S. Bracher	296,919	Apr. 15	1293	.....	27	258
Hat-tip	J. F. Newton, Jr	296,438	Apr. 8	686	189	27	136
Hat-ventilator. Adjustable	W. M. Protheroe	297,715	Apr. 29	2327	633	27	462
Hat-wires. Machine for bending	G. B. Sherman and J. Nutt	299,278	May 27	1643	471, 472, and 473	27	863
Hats and other fabrics. Machine for felting and sizing	R. S. Judson and C. M. Ackerman	296,415	Apr. 8	662	183	27	130
Hatchet	A. C. Rex	297,716	Apr. 29	2329	633	27	462
Hatching eggs by artificial heat. Apparatus for	C. E. Hearson	298,579	May 13	775	217	27	681
Hatchway-gate for elevators	L. Hixson	299,473	May 27	1889	544	27	907
Hatchway-guard	J. Scherer	300,138	June 10	813	219 and 220	27	1062
Hay and grain elevator	J. G. Livingston	296,856	Apr. 15	1210	339	27	243
Hay and grain rack	W. H. Lintz	298,195	Apr. 1	363	104	27	70
Hay and other elevators	C. S. Ambruster	295,893	Apr. 1	1	1	27	3
Hay-binder for wagon-racks	J. Madison	299,817	June 3	399	102	27	997
Hay-carrier	A. J. Burbank	300,208	June 10	912	245	27	1099
Hay-carrier	C. A. Gutenkunst	296,745	Apr. 15	1074	303	27	219
Hay-carrier	E. Woodward	301,036	June 24	1068	543	27	1307
Hay-carrier	W. I. Wooster and J. N. Reynolds	298,809	May 20	1070	300	27	743
Hay-carriers. Adjustable stop for	W. Gntenkunst	296,746	Apr. 15	1075	303	27	219
Hay-carriers. Elevator-power for	J. S. Grabill	296,950	Apr. 15	1325	368	27	264
Hay elevator and carrier	J. M. Boyd	300,667	June 17	1538	423	27	1294
Hay elevator and carrier	A. H. and A. E. King	299,800	June 3	380	97	27	993
Hay-fork	S. S. Wilson	297,900	Apr. 29	2537	694	27	502
Hay-fork. Horse	J. S. Gochnauer	298,574	May 13	769	216	27	680
Hay-fork. Horse	A. J. Nellis	296,769	May 20	1017	284 and 285	27	734
Hay-knife	L. O. Allen	296,304	Apr. 8	523	147	27	105
Hay-knife	W. H. Carter	297,753	Apr. 29	2375	647	27	470
Hay-loader	J. W. and V. W. Macy	296,591	Apr. 8	887	245 and 246	27	176
Hay-presa	T. D. Aylsworth	296,267	Apr. 1	467	131	27	88
Hay-rack	C. A. Peasley and I. F. Dodge	297,842	Apr. 29	2471	677	27	489
Hay-rake. Horse	H. Gale	299,773	June 3	352	90	27	987
Hay-rake. Horse	D. W. Long	295,928	Apr. 1	43	13	27	11
Hay-rake. Horse	G. H. Smith and J. Kienardt	299,430	May 27	1837	528	27	899
Hay-rakes. Trip mechanism for horse	W. M. Saunders	299,423	May 27	1830	536	27	897
Hay-ricking device	R. O. Davis	297,234	Apr. 22	1699	461	27	336
Hay-shears	W. Millspaugh	296,036	Apr. 1	173	50	27	36
Hay-stacker	J. M. Coe	300,955	June 24	1864	511	27	1288
Hay-stacker	W. Louden	298,218	May 6	333	87	27	589
Hay-stacker	J. B. Matlock	296,429	Apr. 8	669	185	27	132
Hay-stacker	W. G. McComas	296,032	Apr. 1	167	48, 49	27	34
Hay-stacker	J. J. Stephenson	298,909	May 20	1193	335 and 336	27	767
Hay-stacker	J. R. Wright	297,099	Apr. 15	1509	416	27	298
Head-comb	S. A. Tisdale	299,879	June 3	469	122	27	1011
Head-covering and making the same	A. B. Waring	296,371	Apr. 8	604	167	27	120
Head-covering or hood. Protective	A. Wienlewski	296,499	Apr. 8	766	210	27	152
Head-rest	H. E. Doren	300,233	June 10	936	253	27	1104
Head-rest	T. B. Elker	299,361	May 27	1752	504 and 505	27	883
Head-rest	F. H. Plummer	296,779	Apr. 15	1113	313	27	226
Header and thrasher	C. Grattan	300,067	June 10	710	193	27	1064
Header and thrasher. Combined	S. L. Gaines	297,127	Apr. 22	1556	429	27	311
Heat-regulator	W. S. Johnson	297,937	Apr. 29	2588	710	27	512
Heat-resisting casing	T. A. MacDonald	297,613	Apr. 29	2189	597	27	435
Heater: *See* Feed-water heater. Steam-heater. Soldering-iron heater.							
Heating and ventilating apparatus	P. W. Nolan	297,434	Apr. 22	1943	530	27	383
Heating and ventilating device for buildings	A. M. Hicks and A. Dishman	300,075	June 10	726	196	27	1067
Heating apparatus	D. M. Graham	297,129	Apr. 22	1559	430	27	312
Heating-furnace	J. Evans	296,399	Apr. 8	644	178	27	127
Heel-burnishing machine	I. Legay	298,484	May 13	666	188	27	666
Heel-machine	E. H. Parks	297,437	Apr. 22	1946	531 and 532	27	384
Heel-plate. Metallic	C. B. Wilson	299,645	May 20	1364	388	27	799
Heel-stiffener	E. Shaw and R. A. Owings	300,022	June 10	657	179	27	1054

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Heel-stiffener machine	A. H. Thompson	298,797	May 20	1054	295	27	740
Heel-stiffeners. Machine for shaping	G. F. Moore	299,996	June 10	620	167 and 168	27	1048
Heels. Die for making rubber	F. Richardson	296,454	Apr. 8	706	195	27	140
Hermetic jar	T. Hetzler	298,378	May 13	545	149	27	638
Hides and leather. Machine for wringing raw	A. Heim	297,260	Apr. 22	1731	470	27	343
Hilling and fertilizing machine	R. W. Allen	296,102	Apr. 1	249	73	27	50
Hinge	A. S. Blake	298,724	May 20	963	269	27	724
Hinge for mirrors	A. Jelinek	298,386	May 13	556	153	27	640
Hinge. Spring-	G. M. Lane	298,480	May 13	662	187	27	659
Hinge. Spring-	D. Nickel and C. Zattan	297,946	Apr. 29	2399	712	27	514
Hitching-block	F Gifford	296,739	Apr. 15	1064	300	27	217
Hitching device. Detachable	C. Marquardt	296,764	Apr. 15	1096	308	27	223
Hitching-strap	S. Birdsall	300,561	June 17	1363	375	27	1191
Hobby-horse	M. Bohlig	300,200	June 10	903	243	27	1098
Hoe	S. Watson	298,926	May 20	1213	342	27	771
Hoe. Wheel-	S. Fuller	298,296	May 6	435	117	27	609
Hoes. Machine for making	R. E. Breed	295,903	Apr. 1	13	4	27	5
Hoist. Chain-	C. A. Teal	296,364	Apr. 8	597	165 and 166	27	119
Hoister. Stone-	W. H. H. Cloppert	300,217	June 10	920	246	27	1101
Hoisting and conveying ground, minerals, &c. Apparatus for	P. H. McCauley	296,343	Apr. 8	574	160	27	114
Hoisting and conveying machine	A. E. Brown	300,689	June 17	1542	424	27	1225
Hoisting and conveying machine	A. E. Brown	300,690	June 17	1547	425	27	1225
Hoisting apparatus	J. H. Montgomery	296,433	Apr. 8	681	188	27	135
Hoisting apparatus	W. F. Murray	299,084	May 20	1411	402	27	808
Hoisting-bucket	G. H. Miller and C. Goyette	298,606	May 13	806	226	27	686
Hoisting device for vessels	R. H. Parnell	297,536	Apr. 22	2081	567	27	409
Hoisting-gear	I. and A. Scoville	300,142	June 10	819	221	27	1063
Hoisting-machine	J. and T. McNell	296,664	Apr. 15	1222	342	27	245
Holdback for pole-irons of wagons	W. D. Hatch	299,324	May 27	1778	512	27	888
Holdback-hook	C. L. Crowell	298,670	May 6	138	35	27	553
Holder: *See* Bag-holder. Bag and twine holder. Bill and poster holder. Bolt-holder. Bottle-holder. Broom-holder. Brush-holder. Button-hook holder. Card-holder. Cartridge-holder. Coin-holder. Copy-holder. Cover-holder. Crayon-holder. Cuff-holder. Dental-floss holder. Dry-plate holder. Eyeglass-holder. File-holder. Grain-binder cord-holder. Lamp-holder. Lead and crayon holder. Leaf-holder. Match-box holder. Mop and brush holder. Mucilage-holder. Paper-holder. Pen-holder. Pillow-sham holder. Plaque-holder. Pneumatic holder. Robe-holder. Sash-holder. Skid-holder. Spittoon-holder. Tag-holder. Tally-card holder. Ticket-holder. Tool-holder. Whip-holder. Wire-holder.							
Hominy-mill	M. L. Mowrer	299,834	June 3	418	108	27	1001
Hook: *See* Back-band hook. Brush-hook. Chain-hook. Check-hook. Chock-rein hook. Hat and coat hook. Holdback-hook. Ice-hook. Ladder-hook. Safety-hook. Sewing-machine hook. Siding-hook. Soap-hook. Swivel-hook. Whiffletree-hook.							
Hook	F. A. Smith, Jr.	298,510	May 13	695	196	27	666
Hoop: *See* Barrel-hoop.							
Hoop-bending machine. Metallic	M. Schlumm and P. Ackermann	300,140	June 10	816	220 and 221	27	1083
Hoop pointing and lapping machine	F. L. Wilson	296,496	Apr. 8	760	209 and 210	27	150
Hoop-skirt	L. H. Loomer	300,678	June 24	1780	485	27	1272
Hoop-splitting machine	I. Walborn	298,044	May 6	105	27	27	547
Horse attaching and detaching device	C. C. Ferrill	297,367	Apr. 22	1865	507	27	368
Horse-cleaner	E. M. Farr	297,365	Apr. 22	1863	506	27	367
Horse-cleaning machine	C. S. and E. A. Conde	298,352	May 13	515	140	27	632
Horse-detacher	D. D. Dantzler	296,142	Apr. 1	207	85	27	58
Horse-detacher	O. Dupas	300,056	June 10	698	190	27	1062
Horse-detacher	I. A. Wesson	297,205	Apr. 22	1602	452	27	330
Horse-detacher	H. Adkins	298,932	May 20	1222	346	27	772
Horse-power	J. Ellis	299,061	May 20	1380	393 and 394	27	802
Horse-power	D. Kaufman	300,610	June 17	1422	392	27	1203
Horse-power	J. T. McCarney	297,925	Apr. 29	2451	671	27	485
Horse-power	R. H. Tisdale	300,411	June 17	1179	323	27	1157
Horse-power	A. Zastrow	296,099	Apr. 1	245	72	27	50
Horse-power. Portable	H. Packer	297,289	Apr. 22	1759	478	27	348
Horse-power tread	N. Hoffman, H. Ellis, and S. Z. Schwenk	296,971	May 20	1270	362	27	781
Horse-rake	H. W. Getman	298,966	May 20	1266	360 and 361	27	781
Horse-tooth cutter	J. H. Dancer	298,556	May 13	743	210	27	676
Horses. Device for controlling runaway	D. J. Shay	299,174	May 27	1526	437	27	840

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Drg.	Vol.	Page.
Horses from cribbing. Device for preventing	J. O. Foster	297,777	Apr. 29	2404	656	27	476
Horses. Interfering-pad for	E. G. Miles	300,718	June 17	1561	434	27	1231
Horseshoe	H. Olson	296,996	Apr. 15	1362	362	27	274
Horseshoe	H. B. Schureman	298,299	May 20	1161	331	27	765
Horseshoe	G. E. Sprinkle	298,907	May 20	1191	335	27	767
Horseshoe-nail machine	J. Roy	296,461	Apr. 8	712	{197 198	27	141
Horseshoe. Spring-	D. Roberge, Jr.	300,899	June 24	1805	494	27	1277
Hose	J. Murphy	296,436	Apr. 8	684	189	27	135
Hose. Adjustable shelf for holding fire-	J. C. N. Gulbert and W. M. Andrus	296,372	May 13	537	147	27	636
Hose carriage. Garden-	G. Grisel	300,772	June 24	1651	452	27	1248
Hose-coupling	G. M. Van Riper and J. O. St. Clair	297,880	Apr. 29	2515	688	27	496
Hose-coupling	T. E. Wells	296,093	Apr. 1	299	70	27	48
Hose-coupling	A. Zoller	298,150	May 6	237	61	27	571
Hose. Fire-	G. A. Stuck	298,321	May 6	470	127	27	615
Hose-grapple	A. H. Green	297,788	Apr. 29	2416	660	27	478
Hose-pipe nozzle	J. E. Prunty	297,447	Apr. 22	1961	536	27	387
Hose-reel	H. L. Gardner	300,355	June 17	1110	301	27	1146
Hose. Seamless multiply-fabric	J. Schenck and B. L. Stowe	298,017	May 20	1320	377	27	792
Hose. Seamless multiply-fabric	J. Schenck and B. L. Stowe	299,018	May 20	1321	378	27	792
Hot-air and steam generating furnace	W. Pullinger	299,008	May 20	1308	{373 374	27	789
Hot-air engine	S. Wilcox. (Reissue)	10,486	June 3	550	{146 147	27	1026
Hot-air furnace	P. B. Clark	296,926	Apr. 15	1301	361	27	260
Hot-blast-oven valve	J. J. Spearman	300,329	June 10	1064	288	27	1127
Hot-water regulator. Automatic	W. S. and E. B. Clark	299,740	June 3	318	81	27	980
House. Portable	O. H. Smith	297,863	Apr. 29	2492	{682 683	27	493
Houses. Apparatus for moving	J. Hollingsworth	295,921	Apr. 1	35	10	27	9
Houses. Constructing frame	E. Totman	299,598	June 3	126	31	27	942
Household implement. Combined	F. E. Parsons	297,836	Apr. 29	2467	676	27	488
Hub	J. F. Packer	300,392	June 17	1156	317	27	1153
Hub-attaching device	G. H. Hombach	298,584	May 13	780	219	27	692
Hub. Vehicle-	J. Jonson	300,264	June 10	982	265	27	1113
Hub. Vehicle-	J. Monk	298,014	May 6	68	17	27	540
Hub. Vehicle-wheel	B. F. Jacobs	296,414	Apr. 8	661	183	27	130
Hub. Wheel-	J. P. Warner	298,525	May 13	707	200	27	669
Hydrant	J. Ward	300,925	June 24	1832	{501 502	27	1282
Hydrant and plug	J. W. Ramsey	300,282	June 10	1008	272	27	1117
Hydrant and street-washer	A. G. Daykin	298,355	May 13	519	141	27	633
Hydraulic elevator	E. B. Ellington	296,889	May 13	907	252	27	705
Hydraulic elevator	G. Q. McGown	299,930	June 3	527	140	27	1021
Hydraulic elevator	O. P. Rice	300,132	June 10	799	215	27	1080
Hydraulic jack	R. H. Dudgeon	297,975	May 6	15	5	27	530
Hydraulic motor	H. Baumotte	296,381	Apr. 8	624	{172 173	27	124
Hydraulic motor	R. Lenchaenring	298,102	May 6	172	45	27	550
Hydrogen-lighter	M. J. Hinden	301,057	June 24	1993	550	27	1311
Ice-chipping tool	H. Albrecht	296,501	Apr. 8	766	211	27	152
Ice-creeper	J. J. Temple	298,517	May 13	701	198	27	667
Ice-creeper	J. J. Temple	298,518	May 13	702	199	27	667
Ice-creeper	C. F. Woat	297,733	Apr. 29	2353	640	27	466
Ice-creeper and heel-plate combined	E. N. Porter	300,006	June 10	637	173	27	1051
Ice-hook	D. F. Burgess	296,126	Apr. 1	281	80	27	55
Ice-hook	J. W. Evenden	296,321	Apr. 8	544	152	27	109
Ice-making apparatus. Absorber for ammonia	M. S. Conly	297,502	Apr. 22	2038	556	27	400
Ice-making apparatus. Retort for ammonia	M. S. Conly	298,660	May 13	892	248	27	703
Ice. Manufacturing and storing	G. Norwood	296,600	Apr. 8	899	{348 349	27	178
Ice-plow	H. F. Dernell	297,236	Apr. 22	1700	462	27	337
Ice-plow	J. H. Knowles	298,213	May 6	326	85	27	587
Ice-tongs	J. S. Dollinger	297,237	Apr. 22	1701	462	27	337
Ice-tongs	M. Hatfield	297,393	Apr. 22	1892	514	27	373
Illuminating-burner	C. Clamond	297,767	Apr. 29	2393	653	27	473
Illuminator. Electric mouth-	E. T. Starr	300,524	June 17	1313	{360 361	27	1183
Incinerating-furnace	H. S. Firman	296,322	Apr. 8	545	152	27	109
Incubator	F. Humphreville	296,413	Apr. 8	660	{182 183	27	130
Incubator	J. Rankin	298,890	May 20	1172	327	27	762
Index	T. C. Brown	299,338	May 27	1726	495	27	878
Indicator: *See* Bill-of-fare indicator. Station-indicator. Speed-indicator. Time-indicator.							
Indicator-lock	F. A. Jillson	299,395	May 27	1796	{516 517	27	891
Induction. Controlling and limiting	S. F. Shelbourne	297,178	Apr. 22	1614	444	27	321
Inductorium	C. J. Van Depoele	298,431	May 13	602	170	27	648
Inhaler	J. N. Dodge	297,769	Apr. 29	2396	654	27	474
Inhaler	C. Warren	298,802	May 20	1069	297	27	741
Injector	W. T. Ewing	297,511	Apr. 22	2048	559	27	401
Injector	L. E. Hogue	297,798	Apr. 29	2426	663	27	480
Injector	F. W. Kremer	299,229	May 27	1589	457	27	853
Injector	F. W. Kremer	299,230	May 27	1591	457	27	853
Injector	J. Loftus	300,092	June 10	743	201	27	1071
Injector	W. R. Park	297,836	Apr. 29	2464	675	27	487
Injector	W. R. Park	298,884	May 20	1161	326	27	761
Injector	J. Reichmann	301,004	June 24	1925	531	27	1290
Injector and ejector	J. Wotapek	298,329	May 6	479	{129 130	27	617
Injector. Lifting feed-water	W. McElroy	297,826	Apr. 29	2452	{671 672	27	485

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Drg.	Vol.	Page.
Injector. Steam-boiler	W. W. Cowley	296,731	Apr. 15	1055	{297 298	27	216
Ink-well	J. H. Gifford	297,378	Apr. 22	1874	509	27	370
Inkstand	I. Brooke	299,730	June 3	307	77	27	978
Insect-powders. Ejector for	A. Isaacsen	297,693	Apr. 29	2303	626	27	457
Inspector. Fluid-	J. L. Hornig	298,409	May 13	649	184	27	657
Insulated conductor	T. Miner	296,294	Apr. 1	507	141	27	95
Insulated electric conductor or cable	S. F. Shelbourne	297,175	Apr. 22	1609	443	27	321
Insulated telegraph tie-wire	C. C. Hinsdale	298,753	May 20	1001	280	27	731
Insulating electric cables. Method of and apparatus for	S. F. Shelbourne	297,181	Apr. 22	1618	445	27	322
Insulating material	D. H. Dorsett	298,072	May 6	140	.....	27	553
Insulating pipe-union	C. Deavs	299,206	May 27	1564	440	27	848
Insulating-support for electric conductors	D. S. Haines and S. D. Lake	296,668	Apr. 8	1001	280	27	199
Insulating-supports for electrical conductors. Bracket for	D. S. Haines and S. D. Lake	296,558	Apr. 8	846	235	27	168
Insulator	J. S. Lewis	298,593	May 13	790	222	27	683
Insulator	J. A. Seely	296,881	Apr. 15	1242	347	27	248
Insulator for electric conductors	W. H. Davis	296,146	Apr. 1	301	87	27	50
Insulator for line-wires of mechanical telephones	J. F. Gilliland	296,330	Apr. 8	555	154	27	111
Insulator for telegraph-wires	L. C. Baldwin and J. C. Thurston.	297,101	Apr. 22	1518	419	27	305
Insulator pin. Electric-	J. M. Klein	297,699	Apr. 29	2312	629	27	459
Insulator-pins. Machine for making	W. Snee	297,865	Apr. 29	2494	683	27	494
Insulator-pins. Machine for turning	J. J. Baldwin	298,543	May 13	728	206	27	673
Insulator. Terminal	J. S. Lewis	298,594	May 13	791	222	27	684
Intrenching-tool	J. H. Patterson	297,840	Apr. 29	2469	676	27	489
Iron and steel. Purifying molten	H. Keeler	298,983	May 20	1281	.....	27	784
Iron. Manufacture of pig-	J. F. Bennett	299,040	May 20	1308	389	27	800
Iron. Manufacture of pig-	J. F. Bennett	299,103	May 27	1440	411	27	894
Iron. Manufacture of sheet-	W. D. Wood	297,097	Apr. 15	1506	.....	27	307
Iron. Manufacture of sheet-	W. D. Wood	300,184	June 10	876	.....	27	1094

Line-stopper	J. Furguson	298,360	May 13	534	146	27	635
Liniment	S. Potter	298,706	May 13	936	.....	27	711
Liquid-cooler	F. W. Wolf	301,035	June 24	1966	543	27	1307
Liquids. Apparatus for dispensing and drawing	L. Bergen	297,221	Apr. 22	1681	458	27	334

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lithographic surfaces. Method of and apparatus for damping	J. W. Osborne	299,002	May 20	1299	370	27	787
Load-binder	H. B. Banker	299,506	June 3	6	2	27	922
Lock: *See* Alarm-lock. Bicycle-brake lock. Car-door lock. Door-lock. Drawer-lock. End-gate lock. Hasp-lock. Mail-pouch lock. Nut-lock. Nut and bolt lock. Padlock. Permutation-lock. Rowlock. Seal-lock. Time-lock. Trunk-lock.							
Lock	F. Ballin	297,660	Apr. 29	2252	613	27	447
Lock	J. Gwynn	300,773	June 24	1652	452	27	1248
Lock	J. J. Knapp	299,805	June 3	387	98	27	995
Lock	J. G. Mattelin	299,486	May 27	1905	548	27	911
Lock	M. L. Mikesell	296,430	Apr. 8	678	187	27	134
Lock	F. W. Mix	297,151	Apr. 22	1584	436	27	316
Lock	E. Parker	300,393	June 17	1157	317	27	1153
Lock	M. Voigt	295,961	Apr. 1	81	25	27	18
Lock	H. C. Neer	299,671	June 3	238	59	27	965
Lock-bolt	J. W. Kohn	298,861	May 20	1131	318	27	754
Lock-strike	J. Kuster, Jr	296,292	Apr. 1	505	141	27	95
Locks. Attaching	F. B. Gould	296,741	Apr. 15	1066	300	27	218
Locket	E. T. Owen	298,114	May 6	188	50	27	562
Locking device for closets, boxes, &c	G. W. Sampson. (Reissue)	10,476	May 6	492	133	27	690
Locking-nut	E. Buss and R. Kühn	296,129	Apr. 1	283	80, 81	27	56
Locomotive	T. S. Tew	296,696	Apr. 1	229	67	27	47
Locomotive	J. G. Butterfield	299,955	June 10	570	153	27	1039
Locomotive ash-pan	S. H. Edgerly	299,360	May 27	1751	504	27	883
Locomotive ash-pan	E. S. Hart	296,749	Apr. 15	1079	304	27	220
Locomotive ash-pan	J. W. Hoyt and J. W. Twiggs	296,964	Apr. 15	1340	371	27	267
Locomotive-brake	G. H. Poor	300,124	June 10	789	212	27	1078
Locomotive-brake	G. H. Poor	300,125	June 10	791	212, 213	27	1079
Locomotive draw-bar lifter	C. K. Cordrey	299,114	May 27	1455	416	27	827
Locomotive driving-gear	G. Enghofer	297,921	Apr. 29	2568	704	27	506
Locomotive driving-wheels from spinning. Preventing	M. L. Johnson	296,576	Apr. 8	870	241	27	173
Locomotive-frame-forging die	T. Morris	298,109	May 6	180	48	27	561
Locomotive-furnace	B. Sloper	298,247	May 6	373	98, 99	27	586
Locomotive-pilots. Safety device for	O. Rothrock	297,012	Apr. 15	1401	387	27	278
Locomotive. Road-	C. P. Leavitt	299,150	May 27	1497	430	27	835
Locomotive-wheel	J. H. Mann	298,007	May 6	58	15	27	538
Log-binder	J. H. Benjamin	300,437	June 17	1214	331	27	1163
Log loader and turner	W. C. Stetson	300,405	June 17	1171	321	27	1155
Log-rolling machine	G. Wiborn	300,820	June 24	1707	466	27	1256
Loom	M. A. Furbush, C. H. Knowlton, and B. F. Meyer.	300,963	June 24	1871	513, 514, 515	27	1290
Loom let-off mechanism	J. Shew	297,019	Apr. 15	1409	388	27	279
Loom picker-staff check	O. D. Lombard and S. Pollard	297,821	Apr. 29	2448	670	27	484
Loom shaft-bearing	L. J. Knowles	300,483	June 17	1260	348, 349	27	1174
Loom shedding mechanism	V. and J. Royle, Jr	296,397	Apr. 1	509	142	27	96
Loom weft stop-motion	G. Crompton and H. Wyman	299,906	June 10	593	156	27	1041
Loom weft stop-motion	F. O. Tucker	298,917	May 20	[illegible]	339	27	760
Looms. Positive shuttle-motion for	F. K. Wright	299,610	June 3	171	35	27	946
Loop forming and stamping machine	C. Pellsier	296,050	Apr. 1	1[illegible]	54	27	39
Looped fabrics. Machine for uniting	J. R. Bridges	300,760	June 24	[illegible]	449	27	1246
Lozenges or tablets. Manufacture of medicated	A. W. Holway	297,800	Apr. 29	2[illegible]	[illegible]	27	480
Lubricating-can. Illuminating	E. R. Walker	296,802	Apr. 15	1138	320, 321	27	231
Lubricating-cup	W. S. Young	299,450	May 27	1861	535	27	902
Lubricating-cup. Automatic	B. W. Felthousen	299,768	June 3	347	88	27	986
Lubricating device. Car-axle	W. S. G. Baker	299,321	May 27	1700	488	27	874
Lubricating steam-engines	W. H. Craig	300,348	June 17	1100	299	27	1145
Lubricator: *See* Axle-lubricator. Steam-engine lubricator. Car-wheel lubricator.							
Lubricator	L. B. Bailey	298,813	May 20	1076	301	27	744
Lubricator	H. R. A. Boys	297,347	Apr. 22	1838	500	27	363
Lubricator	M. S. Cabell	297,567	Apr. 29	2136	583	27	425
Lubricator	A. C. Dearing	298,836	May 20	1103	309	27	749
Lubricator	C. C. Harlow	295,919	Apr. 1	30	9	27	8
Lubricator	W. Hope and J. Homan	298,468	May 13	648	183	27	657
Lubricator	M. McMullin	297,616	Apr. 29	2192	598	27	436
Lubricator	G. McNeil	298,011	May 6	63	16	27	539
Lubricator	T. Nel	297,622	Apr. 29	2198	600	27	437
Lubricator	C. H. Parshall	296,213	Apr. 1	387	110	27	74
Lubricator	C. H. Parshall	300,728	June 17	1591	436	27	1232
Lubricator	C. E. Peace	296,215	Apr. 1	389	110	27	75
Lubricator	P. L. Schmitt	301,010	June 24	1937	535	27	1301
Lubricator	W. O. Wayman	296,657	Apr. 8	966	271	27	193
Lubricator	J. B. Whitacre	296,493	Apr. 8	757	208	27	149
Lubricator	J. S. Peter	298,497	May 13	682	193	27	663
Lubricator and measure	J. Paul	300,119	June 10	763	210	27	1077
Lumber-elevator	J. A. Aycock	297,485	Apr. 22	2066	548	27	395
Lumber-rack	W. C. Stetson	299,694	June 3	266	66	27	970
Lumber-sorting apparatus	E. Heyde	297,395	Apr. 22	1894	514, 515	27	373
Lumber-trimming machine	W. F. Berghofer	298,340	May 13	501	136	27	630
Lunch-box	S. Beal	296,268	Apr. 1	468	131	27	88
Machine-brace							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Machine-table	J. J. Sullivan	299,697	June 3	270	67	27	971
Machinery. Device for suspending	J. D. Huntington	297,133	Apr. 22	1563	430	27	312
Machinery. Mechanism for checking or stopping the action of	J. D. Wright	297,330	Apr. 22	1810	491, 492	27	357
Magnet for dynamo-electric machines. Field-	J. W. Lawson	297,273	Apr. 22	1743	473	27	345
Magneto-electric machine	H. F. Joel	299,551	June 3	60	15	27	932
Mail-bag	J. S. Bailey	296,910	Apr. 15	1292	357	27	256
Mail-bag	J. Ebert	297,359	Apr. 22	1853	504	27	366
Mail-bag	F. Griscom	297,789	Apr. 29	2416	660	27	478
Mail-bag	F. Michael and R. Williams, Jr	296,429	Apr. 8	677	187	27	134
Mail-bag	J. B. Murray	296,704	Apr. 8	1017	285	27	203
Mail-bag	T. H. Smith	297,025	Apr. 15	1421	391	27	281
Mail-bag	F. Wheaton	297,326	Apr. 22	1803	490	27	356
Mail-bag catcher	A. P. Hause	300,969	June 24	1883	517	27	1291
Mail-bag catcher	W. H. Lockwood	298,216	May 6	330	80	27	588
Mail-bag fastener	W. D. Doremus	297,071	Apr. 15	1473	407	27	292
Mail-bag fastener	S. C. Hill and S. D. Webb	296,109	Apr. 1	328	93	27	64
Mail-bag fastener and tag-holder	W. D. Doremus	297,509	Apr. 22	2045	558	27	401
Mail-bag fastening	M. V. B. Ethridge	297,245	Apr. 22	1710	464	27	339
Mail-bag fastening	E. Osgood	297,155	Apr. 22	1588	437	27	317
Mail-bag label-holder	F. L. Herold	296,959	Apr. 15	1334	370	27	266
Mail-pouch lock	G. Deimel	298,451	May 13	625	178	27	653
Mail-sack tag	S. W. Brackett	298,345	May 13	509	138	27	631
Mailing-machine	R. Dick	297,116	Apr. 22	1543	426	27	309
Malt liquors. Process of and apparatus for the treatment of hops in the manufacture of	A. Steinke	297,467	Apr. 22	1985	542	27	391
Manure pulverizer and distributer	P. Johnson	299,648	June 3	195	49	27	956
Marble and granite. Engraving	F. W. Coons	300,049	June 10	691	[illegible]	27	1060
Marble-projector	J. H. Greenwood	296,405	Apr. 8	651	180	27	128
Marker. Lawn-	R. B. Reynolds	300,507	June 17	1298	356	27	1180
Marking implement	W. A. Kibbe	297,812	Apr. 29	2438	666	27	482
Mash, &c. Apparatus for cooling	T. Hayes	298,202	May 6	306	80	27	583
Mash-boiler	A. W. Niboelius	300,113	June 10	774	208	27	1076
Mash-tuns. False bottom for	G. G. Cave	298,172	May 6	266	68	27	576
Mat: *See* Floor-mat. Oil-press mat. Lamp-mat.							
Mat	R. Martinez	298,703	May 20	1011	283	27	733
Match-box	G. H. Gale	299,976	June 10	594	159	27	1043
Match-box holder	W. N. Weeden	298,641	May 13	845	236	27	693
Match-box holder. Self-adjusting	H. Beenwkes, Jr	299,508	June 3	8	3	27	922
Match-box. Pocket	E. B. Lake	299,807	June 3	388	99	27	995
Match-cards. Machine for sawing	G. Flewwelling and G. J. Harris. (Reissue.)	10,468	Apr. 15	1511	416, 417	27	298
Match-splints. Making	C. B. Rawson	298,502	May 13	688	195	27	664
Matrices. Machine for making	R. L. Kimberly	296,974	Apr. 15	1352	374, 375	27	969
Mattress-support	T. Burdick	295,977	Apr. 1	99	30	27	21
Measure and funnel. Combined liquid	T. T. Bishop	300,439	June 17	1216	332	27	1164
Measure and register for bottles. Combined liquid	E. H. Rogers, Jr	298,778	May 20	1029	287	27	735
Measure. Tape-	W. Kenffel	297,417	Apr. 22	1921	525	27	379
Measuring and cutting machine. Cloth	E. L. Crosby	298,670	May 13	803	249	27	703
Measuring and registering device for planing-machines.	J. R. Thomas	299,878	June 3	467	122	27	1011
Measuring apparatus for separators	J. Hug	300,779	June 24	1659	454	27	1249
Measuring device for surveying and other purposes	A. Atkins	296,504	Apr. 8	771	213	27	153
Measuring device. Tailor's	J. S. Hand	299,383	May 27	1776	511, 512	27	888
Measuring machine. Grain-	J. and A. Nafziger	298,612	May 13	813	228, 229	27	688
Measuring silk thread during the process of spooling. Machinery for	R. Morrison	297,706	Apr. 29	2319	630, 631	27	460
Measuring the lineal feet of work done by a wood-working machine. Apparatus for	F. C. Cooke	299,745	June 3	323	82	27	981
Measuring vessel. Liquid-	M. F. Robinson	298,504	May 13	689	195	27	665
Meat and vegetables. Machine for cutting	S. S. Cook	299,910	June 3	503	133	27	1017
Meat-clamp	J. H. Tabony	299,430	May 27	1850	532	27	901
Mechanical motor	G. W. Reams	299,164	May 27	1514	435	27	838
Mechanical movement	A. C. Campbell	298,943	May 20	1230	348, 349	27	774
Mechanical movement	J. W. Dodge	298,671	May 13	896	249	27	703
Mechanical movement	G. S. Hensley	298,376	May 13	541	148	27	637
Mechanical movement	J. P. Lavigne	296,977	Apr. 15	1360	376	27	271
Mechanical movement	J. McEwen	299,092	May 20	1410	402	27	808
Mechanical movement	F. M. Nixon	299,095	May 20	1413	403	27	808
Mechanical movement	A. L. Skinner	300,808	June 24	1691	462	27	1253
Mechanical movement	W. A. Tucker	299,183	May 27	1536	440	27	841
Mechanical movement	L. E. Wallerman	300,419	June 17	1188	325	27	1159
Mechanical movement	J. Warwick	300,539	June 17	1336	367, 368	27	1187
Mechanical power	J. W. Ellis	298,739	May 20	987	274	27	728
Mechanical power	W. S. Gray	297,595	Apr. 29	2170	593	27	432
Mechanical power	J. C. Sellers	298,028	May 13	831	232	27	691
Mechanical power	D. Wise	300,425	June 17	1197	327, 328	27	1160
Medical compounds. Preparing	H. C. Lawrence	298,000	May 6	51	[illegible]	27	535
Medicine. Hog-cholera	M. Frey, Jr	300,460	June 17	1243	[illegible]	27	1160
Menstrual receptacle	H. G. Farr	300,770	June 24	1649	451	27	1247
Metal bars. Machine for straightening round	L. Brightman	299,727	June 3	303	75	27	977
Metal bars. Machine for straightening round	L. Brightman	299,728	June 3	305	76	27	977
Metal plates. Manufacture of combined	J. Pedder	300,730	June 17	1593	437	27	1233
Metal rods. Die for drawing	J. Agnew	297,551	Apr. 29	2110	576	27	420
Metal rods. Machine for straightening	J. Agnew	297,550	Apr. 29	2107	575, 576	27	420

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Metal sheets. Fastening for corrugated	J. Smith	297,802	Apr. 29	2491	622	27	493
Metals by electrolysis. Process of and apparatus for reducing	A. J. Rogers	296,357	Apr. 8	589	164	27	117
Metals from franklinite ores. Separating	A. F. Wendt	297,480	Apr. 22	2000	.....	27	394
Metals from ores and alloys. Process of and apparatus for the separation of	H. R. Cassel	300,950	June 24	1859	510	27	1287
Metals from ores and metallurgical products and from each other. Separating	E. H. Russell	296,710	Apr. 8	1024	.....	27	204
Metals from their ores. Process of and apparatus for separating	A. H. Bliss	297,105	Apr. 22	1524	421	27	306
Metals in ammoniacal solutions. Dissolving	C. R. A. Wright	298,149	May 6	234	.....	27	571
Metallic bars. Weaving	H. D. Plimsoll	297,631	Apr. 29	2221	604	27	441
Metallic surfaces. Implement for smoothing or polishing	W. J. Walker	296,370	Apr. 8	603	167	27	120
Metallurgic furnace	T. J. Wilson	300,181	June 10	873	235	27	1093
Metallurgical gas-furnace	W. F. Durfee and T. Egleston	295,968	Apr. 1	117	35	27	24
Meter: *See* Fluid-meter. Rotary meter. Grain-meter. Water-meter. Oscillating meter.							
Micrometer	T. Hooker	297,602	Apr. 29	2177	595	27	433
Middlings and flour. Reducing grain to	J. M. Case	297,762	Apr. 29	2388	651	27	472
Middlings grading and purifying machine	J. M. Schutz	298,900	May 20	1181	331, 332	27	765
Middlings-purifier	A. Hunter	296,752	Apr. 15	1082	305	27	221
Middlings-purifiers and roller-mills. Automatic shelf-feeder for	W. M. Jewell	298,387	May 13	557	153	27	640
Milk-catcher for nursing-women	L. E. Pattee	296,609	Apr. 8	911	254	27	181
Milk-cooler and refrigerator. Combined	R. M. Rockey	299,166	May 27	1516	435	27	838
Milk. Preserving	E. Scherff. (Reissue)	10,491	June 24	2017	.....	27	1316
Mill: *See* Cider-mill. Pug-mill. Crushing-mill. Roller-mill. Fanning-mill. Saw-mill. Grinding-mill. Stamp-mill. Hominy-mill. Windmill.							
Mills. Electric work-indicator for	A. D. Blodgett	298,341	May 13	502	137	27	630
Mills, purifiers, &c. Feeder for	W. S. Bonnard and W. H. Grupe	298,938	May 20	1227	348	27	774
Milling. Gradual-reduction machine for	J. M. Case	297,759	Apr. 29	2383	649, 650	27	472
Millstone	J. C. Wedekind	297,889	Apr. 29	2524	691	27	500
Millstone-dressing machine	D. S. Greely	298,461	May 13	636	181, 182	27	635
Millstone-dressing machine	J. Miller	300,103	June 10	761	205	27	1074
Mineral fiber or wool from furnace-slag. Process of and apparatus for forming	R. Burns	299,111	May 27	1448	414	27	826
Mineral water in bottles or flasks. Portable apparatus for heating	E. D. Newton	299,251	May 27	1615	464	27	858
Mining apparatus	T. W. Campbell	297,064	Apr. 15	1465	405	27	290
Mining-drill and forming powder-chambers in rock, &c.	W. H. Lytle	299,991	June 10	616	166	27	1047
Mining-machine	J. R. Howells and G. Shelley	300,076	June 10	727	196	27	1067
Mining-machine	B. A. Legg	299,655	June 3	202	51, 52	27	957
Mirror	F. F. Weber	298,304	May 27	1686	483	27	870
Miter-box	W. L. Boyer	297,664	Apr. 29	2259	615	27	448
Miter-box	J. Cashin	297,970	May 6	10	4	27	529
Miter-gage	E. Hipolito	295,920	Apr. 1	34	10	27	9
Mixer: *See* Dough-mixer.							
Mixing-machine	D. H. Levett	296,338	Apr. 8	563	157	27	112
Mixing-machine for drugs and chemicals	A. Dickey	299,209	May 27	1567	450	27	849
Mixing solids and liquids and for other purposes. Apparatus for	E. A. Pond	297,002	Apr. 15	1388	383	27	275
Mold: *See* Collar-mold. Potter's mold. Dental mold. Thermometer and barometer mold. Glass-mold. Tile-mold. Pipe-mold.							
Mold-board	O. A. Essig	298,189	May 6	286	74	27	560
Mold-flask	H. Adams	298,811	May 20	1073	301	27	743
Mold for repairing broken rolls, shafts, &c.	J. J. Vinton	296,369	Apr. 8	602	167	27	120
Molds. Apparatus for lining	G. W. Billings	300,941	June 24	1849	507	27	1285
Molder's flask	E. Thomas	297,646	Apr. 29	2235	608	27	444
Molding-machine	J. W. Hudson	297,403	Apr. 22	1903	517	27	375
Molding machine. Sand-	J. Kinzer	300,422	June 17	1267	347, 348	27	1174
Molding machine. Wood-	M. L. Towle	300,412	June 17	1179	323	27	1157
Molding plastic material	C. M. Du Puy	296,825	Apr. 15	1171	329	27	226
Mop and brush holder	W. F. Cornelius	297,067	Apr. 15	1468	406	27	291
Mop or brush holder	W. Busch	300,692	June 17	1350	426	27	1226
Mop-wringer	J. F. Walter	297,040	Apr. 15	1439	397	27	285
Morse register and perforator	L. C. Springer	296,641	Apr. 8	945	265, 266	27	188
Mortar and globular shield for the same	H. Gruson	299,218	May 27	1576	453	27	850
Motion. Device for converting	C. Bernhard	298,160	May 6	246	64	27	573
Motion. Device for converting	A. Kaiser	300,871	June 24	1771	482, 483	27	1270
Motion. Device for transmitting	W. E. Laird	299,231	May 27	1583	458	27	854
Motion. Mechanism for converting	F. H. Richards	297,165	Apr. 22	1600	440	27	319
Motion. Mechanism for converting	N. D. Wells	300,542	June 17	1341	369	27	1168
Motion. Transmitting	W. A. Rollins	298,893	May 20	1174	328	27	763

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Motor: *See* Churn-motor. Mechanical motor. Coffee-mill motor. Pump-motor. Electric motor. Rotary motor. Electro-magnetic motor. Spring-motor. Hydraulic motor. Spring and weight motor.							
Motor	J. Heckenlively	297,394	Apr. 22	1893	514	27	373
Motor	F. W. Randall	300,894	June 24	1799	491	27	1276
Motor	H. Roeper	297,537	Apr. 22	2081	567	27	409
Motor for light machinery	J. W. Gilbert	295,997	Apr. 1	131	38	27	27
Movement. Device to prevent retrograde	P. C. Wright	298,930	May 20	1217	343	27	772
Mower	H. A. Howe	296,412	Apr. 8	658	182	27	130
Mower. Lawn-	C. W. Cheney	300,345	June 17	1097	296	27	1144
Mower. Lawn-	H. Lacasse	296,750	Apr. 15	1091	307	27	222
Mowing-machine	J. R. Severance	296,232	Apr. 1	416	116, 117	27	79
Mowing-machine	E. Smith	298,249	May 6	375	99	27	597
Mucilage cup or holder	S. S. Harman	297,391	Apr. 22	1891	513	27	373
Mucilage-holder	E. R. Cahoone	299,957	June 10	572	154	27	1040
Music-book holder	C. S. Anders	297,553	Apr. 29	2114	576	27	421
Mules. Counter for	D. and F. H. Orme	300,633	June 17	1459	403	27	1210
Music-holder	G. Burt	298,726	May 20	965	260	27	725
Music. Machine for punching perforated sheet	H. B. Horton	300,368	June 17	1122	304, 305, 306, 307	27	1148
Music-stand	R. C. Barrie	300,834	June 24	1727	472	27	1261
Musical instrument. Mechanical	G. H. Chinnock	298,066	May 6	131	33, 34	27	552
Musical instrument. Mechanical	M. Gally	296,685	Apr. 8	999	279	27	199
Musical instrument. Mechanical	A. H. Hammond	296,165	Apr. 1	322	92	27	63
Musical instrument. Mechanical	O. Spaethe	296,238	Apr. 1	423	118, 119	27	80
Musical instruments. Key-board attachment for	E. F. O'Neill	299,492	May 27	1910	550	27	912
Musical instruments. Transposition key-board for	W. Bohrer	297,222	Apr. 22	1682	458	27	334
Nail: *See* Slug-nail.							
Nail-extractor	M. D. Converse	300,766	June 24	1645	450	27	1247
Nail extractor	H. W. Fowler	298,683	May 13	910	252	27	706
Nail-plate feeder	H. B. Chess	300,571	June 17	1373	379	27	1194
Nail-plate feeder	J. F. Hammond	296,747	Apr. 15	1076	303, 304	27	219
Nails. Machine for making book-headed	B. Brazelle	300,758	June 24	1631	447, 448	27	1245
Nailing-machine nail-feeder	H. F. Ostrum	298,882	May 20	1158	325	27	760
Nailing or pegging machine	J. B. Crosby. (Reissue)	10,492	May 27	1919	553	27	914
Navigation. Disclosing obstacles to	F. D. Torre	299,968	June 10	585	157	27	1042
Neck-wear tip	W. Fichtenberg	298,190	May 6	287	74	27	580
Necktie and collar-button. Combined	A. L. Gilbert	298,458	May 13	632	180	27	654
Necktie and collar clasp	C. Stephens	300,028	June 10	664	181	27	1056
Necktie-fastener	W. Beale	300,192	June 10	886	237	27	1095
Necktie-fastener	P. H. Higgins	298,752	May 20	1000	279	27	731
Necktie-fastener	F. Kubec	298,078	May 20	1405	400	27	807
Necktie-fastener	W. L. Linder	297,275	Apr. 22	1744	474	27	347
Necktie or cravat fastener	J. N. Proeschel	296,619	Apr. 8	922	257	27	183
Needle	J. W. Weed	299,305	May 27	1687	483	27	870
Nest-box for fowls	W. Z. Allen	299,315	May 27	1694	486	27	872
Net, Fly-	R. Brownson	299,953	June 10	569	152	27	1039
Net for horses. Fly-	R. Brownson	300,040	June 10	680	184	27	1059
Net for horses. Fly-	D. Fischbeck	297,121	Apr. 22	1548	427	27	310
Net support. Mosquito-	A. L. Edwards	300,855	June 24	1750	477	27	1266
Net strings. Instrument for cutting fly-	R. Brownson	299,952	June 10	568	152	27	1039
Night-light	S. Clarke	299,448	May 13	620	176	27	692
Nippers. Police chain	E. D. Beam	298,158	May 6	245	63	27	573
Nippers. Shear-cutting	S. Taft	300,031	June 10	667	182	27	1056
Nitro-cellulose. Apparatus for the manufacture of	J. W. Hyatt, F. V. Pool, J. Everding, J. H. Stevens, and W. H. Wood.	299,388	May 27	1784	513, 514	27	880
Nozzle. Exhaust-	G. D. Hunter	300,319	June 10	1054	286	27	1126
Nozzle. Sheet-metal screw-	M. O'Connor	299,841	June 3	425	110	27	1002
Nursery-chair	J. E. Walter and W. B. Montgomery	300,921	June 24	1829	500	27	1282
Nut	S. Gisslnger	298,843	May 20	1110	311	27	750
Nut and bolt lock	G. Van Dusen	295,900	Apr. 1	79	24	27	18
Nut-bearing. Adjustable	G. Edmonds	298,563	May 13	753	212	27	677
Nut. Bolt-	A. Johnson	300,475	June 17	1258	345	27	1172
Nut-fastener	I. Brooke	298,940	May 20	1229	348	27	774
Nut. Lock-	S. Gisslnger	298,842	May 20	1109	310	27	750
Nut-lock	C. E. Belding	296,383	Apr. 8	627	173	27	124
Nut-lock	E. F. Campbell, L. C. Noble, and M. G. Howe.	300,211	June 10	914	246	27	1100
Nut-lock	C. B. Cragin	297,678	Apr. 29	2280	620	27	453
Nut-lock	L. H. Davis	297,681	Apr. 29	2287	622, 623	27	454
Nut-lock	M. F. Dillon	298,950	May 20	1242	351	27	776
Nut-lock	G. C. Ditzler	295,911	Apr. 1	21	6	27	7
Nut-lock	R. Dodson	299,755	June 3	335	85	27	954
Nut-lock	J. Gilgour	296,948	Apr. 15	1323	367	27	264
Nut-lock	J. W. Hawk	299,640	June 3	179	45	27	953
Nut-lock	A. Hebert and T. P. Butler	299,472	May 27	1888	544	27	907
Nut-lock	J. C. McAfee	297,824	Apr. 29	2451	671	27	485
Nut-lock	A. Neutzscher	299,838	June 3	423	109	27	1002
Nut-lock	H. Stone	296,361	Apr. 8	594	165	27	118
Nut-lock	A. A. Wilder	297,894	Apr. 29	2530	693	27	501
Nut-lock	C. A. Williams	299,308	May 27	1689	484	27	871

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Nut-lock-bending machine	J. B. Sutch	299,293	May 27	1669	478	27	867
Nut-picks. Manufacture of	H. M. Quackenbush	296,450	Apr. 8	702	193	27	139
Nut-trimming machine	G. H. Fowler	298,742	May 20	990	276	27	723
Nut-washer	W. A. Jordan	299,967	June 10	611	165	27	1046
Nuts. Locking-washer for jam-	A. P. Neible	297,154	Apr. 22	1587	437	27	316
Nuts to bolts. Locking	B. H. Williams	299,447	May 27	1858	534	27	902
Oar	S. Lindenberger	298,495	May 13	668	188	27	661
Oar	G. B. Stanton	300,915	June 24	1825	499	27	1281
Oatmeal-cutter	F. W. Kremer	297,523	Apr. 22	2061	563	27	404
Oatmeal-machine	G. H. Cormack	297,503	Apr. 22	2039	557	27	400
Oculists and opticians. Trial-frame for	A. L. Smith and E. M. Cole	297,858	Apr. 29	2487	681	27	493
Oidium. Composition for destroying the grape	H. De Chaseloup-Laubat	297,354	Apr. 22	1848	.....	27	365
Oil-cake press	T. De Armon	299,322	June 3	22	7	27	925
Oil-cake-pressing apparatus	W. Krutzsch	296,186	Apr. 1	347	98, 99	27	67
Oil-cerkes. Machine for forming	J. L. Moss and N. Littell	297,610	Apr. 29	2105	599	27	437
Oil-can	W. D. Doremus	300,450	June 17	1926	335	27	1166
Oil-can	R. English	297,977	May 6	17	5	27	530
Oil-can	S. S. Getchell	299,469	May 27	1883	541	27	906
Oil-can	J. A. Griswold	299,068	May 20	1389	396	27	804
Oil-can	J. C. Merrell	298,874	May 20	1147	322	27	758
Oil-can. Incased	J. A. Blankley	300,692	June 17	1532	421	27	1223
Oil-can. Incased	C. H. Tallman	296,248	Apr. 1	435	122	27	82
Oil-cloth. Machine for decorating	A. F. Buchanan	299,732	June 3	309	78	27	978
Oil-cloth. Manufacture of	A. F. Buchanan. (Reissue)	10,462	Apr. 1	520	145	27	98
Oil-cup	I. H. Congdon	296,390	Apr. 8	636	175	27	126
Oil-cup	W. A. Foster	298,861	May 20	1264	359	27	780
Oil-cup	J. J. Irvine	300,960	June 24	1894	521	27	1293
Oil-cup	E. Lunkenheimer	299,929	June 3	596	139	27	1021
Oil-cup	P. Small	297,304	Apr. 22	1778	483	27	351
Oil-cup	W. H. Thomas	298,915	May 20	1201	348	27	760
Oil-cup feeder	J. E. Worswick	297,483	Apr. 22	2003	547	27	395
Oil from oleaginous substances. Apparatus for extracting	W. Krutzsch	296,187	Apr. 1	349	99, 100	27	67
Oil from the earth used in refining oils or fats. Separating	M. A. Beal	298,816	May 20	1079	.....	27	745
Oil. Lubricating	J. E. Gill	296,159	Apr. 1	314	90	27	61
Oil-press	W. P. Callahah	299,958	June 10	573	154	27	1040
Oil-press mat	C. S. Hamilton	298,848	May 20	1116	313, 314	27	751
Oil-press mat	A. E. Osborn	296,601	Apr. 8	900	249	27	178
Oil-press mat	J. H. Vallo	298,920	May 20	1206	340	27	770
Oil-press mat	C. Woodman	300,296	June 10	1029	272	27	1121
Oil-press plate	L. Andrews	296,105	Apr. 1	272	74	27	51
Oil-presses. Division-plate for	I. A. Bang and C. A. Sanguinetti	297,743	Apr. 29	2363	644	27	468
Oils and fats from oleaginous and fatty bodies. Extraction of	E. W. Strain	298,712	May 13	940	261, 262	27	712
Oils. Apparatus for redneing, refining, and separating hydrocarbon	R. Baynes and J. Fearenside, Jr.	299,324	May 27	1703	.....	27	874
Oils. Purifying or refining petroleum and other distillable	J. S. Park	296,047	Apr. 1	184	53	27	36
Oiler	A. J. Spicer	298,514	May 13	698	197	27	666
Oiler	C. H. Parshall	296,214	Apr. 1	368	110	27	75
Oiler. Crank-pin	J. B. Oliver	296,440	Apr. 8	669	190	27	136
Oiling device. Wire-	J. Stubbe	296,645	Apr. 8	950	267	27	189
Oiling device. Wire-	J. Stephenson	300,029	June 10	605	181	27	1056
Oiling-pad for journal-boxes	T. Y. Winter	299,606	May 20	1424	406	27	811
Oiling shaft-bearings. Device for	H. and F. H. Durell	296,281	Apr. 1	487	136	27	92
Ordnance. Breech-loading	W. B. Kennedy and W. M. Nesbit	300,475	June 17	1264	347	27	1173
Ore-concentrator	J. L. Loomis	299,235	May 27	1599	459	27	855
Ore-concentrator. Wet	W. B. Farwell	300,701	June 17	1562	428, 429	27	1228
Ore-crusher	J. C. Wiswell	296,096	Apr. 1	241	71	27	49
Ore-elevator	W. A. Hartt	296,560	Apr. 8	848	235	27	168
Ore-pulverizer. Rotary	J. B. Gagnon	299,772	June 3	351	89, 90	27	987
Ore-sampling machine	T. T. Eyre	299,950	June 3	514	136	27	1019
Ore-separator	H. P. Fairfield and L. A. Shead	295,992	Apr. 1	121	36	27	25
Ore-separator	H. P. Fairfield and L. A. Shead	295,993	Apr. 1	194	37	27	26
Ore-separator	L. A. Shead and H. P. Fairfield	296,075	Apr. 1	217	63	27	44
Ore separator. Dry	W. L. Card and J. C. Dane	300,042	June 10	683	185	27	1039
Ore separator. Dry	W. L. Card and J. C. Dane	300,043	June 10	685	185	27	1039
Ore separator. Dry	W. L. Card and J. C. Dane	300,044	June 10	686	186	27	1039
Ore-separator. Magnetic	F. V. Rouleau	296,068	Apr. 1	210	61	27	43
Ore-washer shafts. Base-plate for the teeth of	G. Lauder	299,393	May 27	1594	458	27	854
Ores and for other purposes. Apparatus for treating	T. R. Timby	296,251	Apr. 1	438	123, 124	27	84
Ores by electrolysis. Chloridizing	H. R. Cassel	300,951	June 24	1860	.....	27	1287
Ores. Machines for washing and concentrating	J. C. Wiswell	300,426	June 17	1199	328	27	1161
Ores. Process of and furnace for smelting and reducing	J. K. Griffin	299,637	June 3	174	44	27	952
Organ case. Cabinet	O. C. Whitney	297,212	Apr. 22	1669	454	27	331
Organ case. Reed	M. Clark	296,134	Apr. 1	288	82	27	56
Organ. Reed	F. F. Franceschini	298,840	May 20	1107	310	27	750
Organ. Reed	J. Hessler	300,777	June 24	1856	454	27	1249
Organ. Reed	F. W. Poloubet	301,000	June 24	1918	378	27	1298
Organ. Reed	H. Wegman	299,707	June 3	292	70	27	973
Organ stop-action. Reed	O. C. Whitney	297,211	Apr. 22	1667	453, 464	27	331
Ornament for personal wear	W. D. Smith	296,636	Apr. 8	940	262, 263	27	187
Ornaments from metals, &c. Producing	W. C. Edge	298,358	May 13	523	142	27	633
Oscillating meter	L. H. Nash	300,625	June 17	1445	398, 399	27	1207
Oscillating meter	L. H. Nash	300,626	June 17	1448	399	27	1207
Oscillating meter	L. H. Nash	300,627	June 17	1450	400	27	1208

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Oscillating meter	L. H. Nash	300,628	June 17	1452	400, 401	27	1208
Oven for drying cores or molds	B. F. Watkins	298,803	May 20	1063	297, 298	27	741
Oven. Portable bake-	E. P. Geneste	296,284	Apr. 1	490	137	27	92
Oven-shelf. Automatic	L. T. Newell	299,672	June 3	239	59	27	965
Overalls	W. G. Venner	299,702	June 3	277	69	27	971
Overflow-trap for wash-basins, bath-tubs, &c	W. T. Jobb	299,476	May 27	1892	545	27	908
Overshoe	D. Hall	300,774	June 24	1653	452	27	1248
Overshoe	G. A. Lewis	296,978	Apr. 15	1362	376	27	271
Overshoe	E. A. Saunders	298,239	May 6	302	96	27	595
Overshoe or arctic	J. B. Belcher	296,115	Apr. 1	266	76	27	53
Oyster-clamp	C. Drake	299,756	June 3	335	85	27	984
Ozocerite and other solid hydrocarbons. Preparing	J. C. O. Chemin	297,766	Apr. 29	2392	.....	27	473
Package and book holder	C. Huff	300,979	June 24	1893	521	27	1293
Packing and show box. Combined	S. and J. R. Toay	296,367	Apr. 8	600	166	27	119
Packing-box	C. H. Morgan	300,721	June 17	1585	414	27	1231
Packing box or cartridge for various articles	V. A. Billetto	300,748	June 17	1616	443	27	1236
Packing. Car-axle	W. H. Wright	296,098	Apr. 1	244	71	27	49
Packing for piston and valve rods. Metallic	C. T. Sleeper	300,653	June 17	1492	411	27	1215
Packing, lubricating, and cooling the pistons of air-compressors	C. F. Ruff	296,462	Apr. 8	716	198	27	142
Packing. Metallic ring	J. Wheelock	297,891	Apr. 29	2527	692	27	500
Packing. Piston-	A. MacLaine	298,871	May 20	1143	321	27	757
Packing. Piston-	E. Suckow	300,815	June 24	1699	464	27	1256
Packing. Piston-rod	T. A. Myers	296,295	Apr. 1	508	141	27	95
Packing salt, flour, &c. Machine for	R. Radley	298,501	May 13	686	194	27	664
Pad: *See* Blotting-pad. Collar-pad. Harness-pad. Oiling-pad.							
Paddle-wheel. Feathering	M. H. Depue	299,752	June 3	330	84	27	983
Paddle-wheel. Submerged feathering	T. A. Cook	296,728	Apr. 15	1051	296	27	215
Padlock	C. W. Judson	298,476	May 13	657	186	27	658
Padlock. Permutation	J. W. Bruff and W. E. T. Merrill	296,520	Apr. 8	791	218	27	157
Pail. Dinner	T. F. Freel	300,591	June 17	1396	385	27	1198
Paint	L. Brown	298,941	May 20	1229	.....	27	774
Paint	E. H. Hague	297,074	Apr. 15	1476	.....	27	293
Paint-can	E. Norton	298,018	May 6	72	18	27	541
Paint-cleaning compound	A. S. Cluff	299,351	May 27	1744	.....	27	882
Paint. Composition of matter to be used as a fire and water protective	F. L. Putt and J. B. Stratton	299,088	May 20	1415	.....	27	809
Paint-distributer	L. Walknp	298,138	May 6	218	57, 58	27	568
Paint. Fire and water proof	M. O. Fisher	296,324	Apr. 8	548	.....	27	110
Paint. Liquid	G. T. Lewis	297,139	Apr. 22	1570	.....	27	313
Paint-mixer	R. H. Smith	296,792	Apr. 15	1127	317	27	229
Paint to wire. Apparatus for applying	W. H. Sawyer	298,896	May 20	1177	329	27	764
Paints. Package for mixed	E. T. Mason and F. A. Bergman	298,393	May 13	563	155	27	641
Painting bobbins, &c. Apparatus for	L. C. Baldwin	296,506	Apr. 8	773	213	27	153
Painting portraits, figures, and landscapes. Hand-	O. H. Orton	296,348	Apr. 8	580	.....	27	116
Pan: *See* Amalgamating-pan. Baking-pan. Locomotive ash-pan. Vacuum-pan.							
Panel for walls, ceilings, &c	L. C. Tiffany	299,181	May 27	1535	440	27	841
Pantaloon-stretcher	Z. M. Johnson	300,609	June 17	1421	391	27	1207
Paper and protecting the same in the roll. Reel and rod for winding	J. L. Firm	297,775	Apr. 29	2402	656	27	475
Paper. Apparatus for feeding sheets of	F. C. Thielscher	295,955	Apr. 1	73	22	27	17
Paper bag	G. O. Blowers	296,117	Apr. 1	269	77	27	53
Paper bag	J. P. Onderdonk	296,871	Apr. 15	1231	344	27	247
Paper-bag machine	O. W. Allison	298,719	May 20	955	267	27	723
Paper-bag machine	O. W. Allison	299,097	May 27	1429	409	27	823
Paper-bag rack	W. Mack	298,870	May 20	1142	321	27	757
Paper bag. Soft-tie	J. Arkell	298,152	May 6	239	62	27	572
Paper bags. Making soft-tie	J. Arkell	298,153	May 6	240	62	27	572
Paper box	J. F. Gooding	299,777	June 3	355	91	27	988
Paper box	J. C. Hurd	298,384	May 13	555	152	27	639
Paper-box-covering machine	L. Weston	296,257	Apr. 1	449	127, 128	27	85
Paper-box machine	P. Abbott	297,484	Apr. 22	2004	548	27	395
Paper boxes. Flap-retainer for	J. C. Baner	296,510	Apr. 8	780	215	27	155
Paper boxes. Machine for cutting straw-board for	G. H. Dickerman	297,576	Apr. 29	2147	585, 586, 587	27	427
Paper-calendering machine	M. Solinger	296,080	Apr. 1	221	64, 65	27	45
Paper. Composition of matter for giving a metallic surface to	J. Franaecky	299,372	May 27	1766	.....	27	886
Paper-creasing machine	J. E. Stannard	298,425	May 13	594	168	27	647
Paper-cutter and die-press	J. H. Lawlor	296,191	Apr. 1	356	101, 102	27	69
Paper-cutting machine	S. Brown	299,457	May 27	1870	537	27	904
Paper-cutting machine	H. T. C. Kraus	296,184	Apr. 1	343	97, 98	27	66
Paper. Fire-proof	D. A. Brown	296,722	Apr. 15	1046	.....	27	214
Paper fixture. Toilet	S. Wheeler	297,044	Apr. 15	1443	398	27	286
Paper fixture. Wrapping or toilet	S. Wheeler	297,045	Apr. 15	1443	398	27	286
Paper-folding machine	F. C. Hellmuth	300,606	June 17	1416	390	27	1202
Paper-folding machine	J. H. Stonemetz	299,094	May 20	1422	406	27	811
Paper for boiler-covering	D. L. Hughes	299,983	June 10	606	162	27	1045
Paper friction-wheel	W. E. Rockwood	300,013	June 10	649	177	27	1053
Paper-holder	A. C. Moore	297,618	Apr. 29	2194	598	27	436
Paper-holder	I. S. Mudgett	297,234	Apr. 22	1752	476	27	347
Paper holder. Ornamental and fly	V. G. Tansey	298,134	May 6	212	56	27	567
Paper holder. Toilet and wrapping	S. Wheeler	297,043	Apr. 15	1442	398	27	286
Paper-machine	T. Stewart	298,634	May 13	637	234	27	692
Paper-machines. Automatic felt-guide for	B. A. Schubiger	296,222	Apr. 1	397	113	27	76

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Paper-machines. Machine for preparing pulp for	W. Umpherston	297,037	Apr. 15	1436	395	27	284
Paper-making machine	J. V. Stenger	296,683	Apr. 1	227	66	27	46
Paper-making machinery	G. E. Marshall	297,702	Apr. 29	2314	629	27	459
Paper-making. Rag-engine for	W. Whitely	299,307	May 27	1688	484	27	871
Paper. Manufacture of	Z. M. Crane	296,928	Apr. 15	1303	.....	27	260
Paper. Manufacture of	W. Rupp	296,463	Apr. 8	716	.....	27	142
Paper-perforating device	C. Carlton	298,667	May 13	889	248	27	702
Paper pulley	W. E. Rockwood	300,012	June 10	648	177	27	1053
Paper-pulp from wood. Process of and apparatus for manufacturing	G. H. Pond	298,780	Apr 15	1114	314	27	226
Paper rolls. End-cap for	F. W. Dunnell	298,502	May 13	753	212	27	677
Paper slitting and winding machine	H. Inman	297,936	Apr 29	2587	{709 710}	27	512
Paper-stock sorting and cleaning machine	R. O. and W. Moorhouse	298,108	May 6	179	48	27	561
Paper, twine, and sack case for grocers, &c	J. F. Barr	298,656	May 13	866	243	27	697
Paper wallet	A. L. Sewell	295,949	Apr. 1	66	20	27	15
Paper-weight	C. J. R. Ballard	299,946	June 10	561	150	27	1038
Paper-weight and pen-rack. Combined	I. W. Heysinger	298,379	May 13	546	149	27	638
Paper wheel	W. E. Rockwood	300,014	June 10	649	177	27	1053
Papers. Ring-suspending device for	G. W. McGill	299,155	May 21	1501	431	27	836
Paraffine-freezer	W. C. Scofield	299,660	June 3	446	115	27	1007
Parasol	F. C. Dennis	296,318	Apr. 8	539	151	27	108
Parasol-frame	H. M. Richardson	296,354	Apr. 8	585	163	27	117
Parer and slicer. Apple	W. E. Brock	297,749	Apr. 29	2369	645	27	469
Parer, corer, and slicer. Apple	W. M. Griscom	298,745	May 20	994	277	27	729
Parer. Potato	G. A. Betancourt	298,547	May 13	733	207	27	674
Passenger or other elevator	M. N. Hutchinson	299,547	June 3	55	14	27	931
Passenger or other elevator	M. N. Hutchinson	299,548	June 3	57	15	27	931
Pattern: *See* Coat-pattern. Undergarment-pattern.							
Patterns on goods. Device for clamping	J. A. House and C. H. Dimond	298,470	May 13	651	184	27	657
Pavement. Concrete	F. Gelb	300,583	June 17	1398	.....	27	1198
Pavement. Wood	J. Kerr	296,561	Apr. 8	874	242	27	174
Paving-block	R. Campbell	296,131	Apr. 1	296	81	27	56
Paving-blocks from furnace-slag, &c. Manufacture of	C. J. Dobbs	300,580	June 17	1383	392	27	1195
Paving streets, walks, &c. Concrete compound for	L. Haas	297,791	Apr. 29	2412	.....	27	479
Peanut separating and assorting table	C. W. Nicholson	301,067	June 24	2005	554	27	1314
Peg-cutter. Rotary	J. L. Coleman, Jr	300,577	June 17	1380	381	27	1195
Pen	W. T. Rightmyer	296,456	Apr. 8	708	195	27	140
Pen	C. G. Spengler	299,283	May 27	1654	475	27	864
Pen. Fountain	C. H. Court and A. J. Kletzker	300,224	June 10	928	250	27	1103
Pen. Fountain	J. R. Haight	299,219	May 27	1578	454	27	851
Pen. Fountain	J. Holland	298,582	May 13	778	219	27	682
Pen. Fountain	J. Holland	300,260	June 10	977	264	27	1112
Pen. Fountain	G. C. Holt	298,382	May 13	550	151	27	639
Pen. Fountain	A. J. Kletzker and C. H. Court	297,420	Apr. 22	1936	526	27	379
Pen-holder	S. A. Holman	298,090	May 6	158	41	27	553
Pen-holder	A. E. Sage	298,411	May 13	581	162	27	644
Pen-holder	O. S. Warner	297,651	Apr. 29	2241	610	27	445
Pen-holder attachment	E. P. McLane	299,242	May 27	1605	460	27	857
Pen-holder and blotter. Combined	J. F. Miller	299,608	June 3	235	58	27	964
Pen holder. Fountain	J. Morton	298,767	May 20	1015	284	27	730
Pen. Marking and shading	E. E. Alderman	299,046	May 20	1365	380	27	799
Pen or pencil case	H. P. Huntoon	300,709	June 17	1573	431	27	1229
Pen-rest	C. McKinnon	298,603	May 13	802	225	27	686
Pen. Stylographic fountain	J. C. Haring and C. H. Court	298,064	May 6	152	39, 40	27	555
Pens. Detachable reservoir for	G. W. Woolley	299,499	May 27	1918	553	27	914
Pencil	T. M. Kenney	295,923	Apr. 1	38	11	27	10
Pencil	G. C. Ward	297,041	Apr. 15	1440	397	27	285
Pencil-case	L. W. Fairchild	298,364	May 13	529	145	27	635
Pencil-case	J. C. Haring	301,056	June 24	1991	550	27	1311
Pencil-case and lead	J. Holland	298,583	May 13	779	219	27	682
Pencil-clasp	J. Batchelor	299,902	June 3	492	130	27	1015
Pencil-clasp	G. A. Schlochter	297,729	Apr. 29	2338	635	27	463
Pencil-holder	M. S. Shipley	300,740	June 17	1606	440	27	1234
Pencil, pen, or toothpick case	A. H. Woodward	296,302	Apr. 1	518	144	27	97
Pencil-sharpener	J. T. Knagge	300,375	June 17	1135	309	27	1150
Pencil sharpener and holder	T. Holdsworth	296,751	Apr. 15	1082	305	27	221
Pencil sharpener and sponge-holder. Combined slate.	G. C. Price, G. W. F. Cook, and W. C. Price.	300,735	June 17	1600	438	27	1233
Pencil-sharpener, eraser, &c. Combined	J. A. Cook	296,730	Apr. 15	1054	297	27	215
Pencil sharpener. Slate	I. Brooke	299,729	June 3	306	76	27	978
Pencils, &c. Case for	R. M. Collard	300,346	June 17	1098	298	27	1144
Pencils. Combined apparatus for attachment to	J. Hicklsson and W. Lee	297,396	Apr. 22	1895	515	27	374
Pencils, &c. Device for holding	C. W. Boman	297,106	Apr. 22	1527	421	27	306
Pencils. Extension-case for	R. M. Collard	300,693	June 17	1551	426	27	1226
Pendant	B. Dreyfus	300,699	June 17	1560	428	27	1228
Perambulator for teaching children to walk and automatic seat therefor. Combined	A. De Julio	299,058	May 20	1377	392	27	801
Perch coupling. Drop	T. D. Lines	300,275	June 10	903	268	27	1115
Percolator	C. K. Bradford and J. G. Benedict	299,198	May 27	1553	446	27	846
Perfumery-stand	V. Demuth	297,235	Apr. 22	1699	462	27	337
Permutation-lock	J. W. Allen	298,651	May 13	859	241	27	696
Permutation-lock	W. M. Brooke	297,749	Apr. 29	2379	645	27	469
Permutation-lock	W. S. Hill	300,868	June 24	1768	482	27	1269
Permutation-lock	O. E Pillard	301,001	June 24	1919	{528 529}	27	1298
Permutation-lock	E. Stockwell	299,695	June 3	267	66, 67	27	970
Pessary	H. G. Farr	300,709	June 24	1648	451	27	1247
Petroleum and for bleaching other oils. Apparatus for improving the fire-test of	J. B. Huston	297,603	Apr. 29	2178	595	27	433
Petroleum. Refining	L. A. Baker	299,611	June 3	142	.....	27	946

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Phosphate rock, ores, &c. Apparatus for washing	F. Brotherhood	299,337	May 27	1723	494	27	878
Photographic camera	H. G. Jones	300,477	June 17	1202	{345 346}	27	1173
Photographic camera	C. W. Stiff and N. C. Bousley	299,289	May 27	1661	476	27	866
Photographic exchange-box	H. Kayser	300,478	June 17	1263	346	27	1173
Photographic plate holder and case	S. S. Peckinpugh and G. J. White	296,443	Apr. 8	694	191	27	137
Photographs. Apparatus for cleaning	R. H. Jones, M. B. Smith, and L. J. A. Roswall.	296,578	Apr. 8	871	{241 242}	27	173
Photographs. Coloring	A. Bisson	296,913	Apr. 15	1285	.....	27	257
Photographs. Producing ornamental relief borders or foregrounds for	C. M. French	297,779	Apr. 29	2406	.....	27	476
Piano	J. Ebel	298,837	May 20	1104	309	27	749
Piano-forte frame	H. Kroeger	299,479	May 27	1698	546	27	909
Piano music-desk	M. J. Chase	296,726	Apr. 15	1048	295	27	214
Piano pedal attachment	J. M. Bettman	296,398	Apr. 8	528	148	27	106
Piano sounding-board	H. S. Parmelee	301,068	June 24	2006	554	27	1314
Piano sounding-boards. A grafle for	C. W. Brewer	298,664	May 13	886	246	27	701
Pianos. Device for cutting damper-felt for	J. Swenson	298,040	May 6	101	26	27	546
Pianos. Lid-raising attachment for	G. W. Peek	296,612	Apr. 8	914	255	27	182
Pianos. Repetition-action for	F. L. Becker	297,908	Apr. 29	2546	698	27	504
Pick	G. W. Elliott	296,736	Apr. 15	1060	299	27	217
Picker: *See* Fruit-picker.							
Picture-support	K. G. E. Liersch and L. R. Erche	299,650	June 3	208	54	27	959
Pictures. Producing	R. Sneider	299,692	June 3	264	66	27	970
Pigeon-hole	H. D. Pursell	299,261	May 27	1624	467	27	860
Pile-driver	G. H. Cavanagh	299,344	May 27	1736	498	27	880
Pile-driver	T. Tangney	300,407	June 17	1174	{321 322}	27	1156

Plane. Variable bench	E. R. Bryant	296,270	Apr. 1	471	132	27	89
Planer attachment. Metal	P. McCourt	299,153	May 27	1500	431	27	836
Planer-knife	F. B. Thompson	300,533	June 17	1327	364	27	1185
Planer-knives. Gage for adjusting	E. B. Hayes	296,502	Apr. 8	851	236	27	169
Planing-machine	L. Houston	298,755	May 20	1003	280	27	731
Planing-machine	G. A. Gray, Jr	296,951	Apr. 15	1326	368	27	265
Planing-machine. Metal	J. Angus	298,209	May 6	401	{105 106}	27	602
Planing machines. Tool-oscillating device for	J. Pleukharp	296,448	Apr. 8	698	192	27	138
Planing polygonal bodies. Machine for	W. Ironside	300,262	June 10	979	264	27	1112
Planter and fertilizer-distributer. Combined	W. C. Pickle	295,939	Apr. 1	56	16	27	13
Planter and fertilizer-distributer. Combined seed-	W. B. Jackson	299,549	June 3	58	15	27	931
Planter and guano-distributer. Seed-	G. S. Paine	300,117	June 10	781	209	27	1077
Planter attachment. Corn-	M. F. Connett	296,533	Apr. 8	808	223	27	161
Planter check-row attachment. Corn-	F. W. Calais	297,110	Apr. 22	1530	{422 423}	27	307
Planter check-row attachment. Seed-	L. Eberhart and I. D. Stevens	296,151	Apr. 1	306	88	27	60
Planter. Check-row corn-	E. P. Barrett and J. A. Forster	300,557	June 17	1360	375	27	1191
Planter. Check-row corn-	W. L. Keller	297,697	Apr. 29	2369	628	27	458
Planter. Check-row corn-	T. J. Lindsay	296,980	Apr. 15	1364	377	27	271
Planter. Check-row corn-	V. Weber and J. Friedman	298,139	May 6	221	58	27	560

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Planter check-rower. Corn	C. S. Locke	298,003	May 6	54	14	27	538
Planter check-rower. Corn	W. B. Rush	298,895	May 20	1176	328	27	763
Planter check-rowers. Tappet-wire for corn	G. W. Brown	298,892	May 20	1086	305	27	746
Planter. Corn	A. D. Adams	296,906	Apr. 15	1277	355	27	256
Planter. Corn	E. Gager	299,975	June 10	502	150	27	1043
Planter. Corn	H. D. Layman	296,697	Apr. 8	1012	283	27	202
Planter. Corn	A. R. McMullen	299,410	May 27	1818	{522 523}	27	895
Planter. Corn	A. Runstetler	301,072	June 24	2010	535	27	1315
Planter. Corn	L. A. Scovil	298,782	May 20	4034	{289 290}	27	736
Planter. Corn	W. A. Sharpe	300,806	June 24	1689	{461 462}	27	1254
Planter. Corn	G. W. Tarbell	295,953	Apr. 1	70	21	27	16
Planter. Corn	F. Wiskocil	297,903	Apr. 29	2539	{695 696}	27	503
Planter. Cotton	W. T. Gardner	296,947	Apr. 15	1392	367	27	264
Planter. Cotton	H. D. Layman	296,698	Apr. 8	1013	284	27	202
Planter. Hand corn	J. T. Ricketts	299,679	June 3	250	62	27	967
Planter. Hand corn and seed	F. E. Culver	296,733	Apr. 15	1038	298	27	216
Planter, potato-digger, and cultivator. Combined corn and potato	G. W. Peirsol	297,698	Apr. 29	2399	602	27	430
Planter. Seed	J. R. Newton	298,880	May 20	1156	324	27	759
Planter. Seed	W. Stoddard	299,593	June 3	121	30	27	941
Planters. Check-rowing attachment for seed	P. Hinkley	299,981	June 10	603	162	27	1045
Planters. Reel for check-row corn	J. C. Dupee and C. P. Housum	298,678	May 13	904	251	27	705
Plaque and panel	L. A. De Planque	299,751	June 3	329	84	27	989
Plaque-holder	D. M. Ireland	298,976	May 20	1274	363	27	782
Plaques. Preparing or treating composition or material to be used in making	J. J. West	297,206	Apr. 22	1662	.....	27	330
Plastering	J. Morrison, Jr	297,822	Apr. 29	2460	674	27	487
Plastic materials. Machine for shaping	W. Kilian	296,183	Apr. 1	342	97	27	65
Pliers. Cutting	J. H. Jencks	298,587	May 13	785	220	27	682
Pliers. Cutting	J. H. Jencks	298,588	May 13	786	221	27	683
Pliers. Cutting	E. Stevens	299,672	June 3	459	120	27	1010
Pliers. Stopper-pulling	B. A. Bacon and J. W. Boardman	297,658	Apr. 29	2250	612	27	447
Plow	C. Anderson	297,906	Apr. 29	2543	697	27	504
Plow	S. W. Ball	296,108	Apr. 1	260	75	27	52
Plow	G. P. Bascom	298,157	May 6	244	63	27	572
Plow	J. A. Bilz	299,195	May 27	1550	445	27	845
Plow	D. E. Fish	300,457	June 17	1235	338	27	1167
Plow	J. Ritz	297,450	Apr. 22	1964	537	27	387
Plow	G. B. St. John	296,946	Apr. 1	432	122	27	83
Plow	E. D. Starke	295,952	Apr. 1	68	20, 21	27	16
Plow	P. H. Starke. (Reissue)	10,477	May 6	493	133	27	620
Plow	T. H. Whitlock and C. L. Etheridge	299,444	May 27	1853	533	27	901
Plow and harrow. Combined	E. O. Long	298,486	May 13	669	188	27	661
Plow attachment	J. Lawrie	295,925	Apr. 1	40	12	27	10
Plow attachment	M. J. Stafford	299,868	June 3	455	119	27	1009
Plow canting device. Gang	W. Kimmel	300,614	June 17	1430	394	27	1204
Plow. Cultivator	H. Parrish	299,160	May 27	1510	433	27	837
Plow ditching and grading attachment	J. W. Estes	298,741	May 20	989	{275 276}	27	728
Plow. Double	J. L. Laughlin	297,815	Apr. 29	2441	667	27	483
Plow. Gang	A. Shaffer	299,022	May 20	1330	{379 380}	27	793
Plow. Gang	S. L. Wilson	300,671	June 17	1512	418	27	1220
Plow. Hillside	J. Neff, Jr	299,250	May 27	1614	464	27	858
Plow-point	W. T. Burks and L. P. Klutts	300,567	June 17	1368	377	27	1193
Plow. Planting	J. Lane	296,851	Apr. 15	1202	337	27	242
Plow. Shovel	R. H. Hudgens and H. R. Allison	296,966	Apr. 15	1342	372	27	268
Plow. Side-hill	J. Rapp	300,592	June 17	1292	355	27	1179
Plow-standard	J. P. McIntyre	296,861	Apr. 15	1215	340	27	244
Plow. Sulky	N. S. Barger	299,459	May 27	1863	{535 536}	27	903
Plow. Sulky	S. W. Barr	298,337	May 13	498	136	27	629
Plow. Sulky	W. L. Casaday	298,343	May 27	1730	{496 497 498}	27	879
Plow. Sulky	R. A. Radford	300,692	June 24	1796	490	27	1275
Plow. Sulky	C. Schweer	299,020	May 20	1325	{378 379}	27	792
Plow. Sulky	J. and E. E. Sickler	300,807	June 24	1690	462	27	1254
Plow. Sulky rotary mold-board	S. H. Taylor	300,658	June 17	1497	413	27	1217
Plow. Vineyard	B. G. Bradley	299,050	May 20	1370	390	27	800
Plow. Wheel	J. W. Bartlett	296,720	Apr. 15	1043	294	27	213
Plug for bowls and bath-tubs	J. D. Bacon	300,552	June 17	1356	373	27	1190
Plug for bowls and tubs. Trapped	J. D. Bacon	300,553	June 17	1357	374	27	1190
Plug-valve for wash-basins. Compound and self-acting	T. P. Ford, Jr	300,589	June 17	1393	384	27	1198
Plumber's trap	T. Dark	295,908	Apr. 1	19	5	27	6
Pneumatic holder and cutter. Combined	J. R. Williams	298,715	May 13	947	263	27	714
Pneumatic lock	A. W. Fuller	299,066	May 20	1365	395	27	803
Pneumatic tube	W. G. Davis	297,505	Apr. 22	2042	557	27	400
Pneumatic tubes. Flexible carrier for	R. J. P. Goodwin	299,216	May 27	1574	452	27	820
Pocket-book	H. A. Chapin	299,908	June 3	500	132	27	1017
Pocket-books, &c. Frame for	H. Didout, Fils	296,940	Apr. 15	1317	365	27	262
Pocket-case and cigar-clipper. Combined	E. P. Hasbrouck	299,135	May 27	1481	425	27	832
Pocket-knife	G. Frenud	297,375	Apr. 22	1871	509	27	367
Pocket-knife handle	G. H. Thompson and E. Hottegan	299,037	May 20	1349	385	27	796
Pole. Clothes-line	M. Bartlett	295,895	Apr. 1	3	1	27	3
Pole for vehicles. Shifting	J. T. Clarkson	300,848	June 24	1742	475	27	1264
Polishing compound	H. H. Becker	296,112	Apr. 1	263	.....	27	53
Polishing liquid	E. Ludwig	296,303	Apr. 1	519	.....	27	98
Polishing-wheel	D. W. Abbott	299,311	May 27	1691	485	27	871

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Polishing-wheel	H. Bintz	299,948	June 10	564	150	27	1038
Pool-ball rack and spotter. Automatic incline	W. A. Tea	297,031	Apr. 15	1428	{392 393}	27	283
Pool-rack	H. W. Collender	296,136	Apr. 1	289	83	27	57
Pool-rack	H. W. Collender	296,137	Apr. 1	291	83	27	57
Pool-rack	H. W. Collender	296,532	Apr. 8	806	223	27	161
Pool-rack	J. Felbel	299,365	May 27	1756	506	27	884
Pool-rack	S. De Gaetano	300,227	June 10	931	251	27	1103
Pool-table ball-rack	M. Rumely	297,169	Apr. 22	1604	441	27	320
Portable and traction engine	H. B. Larzelere	299,484	May 27	1904	548	27	910
Portable engine	H. B. Larzelere	300,270	June 10	988	{266 267}	27	1114
Portable furnace	J. W. Babbit and G. W. Morris	299,713	June 3	288	71	27	974
Portfolio	H. S. Williams and E. L. Shipman	298,532	May 13	718	203	27	671
Post: *See* Binding-post. Fence-post.							
Post-driver	E. Over	299,086	May 20	1413	403	27	809
Post-office box	E. Osgood	296,772	Apr. 15	1103	311	27	225
Pot: *See* Flower-pot.							
Potato-coverer	F. G. Juney	297,966	Apr. 22	1736	471	27	343
Potato-digger	C. Boul	299,107	May 27	1445	413	27	825
Potato-digger	S. D. Brown	296,584	May 6	129	33	27	551
Potato-digger	W. Dodge	296,541	Apr. 8	819	226	27	163
Potato-digger	J. Estes	297,361	Apr. 22	1855	504	27	366
Potato-digger	B. Freeman	299,468	May 27	1882	541	27	906
Potato-digger	C. W. Kattell	299,309	May 27	1802	519	27	892
Potato-digger	H. Nelson	297,285	Apr. 22	1753	476	27	347
Potato-digger	F. A. Paul	298,022	May 6	79	21	27	542
Potato-digger	A. L. Higley	296,168	Apr. 1	327	93	27	63
Potato-digging machine	A. Woeber	296,697	Apr. 1	243	71	27	49
Potter's mold	A. Kürth and R. Beyermann	297,606	Apr. 29	2183	.....	27	434
Pottery and porcelain. Producing colored pictures on	H. T. Hazard	298,085	May 6	153	40	27	555
Powder-flask charger							
Power: *See* Churn-power. Lever-power. Foot-power. Mechanical power. Hand and foot power. Tread-power. Horse-power. Wind-power.							
Power. Apparatus for transmitting	P. A. Dohla	298,672	May 13	896	249	27	704
Power. Device for transmitting	J. A. Sherman	298,317	May 6	464	125	27	614
Power-press	R. E. Boschert	300,201	June 10	903	243	27	1008
Precious metals from ores, &c. Separating	E. H. Russell	296,709	Apr. 8	1023	.....	27	204
Precious stones. Prodneing artificial	S. Grossiord	297,598	Apr. 29	2173	.....	27	432
Preserving food. Case for	J. J. Hoyt	296,692	Apr. 8	1006	281	27	200
Press: *See* Baling-press. Oil-press. Cheese-press. Oil-cake press. Cigar-press. Power-press. Cotton-press. Printing-press. Filter-press. Seal-press. Glass-press. Veneer-press. Lever-press.							
Press	C. B. Adams	298,931	May 20	1218	{343 344 345}	27	772
Press for sacking bran, sawdust, &c	A. L. Battson	299,721	June 3	295	73	27	976
Presses. Rearer for transfer	H. W. Chapman	299,961	June 10	577	155	27	1040
Pressing artificial blocks or bricks, &c. Machine for	A. Ball	296,507	Apr. 8	775	{213 214}	27	153
Pressing-machine. Tailor's	E. Walker	300,817	June 24	1701	465	27	1257
Pressure-regulator	W. Burnett	295,978	Apr. 1	99	30	27	21
Pressure-regulator	F. J. Freese	297,373	Apr. 22	1870	508	27	369
Pressure-regulator	J. F. Gooding	298,687	May 13	914	253	27	707
Printers' blocks. Apparatus for sawing	G. Williamson	296,772	Apr. 8	605	167	27	120
Printer's quoin	J. Polhemus	296,056	Apr. 1	197	57	27	40
Printer's quoin	C. A. R. L. Ver Genius	298,639	May 13	842	235	27	693
Printing and vignetting frame	O. P. Scott	298,901	May 20	1183	332	27	765
Printing. Art of and machinery for lithographic	W. H. Forbes and J. W. Osborne	300,242	June 10	949	{256 257}	27	1107
Printing by sunlight or other light, and apparatus therefor	E. Cope	296,391	Apr. 8	637	175	27	126
Printing. Form-roller for	A. Campbell	297,112	Apr. 22	1536	425	27	308
Printing-machine	J. Brooks	300,842	June 24	1735	474	27	1263
Printing-machine	A. Campbell	297,111	Apr. 22	1532	{423 424}	27	307
Printing-machine	H. Schott	300,141	June 10	818	221	27	1063
Printing-machine	W. Scott	298,781	May 20	1032	{288 289}	27	736
Printing-machine	W. W. Taylor	300,162	June 10	842	227	27	1068
Printing machine inking mechanism	G. A. Wilson	298,147	May 6	232	60	27	571
Printing machine. Lithographic	E. Jaeck	298,092	May 6	161	42	27	557
Printing-machine. Stop-cylinder	B. Huber	300,370	June 17	1128	{307 308}	27	1149
Printing machine. Web	L. C. Crowell	298,182	May 6	275	71, 72	27	578
Printing machines. Wiping and polishing apparatus for plate	A. Reid	297,294	Apr. 22	1767	460	27	349
Printing-press	J. H. Utter	296,898	Apr. 15	1268	353	27	254
Printing press delivery mechanism. Web	L. C. Crowell	301,047	June 24	1980	{547 548}	27	1309
Printing-press feed-guide	J. Blocher	298,164	May 6	255	66	27	574
Printing-press feed-guide	W. B. Smith	297,464	Apr. 22	1983	541	27	391
Printing-press. Oscillating	F. H. Richards	300,897	June 24	1802	{492 493}	27	1276

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Printing-press registering device	J. H. Cranston	300,225	June 10	929	250 / 251	27	1103
Printing-press rollers. Mechanism for raising	A. Campbell	297,752	Apr. 29	2373	646	27	469
Printing, stamping, or embossing. Producing roller-surfaces for	J. J. Sachs	297,017	Apr. 15	1407	.....	27	279
Privy seat or chair. Odorless	F. B. Kendall	296,580	Apr. 8	873	242	27	174
Proscenium. Adjustable	I. Kiralfy	297,813	Apr. 29	2430	667	27	482
Process apparatus	N. G. Gurney	296,285	Apr. 1	492	137	27	92
Projectile	D. M. Mefford	298,906	May 20	1994	369	27	796
Projectile for carrying explosive shells	J. Garrick	300,502	June 17	1396	385	27	1198
Projectile. Submarine	J. Ericsson	298,455	May 13	629	179	27	654
Propeller for small boats	J. B. Kibler	300,982	June 24	1927	521	27	1294
Propeller for vessels	T. Pennefeather	300,888	June 24	1792	489	27	1274
Propeller for vessels. Buoyant	N. Petersen	296,613	Apr. 8	915	255 / 256	27	122
Propeller for vessels. Screw	E. S. Hawley	299,538	June 3	42	11, 12	27	920
Propeller. Marine	E. T. Griffith	299,923	June 3	516	137	27	1019
Propeller. Screw	A. Von Buonaccorsi di Pistoja	296,271	Apr. 1	473	132	27	89
Propelling apparatus for vessels	A. C. de los Rios	298,214	May 6	358	95	27	594
Propelling apparatus for vessels	J. S. Smith	296,476	Apr. 8	736	203	27	145
Propelling canal-boats	G. R. Taylor	298,135	May 6	213	57	27	568
Pruning shears	J. G. Bubach	298,549	May 13	734	207	27	674
Puddling and heating furnace	W. Stubblebine	300,657	June 17	1496	412	27	1216
Puddling-furnace. Rotary	J. Griffen and J. Hall, Jr	300,250	June 10	961	260 / 261	27	1100
Puddling-furnaces. Cooling-shield for	E. W. Hickman	298,203	May 6	307	80	27	584
Pug-mill	S. K. Fletcher and R. Thomas	299,370	May 27	1702	508	27	886
Pull. Flush	J. Spruce	299,032	May 20	1344	384	27	796
Puller: *See* Stump-puller.							
Pulley	W. T. Baker and J. H. Shull	299,322	May 27	1701	488	27	874
Pulley	E. B. Martindale. (Reissue)	10,494	June 24	2020	558	27	1317
Pulley	H. C. Newcomb	297,531	Apr. 22	2075	566	27	407
Pulley	O. R. Olsen	297,624	Apr. 29	2204	601	27	438
Pulley. Belt	A. T. Irwin	296,173	Apr. 1	331	94	27	65
Pulley-block	D. M. Garrett	297,168	Apr. 22	1558	429	27	311
Pulley bracket and block	C. Schneider and C. Pfanne	298,241	May 6	365	97	27	595
Pulley. Friction-clutch	H. W. Hill	299,787	June 3	366	94	27	900
Pulley. Reversing	G. A. Tobey	297,473	Apr. 22	1992	544 / 545	27	393
Pulley. Self-adjusting	W. A. Gröndahl	299,470	May 27	1884	542	27	907
Pulley. Self-lubricating loose	E. F. Gordon	295,999	Apr. 1	134	39	27	28
Pulley. Split	J. N. Baldwin and T. O. Stiles	297,310	Apr. 22	1828	497	27	361
Pulley. Wood-rim	A. Clarke	298,732	May 20	981	272	27	727
Pulp. Apparatus for forming or molding articles from	W. L. Chase	298,728	May 20	966	269 / 270	27	725
Pulp. Apparatus for molding articles from	W. L. Chase	298,729	May 20	972	271	27	725
Pulp-board for roofing purposes	P. Carey	300,946	June 24	1855	.....	27	1286
Pulp-grinder pressure-feeder	E. F. Millard	298,875	May 20	1149	322	27	758
Pulp. Machinery for forming or molding articles from	W. L. Chase	298,730	May 20	975	271	27	726
Pulp. Machinery for molding articles from	W. L. Chase	298,731	May 20	977	272	27	726
Pump	E. Barnes	299,718	June 3	292	73	27	975
Pump	W. H. and W. J. Clark	301,045	June 24	1978	546	27	1309
Pump	T. Courtney	300,957	June 24	1866	511	27	1288
Pump	J. R. and L. T. Fisher	300,702	June 17	1564	429	27	1228
Pump	J. J. Gardner	299,373	May 27	1766	509	27	886
Pump	R. P. Garsed	297,376	Apr. 22	1872	509	27	369
Pump	O. W. Hammond	296,001	Apr. 1	137	40	27	28
Pump	R. Hardie	297,076	Apr. 15	1478	408	27	293
Pump	J. G. Irving	298,208	May 6	318	83	27	586
Pump	A. Jorgensen	299,478	May 27	1897	546	27	909
Pump	F. D. Maltby	300,849	June 24	1782	486	27	1279
Pump	F. D. Maltby and D. Wilmot	301,063	June 24	2000	553	27	1313
Pump	J. R. Maxwell	299,487	May 27	1906	549	27	911
Pump	E. A. Miller	300,623	June 17	1443	398	27	1206
Pump	S. A. Moore	300,389	June 17	1153	316	27	1153
Pump	N. C. Page	299,574	June 3	90	21	27	937
Pump	C. W. Schreiber	300,903	June 24	1810	495	27	1278
Pump	W. L. Shepard	300,400	June 17	1164	319	27	1155
Pump and condensing apparatus for engines. Combined feed-	J. Houpt	296,009	Apr. 1	144	42	27	30
Pump and ice-box. Ale	W. Gardner	298,572	May 13	787	215	27	680
Pump. Compound vacuum	W. Richter	299,367	May 27	1632	468	27	861
Pump. Decanting	E. O. Murdock	296,435	Apr. 8	683	188	27	135
Pump. Double-acting	W. H. and C. A. Holcombe	297,400	Apr. 22	1899	516	27	375
Pump. Double-acting	J. McGwin	299,606	June 3	231	57	27	964
Pump. Double-acting	W. H. Ormsby	300,794	June 24	1675	458	27	1252
Pump. Double force	M. F. McNelly	300,787	June 24	1668	456 / 457	27	1251
Pump. Double-piston	G. W. Holmes	299,788	June 3	367	94	27	990
Pump-fixture. Chain	A. S. Wright	298,330	May 6	491	130	27	617
Pump for portable steam-engines. Steam	W. C. Wolfe	298,435	May 13	606	171	27	649
Pump. Gas	W. J. Ferguson	297,773	Apr. 29	2401	655	27	475
Pump-handle	J. A. Craig	299,748	June 3	326	83	27	982
Pump. Measuring	S. M. Cole	296,531	Apr. 8	805	222	27	160
Pump-motor	B. F. Opp	300,726	June 17	1589	436	27	1232
Pump-regulator	E. F. Osborne	298,771	May 20	1020	285	27	734
Pump. Rotary	E. B. Donkin	298,952	May 20	1245	352 / 353	27	777
Pump. Rotary	G. Lenhard	298,866	May 20	1138	319	27	756
Pump. Rotary	A. Warth	297,478	Apr. 22	1998	546	27	384
Pump-spout	H. Clayton	300,573	June 17	1376	380	27	1194
Pump-spout	S. A. Saum	300,900	June 24	1805	494	27	1277

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Pump. Steam	G. McFeely. (Reissue)	10,475	May 6	491	133	27	619
Pump. Vacuum	C. G. E. Neveux	297,433	Apr. 22	1940	529	27	382
Pump. Wooden	D. Plewa	297,001	Apr. 15	1387	363	27	275
Pumps. Automatic starting and stopping mechanism for windmill	J. M. Whitney	300,177	June 10	865	233 / 234	27	1092
Pumps. Ratchet apparatus for chain	G. M. Shaw	299,171	May 27	1592	446	27	839
Pumps. Stuffing-box for ammonia compression	J. A. Osenbrück	300,886	June 24	1790	488 / 489	27	1274
Pumps. Water-jacket for rotary	A. W. Von Schmidt	299,186	May 27	1541	442	27	842
Pumping-engine. Steam	J. L. Lowry	298,590	May 13	793	223	27	684
Punch	I. M. Dunckleburg	299,210	May 27	1568	451	27	849
Punch	C. J. A. Sjoberg	300,652	June 17	1491	411	27	1215
Punch. Hand	J. E. Atwood	300,831	June 24	1724	470	27	1261
Punch. Hollow	B. F. Mitchell	300,624	June 17	1444	398	27	1207
Punch. Ticket	W. C. Fick	301,052	June 24	1986	549	27	1310
Punching and shearing machine	A. Albien	299,502	June 3	3	1	27	921
Punching-machine	N. C. Stiles	297,090	Apr. 15	1493	413	27	295
Punching machine. Check	J. N. Williams	298,648	May 13	855	239 / 240	27	695
Punching the eyes of axes and similar tools. Machine for	J. W. Bowers	296,618	Apr. 15	1160	326 / 327	27	235
Putting-out machine	J. W. Vaughn	299,701	June 3	274	68	27	972
Pyrometer	A. Boulier	300,202	June 10	905	243	27	1098
Pyroxyline compound. Finishing and glossing the surfaces of fabrics having a coating of some	J. B. Edson	297,770	Apr. 29	2397	.....	27	474
Pyroxyline in comminuted form. Desiccating	J. W. Hyatt	297,935	Apr. 29	2786	709	27	512
Pyroxyline material. Manufacture of	J. W. Hyatt, J. H. Stevens, W. H. Wood, and J. Everding.	296,969	Apr. 15	1346	373	27	969
Pyroxyline pulp. Process of and apparatus for effecting the desiccation of	J. W. Hyatt, W. H. Wood, and J. H. Stevens.	296,968	Apr. 15	1344	373	27	968
Pyroxyline. Treating and molding	J. W., Jr., and I. S. Hyatt. (Reissue.)	10,469	Apr. 15	1514	.....	27	998
Quarrier and stone-shaper. Rotary	J. Crump and R. Brereton	298,353	May 13	517	140	27	632
Quartz crusher or mill	H. Sutherland	300,529	June 17	1320	362 / 363	27	1184
Quicksand. Method of and apparatus for sinking shafts through	F. H. Poetsch	300,891	June 24	1795	490	27	1275
Quoin	M. C. Barry	297,102	Apr. 22	1519	419	27	305
Rack: *See* Book-rack. Paper-bag rack. Hay-rack. Pool-rack. Lumber-rack. Pool-table ball-rack.							
Radiator. Steam	C. Wheat	297,325	Apr. 22	1892	489	27	356
Rag and scrap duster	T. Ferry	299,366	May 27	1758	506	27	884
Rail-brace	P. F. Barr	297,661	Apr. 29	2253	613	27	447
Rail or tram way systems. Apparatus to be used in electric	M. H. Smith	297,306	Apr. 22	1780	483	27	352
Rail-stringer	H. Holgate and R. Bagnall	296,567	Apr. 8	859	238	27	171
Rails. Machine for cleaning tram	J. Remfry	301,007	June 24	1930	532 / 533	27	1300
Rails. Utilizing old	G. A. Steiner	300,404	June 17	1170	321	27	1155
Railway	R. A. Houghton	296,411	Apr. 8	657	182	27	129
Railway appliance. Cable	W. H. Paine	296,602	Apr. 8	901	249 / 250	27	178
Railway. Cable	A. C. Evans	300,058	June 10	700	190 / 191	27	1062
Railway. Cable	C. B. Fairchild	300,235	June 10	939	254	27	1105
Railway. Cable	C. B. Fairchild	300,236	June 10	940	254	27	1105
Railway. Endless cable-traction	F. G. Corning	297,069	Apr. 15	1469	406	27	291
Railway foot-guard	H. Sullings	296,363	Apr. 8	596	165	27	119
Railway-frog	D. H. Mahoney	297,142	Apr. 22	1575	433	27	314
Railway-gate	J. Hickey	300,970	June 24	1884	518	27	1291
Railway-gates. Operating	J. Little	296,761	Apr. 15	1093	308	27	222
Railway-joint and nut-lock	W. M. Jenkins	298,473	May 13	655	185	27	658
Railway rail	T. Breen	297,965	May 6	6	2	27	598
Railway-rail	F. B. Stevens	299,287	May 27	1658	476	27	865
Railway-rail and rail-joint	J. S. McLeod	297,708	Apr. 29	2321	631	27	460
Railway-rail clamp	J. Lockhart	299,557	June 3	67	17	27	933
Railway rail joint	R. P. Morgan, Jr	297,283	Apr. 22	1752	476	27	347
Railway rail joint	R. Raby, Jr	298,776	May 20	1027	287	27	735
Railway-rails to metallic ties. Securing	S. B. Wright	298,539	May 13	724	205	27	672
Railway safety-signal	E. H. Tobey	296,893	Apr. 15	1256	350 / 351	27	251
Railway-signal	W. C. Beckwith	299,101	May 27	1435	410	27	823
Railway-signal	W. C. Beckwith	299,102	May 27	1438	411	27	824
Railway-signal. Electric	L. Finger	300,238	June 10	943	234 / 235	27	1106
Railway signal for locomotives	J. J. Stoetzel	300,406	June 17	1172	321	27	1156
Railway signaling apparatus	C. H. Jackson	298,209	May 6	319	83	27	586
Railway sleeper and chair combined	J. Chater	299,345	May 27	1737	498	27	880
Railway-spike	W. Goldie	300,066	June 10	710	193	27	1064
Railway switch. Horse	B. L. Randall	296,002	Apr. 1	202	59	27	41
Railway-switch rods. Connection of	J. B. Witty	296,808	Apr. 15	1145	323	27	233
Railway-switch signal	J. W. Alexander and M. Wheelhouse	298,151	May 6	237	61	27	571
Railway-tie	W. T. Carter	296,725	Apr. 15	1048	295	27	214
Railway track	T. C. Carroll	300,306	June 10	1039	291	27	1123
Railway track clearer	G. J. Kinzel	297,607	Apr. 29	2159	596	27	434
Railway-track gage	P. Nolan	297,435	Apr. 22	1944	530	27	383
Railway track lifter	I. Shoudy	296,635	Apr. 8	949	262	27	187
Railway track. Street	L. Brayton	296,668	Apr. 8	978	274	27	195
Railways. Apparatus for preventing accidents on	D. and D. Roberge, Jr	296,065	Apr. 1	205	59	27	42
Railways. Automatic connector and disconnector for grips of cable	W. H. Paine	296,606	Apr. 8	907	253	27	180
Railways. Auxiliary switching apparatus for cable	W. H. Paine	296,603	Apr. 8	902	250 / 251	27	179

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railways. Conduit for traction-rope	Z. P. Boyer	296,667	Apr. 8	977	273, 274	27	195
Railways. Conduit for traction-rope or endless cable	Z. P. Boyer	298,819	May 20	1383	303	27	745
Railways. Constructing tubes and road-beds for cable	J. D. Isaacs	298,472	May 13	653	185	27	658
Railways. Electric block-signal for	S. J. Swayze and J. C. Lane	298,913	May 20	1199	338	27	768
Railways. Gripping and brake mechanism for cable	W. H. Paine	296,604	Apr. 8	904	251, 252	27	179
Railways. Interlocking-machine for signals and switches on	S. Warrick	297,885	Apr. 29	2519	689	27	499
Railways. Laying and securing rails in road-beds of	J. Dénéchaud, Sr	299,208	May 27	1565	450	27	849
Railways. Roller-grip for cable	W. H. Paine	296,605	Apr. 8	905	252, 253	27	180
Rain-water trap	E. T. Toomer	298,520	May 13	703	199	27	668
Rake: *See* Harvester chain rake. Horse-rake. Reel-rake. Hay-rake.							
Rake	W. Barry	298,156	May 6	243	63	27	572
Rakes. Pattern and means for molding garden and other	J. F. Hay. (Reissue)	10,472	Apr. 29	2614	716	27	517
Ram. Hydraulic	J. B. Yeagley	298,262	May 6	390	103	27	600
Ram. Hydraulic	J. B. Yeagley	298,263	May 6	392	103	27	601
Ramie and jute. Process of and apparatus for the treatment of	N. Arthurs	297,554	Apr. 29	2115	577	27	421
Range. Portable	C. P. Geissenhainer	300,064	June 10	707	192	27	1064
Range. Portable	W. P. Lewis	300,273	June 10	991	267	27	1114
Ratchet-drill	C. Schnmacher	297,171	Apr. 22	1606	442	27	320
Ratchet-drill	P. A. Whitney	297,210	Apr. 22	1666	453	27	331
Ratchet-drill. Self-feeding	R. N. Cherry	296,924	Apr. 15	1299	361	27	259
Ratchet-locking device	P. P. Lane and J. B. Stanwood	299,654	June 3	201	51	27	957
Razor-strop	R. P. Smith	299,865	June 3	453	118	27	1008
Reciprocating machine. Tool	F. R. Patch	297,839	Apr. 29	2468	676	27	488
Reclining-chair	O. Stechhan	296,478	Apr. 8	738	204	27	146
Reclining or hammock chair	F. H. Plummer	296,777	Apr. 15	1110	313	27	226
Reel: *See* Harvester-reel. Line-reel. Hose-reel.							
Reel for nailing and other machines	H. Weeks	299,041	May 20	1361	387	27	799
Reel-rake	W. H. Knapp	299,989	June 10	614	165, 166	27	1047
Reeling silk, &c. Machine for	J. E. Atwood	296,378	Apr. 8	616	171	27	123
Reflector-support for candles	A. Konefzny	298,478	May 13	659	186	27	659
Refrigerating apparatus	W. A. Chase	299,022	June 3	156	39	27	949
Refrigerating apparatus for chambers and buildings	J. J. Craven	300,695	June 17	1553	426	27	1226
Refrigerating car and chamber	E. Hamilton	298,083	May 6	151	39	27	555
Refrigerating corned-beef tank	H. Menslage	299,567	June 3	82	20	27	935
Refrigerating faucet	F. A. Presko	299,420	May 27	1808	525	27	897
Refrigerating package for shipping and preserving butter, oysters, &c.	O. P. Johnson	300,476	June 17	1259	345	27	1172
Refrigerator	J. Castell	296,923	Apr. 15	1298	360, 361	27	259
Refrigerator	I. T. Dyer	300,351	June 17	1104	299, 300	27	1145
Refrigerator	J. Jackson	296,573	Apr. 8	867	240	27	172
Refrigerator	H. W. Nash	300,791	June 24	1672	457	27	1251
Refrigerator. Air-cooling	D. Sanderson	296,071	Apr. 1	213	61	27	43
Refrigerator-car	H. C. Goodell	300,596	June 17	1401	386	27	1199
Refrigerator-car	T. L. Rankin	296,218	Apr. 1	393	111, 112	27	76
Refrigerator for cooling contents of bottles, cans, &c.	B. Mochina	296,432	Apr. 8	680	188	27	134
Refrigerator. Oyster	S. L. Fraser and W. A. Brigham	300,061	June 10	705	191	27	1063
Regenerative furnace	A. Cuthbert	301,048	June 24	1981	548	27	1309
Regenerative furnace	J. W. Galvin	298,297	May 6	436	118	27	609
Regenerator-furnace	G. Jones	296,174	Apr. 1	332	94, 95	27	65
Register: *See* Billiard-table time-register. Morse register. Time-register. Engine-register.							
Register and alarm	J. G. Lettelier and E. E. Pratt	296,194	Apr. 1	360	103	27	69
Registering railway-passengers. Check-list for	S. D. Eldred	297,588	Apr. 29	2163	590	27	431
Regulator: *See* Damper-regulator. Heat-regulator. Electric regulator. Hot-water regulator. Electric-machine regulator. Pressure-regulator. Pump-regulator. Feed-regulator. Speed-regulator. Gas-regulator. Water-wheel regulator.							
Rein-controller	A. Warth	297,886	Apr. 29	2520	689, 690	27	499
Rein. Driving	W. S. Bowie	300,564	June 17	1365	376	27	1192
Rein-fastener	N. N. Hazelton	297,795	Apr. 29	2422	662	27	479
Rein hook. Check	G. W. Hall	297,387	Apr. 22	1886	512	27	372
Reins. Latch-clasp for driving	J. H. Fenton	300,354	June 17	1109	300	27	1146
Reins. Machine for making	O. A. Dean	299,116	May 27	1458	417	27	828
Rendering lard, &c. Apparatus for	D. W. McElroy	299,821	June 3	403	103	27	998
Reservoirs. Cleaning	J. D. Cook	299,744	June 3	322	82	27	981
Reservoirs. Electric register for fluid	C. S. Lockwood	300,490	June 17	1278	351	27	1176
Resawing-machine	B. Hausheer and J. Meyenberg	297,600	Apr. 29	2175	594	27	433
Retort for carbonizing wood	J. A. Mathieu	300,385	June 17	1148	315	27	1152
Reverberatory gas-furnace	W. L. McNair	296,633	Apr. 1	169	49, 50	27	95
Reversible shears	J. L. Starks	300,153	June 10	929	225	27	1086
Revolver	S. S. Hopkins	297,801	Apr. 29	2429	663	27	481
Rheostat	J. Doyle	298,073	May 6	141	35	27	553

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rheostat	E. Weston	297,324	Apr. 22	1800	480	27	335
Ribbon-holder	A. Stevens	296,887	Apr. 15	1248	349	27	250
Rice-drill	A. D. Middleton	300,883	June 24	1787	488	27	1273
Rice-hulling machine	A. M. Patrick	300,335	June 10	1077	294	27	1129
Ring: *See* Curtain-ring. Jewelry-ring. Curtain-pole ring. Key-ring. Finger-ring.							
Rings, coupling-links, &c. Apparatus for making	S. Harris	297,258	Apr. 22	1729	469	27	342
Rings of plastic compounds. Process of and apparatus for making solid	E. Kipper	299,802	June 3	382	98	27	994
Riveting-machine	W. R. Webster	300,174	June 10	860	232	27	1091
Road-engine	G. F. Page	296,998	Apr. 15	1384	382	27	275
Robe-holder for vehicles	G. H. Chappell	298,173	May 6	267	68	27	570
Rock and coal boring machine. Hand	B. B. Davis	301,049	June 24	1983	548	27	1310
Rock-drill	G. M. Derby	296,681	Apr. 8	994	278	27	198
Rock-drill	W. E. Peyton	296,052	Apr. 1	191	55	27	39
Rock-drill	D. Wood	296,660	Apr. 8	971	272	27	193
Rock-drill and well-boring machine	W. C. Wells	296,804	Apr. 15	1140	321	27	232
Rock-drill carriage	W. L. Saunders	298,625	May 13	829	231	27	691
Rock-drill. Steam	J. F. Allen	297,552	Apr. 29	2111	576	27	420
Rock-drills. Pipe-casing for submarine	C. A. Sterling	298,251	May 6	377	100	27	597
Rocker and reclining-chair. Combined platform	P. B. Cupp	296,931	Apr. 15	1307	362	27	261
Rocker. Folding	J. R. Jones	297,809	Apr. 29	2435	665	27	482
Rocking-chairs. Spring attachment for platform	W. I. Bunker	297,168	Apr. 22	1529	422	27	307
Rod: *See* Drag-rod. Extension suspensory rod.							
Roller: *See* Anti-friction roller. Shade-roller. Card-grinding roller. Street-roller. Land-roller.							
Roller-mill	N. W. Holt	298,206	May 6	316	82	27	586
Roller-mill	N. W. Holt	299,789	June 3	968	94	27	991
Roller-mill	D. W. Marmon and J. Warrington. (Reissue.)	10,493	June 24	2018	537, 558	27	1317
Roller-mill	R. W. Welch	297,890	Apr. 29	2526	691	27	500
Roller-mill casing	J. M. Case	297,757	Apr. 29	2477	647	27	470
Roller-mill feed-box	J. M. Case	297,754	Apr. 29	2476	647	27	470
Roller-mill feed-box	J. M. Case	297,764	Apr. 29	2480	652	27	473
Roller-mills. Adjusting and leveling device for	J. M. Case	297,916	Apr. 29	2557	701	27	506
Rolling axles. Machine for	S. H. Wilson	297,546	Apr. 22	2092	570, 571	27	411
Rolling-mill bearing	W. Steel	296,081	Apr. 1	223	65	27	45
Rolling-mills. Construction of continuous	F. H. Daniels	297,680	Apr. 29	2284	621, 622	27	453
Roof and skylight. Glazed metallic	G. Hayes	299,386	May 27	1781	513	27	889
Roofing-bracket	A. Gnedle	298,463	May 13	642	182	27	656
Roofing compound	J. T. Fretwell	297,374	Apr. 22	1871	.....	27	360
Roofing. Felt	L. Haas and D. Howarth	296,103	Apr. 1	320	91	27	62
Roofing-plate. Metallic	G. Patten	296,610	Apr. 8	912	254	27	181
Roofing-slate fastening	B. M. O'Neill	299,842	June 3	426	110	27	1003
Rope, cord, &c., clamp	F. Eggo	297,241	Apr. 22	1705	463	27	338
Rope or cable coupling	G. M. Green	297,073	Apr. 15	1475	408	27	292
Rope or line clasp	A. L. Pitney	297,158	Apr. 22	1593	438	27	317
Rose-engine	A. Schwitter	297,454	Apr. 22	1967	538	27	388
Rotary cutters. Making	D. H. Church	299,348	May 27	1740	500	27	881
Rotary engine	S. and S. Broadbent, Jr.	296,123	Apr. 1	276	78	27	54
Rotary engine	I. L. Clough	299,370	May 27	1742	501	27	881
Rotary engine	A. Decher	297,553	Apr. 29	2146	585	27	427
Rotary engine	C. Enke	297,589	Apr. 29	2164	591	27	431
Rotary engine	G. L. Griffin, W. A. Shoup, and J. R. Cade.	297,254	Apr. 22	1723	467	27	341
Rotary engine	J. Moffet	300,998	June 24	1915	527	27	1297
Rotary engine	J. W. Wilks	298,434	May 13	605	171	27	649
Rotary meter	J. A. Peer	298,230	May 6	353	94	27	593
Rotary motor	H. A. Tobey	296,894	Apr. 15	1260	351	27	252
Rotary steam-engine	J. H. McVay	299,824	June 3	467	104	27	999
Rotary steam-engine	G. W. Price	299,260	May 27	1622	466	27	860
Rotary steam-engine	F. Stitzel	297,091	Apr. 15	1407	414	27	296
Row-boat	W. A. Rettig	300,895	June 24	1800	491, 492	27	1276
Rowing mechanism. Bow-facing	J. P. Willard	299,042	May 20	1362	388	27	769
Rowlock	J. F. Cumming	299,521	June 3	21	7	27	924
Rubber fabrics. Joining	I. B Kleinert	298,095	May 6	164	42	27	558
Rubber. Felt	J. B. Laughton	296,585	Apr. 8	878	243	27	174
Rubber from waste. Recovering	N. C. Mitchell	300,720	June 17	1564	.....	27	1231
Rubber-surfaced fabric and composition therefor	N. S. White	296,258	Apr. 1	474	.....	27	86
Rudder holder and support	C. A. Richardson	299,205	May 27	1620	478	27	861
Rudder. Propelling	J. L. F. Barbier	299,612	June 3	143	35	27	946
Rule. Caliper	S. H. Bellows	299,993	June 10	619	167	27	1048
Ruler	J. E. Mann	297,717	Apr. 29	2320	634	27	402
Ruler	P. C. Rich	298,834	May 20	1401	308	27	748
Ruler. Draftsman's adjustable curve	F. W. Davenport	298,471	May 13	652	184	27	658
Ruler. Nautical parallel	C. Hutchinson	296,598	Apr. 8	826	248	27	178
Ruler. Parallel	J. C. Miller	297,525	Apr. 22	2008	564	27	405
Ruling-machine feeding device	E. Larson and O. Hammarlund	295,994	Apr. 1	126	37	27	30
Ruling machine. Paper	J. C. Forman	297,735	May 20	944	273	27	727
Ruling machines. Ink-reservoir for paper	E. P. Donnell	297,250	Apr. 22	1719	466	27	340
Saddle. Harness	A. W. Frazee	298,972	May 20	1271	362	27	782
Saddle. Harness	D. B. Holsburg	297,161	Apr. 22	1595	439	27	318
Saddle. Riding	J. L. Powell	297,398	Apr. 22	1897	515	27	374
Saddle-seat	P. B. Hirsch	296,711	Apr. 8	1025	287	27	204
Saddle. Side	H. Ruwart	300,339	June 17	1067	296	27	1142
Safe	T. M. Brintnall						

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Safe	J. R. Grove	299,381	May 27	1773	510	27	888
Safe-deposit box	J. Farrel	296,153	Apr. 1	309	89	27	60
Safe-door	E. Stockwell	296,643	Apr. 8	949	266	27	189
Safes and vaults. Electric locking mechanism for	H. F. Newbury	296,866	Apr. 15	1225	342	27	246
Safes and vaults. Supporting the bolt-work of	H. F. Newbury	296,867	Apr. 15	1227	343	27	246
Safety attachment	E. G. Harley	296,002	Apr. 1	137	40	27	98
Safety-hook	E. H. Smith	300,810	June 24	1694	463	27	1255
Safety-pin	W. J. Broadbent	297,294	Apr. 22	1688	459	27	334
Safety-pin	J. Jenkins	299,075	May 20	1400	399	27	806
Sail-clamp	G. W. Ilner	300,078	June 10	799	197	27	1068
Sail hank and hook	D. Crowell, Jr	300,226	June 10	930	254	27	1103
Salt. Apparatus for the manufacture of	S. C. Wells	297,323	Apr. 22	1798	488	27	355
Salt-cellar	S. C. Wilcox	299,445	May 27	1855	533	27	902
Salt for cattle	H. G. Piffard	296,614	Apr. 8	916	.....	27	192
Salt. Washing and purifying	S. S. Garrigues	299,774	June 3	353	.....	27	987
Sand-bars, &c. Hydraulic apparatus for removing	R. Stone	296,483	Apr. 8	745	206	27	147
Sand-blast apparatus	J. J. Sachs	299,270	May 27	1035	460	27	802
Sand-paper. Removing the sand and glue from waste	W. J. Hussey	300,710	June 17	1574	.....	27	1230
Sand-sifting machine	J. Kinzer	300,481	June 17	1266	347	27	1174
Sardine-can	J. Wolff	299,710	June 3	285	70	27	974
Sash-balance	J. B. Montague, J. T. Booker, and E. C. Dinning.	300,104	June 10	762	205	27	1074
Sash-balance	S. H. Russell	297,790	Apr. 29	2736	635	27	465
Sash-cord fastener	R. N. Brown	299,199	May 27	1555	446	27	840
Sash-cord fastener	H. F. Jenks	300,263	June 10	981	265	27	1113
Sash-cord fastener	S. H. Russell	298,122	May 6	198	53	27	564
Sash-cord guide	W. C. Gilmer	296,830	Apr. 15	1179	331	27	237
Sash-cord guide	G. W. Pero	298,496	May 13	681	193	27	663
Sash-fastener	R. Adams	299,712	June 3	287	71	27	974
Sash-fastener	E. B. Attwell. (Reissue)	10,483	June 3	545	146	27	1023
Sash-fastener	G. S. Barnes	299,719	June 3	293	74	27	975
Sash-fastener	F. M. Case	297,298	Apr. 22	1692	460	27	335
Sash-fastener	L. J. Church	297,499	Apr. 22	2035	555	27	399
Sash-fastener	L. J. Church	297,500	Apr. 22	2036	556	27	399
Sash-fastener	O. R. Cooke	300,694	June 17	1592	426	27	1226
Sash-fastener	W. Goforth	296,402	Apr. 8	647	179	27	128
Sash-fastener	O. S. Judd	297,605	Apr. 29	2180	595	27	434
Sash-fastener	H. Keppel	299,402	May 27	1809	520	27	884
Sash-fastener	E. O. Ladd	296,188	Apr. 1	350	100	27	68
Sash-fastener	R. McCabe	298,106	May 6	177	46	27	560
Sash-fastener	R. T. Murphy	299,246	May 27	1610	462	27	857
Sash-fastener	A. D. Ordway	296,997	Apr. 15	1381	382	27	274
Sash-fastener	J. D. Reiff	301,005	June 24	1927	531	27	1309
Sash-fastener	I. J. Saltzer	297,953	Apr. 29	2607	714	27	515
Sash-holder	G. C. Bolgiano	299,335	May 27	1722	493	27	877
Sash-holder	S. A. Brown	296,723	Apr. 15	1047	294	27	214
Sash-holder	J. P. Centner	300,307	June 10	1040	281	27	1123
Sash-holder	E. B. Clement	300,954	June 24	1863	511	27	1288
Sash-holder	G. E. Gorham	299,217	May 27	1575	452 / 453	27	850
Sash-holder	W. O. Smith	297,187	Apr. 22	1628	446	27	324
Sash holder. Window	J. E. Dohen	299,525	June 3	28	8	27	936
Sash ventilator. Window	E. W. Chadwick	299,960	June 10	576	154	27	1040
Sash-weight	C. E. Heiss	296,410	Apr. 8	656	182	27	129
Sash. Window	L. L. Arnold	299,944	June 10	557	149	27	1037
Satchel	D. Heidelberger	298,852	May 20	1121	315	27	752
Satchel. Album	L. Lazarus	299,812	June 3	302	100	27	996
Satchel. Folding	R. Moffly	296,993	Apr. 15	1380	381	27	274

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Saw-mill feed mechanism	E. T. Gardner	298,195	May 6	293	76	27	581
Saw mill. Gang	D. C. Prescott	296,618	Apr. 8	920	257	27	183
Saw-mill head-block	D. Parkhurst	296,959	Apr. 15	1784	383	27	275
Saw-mill. Portable	W. C. Rodgers	296,220	Apr. 1	395	112	27	76
Saw-mill set-works	R. R. Parsons	296,442	Apr. 8	693	190	27	137
Saw. Pruning	W. K. Stansbury	296,241	Apr. 1	427	120	27	81
Saw. Segment	J. Hilton	299,142	May 27	1489	427	27	834
Saw-set	G. A. F. Clayton	299,349	May 27	1741	501	27	881
Saw-sharpening machine	L. Bush, Jr	297,566	Apr. 29	2132	582 / 583	27	424
Saw-sharpening machine	D. Willey	298,928	May 20	1215	343	27	771
Saw-shifting mechanism for gang-edgers	D. L. Stevens	296,360	Apr. 8	593	164	27	118
Saw-swage	S. Kinney	297,698	Apr. 29	2310	628	27	458
Saw-swaging device	B. F. Bridges	297,559	Apr. 29	2120	579	27	422
Saw-tab	J. E. Emerson	297,343	Apr. 22	1707	464	27	338
Saw-tab plate	J. E. Emerson	297,342	Apr. 22	1706	463	27	338
Saw-table gage	H. L. Hopkins	300,975	June 24	1889	520	27	1292
Saw-tooth. Adjustable	G. W. Sitnebring	299,291	May 27	1667	477	27	807
Saw-tooth. Adjustable	G. W. Sitnebring	300,814	June 24	1698	464	27	1256
Saw-tooth. Insertible	W. B. Risdon	298,892	May 20	1173	328	27	763
Saw-tooth. Insertible diamond	E. Foerster	297,776	Apr. 29	2403	656	27	475
Saw. Tube	M. F. Lucas	300,734	June 24	1665	476	27	1250
Saw-vise	G. W. Burton	296,128	Apr. 1	283	80	27	56
Saw. Wabble	S. F. Kress	300,392	June 10	1058	287	27	1126
Sawing machine. Circular	L. Houston	300,369	June 17	1126	307	27	1148
Sawing machine. Circular	J. H. Jones	296,334	Apr. 8	558	156	27	111
Sawing machine. Circular	J. Van Patten	296,652	Apr. 8	958	269	27	191
Sawing machine. Scroll	W. J. Hull and W. E. Varney	296,693	Apr. 8	1008	282	27	200
Sawing machines. Feed mechanism for circular	J. H. Hermance. (Reissue)	10,467	Apr. 8	1036	291	27	206
Scaffolding. Builder's	D. W. Spooner	299,791	May 20	1048	293	27	739
Scale	E. R. Puffer	298,118	May 6	193	51	27	563
Scale. Pendulum	H. C. Keeler	297,267	Apr. 22	1737	472	27	344
Scale. Platform	N. Du Brul	299,762	June 3	341	87	27	985
Scale. Platform	W. W. Reynolds	296,451	Apr. 8	703	193 / 194	27	139
Scale. Weighing	N. Du Brul	299,757	June 3	336	85	27	984
Scale. Weighing	N. Du Brul	299,758	June 3	337	86	27	984
Scale. Weighing	N. Du Brul	299,759	June 3	338	86	27	984
Scale. Weighing	N. Du Brul	299,760	June 3	339	86	27	984
Scale. Weighing	N. Du Brul	299,761	June 3	340	86	27	985
Scale. Weighing	E. Sirret	296,470	Apr. 8	725	200 / 201	27	144
Scarfs. Holder for the bands of neck	W. E. T. Merrill	301,065	June 24	2003	533	27	1314
Scenery. Stage	M. Armbruster	300,187	June 10	880	226 / 227	27	1094
Scraper and leveler. Road	T. K. Sawyers	300,287	June 10	1017	274 / 275	27	1119
Scraper. Earth	J. F. O'Connor and S. M. Williams	296,044	Apr. 1	181	52	27	38
Scraper. Road	M. E. Cook	296,158	Apr. 1	203	64	27	57
Scraper. Road	W. Ellis, Jr	301,054	June 24	1985	549	27	1310
Scraper. Road	L. Lamborn	298,097	May 6	166	43	27	558
Scraper. Road	C. Mendenhall	298,604	May 13	803	225 / 226	27	686
Scrapers. Portable bridge for unloading earth	B. L. Burris and C. S. Woodman	300,301	June 10	1034	279	27	1121
Screen: *See* Fire-screen. Window-screen.							
Screen for attrition-mills, &c	T. L. Sturtevant	298,428	May 13	509	169	27	648
Screen-frame	G. Phillips	298,116	May 6	189	50	27	562
Screening. Slashed metallic	J. F. Golding	297,382	Apr. 22	1880	511	27	371
Screw	A. Mitchell	296,991	Apr. 15	1378	380	27	274
Screw	S. Potts	297,004	Apr. 15	1392	384	27	276
Screw	H. A. Stone	298,427	May 13	508	169	27	648
Screw-cutting die	J. M. Dodge	296,393	Apr. 8	639	170	27	126
Screw-cutting die	A. J. Kosiol	297,941	Apr. 29	2504	711	27	513
Screw-cutting machine	C. Glover	298,845	May 20	1111	311 / 312	27	751
Screw driver and holder	J. Sinnott	300,146	June 10	823	223	27	1084
Screw. Hand	T. Reno	296,622	Apr. 8	924	278	27	184
Screw-jack	D. W. Norris and M. Neil	298,504	May 13	930	259	27	711
Screw-machine	A. Johnston	299,477	May 27	1894	545	27	908
Screw machine. Metal	S. H. and C. F. Roper	300,736	June 17	1000	439	27	1234
Screw-tap	H. W. Eddy	300,961	June 24	1869	513	27	1289
Screw-tap. Collapsible	J. M. Johnson	297,519	Apr. 22	2057	562	27	403
Screw-taps. Machine for threading	S. W. Card	300,041	June 10	681	185	27	1059
Screw. Wood	J. B. Low	296,982	Apr. 15	1367	378	27	272
Screws. Machine for threading the tapering points of	F. A. Smith and A. Doll, Jr	300,908	June 24	1815	496 / 497	27	1279
Scrubber	W. F. Cornelius	300,447	June 17	1224	334	27	1165
Scythe heel-ring	J. A. Schwob	299,859	June 3	446	115	27	1007
Scythe setting and sharpening machine	J. Faugère	299,767	June 3	346	88	27	986
Scythes. Machine for forming	L. C. Palmer	299,675	June 3	243	60	27	966
Seal	E. J. Brooks	298,168	May 6	260	67	27	575
Seal	C. H. Bundy	296,921	Apr. 15	1295	359	27	259
Seal. Lead and wire	E. J. Brooks	298,065	May 13	895	246	27	702
Seal-lock	J. W. Burd, Jr	295,976	Apr. 1	98	30	27	21
Seal-lock	C. M. Plumb	297,445	Apr. 22	1959	535	27	386
Seal-lock	R. O. Walker	300,171	June 10	855	271	27	1090
Seal-press	E. J. Brooks	298,284	May 6	420	113	27	606
Seal-press	E. J. Brooks	301,043	June 24	1975	545	27	1308
Seals. Fastening tin-strip	E. J. Brooks	296,124	Apr. 1	277	79	27	54
Seam-finishing machine	W. Y. Ober and F. M. Stevens	296,669	Apr. 15	1229	343 / 344	27	246
Seam-finishing machine	C. Woodman	297,216	Apr. 22	1674	456	27	332
Seam-strengthener, gusset, and fly. Combined	J. F. Ensminger	298,360	May 13	524	142	27	634

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Seams of sheet-metal vessels. Constructing	F. A. Walsh	299,942	June 3	544	145	27	1025
Seaming elevator-buckets. Machine for double-	C. J. Williams	297,048	Apr. 15	1446	400	27	286
Seaming machine. Double-	E. Norton and J. G. Hodgson	300,002	June 10	629	171, 172	27	1050
Seaming or double-seaming joints of sheet-metal roofing. Machine for	O. W. Burritt	300,302	June 10	1035	280	27	1122
Seaming plush-back fabrics	L. S. Cox	298,288	May 6	426	114	27	607
Seat: *See* Folding seat. Jump-seat. Wagon-seat.							
Secondary batteries. Device for connecting the elements of	W. Lachlan	296,849	Apr. 15	1200	336	27	241
Secondary battery	A. G. Davis	300,052	June 10	693	188	27	1061
Secondary battery	A. Haid	296,164	Apr. 1	321	91	27	62
Secondary battery	W. A. Shaw	297,457	Apr. 22	1872	534	27	389
Secondary battery	W. Stanley, Jr.	299,177	May 27	1530	438	27	840
Secondary battery	W. Stanley, Jr.	299,178	May 27	1531	438	27	841
Secondary battery	G. L. Winch	300,933	June 24	1841	505	27	1284
Secondary-battery-charging apparatus	R. P. Sellon	299,021	May 20	1327	379	27	793
Seed and fertilizer distributer	G. Tyler	299,184	May 27	1537	440, 441	27	842
Seed, &c. Apparatus for purifying millet-	A. Besser	300,679	June 17	1530	420	27	1222
Seed-drill	F. E. Tower	299,038	May 20	1350	386	27	797
Seed huller. Cotton-	H. Heard	298,466	May 13	645	183	27	656
Seed hulling machine. Cotton-	T. J. McGowan	299,931	June 3	527	140	27	1022
Seed. Removing fiber from cotton-	J. J. Green	299,378	May 27	1776	.....	27	887
Seed. Treating cotton-	J. F. O'Shaughnessay	298,617	May 13	822	.....	27	689
Seed. Treating cotton-	J. F. O'Shaughnessay	298,618	May 13	823	.....	27	689
Seed. Treating cotton-	T. Taylor	297,193	Apr. 22	1633	448	27	325
Seeder and fertilizer-distributer. Combined	G. W. White	298,644	May 13	849	237	27	694
Seeding device	E. Lind	298,761	May 20	1010	282	27	732
Seeding-machine	J. L. Riter	295,945	Apr. 1	62	18	27	15
Seeding-machine. Convertible	T. L. Brooks	299,905	June 3	495	150, 151	27	1016
Self-lubricating wheel	W. T. Snyder	300,913	June 24	1824	498	27	1280
Separating liquid from solid matter, and mechanism therefor.	H. Warden	298,640	May 13	843	236	27	693
Separator: *See* Air and dust separator. Centrifugal separator. Coffee-separator. Dry separator. Grain-separator. Ore-separator. Starch-separator.							
Separator and smutter	W. N. Sharpnack and M. McMahon	301,013	June 24	1940	536, 537	27	1302
Separator and smutter	W. N. Sharpnack and M. McMahon	301,073	June 24	2011	555, 556	27	1315
Separator for peas, &c	R. D. Gladney	298,299	May 6	439	118	27	610
Separator for shelled corn, &c	J. S. Lea and J. B. Cornwall	300,715	June 17	1578	433	27	1230
Service-box cistern	J. G. Morrison	299,999	June 10	925	169	27	1040
Sewer	T. L. Stark	297,643	Apr. 29	2232	607	27	443
Sewer-trap	T. Watkins	298,045	May 6	106	27	27	547
Sewing and embroidering. Process of and cutting apparatus for	L. Bertrand	297,057	Apr. 15	1457	403	27	288
Sewing and other machines. Driving mechanism for	S. Maxim	296,425	Apr. 8	671	186	27	132
Sewing bags, &c. Machine for	C. M. Hine	296,565	Apr. 8	856	237, 238	27	170
Sewing buttons to shoes	A. A. Brown	300,206	June 10	910	244	27	1099
Sewing-machine	G. A. Annett	296,106	Apr. 1	254	74	27	51
Sewing-machine	A. Boecher	300,159	June 10	901	242	27	1097
Sewing-machine	P. J. Clever	296,529	Apr. 8	804	222	27	160
Sewing-machine	A. A. Fisher and A. Hart	299,368	May 27	1560	507	27	885
Sewing-machine	J. L. Follett	300,458	June 17	1236	339	27	1168
Sewing-machine	H. Grellier	300,598	June 17	1404	386, 387	27	1199
Sewing-machine	E. Kohler	301,060	June 24	1997	551, 552	27	1312
Sewing-machine	W. Lüdeke	300,380	June 17	1140	311, 312	27	1150
Sewing-machine	L. Mnther and C. A. Dearborn	299,568	June 3	83	21	27	935
Sewing-machine	L. Mnther and R. G. Woodward	299,569	June 3	84	21, 22	27	936
Sewing-machine	J. F. Sneliker	296,637	Apr. 8	941	263	27	187
Sewing-machine	J. F. Sneliker	296,638	Apr. 8	942	263	27	187
Sewing-machine attachment	E. T. Thomas and T. S. Huntington	300,531	June 17	1324	363	27	1185
Sewing-machine-attachment holder	J. M. Griest	297,596	Apr. 29	2171	593	27	432
Sewing-machine binding attachment	J. M. Griest	297,597	Apr. 29	2173	593	27	432
Sewing-machine bobbin-winder	H. M. Dixon	298,358	May 13	745	210	27	676
Sewing-machine braiding attachment	F. Leias	297,817	Apr. 29	2444	668	27	493
Sewing-machine brake	E. H. Amet	298,541	May 13	796	205	27	673
Sewing machine. Button-	F. Eggo	298,958	May 20	1257	356	27	779
Sewing machine. Button-	F. Eggo	298,959	May 20	1258	356, 357, 358	27	779
Sewing-machine. Button-hole	F. W. Cross. (Reissue)	10,465	Apr. 8	1031	289, 290	27	206
Sewing-machine. Button-hole	F. W. Cross. (Reissue)	10,466	Apr. 8	1034	290, 291	27	206
Sewing-machine. Button-hole	J. Dowling and J. Connolly	299,118	May 27	1459	417, 418, 419	27	808
Sewing-machine. Button-hole	F. Eggo	298,957	May 20	1251	354, 355, 356	27	778
Sewing-machine. Button-hole	D. Mills	298,607	May 13	807	226	27	687

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machine. Button-hole	J. H. Palmer	298,228	May 6	349	92, 93	27	592
Sewing-machine. Button-hole	G. S Rominger	296,626	Apr. 8	929	259, 260	27	185
Sewing-machine. Button-hole	F. E. Schmidt	299,168	May 27	1518	435, 436	27	839
Sewing-machine. Button-hole	C. J. A. Sjoberg	299,027	May 20	1337	381, 382	27	794
Sewing-machine button-hole attachment	T. S. Huntington	299,928	June 3	523	139	27	1021
Sewing-machine button-hole attachment	A. E. Turnbull	300,742	June 17	1608	441	27	1234
Sewing-machine cabinet	J. Bolton	298,277	May 6	413	111	27	604
Sewing machine. Carpet-	G. Gowing	297,384	Apr. 22	1882	511, 512	27	371
Sewing machine. Carpet-	G. Grisel	296,744	Apr. 15	1071	302	27	218
Sewing machine. Carpet-	A. B. Smith	296,474	Apr. 8	731	202	27	145
Sewing machine. Carpet-	A. B. Smith	298,318	May 6	465	125	27	614
Sewing-machine drip-pan	W. Connolly	299,743	June 3	521	82	27	981
Sewing-machine embroidering attachment	G. W. Baker. (Reissue)	10,463	Apr. 1	520	145	27	98
Sewing-machine embroidering attachment	G. W. Baker	297,100	Apr. 22	1517	419	27	305
Sewing-machine embroidering attachment	G. W. Baker	300,434	June 17	1210	330	27	1163
Sewing-machine embroidering attachment	J. S. Sackett and J. P. Lavigne	300,644	June 17	1480	407	27	1213
Sewing-machine for brace-wiring hats	M. H. Ryder	298,314	May 6	460	124	27	614
Sewing-machine hat-binding attachment	G. W. Parkinson	298,399	May 13	569	157	27	642
Sewing-machine hook	A. Boecher	300,683	June 17	1533	421	27	1223
Sewing-machine needle-clamp	J. W. Corey	300,050	June 10	692	188	27	1060
Sewing-machine needle-clamp	J. E. Péchard	299,847	June 3	432	112	27	1004
Sewing-machine quilting attachment	M. R. and A. H. Bell	300,678	June 17	1529	420	27	1222
Sewing-machine quilting attachment	G. O. Houck and C. Smith	298,693	May 13	922	256	27	708
Sewing-machine reversible binding attachment	L. E. Ellsworth	296,396	Apr. 8	642	177	27	127
Sewing-machine ruffling and gathering attachment	L. Onderdonk	298,309	May 6	451	121	27	612
Sewing-machine ruffling attachment	H. C. Goodrich	296,740	Apr. 15	1065	300	27	218
Sewing-machine shuttle	J. Hoefler	296,006	Apr. 1	141	41	27	29
Sewing-machine shuttle	E. H. Smith	296,790	Apr. 15	1125	317	27	229
Sewing-machine table	J. Bolton and J. C. Van Dyke	300,684	June 17	1535	422	27	1223
Sewing-machine table	D. H. Coles	299,353	May 27	1745	502	27	882
Sewing-machine table	I. E. Myrick	296,039	Apr. 1	175	51	27	36
Sewing-machine tension	M. H. Ryder	298,315	May 6	462	124	27	614
Sewing-machine tension device	C. R. Edwards	299,629	June 3	164	41	27	950
Sewing-machine tension device	H. Holden, Jr	297,709	Apr. 29	2427	663	27	480
Sewing-machine tension mechanism	G. H. Dimond and W. F. Dial	298,185	May 6	281	72, 73	27	579
Sewing-machine thread-moistening attachment	J. Nixon	296,770	Apr. 15	1101	310	27	224
Sewing-machine treadle and stand	F. M. Weaver	298,258	May 6	380	102	27	599
Sewing-machine trimmer	L. L. Barber	296,508	Apr. 8	777	214	27	154
Sewing-machine trimmer	D. Mans	296,423	Apr. 8	670	185	27	132
Sewing-machine trimming attachment	W. F. Beardslee	295,896	Apr. 1	4	2	27	4
Sewing-machine trimming attachment	W. F. Beardslee	295,897	Apr. 1	6	2	27	4
Sewing-machine tuck-creaser	E. Bostock	295,975	Apr. 1	90	30	27	21
Sewing-machine tuck-marker	J. C. Goodwin and C. W. Warren	296,555	Apr. 8	842	234	27	167
Sewing-machine tuck-marker	J. C. Goodwin and C. W. Warren	296,556	Apr. 8	844	234	27	168
Sewing-machine wheel clutch	J. B. Secor	301,012	June 24	1939	536	27	1302
Sewing to a hat its band and lining. Mechanism for simultaneously	J. F. Hamilton	299,780	June 3	358	91, 92	27	989
Shade-fixture	G. W. Steele	298,128	May 6	204	54	27	566
Shade-fixture	H. E. Stover	297,030	Apr. 15	1427	392	27	283
Shade-fixture. Spring-	S. Hartshorn	299,782	June 3	360	92	27	989
Shade-hanger. Adjustable	J. Wagner	298,524	May 13	706	200	27	669
Shade-pull	H. L. Judd	300,085	June 10	746	199	27	1069
Shade-pull	L. G. Turner	296,713	Apr. 8	1027	288	27	205
Shade-roller. Automatic spring	J. J. Adgate and F. Hickman	300,207	June 10	1030	278	27	1121
Shade-roller catch	A. A. Lothrop	298,004	May 6	55	14	27	538
Shade-roller hanger	W. J. Mullen	300,108	June 10	768	207	27	1075
Shade-roller. Spring	G. T. Briggs	300,841	June 24	1734	474	27	1263
Shade-roller. Spring	G. B. Massey	299,239	May 27	1602	460	27	856
Shaft-bearing	M. A. Furbush	296,684	Apr. 8	998	279	27	198
Shaft-bearing	H. Tabor	297,312	Apr. 22	1788	485	27	353
Shaft-bearing in wheels	S. Schuch	296,465	Apr. 8	717	198	27	142
Shaft-coupling	W. C. Crandell, Jr	298,049	May 6	137	35	27	553
Shaft-coupling	T. E. and J. P. Golden	297,985	May 6	26	8	27	532
Shaft-coupling	S. S. Lukens	299,152	May 27	1499	431	27	836
Shaft-coupling	J. H. Osborn	298,398	May 13	568	157	27	642
Shaft-coupling	J. M. Watson	297,652	Apr. 29	2243	610	27	445
Shaft-coupling	W. H. Clark	299,113	May 27	1453	415	27	827
Shaft-cushioning device	J. G. Nichols	297,085	Apr. 15	1487	411	27	294
Shaft. Flexible	T. Bergner	296,384	Apr. 8	628	173	27	124
Shaft-hanger	H. H. Richards	299,405	May 27	1912	551	27	912
Shaft iron. Sleigh-	A. J. Brill	296,387	Apr. 8	632	174	27	125
Shaft-support	J. F. Pace	298,495	May 13	680	193	27	663
Shaft-support	W. S. Atwood	296,107	Apr. 1	259	75	27	52
Shaft-tip. Carriage	T. Sutton	299,940	June 3	542	144, 145	27	1024
Shafting and bearing	A. Muir	297,153	Apr. 22	1585	436	27	316
Shafting. Coupling	G. Dawo	296,317	Apr. 8	538	150	27	108
Shafting. Keying wheels, pulleys, &c., to	E. J. Hauck	300,867	June 24	1768	481	27	1269
Shaker for mixing drinks	J. Lowe	300,379	June 17	1139	310, 311	27	1150
Shank-stiffeners. Machine for making	J. Angus	298,268	May 6	400	105	27	602
Shaping-machines. Tool-oscillating device for	J. A. Keiser	300,266	June 10	980	265	27	1113
Shave. Cabinet-	E. A. Whittelsey	300,744	June 17	1613	442	27	1235
Shawl-strap	S. C. Minear	298,107	May 6	177	47	27	560
Sheaf gathering and shocking machine	K. Witte	299,310	May 27	1691	485	27	871
Shears: *See* Animal-shears. Hay-shears. Pruning-shears. Reversible shears.							
Shears	L. C. Crowell	299,115	May 27	1456	416	27	827
Sheet-delivery apparatus	J. Munger	299,489	May 27	1907	549	27	911
Sheet-metal box							

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sheet-metal can	F. H. Arnd	299,316	May 27	1695	486	27	872
Sheet-metal can	F. A. Walsh	298,801	May 20	1061	297	27	741
Sheet-metal can	W. Wilson, Jr.	300,549	June 17	1350	372	27	1189
Sheet-metal cans. Making	W. Wilson, Jr.	300,548	June 17	1349	372	27	1189
Sheet-metal-cutting machine	J. G. Hodgson	299,982	June 10	664	162	27	1045
Sheet-metal. Press for holding and cutting	T. C. Stiles	299,290	May 27	1664	477	27	860
Sheet-metal vessel	F. Haberman	299,779	June 3	358	91	27	988
Sheet-metal vessels. Handle attachment for	E. Krippendorff and H. C. Marsh	298,304	May 6	445	120	27	611
Sheets, boards, blocks, artificial wood, &c. Compound material for the manufacture of	L. Haas	300,464	June 17	1246	.....	27	1169
Sheller: *See* Cocoanut-sheller. Corn-sheller.							
Shelling and grinding machine	E. M. Wilcox and W. E. Botsford	298,260	May 6	389	102	27	600
Shelving. Adjustable	H. F. Stocking	298,129	May 6	205	54	27	566
Shingle-jointing machine	W. Carson	299,619	June 3	152	38	27	948
Shingle. Metallic	J. Mott	297,530	Apr. 22	2073	566	27	407
Shingle. Metallic roofing	J. Mott	297,529	Apr. 22	2072	565	27	407
Shingle-planing machine	A. W. Eldredge	298,454	May 13	628	179	27	654
Shingle-sawing machine	J. and J. W. Challoner	296,525	Apr. 8	797	{219 / 220}	27	158
Shingle-sawing machine	G. Earl	298,737	May 20	986	274	27	728
Shipping-can	G. J. Record	299,010	May 20	1312	375	27	790
Ships. Construction of	T. Langille	300,714	June 17	1577	432	27	1230
Ship's hull and propeller	Z. Oram	298,019	May 6	73	19	27	541
Ships' logs. Rotator for	J. and G. H. Bliss	296,387	Apr. 8	639	174	27	125
Ships' sides. Machine for dressing	J. Hamilton	299,639	June 3	177	45	27	953
Shirt	J. Cohen	300,220	June 10	923	249	27	1102
Shirt	S. Condé	298,178	May 6	272	70	27	577
Shirt	C. K. Miller and G. H. Cleveland	299,032	June 3	569	140	27	1022
Shirt	J. H. Scriven	297,018	Apr. 15	1408	388	27	279
Shirt	W. M. Steppacher	300,655	June 17	1495	412	27	1216
Shirt-bosom	F. S. Williams	297,896	Apr. 29	2532	693	27	502
Shirt-bosom protector	C. S. Kellogg	298,391	May 13	560	154	27	640
Shirt-neckbands. Support for	G. W. Pine	301,002	June 24	1921	529	27	1208
Shoe	I. A. Beals	297,103	Apr. 22	1520	419	27	305
Shoe	W. A. Bristor	296,518	Apr. 8	789	217	27	157
Shoe	T. R. Evans	298,363	May 13	529	{144 / 145}	27	634
Shoe	P. D. Fréchingle	297,592	Apr. 29	2168	592	27	431
Shoe	J. Müller	299,934	June 3	533	141	27	1021
Shoe	M. F. Pelletier	300,394	June 17	1159	317	27	1153
Shoe	J. H. Stickney	297,469	Apr. 22	1987	542	27	392
Shoe	M. L. Stowe	300,526	June 17	1317	361	27	1194
Shoe. Rubber	F. Richardson	296,433	Apr. 8	705	195	27	140
Shoe. Rubber	F. M. Shepard	298,419	May 13	589	166	27	646
Shoe-sole fastening	L. J. Atwood	296,908	Apr. 15	1279	356	27	256
Shoe-upper	W. G. Slater	297,195	Apr. 22	1625	446	27	323
Shoe-uppers. Gage for goring	W. B. Kinsley	297,898	May 6	49	12	27	577
Shoes. Die for securing heel-plates to rubber	F. Richardson	296,623	Apr. 8	925	258	27	184
Shoes. Heel-plate for rubber	F. Richardson	296,455	Apr. 8	707	195	27	140
Shoes. Machine for securing heel-plates to rubber	F. Richardson	296,624	Apr. 8	936	259	27	184
Shoes. Making	C. W. Reynolds	299,422	May 27	1830	526	27	897
Shoes. Manufacturing	C. W. Reynolds	299,421	May 27	1829	526	27	897
Shoemaker's hand-tool	W. D. Frank	299,973	June 10	590	158	27	1042
Shoulder-brace	W. Batchelor	300,435	June 17	1212	331	27	1163
Shoulder-brace	B. Biddlecome	298,848	May 20	1082	303	27	745
Shovel	E. L. Fegerty	299,530	June 3	33	9	27	927
Shovel	F. W. Hudson	297,132	Apr. 22	1562	430	27	312
Shovels. Forming	E. A. Barnes	296,719	Apr. 15	1042	294	27	213
Show-box and reel-holder	G. C. Tate	296,484	Apr. 8	746	206	27	148
Show-case	T. F. Curley	298,183	May 6	278	72	27	578
Show-case	D. E. Ladd and E. J. B. Whitaker	297,271	Apr. 22	1741	473	27	344
Show-stand for cloaks and other goods	J. Bardsley	299,947	June 10	562	150	27	1038
Show-stand. Revolving	S. T. Culp and T. Ticknor	299,466	May 27	1880	541	27	906
Shutter. Corrugated metal rolling	W. Carson	296,373	Apr. 8	606	168	27	121
Shutter-fastener	W. E. and D. E. Doolittle	297,118	Apr. 22	1545	426	27	309
Shutter-worker	T. A. Myers	298,706	May 13	982	258	27	710
Shutter-worker	D. F. Oliver	299,001	May 20	1299	370	27	787
Shutter-worker	J. Pool	297,713	Apr. 29	2396	633	27	461
Shutter-worker	L. Tilton	297,032	Apr. 15	1429	393	27	283
Sickle-grinder	C. W. Claybourne	298,176	May 6	269	69, 70	27	577
Siding-hook	J. D. Otis and D. M. Maxwell	297,711	Apr. 29	2314	632	27	461
Sifter. Ash-	W. T. Adams	297,737	Apr. 29	2356	641	27	466
Sifter. Ash-	E. Bateson	297,654	Apr. 15	1454	402	27	288
Sifter. Ash-	H. C. Pigueron	296,447	Apr. 8	698	192	27	138
Sifter. Corn-	J. Taylor	298,429	May 13	600	169	27	648
Sifter. Flour-	H. Morgenroth and M. S. Levison	300,722	June 17	1586	435	27	1231
Sifting machine. Flour-	F. W. Andrée	296,716	Apr. 15	1039	293	27	213
Sight-feed lubricator	W. A. G. Schönheyder	298,898	May 20	1179	{329 / 330}	27	764
Sign	J. C. Lake	299,652	June 3	199	50	27	956
Sign. Luminous	G. H. Babcock	297,741	Apr. 29	2360	642	27	467
Signal: *See* Bridge-signal. Railway-signal. Railway safety-signal. Railway-switch signal. Train-signal.							
Signal-light. Nautical	M. White	297,046	Apr. 15	1444	399	27	286
Signaling apparatus. Individual	T. D. Lockwood	296,588	Apr. 8	881	244	27	175
Silo	G. E. Burt	297,564	Apr. 29	2486	681	27	424
Sink	J. Kilbourne	300,983	June 24	1897	522	27	1294
Sink	C. T. Regan	300,130	June 10	797	214	27	1080
Sink or analogous article	H. L. Jacobs	297,404	Apr. 22	1905	518	27	376
Sink-spout	J. G. Coburn	300,574	June 17	1376	380	27	1194
Sink-spouts. Device for thawing out	J. G. Coburn	299,352	May 27	1744	502	27	882

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Siphon	F. D. Ryan	300,328	June 10	1064	288	27	1127
Siphon-starter	E. L. Fitch	299,532	June 3	35	10	27	927
Skate	J. A. Whelpley	296,714	Apr. 8	1028	288	27	205
Skate. Roller-	F. A. Bailey	301,041	June 24	1973	545	27	1308
Skate. Roller-	G. L. Bailey	298,721	May 20	960	268	27	723
Skate. Roller-	C. E. Flagg	298,236	May 20	1105	309	27	749
Skate. Roller-	T. P. and J. B. Hall	297,348	Apr. 22	1687	513	27	372
Skate. Roller-	M. F. Henlon	296,631	Apr. 15	1163	342	27	258
Skate. Roller-	C. Huckins and G. N. Parker	296,571	Apr. 8	864	240	27	172
Skate. Roller-	B. Knudblade	299,799	June 3	379	97	27	993
Skate. Roller-	C. F. Morse	298,110	May 6	181	48	27	561
Skate. Roller-	J. V. Rowlett	296,358	Apr. 8	591	164	27	118
Skate. Roller-	L. L. Ryerson	299,682	June 3	254	63	27	968
Skate. Roller-	W. C. Vanneman	298,303	May 6	472	127	27	615
Skate. Roller-	H. A. Wilbur	300,745	June 17	1614	442	27	1236
Skate-sharpener	X. St. Pierre	300,676	June 17	1495	412	27	1216
Skating-rink floor	G. C. Harkins	299,924	June 3	510	138	27	1020
Skeins. Silk and other	O. Atwood	300,431	June 17	1205	329	27	1162
Skelp-heating furnace. Regenerative	M. V. Smith	299,030	May 20	1342	363	27	795
Skid	J. Barnett	299,507	June 3	7	3	27	922
Skid-elevator	S. Barcus	298,934	May 20	1221	346	27	773
Skid-holder	J. D. Coppes	299,546	June 3	324	82	27	981
Skidway	J. L. Given	299,576	May 27	1768	509	27	887
Skylight	G. Hayes	299,387	May 27	1783	513	27	889
Skylight	C. A. Valle	297,038	Apr. 15	1436	326	27	284
Slate and slate-frame muffler	J. D. Emack	298,140	May 20	988	275	27	728
Slate. Composition and mold for the manufacture of articles from artificial	J. W. McKnight	299,566	June 3	80	20	27	935
Slate-frame	O. M. Pond	298,499	May 13	684	194	27	664
Slate. Noiseless	J. Ridge	298,691	May 20	1172	327	27	763
Slate. School	W. D. Heyer	297,996	May 6	47	12	27	536
Slate-washer	H. L. Weed	296,692	Apr. 1	239	70	27	48
Sled	E. Wagner	299,601	June 3	131	32	27	944
Sled-runner	N. W. Starr	300,156	June 10	835	{225 / 226}	27	1087
Sleeve. Garment-	S. Lorsch	297,926	Apr. 22	2080	565	27	406
Sleigh	W. H. Winne	298,538	May 13	721	204	27	672
Sleigh. Bob-	W. C. Case	299,462	May 27	1876	{539 / 540}	27	905
Sleigh. Bob-	E. A. Harding	298,849	May 20	1118	314	27	752
Sleigh-knee brace	O. A. Thayer	297,316	Apr. 22	1792	486	27	354
Slide-rest	J. Fitz	296,156	Apr. 1	311	89	27	61
Sliding gate	J. S. McClaskey	296,505	Apr. 8	892	247	27	177
Slime-table	T. Carkeek	300,947	June 24	1855	509	27	1286
Slipper. Buck	J. C. Bickford	295,973	Apr. 1	95	29	27	20
Slotting-machines. Tool-oscillating device for	J. Angus	298,227	May 6	393	104	27	601
Slug-nail. Headed	J. Hyslop, Jr.	300,677	June 10	729	197	27	1067
Smelting-furnace	A. Gibson	299,534	June 3	37	10	27	927
Smelting-furnace attachment	G. M. Levette	296,560	Apr. 8	879	244	27	174
Smelting furnace. Ore-	J. W. Webb	297,888	Apr. 29	2523	{690 / 691}	27	500
Smoke-consumer	W. L. Fitch	297,122	Apr. 22	1540	427	27	310
Smoke-consuming device	J. W. and J. D. Smith	296,791	Apr. 15	1126	317	27	229
Smoke-consuming furnace	A. Crawford	299,905	June 10	582	156	27	1041
Smoke-preventing furnace	G. Playford and G. R. Swaine	297,670	Apr. 29	2219	603	27	440
Smoothing and polishing material	R. S. Jennings	298,474	May 13	656	185	27	658
Snap-hook	J. C. Covert	297,352	Apr. 22	1846	502	27	365
Snap-hook	J. A. Park	296,607	Apr. 8	909	253	27	181
Snap-hook for harness. Double	J. Gibbons	300,065	June 10	709	190	27	1064
Snatch-block	T. R. Ferrall	299,531	June 3	33	10	27	927
Snow-clearer	J. Forster	295,995	Apr. 1	128	37, 38	27	26
Snow-plow	P. B. Brazel	298,441	May 13	642	173	27	650
Snow-plow	J. Q. Day	299,750	June 3	328	83	27	982
Snow-plow	O. Jull	297,408	Apr. 22	1942	523	27	377
Snow-plow	J. H. Russell	300,016	June 10	670	178	27	1053
Snuff and match box	P. Seller	299,647	June 3	260	64	27	969
Soap	W. H. Carslake	300,214	June 10	917	247	27	1100
Soap, &c. Machine for plotting	F. S. Butschman	296,858	Apr. 15	1239	346	27	248
Soap-stand and support	W. H. Carslake	300,213	June 10	916	246	27	1100
Soap. Tobacco-	C. L. F. Rose	299,584	June 3	107	.....	27	940
Soda. Apparatus for the manufacture of bicarbonate of	C. Wigg	296,960	Apr. 1	457	129	27	86
Soda-fountain	A. H. Van Riper and F. E. Kip	300,170	June 10	853	230	27	1090
Soda. Obtaining	J. Townsend	298,256	May 6	324	.....	27	599
Soda or other aerated waters. Agitator for generators and receivers for	A. D. Puffer	300,007,	June 10	638	174	27	1051
Soda-water apparatus	A. Bertelli	298,161	May 6	247	64	27	573
Soldering implement	C. A. G. Winther	300,672	June 17	1520	418	27	1223
Soldering-iron heater	W. Dunlop	300,768	June 24	1648	451	27	1247
Soldering-machine	B. Hausheer and J. Meyenberg	297,993	May 6	42	10, 11	27	535
Soldering-machine	M. Jensen	300,083	June 10	733	198	27	1068
Soldering-machine	G. H. Perkins	297,629	Apr. 29	2210	{602 / 601}	27	439
Sole-edge-burnishing machine	W. Gordon	297,030	Apr. 29	2589	708	27	510
Sole-edge-burnishing machine	J. Howard	296,570	Apr. 8	863	239	27	171
Sole-edge cutter. Rotary	W. D. Orcutt	295,936	Apr. 1	51	15	27	13
Sounding apparatus. Navigational	W. Thomson	298,798	May 20	1055	{295 / 296}	27	740
Sower. Seed-	H. D. Layman	296,699	Apr. 8	1014	284	27	202
Sower. Seed-	W. H. Thomas	300,659	June 17	1499	413	27	1217
Spading-machine. Horse	J. B. Turchin	300,413	June 17	1181	324	27	1157
Spark-arrester	E. B. Baldwin and E. R. Kline	300,555	June 17	1358	374	27	1191
Spark-arrester	W. C. Beal	300,191	June 10	885	237	27	1095
Spark-arrester	J. S. Park	298,229	May 6	352	94	27	593

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Spark-arrester	H. M. Stainfield	297,028	Apr. 15	1425	392	27	282
Spark-arrester	J. Westinghouse	298,807	May 20	1067	299, 300	27	742
Spectacle-frame	J. H. Nichols	295,934	Apr. 1	49	14	27	12
Spectacles	A. J. Gross	300,696	June 17	1535	427	27	1227
Speculum. Electric-light	E. T. Starr	300,525	June 17	1316	361	27	1184
Speed. Device for changing	G. H. Preston	300,734	June 17	1508	438	27	1231
Speed device. Variable	W. F. Marks	297,143	Apr. 22	1576	469	27	314
Speed-governor	T. L. Calkins	299,618	June 3	150	37	27	948
Speed-indicator	E. R. E. Cowell	296,670	Apr. 8	990	278	27	197
Speed-indicator	R. J. Pratt	299,677	June 3	248	61	27	966
Speed movement. Variable	C. L. Smith	299,500	June 3	114	28	27	941
Speed-regulator	J. H. Sharp	300,647	June 17	1485	408, 409	27	1214
Speeder for the manufacture of rovings, coarse yarns, &c.	J. F. Randall	296,217	Apr. 1	391	111	27	75
Spike-extractor	W. A. Wright	301,077	June 24	2016	537	27	1316
Spindle: *See* Vehicle-wheel spindle.							
Spindle-bearing	J. Kilburn	296,754	Apr. 15	1086	306	27	221
Spindle-bearing	J. Kilburn	296,755	Apr. 15	1087	306	27	221
Spindle-bolster	J. R. Gray	300,402	June 17	1244	340	27	1169
Spinning, drawing, and twisting machinery. Scavenger mechanism for	E. W. Sargent	299,855	June 3	441	114	27	1006
Spinning-frame and uniting the ends of bands thereof	J. E. and E. Atwood	296,377	Apr. 8	614	170	27	122
Spinning-frame spindle and bolster	J. Birkenhead	295,899	Apr. 1	8	2	27	4
Spinning-frame spindle-bearing	G. B. McCracken and S. Hamer	300,785	June 24	1666	456	27	1250
Spinning-frame spindle-bolster	A. Aldrich	297,959	May 6	1	1	27	527
Spinning frames. Thread-separator for ring-	G. Jaquith	296,574	Apr. 8	868	240	27	172
Spinning-machine flier	L. Binns	295,974	Apr. 1	95	29	27	20
Spinning-machine spindle-bolster	A. S. Hopkins	296,902	Apr. 15	1336	371	27	267
Spinning-machines. Apparatus for collecting and removing waste from	W. A. Delmage	296,148	Apr. 1	304	87	27	59
Spinning-machines. Saddle for the top-rolls of	H. L. Pierce	298,621	May 13	825	230	27	690
Spinning-machines, &c. Stop-motion mechanism for	C. H. Larned	300,616	June 17	1432	3[illegible]4	27	1204
Spittoon	P. H. Deis	299,355	May 27	1747	503	27	882
Spittoon-holder	B. H. Haskins	296,409	Apr. 8	655	181	27	129
Spool-feeder	E. Allen	299,047	May 20	1366	389	27	799
Spool. Thread	W. J. Clark	299,739	June 3	317	81	27	980
Spooling-machine stop-motion device	J. Garsed	297,242	Apr. 22	1721	467	27	341
Spoon	J. Bergfels	298,159	May 6	246	63	27	573
Spout. Sap	C. C. Post	296,059	Apr. 1	199	58	27	41
Spouting-elbow	D. B. Rock	296,786	Apr. 15	1121	315, 316	27	228
Spring: *See* Door-spring. Vehicle-spring. Wagon-spring. Wagon-bolster spring. Watch-case spring.							
Spring and weight motor	A. Lewis	298,001	May 6	52	13	27	537
Spring-chair	A. M. Blake	298,036	May 20	1226	347	27	773
Spring-coupling for vehicles	G. F. Thompson	300,660	June 17	1499	414	27	1217
Spring for steam and other pressure gages	F. A. Wood	297,735	Apr. 29	2354	640	27	466
Spring-motor	T. K. Austin	300,753	June 24	1625	446	27	1244
Spring-motor	J. W. Fawkes	2[illegible]6,738	Apr. 15	1063	299, 300	27	217
Spring-motor	G. F. Godley	299,978	June 10	595	160	27	1043
Spring-motor	G. F. Godley	299,979	June 10	600	161	27	1044
Spring-motor	H. Hohmann	297,399	Apr. 22	1[illegible]98	516	27	374
Spring-motor	A. Kanthack	298,388	May 13	559	154	27	640
Spring-motor	D. M. Pfantz	296,707	Apr. 8	1020	287	27	204
Spring-motor	J. B. Powell	299,240	June 3	434	112	27	1004
Spring-motor	A. D. Stansbury	297,725	Apr. 29	2341	637	27	464
Spring-motor	P. A. Tarbox	296,889	Apr. 15	1250	349	27	250
Sprinkler: *See* Street and lawn sprinkler.							
Sprocket-wheel	B. A. Legg	296,192	Apr. 1	359	103	27	69
Square and bevel. Combined carpenter's	R. Steele	299,435	May 27	1845	531	27	900
Square. Try-	W. A. Gabriel	296,157	Apr. 1	312	90	27	61
Squib. Miner's	G. A. Ingram	296,011	Apr. 1	147	43	27	30
Stacking-frame	W. J. Darrah	298,833	May 20	1100	308	27	748
Staircase. Folding	C. H. Chase	296,526	Apr. 8	801	221	27	159
Stairs. Folding	T. Peterson	300,395	June 17	1459	318	27	1154
Stalk-cutter	A. R. Brown	299,053	May 20	1372	391	27	800
Stamp and dater combined. Self-inking hand	E. Schmitz	297,856	Apr. 29	2485	680, 681	27	492
Stamp-mill	G. S. Long	298,869	May 20	1141	320	27	757
Stamp. Steam-power	W. S. Sharpneck	296,789	Apr. 15	1123	316	27	228
Stamp. Time-	W. H. Gillette	300,966	June 24	1678	516	27	1290
Stand: *See* Music-stand. Perfumery-stand. Show-stand. Soap-stand.							
Staple	C. B. Brainard	300,204	June 10	908	244	27	1099
Staples. Machine for making barbed	G. Rumsey	296,628	Apr. 8	931	260	27	195
Starch. Manufacturing	H. Duryea	300,700	June 17	1560	.....	27	1228
Starch refuse, &c. Apparatus for separating solid and liquid portions of	P. H. Grimm	296,000	Apr. 1	135	39	27	28
Starch-separator	C. W. Tremain	300,165	June 10	845	228	27	1089
Station-indicator	H. E. Bissell	298,102	May 6	251	64, 65	27	573
Station-indicator	I. Osgood	297,625	Apr. 29	2304	601	27	438
Station-indicator	M. V. Walker	297,320	Apr. 22	1795	487	27	335
Stave-bending machine	E. and B. Holmes	297,401	Apr. 22	1900	516	27	375

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Stave-crozing machine	S. F. Maxwell	296,190	Apr. 1	367	104, 105	27	70
Stave-jointing machine	J. Treat	300,033	June 10	668	182	27	1056
Stave-packing machine	J. H. Overton	299,493	May 27	1911	550	27	912
Stave-shaping machine. Barrel-	M. E. Beasley and E. M. Hugenfobler.	300,194	June 10	891	239, 240	27	1096
Staying-piece for garment slit-openings	I. P. Turner	295,959	Apr. 1	78	23, 24	27	18
Staying-piece for garments	G. E. Norris	295,935	Apr. 1	50	15	27	12
Staying-piece for garments	G. W. Pine	298,401	May 13	572	157, 158	27	643
Steam-alarm and damper-regulator	J. C. Jones and C. T. Reid	296,839	Apr. 15	1188	333	27	239
Steam. Apparatus for utilizing waste heat of kilns in generating	C. Godfrey	297,381	Apr. 22	1878	510	27	370
Steam apparatus. Rotating joint mechanism for	E. Wright	298,049	May 6	110	28	27	548
Steam-boiler	E. B. Badlam	299,505	June 3	6	2	27	922
Steam-boiler	J. O. Draper	300,767	June 24	1647	451	27	1247
Steam-boiler	P. F. Dundon	298,561	May 13	771	212	27	677
Steam-boiler	H. K. Kriebel	298,862	May 20	1132	318	27	755
Steam-boiler	J. Roberts	297,009	Apr. 15	1397	385, 386	27	277
Steam-boiler and furnace	W. S. Post and H. D. Sawyer	299,578	June 3	97	25	27	938
Steam-boiler and furnace lining	C. McMillan	296,768	Apr. 15	1099	310	27	224
Steam-boilers. Heating and feeding water to	H. Stollwerck	301,017	June 24	1944	537	27	1302
Steam-distributing pipes. Automatic relief device for	E. H. Ashcroft	299,192	May 27	1547	443, 444	27	844
Steam-engine	W. Golding	298,081	May 6	148	37, 38	27	555
Steam-engine. Balanced	B. Field	296,944	Apr. 15	1320	366	27	203
Steam-engine. Compound	W. L. Shepard	298,630	May 13	833	233	27	691
Steam-engine lubricator	C. B. McAlvay and C. H. Christopher.	300,619	June 17	1437	396	27	1205
Steam-engine or water-motor	G. S. Peppard	299,161	May 27	1511	434	27	837
Steam-engine. Oscillating	M. Ulrich	300,166	June 10	846	228, 229	27	1089
Steam-generating apparatus	W. A. Pentecost	298,094	May 6	82	22	27	543
Steam-generator	B. S. Comstock	300,446	June 17	1223	334	27	1165
Steam-generator	E. I. Walden	300,418	June 17	1187	325	27	1159
Steam-generator for street-car or other locomotive engines.	F. G. Wheeler	299,607	June 3	137	34	27	945
Steam-generator. Water-tube	C. Ward	297,649	Apr. 29	2230	609, 610	27	445
Steam-heater	W. C. Bronson	300,207	June 10	911	345	27	1099
Steam-heater	W. J. Lane	300,376	June 17	1136	309, 310	27	1150
Steam-pipe joint for rotary paper-drying cylinders, &c.	M. J. Roach	298,624	May 13	828	231	27	690
Steam-pressure-gage trap	G. H. Crosby	297,504	Apr. 22	2041	557	27	400
Steam-trap	H. Lancaster	299,809	June 3	390	100	27	995
Steam-trap	R. B. Morse	298,878	May 20	1152	323	27	759
Steam-trap	E. F. Osborne	300,003	June 10	632	172, 173	27	1050
Steam-trap	W. Vanderman	300,664	June 17	1509	415, 416	27	1219
Steam. Utilizing exhaust	D. Renshaw	300,506	June 17	1296	356	27	1180
Steamer. Potato-	C. F. Bower	297,346	Apr. 22	1838	500	27	363
Steamer. Vegetable-	L. M. Marr	295,930	Apr. 1	45	13	27	11
Steel from wrought-iron with plumbago. Producing	W. A. O. Wrth	300,826	June 24	1716	.....	27	1260
Steel ingots. Pouring and compressing	G. W. Billings	298,662	May 13	875	245	27	698
Steel. Manufacturing wrought-	S. T. Wellman	298,642	May 13	846	236	27	694
Steel-melting furnace. Open-hearth	C. M. Ryder	298,028	May 6	88	23	27	544
Steel ribbon. Method of and apparatus for hardening	J. Logan	297,610	Apr. 29	2185	596	27	435
Steels. Combining	J. J. Williamson	295,965	Apr. 1	83	26	27	19
Steering-gear for ships	J. K. Kilbourn and G. Fossick	300,613	June 17	1426	393, 394	27	1203
Steering mechanism. Steam	W. C. Williamson and H. O. Fladvad	300,180	June 10	871	234, 235	27	1093
Stencil or perforating-pen	J. C. Hill	298,853	May 20	1122	316	27	753
Stencil-plate	R. E. Ghezzi	296,327	Apr. 8	552	153	27	110
Stereoscope	H. E. Pierce	296,055	Apr. 1	196	56	27	40
Stereotype-block	E. E. Pratt	300,732	June 17	1596	437	27	1233
Stereotype or electrotype plates. Mounting	R. W. Nelson	298,703	May 13	933	250	27	711
Stereotype-plates in the form. Device for securing	E. E. Pratt	300,731	June 17	1595	437	27	1233
Stereotype-plates. Method of and apparatus for drying matrices for	G. Pearce and E. Hughes	296,049	Apr. 1	186	54	27	39
Stereotypes. Device for locking removable	E. E. Pratt	296,061	Apr. 1	201	58	27	41
Stereotyping apparatus	F. J. Smith	297,023	Apr. 15	1418	390	27	281
Still. Petroleum-	R. C. Clark and M. H. Warren	298,825	May 20	1091	305	27	746
Stirrup	F. Lehmann	300,986	June 24	1809	522	27	1294
Stitch ripper. Lock-	E. H. Wheeler	296,402	Apr. 8	757	208	27	149
Stitches. Hand apparatus for forming	C. Stickel	296,084	Apr. 1	229	66	27	46
Stocking-supporter and garter	C. F. and W. J. Walters	300,923	June 24	1831	501	27	1289
Stone and marble. Manufacture of artificial	H. A. Daniels	297,971	May 6	11	.....	27	529
Stone-channeling machine	W. L. Saunders	299,092	May 20	1419	405	27	810
Stone. Compound for the manufacture of artificial	H. Beuing	300,560	June 17	1202	.....	27	1191
Stone-crandall. Sand-	F. Schneddig	298,417	May 13	588	166	27	646
Stone-crusher	T. A. Blake	296,914	Apr. 15	1286	357	27	257
Stone-crusher	H. Sundquist	296,795	Apr. 15	1129	318	27	230
Stone. Cutter for dressing	F. Trier	296,252	Apr. 1	439	124	27	84
Stone-cutting machine	W. L. Saunders	299,093	May 20	1420	405	27	810
Stone-dressing machine	J. W. Maloy	300,277	June 10	995	268, 269, 270	27	1115
Stone-dressing machine	J. Mann	298,598	May 13	798	224	27	685
Stone-dressing machine	N. J. Swayze	298,132	May 6	209	55, 56	27	567
Stone-dressing machine	F. Trier	297,036	Apr. 15	1432	394, 395	27	284

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Stone dressing tools. Diamond-holder for	A. L. Teetor	297,728	Apr. 29	2347	638	27	465
Stone. Manufacture of artificial	B. Lande	299,810	June 3	391	.....	27	995
Stone. Manufacture of artificial	M. McNamara	295 931	Apr. 1	46	.....	27	11
Stone. Manufacturing artificial	M. B. Randle and B. E. Turner	298,026	May 6	96	.....	27	543
Stone-splitting tool	W. W. Wild	300,423	June 17	1195	327	27	1160
Stones. Machine for gathering	B. A. Weatherbee	300,173	June 10	857	{231 / 232}	27	1091
Stool. Milking	C. D. Goodman and F. J. Smith	297,786	Apr. 29	2413	659	27	477
Stool or seat standard	H. Ocorr	300,116	June 10	779	209	27	1076
Stop-motion. Automatic	R. R. Pease	300,120	June 10	784	210	27	1077
Stopper: *See* Bottle-stopper. Fruit-jar stopper.							
Stopper-lock	J. D. Mattison	297,425	Apr. 22	1932	527	27	360
Storage-battery element	W. E. Case	298,348	May 13	512	.....	27	630
Store-service apparatus	I. Birgé	300,198	June 10	898	241	27	1097
Store-service apparatus	H. H. Hayden	300,072	June 10	721	195	27	1066
Store-service apparatus. Automatic	J. H. Goodfellow	297,967	May 6	29	8 9	27	533
Store-service apparatus. Roller for	I. Birgé	300,021	June 17	1532	421	27	1223
Store-service switch	E. L. Gilles	299,130	May 27	1476	424	27	831
Stove	F. and J. Moses	300,723	June 17	1586	435	27	1231
Stove and furnace grate	H. Schreiner	300,904	June 24	1811	495	27	1278
Stove and heater	T. M. Fell	297,772	Apr. 29	2399	655	27	474
Stove attachment. Gasoline	J. Ringen	299,853	June 3	439	113	27	1005
Stove-casting	G. H. Phillips	299,007	May 20	1307	372	27	789
Stove. Cooking	E. J. Krause	298,986	May 20	1284	366	27	784
Stove. Heating	L. F. Betts	299,104	May 27	1442	{411 / 412}	27	925
Stove. Heating	W. A. Winfree	297,902	Apr. 29	2538	695	27	503
Stove. Hot-blast	J. J. Airey	296,101	Apr. 1	248	72	27	50
Stove-jacket	W. H. Benson	296,911	Apr. 15	1283	357	27	257
Stove. Lamp	C. P. Kemmerer	300,268	June 10	985	266	27	1113
Stove. Oil	C. T. Ham	300,601	June 17	1409	388	27	1200
Stove. Oil	C. O. Schwarta	299,426	May 27	1833	527	27	898
Stove-pipe connection	G. Laube	297,272	Apr. 22	1742	473	27	345
Stove-pipe shelf	F. A. Gardner	298,085	May 13	912	253	27	707
Stove-pipe thimble	G. Laube	300,486	June 17	1273	350	27	1175
Stove, range, furnace, &c	W. Miggett	298,605	May 13	805	226	27	686
Stove. Vapor	F. O. Farwell	297,120	Apr. 22	1546	427	27	309
Stoves. Water-heater for gasoline	J. W. Stoffel	301,016	June 24	1943	537	27	1302
Straightening, bending, and punching machine	J. Crosgrove	296,279	Apr. 1	485	{135 / 136}	27	91
Strap: *See* Box-strap. Shawl-strap. Hitching-strap.							
Strap and buckle loop	F. A. Neider	300,111	June 10	779	207	27	1075
Strap-fastener	J. W. Ropp	298,408	May 13	579	162	27	644
Straw-carrier	L. W. Hasselman	299,537	June 3	41	11	27	928
Straw-cutter	E. W. Ross	295,947	Apr. 1	64	19	27	15
Straw-stacker	H. Campbell	301,044	June 24	1976	{545 / 546}	27	1308
Straw-stacker	S. M. Miller and E. F. Brown	299,933	June 3	530	141	27	1022
Straw-stacking machine	J. Buchanan	297,561	Apr. 29	2122	579	27	423
Street and lawn sprinkler. Combined	J. Jungbluth	299,076	May 20	1401	399	27	806
Street-cleaning machine	B. Van Gaasbeek	296,486	Apr. 8	751	207	27	148
Street-roller	C. K. Pickles	296,446	Apr. 8	697	191	27	138
Stuffing-box jack	A. R. Seaman	298,903	May 20	1184	333	27	765
Stump-extractor	A. S. Croxton	296,929	Apr. 15	1304	362	27	260
Stump-extractor	R. M. McMeen	300,786	June 24	1667	456	27	1251
Stump-extractor	W. Smith	297,026	Apr. 15	1422	391	27	281
Stump-puller	C. A. Blume	296,915	Apr. 15	1227	358	27	257
Stump-puller	G. M. Grabert and T. J. Dennis	297,253	Apr. 22	1722	467	27	341
Sugar and apparatus therefor. Washing raw	J. H. Tucker	297,095	Apr. 15	1504	415	27	297
Sugar and sugar masses. Method of and apparatus for mashing	A. Fesca	297,978	May 6	18	6	27	531
Sugar. Cooling and drying	H. E. Niese and G. Dinkel	296,042	Apr. 1	179	52	27	37
Sugar-cooling apparatus	H. E. Niese and G. Dinkel	296,040	Apr. 1	176	51	27	36
Sugar-cooling apparatus	H. E. Niese and G. Dinkel	296,041	Apr. 1	177	52	27	37
Sugar, &c. Depurated composite	J. Gandolfo	296,326	Apr. 8	550	.....	27	110
Sugar, &c. Device for loosening	J. S. Lash	298,099	May 6	169	44	27	559
Sugar-evaporator	G. H. Grimm	296,743	Apr. 15	1069	301	27	218
Sugar. Method of and apparatus for bleaching	O. B. and J. M. Stillman	297,029	Apr. 15	1426	392	27	282
Sulphur. Apparatus for reducing	F. Dickert	298,734	May 20	963	273	27	727
Superheater	G. Jones	296,175	Apr. 1	334	95	27	65
Superheater for engines	J. C. H. Stut	301,074	June 24	2042	556	27	1315
Superheating-furnace	G. Jones	296,176	Apr. 1	336	95	27	65
Suppository for catarrh	F. H. Hubbard	298,855	May 20	1124	.....	27	753
Suspended adjustable chair and seat	H. S. Peck	296,775	Apr. 15	1108	312	27	225
Suspender-end	M. Marcus and H. Aniss	298,009	May 6	60	16	27	539
Suspender-end	A. Nascher	300,495	June 17	1284	353	27	1178
Suspender-end	C. C. Shelby	296,076	Apr. 1	218	63	27	44
Suspending device	G. W. McGill	300,100	June 10	758	204	27	1073
Suspension-jack for removing journal-boxes of cars	J. M. Garverick	298,298	May 6	437	118	27	610
Swing and chair. Combined	F. Robinius	295,946	Apr. 1	63	18	27	15
Switch: *See* Automatic switch. Cash-railway switch.							
Switch guard. Safety	H. Harmer. (Reissue)	10,478	May 13	951	264	27	715
Switch-operating mechanism	J. D. Stanwood	298,036	May 6	96	25	27	545
Switch-stand	F. W. Snow	299,176	May 27	1528	438	27	840
Switch-stand	F. W. Snow	300,911	June 24	1890	498	27	1280
Switch-stand	F. W. Snow	300,912	June 24	1892	498	27	1280
Switch-stand	J. B. Witty	298,537	May 13	722	204	27	672
Switch-thread	H. Borchardt	299,614	June 3	146	36	27	947
Swivel-hook for ornamental chains	D. F. Briggs	299,336	May 27	1723	494	27	877
Syringe	J. B. Hunt	297,263	Apr. 22	1734	471	27	343

Table: *See* Billiard and pool table. Extension-table. Folding table. Game-table. Gynecological and surgeon's operating-table. Ironing-table. Machine-table. Peanut separating and assorting table. Sewing-machine table. Slime-table.							
Table	S. W. Maxson	298,601	May 13	800	224	27	685
Table-knife	A. W. Cox	298,829	May 20	1097	307	27	748
Table-leaf support	H. J. Goold	298,967	May 20	1267	361	27	721
Table-leaf support	S. W. Stilwell	299,874	June 3	461	120	27	1010
Table-leg fastening	H. W. Groebl	297,931	Apr. 29	2582	708	27	511
Tack-machine	H. B. Chess	299,346	May 27	1737	{499 / 500}	27	880
Tack or fastener	F. A. Smith, Jr.	296,475	Apr. 8	735	203	27	145
Tacks. Making plumbers'	C. E. Heiss	297,797	Apr. 29	2425	662	27	480
Tackle	K. Upton	296,487	Apr. 8	750	207	27	148
Tackle	J. C. St. John	298,711	May 13	939	261	27	712
Tag	J. T. Dunham. (Reissue)	10,488	June 10	1079	294	27	1130
Tag and envelope. Combined	G. W. McGill	296,766	Apr. 15	1097	309	27	223
Tag and tag-fastener	G. N. Buck	298,549	May 13	735	208	27	674
Tag-fastener	G. W. McGill	299,154	May 27	1500	431	27	836
Tag-fastener	S. S. Sencenbaugh	298,629	May 13	632	232	27	691
Tag-fastener	W. Dickie	299,753	June 3	331	84	27	983
Tag-holder	B. H. Winchell	300,182	June 10	874	235	27	1093
Tag-holder	F. A. Knox	297,270	Apr. 22	1740	473	27	344
Tag. Key	M. Kersten	296 180	Apr. 1	340	96	27	66
Tag. Metallic	S. C. Campbell	300,212	June 10	915	246	27	1100
Tag or ticket fastener	O J. Cohn	298,535	May 13	743	209	27	675
Tag. Pin	R L. French	298,367	May 13	592	145	27	635
Tally-card holder	T. A. Mayes	296,966	Apr. 15	1373	370	27	272
Tan-vats. Apparatus for agitating the liquor in	S. S. Eddy	300,392	June 17	1106	.....	27	1146
Tanning-process							
Tank: *See* Refrigerating corned-beef tank. Windmill-tank.							
Tap. Self-closing	F. Hyde	297,691	Apr. 29	2309	626	27	458
Tap-wrench	M. S. Brooks	295,904	Apr. 1	15	4	27	6
Tap-wrench	N. Sawyer	298,029	May 6	89	23	27	544
Tapping beer. Device for	J. H. Brennan	296,311	Apr. 8	531	149	27	106
Target. Flying	A. H. Hebbard	299,783	June 3	361	92	27	989
Target. Flying	F. J. Meyer	299,835	June 3	420	108	27	1002
Target. Flying	C. F. Stock	297,307	Apr. 22	1782	484	27	352
Target. Flying	C. F. Stock	299,292	May 27	1608	478	27	867
Target. Flying	I. W. Harlow	298,465	May 13	644	183	27	656
Tea-kettle	N. Plympton	299,848	June 3	433	112	27	1004
Tea-pot	E. M. Greene	297,385	Apr. 22	1883	512	27	371
Telegraph and telephone instruments. Protector for	R. Anderson	296,376	Apr. 8	612	170	27	122
Telegraph. Automatic	P. H. Vander Weyde	300,034	June 10	669	{182 / 183}	27	1057
Telegraph-cable. Compound	S. F. Shelbourne	297,180	Apr. 22	1617	444	27	322
Telegraph cable. Submarine	M. J. O'Sullivan	299,417	May 27	1825	524	27	897
Telegraph call-box. District	G. Smith	297,540	Apr. 22	2085	568	27	409
Telegraph. Diplex or quadruplex	C. W. Lewis	297,819	Apr. 29	2445	669	27	484
Telegraph-key	G. F. Brott	295,905	Apr. 1	16	4	27	6
Telegraph or other pole	J. Hunter	298,975	May 20	1273	363	27	782
Telegraph-pole	C. L. Buckingham and W. B. Vansize.	300,341	June 17	1091	297	27	1143
Telegraph. Printing	W. J. McCausland	299,664	June 3	228	56, 57	27	963
Telegraph. Printing	W. B. Vansize and C. L. Buckingham.	300,417	June 17	1186	325	27	1158
Telegraph. Quadruplex	G. W. Gardanier	298,571	May 13	764	215	27	679
Telegraph. Quadruplex	G. Smith	297,186	Apr. 22	1626	446	27	323
Telegraph transmitter. Printing	S. D. Field	300,859	June 24	1754	{478 / 479}	27	1267
Telegraph-wire conduit	W. Magner	299,992	June 10	647	166	27	1048
Telegraph-wires. Conduit for underground	E. O. Hildebrand	297,397	Apr. 22	1896	515	27	374
Telegraph-wires to posts and insulating them therefrom. Device for attaching	H. Cottrell	297,677	Apr. 29	2279	619	27	452
Telegraphs. Signal-box for district and fire-alarm	C. H. Carter	298,945	May 20	1233	340	27	775
Telegraphs. Static compensator for	F. W. Jones	300,781	June 24	1661	455	27	1250
Telegraphic cable	W. R. Patterson	296,774	Apr. 15	1107	312	27	225
Telegraphic relay	J. S. Lamar	300,269	June 10	986	266	27	1113
Telegraphic transmitter	N. J. Bishoprick	299,949	June 10	564	151	27	1038
Telegraphic transmitter for unskilled operators	J. N. Farrar and C. W. Morse	300,353	June 17	1107	300	27	1146
Telephone	F. B. Cook and F. F. Graves	295,963	Apr. 1	111	33	27	23
Telephone	W. Gillett	296,929	Apr. 15	1177	330	27	237
Telephone	J. H. Rogers	297,166	Apr. 22	1601	440	27	319
Telephone	J. H. Rogers	297,167	Apr. 22	1602	440	27	319
Telephone	J. H. Rogers	297,168	Apr. 22	1603	441	27	319
Telephone	H. B. T. Strangways	297,470	Apr. 22	1988	543	27	392
Telephone	W. A. West	300,422	June 17	1194	{326 / 327}	27	1159
Telephone and telegraph purposes. Conductor for	W. Jamieson	297,406	Apr. 22	1906	518	27	376
Telephone-cable	F. C. Guilleaume	297,688	Apr. 29	2296	624	27	456
Telephone call and switch box	E. H. McFall	297,148	Apr. 22	1580	435	27	315
Telephone-exchange apparatus	T. B. Doolittle	298,550	May 13	740	{210 / 211}	27	676
Telephone exchange. Mechanical	G. F. Shaver	298,243	May 6	367	97	27	595
Telephone-exchange system	F. B. Herzog	299,070	May 20	1302	397	27	804
Telephone-exchanges. Metallic circuit for	J. C. and E. P. Warner	299,603	June 3	133	33	27	944
Telephone-line	T. D. Doolittle	297,683	Apr. 29	2289	623	27	454
Telephone. Mechanical	A. A. Knudson	300,713	June 17	1576	432	27	1230

Telephone signaling apparatus	W. J. Dudley	295,913	Apr. 1	22	7	27	7
Telephone-station apparatus	E. M. Bentley	297,909	Apr. 29	2549	699	27	505
Telephone-support	N. G. Warth	299,300	May 27	1680	482	27	869
Telephone system	C. H. Haskins	299,926	June 3	521	138	27	1020
Telephone-systems. Spring-jack for	C. E. Scribner	300,143	June 10	821	222	27	1084
Telephone time-signal apparatus	H. B. Lytle and J. J. Carty	299,562	June 3	75	19	27	934
Telephone time-signals. Method of and apparatus for individualizing	H. B. Lytle and J. J. Carty	299,561	June 3	71	18	27	934
Telephone-transmitter	S. Chadwick	296,676	Apr. 8	987	277	27	197
Telephone-transmitter	D. Drawbaugh	297,578	Apr. 29	2151	587	27	428
Telephone-transmitter	D. Drawbaugh	297,579	Apr. 29	2154	588	27	428
Telephone-transmitter	D. Drawbaugh	298,676	May 13	901	251	27	704
Telephone-transmitter	G. W. Drawbaugh	298,677	May 13	903	251	27	705
Telephone-transmitter	J. A. Maloney	296,421	Apr. 8	668	185	27	132
Telephone-transmitter	H. E. Waite	298,923	May 20	1209	341	27	770
Telephone-transmitter	H. E. Waite	298,925	May 20	1212	342	27	771
Telephone-transmitter. Electric	J. A. Maloney	296,593	Apr. 8	889	246	27	176
Telephonic receiving-instrument	J. D. Husbands	299,074	May 20	1398	398	27	805
Telephonic transmitter	H. Clay	298,286	May 6	423	113	27	606
					114		
Telephonic transmitter	J. D. Husbands	299,073	May 20	1396	398	27	805
Temperature, &c. Electric valve for regulating	W. S. Johnson	301,059	June 24	1995	551	27	1312
Tennis-grounds. Device for laying out	H. N. Covell	299,625	June 3	159	30, 40	27	949
Tent	S. Marvin	300,993	June 24	1907	525	27	1296
Terret. Harness-	H. F. and L. A. Townsend	297,033	Apr. 15	1430	393	27	283
Theater appliance. Hydraulic	R. Gwinner, J. Kantaky, C. Dengg, and F. Roth.	296,286	Apr. 1	494	138	27	93
					139		
Theaters. Border-light for	J. T. Preddey	298,888	May 20	1168	327	27	762
Theatrical appliance	J. W. Sherman	296,467	Apr. 8	720	199	27	143
Thermo-reservoir	E. D. Newton	299,252	May 27	1616	464	27	858
Thermometer and barometer mold, &c	W. Somerville	296,703	Apr. 15	1127	317	27	229
Thermostat	M. D. Porter	296,058	Apr. 1	199	58	27	41
Thill-coupling	E. P. Alexander	300,750	June 24	1622	445	27	1243
Thill-coupling	C. W. Ament	296,103	Apr. 1	250	73	27	51
Thill-coupling	A. O. Bonsteel	298,439	May 13	611	172	27	650
Thill-coupling	E. S. Buzby	299,460	May 27	1675	539	27	905
Thill-coupling	M. E. Campany	298,942	May 20	1230	348	27	774
Thill-coupling	J. W. Carns	300,045	June 10	687	186	27	1060
Thill-coupling	S. Craig	299,912	June 3	505	133	27	1018
					134		
Thill-coupling	J. C. Dietrich	297,356	Apr. 22	1849	502	27	365
Thill-coupling	L. J. Dresser	299,917	June 3	510	135	27	1019
Thill-coupling	R. R. Earnest	300,057	June 10	699	190	27	1062
Thill-coupling	R. H. P. Ellis	299,902	May 20	1381	384	27	802
Thill-coupling	J. A. Green	300,597	June 17	1403	386	27	1199
Thill-coupling	S. Hubbell, Jr	297,961	Apr. 29	1772	470	27	343
Thill-coupling	S. D. Lecompte	299,556	June 3	67	17	27	933
Thill-coupling	P. D. Peck	297,442	Apr. 22	1956	534	27	385
Thill-coupling	G. W. Rossman and J. E. Strever	296,787	Apr. 15	1122	316	27	228
Thill-coupling	L. D. Rundell and P. Van Valkenburgh.	297,297	Apr. 22	1771	481	27	350
Thill-coupling	F. M. Stevens	296,794	Apr. 15	1129	318	27	230
Thill-coupling	C. E. Struck	299,696	June 3	269	67	27	970
Thill-coupling	C. M. Westcott	299,443	May 27	1852	533	27	901
Thill-coupling	H. M. Wheeler	296,805	Apr. 15	1142	322	27	239
Thill-coupling	W. H. Wright	298,810	May 20	1072	301	27	743
Thill-couplings. Anti-rattler for	J. M. Haas	300,251	June 10	964	261	27	1109
Thimble	M. Démme	297,355	Apr. 22	1849	502	27	365
Thrasher and clover-seed huller. Combined grain-	C. H. Horton. (Reissue)	10,485	June 3	548	146	27	1025
Thrasher and huller. Clover	C. A. Bikle	297,104	Apr. 22	1521	420	27	306
Thrashers or separators. Recleaning attachment for	H. Campbell	296,922	Apr. 15	1296	360	27	259
Thrashing and cleaning machine	W. H. Parrish	296,441	Apr. 8	690	190	27	136
Thrashing-machine	J. A. Beam	296,111	Apr. 1	262	76	27	53
Thrashing-machine	J. Buchanan	297,562	Apr. 29	2123	579	27	423
Thrashing-machine	J. M. C. Jones	296,015	Apr. 1	153	44	27	31
Thrashing-machine	D. Lippy	299,406	May 27	1816	522	27	895
Thrashing-machine	C. Shirley	299,802	June 3	448	116	27	1007
					117		
Thrashing-machine band-cutting and feeding attachment	C. B. Scherer	300,645	June 17	1482	407	27	1214
					408		
Thrashing-machine beater	R. and F. Garrett and J. D. Ellis	297,781	Apr. 29	2407	657	27	476
Thrashing-machine straw-carrier	M. J. Gessner	297,594	Apr. 29	2170	592	27	432
Thrashing-machine straw-stacker	D. D. and P. J. Sprague	298,250	May 6	376	100	27	567
Thrashing-machines. Clover-hulling attachment for	A. L. Gates	298,196	May 6	295	76	27	581
Thrashing-machines. Self-feeding and band-cutting attachment for	S. S. Barr	296,109	Apr. 1	260	75	27	52
Thread. Machinery for stretching and smoothing sewing	J. E. Tynan	297,542	Apr. 22	2088	569	27	410
Thrashing peas, beans, &c. Machine for	B. F. Archer	300,429	June 17	1202	329	27	1161
Threads, yarns, &c. Dressing compound for	J. S. Wattles	299,704	June 3	279	.....	27	973
Ticket-case	P. Abbott	297,217	Apr. 22	1676	456	27	339
Ticket-case	W. E. Chatterton	297,349	Apr. 22	1842	500	27	364
					501		
Ticket-holder	C. W. Walters	300,172	June 10	856	231	27	1000

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Tile and sewer pipe machines. Feeder for	J. S. Smith	296,236	Apr. 1	421	118	27	80
Tile. Decorative	S. Van Campen	298,921	May 20	1207	341	27	770
Tile. Illuminating-	J. Jacobs	297,806	Apr. 29	2433	665	27	461
Tile-machine	F. M., M. G., M. J., and M. L. Harris.	298,850	May 20	1119	314	27	752
Tile-machine	W. Lewis	298,002	May 6	53	14	27	537
Tile-machine	M. Nolan	300,278	June 10	1002	271	27	1116
Tile-machine	J. S. Smith	296,477	Apr. 8	737	203	27	146
Tile machine. Drain-	C. J. Merrill	300,852	June 24	1785	487	27	1273
Tile-mills. Revolving table for	J. S. Smith	300,909	June 24	1817	497	27	1279
Tile-mold	J. Grant	298,847	May 20	1114	313	27	751
Tile mold. Drain-	C. B. Hewitt	297,995	May 6	46	12	27	536
Tile or brick for floors, &c	T. C. Smith	300,521	June 17	1311	360	27	1183
Tile. Roofing-	B. F. Powers, G. E. Needham, and J. Hayes.	296,616	Apr. 8	918	257	27	183
Tiles. Constructing and fastening	W. Booth	297,491	Apr. 22	2014	550	27	397
Tilting-chair	H. Parry	299,846	June 3	431	112	27	1004
Time-detector. Watchman's electric	C. G. Spengler	298,906	May 20	1189	335	27	766
Time-indicator and block-signal. Automatic	E. F. Bard and G. G. Wagner	300,833	June 24	1795	471	27	1261
Time-lock	M. C. Hawkins	296,561	Apr. 8	850	236	27	168
Time-lock	H. F. Newbury	297,623	Apr. 29	2200	600	27	437
Time-piece for operating mechanical devices	J. A. Lakin	296,988	May 20	1256	366	27	784
Time-recording device	J. Keller and J. F. Peribach	297,939	Apr. 29	2592	711	27	512
Time-register. Automatic	G. W. Foster	297,248	Apr. 22	1714	465	27	340
Time-signals over lines employed for other purposes. Apparatus for distributing	F. Waldo	296,653	Apr. 8	960	270	27	191
Tin cans. Utilizing	B. F. Mechling	298,221	May 6	338	88	27	590
Tin. Process of and apparatus for crystallizing	C. R. H. M. Habenicht	300,599	June 17	1407	387	27	1200
Tire-tightener	H. C. Batea	296,306	Apr. 8	596	147	27	105
Tire-tightener	W. Campbell	295,979	Apr. 1	101	31	27	21
Tire-tightener	S. McCay	296,987	Apr. 15	1374	379	27	273
Tire-upsetter	J. Nyce	297,947	Apr. 29	2600	713	27	514
Tobacco-caddy. Sheet-metal	E. H. Striker	298,255	May 6	382	101	27	509
Tobacco-cutter	G. A. Priest	298,404	May 13	576	159	27	643
					160		
Tobacco. Machine for attaching tags and labels to plug-	N. B. Hieatt and E. R. Hearn	299,541	June 3	48	12	27	929
Tobacco-pipe	M. Dittenhoefer	299,357	May 27	1749	503	27	883
Tobacco-planta. Shears for cutting	C. Nagley	298,768	May 20	1017	284	27	733
Tobacco-sweater	G. Brownstein	297,668	Apr. 29	2262	616	27	440
Tobacco-transporting rack	W. Sternberg	298,252	May 6	379	100	27	598
Tombstone	S. R. Miller	296,431	Apr. 8	679	187	27	134
Tombstone picture-case	H. A. Holloman and W. R. Green	298,060	May 6	157	41	27	557
Tongs	W. E. Wood	297,736	Apr. 29	2355	640	27	466
Tongs for lifting spools of fence-wire	W. A. Hardin	296,559	Apr. 8	847	235	27	168
Tongue-rest	J. Fisher	297,368	Apr. 22	1805	507	27	368
Tongue-support	D. Read	296,621	Apr. 8	923	258	27	184
Tongue-support	S. B. Reid	300,706	June 24	1679	459	27	1253
Tongue support. Wagon-	J. Bower	297,745	Apr. 29	2366	644	27	468
Tongue support. Wagon-	W. P. Martin	299,238	May 27	1601	459	27	856
Tool	J. A. Sherman	298,421	May 13	591	167	27	647
Tool. Combination-	J. A. Morrell	299,488	May 27	1906	549	27	911
Tool. Combination-	G. H. Zlph	301,039	June 24	1971	544	27	1308
Tool-handle	J. P. Johnson	298,695	May 13	994	257	27	709
Tool-holder	E. L. Hartmann	296,332	Apr. 8	557	155	27	111
Tool-holder	C. D. Hawley	296,167	Apr. 1	325	92	27	63
Tool-holder	A. Mercer	296,980	Apr. 15	1376	380	27	273
Tool-holder	R. J. Schemmel	299,494	May 27	1832	596	27	898
Tool-holder. Adjustable	F. B. Bowman	296,310	Apr. 8	530	148	27	106
Tool stock or handle	R. A. Small	299,428	May 27	1835	527	27	898
Tooth-crown. Artificial	A. E. Matteson	297,704	Apr. 29	2317	630	27	459
Tooth-crowns. Apparatus for constructing artificial	A. E. Matteson	297,703	Apr. 29	2316	630	27	459
Tooth-pick device	J. Hoffman	298,087	May 6	156	40	27	556
Topographical representation or model	C. L. Anderson	298,512	May 20	1074	301	27	743
Torch	J. A. McPherson	299,411	May 27	1819	523	27	895
Torch. Signal-	J. Hall	296,976	Apr. 15	1328	368	27	265
Torpedo. Marine	J. H. L. Tuck	297,648	Apr. 29	2238	609	27	445
Torpedo. Railway	J. H. Bevington	298,935	May 20	1225	347	27	773
Torpedoes. Water-proof wafer for	C. Nelson	299,837	June 3	422	109	27	1002
Towels, napkins, &c. Machine for folding	C. Chambers, Jr	297,673	Apr. 29	2273	618	27	451
Tower	J. S. and F. U. Adams	296,375	Apr. 8	608	168	27	121
					169		
Tower and mode of erecting the same. Skeleton iron	J. S. Adams	297,333	Apr. 22	1815	493	27	358
					494		
Tower. Skeleton	J. S. Adams	297,331	Apr. 22	1811	492	27	358
Tower. Skeleton	J. S. Adams	297,334	Apr. 22	1818	494	27	359
Tower. Skeleton	J. S. Adams	297,335	Apr. 22	1820	495	27	360
Tower. Skeleton	J. S. Adams	297,337	Apr. 22	1823	495	27	360
					496		
Tower. Skeleton	J. S. Adams	297,338	Apr. 22	1825	496	27	361
Tower. Skeleton iron	J. S. Adams	297,336	Apr. 22	1821	495	27	360
Toy	F. W. Carpenter	298,440	May 13	618	176	27	651
Toy	J. A. Crandall	296,536	Apr. 8	813	224	27	162
Toy	J. A. Crandall	298,289	May 6	427	114	27	607
Toy	C. Diener	296,941	Apr. 15	1318	365	27	262
Toy	L. Keller	297,134	Apr. 22	1564	431	27	313
Toy	J. E. A. McAllister	300,097	June 10	754	203	27	1072
Toy	M. Raughtigan	296,351	Apr. 8	582	162	27	116
Toy	W. B. Sales	299,015	May 20	1318	376	27	791
Toy	C. A. Volke	299,703	June 3	278	69	27	972
Toy	J. G. Webb	299,604	June 3	133	33	27	944
Toy	A. Wilhelm	299,608	June 3	139	34	27	946

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Toy. Alphabetical	J. A. Crandall	298,299	May 6	428	115	27	607
Toy and advertising medium	L. S. Burridge and N. R. Marshman	296,794	Apr. 15	1047	295	27	914
Toy bank	H. C. Hart and J. W. Cross	296,689	Apr. 8	1003	280	27	199
Toy building	W. S. Reed	296,783	Apr. 15	1117	314 / 315	27	227
Toy building	W. S. Reed	296,784	Apr. 15	1119	315	27	227
Toy building-block	E. H. Snow	298,833	May 13	896	234	27	992
Toy gun	J. L. Joyce	299,796	June 3	375	96	27	992
Toy gun	L. Stockman	299,436	May 27	1846	531	27	900
Toy horse. Trundling	E. J. B. Whitaker. (Reissue)	10,480	May 13	953	265	27	715
Toy. Mechanical	R. H. Ricker	300,799	June 24	1680	459	27	1253
Toy. Mechanical	R. H. Ricker	300,800	June 24	1681	460	27	1253
Toy mortar	A. W. Partrick	300,634	June 17	1460	403	27	1210
Toy mortar	S. B. Pratt	300,638	June 17	1464	404	27	1211
Toy pistol	A. Gilman	297,379	Apr. 22	1876	510	27	370
Toy revolving bell	W. Goodfellow	298,575	May 13	770	216	27	690
Toy savings-bank	C. M. Crandall	298,830	May 20	1098	307	27	748
Toy scale	J. F. Lawrence	300,675	June 24	1775	483	27	1271
Trace-bearer for pad-skirts	S. D. Taylor	300,916	June 24	1827	500	27	1281
Trace-carrier	W. M. Smither	297,864	Apr. 29	2403	683	27	494
Trace-carrier	H. Tay	299,035	May 20	1347	385	27	796
Trace-trimming	J. M. Basinger	296,110	Apr. 1	261	75	27	52
Trace-trimming machine	W. Gordon and J. W. Dodge	297,787	Apr. 29	2414	659	27	477
Tracheotome	D. L. Russell	300,285	June 10	1015	274	27	1118
Track cleaner. Car-	J. G. Holden and J. E. Coe	298,068	May 6	157	41	27	556
Track-clearer	E. B. Bishop	297,910	Apr. 29	2551	699	27	505
Track-clearer	W. Dunbar	298,295	May 6	434	117	27	609
Traction-engine	H. H. Hudson	300,869	June 24	1769	4-2	27	1270
Traction-engine	H. B. Larzelere	300,271	June 10	969	267	27	1114
Traction-engine	H. B. McMurray	296,802	Apr. 15	1217	341	27	244
Train-signal	M. F. Parish and S. J. Munn	297,438	Apr. 22	1950	532 / 533	27	384
Traction-engine	F. W. Robinson	300,397	June 17	1162	318	27	1154
Traction-engine	W. L. Shepherd	299,427	May 27	1834	527	27	898
Traction-engines. Steering-gear for	A. P. Broomell	298,169	May 6	262	67	27	575
Tramway	A. H. Rowan	299,681	June 3	252	62	27	968
Trap: *See* Animal-trap. Ball-trap. Overflow-trap. Plumber's trap. Rain-water trap. Sewer-trap. Steam-trap. Steam-pressure-gage trap. Valved trap.							
Trap for sinks, &c	H. Friedrich	298,841	May 20	1108	310	27	750
Trapeze. Revolving double	E. J. Leamy	300,487	June 17	1273	350	27	1175
Traveling-bag	M. Schmickl	299,272	May 27	1637	470	27	862
Traveling-bag	C. A. Zinkand	298,050	May 6	111	29	27	548
Traveling-bag clasp	W. J. Large	298,481	May 13	663	187	27	660
Traveling-bag handle and handle-cap	F. Waldschmitt	300,667	June 17	1512	417	27	1220
Tray	J. B. Higbee	300,472	June 17	1257	344	27	1171
Tray. Dinner-	F. Nemmüller, J. P. Whedon, and E. M. Perhács.	296,043	Apr. 1	180	52	27	37
Tray-machine	M. E. Benjamin	297,662	Apr. 29	2254	613 / 614	27	447
Tread-power	E. Kilbourn	298,094	May 6	164	42	27	558
Treadle mechanism	H. Leeming	296,854	Apr. 15	1207	338	27	243
Treadle-motion	D. P. Foster	299,921	June 3	515	137	27	1019
Trestle. Adjustable	E. Owen	300,667	June 24	1791	489	27	1274
Tricycle	F. C. Atherton	295,894	Apr. 1	2	1	27	3
Tricycle	J. Gowdey	300,350	June 17	1114	302	27	1147
Tricycle	M. F. McMahan	298,994	May 20	1291	368	27	786
Tricycle	W. Spence and R. C. Thompson	296,639	Apr. 8	943	264 / 265	27	188
Trimmer: *See* Sewing-machine trimmer.							
Trimming. Dress-	A. Hirsch	298,691	May 13	921	255	27	708
Trimming fabric	W. P. Jennings	299,985	June 10	608	163 / 164	27	1046
Triturating-machine	F. E. Boericke and G. Goll	296,816	Apr. 15	1155	326	27	234
Truck	H. Metsker	300,788	June 24	1670	457	27	1251
Truck	J. H. Tiffany	297,876	Apr. 29	2507	686	27	496
Truck and elevator. Barrel	H. E. Gilchrist	298,459	May 13	633	180	27	654
Truck and step-ladder. Combined	A. H. Barnes	298,336	May 13	498	135	27	629
Truck. Car-	S. A. Bemis	299,510	June 3	9	3, 4	27	922
Truck. Car-	C. E. Candee	299,735	June 3	312	79, 80	27	979
Truck. Car-	J. R. Fish	296,545	Apr. 8	824	227	27	164
Truck. Car-	J. N. Hicks	299,786	June 3	365	93	27	990
Truck. Car-	J. H. McClure and G. F. Murdock	296,988	Apr. 15	1375	379	27	273
Truck. Car-	A. T. Peirce	300,795	June 24	1676	458	27	1252
Truck. Car-	T. H. Roberts	301,008	June 24	1934	534	27	1300
Truck. Car-	G. W. Simonds	299,026	May 20	1336	381	27	794
Truck. Hand-	J. S. Nelson	300,496	June 17	1285	353	27	1178
Truck. Railway-	L. S. Zachariasen	296,904	Apr. 15	1275	354 / 355	27	255
Truck. Safety car-	S. Brown	297,061	Apr. 15	1461	404	27	289
Truck. Shifting-	P. H. McWilliams	296,865	Apr. 15	1224	342	27	245
Trucks. Tower-pipe attachment for	J. R. Day	297,919	Apr. 29	2564	703	27	508
Trunk	J. B. Duguid	298,453	May 13	627	178	27	653
Trunk	A. R. Earl	296,395	Apr. 8	641	176	27	127
Trunk	W. J. Large	296,976	Apr. 15	1360	376	27	271
Trunk	W. J. Large	297,814	Apr. 29	2440	667	27	483
Trunk	P. Loewe	300,378	June 17	1138	310	27	1150
Trunk	E. Wilson	298,146	May 6	231	60	27	576

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Trunk-lock	G. Crouch and H. Ahrend	300,850	June 24	1744	476	27	1265
Trunk-lock	E. A. Judd	297,938	Apr. 29	2590	710	27	512
Trunk-lock	F. W. Mix	296,345	Apr. 8	577	161	27	115
Trunk-lock	E. W. Brettell	299,279	May 6	415	111	27	605
Trunk or box fastener	H. W. Mattoni	296,030	Apr. 1	166	48	27	34
Trunk or case. Sample	C. D. Sigsbee	298,789	May 20	1045	292	27	738
Trunk-stay	P. T. Perkins	296,444	Apr. 8	695	191	27	138
Trunks, boxes, &c. Corner-stay for	J. Y. Egan	300,454	June 17	1222	337	27	1167
Truss	J. B. Mayer	296,342	Apr. 8	573	159	27	114
Truss	D. S. Peters	300,689	June 24	1703	490	27	1275
Truss	W. L. Tucker	296,300	Apr. 1	515	143	27	97
Truss. Hernial	W. H. Blake, 2d	300,942	June 24	1850	507	27	1285
Tub and box fastener	C. P. Lattemoor	297,609	Apr. 29	2184	596	27	434
Tub. Self-dumping							
Tube: *See* Pneumatic tube.							
Tube-corrugating apparatus	S. Fox	297,372	Apr. 22	1869	508	27	369
Tubes. Machine for forming taper	G. W. Knapp	299,404	May 27	1811	521	27	894
Tubes. Method of and apparatus for corrugating	C. E. Emery and A. H. Gentner	297,244	Apr. 22	1708	494	27	338
Tug and buckle. Hame-	W. G. Slater	296,472	Apr. 8	729	201	27	144
Tug and trace. Hame-	G. Rupp	297,538	Apr. 22	2053	568	27	409
Tug. Antomatic shaft-	J. T. Watson	296,899	Apr. 15	1360	353	27	254
Tug. Hame-	T. L. Rivers	297,534	Apr. 29	2223	604	27	441
Tug. Hame-	I. H. Tubbs	297,474	Apr. 22	1993	545	27	393
Tug. Shaft-	C. W. Haas	300,865	June 24	1764	481	27	1269
Tug. Shaft-	P. B. Swick	297,727	Apr. 29	2346	638	27	465
Tuning-fork	S. B. Butterworth	299,956	June 10	572	153	27	1040
Tunnel-inlet. Submerged	J. A. Cole	300,576	June 17	1378	381	27	1194
Tunnels. Constructing	D. C. Haskin	300,469	June 17	1253	343	27	1171
Turning gun-barrels and other articles of irregular form. Machine for	C. A. King	297,418	Apr. 22	1922	525	27	379
Turning-machine	A. T. Booth	300,943	June 24	1851	508	27	1285
Tuyere and attachment therefor	J. M. Hartman	299,536	June 3	39	11	27	928
Tuyere-stoppers. Device for operating	H. W. Oliver, Jr.	299,572	June 3	88	22	27	936
Type-case	W. Piel	296,350	Apr. 8	581	162	27	116
Type-rubbing machine	G. S. Eaton and J. W. Lyon	300,452	June 17	1228	336	27	1166
Type-writer	T. A. Edison	295,990	Apr. 1	118	35	27	25
Type-writing machine	D. W. Dodson	299,754	June 3	331	85	27	983
Type-writing machine	E. J. Hall	298,576	May 13	771	216	27	680
Type-writing machine	G. H. Herrington and D. G. Millison	299,785	June 3	364	93	27	990
Type-writing machine	H. Orpen	297,086	Apr. 15	1488	412	27	294
Type-writing machine	A. Carrara	298,944	May 20	1232	349	27	774
Umbrella and parasol frame	A. T. Meyer	297,281	Apr. 22	1750	475	27	346
Umbrella and parasol rib	W. J. Chambers	296,132	Apr. 1	286	61	27	56
Umbrella-tie	J. Matzenbacher	298,219	May 6	335	87	27	589
Umbrella tip-cup	L. Damhauser	298,832	May 20	1100	307	27	748
Under-garment	J. M. C. Chenivesse	297,570	Apr. 29	2139	583	27	426
Undergarment-pattern	T. L. Smith	297,463	Apr. 22	1981	541	27	390
Underground-line conduit	T. L. Smith	297,462	Apr. 22	1979	541	27	390
Underground wire-conduit	S. Marvin	297,823	Apr. 29	2450	670	27	485
Upper	L. P. Lawrence	300,876	June 24	1776	484	27	1271
Vacuum-brakes. Air-ejector for	L. M. Campi	299,112	May 27	1450	414	27	895
Vacuum-pan	J. H. Blessing	300,836	June 24	1730	472	27	1262
Valve	J. M. Goldsmith	297,980	May 6	27	8	27	532
Valve	C. S. Haskell and W. B. Fleming	300,468	June 17	1252	342 / 343	27	1171
Valve	J. S. Leng	298,865	May 20	1136	319	27	756
Valve and gear for steam-engines	A. C. and A. F. Dumke	296,543	Apr. 8	821	226	27	164
Valve and muffler. Safety-	J. M. Coale	297,066	Apr. 15	1467	406	27	291
Valve. Balanced rotary	J. L. Bogert	298,063	May 6	127	32	27	551
Valve. Balanced slide-	J. Bewaher	300,756	June 24	1629	447	27	1244
Valve. Balanced slide-	L. J. M. Boyd	299,950	June 10	566	151	27	1038
Valve. Balanced slide-	W. A. Pearson	299,004	May 20	1303	371 / 372	27	788
Valve. Balanced slide-	W. G. Smith	298,512	May 13	697	197	27	666
Valve. Balanced slide-	A. Welch	297,392	Apr. 22	1797	488	27	355
Valve. Balanced slide-	F. H. Richards	299,090	May 20	1416	404	27	809
Valve-body-milling machine	J. H. Blessing. (Reissue)	10,487	June 10	1078	294	27	1130
Valve. Check-	J. H. Blessing	298,061	May 6	125	31, 32	27	551
Valve. Combined check and stop	J. H. Blessing	300,837	June 24	1731	473	27	1262
Valve. Combined check and stop	J. E. Jerrold and C. L. Burgermeister.	300,373	June 17	1134	309	27	1149
Valve for engiuery and vessels	W. C. Wolfe	300,824	June 24	1714	468	27	1259
Valve for the feed-pipes of steam-boilers. Relief-	J. Arthur	299,899	June 3	489	129	27	1015
Valve. Gate-	J. H. Strehll	299,594	June 3	122	30	27	942
Valve. Gate-	H. F. Ambos	297,656	Apr. 29	2247	611 / 612	27	446
Valve-gear	G. M. Conway	298,893	May 20	1095	306	27	747
Valve-gear	L. Windhurst	300,036	June 10	673	183	27	1057
Valve-gear	W. Culbertson	300,349	June 17	1102	299	27	1145
Valve-gear for reversing engines	B. Arnold	298,438	May 13	609	172	27	650
Valve-gear. Steam-engine	O. F. Howard	297,997	May 6	47	12	27	536
Valve-gear. Steam-engine	H. W. Burleigh	297,063	Apr. 15	1464	405	27	290
Valve-grinder	G. W. Richardson	297,007	Apr. 15	1394	385	27	277
Valve. Marine safety-	D. T. Ellis	296,738	May 20	986	274	27	728
Valve mechanism	H. G. Ashton	299,503	June 3	4	1	27	921
Valve muffler. Safety-	G. W. Pearsons	297,441	Apr. 22	1955	534	27	385
Valve. Pressure-regulating	H. F. Frisbie	298,194	May 6	292	75	27	581
Valve. Puppet-	W. A. Pendry	299,006	May 20	1306	372	27	789
Valve. Puppet-	H. J. Johnson	300,372	June 17	1133	309	27	1149
Valve seat. Slide-	I. De Graff	297,682	Apr. 29	2288	623	27	454
Valve. Slide-	G. E. Elliott	298,681	May 13	908	252	27	706
Valve. Steam-actuated	J. H. Valle	298,919	May 20	1205	339 / 340	27	770
Valve. Steam-actuated							
Valve. Straight-way	T. Holland	300,973	June 24	1887	519	27	1292

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Valve. Straight-way	P. B. Page	296,046	Apr. 1	183	53	27	38
Valve. Water-cooled	J. Hanlon	300,602	June 17	1411	388 / 389	27	1200
Valves. Chuck for holding gate-	A. Weber	300,927	June 24	1835	502	27	1283
Valves. Device for operating	J. Reichmann	300,131	June 10	798	214	27	1040
Valves. Operating	F. M. Lndlow	299,079	May 20	1406	401	27	807
Valved trap	W. H. Willson	300,746	June 17	1615	443	27	1236
Vapor as a motor power. Liquid for and process of generating a compound	W. L. Lowrey	296,197	Apr. 1	365	.....	27	70
Vapor-burner	Z. Davis	296,147	Apr. 1	302	87	27	59
Varnish. Leather and cloth	W. C. Gifford	297,515	Apr. 22	2050	.....	27	402
Vegetable-cutter	C. L. Williams	296,261	Apr. 1	459	129	27	87
Vegetable-slicer	S. Kranshaar	296,757	Apr. 15	1089	306	27	222
Vegetable-slicer	M. Reichert	298,023	May 13	827	231	27	600
Vehicle	J. Price	297,714	Apr. 29	2296	633	27	462
Vehicle-brake	F. Biery	297,490	Apr. 22	2012	549	27	396
Vehicle-brake	J. R. Miles and J. K. Baldridge	300,884	June 24	1788	488	27	1274
Vehicle canopy-holder	H. Etchling	299,630	June 3	165	42	27	950
Vehicle dash-board	T. H. Mader	299,236	May 27	1600	450	27	855
Vehicle. Hand-power	T. A. Davies	296,936	Apr. 15	1312	364	27	261
Vehicle. Hand-power	T. A. Davies	296,937	Apr. 15	1314	364	27	262
Vehicle-platform gear	C. C. Wilson	299,892	June 3	479	126	27	1013
Vehicle propelled by compressed air	D. S. Troy	300,290	June 10	1021	276	27	1119
Vehicle running-gear	J. M. Bradley	297,747	Apr 29	2368	645	27	469
Vehicle running-gear	H. W. Chamberlain and F. G. Harris	298,946	May 20	1235	350	27	775
Vehicle running-gear	W. W. Grier	296,406	Apr. 8	652	181	27	129
Vehicle running-gear	R. C. Parvin	297,439	Apr. 22	1951	533	27	385
Vehicle. Side-bar	H. W. Moore	298,016	May 6	76	18	27	541
Vehicle. Side-bar	C. W. Saladee	298,123	May 6	198	53	27	565
Vehicle. Side-bar	J. Taylor	298,516	May 13	700	198	27	667
Vehicle. Skeleton speed-	T. H. Brown	297,348	Apr. 22	1841	500	27	364
Vehicle. Spring-	J. B. Armstrong	299,191	May 27	1545	443	27	843
Vehicle. Spring-	M. G. Hubbard	300,978	June 24	1891	520	27	1293
Vehicle-spring	C. A. Behlen	298,113	Apr. 1	264	76	27	53
Vehicle-spring	E. P. Carter	298,533	May 13	740	209	27	675
Vehicle-spring	R. H. Cornett	300,956	June 24	1865	511	27	1282
Vehicle-spring	J. D. Dorsey	297,974	May 6	14	5	27	530
Vehicle-spring	W. S. Everett	299,363	May 27	1755	505	27	884
Vehicle-spring	J. Herbrand	299,641	June 3	180	45	27	953
Vehicle-spring	J. Howell	296,834	Apr. 15	1184	332	27	238
Vehicle-spring	G. W. Morris	296,994	Apr. 15	1381	381	27	274
Vehicle-spring	R. Mulholland	296,347	Apr. 8	579	161	27	115
Vehicle-spring	S. E. Oviatt	297,834	Apr. 29	2462	674	27	487
Vehicle-spring	J. Percy	299,575	June 3	92	23	27	937
Vehicle-spring	C. W. Saladee	296,359	Apr. 8	592	164	27	118
Vehicle-spring	H. J. Schild	300,020	June 10	655	179	27	1054
Vehicle-spring attachment	P. Hebert	300,254	June 10	967	262	27	1110
Vehicle spring-seat	L. Warren	295,963	Apr. 1	82	25	27	19
Vehicle-top	F. A. Korizek	300,069	June 10	740	200	27	1070
Vehicle-top	E. Warren	296,090	Apr. 1	237	69	27	48
Vehicle-tops. Hood for	C. T. Shreve	300,590	June 17	1310	359	27	1183
Vehicle turning-gear	F. Bremerman	299,108	May 27	1446	413	27	825
Vehicle. Two-wheeled	J. C. Bach	299,319	May 27	1698	487	27	873
Vehicle. Two-wheeled	J. C. Blocher	299,105	May 27	1443	412	27	825
Vehicle. Two-wheeled	W. M. Buchnan	299,330	May 27	1726	493	27	878
Vehicle. Two-wheeled	L. S. Clark, O. G. Franks, and G. T. Baughman	296,316	Apr. 8	536	150	27	107
Vehicle. Two-wheeled	A. Davis	300,051	June 10	692	188	27	1061
Vehicle. Two-wheeled	L. Donley	297,358	Apr. 22	1852	503	27	365
Vehicle. Two-wheeled	W. S. Frazier	299,124	May 27	1468	421 / 422	27	830
Vehicle. Two-wheeled	W. T. Goodman	296,949	Apr. 15	1324	367	27	264
Vehicle. Two-wheeled	C. S. Harper	297,590	Apr. 29	2174	594	27	432
Vehicle. Two-wheeled	J. D. Libey	300,377	June 17	1138	310	27	1150
Vehicle. Two-wheeled	L. D. Robertson	297,451	Apr. 22	1965	537	27	387
Vehicle. Two-wheeled	C. W. Saladee	296,412	May 13	581	163	27	644
Vehicle. Two-wheeled	C. W. Saladee	298,413	May 13	583	163 / 164	27	645
Vehicle. Two-wheeled	C. W. Saladee	298,414	May 13	584	164	27	645
Vehicle. Two-wheeled	C. W. Saladee	298,416	May 13	586	165	27	646
Vehicle. Two-wheeled	E. E. P. Truesdell	297,955	Apr. 29	2609	715	27	516
Vehicle. Two-wheeled	W. Vandercook	297,543	Apr. 22	2090	569	27	410
Vehicle-wheel	J. E. Bell	296,307	Apr. 8	527	148	27	105
Vehicle-wheel	J. J. Bush	299,906	June 3	497	131	27	1016
Vehicle-wheel	J. Dietrich	300,230	June 10	935	252	27	1104
Vehicle-wheel	F. L. Kirkbride	298,501	May 13	788	221	27	683
Vehicle-wheel	L. A. Powers	298,500	May 13	685	194	27	664
Vehicle-wheel	M. L. Smith	298,502	May 13	835	233	27	692
Vehicle-wheel spindle	W. Holloway and T. L. Clevenger	300,974	June 24	1888	519	27	1292
Vehicles. Breeching for	D. Hutchinson	296,694	Apr. 8	1009	282	27	201
Velocipede	D. Crowley	296,680	Apr. 8	991	278	27	197
Velocipede	F. W. Jones	296,837	Apr. 15	1186	333	27	239
Velocipede	W. A. Lorens	298,217	May 6	331	87	27	589
Velocipede	A. Pesenecker	296,776	Apr. 15	1109	312	27	226
Velocipede	C. M. Schaffer	297,300	Apr. 22	1775	482	27	351
Velocipede	E. R. Settle	300,516	June 17	1307	358	27	1182
Velocipede	A. E. Wallace	299,683	June 3	471	124	27	1012
Velocipede attachment	F. J. W. Dopp and G. Wolff	297,338	Apr. 22	1701	462	27	337
Velocipede. One-wheeled	B. G. Berlinghausen	299,617	June 3	149	37	27	947
Velocipede-treadle	P. Gendron	298,079	May 6	147	37	27	554
Velocipede. Water-	E. F. Steele	298,792	May 20	1049	263	27	739
Velocipedes. Ball-bearing for	J. White	300,544	June 17	1343	370	27	1188
Veneer-cutting machine	C. W. and A. S. Gage	300,243	June 10	953	257	27	1107
Veneer-press	A. Newell	300,725	June 17	1588	436	27	1232

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Ventilating apparatus	J. Sellwood and S. J. Harry	296,634	Apr. 8	938	262	27	187
Ventilating water-closets, urinals, drains, &c. Apparatus for	T. Rowan	297,296	Apr. 22	1770	480	27	350
Ventilation	M. B. Stafford	297,189	Apr. 22	1629	447	27	324
Ventilation of barrels and boxes	J. W. Brook	297,225	Apr. 22	1689	459	27	335
Ventilator: *See* Hat-ventilator.							
Ventilator	C. Müller	297,707	Apr. 29	2320	631	27	460
Vessel-ballast	E. P. Hickey	300,471	June 17	1255	343 / 344	27	1171
Vessel for containing aerated liquids	J. P. Haskins	297,992	May 6	41	10	27	535
Vessel for containing and transporting liquids	D. W. Norris	297,532	Apr. 22	2075	566	27	407
Vessel for containing liquids	W. T. Sallé	296,768	Apr. 15	1123	316	27	238
Vessel. Metallic	A. O'Hara	299,673	June 3	240	60	27	965
Vessel. Non-heat-conducting	H. M. Hanmore	296,955	Apr. 15	1330	369	27	265
Vessel. Sea-going	J. Gartner	299,128	May 27	1473	423	27	831
Vessel. Submarine	J. H. L. Tuck	297,647	Apr. 29	2236	608 / 609	27	444
Vessels, &c. Apparatus for closing	E. Leinert	300,987	June 24	1900	523	27	1295
Vessels. Apparatus for filling	M. L. Beat	297,058	Apr. 15	1458	403	27	288
Vessels. Attachment of lips and spouts to	J. C. Milligan and E. Monhot	298,222	May 6	339	88	27	590
Vessels. Attachment of lips and spouts to	E. Monhot and J. C. Milligan	298,308	May 6	449	121	27	612
Vessels with phosphate-rock, &c. Loading	F. Brotherhood	298,444	May 13	615	174 / 175	27	451
Vinegar. Apparatus for the manufacture of	A. Wecker	300,928	June 24	1836	502	27	1283
Violets of Paris. Sulpho-conjugated	A. F. Poirrier and D. A. Rosenstiehl	297,844	Apr. 29	2473	.....	27	490
Violin tail-piece	J. J. Smith	300,149	June 10	825	223	27	1085
Vise	A. Montant	300,388	June 17	1153	316	27	1153
Vise	C. Riggs	299,777	May 20	1027	287	27	735
Vise	W. M. Whiting	299,899	June 3	477	125	27	1013
Vise and ring-bender. Watch-maker's hand	C. B. Rubert	297,853	Apr. 29	2482	679	27	491
Vise attachment	C. H. Eddy	297,360	Apr. 22	1854	504	27	366
Vise. Bench	W. H. Northall	298,225	May 6	345	91	27	591
Vise. Carpenter's	J. F. Miller	297,282	Apr. 22	1751	476	27	347
Vise-jaws. Die for making	J. Cain	298,285	May 6	422	113	27	606
Vise. Pipe-	A. H. Jarecki	296,333	Apr. 8	558	155	27	111
Voltaic pile	A. Schroeder	296,464	Apr. 8	717	198	27	142
Vulcanizers. Device for regulating heat in	F. H. Chidester	300,952	June 24	1861	510	27	1287
Vulcanizing-heat regulator	F. H. Chidester	300,953	June 24	1862	510	27	1287
Wagon-body	C. F. Folsome	297,370	Apr. 22	1867	508	27	368
Wagon-bolster spring	J. R. Calhoun	299,518	June 3	17	6	27	924
Wagon-brake	B. F. Ball	300,188	June 10	881	237	27	1094
Wagon-brake	J. K. Hedgcock	297,680	Apr. 29	2287	625	27	456
Wagon-brake	J. Hocking and C. R. Jones	296,171	Apr. 1	330	94	27	64
Wagon-brake	W. Parks and S. M. Smith	300,500	June 17	1290	354	27	1179
Wagon-brake	L. G. Peel	297,443	Apr. 22	1957	535	27	386
Wagon-brake	M. T. Preston	300,327	June 10	1063	288	27	1127
Wagon-brake	T. W. Sonthard	299,866	June 3	554	118	27	1009
Wagon-brake	A. J. Steele	299,693	June 3	265	66	27	970
Wagon brake. Hay-	J. A. Putt	296,620	Apr. 8	922	258	27	183
Wagon-brake lever	T. J. Davies	296,143	Apr. 1	298	86	27	58
Wagon-dasher	E. Myrick	300,390	June 17	1154	316	27	1153
Wagon. Dumping-	T. W. Boyce and C. Frische	296,917	Apr. 15	1290	358	27	258
Wagon. Dumping-	W. C. Bryan	296,670	Apr. 8	980	274	27	195
Wagon. Dumping-	L. C. Dees	296,938	Apr. 15	1315	365	27	262
Wagon. Dumping-	F. A. Graff and L. C. Hippie	299,377	May 27	1769	510	27	887
Wagon-jack	G. B. Clark	298,350	May 13	514	139	27	632
Wagon-jack	D. B. Kinne	300,984	June 24	1898	522	27	1294
Wagon-jack	J. F. Lindsey	296,979	Apr. 15	1303	377	27	271
Wagon jump-seat	C. H. Stratton	299,437	May 27	1847	531	27	900
Wagon. Lumber-	O. Kinsley	296,010	Apr. 1	156	45	27	32
Wagon running-gear	W. H. Fanning	298,564	May 13	754	212	27	677
Wagon running-gear	P. Gendron	298,078	May 6	146	37	27	554
Wagon running-gear	J. B. Spry and T. Barry	300,914	June 24	1824	499	27	1280
Wagon running-gear	A. Womack	298,430	May 13	607	171	27	649
Wagon. Sail-	J. A. Aspinwall	299,317	May 27	1696	487	27	872
Wagon-seat	P. J. Kern	300,611	June 17	1424	392	27	1203
Wagon-skein	C. Pierce	298,498	May 13	683	194	27	664
Wagon-spring	C. Fallesen	298,456	May 13	630	180	27	654
Wagon. Spring-	T. P. Yates	296,500	Apr. 8	767	211	27	152
Wagon. Spring-board	H. L. Sherwood	298,245	May 6	370	98	27	596
Wagon. Sugar-dumping	J. D. Edwards and L. F. Haubtman	296,544	Apr. 8	823	227	27	164
Wall-paper, paper board, &c	H. W. Johns	300,374	June 17	1134	.....	27	1150
Wardrobe-hook	C. A. Kuhlman	296,696	Apr. 8	1012	283	27	202
Warm air furnace	J. Walsh	301,022	June 24	1951	530	27	1304
Wash-bench and step-ladder	J. S. Nelson	299,209	Apr. 1	381	108	27	73
Washer: *See* Bottle-washer. Nut-washer. Slate-washer. Wheel-washer.							
Washer	O. F. Garvey	299,977	June 10	594	159	27	1043
Washer-cutter	J. Rath	296,219	Apr. 1	394	112	27	76
Washing compound	A. E. Rhoads	296,452	Apr. 8	705	.....	27	139
Washing-machine	C. Martin	300,992	June 24	1907	525	27	1296
Washing-machine	J. Newman	298,613	May 13	815	220	27	688
Washing-machine	W. Park and J. S. Parker	299,159	May 27	1508	433	27	837
Washing-machine	F. Pollmiller	297,049	Apr. 29	2603	713	27	514
Washing-machine	M. R. Pottorff	298,775	May 20	1025	286	27	735
Washing-machine	F. G. Powers	296,617	Apr. 8	910	257	27	183
Washing-machine	J. W. Rhoades	305,943	Apr. 1	60	17, 18	27	14
Washing-machine	M. H. Schug	300,646	June 17	1464	408	27	1214
Washing-machine	J. Tombow	301,075	June 24	2013	556	27	1316
Washing table-cutlery, &c. Machine for	A. E. Wetmore	298,530	May 13	714	202	27	670
Watch-case	C. W. Harman and H. G. Skidmore	298,197	May 6	296	76	27	582
Watch-case	J. Lamont	297,421	Apr. 22	1927	526	27	380

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Watch-case	D. O'Hara	297,533	Apr. 22	2073	566	27	408
Watch-case	D. O'Hara	298,615	May 13	817	229	27	689
Watch-case	C. Schnetz	296,631	Apr. 8	935	261	27	186
Watch-case	H. G. Skidmore	298,509	May 13	694	196	27	666
Watch-case bezel	E. C. Fitch	299,369	May 27	1761	507	27	885
Watch-case bows. Fastening for	D. Glickman	300,706	June 17	1570	431	27	1229
Watch-case center	J. C. Dueber	297,976	May 6	16	5	27	530
Watch-case centers. Manufacture of	J. C. Dueber	299,119	May 27	1462	419	27	898
Watch-case pendant	D. O'Hara	298,396	May 13	567	156	27	642
Watch-case pendant	D. O'Hara	298,616	May 13	821	230	27	689
Watch-case spring	W. H. Fitz Gerald and G. C. Smith	297,123	Apr. 22	1550	428	27	310
Watch-cases. Die for forming	T. Mueller	300,109	June 10	768	207	27	1075
Watch-movement	H. B. Mears	296,204	Apr. 1	375	107	27	79
Watch-protector attachment	J. C. Grimmell	297,516	Apr. 22	2051	560	27	402
Watch-winding mechanism	O. E. Hinklin	296,170	Apr. 1	329	93	27	64
Watch. Stop	A. Aubert	296,663	Apr. 8	973	272	27	194
Watches. Dust-proof cap for	C. Kistler	300,088	June 10	739	200	27	1070
Watchman's electric recorder	J. Redding	299,011	May 20	1313	375	27	790
Water. Apparatus for the purification of	A. R. Leeds	296,337	Apr. 8	502	157	27	112
Water-closet	P. Connolly	296,222	Apr. 15	1166	328	27	236
Water-closet	C. F. Pike	298,310	May 6	452	{121 / 122}	27	612
Water-closet	J. Semple	300,905	June 24	1812	495	27	1278
Water-closet and preserving the seals of the traps therefor	J. P. Hyde	299,792	June 3	371	95	27	991
Water-closet attachment	J. W. Birkett	299,333	May 27	1720	493	27	877
Water-closet basins. Adjustable support for	H. C. Weeden	298,804	May 20	1064	{298 / 299}	27	742
Water-closet cistern	J. Demarest	298,452	May 13	626	178	27	653
Water-closet connection	H. C. Weeden	297,321	Apr. 22	1796	487	27	335
Water-closet connection	H. C. Weeden	299,605	June 3	134	33	27	944
Water-closet seat cover	D. O. Cowen	296,141	Apr. 1	296	85	27	58
Water-closet valve	P. White	299,888	June 3	476	125	27	1013
Water-closets. Attachment for operating cistern-valves for	D. Burrows	299,341	May 27	1728	495	27	879
Water-closets, &c. Flushing apparatus for	H. C. Weeden	299,606	June 3	135	33	27	945
Water-closets, &c. Supply-valve for	H. C. Weeden	300,540	June 17	1338	{368 / 769}	27	1187
Water-closets, &c. Valve for	W. Scott	297,455	Apr. 22	1960	538	27	388
Water-cooler	E. B. Jewett	298,694	May 13	923	256	27	709
Water-cooler	J. E. Welling	298,140	May 6	224	50	27	569
Water-cooler	C. F. Wisloh	296,095	Apr. 1	241	71	27	49
Water-cooler and refrigerator	C. S. Richman	300,511	June 17	1302	357	27	1181
Water-elevator	D. S. Boyakin	298,344	May 13	508	138	27	631
Water-elevator	W. I. Rorick	298,014	May 20	1317	376	27	791
Water elevator and carrier	R. J. Foster and J. W. Collie	297,240	Apr. 22	1716	466	27	340
Water elevator and carrier	J. M. Williams	299,043	May 20	1363	388	27	799
Water-elevator. Compressed-air	J. K. Leedy	298,990	May 20	1288	367	27	785
Water-meter	B. Fitts	299,213	May 27	1570	451	27	849
Water-meter	A. Frager	297,922	Apr. 29	2568	{704 / 705}	27	508
Water-meter	N. Seibert	297,301	Apr. 22	1776	482	27	351
Water-meter. Oscillating	L. H. Nash	300,629	June 17	1454	401	27	1209
Water-meter. Oscillating	L. H. Nash	300,630	June 17	1456	402	27	1209
Water-meter. Rotary	F. Stitzel	297,092	Apr. 15	1499	414	27	306
Water-pipe. Straight	J. F. Bennett	298,657	May 13	867	243	27	697
Water-pipes against freezing. Protector for	P. E. Jay	299,392	May 27	1791	515	27	890
Water-pipes. Hydraulic cushion for	J. Story	300,017	June 24	1827	499	27	1281
Water-proof cloth. Manufacturing gossamer	F. E. Hall	299,638	June 3	176	44	27	993
Water-proof. Rendering goods and fabrics	R. S. Forbes	298,306	May 13	531	.....	27	635
Waterproofed textile fabric	I. F. Williams	296,263	Apr. 1	461	130	27	87
Waterproofing cellars, &c.	J. J. Schillinger	299,425	May 27	1832	527	27	898
Water. Purification of	A. R. Leeds	298,101	May 6	171	45	27	559
Water-wheel	J. Kellams	298,477	May 13	658	186	27	659
Water-wheel regulator	C. F. Thayer	297,873	Apr. 29	2503	686	27	496
Water-wheel. Turbine	A. N. Wolf	300,823	June 24	1712	{467 / 468}	27	1259
Waters. Purifying canals and basins connecting with tidal	A. J. L. Loretz	299,559	June 3	60	17, 18	27	933
Weaner. Calf	H. B. Strant	297,870	Apr. 29	2501	685	27	495
Weather-board gage	D. H. Finch	298,682	May 13	909	252	27	706
Weather-boarding. Fire-resisting	P. Toglio	297,730	Apr. 29	2350	639	27	465
Weather strip	W. D. Bennett	300,939	June 24	1847	507	27	1285
Weather-strip	J. Conturier	300,849	June 24	1743	476	27	1265
Weather-strip	D. Gibbons	296,158	Apr. 1	313	90	27	61
Weather-strip	P. E. Reynolds	299,089	May 20	1415	{403 / 404}	27	809
Weather-strip	J. F. Rowlett	297,636	Apr. 29	2225	605	27	442
Weavers' shuttles, picker-sticks, &c. Machine for truing	S. C. Gardner	296,552	Apr. 8	839	233	27	167
Wedges. Machine for making	A. M. Burnham	297,563	Apr. 29	2124	{560 / 561}	27	423
Weeding-machine	J. B. Ladd	298,863	May 20	1133	318	27	755
Weighing and supplying apparatus	H. E. Smyser	297,027	Apr. 15	1424	391	27	282
Weighing-machines. Electric automatic recording apparatus for	W. H. Beehler	299,328	May 27	1707	{490 / 491}	27	875
Welding compound	J. S. Wilkins	301,032	June 24	1961	.....	27	1306
Well-boring machine	W. Velte	299,298	May 27	1678	481	27	869
Well-drilling machine	J. Conner, Jr., and H. A. Otto	300,222	June 10	925	{249 / 250}	27	1102
Well-drilling machine	L. C. Weltner	299,306	May 27	1667	484	27	870
Well-poles. Clamp for holding	B. Wheeler	299,887	June 3	475	125	27	1012
Wells. Bailer for cleaning oil-	J. S. Moody	298,876	May 20	1150	323	27	758
Wells. Tool for raising sucker-rods from	M. Newton	299,254	May 27	1618	465	27	859

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Wheel: *See* Bicycle-wheel. Car-wheel. Fifth-wheel. Harvester grain-wheel. Iron wheel. Locomotive-wheel. Paddle-wheel. Paper wheel. Paper friction-wheel. Polishing-wheel. Self-lubricating wheel. Vehicle-wheel. Water-wheel.							
Wheel	R. Adams	299,711	June 3	286	71	27	974
Wheel	R. S. Carr	300,046	June 10	688	{186 / 187}	27	1060
Wheel	R. Ellwood and H. H. Staugaard	299,120	May 27	1463	419	27	899
Wheel	J. V. Rowlett	300,737	June 17	1603	439	27	1234
Wheel	S. T. Williams	300,293	June 10	1026	276	27	1120
Wheel	H. H. Fulton	297,514	Apr. 22	2050	560	27	402
Wheel or pulley	B. Masterson	296,029	Apr. 1	165	48	27	34
Wheel washer. Vehicle	F. B. Kendall	299,798	June 3	378	97	27	993
Wheelbarrow and sled. Combined	E. R. Annable	297,960	May 6	2	1	27	527
Whiffletree	H. Clark	296,275	Apr. 1	479	133	27	90
Whiffletree	J. Whitcomb	297,734	Apr. 29	2353	640	27	466
Whiffletree-hook	M. E. Hamilton	300,292	June 10	964	261	27	1110
Whiffletree-hook	J. Rancevan	300,893	June 24	1797	491	27	1275
Whiffletree-hook	J. B. Williams	296,365	Apr. 1	464	130	27	87
Whiffletree-hook	S. Baker	297,962	May 6	3	1	27	527
Whip	A. C. Rand	297,006	Apr. 15	1393	384	27	270
Whip	H. B. Pitner	299,163	May 27	1513	434	27	838
Whip and line holder. Combined	H. Schoby	298,627	May 13	830	232	27	691
Whip-holder	W. P. Kellogg	299,797	June 3	377	96	27	993
Whip-rack	W. F. Dinse	298,356	May 13	520	141	27	633
Whip-socket	E. E. Swett	299,497	May 27	1915	551	27	913
Whistle	G. W. Sanford	298,779	May 20	1030	288	27	736
Wick-raiser	D. H. Bansman	299,325	May 27	1703	489	27	874
Wind-engine	C. S. Garrigus	299,127	May 27	1472	422	27	830
Wind-power	F. A. Grater	296,161	Apr. 1	318	91	27	62
Windlass	G. W. Zeigler and G. W. Graves	297,050	Apr. 15	1449	401	27	287
Windlass	A. Amiro	299,048	May 20	1368	389	27	800
Windlass. Ship	W. W. Palmer	298,883	May 20	1160	325	27	760
Windlass. Well-bucket	G. M. Beard	299,327	May 27	1705	{489 / 490}	27	875
Windmill	J. B. Foster	298,570	May 13	763	214	27	679
Windmill	A. Martin	299,563	June 3	78	19	27	935
Windmill	J. O. Stayner	299,869	June 3	456	119	27	1009
Windmill	G. M. Taylor	300,161	June 10	840	227	27	1087
Windmill	J. Warwick and W. C. Westaway	300,818	June 24	1703	465	27	1257
Windmill	F. Witherspoon	297,904	Apr. 29	2541	696	27	503
Windmill	H. R. Stevens	297,468	Apr. 22	1986	542	27	391
Windmill-tank	H. R. Stevens	298,793	May 20	1050	294	27	739
Windmill-tank	A. Matuska	298,699	May 13	930	258	27	710
Window	J. B. Montague, J. T. Booker, and E. C. Dinning	300,105	June 10	764	206	27	1074
Window	N. F. Sandelin	300,136	June 10	812	219	27	1082
Window	W. D. Smith	299,432	May 27	1836	502	27	899
Window and door button	E. B. Newcomb	296,437	Apr. 8	686	189	27	136
Window-guard	G. W. Clark	299,519	June 3	18	6	27	924
Window protector. Area	J. F. Smith	300,654	June 17	1494	412	27	1216
Window-screen	N. J. Bishoprick	300,562	June 17	1363	376	27	1192
Window-screen	A. Brown	297,667	Apr. 29	2262	616	27	449
Window-screen	H. K. Cotton	297,230	Apr. 22	1694	460	27	336
Window-screen	T. W. Dowling	298,675	May 13	900	250	27	704
Window-screen	S. R. Hazen	299,137	May 27	1484	426	27	833
Window-screen	G. W. Henry	300,776	June 24	1656	453	27	1248
Window-screen	E. E. Masters	300,881	June 24	1783	{486 / 487}	27	1273
Window-screen	S. E. Parrish	299,257	May 27	1620	465	27	859
Window-screen	J. K. Proctor	298,311	May 6	454	122	27	612
Window-screen	E. V. Whitaker	297,892	Apr. 29	2528	692	27	501
Window-shade	C. Geertz	300,662	June 10	705	192	27	1063
Window-shade attachment	H. L. Judd	296,291	Apr. 1	505	140	27	93
Window-shade bar	N. Slingland	296,473	Apr. 8	730	202	27	145
Window-shade fixture	W. Lang	299,483	May 27	1903	547	27	910
Window-shade pull	J. Munger	298,611	May 13	812	228	27	687
Window-shade rollers. Gudgeon for	R. S. Whittier	296,494	Apr. 8	758	209	27	150
Window-shades. Apparatus for operating	V. Blank and T. J. Anthony	295,901	Apr. 1	11	3	27	5
Window-shades. Device for operating	G. W. Richwine	297,008	Apr. 15	1397	385	27	277
Window ventilator. Show	B. A. Grant	296,742	Apr. 15	1067	301	27	218
Wire. Apparatus for galvanizing and coating	J. Spruce	300,741	June 17	1607	440	27	1234
Wire. Apparatus for manufacturing imitation twisted							
Wire. Attachment for receiving and collecting looped end and cut	W. Wilson, Jr.	300,547	June 17	1347	{371 / 372}	27	1189
Wire. Barbed	C. B. Brainard	298,440	May 13	611	173	27	650
Wire-barbing machine	T. H. Dodge	299,524	June 3	24	7, 8	27	925
Wire-barbing machine	P. P. Hill	298,204	May 6	308	{80 / 81 / 82}	27	584
Wire-barbing machine	D. C. Stover	298,121	May 6	207	55	27	566
Wire-barbing machine	P. A. Terrell	297,472	Apr. 22	1990	{543 / 544}	27	392
Wire-bending machine	C. F. Beaman	296,269	Apr. 1	409	122	27	68
Wire-cloth. Labeled	C. Swinscoe	298,133	May 6	211	56	27	567
Wire-cloth. Shuttle for weaving	G. F. Wright	299,895	June 3	483	127	27	1014
Wire-coating preparatory to drawing	B. F. Aiken, Jr., C. W. Newhall, Jr., and G. W. B. Ellis	298,051	May 6	112	.....	27	548
Wire. Coiling	F. L. Bryant and A. H. Frost	296,671	Apr. 8	981	275	27	196
Wire-coiling machine	C. W. H. Day	300,960	June 24	1869	512	27	1289

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Wire-coiling machine	A. H. Frost and F. L. Bryant	296,551	Apr. 8	837	232	27	166
Wire-coiling machine	L. Wildermuth	296,806	Apr. 15	1143	322	27	232
Wire-covering machine	H. Splitdorf	300,403	June 17	1167	320	27	1155
Wire-crimper	M. M. Jones	296,177	Apr. 1	337	95	27	65
Wire-cutter	E. Stevens	299,033	May 20	1345	364	27	756
Wire-cutting machine	D. Houghton	298,974	May 20	1272	363	27	782
Wire-cutting machine	D. Houghton	299,791	June 3	371	95	27	991
Wire-cutting machine	W. H. Savage	298,240	May 6	364	96	27	595
Wire. Device for handling spooled barb	W. T. Burrows	296,273	Apr. 1	476	133	27	90
Wire-drawing. Coating compound for	A. F. Hoyle	297,131	Apr. 22	1561	.....	27	312
Wire-drawing. Preparatory coating for	V. D. Kenerson and C. N. Howe	297,606	Apr. 29	2181	.....	27	434
Wire holder and carrier	W. P. Stewart	300,813	June 24	1697	464	27	1256
Wire. Imitation twisted	J. Spruce	299,285	May 27	1655	475	27	865
Wire machine. Barbed	G. H. Lasar	296,190	Apr. 1	352	100, 101, 157, 158	27	68
Wire machine. Barbed	A. Matteson	296,339	Apr. 8	564	373	27	113
Wire. Machine for making looped	W. Wilson, Jr.	300,550	June 17	1359	373	27	1190
Wire-rolling machinery	W. H. Jackson, Jr.	298,977	May 20	1274	363	27	782
Wire-rope clamp	H. R. Taylor	300,406	June 17	1176	322	27	1156
Wire spool. Barbed	J. W. Nadelhoffer	299,836	June 3	421	109	27	1002
Wire-straightener	H. Borchardt	299,615	June 3	148	36	27	947
Wire-stretcher	T. Hugon	298,385	May 13	555	152	27	639
Wire-stretcher	C. S. Older and L. L. Doering	298,881	May 20	1157	324	27	760
Wire stretcher. Gang	J. H. and E. L. Cole	297,501	Apr. 22	2237	556	27	400
Wire twisting and spooling machine. Barbed	C. C. Hill	299,542	June 3	49	13	27	929
Wire with metal. Apparatus for coating	L. Williams	296,094	Apr. 1	240	70	27	49
Wire wrapping or covering machine	C. Conner	298,179	May 6	373	70	27	577
Wires. Machine for manufacturing bottle	M. V. B. Ethridge	298,362	May 13	526	143, 144	27	634
Wood. Composition for staining and preserving	S. Cabot, Jr.	297,568	Apr. 29	2137	.....	27	425
Wood ornamentation	J. P. Jamison	299,984	June 10	606	163	27	1046
Wood-polishing machine	J. Casey	300,844	June 24	1737	474	27	1263
Wood-splitting machine	W. T. McCloskey	300,099	June 10	757	204	27	1073
Wood. Uniting	A. H. Walker	300,536	June 17	1332	365	27	1187
Wood-working machine	R. H. Andrews	299,190	May 27	1544	443	27	843
Wood-working-machine knife	S. J. Shimer	296,077	Apr. 1	218	63	27	45
Wooden box	H. Wood	297,654	Apr. 29	2245	611	27	448
Wool burring and cleaning machine	F. G. and A. C. Sargent	299,016	May 20	1319	377	27	791
Wool. Separating and purifying certain compounds of the scourings of	J. A. W. Borchers	299,904	June 3	494	130	27	1016
Work-bench. Carpenter's	C. A. Williams	300,178	June 10	867	234	27	1092
Wrench: *See* Chain-wrench. Lever-wrench. Pipe-wrench. Tap-wrench.							
Wrench	J. Combs	299,902	June 10	578	155	27	1041
Wrench	D. M. De Silva	296,540	Apr. 8	818	226	27	163
Wrench	J. Du Shane	296,949	Apr. 15	1319	366	27	263
Wrench	F. W. Merrick	300,717	June 17	1580	433	27	1230
Wrench	S. Robinson	299,165	May 27	1515	435	27	838
Wrench	B. Ross	296,877	Apr. 15	1298	346	27	348
Wrench	F. Schmemann	297,640	Apr. 29	2229	606	27	442
Wrench	H. Simon, Jr.	300,145	June 10	822	222	27	1084
Wrench	N. W. Vandegrift	298,043	May 6	104	27	27	547
Wrench	T. F. White	297,209	Apr. 22	1665	453	27	330
Wringer: *See* Clothes-wringer. Mop-wringer.							
Writing-instrument. Combination	S. Blitz	300,440	June 17	1216	332	27	1164
Yoke attachment. Neck	T. C. Maggs	296,592	Apr. 8	838	246	27	178
Yoke center. Neck	P. J. Hellman	300,074	June 10	723	196	27	1067
Yoke. Neck	A. S. Bailey	299,193	May 27	1548	444	27	844
Yoke. Neck	N. Hiatt	296,960	Apr. 15	1334	370	27	266
Yoke. Neck	M. V. Longsworth	296,589	Apr. 8	885	245	27	176
Zinc sulphide anhydrous. Making	T. Macfarlane	296,858	Apr. 15	1212	.....	27	244
Zylonite and other plastic compounds from a cylindrical block. Cutting sheets of	E. Kipper	299,803	June 3	384	98	27	994

ALPHABETICAL LIST OF DESIGNS.

Design.	Name.	No.	Date.	Official Gazette. Volume.	Official Gazette. Page.
Actor's shield	C. F. Waldron	15,013	May 20	27	722
Album leaf. Photographic	S. Meers	14,961	Apr. 15	27	211
Ax box or case	O. S. Rixford	14,935	Apr. 1	27	1
Axle-yoke	H. K. Porter	14,971	Apr. 22	27	303
Basque. Lady's	L. Tully	15,031	May 27	27	822
Biscuit-cracker	J. Hartman	15,006	May 20	27	722
Bottle or flask	J. K. Cummings	14,925	Apr. 1	27	1
Burial-casket	I. G. Hatcher	14,987	May 6	27	525
Burial-casket handle	A. Vogt	15,033	May 27	27	822
Burial-casket knob	W. H. Hutchinson	15,014	May 27	27	821
Button. Sleeve	F. F. and J. C. Bioren	15,003	May 20	27	722
Cabinet. Toilet	E. Bourne	15,062	June 17	27	1139
Candles. Ornamentation of	F. Baumer	14,995	May 13	27	627
Car-seats. End frame for	H. S. Hale	15,053	June 10	27	1035
Card. Back of a game	L. L. Smith	14,991	May 6	27	525
Card. Christmas	R. Sneider	14,992	May 6	27	525
Cards. Ace of spades for playing	A. Binkert	14,957	Apr. 15	27	211
Carpet	A. Danby	14,926, 14,927	Apr. 1	27	1
Carpet	W. L. Jacobs	14,951	Apr. 8	27	104
Carpet	D. McNair	15,076	June 17	27	1140
Carpet	D. G. Melville	15,077	June 17	27	1140
Carpet	H. Mitchell	14,931	Apr. 1	27	1
Carpet	E. Poole	14,932, 14,933	Apr. 1	27	1
Carpet	E. Poole	14,970	Apr. 22	27	303
Carpet	E. G. Saner	14,936, 14,937	Apr. 1	27	1
Carpet	S. Smith	14,938	Apr. 1	27	1
Carpet	F. C. Swann	14,939 to 14,942	Apr. 1	27	1
Chain. Watch	C. K. Giles	14,978	Apr. 29	27	417
Chair	C. J. Bruschke	14,975	Apr. 29	27	417
Chair-frame	A. G. Hofstatter	15,072	June 17	27	1139
Chenille	C. A. Schmidt	14,954	Apr. 8	27	104
Chenille pendant	J. Loeb	15,039	June 3	27	920
Churn-frame	T. Dickman and J. W. Elliott	15,046	June 10	27	1035
Clock-frame	J. Schweizer	14,955	Apr. 8	27	104
Coffee-pot	H. C. Rice	14,934	Apr. 1	27	1
Coffin-screw	W. M. Smith	15,044	June 3	27	920
Coffin-screw escutcheon	W. M. Smith	15,043	June 3	27	920
Coffin-tablet	O. McCarthy	14,989	May 6	27	525
Collar. Lady's	S. Loewenstein	15,015	May 27	27	821
Costume. Child's	F. Wright	15,100	June 24	27	1242
Costume. Girl's	C. Shiels	14,999	May 13	27	627
Costume. Girl's	L. Tully	15,102	June 24	27	1242
Costume. Lady's	M. Kavanagh	15,091	June 24	27	1242
Costume. Lady's	J. Q. Reed	15,023	May 27	27	821
Costume. Lady's	S. J. Shiels	15,024 to 15,026	May 27	27	821
Costume. Lady's	S. J. Shiels	15,101	June 24	27	1242
Costume. Lady's	L. Tully	15,029, 15,030	May 27	27	822
Costume. Lady's	M. Turner	15,104	June 24	27	1242
Costume. Miss's	M. Kavanagh	15,090	June 24	27	1242
Costume. Miss's	S. J. Shiels	15,027, 15,028	May 27	27	821
Cultivator-knife	I. A. Packard	14,990	May 6	27	525
Curry-comb back	W. P. Kellogg	14,980	Apr. 29	27	417
Curtain	J. Sweeney	15,060	May 13	27	627
Dipper	W. C. Freeman	15,051	June 10	27	1035
Dish. Earthenware	E. Chetwynd	15,063	June 17	27	1139
Dish. Earthenware	E. Havilland	14,948	Apr. 8	27	104
Dish-handle	G. Vogt	15,045	June 3	27	920
Envelope	R. Sneider	14,993	May 6	27	525
Finger-ring	H. Huestis	14,967	Apr. 22	27	303
